

RV commentary: introductory remarks and abbreviations

As a companion to the Jamison-Brereton English translation of the R̥gveda (*The R̥gveda: The Earliest Religious Poetry of India. An English Translation*, Oxford UP, 2014), one of the two translators, Jamison, is providing a more detailed commentary on the translation, intended for readers with Sanskrit who are interested in how, starting from the text, we arrived at the translations we did, especially in the frequent cases in which our translations diverge from the standard ones, esp. Geldner's. For a project of this sort, online posting seems the ideal medium. The commentary is being posted piecemeal, and its various pieces are updated from time to time. As of now (January 2024) Jamison has commented on all hymns for which she had primary responsibility and has now turned to Brereton's, with Maṇḍalas II and III now complete. (For the division by translator, see the published translation, pp. 83–84.)

When citing from the comm., please give the date of access as well as the date of the posting of the file, since updated versions of already posted files will be regularly substituted, with the date of re-posting.

Comments will not only point out our differences from standard interpretations and explain the reasons for them, but also touch on any matters of language or content that strike us as worth discussion -- especially poetic and rhetorical figures, puns and word plays, and curious or aberrant syntax and morphology. Our own doubts about our translations of particular passages will also be noted, with possible alternative translations provided, and comments and suggestions subsequently made by others will be incorporated. Errors and omissions in the published translation will also be rectified. Lists of emended or alternate translations and of typos in the published edition are also provided, as well as a list of lexical items treated in the commentary, with the location indicated.

We will not generally provide info. readily available elsewhere (e.g., parallels, repeated passages, standard metrical resolutions, which are generally noted by Geldner in the first two cases and Oldenberg in the last) except when it's necessary for our argument. Nor will we catalogue *all* our differences from all the standard translators/interpreters, though we will usually do so for Ge. Nor engage with most of the sec. lit. And we will try to repeat info. from our published translation only when nec. to make the point clear. We thus expect that readers will have access at least to our published tr. and Geldner, with Grassmann, Renou (ÉVP), Oldenberg (Noten), and Witzel-Goto useful to have to hand as well. Many of the references to other secondary literature will be made in an abbreviated style and will assume that the interested reader can decode these references, although at some point we may provide a more formal bibliography.

The commentary is, not surprisingly, ordered by hymn and verse number. Hapaxes will be discussed in the passage in which they're found, as will particular morphological forms. Words that appear rarely and require lexical discussion will generally be discussed only once (and not necessarily in the first passage in which they are found). An index is provided for these.

Abbreviations: Unless otherwise indicated, “publ. intro” = the introduction to the hymn in question in our published translation. Other abbreviations: tr. can = translation(s), translator(s), translate(s); interpr. = interpret(s), interpretation(s). Gr = Grassmann, Ge = Geldner, Re = Renou (ÉVP unless otherwise noted), Old = Oldenberg (Noten, unless otherwise noted), Th = Thieme, Hoff / KH = Karl Hoffmann, WG = Witzel Gotō, Sāy = Sāyaṇa, Bl = M. Bloomfield, RR = *Rig-Veda Repetitions*, Macd = Macdonell, HvN = Holland & van Nooten RV ed., Mau = Walter Maurer, *Pinnacles of India’s Past*, Lub = Lubotsky, *Rigvedic Word Concordance*, Lü = Lüders, *Varuṇa* (unless otherwise noted), Schmidt / HPS B+I = Hanns-Peter Schmidt, *Brhaspati und Indra*, Kü = Kümmel, *Perfekt*, Scar = Scarlatta, *Wurzelkomposita*, Klein / JSK = *Discourse Grammar of the Rigveda*, Schaeffer, *Intensiv*, Krick, *Das Ritual der Feuergründung*, Don = Wendy Doniger *The Rig Veda*, C-H = Caland-Henry *L’Agniṣṭoma*. Personal comms.: JL = Jesse Lundquist, ET = Elizabeth Tucker, IH = Ian Hollenbaugh, JTK = Joshua T. Katz, DL = Diego Loukata., MLW = Michael Weiss, JC = John Clayton, CL = Colton Lavalette, PS = Paolo Sabattini, EM = Elisa Migliaretti, TY = Tony Yates, AR = Alex Roy.

Although we welcome comments (and appropriate comments from readers will be incorporated into later posted versions with due attribution), the posted commentary is deliberately not set up to receive comments directly. Please communicate with the translator(s) personally.

Lexical discussions:

(Hapaxes are treated in the commentary to the passages in which they appear.)

Maṇḍala I

[I.1 Agni JPB]

[SJ: The repetition of the dedicand's name in initial position in the first 5 vss. of the hymn in a variety of different cases – the versified paradigm -- has been long and often remarked upon, including famously by de Saussure. Perhaps more interesting is what happens when the pattern breaks, in vs. 6. The expected form of *agní-* is absent, but in 2nd position is the relatively rare particle *aṅgá*, a phonological scrambling of the divine name, followed by an initial voc. *ágne* in the 2nd pāda, and another phonologically scrambled form, voc. *aṅgiráḥ*, ending the verse. Though this vs. breaks the pattern, it has an over-abundance of reminiscences of it. Vs. 7 provides a vocative *agne* in modified 2nd position in the first pāda; vs. 9 an initial voc. *ágne* in pāda b. Vs. 8 is perhaps the most interesting with regard to the pattern: it is the only vs. that lacks any form of *agní-*. While vss. 6 and 7 seemed to be keeping the sequence going by other means, vs. 8 breaks it off definitively. *Except* it is the only vs. that is not syntactically self-contained. It consists of a series of acc. sg. phrases all characterizing Agni, which must be syntactically dependent on the acc. *tvā* in 7a, which immediately preceded the last representative of *agní-*. The unnamed god is insistently present and tied to the last mention of his name. Note also that this is the first time since vs. 1 that Agni appears in the accusative (1a *agním īle*), so vs. 8 creates a sort of syntactic ring with the opening of the hymn.]

I.2 Vāyu, etc. (Praūgaśastra)

The recipients of the various ṛcas making up these two rather simple hymns are clearly signalled. All three verses making up the first ṛca to Vāyu (vss. 1-3) open with a voc. *vāyo*; the second ṛca (to Indra and Vāyu, vss. 4-6) opens with the voc. *indravāyū*, while the next two begin with the famous “Vāyav Indraś ca” construction (on which see Jamison 1988). The pattern is varied in the Mitra and Varuṇa ṛca (7-9), with the conjoined accusatives *mitrām* and *vāruṇam ca* opening the first and second pādas of vs. 7, and the dual dvandva *mitrāvāruṇā(v)* in second position in the next two verses, first as a vocative, then as a nominative.

There appears to be some attempt to create bridges between the ṛcas: verses 3 and 4 both sketch a reversal of the usual ritual model; vss. 6 and 7 both concern our ‘insight’ (*dhî*).

I.2.2: Ge. suggests that *jarante* here can be ambiguous, belonging not only to ‘sing’, but also to ‘awaken’, with identical present stem. This is possible, but only with an intransitive sense of ‘awaken’: “the singers awaken / wake up to you,” since the ‘awaken’ present is only intrans. (see Gotō 1987: 150). In any case surely the primary sense is ‘sing’, given the etymological figure produced by its grammatical subj. *jaritārah* ‘singers’.

I.2.3: The difficult words *dhénā* and *praprñcatī* complicate the interpretation of this verse. The former, investigated in detail by H.-P. Schmidt (Gd. Nyberg), is now generally interpreted as ‘(milk)stream’, rendering Geldner’s ‘lip’ and Renou’s ‘tongue’ out of date. As for *praprñcatī*, the simplex *prñcatī* appears in another Praūgaśastra hymn (I.23.16),

modifying waters and referring to the mixing of milk (acc.) with honey (instr.). Given the similarity of context, a direct object referring to a liquid should be supplied.

What is also puzzling here is in what way the ‘stream’ is Vāyu’s: it should not originate with him, but rather be destined for him, but then why is the ‘pious man’ apparently receiving the benefit of it? As in the next verse, there seems to be a bit of role reversal here, with the gods depicted as providing the ritual benefits rather than receiving them. Presumably the point is that the pious man gets the benefit secondarily, by having pleased the god, but the dative *dāsūṣe* is striking, esp. as it is apparently parallel grammatically (though it cannot be functionally) to the dat. *sómapītaye* ending the verse. Although the verse presumably depicts the sacrificer’s offering of soma to Vāyu to drink, the lexicon and the case usage complicate the message.

I.2.4: As noted in the comment on the last verse, the ritual model here is shaken up a bit: Indra and Vāyu are urged to come *with práyobhiḥ*, a word generally used of ‘pleasurable offerings’ that are presented *to* the gods and *to which* they come (cf. VIII.60.4 *abhí práyāṃsi ... gahi*). Our translation “with delight,” agreeing with most other translators, avoids, and conceals, the problem. The gods should not be bringing *práyāṃsi*. The little disturbance of the ritual model is confined to these two verses in this hymn.

The pāda-final position of *hi* here is unusual, and I have no explanation for it, esp. as it does not take second position in its clause as is usual.

I.2.7-9: As mentioned in the intro., this *ṛca* contains the trio *dhī* ‘insight’ (vs. 7), *krātu-* ‘intention’ (vs. 8), and *dākṣa-* ‘skill’ (vs. 9), the three elements necessary to conceive and carry out an action. Their interconnection is emphasized by the fact that all three are in the accusative and each is stationed initial in the last pāda of its verse.

The juxtaposition across vss. 8-9 of *krátum* (beginning 8c) and *kavī* (beginning 9a) may also be meant to evoke the well-established compound *kaví-kratu-* ‘having the will/resolve of a poet’, ‘having a poet’s purpose’, an occurrence of which is found in the preceding hymn by the same poet (I.1.5).

I.2.7: Here and everywhere else it is found, the word *riśādas-*, an epithet of various gods, is opaque. There are currently two competing and entirely different interpretations: that of Karl Hoffmann (Aufs. 564 n. 16) as ‘discriminating, fastidious’ (< ‘picking at food’) and Paul Thieme’s ‘caring for the stranger’ (*Fremdling*). See EWA s.v. The contexts are not diagnostic, and it is probably the case that the epithet was no longer understood even as it was being deployed (note that it is almost always pāda-final, possibly a sign of formulaic freezing).

Throughout our translation we have followed the Thieme interpretation, but not with any great conviction. One thing in favor of the Thieme interpretation is that the word is regularly applied to one or more of the Ādityas (as here), who might be expected to show care for humans in their charge. That it is also regularly used of the less ethically inclined Maruts might give us pause (though these contexts are generally benevolent ones) – except that ‘fastidious’ is even less a likely quality of the Maruts than ‘caring for the stranger’.

I.2.8: The unaccented voc. *ṛtāvṛdhāv* opening the 2nd pāda has been thus transmitted, though we would expect **ṛtāvṛdhāv*. In fact there is a striking string of 13 unaccented syllables in this hemistich, starting after the first word of the vs., *ṛténa* (14, counting -*na*). See Old, who has no good explanation for the lack of accent on the first word of the 2nd pāda, though he considers it an old error. It cannot be simply a peculiarity of this hymn, because I.3.1b (forming part of the Praügaśastra sequence with I.2, as discussed in the publ. intro.) opens with an initially accented voc. *drávatpāṇī* (to the stem *dravátpāṇi*).

I.3 (Praügaśastra continued)

As in I.2 the recipients of the various ṛcas are emphatically signalled. In vss. 1-3 to the Ásvins, the voc. *ásvinā* opens the first two verses, while their alternative name *nāsatyā* opens the second pāda of the third. The voc. *índra* opens all three verses of the next ṛca (4-6). The Viśvedevāḥ ṛca contains three instances of that phrase: the voc. in 7b, nominatives opening vss. 8 and 9. The final ṛca to Sarasvatī likewise contains three occurrences of her name in the nominative, but all three end their pādas (10a, 11c, 12a).

I.3.2: *sāvīra*- rendered as ‘powerful’ in the publ. tr. But see disc. below ad I.30.17.

dhīṣṇya- and related forms are obscure and much discussed; indeed Ge. refuses to translate the word. We generally follow the view of Pinault (UTexas Vedic Workshop), who takes it to mean ‘related to / proper to the holy place’, thence simply ‘holy’. See disc. of *dhīṣṇā*- ad I.160.1

I.3.3: In the compound *rudra-vartanī*, number is of course neutralized in the first member. The Maruts are regularly called Rudras (without ṛddhi or derivational suffix) after their father. The ‘course of the Rudra/Maruts’ is simply a reference to the midspace (antarikṣa) much frequented by the Maruts, where the Ásvins are now driving.

I.3.5: The peculiarly formed stem *vāghát*- clearly refers to a ritual officiant of some sort, but in the absence of both a set of diagnostic contexts and a convincing etymology, it is hard to narrow his function down. Because his voice (*vāṇi*-) figures in a simile (I.88.6 *vāgháto ná vāṇiḥ*); because he is associated with verbal products, like the *bráhmāṇi* here; because Vāghats are the agents at vying sacrificial invocations (e.g., I.36.13 *vāghádbhir víhváyāmahe*; cf. III.8.10, VIII.5.16); and because they are associated with the Āngirases, the singers in the Vala myth (X.62.7), we chose to render the term by ‘cantor’, though this is only a guess – esp. since in most of the occurrences the ritual role and priestly activity are pretty generic. The word is also twice applied to the Ṛbhus (I.110.4, III.60.4).

I.3.7: On the voc. of *visva*- see comm. ad X.15.6.

The use of *dāsvāms*- to modify gods is striking; here it is in reciprocal usage with gen. *dāśúṣaḥ*, used of a pious mortal in its ordinary usage. For the few other divine *dāsvāms*, see comm. ad X.104.6.

I.3.8: A small grammatical mismatch here: the phrase *visve devāsaḥ* and the adjectives modifying it (*aptúraḥ*, *túrṇayaḥ*) are nominatives and should not be the subject of the imperative *ā ganta*. Ge. (and WG) ignore the problem by translating the nom. as voc.

(“Thr Allgötter”). Although the effect is minor, my translation reflects the grammatical disjunction by rendering pāda b as an interjection.

Another question is why 7b contains the same 2nd pl. imperative, except with a different grade of the root: *ā gata* vs. *ā ganta*. Both forms are reasonably well attested, with 7b a repeated pāda (=II.41.13a, VI.52.7a). Whatever the history of the distinction, the synchronic distribution seems to be metrical, with *ā gata* almost always final, providing an iambic cadence in dimeter verse, and *ā ganta* found earlier in the verse.

In b *tūrṇayaḥ* was carelessly omitted from the tr. In the meantime I have reassessed the meaning of *tūrṇi-* (see comm. ad III.11.5) and would now render it ‘crossing, advancing’. Note the presence of *aptūr-* ‘crossing the waters’ in pāda a, a connection also found in III.51.2.

I.3.9: I follow the analysis of the hapax *éhimāyāsaḥ* as a frozen 2nd sg. imperative phrase, “*éhi mā+yāḥ*” (“come! don’t go”), transformed into an adjective in the nom. pl. masc. – an analysis that goes back at least to Sāyaṇa. Ge also follows this analysis, though it is somewhat difficult to excavate from his “willkommen und ungern fortgelassen.” I interpret it as representing the words of the singers’ invitation regularly heard by the VDs. The other currently competing explanations, as a frozen phrase “*éhi māyā*” [better voc. *māye?*] “come here, magic” (Old) or as a deformation of *āhi-māya-* ‘vielgestaltig’ (Gr) [=‘snake-sly’ (J+B)] (BR, followed by Gr), fit less well into the content of the hymn, which after all focuses on calling the various gods to the ritual; note the *ā gata*, *ā ganta* of vss. 7-8 addressed to the same VDs. Support for this analysis may also come from the next hymn (I.4), attributed to the same poet, in which successive vss. (3c, 4a) contain the imperatives *ā gahi* ‘come here’ and *pārehi* ‘go away’, with at least the former addressed to the god Indra.

I.3.11-12: Note the contrastive values of the simplex pres. *cétantī* ‘perceiving, taking note’ and the -āya-pres. (*prā*) *cetayati* ‘makes perceived, reveals’ in successive vss.

I.4 Indra

I.4.2: *godā(h)* of pāda c echoes *godúhe* of 1b. I consider pāda c a proverbial expression – when a rich man is pleased, he gives cows – though it’s obviously applied to Indra here.

I.4.4: Striking is the abrupt change of subject of the 2nd sg. imperatives, from Indra (3c) to an unidentified human companion (4a).

My interpretation differs substantially from those of most others in pāda b. In my view, the accusative *índram* marks Indra as the one directly interrogated, rather than (with most interpretations) the one to be asked about. Most interpreters take *vipaścítam* as identifying the person to be interrogated (e.g., Ge. “einen Weisen”), thus assuming two different referents for the accusative singulars in that pāda: “ask the wise one about Indra.” I find that unlikely, in part because, though *vipaścít-* can be used of humans, it more often qualifies gods.

Taking Indra as the one interrogated has further effects on the interpretation. For others the relative clause in c has Indra as its subject (*yāḥ*) and the 2nd ps. *te* refers to the human interrogator: it is Indra who is dear(er) to you, the poet, than your comrades. I, on

the other hand, take pāda c as a syntactic hybrid, with an underlying direct discourse question, directed to Indra, “who [expected *kāh*] is your choice from among your comrades?” incompletely converted into a relative clause in indirect discourse “ask (Indra) about (the one) who [*yāh*] is your [=Indra’s] choice...” In my view the 2nd ps. ‘your’ of “your choice” in pāda c refers to Indra, not to the subject of the imperatives *pārehi* and *prchā* of ab, while Indra is in the 3rd ps in pāda b. (I will not even contemplate the possibility that *prchā* in b is a 1st ps subjunctive: “Go away. I will ask / let me ask Indra...”)

Although this interpretation complicates the syntax, in my opinion it fits better into its trca and better reflects the relationship between Indra and humans. As often in Indra contexts, the poet worries that Indra will favor others over the poet himself, and this verse poses the question directly to Indra: who do you like best? Indra’s presumed and desired answer is “you!” This answer then allows the poet to dismiss those who criticize him for not spreading his devotion around to other gods (vs. 5) and defends this exclusive focus as a good bargain, as the rest of the world has to admit (vs. 6). The first defense of henotheism?

I should admit, however, that the standard view is somewhat compatible with my larger interpretation, in that “... ask about Indra, who is your [=poet’s] choice from among your comrades” could reinforce that message that our focus is only on Indra, not on other gods. But I do not see how questions *about* Indra fit with the next two verses.

I.4.5-6: Most interpretations take these two verses as syntactically parallel (e.g., Ge. “Mögen ... Und mögen ...”), but the impv. *bruvantu* and the opt. *vocéyuḥ* are surely doing different things: the imperative is concessive: “let them say / even if they say ...” while the optative expresses the conclusion that the rest of the world would have to draw. The parallel *utā*’s that open these verses might give us pause, but they may have something like the value “on the one hand ... on the other.”

I.4.7: The cmpd *yajña-śrī*- belongs to the interpretationally problematic group of *-śrī*-root-noun cmpds, on which see comm. ad III.26.5. Our cmpd is quite parallel to *adhvara-śrī*- (see ad I.44.3) and may well be better taken as transitive “perfecting the sacrifice.”

The b and c pādas both end with an adjective modifying the implicit object soma, a compound of the root *√mad* ‘exhilarate’ (the second time in its byform *mand*) and a noun expressing the personal object of the verb, but in exactly opposite order: *nṛ-mādana*- and *mandayāt-sakha*-, what might be called a “compound chiasmus.” A less complex etymological figure is found at the beginning of the verse: *āśúm āśāve*. (JL)

Gr gives a lemma *patayāt-sakha* ‘den Freund beflügelnd’, but of course only *patayāt* is actually found, beside *mandayāt-sakha*-. Gr obviously thinks *-sakha*- was gapped in this phrase and should be supplied. (So also AiG II.1.30.) But there is no reason to do so, and in fact such a sequence would detract from the “compound chiasmus” noted by JL. Best to take *patayāt* as an adverb with adverbial accent shift (or else attribute its final syllable accent to redactional matching to *mandayāt*-. Lowe (*Participles*, 283)) rejects the adverbial interpr. and suggests either following Gr’s suggestion, augmented by Ge’s (n. 7c) that the underlying form in that cmpd is caus. **pātayāt*-, or assuming that *patayāt* is “a nonce metrical replacement ... for *patāyantam*.” The former requires too much machinery, and if we allowed every inconvenient RVic

form to be interpr. as a metrical replacement for the form we want, we could rewrite the RV with no controls whatsoever!

I.4.8: My occasional tr. of *ghaná-* as ‘bane’ was inspired by my husband’s treatment of etymologically related nominal constructions in Greek and Germanic (Watkins 1996: 418ff., 423). I think JL for reminding me of this.

I.4.9: (JL) Etymological figure also in *vāṇṇeṣu vāṇṇam*, immediately followed by *vāṇṇāmasi*, which, however, is synchronically distinct from the ‘prize’ words.

I.4.10: There may be bit of ring composition here, with 10b *supārāḥ* echoing the first word of the hymn, 1a *surūpa-*.

I.5 Indra

I.5.1: Seems deliberately to echo the last vs. of the preceding hymn (I.4.10), with pāda b *īndram abhī prā gāyata* “sing forth to Indra” matching I.4.10c *tāsmāi īndrāya gāyata* “sing to him, to Indra” (the difference in case being governed by the presence of the preverb *abhī* in I.5.1). I.4.10 is then exactly repeated in I.5.4c. The *sākhāyaḥ* of I.5.1c also recalls I.4.10b *sākhā* — though the latter refers to Indra and the former to the priest-poets. But I.4.4c contains a pl. *sākhībhyah*, which in our analysis has the same human referents as I.5.1, showing the reciprocal relation between men and gods that was one of the points of I.4.

I.5.2: *purūtāmam purūṇām* is pleonastic, meaning literally “the first of many, of the many ones.”

I.5.3: My interpretation of these sentences as questions is not overtly marked in the text, but seems a reasonable use of the subjunctives.

On the distorted word order of pāda c, see comm. on the parallel in III.13.1.

I.5.5: The double dative *sutapāvne ... vītāye* with *yanti* is more literally “... go to the soma-drinker [lit. ‘pressed (soma) drinker’] to pursue (him).”

I.5.10: A whiff of ring composition – 10c *īśānaḥ* ‘having control over’ echoes 2b *īśānam*, both modifying Indra. In 2b the god controls something undeniably positive, “choice things,” which he will presumably distribute to his favorites. In 10a he controls “the deadly weapon” that other mortals might wield against us. The identity of expression ties together the very different sentiments.

I.6 Indra and the Maruts (per Anukr.)

As noted in the intro. the Anukramaṇī’s identification of the divinities as Indra (1-3, 10), Maruts (4, 6, 8-9), and Indra and Maruts (5, 7) does not conform to the content of the hymn, which is quite disjointed, but appears to concern, at least in part, the Vala myth. The Maruts do not seem to figure at all in the hymn; the plural entities with Indra

are probably the Aṅgirasas. For my view of the structure (which is informed by the discussions of Ge and Old), see publ. intro.

I.6.1-2: These verses begin identically (*yuñjānti* ‘they yoke’), inviting the audience to equate the action of the two verses.

1b: The referent of the apparent acc. plural *tasthūṣaḥ* ‘(those) standing still’ is not given. Ge. (/WG) thinks it refers to stable things on the earth, but if the sun is referred to in the first pāda, it is more likely to “move around” celestial features than earthly ones, and the stars or other luminous heavenly bodies are referred to in the next pāda. Re’s interpretation (flg. Ludwig) of *tasthūṣaḥ* as an abl. sg. (“from the one standing still” – “à partir de (l’espace) immobile”) is ingenious and would match the minor syntactic idiom ‘yoke from ABL’ (e.g., I.115.4 *yadéd āyukta harītaḥ sadhāsthāt*), so it cannot be dismissed. The ablatives in the final verses (9-10) might lend weak support for Re’s view.

2b: The hapax compound *vīpakṣasā* is difficult and has been variously interpreted. The second member, *pākṣas-* (and related and more common *pākṣā-*), can mean either ‘wing’ or ‘side’; the first member, *vī-*, is most likely the preverb *vī-*, but in compounds this element has a number of possible meanings: ‘without’, ‘distant’, ‘wide’, ‘alternating/opposite/different’, ‘dispersed’. It could also possibly represent *vī-* ‘bird’, which has been claimed as the first member of some other compounds (see EWA s.v. *vāy-*, KEWA III.266). The possible combinations of these two ambiguous elements allow for a number of interpretations. I more or less follow the Sāy/Gr interpretation, ‘auf beiden Seiten des Wagens gehend’, though I take it as an adverbial instrumental, not a dual. (The presence of a number of duals in *-ā* in the verse does not favor an adverbial interpretation, however.) Re’s “aux ailes d’oiseau” obviously takes the first member as the ‘bird’ word, while WG “die mit weiten Flügeln” takes *vī-* as the preverb, but with the second member meaning ‘wing’ as in Re’s interpretation. Ge’s ‘auseinanderstrebenden(?)’ treats the second member quite loosely.

I.6.3: The baffling part of this verse is the voc. plural *maryāḥ* ‘o young men’ in b, embedded in a verse that otherwise has 2nd singular reference (*ajāyathāḥ* c, along with sg. ptcpl. *kṛṇvān* in a). There is no clear referent for this voc., though it may refer to the unidentified plural subjects of the verbs in vss. 1-2 (*yuñjānti*) and 4 (*eriré*). In the plural *mārya-* is often used of the Maruts, which may account for the Anukramaṇī identification of them as divinities of the hymn. Though Ge suggests the “young men” here may constitute the audience for the singer and Re that they are the singers themselves, this seems unlikely because when *mārya-* has an identifiable referent, it is never a human. I tentatively assume that it refers to the Aṅgirasas as the fire-priests who first kindled Agni, the subject of the verse.

As for the subject of *ajāyathāḥ*, contrary to most interpretations I take this as primarily referring to Agni, not the sun, though perhaps, with Re, “Agni solaire.”

I.6.4: Grammatically problematic is the accent on the verb *eriré* in b, a fact that seems to have been elided in most translations, including mine. Old suggests that the particle *āha* may have conditioned the accent, but this seems unlikely because *āha* doesn’t have this effect elsewhere in the RV. However, see Pāṇ. VIII.1.39–40, which prescribes accentuation of verbs after a number of forms, including *āha*. For accented exx. in Vedic

prose (and one ex. in the AV), as well as a thorough treatment of the particle and its history, see Z. Rothstein-Dowden, “On the Etymology of Vedic *áha*” (JAOS 142.1 [2022]). I would now alter the translation to make vs. 4 syntactically dependent on vs. 3, without an overt subordinator. Thus, “you were born together with the dawns, / (as/when) just after that they once again roused ...” Again, though most commentators (save Old) consider this to concern the rebirth of the sun, I think it more likely that Agni/the ritual fire is the object, esp. as *erire* +/- *ní* is regularly used of establishing the ritual fire (e.g., I.134.4). As for c, the service to the ritual fire of the unnamed subjects (=Aṅgirases?) would account for their receiving a name worthy of the sacrifice; see, e.g., I.72.3.

I.6.5: As noted in the intro., this verse helps resolve the unclear referents in the earlier part of the hymn by giving a relatively clear sketch of the Vala myth, with Indra finding the cows after his companions “break the stronghold (=Vala).”

I.6.6: This verse contains, in my opinion, what Re might call a “legère zeugma,” in which the verb *anūṣata* “they bellowed” takes (as is usual) an acc. of the target of the bellowing (“to the finder of goods,” i.e., Indra) in the frame, but in the simile it takes an acc. of the content of the bellowing (“their thought”). Ge avoids this mismatch of acc. function by removing *matīm* from the simile by supplying a form of \sqrt{bhr} ‘bear, present’, leaving *devayāntaḥ* as the only term directly compared in the simile: “Wie Gottverlangende, die das Lied [vortragen], so haben die Lobreden ... hergerufen.” It is certainly true that *matī-* is common as the object of \sqrt{bhr} and that \sqrt{nu} doesn’t normally take an acc. of content, but since the poet of the hymn has pushed the linguistic limits elsewhere, I prefer to think he meant the jarring figure. Note that there is also a mismatch between the two subjects, with the simile referring, implicitly, to human actors, while the frame has ‘songs’ (*gīrah*) as subject (unless we take the Aṅgirases or the cows as subj. and allow *anūṣata* to take two accusatives: “they bellowed their songs to the finder of goods” – however, \sqrt{nu} doesn’t take two acc., to my knowledge).

The zeugma may iconically represent the fact that the verse connects across a temporal gap as well: the simile seems to refer to present-day worshippers producing their praise, but the frame (with augmented verb form) refers to the mythic past of the Vala tale. This verse thus serves as a transition to the here-and-now of the current ritual, which is treated in vs. 7.

I.6.7: As noted in the intro., this verse pairs structurally with vs. 3; I therefore take Agni to be the subject, with the verse expressing the kindling of the fire at the time when Indra arrives to receive the morning offering.

The form *dṛkṣase* is isolated, but its grammatical identity is fairly clear (see Narten, Sig. Aor. p. 146): a 2nd sg. mid. *s*-aor. subj. with the “wrong” grade of the root (expect **darkṣase* or **drakṣase*); it is probably based immediately on the other *s*-aor. middle form, 3rd pl. indic. *adṛkṣata* (5x, once accented) of the same metrical shape (minus augment), which always appears final, as does *dṛkṣase*, and usually in dimeter verse as here.

The two beings in pādas ab, one as unexpressed sg. subj. of the verb, one in the instr., are then referred to as a pair in the du. nom. of pāda c, the predicate of an unexpressed nominal sentence “you two are...”

I.6.8: The Āngirases are presumably the referents of the instr. phrases, and the verse is, like 5, a pretty clear allusion to the Vala myth.

I.6.9: As suggested in the intro., this is the last real verse of the hymn, as vs. 10 is a mere variant of 9, and it shows a bit of ring composition: the *diváh ... rocanāt* echoes *rocanā diví* of 1c, and if we were to accept Re's interpr. of 1b *tasthúṣaḥ* as an ablative, the ablatives *átah* and *rocanāt* would match it grammatically.

This is a rare example of the present middle *ṛñj* not taking an acc. (see Tucker 2002: 284 n.17, HS 115 "RV rgmín-, ṛgmíya- and ṛñjate"). (JL)

I.7 Indra

I.7.1: *anūṣata* provides a link to the immediately preceding hymn, I.6.6.

I.7.2: Though a number of interpreters (Gr, WG, Scar) take *vacoyújā* as an instr. sg. and supply *ráthēna* 'chariot', this form otherwise (4x) is only du. and modifies *hárī* 'the two fallow bays'. Thus, it seems better to follow the Sāy/Ge/Re interpr. As Ge points out, the untethered *ā* in b allows a form of *√sthā* to be supplied, in the idiom *ā√sthā* 'mount'. The verse is then slightly unusual in referring to Indra's twin horses in two grammatical cases in the same sentence (*háryoḥ* loc., [*hárī*] *vacoyújā* acc.).

I.7.3: A more felicitous tr. of *dīrghāya cákṣase* might be "to be seen for a long time," but "for the long view" allows the phrase to be read as referring to either time or space ("to be seen for a long distance") or both.

The usage of the instr. *góbhiḥ* is somewhat strange; it is clearly not meant either as an instr. of agent/instrument or of accompaniment, at least of simple accompaniment. It might be an instr. of separation, or, as in this tr., an adjunct or accompaniment to the obj.: "the rock (which was) with cows." ET points out to me that such a construction would be very unusual; I suggest that it could derive from an instr. of accompaniment: "the rock along with its cows."

I.7.5: The phrase *mahāddhané ... árbhe* "when the stake is great and when it's small" is an example of the occasional gapping of a 2nd cmpd member in a parallel construction; we would expect **arbha-ddhané*. So already Gr; the ex. is cited by Wack (AiG II.1.35). The same phrase is found in I.40.8.

I.7.6: For the pot, see intro. The doubling of the 1st pl. pronoun (*naḥ* in a, *asmábhyam* in c) is probably simple redundancy, with *naḥ* a Wackernagel placeholder at the beginning of the sentence, anticipating the full pronoun that opens c. However the *naḥ* could possibly be construed with the voc. *sátrādāvan* 'who give in every way' in b, though it seems a bit distant from the enclitic.

I.7.7: Improper relative, as shown best by Re's rendering, "Les corps-de-louange qui, poussée, (vont toujours) plus haut..." (Re's suspension dots). The masc. nom. pl. *yé ...*

stómāḥ of ab has no matching grammatical referent in the main clause of c, though it is picked up by its semantic and etymological equivalent, fem. sg. *suṣṭutī-*.

I.7.8: Connected to vs. 6 by shared vocab., *vṛṣan-* (a) and (the rather rare) *āpratiṣkuta-*, though separated by vs. 7.

I.7.9: Incomplete sentence, consisting only of rel. cl., completed by main cl. of 10. The *ékaḥ* opening this last sentence of the hymn and the *kévalaḥ* ‘exclusively’ that is its last word are more insistent counterparts of *íd* in the opening pādas of vss. 1-2. Once again Madhuchandas seems to be faintly signalling ring composition.

I.8 Indra

I.8.2: Incomplete sentence, with relative hanging off *rayīm* ‘wealth’ in the previous verse. Two methods of fighting are contrasted: ‘fighting (*-hatyā-*) by fist’ (*muṣṭi-*, my ‘bare-knuckled’) and ‘on horseback’ (*ārvatā*). Although the two terms are grammatically parallel (instrs. *muṣṭi-hatyāyā* and *ārvatā*), they are not semantically, since it’s the first member of the compound, *muṣṭi-* that corresponds to *ārvatā*, and ‘fighting’ must be supplied with the second term.

The verse shows overt signs of late grammatical features: esp. the *-ai* ending of the middle subjunctive *ruṇádhāmahai* (rather than *-e*), but also the longer *-ā*-stem instr. *-āyā* (rather than *-ā*), though of course the latter is fairly well distributed throughout the RV.

I.8.3: Concatenation of *tvótāsaḥ* (pāda a) with the same form in 2c, though the one in 2c requires distraction (*tuvo-*), but not the one in 3a. Ge/Re take *ghanā* as (an archaic) instr. sg., but nom. pl. *ghanā(h)* seems preferable, esp. as Madhuchandas uses the same word in the sg. as a personal designation in I.4.8 (where it applies to Indra and which I tr. ‘bane’). So Old. Although designating animate beings (namely “us”) as “hammers” may seem unusual, it’s not unprecedented, at least in English: cf. the rock song entitled “Sometimes you’re the hammer and sometimes you’re the nail,” and (gleaned from Google) a quotation from an American poet unknown to me, Edwin Markham (1852–1940), “For all your days be prepared, and meet them ever alike. When you are the anvil, bear – when you are the hammer, strike.”

I.8.6: The whole verse is a relative clause with accented verb (*yá āśata*), with no overt antecedent available in either the preceding or the following vs. My solution follows Old, who suggests that it implicitly hangs off vs. 5: Indra’s power is (for those) who... This fits the message of the hymn, that men’s success is entirely dependent on Indra’s aid and intervention, a message that is reinforced by the interdependence of various vss. already noted (1-2 [main cl., rel. cl.], 2-3 [lexical concatenation]) and to be described below [7-10].

Though *āśata* lacks expressed obj., ‘him’ (=Indra) should be supplied, on the basis of passages like I.85.7, VIII.97.9.

In the publ. tr. I follow Gr's deriv. of *samohá-* from *sám √ ūh* 'shove together', but I now think that it is better analyzed as *sa-mohá-* to *√ muh* 'be confused' (see comm. ad IV.17.13) and would slightly modify the tr. here to "in the confusion (of battle)."

I.8.7: Yet another untethered rel. cl. In my view, the description of Indra's physical capacity serves as the basis for the expressions of Indra's vast liberality and help in vss. 8-9, each of which begins with *evá hí* "for just in the same way." Therefore the *yáh* 'which' of 7a seems a substitute for *yáthā* 'even as', the usual relative with *evá*. Although I do not so translate it, 7-8 could be rendered "even as his cheek ... swells ..., even so is his liberality..."

For *kukṣí-* as 'cheek', not 'belly', see Jamison 1987 (Gs. Cowgill).

I.8.8: The image of Indra's generosity as "a ripe branch" is an unusual one; I do not know of a parallel. In any case, "ripe branch" must be a condensed expression for something like a branch laden with ripe fruit. (JL)

I.8.10: Despite sharing the *evá hí* opening with vss. 8-9, this verse is not entirely parallel with those two, which express the vastness of Indra's liberality and help. Here it is what we owe Indra, praise and recitation, that are implicitly suggested to be as vast as what he gives us. A tr. more parallel to the previous two verses would be "Just the same [that is, just as vast] are those things beloved of him, the praise-song and recitation to be proclaimed ..." However, I favor the published tr., with *śáṃsyā* 'to be proclaimed' as predicate, because it provides a hortatory end to the hymn.

I.9 Indra

I.9.1: *somapárvan-* 'soma-joint' could refer either to the segments of the stalk of the soma plant (e.g., Re) or to the segments of the Soma Sacrifice (e.g., WG). Ge suggests it's a word play. It is difficult to judge, but I weakly favor the horticultural interpretation.

There is no explicit 2nd ps. in c, but the general interpretation of this pāda as referring to Indra seems correct.

I.9.2: For the doubling of the enclitics *īm enam* see Jamison 2002.

I.9.6: With Re I take the two acc. pl. -*vant*-adjectives (*rābhasvataḥ ... yásasvataḥ*) as proleptic, with the acquisition of these qualities being the result of Indra's impelling of us – rather than taking them as qualities we already possess, as most translators do.

I.9.8: *rathín-* should of course mean 'possessing chariots' or express some looser association with a chariot or chariots (such as Re's "carried on chariots") but since there's no obvious association of refreshments with chariots, an idiomatic and figurative use like Ge's "wagenvoll" seems appropriate – hence my "by the cartload."

I.9.9: In my view *gr̥ṇánta(h)* is an instance of the comparatively rare (but more common than generally supposed) predicated present participle. Other translators (Ge, Re, WG) take the participle as attributive and consider the sentence incomplete.

I.9.10: As Thieme (Fremdling, pp. 11f.) points out, the verse sets up an implicit contrast between Indra, who is “at home” (*nyòkas-*) wherever soma is pressed, and the stranger – but this opposition also implicitly suggests that, despite being a stranger or foreigner, any man can offer soma and praise to Indra, who will make himself at home in those foreign parts. This contrast would be better expressed by “even the stranger chants...” rather than the published “the stranger himself chants...”

The position and function of *ā* (embedded in *éd*) in b are unclear. The verb *\√arc* doesn’t take *ā* and in any case preverbs don’t usually ended up stranded in the middle of a pāda (of course the etymological figure *brhád brhaté* could have been fronted around it); a mid-pāda position suggests a role as adposition, but as an adposition *ā* doesn’t take a dative.

I.10 Indra

I.10.1: The first three pādas almost, but not quite, provide a tripartite ritual speech division: Sāmaveda, R̥gveda, X? Veda. The last is the problem: the “formulators” don’t work very well as speakers of Yajurveda yajuses, and it’s too early for the brāhmaṇa priest to be associated with the Atharvaveda, as in later Vedic.

Pace most translators, pf. *yemire* is ordinarily presential in value; see Kümmel s.v. *yam*.

I.10.2: Most translators take the subject of ab to be the sacrificer, but Indra seems a more likely candidate, esp. since *kártva-* ‘to be done’ is regularly used of the prospective deeds of Indra (e.g., II.30.10, IV.18.2, VIII.63.6).

I.10.3: On *hí* with the imperative marking that clause as the causal basis of the next clause, here initiated by the logical connector *átha*, see Brereton 2012 [Bronkhorst Fs.].

I.10.5: The rt noun cmpd *puru-niṣṣídḥ-* appears at first to be an exception to the apparent rule that such cmpds with direct-object 1st members do not also include preverbs (on which see comm. ad I.124.7), but this cmpd appears to be a bahuvrīhi (‘providing many fulfillments’), and further, the word *niṣṣídḥ-* seems completely lexicalized, with an uncertain history.

rārāṇat: pf. subj. with presential value, like the whole pf. system of this root. See Kümmel s.v. *ran* and Jamison (García Ramón Fs).

I.10.6: The case usage here is somewhat odd, in that the three benefits we beg Indra for, in strict parallel structure, are in loc., dat., and loc. respectively (underlying forms *sakhitvé ... rāyé ... suvīrye*). However, all end in *-e* — showing that surface phonetic agreement can sometimes trump case function.

The transformation of an epithet (*śakrá-* ‘able’) into its associated verb (*śakat* ‘he will be able’) is a neat little figure and demonstrates the importance of gods’ dynamically living up to their verbal attributes. (For the almost identical pāda see VIII.32.12.) It is an example of a type of verbal transformation of divine epithets into desired divine action that Elizarenkova (1968: 267–68) attempted to claim as the, or an, organizing principle of

RVic hymnic composition, despite its relative rarity. Of the other standard translations, only Re (“... le puissant; qu’il exerce .. sa puissance”) captures the etymological figure.

I.10.7: The two compounds in pāda a, *suvivṛtaṃ sunirājam*, do not occur elsewhere and are grammatically and interpretively ambiguous. The semantic reference of the two words is clear — the easy opening (*vī√vr*) of the Vala cave and the easy driving out (*nir√aj*) of the cows, using the standard lexemes for those actions — but 1) what are their stems? and 2) assuming they are adjectival, what do they modify? Gr/Lub analyse them as *-a*-stems -- also AiG II.1, though AiG II.2 takes *sunirājam* as belonging to an *a*-stem (p. 86) but *suvivṛtaṃ* to a root noun (p. 43) [and Hauschild’s Index to AiG lists them both as root nouns, somewhat emphatically] -- while, e.g., Old and Scar take both as root nouns. There is another formal anomaly: the pāda they form, *suvivṛtaṃ sunirājam*, has only one internal heavy syllable, the final syllable of the first word, where the initial consonant of the second makes position. A very unusual metrical line. Arnold (VM 125–26, 290) suggests the possibility of reading *suvivṛtaṃ* on the basis of the lengthening of the final vowels of the preverbs *āpi*, *abhī*, *pāri*, etc., before forms of *√vr*. Thanks to ET for pointing this out.

As to their reference, the general approach has been to take them as modifying an unexpressed *īndram*, supplying the whole structure of 6a (*tām ... īmahe* “we beseech him”) or some similar verb phrase to provide a grammatically acceptable referent for the two forms in 7a. But this solution is not very satisfying: Indra appears in the 3rd ps. *nominative* in 6c and as 2nd ps. *vocative* and *subject* of impv. in 7bcd, so extracting an acc. from a pāda in the past seems arbitrary. Scar suggests that the two words might instead modify *yásah* in b, which has the merit of providing a referent close by; however, this would technically eliminate the possibility that the two are root nouns, since *yásah* is neut. and presumably nom., and if the two words in pāda a are root nouns, they can only be acc. sg. I am nonetheless attracted by this solution (and would therefore be open to the *-a*-stem interpretation), with the possible modification that the two might actually be nouns (“the easy opening ... , the easy driving ...”) that specify the glory (*yásah*) of b. I have not troubled myself to figure out how the accent and other details of the formation would work, however.

On the possible double sense of *tvāḍātā* in b, see publ. intro.

I.10.8: *jéṣah*: The standard translation take this *s*-aor. subj. as a functional impv. parallel to *dhūnuhi* in d, whereas I take it as having real subjunctive value. This has the merit of providing a main clause to the subordinated *hí* clause of ab. Moreover, the otherwise identical pāda VIII.40.10 with 3rd sg. subj. *jéṣat* has clear subjunctive value, and in addition there is already a well-attested “*-si* imperative” *jéṣi* (7x) that fills that function for the *s*-aor., so it seems unlikely that *jéṣah* would be so used.

I.10.9: *āśrutkarṇa śrudhī*... shows the same transformation of an epithet into a derivationally related divine action as 6c.

I.10.10: Takes the verb phrase of 9a *śrudhī hávam* and elaborates on both its members, with b *havanaśrútam* and c *hūmahe*.

I.10.11: Kuśika is the ancestor of the Viśvāmitras, the family to which our poet belongs. As this is the last hymn attributed to Madhuchandas in this set, an ancestral reference is in order.

Dunkel (1997: 21) claims that the *ā* that opens this vs. cannot be the preverb, but most be his “asserative, sentence-initial **eh* ‘hey!’,” because *√pā* doesn’t otherwise appear with *ā*. He dismisses those who supply a verb of motion like ‘come’. But the numerous exx. of “come and drink” (e.g., VIII.65.5 *éhi naḥ sutām piba*; VIII.4.8 *tūyam éhi drāvā pība* and its variants) would favor a reduced expression of the sort “(come) here (and) drink...” Moreover, *ā tūl tū* is a common pāda opening.

I.11 Indra

I.11.1: The phraseology involving “songs” (*gīraḥ*) and “strengthening” (*√vṛdh*) matches that of the last verse of the preceding hymn (I.10.12) attributed to the father (or other ancestor) of this poet.

“Lord of prizes and lord of settlements” in d may set up an implicit contrast between battle and battle-like activity (contests with prizes) and peace.

I.11.2: “Conquerer” (*jétar-*) as epithet of Indra here may be responsible for the poet’s name Jetar in the Anukramaṇī.

I.11.3: Though the printed text reads *yádī* ‘if’, with (as often) lengthened final vowel, nothing prevents us from taking this as *yád ī*, ‘when’ + enclitic acc. pronoun, anticipating the expressed acc. obj. For this phenomenon, see Jamison 2002.

I.11.5: Though it may seem odd that the enemy Vala is called ‘fearless’, the other solution, to take *ābibhyuṣaḥ* as an “irregular” nom. pl. masc. pf. part. (expect *ābibhīvāṃsaḥ*) (so Sāy/Old), is not satisfying, esp. as it’s hard for me to see how the gods could be both “fearless” and “being pushed back” (although ET points out that they could have come to Indra’s aid without fear, even though being pushed back). The question is what syntactic function the gen./abl. *ābibhyuṣaḥ* is fulfilling. Re seems to take it as a gen. agent with *tujyāmānāsaḥ* (“pressés par le (dieu) sans peur”), but gen. agents are rare and confined to semantically and grammatically specialized situations (see Jamison 1979), and an ablative value “before,” as implied by Ge, seems better. Since expressions of fearing take the ablative, we can even assume an underlying implicit contrast: “the gods, (fearful) of [=from] the fearless one...”

I.11.6: Although Ge suggests simply that the poet is announcing Indra’s gifts to the river of his native land, this may have a further mythological reference. Esp. in X.108 (Saramā and the Paṇis), the (Vala) cave in which the Paṇis have trapped Indra’s cows is on the edge of the world, across the river (Rasā) that borders the world. Here the poet may be evoking this myth to indicate the efforts that he (and Indra) must expend to retrieve the good things his community desires, and to emphasize that poets and wise men (see also vs. 7) must bear witness to Indra’s deeds performed far away in order to attract his munificence.

I.12 Agni

I.12.6: The plethora of ritual fires implied by the āmreḍita *agnīm-agnim* in vs. 2 is made more explicit in this expression of the kindling of one fire by another, presumably (as Ge suggests) through the taking out of the Āhavanīya fire from the Gārhapatya, much treated in the later ritual lit. The Āhavanīya may be referred to in 5a *ghṛta-āhavana-* ‘whose oblation is ghee’, and in this vs. the second pāda (6b) might contain allusions to the three ritual fires, *grhāpati-* ‘household’ a transparent reference to the Gārhapatya and *yūvan-* ‘youth’ referring to the newly kindled Āhavanīya (see pāda a). However, this would leave *kavī-* ‘poet, sage-poet’ as a designation of the Dakṣiṇāgni, which doesn’t make a lot of sense, as far as I can see.

I.13 Āprī

On the Āprī hymns see the detailed examination by Lourens P. van den Bosch (IIIJ 28 [1985] 95–122, 169–89).

I.13.5: The singular *amṛtasya* ‘of the immortal’ seems to refer to the collectivity of gods who will come to the sacrifice and sit on the barhis. Vss. 7, 9 name some of the individual gods who will sit on the barhis.

I.14 All Gods

I.14.3: All these gods names are in the accusative, but there is no verb to govern them, either in the verse or in the immediately preceding or following pādas. One solution is to reach back to 2a *ā ACC kṛtvā ahūṣata* “The Kaṇvas have called ACC here,” though skipping over the intervening syntactic constructions is not appealing. However, the recurrence of a similar construction in 5ab *īlate ACC ... kṛtvāsaḥ* “The Kaṇvas solemnly invoke ACC” may suggest that the structure of invocation underlies the hymn.

I.14.4: Acdg. to Gr, *mādhvaḥ* is a nom. pl. masc. adj., modifying *drapsāḥ*. But it is surely a gen. sg. of the neut. noun: “drops of honey” (so also, e.g., Ge). Note the identical form in 7c, which has to be a gen. sg., varying with *mādhvaḥ*, also gen. sg., in the flg. vs. (8c) in the same metrical position. In fact, no exx. of *mādhvaḥ* identified as m. or f. nom. or acc. pl. are secure; they can all be interpr. as the gen. sg. of the noun. See further disc. ad IX.89.3.

I.14.6: By making pāda a a nominal sentence, from which the relative clause of bc hangs, I avoid the need to supply a main clause verb for c that other tr. encounter. E.g., Ge “Die ... Fahrrosse, die dich fahren, (mögen) die Götter ... her(fahren).” However, in the following vs. (7) Agni himself is urged to bring the gods here, so lumping together the transport of Agni and the gods as in my interpretation of 6 may not be in the spirit of their separation in 7. Nonetheless, I still feel that the syntactic argument is strong.

I.14.7: The ab pādas literally mean “make (the gods) possess wives,” but we know from the ritual that this refers to the coming of the gods *along with* their wives. Cf. III.6.9 *pātnīvataḥ ... devān ... ā vaha*. Ge translates our phrase literally: “Die Opferwürdigen ...

mache beweibt,” but then paraphrases it in his note: “D. h. bring ihre Frauen mit.” The problem would be solved by supplying the preverb *ā*, because *ā√kr* generally means ‘bring/attract here’. Although I am generally loathe to supply material without a clear warrant, it is the case that the immediately preceding pāda, 6c, begins with *ā*, which might have been taken to have domain over what follows.

I.14.9: The hapax *ākīm* (so, e.g., Gr, Aufr, HvN, Lub) or, more likely, *ā kīm* contains what is apparently a now meaningless particle *kīm*, matching the shape of the acc. particles *īm* and *sīm*. Though clearly derived from the interrogative **k^u*-stem, it has lost all interrogative value, presumably “laundered” through the weak negative indefinites *nā kīm* (or *nākīm*) and *mā kīm* (or *mākīm*). It is not at all clear what, if anything, *kīm* is doing here.

I.14.10: Instrumental plurals begin (*viśvebhiḥ*) and end (*dhāṁabhiḥ*) the verse. The question is whether they should be construed separately or together. Ge chooses the latter path: “Mit allen Verkörperungen des Mitra (der Freundschaft).” But because the hymn is dedicated to the Viśve Devas and there is an emphasis on them throughout (see esp. vss. 1, 9, with ‘gods’ or words referring to them collectively in vss. 2, 6, 7, 8), I prefer to supply ‘gods’ with *viśvebhiḥ* and take *dhāṁabhiḥ* separately (sim. Re, WG), interpreting *mitrāsya* not as the god’s name (or not principally the god’s name) but as referring to the alliance that undergirds the sacrificial system.

I.14.12: The construction involving the normally causal particle *hi* and the imperative is a troubling one. Brereton (2012 Bronkhorst Fs.) plausibly argues that in cases like this, with two imperative clauses in sequence, the *hi* clause expresses the action necessary for the second one to take place. In other words, the usual causal value of *hi* is found there as well, though the addition of imperative modality makes it difficult to render in English.

I.15 Sequential deities (for the ṛtugrahas)

Although this hymn is in some ways a rote and formulaic listing of the Ṛtugraha deities with invitations to drink of their respective cups, the poet does inject some life in the hymn by varying the expected phraseology. After having established the formula DRINK *ṛtúnā* in the first few verses, the poet introduces deviations from that formula. In vs. 5 he urges Indra to drink not from the Brahman’s cup (as would be standard: see II.36.5), but from the Brahman’s “largesse” (*rādhasaḥ*) and *ṛtúm ānu* substitutes for *ṛtúnā* (note the phonological crossing of *únā: ānu*). In vs. 6 there is no invitation to drink, though *ṛtúnā* is found in another expression. In vs. 7 the expected deity (“Wealth-giver”) appears in the nominative (*draviṇodā(h)*) as expected, but there is no attached predicate: the verse goes off in a different direction. The Wealth-giver is the subject of the next three verses (8-10) as well, but it is only in vs. 9 that any drinking goes on. Here the imperative “drink!” is replaced by the desiderative “desires to drink” (*pīpīṣati*), and though there is an ablative of a priestly cup, it is one belonging to a different priest and the verb used with it is not ‘drink’. Although this is not high art, it does show that even the most cut-and-dried litany affords some room to tinker with the verbal form.

I.15.1 The accent on *pība* is syntactically unnecessary and not well explained. Oldenberg (ZDMG 60) suggests either that it's a not explicitly marked foundation clause for the following clause, or that *pība* has a tendency to emphatic accentuation. Although he does not want to get the accent from *pībata ṛtúnā* in the next verse, where the accent is correct (following voc. *márutaḥ*; cf. also *pība ṛtúnā* in 4c, again with correct accent), this seems a possibility. One might also note that in the second Ṛtugraha hymn sequence (II.37.1-3), the verb is accented in the phrase *pība ṛtúbhiḥ*, though again the accent is unnecessary. So perhaps *pība ṛtúnā/ṛtúbhiḥ* was a separable refrain-phrase in the Ṛtugraha ritual, and therefore received accent even when incorporated into a hymnal context. See now comm. ad III.32.1.

I.15.2: *sudānavaḥ* lacks accent and is therefore a vocative, not (as the tr. implies) a predicative nominative. The predicated vocative has been much discussed in the lit.; see Old, *Noten* ad loc. and Bloomfield, *RR*. On this repeated pāda see comm. ad VIII.7.12.

I.15.3: Tvaṣṭar is called Neṣṭar ('leader') here because he regularly "leads" the wives of the gods.

I.15.4: The three wombs are presumably the three ritual fires, so "at/by" would be a more felicitous translation than the published "in."

I.15.6: The voc. *dhṛtavrata* 'of steadfast commandments' is apparently a *singular* in the Saṃhitā text, though the Pp. reads -ā. There is, however, no sandhi situation that could have triggered a shortening of the final vowel. Although the epithet is several times found in the du. modifying Mitra and Varuṇa (VIII.25.2, 8), it is more often in the singular modifying only Varuṇa (e.g., I.44.14, 141.9), and this may have been the intent here. The *vrata* is really Varuṇa's province, not Mitra's. However, the matter is complicated by the fact that the clear dual dvandva voc. *mītrāvaruṇa* in b also has a singular ending, rather than expected -ā. I would attribute this shortening to an attempt to match the short final of sg. *dhṛtavrata*, rather than assuming the shortening affected both words for the same reason. Alternatively, as JL points out to me, it would be possible to consider the final short vowel of *dhṛtavrata* an example of Kuiper's Law, with loss of final laryngeal in pausa, though this could not account directly for the following *mītrāvaruṇa*, which is the real problem.

I.15.9: For *prā√sthā* with soma as expressed or implied obj., see parallels cited at VI.41.2.

I.16 Indra

I.16.1: It's not clear why Indra's horses are called *sūracakṣas*- 'having the eye of the sun', a word otherwise (3x) used of gods. The awkward doubling of the enclitic *tvā* (found in both a and c, as object of the same verb) might suggest that the c pāda was borrowed from elsewhere. And indeed this hymn gives the impression of being assembled from ready-made formulae; the proportion of repeated pādas is fairly high (see Bloomfield, *RR*), not to mention sub-pāda repetitions. JL suggests, however, that the repeated *tvā*

might not be the result of careless doubling, but rather the stranded object of a gapped repetition of *vahantu* in pāda a.

I.17 Indra and Varuṇa

I.17.3: The other standard translations take *tarpayethām* as a self-beneficial reflexive “satisfy yourselves” with *anukāmām* referring to the gods’ desire (e.g., Ge “freuet euch nach Herzenslust”; Re “Rassasiez-vous à votre gré”), but this doesn’t make sense. The whole hymnic context depicts Indra and Varuṇa as givers, not takers, and it’s not clear to me that gods ever desire wealth, per se. It is much more likely that the poet is asking the gods to grant *us* wealth, and that the *kāma* is the mortals’, not the gods’. For further discussion, with a strikingly parallel usage, see Jamison 1983: 140-41 and esp. n. 73, though I would not now emend the text to **ānu kāmam*, as I suggested there. Curiously, though Ge *translates* the verb as a reflexive, he goes to elaborate pains to *interpret* the whole phrase as urging the gods to give us their wealth, in other words much the same meaning as I favor.

In b *rāyā ā* is ambiguous as to case; it could be either dat. *rāye* or abl./gen. *rāyas* (so Pp.). Ge takes it as a gen., construed with *anukāmām*, but *rāyā ā* is a fairly well-established expression (e.g., I.81.7, III.56.6) and the *rāya* seems too distant from *anukāmām* to be naturally construed with it. Most other tr. seems to favor the dat. (see esp. disc. of Old ad loc, also Re.), but I weakly favor an abl. reading “from (your) wealth.”

A further question is what noun to supply with *nēdiṣṭham* ‘closest’ or what else to do with it. Ge suggests ‘wealth’ in a note; Re seems to take the word as adverbial (“de la manière la plus proche,” whatever that means). My supplied “friendship” is based on two occurrences of *āpyam* (VII.15.1, VIII.73.6) and one of *āpīm* ‘friend’ with *nēdiṣṭham*. Esp. telling is VIII.73.6 *nēdiṣṭham yāmy āpyam* “I beseech (you two) for closest friendship,” with the same verb as here.

I.17.4: A curious construction: $\sqrt{bhū} + \text{GEN.}$, which seems to express partitive value: “become (part of) X” → “partake of,” though the path to partitive meaning is not straightforward. (Other translators seem to feel less guilt about making this leap than I do.) Closest to it formulaically is *vidyāma* + GEN, “might we know of X.” Cf. *vidyāma sumatīnām* (I.4.3, X.89.17) “might we know (of) your favors.” The oddity of the construction is exacerbated by the emphatic pāda-initial repetition (a, b) of indeclinable *yuvāku* ‘of you two’.

I.17.5: As noted in the intro., this is the middle verse of the hymn and the only one in which Indra and Varuṇa are separated, and in my view translations that don’t take this into account are likely to be on the wrong track. (So, Ge’s “Indra, Varuṇa sind der preisliche Rat der rühmlichen Tausendschenker,” which puts all nominatives and all genitives together.) The rhetorical structure of ab, nom. sg. – gen. pl. / nom. sg. – gen. pl., invites an association of each nom. sg. with its immediately following gen. pl., producing a contrastive pair of Indra associated with thousand-giving and Varuṇa with (something) to be proclaimed. I have followed this rhetoric clue and, further, have tentatively supplied

a noun ('master') to head the gen. phrase. Alternatively, *krátuḥ* of c may be the head ("Indra becomes the *krātu* of ..."), as WG take it (also Ge).

There is the further question of what *śamsyānām* refers to. I have somewhat reluctantly supplied 'riches', since this is a theme of the hymn and *śamsyā-* several times modifies *rayī-* and similar words (e.g., VIII.60.11, X.47.2). However, it also regularly qualifies verbal products like *ukthyā-* or *ukthā-*, and given Varuṇa's nature, an association with "(solemn words) to be proclaimed" is probably more likely than with "(riches) to be proclaimed." I might therefore modify my published translation, though the desire for wealth is quite strong in this hymn (see vss. 3-4, 6-7).

I.17.8: The doubled *nū nū* 'now now, just now' is found only here, though doubling with an intercalated particle is found (*nū cin nū* I.120.2, VI.37.3, VII.22.8). It is possible that the sequence *nū nū vām* is meant to evoke a form of \sqrt{nu} 'bellow, shout', in this verse concerning the poet's praise of the gods. Various forms of song and so forth serve as subjects of \sqrt{nu} . Cf. nearby I.6.6, 7.1.

I.17.9: *suṣṭutī-* 'lovely praise' is not a particularly good obj. of *huvé*, which ordinarily takes the addressee, not the content of the call. (See ... *vām ... huvé* in vs. 7.) Here the semantic disharmony may suggest that the lovely praise is personified and urged to do her part to please Indra and Varuṇa.

I.18 Brahmanaspati and Sadaspati

I.18.1: Though *somānam* is assigned to a *-man-*stem by Debrunner (*AiG* II.2.760), it seems preferable to analyze it, with Kuiper (IJ 15 [1973]: 190–94 [my thanks to ET for the ref.]), as having the so-called "Hoffmann suffix" (*-*Hon-* / -*Hn-*) (Hoffmann 1955 = *Aufs.* II, 378-83) added to the thematic noun *sóma-*, of the same type as Aves. *mθrān-* 'possessing *mθras*' to *mθra-*. Our *somānam* is a hapax, so there are no diagnostic forms; a masc. agent noun in *-mán* would also have suffixal accent and a long suffixal vowel (cf. *dharmānam*, *-as* 'upholder(s)'). In favor of the Hoffmann-suffix interpretation is the quadrisyllabic scansion, inviting distraction of the *-ā-*, which should not occur in a *man-*stem. The accent might be a problem; Hoffmann is somewhat cagey about the accent of these forms (not difficult, since most of his examples are Avestan), but he does suggest (p. 381) that the original accent of the acc. sg. might fall on the suffix, as here. Kuiper makes no mention of the accent. For another likely ex., see *stavān* and comm. ad VI.24.8.

Most translators (Ge 'Lautsingenden(?)', Re, Schmidt B+I, WG) take *svāraṇam* to the 'sound' root \sqrt{svar} , though Gr connects it with *svār-* 'sun' ('glanzreich'). The metrical distraction to *suvāraṇam* might favor a connection with the 'sun' word, since, as far as I know, the 'sound' root is never so distracted. This hapax is also phonologically reminiscent of *svārṇara-* 'possessing solar glory', whose initial cluster is always distracted and which almost always occupies the end of the pāda, as our word does. At the very least, it is likely that *svāraṇa-* is a pun.

It is surprising to find Kakṣīvant Auśija, the dazzling poet of I.116-26, in the context of this rather simple and mundane hymn, for Medhātithi certainly lacks Kakṣīvant's skill. The request must then be seen as a species of wishful thinking. I

translated *auśijā-* literally, as ‘descendant of a fire-priest’, though it is also Kakṣīvant’s metronymic, because I think the word previews the Agni theme of the second half of this hymn. However, I now think the final clause *yá auśijāh* may be an izafe-like construction further specifying Kakṣīvant by this metronymic. The publ. tr. follows Ge in assuming a desired identification of Medhātithi with Kakṣīvant: Ge “Mach ... zu einem (zweiten) Kakṣīvat.” ET points out that there is actually no overt mention of Medhātithi and the verse could simply mean “make Kakṣīvant a possessor of soma ...” But then we still must explain the presence of Kakṣīvant here.

I.18.3: The *śámso áruruṣaḥ ... mártasya* “(male)diction of the grudging mortal,” which is dreaded by the poet, anticipates the desirable *nárāśámsa-* ‘praise of men’ that opens the last verse of the hymn (9).

I.18.6: *ayāsiṣam*: I take this form to the root $\sqrt{yā}$ ‘beseech, implore’, not to $\sqrt{yā}$ ‘drive, go’, which does, admittedly, have a well-attested *-sis-*aorist. So also WG, though other translators (including Schmidt, B+I) render as a verb of motion (Ge “habe ich ... angegangen”). That interpretation isn’t impossible, but ‘beseech’ fits the context better.

I.18.7: If the referent of *yásmāt* is Agni and the two halves of the hymn concern the verbal and the physical parts of the sacrifice respectively, as I argue in the intro., this verse makes particular sense: even a skilled poet has to get the oblations right.

I.18.8: All standard tr. take *hótrā* as nom. sg. and the subject of the clause. But since the point of this verse and the last one is the labor Agni expends in making the sacrifice succeed, it seems better to keep him as subj. of *gachatī*, as he was of *ṛdhnotī* (a) and *kṛnotī* (b). *hótrā* can then be an instr. sg. of the *-ā*-stem, as commonly. The ritual model in which Agni goes to the gods with the offering is of course quite widespread in the RV.

I.18.9: Note the high proportion of sibilants in this verse.

The meaning of *makhá-* and its relatives (here represented by the second cmpd. member *-makhas-*) is much discussed. I consider it to have both martial and bountiful senses. I take the original sense to be martial and, despite some difficulties, believe the often suggested connection with Grk. μάχομαι. The ‘bounteous’ sense comes, in my opinion, from secondary association with *maghá-*, etc. In this compound *sádmamakhas-* most tr. take the second member in a ‘give, be bounteous’ sense (e.g., Ge “der einen Wohnsitz beschert,” Re “qui confère-généreusement un siège,” WG “den ... mit einem Himmelssitz freigebigen”). However, the martial sense fits the context well. The image is of the smoke of the ritual fire rising to, and thus visually ‘besieging’, heaven itself (so Gr). See Old’s disc.; Scar (277) questioningly suggests both.

I.19 Agni and the Maruts

I.19.4: Note the double etymological figures *arkám āṇṛcúḥ* ‘chanted the chant’ and *ugráḥ ... ójasā* ‘strong ones ... through strength’, with the former nested inside the latter. There is also phonological play between ...*ám āṇṛ-* and *ánādhṛ-*

I.19.7–8: Ge (sim. Re) supplies a verb (“kommen”) with 7b. I am, as usual, reluctant to do so, but as ET points out, swinging the mountains across the sea is a very peculiar image. I would prefer to supply the ‘stretch’ (*ā ... tánvantī*) of the next verse, since the b pādas of 7–8 are structurally identical, producing a tr. of 7ab “Those who make the mountains swing, (as they stretch) across the undulating sea.” However, Ge/Re don’t construe the ‘stretch’ verb with 8b either.

I.20 R̥bhus

I.20.1 Calling the R̥bhus “the godly breed” (*devá- jánman-*) is a bold way to begin this hymn precisely because they did not begin as gods but obtained immortality by their wondrous deeds — the deeds about to be recounted in the hymn.

I.20.2: Although *vacoyújā* is principally a dual acc., modifying the two fallow bays (*hárī*) as usual, it could also secondarily be taken as an instr. sg., modifying *mānasā* ‘with mind’. In any case, ‘speech’ and ‘mind’ are implicitly contrasted in this verse, and in addition *mānasā* contrasts with *āsayā* ‘by mouth’, referring to the means of creating.

I.20.3: Though Ge (/WG) takes *sabardúgha-* as the cow’s name, the word has a literal sense that works well in context.

I.20.5: A reference to the Third Pressing, with which the R̥bhus are associated.

I.21 Indra and Agni

The verbal “hero” of this hymn is the nom.-acc. du. pronoun *tā* ‘these two’, which represents the pairing of the otherwise very different gods Indra and Agni. The form appears 6x in the hymn, with an additional gen.-loc. *tāyoḥ* in 1b.

I.21.6: The opening of this vs., *téna satyéna*, is of course the standard signal of the later truth formulation (satyakriyā). It is difficult to impose such a value here, but the phrase *can* be seen as a summary of the praise-hymn that precedes this final vs. and therefore as the grounds on which the poet asks for their vigilance and help.

Ge (followed by WG) considers the *padá-* that is to be watched over the track or traces of something demonic or monstrous (“Die Spur der Unholde”), presumably the *rākṣas-* of the previous vs. But Re (XIV.121) points out that the root \sqrt{gr} ‘be watchful, wakeful’ always governs an object with favorable sense. Still, the exact reference of *padá-* is unclear. As the word is often used of the ritual ground (e.g., in the phrase *īlās padé* “in the footprint of refreshment” [I.128.1, etc.]), I have interpreted it in this way in the transl. But it’s also possible to invoke another common use of the word, for the cosmogonic footsteps of Viṣṇu, an example of which is in the last verse of the next hymn, also close to a form of \sqrt{gr} (I.22.21): *jāgrvāṃsaḥ ... víṣṇor yát paramám padám* “watchful (over) what is the highest footprint of Viṣṇu.” These two views can in fact be reconciled. As noted below, the “highest footprint of Viṣṇu” in that verse is probably a reference to the sun, identified with the ritual fire, and therefore here “the footprint of discernment” can be both the ritual ground and Viṣṇu’s footprint in heaven.

I.22 Various divinities

I.22.4: The use of the diminutivizing *-ka*-suffix on *dūraké* ‘at a (little) distance’ reinforces the point of the verse, that it’s not much of a trip for the Aśvins to come here.

I.22.6: It is not entirely clear why we “desire the commandments (*vratāni*)” of Savitar, though I think it is likely that it is because his *vratā* keep the world functioning, esp. the cyclical rising and setting of the sun.

I.22.10: Note the opening phonetic figure *ā gnā agna*.

The shadowy goddess figures mentioned here are difficult to sort out. I assume that there are three goddesses here, with Hotrā Bhāratī the double name of the deified libation belonging to the Bharatas. In this passage Ge takes them as two different figures (also in II.1.11, III.62.3), but in I.142.9 as a doubly named single figure. See Old (SBE, ad I.142.9): “Hotrā Bhāratī, i.e., the personified Offering of the Bharatas, seems to be one goddess, more usually called simply Bhāratī,” with reff.

I.22.11: The goddesses “with unclipped wings” (*āchinnapatra-*) are found only here in the RV, but appear in a set of YV mantras used in the Agnicayana at the placing and heating of the ukhā pot (for firing the bricks). See VS XI.61, MS II.76, KS XVI.6, ŚB VI.5.4.8, etc. A number of other female divinities are mentioned in the same context. What *āchinnapatra-* actually refers to is unclear to me. Griffith (ad VS XI.61) suggests “moving freely and without interruption.” It might evoke the myth of the originally winged mountains, whose wings Indra clipped so that they would settle down. But the mountains are masculine figures. I also do not see any sign of the later Agnicayana employment here, simply an association with other female divine figures.

I.22.13: *mahī* is grammatically ambiguous, as it can be either fem. singular or fem. (or neut.) dual. Most tr. take it as the former, modifying only *dyaúh*, but all things being equal, it is preferable to take *dyaúh* as masculine (though fem. occasionally is unavoidable), esp. as *mahī* by itself can refer to the earth without further specification. I see no reason why *mahī* cannot be dual here, modifying the conjoined NP *dyaúh pṛthivī ca*. For the contribution of passages like this to the rare “fem.” forms of *dyaúh* see disc. ad I.57.5.

I.22.14: The meaning of this verse is entirely obscure to me, and it comes as a surprise in a hymn (or set of hymns) displaying no other verbal tricks at all. (It is true that the Gandharva spreads obscurity almost every place he appears in the RV.) I might speculate that what the verse is conveying is that by their inspired hymns the poets have achieved a place in the highest firmament, where the Gandharva often seems to be located, and where they consume the luscious food produced by Heaven and Earth. If this speculation has any merit, the instr. *dhītibhiḥ* should not be taken as an instrument of licking (“lick ... with their poetic insights”), but rather as an instr. of cause (“by reason of their [prior and successful] poetic insights”), so the publ. tr. could be amended accordingly.

I.22.15: On *anrkṣarā-* as ‘not sweeping men away’, rather than ‘thornless’, see Jamison 1993 (Fs. Rix). The standard ‘thornless’ interpretation has no real support; I derive the word instead from *a-nṛ-kṣara-*, to the root $\sqrt{kṣar}$ ‘flow, stream’, cognate with Greek φθείρω ‘I destroy’. Formulaic and textual support for this analysis is given in the art. cit.

“A place to settle down” (*nivésanī*) might have been better tr. adjectivally “bring to rest, causing to settle down,” but this causes awkwardness in the English.

I.22.16-18: This *ṛca* is marked by minor ring composition: the *ātaḥ* [sandhi *āto*] ‘from there’ that begins 16a also begins the last pāda of 18, in the same sandhi form.

I.22.20: The image in pāda c needs a little unpacking. The “eye in heaven” is of course the sun; the incongruity is that it is depicted as “stretched out,” which might suggest an elongated ovoid sun, not a happy picture. The concentrated expression of pāda c rests on the common formula of the sun stretching (through space) with its rays (*raśmī-*), as in VII.47.4 *yāḥ sūryo raśmībhir ātatāna* “towards which [=waters] the sun has stretched with its rays.” Note that *sūrāyaḥ* ‘patrons’ ending b phonologically evokes the absent *sūrīya-* in c.

I.22.21: This verse also contains some semantic incongruities: “kindling the footstep” is of course a curious expression, and that poets, presumably human, perform this action on the “highest footstep of Viṣṇu,” usually an expression for highest heaven, makes it all the odder. Ge (also Old, WG) plausibly identify “the highest footstep of Viṣṇu” here as the sun, and the verse would therefore express the common notion that priests kindling the ritual fire at dawn cause the sun to shine.

I.23 Various gods (Prauḡaśāstra)

I.23.4-6: This *ṛca* to Mitra and Varuṇa stations the two names in three different ways in the three verses. In 4 *mitrā-* opens the first pāda and *vāruṇa-* the second; in 5 they are expressed in the dual dvandva *mitrāvāruṇā* in c; in 6 they again open the first two pādas, but with *vāruṇa-* first and *mitrā-* second.

I.23.8: It is striking that all of ab is made up of vocatives, with each one accented: because of the place of the accent, three of the four words *have* to be vocatives; only *īndrajyeṣṭhā(h)* could be nom. pl., since *īndra-* has inherent initial accent. The first word of c, *vīśve*, may also be and probably is a voc., making a pair with voc. *dēvāsaḥ*, which opens the preceding pāda. On the voc. of *vīśva-* see comm. ad X.15.6.

It would be satisfying to have three GOD-X bahuvrīhis parallel in semantic and morphological structure, but although Ge (followed by WG) interprets the *rāti-* in *pūṣa-rātayaḥ* as an agent noun (“mit Pūṣan als Gönner”), *rāti-* both as simplex and in its fairly numerous compounds is always an abstract ‘giving’ or concretized version thereof (‘gift’), as its morphology as a deverbal feminine abstract would require. I therefore take the third cmpd as a tatpuruṣa *pūṣa-rāti-* the gift(s)/giving of Pūṣan’. It owes its initial accent to the fact that it is a voc. (as does the bahuvrīhi *mārudgaṇāḥ* [expect **marúdgana-*].) The ‘gift’ or ‘giving’ of Pūṣan is described as auspicious (*bhadrā*) in VI.58.1.

I.23.9: Ge (WG), following Gr, tr. *sáhasā* as an adj. modifying Indra (“mit dem starken Indra”), but this is of course impossible. With that accent it must be a neut.; accent shift to **sahás-* would turn it into an adjective, but this form is unattested (versus, e.g., *yásás-* ‘glory’ → *yásás-* ‘glorious’).

On the analysis of fairly common 3rd sg. *īśata* (always with *mā(kiḥ)*) as an injunc. to a reduplicated aor., see Hoffmann 1967 (*Injunk.*): 64-66 (seemingly accepted by Lub, Concordance). Although he adduces semantic and syntactic factors that impose this interpretation, it nonetheless does not seem entirely satisfying, because the thematic stem envisioned (*īśa-* [never accented]) seems insufficiently distinguished from the presential perfect stem *īś-*, and Hoffmann does not suggest a mechanism for deriving such an aorist stem from either the presential perfect stem or directly from the root. Moreover, his argument that *mā* preventive clauses should have an aorist might falter in the face of a root that simply lacks an aorist. (See now IH’s work demonstrating just that.) I prefer Debrunner’s explanation, rejected by Hoffmann, that *īśata* represents a re-marking of *īśa* with *-ta* to make it more clearly a 3rd sg. Judging from the accent (*īśe*, *īśāna-* [versus *īśānā-*]), the old presential perfect had been mostly reanalyzed as a root present, and *īśa* would be an anomalous 3rd sg. injunctive to such a present.

I.23.13-15: As noted in the intro., I take the “king” that Pūṣan is returning as Agni, not, with most tr., Soma. The theme of the finding and returning of the god-in-hiding in 14 is much more appropriate for Agni than for Soma, and the “glittering barhis” is also more likely to be associated with Agni. Both Agni and Soma are called “buttress, support” (13) (Agni in V.15.1–2) and both are called king (14). The drops (*indu-*) in 15 might seem rather to indicate Soma, but in VI.16.16 Agni is strengthened by drops (*indubhiḥ*), which must be drops of ghee.

I.23.15: The ritual referent of the “six yoked” entities (*ṣaḍ yuktān*) is unclear, no matter whether Soma or Agni is taken as the main referent: those in the Soma camp consider the yoked ones to be the dakṣiṇās due the poet; I consider them the flames of the recovered Agni, roused by the drops of ghee. In terms of the simile in c, the six yoked ones are clearly the teams for plowing. See esp. AV VI.91.1, cited by Schaefer (1994: 197). On *anu √sidh* as ‘entlangtreiben’, see Schaefer 1994: 196–97.

In my translation I have reversed the renderings of the finite intensive (unaccented *carkṛśat* in c) and the intensive participle (accented *anuséṣidhat*) to make the relationship between simile and frame clearer.

I.23.16: Contra Ge and others but with Re, I construe the gen. pl. *adhvarīyatām* ‘of those performing the rites’ with *ādhvabhiḥ* ‘along the roads’, as I do not think the waters are the mothers of the priests (Ge “Die Mütter der diensttuenden (Priester)”).

I.23.18: Ge and others attach b to a, with c a separate sentence, which is also possible.

I.23.19: Again I disagree with most tr. in the disposition of the b pāda. I take it with a, because I think we mortals are to glorify the waters. Others think the gods should become

strong or victorious in order to praise the waters – but gods are not usually the agents of such praising.

I.23.20-23 = X.9.6-9, save that the fourth pāda of 20 is missing in X.9.6.

I.23.20: The semi-direct speech and esp. the casual conversational tone of this verse are quite unusual for the RV. Although most tr. take the whole as indirect speech (“Soma said to me that...”), the construction of the verse seems to me to mix direct and indirect speech, with c, couched in the acc., shading into indirect speech. I take the final pāda separately, as it is absent from the parallel in X.9.6.

Note the distraction of the *apsú antár* phrase that opens 19a into two pāda opening words: 20a #*apsú* ... b #*antár*.

I.23.22: The construction of the 2nd hemistich is complex, containing a double *vā* conjoining two *yád* clauses and an *utá*, which reaches back to conjoin the indefinite *yát kím ca durítám mama* “whatever trouble is in me” (b) and the final word of the vs. *ánrtam* (d). The two *yád* clauses of cd are alternative expansions of the indefinite expression of b, while *ánrtam* is a new term. So Ge, WG, and, with explicit disc. of the construction, Klein (DGRV I.301). By contrast Lü (417; sim. Ober II.37) takes *ánrtam* as part of the 2nd *yád vā* clause and seems to ignore the *utá*: “... was immer Sunde an mir ist, was ich betrogen habe oder was ich geschworen habe als Lüge

I.23.23: Most tr. take *āpah* as acc. here (“I have followed the waters.”). This is of course possible: the nom. of this stem does get used for acc. occasionally in the RV. However, such an interpr. is not nec. in this case, since it is easy to supply an acc. “you.” And the fact that the two previous vss. (21a and 22a) contain vocatives *āpah* and *āpah* respectively supports a vocative interpretation here.

I.23.24: It is difficult to know what, if anything, is the referent of *asya*. I have tentatively supplied ‘hymn’, but the poet may simply be calling upon the gods to witness the general situation (so Ge). The same expression √ *VID me asya* is found in the refrain of I.105, except with accented *asyá*, for which reason I more confidently supply ‘speech’ there.

[I.24–25 JPB]

I.26 Agni

I.26.1: As often, the *hí* in the first of two imperative clauses marks the action urged in ab as subordinate to and the basis for the consequence expressed in c. See Brereton 2012.

I.26.2: As on some other occasions the pāda-final *vācaḥ*, superficially a nom.-acc. (or a stem form), is to be construed as an instr. with the instr. adj. (*divítmatā* in this case), whatever the source of this truncated form. (See M. Hale [Fs. Melchert] for an attempt, unsuccessful in my view, to see it as an archaic zero-grade *s*-stem instr. [*-*es-H*, not the renewed and standard *-*es-eH*]. For further disc. see comm. ad VIII.39.2.) In this particular phrase, the existence of a fully instr. parallel in X.76.6 *vācā divítā divítmatā*

strongly suggests that *vācaḥ* should indeed be construed with *divítmatā* here. On *divítmant-* itself, see comm. ad IV.31.11.

I.26.3: A paradigm ex. of the use of the act. of \sqrt{yaj} to express sacrificing on behalf of someone other than the grammatical subj.

I.26.5: In the phrase ... *asyá naḥ, mándasva sakhyásya ca* most tr. render the *ca* as ‘also’ and construe the demonstrative with the noun (Ge “... freue dich auch dieser Freundschaft mit uns”). However, the most natural way to take the syntax is as a conjoined NP: “of this (x) and the comradeship of ours.” The question is what *asyá* is modifying. Following Gr I supply ‘ritual grass’, because *barhíḥ* is the most recent ritual referent (4a). Although “rejoicing in ritual grass” may seem an odd activity, cf. VIII.13.4=VIII.15.5 *mandānó asyá barhíṣo ví rājasí*, with the same verb \sqrt{mand} ‘rejoice’ and the fuller version of the nominal phrase. (As it happens, in that passage I construe the *barhíṣ* phrase with the main verb *ví rājasí*, but it is certainly ambiguous.)

I.26.8: Although most tr. implicitly take pāda a as subordinated to b (e.g., Ge. “Denn wenn ..., so...”), again the *ca* suggests rather that they are coordinate structures, with pāda a a nominal sentence (*svagnáyaḥ* predicated of *devāsaḥ*) coordinated with the finite verb *dadhiré* in b. This verb is accented because it is under the domain of *hí* in a. In this reading, pāda c functions as the main cl. of ab.

I also supply ‘him’ (=Agni) as first object of *dadhiré*, again unlike most tr. (eg., Ge “so bringen sie auch uns Erwünschtes”). For the reasons for this in the structure of the hymn, see disc. in intro.

I.27 Agni

I.27.1: *vandádhyai* is a predicated infinitive, serving as the main verb.

Pāda a contains a likely pun, the possessive -*vant*-stem adj. *vāravantam* modifying Agni. In the first instance it means ‘having (that is, providing) choice things’ (*vāra-*, to \sqrt{vr} ‘choose’), but the homonym *vāra-* means ‘hair, tail-hair’ (cf., e.g., nearby I.32.12) and so the -*vant*-stem can mean ‘possessing (long) tail-hair’. Either of these meanings is applicable to the horse of the simile, which has tail-hair by nature and brings choice things by winning races and contests. ‘Bringing choice things’ is more applicable to Agni than ‘having hair’, but his flames could be so conceived. Note that Agni is characterized as “ghee-haired” (*ghṛtā-keśa-*) in VIII.60.2.

I.27.2: With Old I supply *śávasaḥ* with *sūnūḥ*, to complete the common epithet of Agni “son of strength,” which is suggested by the associated instr. *śávasā*. Indirect support might come from the parallel voc. *sahasō yaho* ‘o young (son) of strength’ (with a different word for strength, also regularly appearing as an epithet of Agni) that ends the preceding hymn (I.26.10c). However, this supplement is not strictly necessary, and most tr. do not supply it (e.g., Ge simply “unser Sohn”). In favor of a translation like Ge’s is the presence of *naḥ* in pāda a. However, this could simply be a Wackernagel place-holder for *asmākam* in c. Although the difference might seem slight, in fact the two interpretations are quite different. Ge’s emphasizes that *we* have created Agni, supplying

‘our’ with *śávasā* (“unser Sohn durch (unsere) Kraft”); this might suggest that Agni is in our debt because we begot him and he ought therefore to become our benefactor. The other tr. invest Agni with his own strength and hopes that he will graciously use some of it to benefit us.

I.27.6: With Ge (/WG) and Re I take the expression in pāda b as a simile or comparison that provides the basis for the verb ‘stream’ (*kṣarasī*) in c. Agni/the fire cannot literally be on or in a river’s wave.

I.27.7: It is difficult not to interpret the agent noun *yantā* in c as a periphrastic future, given the subjunctives in ab, *pace* Tichy 1995: 226. Although it is sometimes claimed that no examples (or “no certain examples”) of this usage are found in the Saṃhitās (see esp. Macdonell VGS §152), there are too many passages in the RV where a future interpretation of the *-tar*-stem is more natural and fits the context better than a purely agentive one.

I.27.8: Since this verse continues the thought of 7, the agent noun *paryetā* in b should likewise be future in value, despite Ge’s “Keiner überholt ihn.”

asya ... kāyasya cit: most tr. take these two genitives as coreferential, with the indefinite referring to a person – so Ge’s “Keiner überholt ihn, wer er auch sei.” But the person in question has already been defined as a client of Agni’s, and so an indefinite seems odd in context. Moreover, the other two instances of *paryetār*- both take inanimate complements; cf. VII.40.3 *nā tāsya rāyāḥ paryetāsti* “There exists no one who can encompass his wealth.” Therefore I take *kāyasya cit* as referring to anything belonging to the favored man, expressed by *asya*. Ge’s note seems to lean in this direction, but not his tr.

On *śravāyya*- see I.31.5 below.

I.27.10: The supposed voc. *jārābodha* in a is problematic on several grounds. It is generally taken to mean something like “attentive to the early call,” but 1) the first member, *jārā*-, is only attested in the meaning ‘old age’ (hence Old’s suggested “im (bis zum) Greisenalter wachend”), and 2) the second member, the thematic nominal *bodhā*-, is not otherwise found in the RV (though it does occur in the AV). I therefore prefer to interpret it as a pair of linked imperatives, *jārā bodha*. The latter is found 5x in the RV, as impv. to the thematized aor. to *√budh* ‘awake’; the former would belong to the thematic pres. *jāra*- of *√gr̥jṛ* ‘sing’. Although this present is ordinarily only middle (vs. *jāratī* ‘make old’), attraction in voice would not be surprising in a construction like this. The long *-ā* of *jārā* simply reflects the common lengthening of the 2nd sg. impv. Although we might expect *bodha* to be accented, it may have lost the accent when the construction ceased to be understood, or it may never have received it in this close semantic nexus. Under this analysis the order of imperatives is actually “sing (and) awake!” which I have reordered for clarity. Alternatively, we might take *jārā* to *√gr̥jṛ* ‘awake’, which likewise builds a Class I middle pres., and translate “awake (and) take heed.” See Gotō 1987: 150-56 for discrimination of the various Class I *jāra*- presents.

Since *dṛśīka*- is otherwise a neut. substantive, I have rendered it as appositional to *stómam* rather than as an adjective (e.g., Ge “ein schönes Lied”). So also Re (“un corps-

de-louange, chose belle à voir”). Note also the synesthesia, with the praise-song something to be seen, not heard. This usage somewhat anticipates the later Vedic notion that ṛṣis “see” divinely bestowed sāmāns.

I.28 Indra (Abbreviated Soma Rite)

See intro. for detailed discussion of my interpretation of the context of the hymn, which differs significantly from the standard view. I discuss this further in a treatment of the prehistory of the śrauta/gṛhya ritual split: “Vedic Ritual: The Sacralization of the Mundane and the Domestication of the Sacred” (Thite Fs., 2019, ed. Lauren Bausch).

Note the *l*-forms *ulūkhala(ka)-* (vss. 1–mn.6) and *jalgulaḥ* (1–4), which fit the low-register, popular content of the hy

I.28.1: Both *prthūbudhna-* ‘having a broad bottom’ and *ūrdhvā-* appear to be double-entendres. The salacious references continue, more clearly, in vss. 3–4.

I.28.3: On the medial *śikṣate* with acc. see comm. ad VIII.42.3.

I.28.4: The word *mānthā-* occurs only here in the RV; it clearly refers to the churning stick later known as *mantha* or *cāt(t)ra-*, which is bound around with cords that, manipulated by a priest, move it rapidly back and forth while its bottom tip is inserted in the hole (*yoni*) of the lower kindling stick (*arāṇi-*) to create the friction that produces fire. The cords here are obviously likened to reins. For equine imagery in this context and for further disc. of the process, see comm. ad X.27.14.

Here there is a bit of slippage between frame and simile (as Ge also notes, n. 4a): though acc., the reins (*raśmīn*) should not be directly compared to the churning stick, also acc. (*manthām*), and we might rather expect instr. **raśmībhiḥ*. However, it’s quite possible that *raśmīn* is actually dependent on *yāmitavaī* and is not directly parallel to *manthām*. So perhaps “when they bind the churning stick, as if to control the reins” (vel sim.); for other passages in which *raśmīn* is obj. of *√yam* see I.144.11, VIII.35.21.

What is somewhat puzzling is what the reference to the churning stick is doing in this hymn focused on the preparation of soma, since the implement and the process are characteristic of the production of the ritual fire. Either kindling the ritual fire is considered part of the soma preparation here, or, more likely, the pestle used to pound the soma stalks has been homologized to the churning stick, in great part because of the highly sexualized nature of that implement in the fire-kindling ritual (see comm. ad X.27.14).

The inf. *yāmitavaī* here is one of the few not appearing in the configuration *-tavā u*, on which see Klein, Particle *u*, 164–67. Inter alia, the substitution of *iva* for **u* gives the desired iambic cadence.

I.28.6: The reference in this verse is not entirely clear, but “the lord of the wood” (*vānaspāti-*, ordinarily a word for tree, or an esp. prominent tree, then applied the sacrificial post) is probably here the pestle and metaphorically the erect penis. If so, *āgram* might be better tr. ‘tip’ than ‘top’ and the whole clause as “the wind blows across [rather than ‘through’] your tip.” In an unpublished paper on this hymn, “Rgveda I.28 and the Two Forms of Pressing Soma,” Hanns-Peter Schmidt cites a Kuntāpa verse AV

20.136.6 = ŚŚŚ 12.24.2.7, which he tr. “The harlot, stepping over the mortar, said, ‘Just as on thee, o tree (o wooden mortar), they strike (with the pestle) so may they strike on me,’” which also shows the connection of mortar and pestle with unlicensed sex. If the tr. is correct, the “lord of the wood” there is the mortar, not the pestle, as it seems to be here. In vs. 8 below, both the mortar and the pestle seem to be so called.

I.28.7: On the motions involved, see Schaefer 1994: 163-64.

I.29 Indra

I.29.2: Ge takes ... *táva dāṃsánā* as a nominal sentence “du hast ja die Machtvollkommenheit.” This is possible. But with Gr and Re, I prefer to take *dāṃsánā* as an instr. (as it often is), in order to allow the whole verse to be a single sentence.

I.29.7: On *jambhāya*- ‘crush’, see comm. ad II.23.9 and my *-āya*-Formations, p. 93.

I.30 Indra, Aśvins, Dawn

I.30.1: The word *krívi*- makes trouble wherever it shows up. In some of its occurrences it appears to be a personal name, but that is unlikely here. It is not even clear if all the occurrences of *krívi*-, even in non-personal uses, belong to a single stem -- in fact it seems unlikely (see comm. ad V.44.4). Here the context favors an equine reference, and I have taken it as designating a particular color of horse, viz., ‘blood-red’. Assuming, with most scholars, that *krívi*- in at least some of its usages is connected with *krívís*- in the hapax adj. *krívīr-dant*- (I.166.6), which possibly means ‘having gory teeth’, and that both are etymologically connected with *kravís*- ‘raw, bloody flesh’, as a color term ‘blood-red’ would work well. The details of the derivational relation I leave to others, but a putative -*i*-stem to the underlying root *krū* < **kruh₂* (in *krūrā*- [AV+]) would have the shape **kruh₂-i*- > **kruv-i*-, and assimilation to *krívi*- would not be difficult.

The verse is structured by number disharmony — the pres. part. *vājayántaḥ* is nom. plural, but the finite verb *siñce* is singular — reflecting the common conceptual fluctuation between the collectivity of priests and singers and the priest-poet speaking in his individual voice.

I.30.2: The number disharmony continues here, at least in my view. Ge. takes the sg. rel. pron. *yáḥ* as referring to Indra and then supplies the verb ‘drinks’ to governing the ‘hundred’ and ‘thousand’ phrases referring to soma. But if *yáḥ* is instead taken as referring to soma and coreferential with the (unexpressed) subj. of the verb in the main clause *rīyate*, no material needs to be supplied. Instead the singular ‘which (soma)’ is defined as consisting of a hundred or a thousand separate drinks. So also Re.

I.30.3: The form *śuṣmīṇa* (in sandhi) can represent either *śuṣmīne* (dat. sg.) or *śuṣmīṇaḥ* (in turn, either gen.-abl. sg. or nom.-acc. pl.). (The Pp. reads -*e*.) Any of these possibilities is possible in context, and so it may well be that the ambiguity is meant. As a nom. pl. it could characterize the subj. (‘they’ = soma drinks), as Re. takes it. As a gen. sg. it could refer to Indra, who is indeed regularly modified by this adj. As a dat. sg. it

could modify *mādāya* (so Ge), or it might still refer to Indra, in well-known double dative construction of the type “for the tempestuous one for his exhilaration” → “to exhilarate the tempestuous one.” I favor an interpretation that attributes the word to Indra; among other things, this makes the unaccented *asya* in b easier to account for. Preferably genitive *śuṣmīṇaḥ*, though I have not been able to find a parallel expression.

On the surface, pāda a lacks a main verb, but it is possible that it is lurking there. The subordinator *yád* appears as *yán* in sandhi before a nasal. The otherwise unattested 3rd pl. injunctive of \sqrt{i} ‘go’ would have the same shape and is the expected verb in this idiom (cf., e.g., 3rd pl. impf. *sám āyan* X.27.8). I therefore suggest we have a notional haplology *sám *yád yán*.

I do not understand the function of *hí* in b, which triggers accentuation of the main verb *dadhé* in c. I would at all costs prefer to avoid attributing pure emphatic function to *hí*, but this passage comes perilously close to that.

I.30.4: *ohase* is generally taken as a 2nd sg. mid. to the root $\sqrt{ūh}$ / *oh*, which has a messy set of forms. Cf., e.g., Ge. “Diese Rede von uns weisst du gewiss zu würdigen.” However, I interpret it as a 1st ps. -*se* form of the type *stuṣé* ‘I shall praise’, *gṛṇīṣé* ‘I shall sing’, all of which fall into this semantic sphere. Indeed the root has a -*se* formation of different shape in VIII.5.3 *vācam ... ohiṣe*, with almost identical object (our passage: *vācaḥ*). For the thematic/(pseudo-)subjunctive form here, cf. *arcase* ‘I shall address’ (X.64.3). Despite the complications involved in positing a second 1st ps. -*se* form to this root and separating *ohase* from the identical form in VIII.80.9, which I take as a 2nd sg. in passive usage, I prefer my interpretation to that of Ge (/WG) ‘value’, Re ‘take into consideration, take note of’, because these latter seriously attenuate or alter the meaning of the root, which otherwise means ‘solemnly proclaim, praise, vaunt oneself’.

I.30.5: The word order of ab is rather tortured. The clause is simply a nominal sentence forming a relative clause, but the relative pronoun phrase *yāsya te*, instead of appearing in 2nd or modified position after pāda-initial *stotrām* as is overwhelmingly common (see, e.g., modified 2nd in 2a *śatām vā yāḥ ...* above), comes at the very end of the hemistich, separated from its noun by three vocative phrases, which take up the rest of pāda a and most of pāda b: ... *rādhānām pate, gírvāho vīra* This still *counts* as 2nd position since the vocc. are extra-sentential, but the poet is cheekily pushing the limits. The *te* is simply there to indicate that the rel. pron. has 2nd ps. reference, which is of course not syntactically coded onto the relative. Cf. the common phrase *tām tvā* (e.g., 10a below), where the 2nd ps. pronoun has the same function: to give 2nd ps. ref. to the demonstrative.

I.30.8: *yádi* here stands for *yád *ī*, ‘when ... it’ rather than ‘if’. The pronominal enclitic *ī* has been shortened before the initial cluster of *śrávat*. See Jamison 2002.

I.30.9: Although *huvé* in c is morphologically problematic, its interpretation is imposed by context: a past-tense 3rd ps. ‘he called’. But this is the only 3rd ps. *huvé* (in contrast to over 70 exx. of 1st ps. *huvé*, -*e*), and it must be preterital not present, as *huvé* otherwise is. I have no explanation.

The referent of *te* ‘your’ in the same pāda is unclear. Assuming the relevant constituent is “your father” (*te ... pitā*), *te* should refer to the poet, or some poet, in whose

lineage “you” are, but I would expect the poet to be the 1st ps. speaker of the first *huvé* (pāda b). Perhaps the reference to the “ancient house” in pāda a indicates that another, more venerable poet is on the scene, whose model (and that of his forebears) the current poet is following. The publ. tr. of pāda a supplies “your” with “ancient house” – implying that the current poet is modeling himself on “you” and “your father,” but it should be remembered that the “your” of a is not explicit in the text. It could well be “my ancient house” (or indeed someone else’s). Though the pāda is repeated in VIII.69.18, that passage is not helpful in interpreting this one. However, I.87.5 contains an occurrence of *pratnā-* modifying father that seems to assert a similar entitlement to poetic speech by lineage: I.87.5 *pitūḥ pratnāsya jánmanā vadāmasi* “We speak by virtue of our kinship with our primordial father.”

I.30.11: Though it modifies *asmākam* ‘of us’ and “we” are definitely male, *śipriṇīnām* ‘of the (well-)lipped ones’ is a *feminine* gen. pl. The form must be contextually motivated: the other two pādas end with (masc.) gen. pls. in -*Vnām* / -*Vnaam* (*somapāvnām* [my preference, for HvN *somapāvnām*], *sākhīnām*). Esp. the latter, with -*īnām*, invites a type of dittography: **śipriṇām* → *śipriṇīnām*. See also *śipriṇīvān* in X.105.5. Although *śipriṇīnām* reminds us of the equally unexpected fem. for masc. *nāvyasīnām* V.53.10, 58.1, I explain the latter differently. See comm. ad V.53.10.

I.30.12: Ge (WG) take *iṣṭāye* as “dass du rasch kommst,” without comment, but it is not clear to me what root they are using to produce ‘come quick’. There are several roots $\sqrt{iṣ}$ to which *iṣṭāye* could belong: ‘seek, desire’ and ‘send’ are the most likely, along with the marginal root ‘prosper’ found in *iṣāyati*. A zero-grade of \sqrt{yaj} ‘sacrifice’ could (and does) also produce *iṣṭī-*. None of these comes close to ‘come quick’; my conjecture is that they are connecting it with ‘send’, but forms of this root are always transitive. Re more reasonably assigns it to the ‘seek’ root: “... que (tu) cherches (des biens pour nous),” but must supply much material for it to work. I suggest that it belongs to this same root, but in the sense ‘desire, want’, and that the message here is the mutually reinforcing “we want you to want what we want.” This expression is somewhat reminiscent of *sā naḥ sanītā sanāye* in vs. 16: “he the winner, for us to win it,” though using two different but synonymous roots, rather than the etymological figure of 16.

I.30.13: A noun needs to be supplied with *revātīḥ* ‘rich (fem.)’. Old suggests *īśaḥ* ‘refreshments’, which works formulaically with the rest of the lexicon in the passage (including the verb in c; cf., e.g., VII.64.3 *iṣā madema*, with an instr. as in our *yābhir madema*). Ge’s “Geschenke” (gifts) is not so happy.

sadhamāda out of sandhi could end in either -*e* (so Pp., followed by most) or -*aḥ*. Complicating the decision is the fact that both a thematic stem *sadhamāda-* and a root noun *sadhamād-* are well attested. Though most tr. take presumed underlying *sadhamāde* as loc. to the thematic stem (Ge “bei dem Mahlgenossen”), I think it possible that it is the dat. of purpose to the root noun. It may be that Re’s “pour le symposium” also assumes such a dative.

I.30.14: Vss. 14–15 are parallel in structure and phraseology, but this does not help as much as we might like. To begin at the beginning, it seems odd to refer to Indra as “one

like you” (*tvāṁvān*), and grammatically it is also problematic, because *tvāvant-* ordinarily takes a 3rd ps. verb, not 2nd ps. as here. It is tempting to follow Ge’s path and make ab into a subordinate clause (“Wenn einer wie du...”), but this doesn’t work because the initial *ā* of pāda a must be construed with the *ṛṇóḥ* of c. The rest of the first hemistich, two participial phrases, is somewhat awkwardly phrased (at least in translation) but comprehensible: the praisers obtain Indra (or his like) in his own person and implore him for aid, which he provides in c. That pāda uses an idiomatic expression for fitting an axle between two wheels. As the presence of *ná* in 14c and the structure of vs. 15 show, this expression is a simile, to which some other action of Indra is being compared, even though in 14 there is no obvious frame. The meaning of *ā ṛṇóḥ* in the frame is somewhat different from the idiomatic usage, but not, to my mind, the “untranslatable wordplay” that Ge sees. I take it mean ‘fit out’, namely ‘provide’. In 14c I supply ‘refreshments’ from the preceding vs. (13), the first vs. of the *ṛca*. Nonetheless, this translation of the *ṛca*, esp. 14–15, strikes me as less than satisfactory.

I.30.17: *śávīra-*. Although this may just have a suffix *-īra-*, it is tempting to see it as a bahuvrīhi containing a Caland form *śavi-* (root *śū-*, cf. *śūra-*) plus *īrā-* ‘refreshment’, so ‘possessing powerful refreshment’. For the accent, see the many compounds with *śuci-*, e.g., *śuci-jihva-* ‘having a blazing tongue’. If this is correct, the translation of the same word in I.3.2 should be modified. There it modifies *dhī-* ‘insight’, which might not be as apt, but thoughts and hymns that provide refreshment are not foreign to the RVic conceptual universe. Although we might expect **śuvi-*, ET suggests comparing presumed Caland forms RV *ákravihasta-* and PN *dabhīti-*, which apparently show full grade of the root.

The neut. adjectives *gómat* and *híraṇyavat* are generally taken to refer directly to the gifts that the Aśvins will provide us (e.g., Ge “Rinderbesitz ... Goldbesitz (sei uns)!”) But (as Ge suggests in his note) in I.92.16 and VIII.22.17, where the pāda is repeated, the adjectives modify *vártiḥ* ‘circuit, course’, in turn the object of forms of *√yā* ‘drive’ in VIII.22.17 (and often elsewhere). Since 17b contains *yātam*, I supply *vártiḥ* here as well.

I.30.18: Because *yójana-* has a number of different meanings (‘yoking, stage of journey, distance, route’), the compound *samānáyojana-* has received a number of different translations. The analytic phrase *samānéna yójanena* occurs in I.92.3 of Dawn’s journey, where again ‘route’ best fits the context.

I.30.19: Other passages also depict the Aśvins’ chariot with one wheel at rest (presumably on earth, on the ritual ground) and the other in motion (V.73.3, VIII.22.4), as Ge explains in his note.

The “head of the inviolable (bull)” is somewhat opaque, but is probably a mystical expression for the ritual ground – more clearly expressed in *mūrdhán yajñásya* “on the head of the sacrifice” (II.3.2, IX.17.6). Others have speculated that the whole complex (the two wheels and the bull’s head) refer to a constellation. See WG n.

I.30.20: “Fair-weather friend” translates the voc. *kadhapiṛye* and is an attempt at an idiomatic English rendering of ‘when-friend’, i.e., ‘uncertain, fickle, or capricious friend’ – following Bloomfield’s (*RR*, ad I.38.1) attractive explanation of closely related

kadhapri- as built to the Aśvins' epithet *adhapriyā* 'then-friends'. The epithet is appropriate to the usually reliable Dawn in this verse because the poet questions her as to where she will bestow her presence and favors.

I.30.21: All of pāda c is a vocative, though it is syntactically peculiar for the noun in the simile to be in the vocative: *ásve ná*, literally "like o mare." It must have been attracted into the voc. by the voc. adjectives that are the points of comparison: *citre aruṣi* "bright and ruddy." See also I.57.3 below.

I.31 Agni

This is the first of five hymns attributed to Hiranyastūpa Āṅgīrasa and the only one addressed to Agni. It is noteworthy that the hymn begins and ends with references to the Āṅgīrasas: 1a (*agne ...*) *āṅgirā ṛṣiḥ*, 2a (*agne ...*) *āṅgirastamaḥ* and 17a (the last vs. before the extra-hymnic summary vs.) (*agne*) *āṅgirasvād āṅgiraḥ*, a reference to his parentage and a word that often plays off its phonological similarity to *agnī-* (cf. RV I.1), a voc. of which occurs in every vs. in this hymn.

I.31.1-2: Some reciprocal vocabulary: in 1c the *kavīs* (the Maruts) are born under the *vrata* of Agni, while in 2b Agni as *kavi* tends to the *vrata* of the gods.

I.31.1: Wackernagel treats the structure of the bahuvrīhi *vidmanāpas-* differently in different parts of the grammar. It is clear that the first member is the instr. of *vidmán-* 'wisdom, know-how', but in some places (II.1.234, III.268) he suggests that the 2nd member is the secondary adj. *apās-* (so also Gr) and that the first member is accented (as is customary in bahuvrīhis), but with end-accent *vidmanā*, rather than the attested independent *vidmánā* (I.110.6, etc.) (so explicitly III.268). Elsewhere (esp. II.1.301) he groups it with other bahuvrīhis containing *-as-* stems as 2nd members, which have accented 2nd members (on the 1st syllable), such as *prthu-pákṣas-* (and cf. *purū-rávas-* in 4b). The latter analysis must be correct: inter alia, we don't expect bahuvrīhis of similar sense to have adjectives as 2nd members, and it seems arbitrary to assume ending accent of the instr. against the independent usage of *-n-* stems. Therefore, the compd. must represent *vidmanā-ápas-*, built to the neut. *-as-* stem 'work', inflected as a masc. nom. pl. because the compd. is a bahuvrīhi and hence an adjective. The meaning should be literally 'having/displaying work with know-how'.

I.31.2: In c note the phonetic figure **vibhúr víśvasmai bhúvanāya**, with the two elements of the first word distributed over the next two.

Note that Agni here is said to have "two mothers" (*dvimātā*), while in vs. 4 he swells in his "two fathers" (*pitróḥ*; see also 9a) -- in both cases referring to the kindling sticks. Although both "two mothers" and "two fathers" can refer pregnantly, as it were, to a mixed gender set of parents, it is striking that both are used so close together here, and of the same referents.

It is esp. interesting in light of the word *śayú-*. As disc. ad IV.18.12 the interpr. of this term as 'orphan' (or better 'fatherless') on the basis of apparent Middle Iranian and Balto-Slavic cognates can be seen in its punning use in a few passages like this one. I

would slightly emend this tr. to “... having (just) two mothers, fatherless/lying down in so many places ...” For a similar passage see III.55.6.

I.31.3: The mythology behind *ab* is related in I.143.2, as Ge points out; see also VI.8.4. It is not clear here why a mythological situation should be couched in the imperative (“become manifest!”), esp. as the second hemistich contains three augmented imperfects, but I cannot see any way to fix it. As Old points out, various scholars have suggested reading injunc. *bhavaḥ* but it is not easy to switch that form in, esp. because 1) the hymn has no other injunctives, and 2) the stem *bháva-* doesn’t have any clear injunctives, certainly no *bhavaḥ*, in the RV. In I.143.2 the same myth is related in the same phraseology in the impf.: *āvír agnír abhavan mātariśvane*.

sukratūyā must mean something more than simply *krátvā / krátunā*; see the denom. *sukratūyase* in X.122.6.

I.31.4: Purūravas is found only here in the RV outside of his dialogue with the Apsaras Urvaśī in X.95. It’s not entirely clear why he is here, but his is a speaking name (‘having much roaring’), which fits with the bellowing in pāda a. Moreover his son Āyu figures several times in this hymn (vss. 2, 11), and Iḍā, said to be Purūravas’s mother in X.95.18, also appears in vs. 11.

Contrary to most tr., I have segregated *sukṛte sukṛttaraḥ* as a separate clause, since this expression is found in different context in I.156.5. *sukṛt-* is usually used of the priest or ritual performer, and this interpretation fits with the 2nd hemistich, which refers to the ritual here and now. Starting a new sentence in pāda b also helps mitigate the tense disharmony in this verse, where the present in the subordinate clause (*múcyase*) is by most accounts connected to an imperfect in the main clause of d (*anayan*), the action of which should temporally follow the verb in c (or to the imperfect *avāśayaḥ* in a). By connecting c instead with the last part of b, this temporal reversal is avoided.

Ge (following Gr) tr. *śvātra-* as simply “Kraft,” but the noun belongs with the root $\sqrt{śū}$ ‘swell’, and the image in this pāda is a vivid one: Agni’s “swelling” in his two parents refers to the flaming up of the fire created by the kindling sticks (already referred to in 2d). Both Re and WG render the ‘swell’ sense. With Sāy. (see Ge’s n. 4c) I take *pitróḥ* with *śvātrēṇa*, not with *múcyase*. On “two fathers” see comm. ad vs. 2. Because of the contrast between the two mothers in 2 and the two fathers in this vs. and 9a, I would now alter the tr. of both 4 and 9 to “in your two fathers.”

I do not understand what the final pāda is conveying. I have tr. *pūrvam ... āparam punaḥ* as “to the east ... then again to the west”; Ge has “vorwärts und wieder zurück.” But in either case the ritual ref. is hard to decode, since generally the fire “taken out” of what will later be called the Gārhapatya fire, situated at the west of the ritual ground, is carried to the east to become what will later be called the Āhavanīya fire. Sāy. (see Ge’s n. 4d) takes the vedi as the reference point, with one part of the fire going to the east (Āhavanīya) and one to the west (Gārhapatya), but this is not how the placement of the ritual fires happens.

I.31.5: *údyataśruce ... śravāyyaḥ*: Ge’s (/WG’s) “ruhmbringend” is not possible for *śravāyya-*, because this is a (pseudo-)gerundive and hence passive. The dat. *údyataśruce*

can serve as agent, because RVic gerundives can take dat. agents (see Jamison 1979 [Die Sprache 25] 137–38 n. 14), as also in other IE languages.

The publ. tr. renders *bhavasi śravāyyaḥ* as “should be celebrated,” because a more lit. “become one to be celebrated” is clumsily heavy. However, despite its awkwardness, the more literal tr. should probably be preferred. The use of $\sqrt{bhū}$ + GRDV may well indicate that Agni/the ritual fire only deserves celebration after he/it has been kindled and placed to the west. The *āhuti-* in the next pāda may be an indirect ref. to the thus-placed fire as receiver of oblations, what will, by the time of the AV, be called the *Āhavanīya*.

The rel. pronoun *yāḥ* in c has double reference: in c it refers to the priest in the 3rd ps. and is the subject of accented *védā*; in d it refers to Agni in the 2nd ps. and is the subject of the accented *āvívāsasi*. Both referents are present in the main cl.: the priest as *údyataśruce* in b and Agni of course as *tvām agne* in a. This grammatical play cannot be easily rendered in English.

ékāyu- is a hapax and also probably a pun. On the one hand it is formed like *viśvāyu-* ‘having a complete lifetime’, *dīrghāyu-* ‘having a long lifetime’, hence ‘having a single lifetime’; on the other, it can contain the proper name of Āyu, who is found in vss. 2 and 11 of the hymn, hence Ge’s tr. “im Alleinbesitz des Āyu,” WG “den Āyu (als) einzigen (Opferer) hatte.” Although Ge (/WG) do not recognize the “lifetime” possibility, the parallel formations make such a reading hard to avoid. In the lifetime meaning, the compound presumably refers to the ritual fire’s duration through a single sacrifice or, perhaps more likely, through the lifetime of the sacrificer. In the personal-name reading, it would mean that Agni and our ritual fire have the ur-Aryan sacrificer and clanlord (see 11b) Āyu on their side (‘having Āyu as [yours] alone’?). In vs. 11 Agni is identified with Āyu the clanlord, and so here, in that identity, he brings together the *viśaḥ* ‘clans’. The publ. tr. does not register the personal-name reading, which should be remedied: I would add as an alternative tr. “having Āyu as yours alone.”

āgre: Although in absolute usage this word can refer to the beginning of time, as it were, that sense seems unlikely here because of the present tense verb. I therefore consider it to reflect a phrase like *āgre yajñāsya* (VII.15.5), at least in the primary reading. Secondly, with the second meaning of *ékāyu-* (‘having Āyu as yours alone’), it may allude to the primal sacrifice.

I added the parenthetical “divine” qualifying “clans” because gods (or their qualities) are the usual object of *āvívāsa-*, and I still think that is the more likely interpretation. However, ET points out to me that, in light of vs. 11b *tvām ... devā akṛṇvan náhuṣasya viśpátim* “You ... did the gods create as the clan-lord of Nahuṣa,” it might instead refer to human clans. Proferes (2007) argues at length, though not mentioning this hymn, that a royal fire can unite several clans.

I.31.6: *sákman* is a hapax, rendered by Ge as “in der Freundschaft” but by Re as “en détresse” (followed explicitly by WG “aus der Not”). The former interpretation is surely the correct one, taking it as a derivative of the very common root \sqrt{sac} ‘accompany’ and directly cognate with Aves (O+Y) *haxman-* ‘association, community’. (So EWA s.v.) Re suggests a derivation rather from \sqrt{sac}^2 ‘dry up’, but the semantics of the derivation are not straightforward, and such a connection requires both the apparent Avestan cognate and RVic hapax *sákmya-* ‘comradeship’ to be decoupled from *sákman-*. It is hard to see the motivation for this proposal. It must have been that the context seemed not to be one

of comradeship, but in fact there is no problem with that meaning in context: Agni demonstrates his comradeship with the man at issue by giving him aid.

I interpret the first hemistich to be entirely concerned with the sacrifice, as the loc. *vidáthe* ‘at the ceremony’ suggests. In my view *vr̥jiná-vartani-* ‘having twisting turns’ envisions the sacrifice as a race-course, which the sacrificer must navigate, esp. the tricky turn at the further end. That the sacrifice was commonly envisioned as a course to traverse is clear from the word *adhvará-* ‘ceremony, rite’, related to *ádhvan-* ‘road, way’ and found in expressions like *rathīr adhvarāṇām* ‘charioteer of the rites’ (I.44.9, cf. VI.7.2). Although *vr̥jiná-* ‘twisted, crooked’ often has a morally negative sense (like its English glosses), in this case the twist(s) would simply be tricky (that is, challenging) to steer. It is possible, with some other tr., to assume that the twisting turns are not ritual but refer to unfortunate life circumstances, but then *vidáthe* is hard to account for.

The image of the sacrifice as a race-course in ab then transitions to the image of a race or contest in general in pāda c. *páritakmye* ‘at the crucial turn’ picks up the *vr̥jiná-vartani-* of pāda a. As so often, *dháne* is a truncated loc. absol. for the common expression *dháne hité* (I.40.2, etc.) ‘when the stake is set.’ Contra Gr and Ge, I do not take *páritakmye* as an adj. with *dháne*; like me, Re. and WG keep the two expressions separate, and Re. suggests that *páritakmye dháne* is ‘abregé’ from *páritakmyāyām ... dháne hité*. Although I am leery of characterizations like ‘abregé,’ in this case I think that the form we have has been manipulated in some such way. Gr lists an adj. *páritakmya-* to which our form is said to belong, but this stem does not exist: all clear forms belong to the fem. noun *páritakmyā-*, almost all of whose forms are loc. sg. *páritakmyāyām* at the end of a Triṣṭubh line. This stem is subject to various poetic deformations: see comm. ad V.30.113–14. I believe that our *páritakmye* here also belongs to this noun stem and reflects a loc.; it is positioned exactly like the *páritakmyāyām* forms, at the end of a trimeter line after an opening of 5. But to conform to the Jagatī line this loc. has been replaced by an apparent masc./neut. loc. in -e, and the independent loc. absol. *dháne* has been added to supply the requisite light + anceps ending. For further on the phrase *dhána-hitá-* see comm. ad VI.45.

The last pāda thus turns the contest image into an actual battle; the line between contest and battle is a thin and permeable one in the RV.

I.31.7: Though both Ge and Re make *amṛtatvé* ‘immortality’ and *śrávase* syntactically parallel, despite superficial appearances they are in different cases and should be so rendered.

In the 2nd hemistich *kṛṇóṣi* has a complex direct and indirect object phrase: *ubháyāya jánmane máyaḥ kṛṇóṣi práya ā ca sūrāye*, with the chiasmic structure DAT.-IO ACC-DO VERB ACC-DO DAT-IO arranged around the verb. In such a structure we might expect coordinating *ca* to be positioned immediately after the 1st term of the second object complex, that is, after *práyaḥ* (*práyaś ca*); see Klein DGRV I.54 and passim. The interruption of this balanced construction by *ā* is also curious; the point seems to be that Agni makes refreshment for the first, mixed set of beneficiaries in an unspecified place but the meal for the patron right here (*ā*) on the ritual ground. It may be that the propensity of *ca* to follow preverbs in tmesis (/adverbial usage) has dictated the position; Klein implies as much (DGRV I.134 and n. 49, 227).

I.31.8: The question in ab is who is winning the stakes. I take it to be “us,” with our winning enabled by Agni’s giving glory to our poet. Most take it to be the poet himself, a poet identified as ours (“for our bard to win the stakes”). This is certainly possible. Indeed Old (SBE) actually interprets *sanáye ... kṛṇuhi* as a periphrastic causative “make/cause to win,” with the poet the first object. Although Zehnder (Periphrastic Kaus., 2011) does not discuss this passage, he does recognize (p. 61) other examples of periphrastic causatives to \sqrt{san} ‘win’, which does not build a morphological causative (expect **sānáyati*, or possibly **sanáyati*, neither of which would cause phonological problems). Of course at this period of the language, underlying transitive verbs like \sqrt{san} should not build double transitive causatives (“cause X to win Y”).

apásā návena: the suffixal accent of *apásā* should rule out a tr. ‘work’, but most tr. ignore (Re actually cites it in his notes as *ápas-*) or overrule the accent. So Ge “durch das neue Machwerk” (i.e., the hymn), sim. Re, WG. Although Gr cites other forms of *apás-* in the meaning ‘work’, none of these is convincing. Therefore, although it would simplify the tr. to take it as neut. ‘work’, the transmitted text can only mean ‘worker, laborer’. My tr. implies that we have a new poet, or perhaps the bard, made glorious by Agni in pāda b, who takes a new lease on his poetic life. Alternatively, we might follow Old (SBE), who alone paid attention to the accent and tr. “with the help of the young active (Agni).”

The introduction of Heaven and Earth as recipients of our prayers in the last pāda of this vs. is odd, giving the vs. the appearance of a hymn-final vs., since extraneous gods are often brought in at that point. The fact that the vs. is in Triṣṭubh, rather than the Jagatī that prevails in the hymn (save for 16 and 18) also supports the view that this vs. marks at least an internal boundary, and though the initial *tvám (no) agne* sequence continues in the vss. that follow, the subject matter subtly changes. See publ. intro.

Note the phonological play in bc (... *kārúm kṛṇuhi ... kárma*), which may imply a folk-etymological connection of *kārú-* ‘bard’ with $\sqrt{kṛ}$, and in d (*devair dyāvā pṛthivī prāvataṁ*)

I.31.9-11: Some patterned responsion in these two verses: 9 *tanū-kṛt ... prāmatih* / 10 *prāmatih ... vāyas-kṛt*. However, although these two verses are roughly in the middle of the hymn and patterned responsion is characteristic of omphalos verses, the repetitions do not seem sufficiently important to constitute an omphalos. On the relationship between *prāmati-* and *vāyas-* and between *tanū-* and *vāyas-* see disc. ad I.71.7, where it is suggested that *tanū-* and *vāyas-* are the tangible and intangible elements that together make up a living being.

The “two fathers” in 9a ushers in the paternal imagery found in the rest of 9–11 (and beyond). Besides the *tanū-kṛt* ‘body-creator’ and *vāyas-kṛt* ‘life-force-creator’, which jointly define the parental contribution to a new human being, we have the repeated word *prāmati-* ‘solicitude’, which is strongly associated with the father (see disc. ad I.71.7). Here the word first appears by itself in 9c, then along with *pitā-* in 10a (as well as 14c, 16c). The father figure in these vss. switches back and forth: Agni is first “in the lap of his two fathers” (thus implicitly the son) in 9a, but has the fatherly role in 9cd, 10ab -- then switching back to the son in 11d. The two remaining allusions to the father (14c, 16c) cast Agni in that role again.

I.31.9: As noted above (ad vs. 4), I would now change “your two parents” to “your two fathers” because of the contrast with the “two mothers” of 2.

The *naḥ* in 2nd position in the vs. does not fit easily into the first hemistich (though cf. Ge “Du Agni (sei) uns im Schosse der Eltern als Gott ...”). I have postponed it to the 2nd hemistich -- with no verb in the 1st this seems possible -- and taken it as a gen. dependent on *kārāve* ‘bard. It could also be taken as a dat. with *tanūkṛt* in a chiasmic construction exactly like that of 7cd discussed above. Hence, “become body-creator for us and fatherly solicitude for the bard. Otherwise it might be possible just to assume that it was generated to the pattern *tvām (no) agne* in the rest of the hymn, when another syllable was needed. Both Re and Old (SBE) simply ignore it.

I.31.11: On Āyu and Idā see disc. ad vs. 4 above. This verse clearly refers to the primal institution of the ritual fire at the Ārya sacrifice, but the details are somewhat obscure.

Because of the tense differences between c and d (augmented impf. *akṛṇvan* vs. pres. *jāyate*), I follow Re in taking d as the content of Idā’s instruction, namely that in mundane current-day terms Agni/ritual fire has a mere human father, the sacrificer, though it was the gods who originally created him/it.

I would now tr. *mānuṣasya* as “of Manu,” since this refers to the original establishment of the sacrifice.

I.31.12: The theme of protection gets hammered home by the use of three different roots in this semantic sphere: $\sqrt{pā}$ (*pāyúbhiḥ* a), $\sqrt{rakṣ}$ (*rakṣa* b, *rakṣamāṇaḥ* d), and $\sqrt{trā}$ (*trātā* c).

In the conjoined NP *maghónaḥ ... tanvās ca, tanvāḥ* must be reflexive “(we) ourselves,” despite *tanū-kṛt*, where *tanū-* refers specifically to the body.

In c the standard tr. construe the genitives *tókasya .. gāvām* with *trātā*, but I take them with *tānaye*, which they flank, as in the symmetrical constructions discussed above ad vss. 7 and, possibly, 9.

Pāda d can be seen as a paraphrase of 9b, with *ānimēṣaṃ rākṣamāṇaḥ* “unblinkingly watchful” an expansion of *jāgrviḥ* “wakeful,” and of 10d, with *rākṣamāṇas tāva vraté* “watchful in accord with your commandment” expanding *vratapā-* “protector of the commandment.”

I.31.13: The man who lacks even a quiver lacks weapons and is therefore defenseless.

My interpr. of cd differs significantly from the standard (though it is close to Ge’s alternate, given at the end of his n. on 13cd). Most take *yó rātāhavyaḥ* as a nominal rel. cl. referring to the worshipper, with coreferential resumptive pronoun *tām* in the main clause *vanóṣi tām*, whose subject is Agni (e.g., Ge “Wer Opfer spendet ... den begehrst du.”). (Its initial position in its clause would of course account for the accent on the main verb.) This interpretation has several merits: the skeletal syntactic structure is clear; it explains the unusual position of the *tām*; it parallels the structure of 14b; and *rātāhavya-* is more often used of mortals than of gods (a usage that might be supported here by the parallel compound *práyatadakṣiṇa-* in 15a). However, it makes the phrase *kīrés cin mántram mánasā* impossible to construe: the acc. sg. *mántram* has nothing governing it, and the “solution” in such tr. is simply to set it off by dashes and hope for the best. I therefore prefer to take cd as a single relative clause with Agni as subject. The adj.

rātāhavya- can modify gods, including Agni in IV.7.7. This reconfiguring of the syntax allows *māntram* to be the obj. of *vanóṣi*, with the point being that Agni, by properly performing his ritual duties, acquires a powerful mantra for the weakling in his charge. (The perhaps overly heavy tr. “mental spell” was meant to highlight the etymological relationship with *mānas-* ‘mind’.)

My interpretation differs from the standard in other smaller ways. In c I take *dhāyase* not as a quasi-infinitive to $\sqrt{dhā}$ ‘place, establish’ (e.g., Ge “um sich Sicherheit zu schaffen”), a formation not otherwise found, but to the standard *s*-stem *dhāyas-* ‘nourishment’ to $\sqrt{dhā(y)}$ ‘nourish’. I also take *kīrēś cid* with the preceding dative phrase, rather than with *māntram*.

I.31.14: Again my interpr. differs from the standard, though not as radically as in vs. 13. Most tr. take ab as a single clause with, implicitly, an embedded nominal relative clause *spārham yád réknaḥ paramám*. The main clause resumes with *vanóṣi*, hence the accent, and the *yád* clause is picked up by *tād*. The problem is that the RV does not ordinarily allow embedded relatives; (almost) all relative clauses are either pre- or postposed, as M. Hale has argued in the past. I therefore supply the frame “you are kindled as protector” + DATIVE from the parallel vs. 13ab. Note that Agni as protector also begins the next verse (15). I have now partially rethought this interpr., based on my discovery that izafe-like nominal relative clauses can be embedded (see my 2022 “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian: Proto-proto Izafe”). Unfortunately the relative clause we have here is not quite an izafe type: we should expect something like **réknaḥ spārham yát paramám ...* vel sim., “the legacy worth seeking that is highest,” with the head noun in the main clause. However, I now would suggest an alternative tr. “for the cantor chanting far and wide what is the highest legacy worth seeking, you win that,” as an extension of the izafe-type embedding.

The phrase *prá pākam śāssi prá díśaḥ* in d causes problems, because, despite the strong superficial parallelism, the two accusatives *pākam* and *díśaḥ* do not appear to be parallel. I have translated them as parallel, but admit the awkwardness. If the verb *prá śāssi* is used in the same way in both iterations, the “quarters,” that is, the geographical directions, are receiving the same instruction as the simple man. In support of this interpretation ET remarks “my guess is that the poet intends a contrast between two extremes (the limited simple man and the vast semi-divine quarters) as recipients of instruction from the one who is superior to all in knowledge.” Ge supplies a different verb with the second *prá* phrase: “du (gibst) Weisungen,” suggesting that while *pākam* refers to the person who receives the instruction, *díśaḥ* might rather express the content (“directions”) of the instruction.

I.31.15: In *upamā* I prefer to see the first attestation of the root noun compound *upamā*- ‘likeness’ (< ‘measure’), rather than the adverbial instrumental preferred by Old and apparently followed by the standard tr. How an instr. would function here is not clear to me, and Ge’s “der kommt zu oberst im Himmel” seems to push *sópamā diváḥ* further than the meager expression will take it. Old’s objection is that for such a root noun we would expect nom. sg. *upamāḥ*, but this isn’t apposite: in this sandhi situation *upamā* would be the outcome in any case, so it is only the Pp. reading that enforces an underlying *-ā* final. Moreover, the parallel compounds *pramā-* and *pratimā-* are attested in

the RV with clear asigmatic nom. sg. (X.130.3), suggesting that they have been reinterpreted as *-ā*-stems (see Scar p. 378). There is no reason that an *upamā-* wouldn't have been treated similarly. See also *upamā* in VIII.60.13.

I.31.16: I interpret *mīmṛṣaḥ* slightly differently with its two different objects, as “make X forgotten” and “make us forget X” respectively. The verb ‘forget’ is an I/T verb of perception (in the terms of my 1983 book), and its causative thus can take two different types of constructions.

Agni is “whirling” (*bhṛmi-*) because of the movements of his smoke and flames.

[I.32 JPB]

[SJ] I.32.9: John Clayton (p.c.) points out the phonological similarity of the coreferential *dānuḥ* and *dhenúḥ*, polarized at the beginning and end of pāda d, in frame and simile respectively. This is one of two places in the RV where we meet Vṛtra's mother by name (and indeed at all), the other being in the bahuvr. *sahádānu-* in III.30.8. Vṛtra himself is called *dānavá-* on several occasions (II.11.10, V.30.1, 4, 7, probably V.29.4, the only 5 occurrences of this stem). I am inclined to see this designation of Vṛtra as equivalent to YAv. *dānauua-* (Barth. ²*dānav-* “bezeichnet einen den Iranern feindlichen *tūrischen* Volksstamm”), with the name of Vṛtra's mother Dānu backformed from that – rather than taking Dānu as the name of a riverine goddess, who may or may not be attested elsewhere in IE (esp. Celtic), as some others do.

In any case the stem(s) *dānu-* are difficult to sort out. In addition to the fem. form here (perhaps coerced into that gender), there are 4 masc. forms referring to a demon or demons (pl. only in the late X.120.6), with the 3 sgs. either referring clearly to Vṛtra (II.11.18, also containing *dānavá-* in vs. 10; II.12.13) or with Vṛtra as likely referent (IV.30.7). In addition there are the neuts. *dānu-* ‘gift’ and *dānu-* ‘drop’, which can be hard to separate in context, since “drops” (of rain, esp.) are also “gifts.” There is also a single fem. form that must belong to one of these otherwise neut. stems, in I.54.7, whose non-neut. gender is shown by the nom. sg. *-s* and its specifically fem. gender by the adj. *úparā* (*dānur asmā úparā pínvate diváh* “For him the gift [drop] of heaven swells here below.”). In context this fem. obviously cannot designate Vṛtra's mother. I have no explanation. It is worth noting that what anchors *dānuḥ* as a fem. in I.54.7 is the adj. *úparā* based on the directional preverb *úpa*, just as in our passage the feminine is established earlier in the hemistich by the phrase *úttarā sūḥ* “the mother was above,” with the adj. based on the directional preverb *úd*.

[SJ] I.32.12: This vs. contains a famous crux. The first hemistich reads *ásvyo vāro abhavas tād indra, sṛké yāt tvā pratyáhan devá ékaḥ*, rendered (up through *pratyáhan*) in the publ. tr. as ‘You, Indra, then became the tail of a horse when he struck his fangs at you’. Indra is clearly addressed in the 2nd ps., as shown in pāda a by the 2nd sg. *abhavaḥ* and the voc. *indra* and in pāda b by acc. *tvā*. This means, by easy process of elimination, that the subject of the verb *pratyáhan* ‘struck at’ must be Vṛtra. What then to do with the following nominative phrase, *devá ékaḥ* ‘the one god, the god alone’? Indra's arch-opponent in the Rig Veda is emphatically not a god, and certainly with Indra on the scene he could not be the *one* god. There are several alternative solutions to this conflict

between grammar and sense: to read this nominative phrase as an independent nominal clause, or as a continuation of the clause in pāda a with the dependent clause *ṣṛké yāt tvā pratyáhan* embedded within it (the solution in the publ. tr.), or as anticipating the next hemistich, where Indra returns as the 2nd sg. subject of the verbs *ájayah* ‘you conquered’, etc. Thus, the first possibility: ‘you became the tail of a horse when he struck his fangs at you; (you are) the one god / (you as) god (were) alone’ (etc.); for the second: ‘o Indra, you became the tail of a horse -- when he struck his fangs at you -- (you) the god alone’; for the third: ‘you became the tail of a horse when he struck his fangs at you; as god alone, you conquered ...’. None of these is impossible, but they are all ad hoc, constructed under desperate circumstances to avoid the semantic clash between the undoubted subject of the verb *pratyáhan*, namely Vṛtra, and the immediately following nominative phrase that conceptually should not modify him, despite their close quarters in the pāda.

There is a potential way out of this conundrum, however. The verb *áhan* is the 3rd sg. imperfect to the famous root present *hánti*; its older form should have been **ahant*. I tentatively suggest that the sequence **áhant evá*, containing the emphatic particle *evá*, at an early stage underwent external sandhi voicing assimilation to **áhand evá* and then resegmentation to *áhan devá*, rather than displaying the expected synchronic sandhi development to **áhann evá*. This aberrant resegmentation was facilitated by the existence of the ubiquitous noun *devá-* and the following adj. *ékaḥ*, with which that noun could be construed. My proposed underlying original **áhand *evá ékaḥ* has the particle *evá* stationed after the verb to emphasize the unusual use of Indra’s signature verb *áhan*, found in this hymn five times with Indra as subject (1c, 2a, 3d, 4a, 5a; cf. also 11c *jaghanvān* in the vs. immediately preceding ours), with Vṛtra as subject. The following *ékaḥ* emphasizes the single combat between Indra and Vṛtra: the equal balance between the two opponents is a feature of this part of the hymn -- cf. esp. 13c *índraś ca yád yuyudhāte áhiś ca* “When Indra and the serpent fought with each other ...,” with middle dual verb and conjoined subject NP. This contrasts sharply with the much more one-sided depiction of the battle in the earlier parts of the hymn. I would therefore translate 12b as ‘when just he, alone, struck his fangs against you’.

One major stumbling block to accepting this scenario: the sandhi of **evá ékaḥ*. The hiatus found in the transmitted text in the sequence *devá ékaḥ* is of course expected from underlying **devás ékaḥ* (/ **deváḥl*z), with loss of the final consonant of the nom. sg. and the resulting hiatus maintained. But we would ordinarily expect the final vowel of the particle *evá* to coalesce with the initial of *ékaḥ* to produce **evaíkaḥ* (as in IV.54.5, X.44.7 *evaívá*, X.173.2 *ihaívaídhi*). However, the application of the sandhi rules governing the coalescence of final and initial vowels is by no means exceptionless. For further discussion, with reff., see my “Hidden in Plain Sight: Some Older Verb Endings in the Ríg Veda,” Fs. Kazuhiko Yoshida (2019).

I.33 Indra

I.33.1: There is no overt interrogative marker in b, but the *kuvíd* of c may suggest a similar question in b.

The transitive thematic subjunctive *vāṽrdhāti* is assigned to the “Aorist des Caus.” by Gr, but the properly formed redupl. caus. aorist *ávīṽrdha-* occupies that slot. Other

than our form, all forms belonging to the *vāṛdha-* stem are medial, and it seems best to follow Kü (471) in seeing this thematic stem as built to the perfect in order to allow the root-final consonant to be maintained in forms like 2nd sg. impv. *vāṛdhásva* (since athem. **vāṛtsvá* could be taken to the root $\sqrt{\text{vṛ}}$ ‘turn’); see now further my 2017 art. on perf. impv (García Ramón Fs.). These medial intrans./reflex. forms in turn generated the oppositional trans. act. *vāṛdhāti*.

I take *kétam páram* in d as referring to Indra’s “distant intention” (which we hope to move closer to us; see *úpa* in 1a, 2a), rather than our “highest wish,” as is standard. The middle voice of *āvárjate* may support this. However the other interpretation is certainly possible.

I.33.2: Given the importance of the close/distant theme in these verses and the repeated *úpa*’s of 1a and 2a, *upamébhiḥ* in c should probably be rendered not only as “best” but also “nearest/most intimate.”

I.33.3: Although the gen. in the rel. cl. *yásya váṣṭi* appears to be parallel to *aryáh*, as I’ve tr. it, it may be better as a datival gen. “for whomever he wishes,” that is, Indra redistributes cows belonging to enemies to his friends.

I’ve tr. the part. *coṣkūyámāṇaḥ* as an impv. to avoid the awkwardness of “continuing to poke...”

In my opinion *asmád ádhi* continues the “distance” theme, and is equivalent to the common *āré asmát*.

I.33.4: *vádhiḥ ... ghanéna*, with verbal $\sqrt{\text{vadh}}$ and nominal $\sqrt{\text{han}}$ reverses the expected distribution found, e.g., in VII.104.16 ... *hantu mahatā vadhéna* (cf. also I.94.9), with verbal $\sqrt{\text{han}}$ and nominal $\sqrt{\text{vadh}}$.

The phrase *ékaś cáran* is a first instantiation of the lexeme famous in much later times from the Rhinoceros(-horn) Sūtra. For the phrase in the dharma lit. and the association with the rhinoceros (not, in my opinion, its horn), see my 1998 “Rhinoceros toes, Manu V.17-18, and the Development of the Dharma System” (*JAOS* 118: 249–56).

upaśāká- is only here, but *śāká-* is several times used of the Maruts or Aṅgirasas in their roles as helpers of Indra (IV.17.11, V.30.10). Therefore, though there is a disjunction between “going it alone” and being accompanied by a host of helpers, I take *upaśākébhiḥ* as personal here. The *upa-* may mark them as particularly subsidiary, or it may simply have been prefixed to the stem because it is a signature word in this part of the hymn.

Other tr. take *sanaká-* as the name of a group, but it seems a perfectly well-formed *-ka*-suffixed form of *sána-* ‘old’, with a pejorative diminutive sense appropriate to belittling one’s enemies. So Edgerton (1911 [k-suffixes]: 53): “the old rascals.” My “old codgers” is also an attempt to capture the slangy and deprecatory tone. On the demotic value of *-ka-* see Jamison 2009 (IIJ 52).

Ge takes *prétim īyuh* as an idiom “gingen in den Tod,” but despite the later such usage of *pra* $\sqrt{\text{i}}$, this idiom does not appear in the RV. As indicated in the intro., I take this as referring to the separation of sacrificers from non-sacrificers.

I.33.5: Because the verb in d, *adhamah*, is unaccented, something must be supplied to complete the subordinate clause of c (*prá yád ...*). It seems simplest to supply a form of the verb \sqrt{i} ‘go’, esp. as *prá√i* is found in 4d. Ge’s solution, to supply the same verb as in d, is possible, but seems pleonastic.

I.33.6: The Navagvas are ordinarily adherents of Indra’s. In order to preserve this alliance, we must assume that the plural reference in pādas a-c alternates, with a and c referring to Indra’s enemies, and b to his friends.

vṛṣāyúdhō ná vādhrayaḥ is the clearest echo in this hymn of the phraseology of the immediately preceding, very famous hymn depicting the Indra-Vṛtra battle: I.32.7c *vṛṣṇo vādhrīḥ pratimānam búbhūṣan* “a steer who tried to be the measure of a bull.”

cītāyantaḥ is unclear, as forms built to this stem often are, and the tr. differ appreciably: Ge “zu Einsicht kommend,” WG “erkennend,” Re “se rendant compte.” In my opinion, it is in its usual intrans. value “appearing” and adds a simile-like aspect to the main verb *āyan*, a sort of utprekṣā.

I.33.8: The verse is full of adornment/clothing terms; clear are *śumbhamāna*- ‘adorning themselves’ in b and *pari√dhā* ‘clothe’ in c. In pāda a the middle participle *cakrāṇāsaḥ* has a clear parallel in the adornment phrase in VIII.14.5 *cakrāṇā opaśām divi* “creating for himself a headdress in heaven.” As in the previous verses, there seem to be two contending sides, the enemies found in pādas abc and the friends in d. “Having made for themselves a girdle from the earth” in a is easily interpretable in this framework: the enemies have fallen and are perhaps dead, partially covered by earth. But “adorning themselves with a golden amulet” in b is more difficult, since a golden amulet sounds like a positive decorative item. However, Younger Avestan has a compound *zarənu-maini* (Yt. 14.33), apparently made of related verbal material, which is the epithet of a vulture, found in a passage in which the vulture spies bloody meat from far distances. If there is a connection between the two (see EWA s.v. *mañī*), “to adorn oneself with a golden amulet” may mean figuratively “to become food for vultures.” In contrast to Indra’s doomed adversaries in ab, in d he clothes his “spies” with the sun; sunlight is often a symbol of untroubled life, as in the often repeated wish “to see the sun” (*sūryam dṛśé* and related expressions).

For a detailed discussion of this vs., esp. pāda b and its Iranian correspondents, see my 2018 “A Golden Amulet in Vedic and Avestan” (Ged. H.-P. Schmidt, *Dabir* 6: 57–66). I would now emend the publ. tr. of pāda a to “having made for themselves a coverlet from the earth.”

I.33.9: ET points out that the verb of ab *pári ... ábubhojīḥ* “you coiled around” might be more appropriate as a description of Vṛtra; it is almost as if Indra is appropriating the qualities of his opponents in addition to his own and thereby showing himself to be even more powerful. The form *ábubhojīḥ* itself is isolated, the only reduplicated form to the root \sqrt{bhuj} ‘bend’. Kü gives it a lemma in his monograph on the perfect (351–52) but does not commit himself further, beyond stating that the form is a 2nd sg. preterite “in der statisch-attingenten Bedeutung” and suggesting that there might have originally been a stative perfect that is no longer alive in Vedic. This would allow a plausible analysis of our form as a pluperfect, with a renewed ending *–īs*, to avoid expected but non-

transparent **abubhok*. JL points to the phonetic echo *ubhe ábubhojīr* across the pāda boundary.

adhamah in d needs to be read with both pādas, c and d.

I.33.10: The rel. clauses with plural subj. in ab have no possible connection with anything in the second hemistich. I take them instead as completing the portrayal of the conflict between the two moieties depicted in the earlier parts of the hymn. The pl. rel. prn. *yé* has no direct antecedent in the preceeding pāda (9d), though it can pick up the intent of sg. *dásyum*; it can also hark a little further back to 9c *ámanyamānān* ‘heedless ones,’ as H-P Schmidt suggests (B+I).

If pādas ab close the preceding myth, the rest of the verse seems to allude glancingly to the Vṛtra (c) and Vala (d) myths.

I.33.11: *abhí dyūn*: acc. pl. *dyūn* almost always refers to ‘days’ (as in the expression *ánu dyūn* “through the days,” which regularly occupies this same metrical position. However, *pace* Re’s “pour toujours” (which is, in any event, not equivalent to “through the days”), a temporal interpretation does not work here. Ge (/WG) “für die Himmels(götter),” for which there is no support (their I.190.4 is better tr. otherwise) and whose datival “für” is an odd rendering of *abhí*. My “to high heavens” (the “high” being imported from the English idiom) rests on the adj. *abhídyu-* ‘heaven-bound’; as ET suggests it can be taken as a decomposition of this adjective, which, as it happens, is almost always pāda final.

I.33.12: Bloomfield’s disc. of the 2nd hemistich (RR) is interpretively useful, though somewhat dismissively phrased. It is too long to paraphrase here, but he acutely observes that previous translators have glossed over the problem that Indra is uncharacteristically depicted as at the end of his strength.

I.33.13: Stylistically the verse is marked by 4 fronted preverbs in tmesis, an effect not possible to convey in English without awkwardness.

I.33.15: *śáma-* ‘hornless’ found only here and in I.32.15, another piece of shared terminology.

I.34 Aśvins

I.34.1: “Three times a day” (*tríḥ ... adyá*) opens the hymn, announcing the hymn’s “three” theme and also linking it to the three pressings of (some Ṛgvedic versions of) the Soma Sacrifice.

Predicative voc. *navedasā* here rendered as part of a phrasal verb, with impv. *bhavatam*.

The second hemistich is built on an etymological relationship between the instrument noun *yantrá-* (c) and the gerundive *abhyāyaṃsénya-* (d), both built to the root *√yam* ‘hold’ (the second form presumably to the *s*-aor. of that root; so AiG II.2.503, though the reason for using this base isn’t clear). This word play is lost in Ge’s (/WG’s) tr., but I have aimed to keep it, unfortunately producing some awkwardness in the English.

I.34.4: *suprāvyèḥ prāvī-* and related forms I take, following Old (Noten ad II.13.9; also Scar. 501) to $\sqrt{vī}$ ‘pursue’, rather than to \sqrt{av} ‘help’ (e.g., Gr). The forms are specialized for the pursuit of ritual activities; verbal forms of $\sqrt{vī} + prā$ have a wider range of meanings, but can be used of ritual activities. The lexeme is disc. by Scar (501) but not to much avail. Gr’s thematic stem *suprāvyā-*, supposed found here and in II.13.9, can be stricken. Both forms belong to the root noun cmpd. – here a dative, in II.13.9 a gen.

tredhēva “as if threefold” presumably refers to the Aśvins, who, though only being a pair, are as effective as if they were three.

With Ge (/WG) I take *akṣārā* (in *akṣāreva*) as nom. sg. fem., corresponding to the Aśvins, who are subject to *pinvatam*. See Old’s somewhat inconclusive disc. (*ZDMG* 63 [=KlSch p. 310]) of the various options. Rivelex (I.16–17) takes it as a neut. nom. pl. collective; Gr. also as a neut. pl., though without specifying case.

I.34.5: *sūre duhitā* “daughter of the Sun” preserves, by most accounts, the archaic sandhi of final *-as > -e* before initial dental. For further disc., see my 2010 “Sūre Duhitār’s Brother, the ‘Placer of the Sun’: Another Example of *-e < *-as* in Rigvedic Phrasal Sandhi” (Fs. Melchert, 159–66). The myth on which this pāda is based, Sūryā’s marriage, is not otherwise mentioned in this hymn. On the formulaic representation of the myth in the RV see my 2001 “The Rigvedic svayamvara? Formulaic Evidence” (Fs. Parpola, 303–15).

I.34.6: Ge (/WG) take *māmakāya* as referring to the poet himself (“... meiner Wenigkeit”), with *sūnāve* in apposition and identifying the poet as the Aśvins’ son (“als (eurem) Sohne”). This is certainly possible and in line with the self-deprecatory use of *māmaka-* in I.31.11 for the poet-sacrificer’s self-reference. It is by no means necessary, however, and it does introduce extra machinery.

I.34.7: On *aśāyatam* see VI.33.2. This stem is found with *pāri* also in X.43.6.

ātméva vātaḥ is an underlying grammatical pun. Though *vāta-* is of course an Indo-Iranian word for ‘wind’, historically it is actually a thematized present participle to the ‘blow’ root. Here I think it is an adjective ‘blowing’ qualifying *ātmā*, which is itself being compared to wind in this simile. *ātmán-* here shows its older ‘(life-)breath’ sense, not the ‘self, soul’ that already begins to take over in the RV.

I.34.8: I take the *kṛtām* in b as predicated of both *āhāvāḥ* and *havīḥ*, with number agreement with the nearer noun and slightly different senses (at least in English).

I.34.9: The “three wheels” (*trī cakrā*) here are surely imposed by the insistent “three” theme of this hymn. Vedic chariots ordinarily had two wheels (see Sparreboom, Ved. Ch., 10–11), and how a third wheel would even be affixed isn’t clear to me.

I.34.10: It is a physical oddity that the two Aśvins are apparently credited with plural mouths. There are two possible solutions: 1) The plural expression has been adopted from elsewhere. There is one other occurrence of *madhupébhir āsábhiḥ* (IV.45.3), unfortunately also in an Aśvins hymn; however, other examples of *āsábhiḥ* occur in

plural context. 2) The mouths don't belong exclusively to the Ásvins, but to other soma-drinking gods. The 33 gods who accompany the Ásvins here for drinking in the next verse might support this latter possibility.

I.34.12: The *ca* of *d* has no obvious function; Klein (DGRV I.227-28) ascribes the construction to "looser nexus," which isn't terribly helpful.

I.35 Savitar

I.35.4: I take *kṛṣṇā rájāṃsi* loosely as an accusative of extent. Others (Ge, Re) supply a verb to govern this phrase ("verbreitend" and "pour traverser" respectively), while still others (Macd., Falk 1988, WG) take it as a second acc. with *dádhanah*, as appositive to *táviṣīm* "assuming the dark realms as his power." This latter solution is possible grammatically and does not require additional material to be supplied, but I am somewhat dubious that the dark realms constitute his power.

I.35.6: This verse of cosmic mystery decked out in numerology comes as a surprise after the simple, descriptive beginning of this hymn. The syntax of *c* is ambiguous: Ge (Re / WG) takes *amṛtā* as nom. pl., supplying "him" as acc. with *ádhi √sthā*: "Alles Unsterbliche ruht (auf ihm) ..." I follow Old, who takes it as acc. pl., citing III.38.4 *ā viśvárūpo amṛtāni tasthau* "Having all forms, he mounted on the immortal (things?)."

Note the fem. numeral *tisráḥ* with *dyāvah*, a stem ordinarily masc. On the occasional gender switch see comm. ad I.57.5 and VIII.40.4, as well as the next vs., 7.

I.35.7: In some ways a responsive verse to the previous one(s): *ví ... akhyat* (a) parallels 5a *ví ... akhyan*; *ciketa* (c) responds to *ciketāt* in 6d; and the three heavens of 6a are alluded to in the query in 7d *katamām dyām* "to which heaven (of three or more)?"

The fem. gender of *katamām* signals 'heaven' as fem., one of the rare examples of this gender switch, quite possibly induced here by the fem. *tisró dyāvah* in the immed. previous vs. On pronominal fem. forms in this situation, see comm. ad VIII.40.4.

I.35.8: In b I read *trī* with both *dhánva* and *yójanā* (taking both as neut. pl.). The position of the numeral favors taking it with *dhánva*, which could, however, be singular; in favor of reading the numeral (also) with *yójanā* is X.86.20 *dhánva ca yāt kṛntátram ca, káti svít tā ví yójanā* "Wasteland and chasm -- how many yojanas (of distance) are they away (from here)." (Note that *dhánva* is singular in that passage.)

I.35.10: On *svávām* as nom. sg. of the *-s*-stem *sv-ávas-*, see AiG III.287. The Pp. analyses it rather as *svá-vān* 'possessing property'. Curiously Macdonell (Ved. Reader, ad loc.) claims to be following the Pp., but tr. 'aiding well'.

Most tr. take *pratidośám* as a temporal, "towards evening" or "every evening." I think rather that it's spatial, construed naturally with *ásthāt* 'took his place, stood'. The god is facing west. (Cf. Peter Pan: "straight on 'til morning," presumably meaning "east.") The same expression, also of Savitar, is found in VI.71.4, though it does not clinch the interpretation.

I.35.11: Although it is possible to construe c directly with d, it seems best, following Ge, to supply a verb of motion in c. The d pāda has a close parallel in I.114.10, suggesting that it is independent.

Note the unusual duplication of the nominal referent in both rel. and main clause:
yé ... pānthāḥ ... / tébhiḥ ... pathíbhiḥ.

I.36 Agni

I.36.1: *purūṇām* is generally construed as qualifying *yahvám*, but this requires taking the latter as an implicit superlative (Ge “den Jüngsten unter vielen”), which it is not. (JL points out that a derivative of the real superlative, *yáviṣṭhya*, appears twice in the hymn, vss. 6, 15.) Better to take it as parallel to *viśām*, though, since *viś-* is fem., not modifying it as Proferes (2007: 31) does.

I.36.10, 17: As often, it is difficult to know when to tr. analyzable words as PNs rather than literally. There is no particular reason that I explicitly allowed both possibilities in vs. 10 and only the PN in 17.

I.36.13: *añjibhiḥ* would have been better rendered as ‘ornaments’ than ‘unguents’, and as ET suggests, these ornaments could be vocal.

I.36.14: On *vidā* versus *vidāḥ*, see comm. ad IX.19.6. Since the verb is parallel to three impvs. (*pāhi* a, *daha* b, *kṛdhī* c), an imperatival interpr. works better than a subjunctive.

In keeping with I.37.14, it might be best to change ‘favor’ to ‘friendship’ for *dúvaḥ* in d.

I.36.16: On *īśata* see comm. ad I.23.9.

On *ghanéva* see comm. ad I.63.5.

I.36.17: *mitrótá* has been variously interpreted. The Pp. analyzes it as *mitrá utá*, which is surely correct, with *mitrá* as a dual. Ge takes this as an acc., parallel to *médhyātithim*, referring to Turvaśa and Yadu in 18a: “den beiden Verbündeten.” Better, with Gr and Old, to take it as an elliptical dual, “Mitra (and Varuṇa)” and a nom. parallel to Agni as subj. Wackernagel’s idea (AiG II.1.36) that it is truncated from the PN **mitráīthi-* (found only in X.33.7) by gapping from *médhyātithi-* was properly rejected by Old and Ge; that PN was clearly not widespread, and a bare form *mitrá* would surely be interpr. by the audience as referring to the god or the common noun ‘ally’.

I.36.18: Ge (/WG) takes *dāsyave sáhaḥ* as a phrasal personal name “Dasyave Sahas,” a personal name that would have to be neuter. Better to follow Old (SBE) by taking it as a qualifier of Agni. Re also rejects the personal name interpr., but considers it a pāda-final truncation of the instr. *sáhasā*. (Because *sáhaḥ* can be construed without problem as the nom./acc. neut. it appears to be, there is no reason to resort either to Re’s truncation or to an archaic instr. sg. zero-grade ending **-h₁* in the mode of Hale [Fs. Melchert].) Old’s interpretation finds support in 19, where the second pāda contains an entirely parallel

phrase qualifying Agni, with neut. noun construed with benefactive dative: *jyótir jánāya* “a light for the people.”

I.36.19: *ukṣitā-* is ppl. to both $\sqrt{vakṣ}/ukṣ$ ‘grow’ and $\sqrt{ukṣ}$ ‘sprinkle’; both meanings are apt for Agni.

I.36.20: I read *ná* twice in b, both as the neg. with the dat. infinitive *prātītaye* and as a simile marker, evoking the common phrase *mṛgó ná bhīmáḥ* (I.154.2, etc.) and its variants.

I.37 Maruts

I.37.1: There are two ways to take the apparent masc. acc. phrase *anarvāṇam ratheśúbham* in b. In the publ. tr. I interpret *ratheśúbh-* as a noun, ‘beauty on a chariot’, modified by masc. *anarvāṇam*, with the phrase an appositive to the neut. *śárdho mātutam* in pāda a. But there are some problems with this. First, the indep. noun *śúbh-* is fem. Of course, its acc. is also *śúbham*, and it is arguable that the bahuvrīhi adj. *anarvān-* would make a fem. of the shape *-āṇam*, rather than a deriv. fem. **anarvaṇī-* (acc. **-aṇīm*). So the interpr. of the publ. tr. remains (barely) possible. However, the standard tr. treat the phrase as adjectival with the preceding neut. acc. This interpr. finds support in V.56.9 *śárdham ratheśúbham*, with masc. *śárdham*, and also from VI.48.15, where masc. acc. *anarvāṇam* apparently modifies the same neut. phrase as here, but in a simile *śárdho ná mātutam*. See comm. ad loc. To construct a proper neut. for our phrase here is enough to provide the answer: **anarvá ratheśúp* is remarkably unappealing, and a slide into a form more recognizably acc. and more recognizably associated with the underlying stems is easy to understand. For *anarvá-* see comm. ad I.185.3.

I.37.1-2: An “improper” relative construction, with masc. pl. *yé* in 2a picking up *śárdhaḥ* ‘troop’ of 1a, which is grammatically neut. sg., though conceptually plural.

I.37.3: The Pp. reads pl. *kásāḥ* ‘whips’ here, and standard tr. follow this, making it the subj. of *vádān*. But *kásā-* is otherwise only sg. in the RV, even when plural entities wield it. I therefore take it as sg. *kásā* and as the subj. of *śṃve*, with the Maruts as unexpressed subj. of *vádān*. This also makes better sense of the positions of both *eṣām* and *yád*: most tr. construe *eṣām* with *hásṭeṣu*, which means the unaccented pronoun would begin a clause. And *yád* would be too far to the right in its clause: we expect *yá-*forms to follow at most one constituent. (Of course, it might be possible to interpret *eṣām kásā hásṭeṣu* “the whip in their hands” as a single constituent, but this would be pushing it.)

I.37.5: It is possible to take *prá śamsā* as 1st sg. subjunctive, as Re. does, though there seems no compelling reason not to continue with a 2nd sg. impv., following the 2nd pl. *gāyata* in the previous pāda (4c).

Pāda b seems an incipient izafe construction, with an appositive introduced by *yád* -- even though it is grammatically impeccable as a standard rel. cl. (allowing for the attraction in gender to neut. *yád* of putative **yám*, whose antecedent *ághnyam* is masc.).

Ge unaccountably interprets the med. pf. *vāṇṛdhe* as a 1st sg. (“Ich habe mich ... gestärkt”; so also WG), though he doesn’t read *prá śamsā* in a as 1st ps. Although this is grammatically possible, context suggests that the Marut troop is the subj. of this verb.

I.37.6: Although nouns not in the vocative case generally lose their accent in vocative phrases (type *sūno sahasaḥ* “o son of strength”), the conjoined genitives *divás ca gmaś ca* retain their standard accent though being part of the voc. phrase headed by *dhūtayaḥ* “o shakers” – presumably in part because the pāda needs to begin with an accented word and also because this particular voc. phrase is not only structurally complex (with a conjoined NP as gen.) but also not a fixed idiom. Of course, since *divás ca gmaś ca* opens the pāda, it would have to be accented one way or other, but if it had received default voc. accent we would expect *dívaś ca gmaś ca*.

I.37.7: With Ge, I read *ní* with both clauses. For c (*ní*) ... *jíhīta*, cf. VIII.7.2 *ní párvatā ahāsata* “The mountains have bent down.”

I.37.9: The syntactic structure of this verse is not clear, in great part because it contains no finite verbs, and most tr. leave the structure undefined. In my interpr. pāda a is a causal clause dependent on the main clause of pāda b, with *yát ... śávaḥ* in the relative clause of pāda c coreferential with the *váyaḥ* of b. The point is that at the moment of birth, in a stable situation (a), the Maruts had the strength to leave their mother’s womb on their own (*nír√i* is a lexeme specialized for birth contexts; cf., e.g., IV.18.2, V.78.9) (b), and that same strength remains with them (c).

I construe *ānu* with preceding *sīm* (“follows them”); cf. I.141.9.

I.37.10: The standard tr. separate pādas a and b and supply a verb with the former (e.g., Ge “stimmen”) with no obvious source. I prefer to take the two pādas together and take *kāṣṭhāḥ* as an unmarked simile: “their songs (like) race-course posts.” The lexeme *úd√tan* then has the meaning ‘stretch upward, erect’; this is the only finite form of the idiom in the RV (or, it seems, anywhere), which is mostly attested in the frozen adjective *uttāná-* ‘stretching upward, stretching out’.

Why their knees are bent is a matter of speculation, but it probably refers to a crouching position suitable for driving (cf. VIII.92.3).

I.37.11: Although most tr. take the “child of mist” to be the rain, its physical description here (“long and wide”) makes better sense for a cloud.

āmṛdhra- normally means ‘not neglectful, not slighting’, but this doesn’t yield much sense here. I therefore take it in the passive sense ‘not (to be) neglected / slighted’; English “not negligible” provides a perfect idiomatic counterpart.

I.37.13: The mutual chatter of the Maruts on their journey refers of course to the thunder.

I.37.14: For plural *dúvaḥ* pl. see Schindler, Rt. noun, p. 25, EWA s.v. *dúvas-*. The same nom. pl. is found in VI.29.3.

I.37.15: This final verse is oddly disjointed. For one thing there must be a change of person from 2nd (*vaḥ*) to 3rd (*eṣām*) in ab in reference to the Maruts; it is difficult not to take these pl. pronouns as coreferential. I supply *dúvaḥ* in a, because this pāda is structurally similar to 14b; however, this is not strictly necessary, and an interpretation like Ge's "Denn es gibt etwas für euch zum Schwelgen" is certainly possible. As for pāda b, it is generally taken to mean "we are theirs," and, again, this is possible. But given its structural similarity to the immediately preceding pāda, I interpret it in similar fashion, as suggesting that we have something to offer them. The last pāda then expresses what our service to the Maruts should bring about for us.

I.38 Maruts

I.38.1: For *kadhapriyaḥ* see I.30.20. In this passage the connection of this voc. with the interrogative is esp. clear, since the pāda begins *kād dha* "what indeed?" *kād* is translated twice, for clarity.

I.38.2: The gen./abl. form of *divāḥ* and *pṛthivyāḥ* is somewhat surprising, but, with Old, it is best to assume they depend on *kvā*. Although the *nā* separating them is also somewhat surprising, it is possible to take it as a real simile particle rather than a bleached connective (Re's "aussi bien que..."). Since the point of this tṛca is the anxiety occasioned by the Maruts' absence from our sacrifice, the poet worries that the Maruts have disappeared to some other sacrificer on earth as definitively as if they had gone off to heaven.

In the simile in c, "in a pasture" is supplied on the basis of the formula *√RAN gāvo nā yāvase* (V.53.16, etc.). Note that the expected *yāvase* shows up below in 5a, in a slightly off-kilter simile. This might be taken as "poetic repair" (see Jamison 2006: Paris poetics), but simultaneously "de-repair," in that it introduces an element from one verbal complex into another, where it is unexpected.

I.38.5: See remarks ad vs. 2 on the simile here.

The "path of Yama" is of course the path to death (or after death, to Yama's world). The prohibitive *mā* of pāda a must have domain also over pāda c.

I.38.6: *durhāṇā* and related forms are most likely Middle Indic developments of **durhīṇā* (etc.) 'evil rage' from *√hr̥* 'be angry'. See EWA s. *HAR*¹.

Ge (WG) take *pārāparā* as representing *pāra+apara-* 'further and nearer, earlier and later', but Old's interpr. (followed by Re) as an āmreḍita preposition 'further and further, ever further' is more appealing. As Re points out, the adv. *pārā* and related forms are characteristic of *nīrti-*.

I.38.7: The standard interpr. of *avāta-* here is 'windless', but with Gr (see also Lub) I take it to the homonymous stem 'unextinguishable, unquenchable' (*√vā* 'extinguish'). The point here is that even in a waterless place the Maruts can make rain: wind is irrelevant, but water that doesn't give out is crucial. Cf. *avānīr avātāḥ* "unquenchable streams" in I.62.10.

I.38.8: “lightning bellows” – a mixed image, of a type not uncommon in Marut hymns.

I.38.10: Ge (WG) takes the *sádma* phrase as a parallel subject to *mānuṣāḥ* (requiring a sg. form of *reja-* to be supplied), but an acc. extent-of-space interpretation works just as well, without needing an extra verb. So also Re.

The last three verses (7–9) describing the thunderstorm are all couched in the present tense, so the augmented imperfect *ārejanta* is somewhat surprising. Vs. 10 does begin a new *ṛca*, however.

I.38.11: *ródhas-* is a bulwark or fortification (\sqrt{rudh} ‘obstruct’), in this context indicating the ‘banks’ of a river, which keep the waters within.

I.38.12: The change of person between pādas, 2nd pl. *vaḥ* in a, 3rd pl. *eṣām* in b, is exactly the same as in I.37.15 and equally inexplicable. I have therefore failed to tr. *eṣām*. It is possible, of course, that *eṣām* doesn’t refer to the Maruts, but to part of the listed equipage, perhaps the chariots – hence “Let your wheel-rims be steady, and (your) chariots and their horses” – but the parallel structure in the previous hymn makes that unlikely.

I.38.13: I have tr. *jarāyai* as ‘to awaken him’, but this is probably wrong, however appealing in context. The noun *jarā-* only means ‘old age’, and therefore some version of Ge’s “dass er das Greisenalter (uns schenke)” is better. Its intent would match the last pāda of the previous hymn, I.37.15c “in order (for us) to live a full lifetime,” and the two hymns have much in common.

I.38.14: The first two pādas contain two punning verbs, whose double meanings reinforce each other: *mīmīhi* can belong to $\sqrt{mā}$ ‘bellow’ and $\sqrt{mā}$ ‘measure’ (generally assigned only to the latter and so tr.). In the first meaning it refers to the sound of the song, in the second to its regulated production, that is, to its meter. *tataṇaḥ* can belong to \sqrt{tan} ‘thunder’ and \sqrt{tan} ‘stretch out’ (Gr assigns to the former, but standard tr. reflect the latter). In the first meaning it again refers to the sound of the song, in the second, again to its method of production – in this case, the prolonging of a tone or note. The second meanings of both verbs clearly belong to the technical vocabulary of singing (see the next pāda, 14c, as well), the former connect the poet’s sounds to those of the Maruts’ thunderstorm (cf. *mīmāti* ‘bellows’ in 8a).

I.38.15: The two occurrences of *tveṣā-*, 7a and 15b, both referring to the Maruts, should have been harmonized in tr. (currently ‘dazzling’ and ‘glittering’ respectively). A regrettable if minor lapse.

I.39 Maruts

I.39.1: *māna-* seems to activate the same pun on the homonymous roots $\sqrt{mā}$ as was noted in the preceding hymn, I.38.14. The Maruts project both their bellowing and the measure of their song. (Standard tr. only recognize the ‘measure’ sense.)

“Like a flame” – what does *śocīḥ* correspond to in the frame of the passage? Ge (/WG) take it as parallel to “you” (=Maruts), as the agent of throwing, and supply an object “(ihren Schein).” But since *śocīś-* is a neuter, it can as easily be an accusative and express the thrown object, and this seems to me the more likely interpretation (perhaps influenced by the modern flame-thrower). In a Marut context it could stand for the lightning they deploy in addition to the thunder represented by *mānam*. For further on this image see disc. at vs. 10.

I.39.2: The two contrastive pādas of the first hemistich express offensive and defensive procedures respectively.

I.39.3: Standard treatments (including Old) divide pāda a into a rel. cl. and a main clause (e.g., Ge “Was fest ist, stosset ihr um”), accounting for the accent on *hathá* by its placement immediately after the rel. cl. However, this interpr. requires taking *yát sthirám* as an embedded relative, preceded by the preverb+part. associated with the main verb (*pārā ha*). Since RV does not (ordinarily) have embedded relatives, it is best to take *yád* as the subordinator for the whole hemistich (with domain over *vartáyatha* as well). This also makes the two pādas more parallel: Ge’s tr. of b as also consisting of rel. cl. main cl. (“was schwer ist, bringet ...”) is impossible. Nonetheless, since I now see that nominal relative clauses can be embedded, I am willing to consider an alt. tr. “What (is) steadfast, you smite to the far distance,” though the argument about parallelism still seems strong.

I.39.4: The opening of pāda c is identical to 2c. The rest of this hemistich presents a few problems. The phrase *tánā yujā* is rendered variously. My translation is based on the observation that in almost every single instance *yujā* follows an instr. in an expression meaning “with X as yoke-mate” (X may either be animate [e.g., I.8.4 *tváyā yujā*] or inanimate [e.g., X.83.3 *tāpasā yujā* “with fervor as yokemate”]). In this case, I take the root noun *tán-* to refer to the Marut’s entire lineage, in other words their family heritage and their sibling connections to each other. The instr. phrase *sārvayā vísā* “with your whole clan” in the next vs. (5d) may convey the same meaning. Taking *tánā* as ‘lineage’ here also has the merit of allowing a semantic connection with *tánāya* in 7a.

I separate the two pādas (so also Re), in great part because of the position of *nū cid*, which usually opens its clause (here after an extra-sentential voc. *rúdrāsah*). However, a tr. similar to Ge’s, “your might is never to be open to challenge,” would also be possible.

I.39.5: The two other occurrences of *durmáda-* ‘badly drunk’ (I.32.6, VIII.2.12) are both in martial context and seem to refer to warriors intoxicated on the frenzy of battle. The other occurrences are quite negative, whereas here we must take the word as positive or neutral in describing the Maruts, who are, to be sure, frequently depicted as being almost out of control. I think this is the point of comparison.

I.39.8: The threatening *ābhva-* (< privative *á-* + $\sqrt{bhū}$; cf. WG “Unwesen”) that besets us represents the Vedic fear of formlessness. See my forthcoming “The Blob in Ancient India.”

I.39.9: The signature word of this final *tr̥ca* is *ásāmi-*, Ge’s “vollkommen” “complete.” It literally means “without a half, not halved,” and the insistence on this unusual form merits a literal translation, in my view, although it is less fluent than the paraphrase.

kāṇvaṃ dadā “you gave Kaṇva” -- the grammar is clear, but the meaning somewhat odd. What is presumably meant is the ancient poet Kaṇva, ancestral to the current line.

I.39.10: This verse shows a type of ring composition with vs. 1, in sense though not vocabulary. The hymn begins (1b) with a shooting/throwing metaphor, *śocīr ná m̐nam āsyatha* “(when) you cast your measure/bellowing like a flame.” The last pāda of the hymn (10d) makes the shooting image more pointed: *īṣuṃ ná sṛjata dvīṣam* “you launch your enmity like an arrow.” The “shooting” verb *√as* of 1b is replaced by more generic *√sṛj* ‘launch, release’, but the simile specifies an arrow, rather than the potentially destructive but less specific ‘flame’. The responsion between these two expressions may give added support to the interpretation of *śocīḥ* as an accusative in vs. 1; see discussion there.

I.40 Brahmanaspati

I.40.3: The sense of the hapax *pañktīrādhas-* ‘whose gifts come in fives’ is unexplained. It may of course be some ritual reference (and the range of available explanations tends in that direction), but I suggest that it might be a reference to the fingers and mean that gifts come by the handful, that is, abundantly.

I.40.4: I would now take *īlām* as both ‘refreshment’ and deified Refreshment; the verb *āyajāmahe* then indicates not merely that we win refreshment by sacrifice, but we attract the goddess Iḍā to our sacrifice by our performance. For a similar passage, but with deified *hótrā-* ‘Libation’, see X.63.7 and comm. ad loc.

On the basis of my re-eval. of *anehās-* (ad X.61.12), I would now slightly alter the tr. to “flawless refreshment,” the point being that the refreshment is physically complete, lacking nothing, rather than it is morally without fault.

I.40.6: The rendering of *anehās-* here as ‘faultless’ works better with mantra, than with refreshment in vs. 4 (q.v.). However, I would still change the tr. to ‘flawless’: the mantra should likewise be complete, lacking no necessary words.

The *ca* in c is subordinating, as the verbal accent shows (*pratiháryathā*). See Klein: DGRV I.240.

I.40.7: Although the standard tr. take *antarvāvat* as referring to territory “in between” (e.g., Ge “das dazwischen liegende (Land)”), I follow Schmidt’s (B+I, 102; see also Old ad loc., AiG II.2.893) suggestion that it is a pleonastically marked variant of *antárvant-* ‘pregnant’, an interpretation that works nicely with the following verse. Although my translation implies that *antarvāvat* modifies *kṣáyam*, this cannot be true because *kṣáya-* is masc. My rendering is an abbreviated form of “made his dwelling place into (something) pregnant” (cf. Schmidt “seinen Wohnsitz hat er zu etwas gemacht, das ... schwanger ist”).

Where I differ from Schmidt (and some others) is in the interpr. of *pastyābhiḥ* in pāda c. Opinion is split over whether this stem (and *pastyā-*) means ‘stream’ or ‘dwelling place’, and Schmidt goes with the former. Although that meaning works well in this passage -- Schmidt takes pāda d as meaning “pregnant (with streams),” that is, well-watered -- on balance the ‘dwelling place’ interpretation fits more contexts better. (Curiously in the same work [B+I, p. 64] Schmidt renders *pastyānām* in VII.97.5 as “der Häuser.”) For disc. see EWA s.v. *pastyā-* (favoring ‘dwelling place’ for *pastyā-* and, less strongly, for *pastyā-*) and Brereton (*Ādityas*, 94–96 n. 45). For additional if indirect evidence for ‘dwelling place’ see comm. ad IX.97.18.

I.40.8: Most tr. (including Schmidt) render *pr̥ñcītā* with the anodyne ‘increase’, but *úpa √pr̥c* is a sexual idiom (‘inseminate’ < ‘engorge’; see, e.g., VI.28.8). The accent on this verb probably results from its adjacency to accented *hánti* (on which see, HO and JSK – reff.).

Note the gapping out of compound in the contrastive phrase *mahādhané ... árbhe* “when there is a large stake or a small,” where the independent loc. *árbhe* is functionally parallel to the 1st compound member *mahā-*. See disc. ad I.7.5, which contains the same phrase.

I.41 Ādityas

I.41.4: The voc. *ādityāsaḥ* was omitted from the tr. “O Ādityas” should be added at the end of the first line.

I.41.8: The first two pādas have elicited a fair amount of discussion and disagreement. The questions are these: 1) What is the nuance of *prāti √vac* and, in particular, what is the function of the accusative construed with it? 2) Are *ghnāntam*, *śāpantam*, and *devayāntam* parallel accusatives, or is there a dependency relationship among them? Ge (/WG) take *devayāntam* as the object of *ghnāntam* and *śāpantam* (Ge “der den Gottergebenen schlägt oder flucht”), while Re (EVP V) and Old consider the three accusatives parallel, with the first two given as negative examples, the third one as a positive one. Although I think the latter view is correct, I do not follow these scholars in their assessment of the function of the accusative with *prāti √vac*: both take it as the topic spoken about (as opposed to Ge and WG). However, though *prāti* is rare with *vac* (one other occurrence in the RV, VIII.100.5, non-diagnostic because it is not construed with an accusative there), when that preverb appears with other verbs of speaking (*√vad*, *brū*, *ah*), the complement identifies the person spoken to, not the contents of the speech. I therefore take the clause to mean that “I” will not bother to answer back to a man who behaves badly, either physically (*ghnāntam*) or verbally (*śāpantam*), though I would to a godly man. The parenthetical “as if” could be omitted here, as ET points out. With *devayāntam* freed from its potential as object of the first two participles, they can instead take *vah* ‘you’ as their object (though admittedly how a mortal can “smite” the Ādityas is a bit unclear).

I.42 Pūṣan

I.42.1: Note the regularly contrasting preverbs *sám* and *ví* opening the first two pādas.

Though Re and, judging from his tr., Ge take *sákṣvā* to \sqrt{sac} ‘accompany’, following Gr., according to Narten (265 and n. 834, and already so in BR, Whitney’s *Roots*, etc.) it belongs with \sqrt{sah} ‘conquer’. That *prá* \sqrt{sah} is fairly common in the RV (including nominal compounds) while *prá* \sqrt{sac} occurs only once (X.27.19) may support this root assignment. I am, however, disturbed by the position of the preverb and its accompanying enclitic pronoun *naḥ*: the collocation looks like the start of a new clause. I wonder if we don’t in fact have two imperative clauses here, the second with a gapped *ihī*. Cf. VIII.17.9 *índra préhi purás tvám*. My translation “go forth ... to victory” reflects this possible interpretation.

I.42.3: On *huraś-cít-* see comm. ad IX.98.11.

I.42.4: *tápuṣi-* is attested only twice elsewhere, both times modifying *hetí-*, hence the supplied ‘weapon’ here.

I.42.7-9: *vidaḥ* is formally an injunctive and therefore functionally multivalent. Hoffmann (1967: 263) is not certain that it has modal value, though most tr. (Ge, Re, WG) take it as an impv. (e.g., Ge “schaff hierfür Rat!”). The other question is whether the *krātu-* that Pūṣan is to find is his own or meant for us (e.g., Re “procure (nous)...”). I have chosen to take the injunctive not as an impv. but a future-oriented indicative and to interpret the *krātu-* as Pūṣan’s, not ours – the point being that Pūṣan will find the resolve at our sacrifice to fulfill the requests we make of him in the imperatives. However, the other possibilities sketched above are not excluded, and at least in IX.20.3 an imperatival value of *vidaḥ* is likely; see comm. ad loc. I therefore put forth the alternative tr. “find resolve” for the refrain in this tṛca.

I.42.8: My “with” tr. of pāda b obscures what I think the grammatical structure is. *Pace* Gr and Old, on accentual grounds *navajvārā-* should not be a bahuvrīhi, but rather a karmadhāraya ‘new suffering’. The question is what relationship its pāda bears to the previous one. Re’s suppressed purpose clause (or so his supplied “qu’il n’y ait” suggests) may be the best possibility syntactically. If we simply assume an imperatival “let there not be ...” (so Maurer, sim. WG “nicht (sei uns)...”), parallel to pāda a, we should expect *mā*, not *ná* as the negative. It may be, however, that existential prohibitives (of the “let there not be” type) are blocked, because the root \sqrt{as} ‘be’ does not build an aorist and also lacks injunctive present forms, although functionally similar *mā bhūt* does occur. I have not found a discussion of this issue in Hoffmann 1967, but I may have missed it.

I.42.9: Though most of the verbs represented in this catalogue of imperatives normally take objects, the rhetorical point of this listing is the stark abruptness, and the inclusion of an object (*udāram* ‘belly’) with the final verb lays particular stress on this last desire expressed, to eat one’s fill.

I.43 Rudra and Soma

I.43.1: Tr. of *vocéma* repeated for clarity.

I.43.2-3: It is striking that Aditi and her two most illustrious sons, Mitra and Varuṇa, are depicted here as closely connected with Rudra. It is not entirely clear why, though perhaps it is simply an attempt in this relentlessly upbeat hymn to associate Rudra, who can be viewed ambivalently, with these powerful and positive figures.

I.43.4: *jālāṣa-* is “of unclear meaning” (so EWA s.v.) and shows non-Indo-Aryan phonology. In the RV it occurs twice independently and twice in this compound *jālāṣabheṣaja-* (and one of its independent occurrences is adjacent to *bheṣajā-*), always in association with Rudra. The translation ‘healing’ (see also Kuiper, *Aryans* 25-26, 46) therefore makes contextual sense, despite the lack of etymological support.

I.43.5: A verse-length relative clause, which can be construed either with vs. 4 (so Ge) or, by my preference, with vs. 6 (so also Re, WG). There is no strong evidence either way, however.

I.43.6: Global ref. to human kind as “men and women” is vanishingly rare in the RV. I know only one other potential case, the identical dative phrase in VIII.77.8, though it has a more restricted sense in that passage.

I.43.8: The supposed root noun cmpd (with both direct object and preverb, against standard practice; see comm. ad I.124.7) *somaparibādh-* (so Pp., Gr) is now taken by most interpr. as voc. *soma*, fld. by the preverb-root noun cmpd. *paribādh-*. See Scar (345 n. 484).

Although *juhuranta* and related forms are assigned to the root $\sqrt{h\bar{r}}$ ‘be angry’ by Insler (1968: 219ff.), an assignment accepted by Mayrhofer (EWA s.v. *HAR*^h) and further developed by Kü (602–3), such a meaning simply doesn’t make sense in this passage or in III.55.2, and so I take the form to $\sqrt{hv\bar{r}}$ ‘go crookedly, go amiss’. The phonology is perfectly apt, with a zero-grade having vocalic *u* and consonantal *r* before vowel, despite the metathesized zero-grade *hru* found in some forms.

I.43.9: The construction of the various parts of this rhetorically ambitious verse is not entirely clear, and various tr. make various choices. (In addition to the standard ones, see Lüders [231–32] and Hoffmann [Injunk. 260].) I take *amṛtasya* as modifying *te*, rather than construing it with *prajāḥ* (as, e.g., Ge does). I consider the two locatives, *pārasmin dhāman ṛtasya* and *nābhā*, to be parallel and to express the two geographically opposed places where Soma will be searching: highest heaven and the navel of the earth (supplying *pṛthivyāḥ* with *nābhā* as often). The larger meaning of this verse is addressed in the publ. intro.

I.44-49: For illuminating remarks on the rhetorical and grammatical connections among these hymns, see Jesse Lundquist 2014 (25th UCLA IE Conf., Proceedings).

I.44 Agni

I.44.1: On the locatival *-ar* in *uṣarbūdḥ-*, see Lundquist 2014.

I.44.2: *sajūs-*, opening pāda c and here rendered ‘jointly’, is etymologically related to *jūṣṭa-* ‘enjoyable, delightful’, which opens the verse, and the poet clearly recognizes the connection. A tr. “in joint enjoyment with...” seems too heavy, however.

I.44.3: My interpretation of *bhāṛjika-* I owe to Thieme (Unters. 40 n. 2; see EWA s.v. *ṛjika-*). MLW drew my attention to the article of Sabine Ziegler, “Altirisch (*im*)*bārach* und ved. *bhāṛjika-*: Eine uridg. Kollokation” (*HS* 124 [2011]: 268–76), where she connects the Vedic word with an Old Irish word meaning ‘morning’.

adhvaraśrī-. Pace Gr, Old (SBE) Ge (/WG), I very much doubt that *-śrī-* in this compound (or others) has transitive value: ‘das Opferfest verschönend’. For extensive disc. see Scar (545–46), who lays out a number of interpretive possibilities but seems to lean towards the one I also favor. (So also Re.) – So I wrote previously. However, I am now open to the possibility that this cmpd (and other *-śrī-* cmpds with ritual first members) do/can have transitive value. See comm. ad III.26.5. And so I’d now entertain an alternative “perfecting the ceremonies.”

Related to the analysis of this compound is the interpretation of *yajñānām adhvara-*. Ge (WG) take the former as dependent on the latter (clearest in WG “der die Opferhandlungen der Opfer verschönt”), but I think it more likely that the two nouns are parallel and depend on *-śrī-*, one as an independent gen., one as 1st compound member. So Re.; Scar adduces VIII.44.7 *adhvarāṇām abhiśrīyam*, with an independent gen. of *adhvarā-*, which supports this analysis. This can be fit into the above, revised transitive interpr.: “perfecting / perfecting of the ceremonies, of the sacrifices.”

I.44.4: The initial word of this verse, *śréṣṭham* is the superlative associated with *śrī-*, the last word of the previous verse. A translation “glory ... / Most glorious...” would have captured this connection.

I.44.6: All standard tr. take *suśāṃsa-* in an active sense (e.g., Ge “der ...Schönes sagt”) with the singer the recipient of Agni’s good speech. Certainly when applied to mortals, this has to be the sense, but when applied to gods I take the adj. in passive sense ‘good to proclaim/laud’, with here the singer in the dat. (*gṛṇatē*) as the agent of the praising.

I.44.7: The very common epithet *viśvávedas-*, used especially of Agni, has a potential double sense in all its occurrences: ‘possessing all possessions’ and ‘possessing all knowledge’. In fact, although the latter is generally favored in standard RV translations, the former may be the more stable sense, in that its 2nd member *védas-* is widespread in the meaning ‘possession, property’, but not found as a simplex in the meaning ‘knowledge’ (save at III.60.1, q.v). The parallel formation *jātávedas-* (see above, vs. 4) has a similar problem. Though generally rendered as ‘who has knowledge of the beings’ it could as well mean ‘who has possession of the beings’. Since *jātávedas-* seems to have become more opaque to its users than *viśvávedas-*, which does often (?) participate in its context, in the publ. tr. we do not translate *jātávedas-*.

I.44.8: Pāda a, with the list of gods in the accusative, is an expansion of *devān* in 7d. Though b begins with a god's name in the acc. (*agnīm*), this is to be construed with the following pādas.

I.44.9: As with vs. 4, the beginning of this verse connects with the final word of the previous one: 8d ... *svadhvara* 'o you of good ceremony' / 9a ... *adhvarāṇām* 'of the ceremonies'.

svardṛś- is a difficult word, with multiple interpretations. See Scar (pp. 234-39) for discussion of the various possibilities, though his favored one ("das Sonnenlicht sehend") seems to me the less common, since the adj. generally modifies gods. I generally take it as meaning 'having the look/appearance of the sun', that is 'looking like the sun', but occasionally as 'having the sight of the sun', that is, 'seeing the sun'. Interpretations like Ge's "deren Auge die Sonne ist" are unlikely because *dṛś-* is not 'eye'. See Re (EVP XII.81). In this particular passage, it is possible that 'seeing the sun' might also be appropriate, as anticipating the description of Agni in the next vs. (10b) *viśvādarśata-* 'visible to all'. In other words, the gods in 9 "see the sun" and in 10 Agni, often homologized to the sun, is something that everyone sees.

I.44.10, 12: In my opinion, *purohitā-*, though preserving its literal meaning 'set in front', also often already refers technically to a priestly office, the figure later known as the Purohita. Agni is called *purohitā-* both because he is literally 'set in front', that is, moved to the east to serve as the offering fire (later called the Āhavanīya), and because he serves as priest. JPB, however, does not believe that the word has developed this technical meaning in the RV. See esp. his 2004 "Brāhman, Brahman, and Sacrificer," in Griffiths and Houben, eds., *The Vedas: Texts, Language & Ritual: Proceedings of the Third International Vedic Workshop, Leiden 2002*, 325-44.

I.44.10: As just noted, this verse also shares lexicon with the previous one: 9d X-*dṛś-*, 10b X-*darśata-*.

"Rich in radiance" is a less clumsy alternative for a literal rendering of the bahuvrīhi *vibhā-vasu-* 'whose goods are radiance'.

I.44.11: Another lexical reminiscence across verses: 10d *mānuṣaḥ*# 'descendant of Manu' and 11c #*manuṣvāt* 'like Manu'. As with the other examples, it is the last word of the previous verse that is matched in the next.

I.44.12: Again, lexical echo, though in this case it's the next-to-last word of the preceding verse: 11d *dūtām* / 12b *dūtyām*.

Note the synaesthesia in the second hemistich, with the sounds of the river's waves compared to the visual flashing of fire. The gen. *agnēḥ* here is a common noun referring to the substance fire, not to the god. Its parallelism with *sīndhoḥ*, also pāda-initial, helps ground this usage.

I.44.13-14: The emphasis on hearing in these verses is continued in the next hymn (vss. 2-3, 5, 7).

I.44.13: *váhni-* is usually ‘conveyor’, but here the gods cannot be conveying Agni, and the word seems to be quite loosely connected with the notion of conveyance. My ‘passengers’ is probably pushing it beyond where it should go.

I.44.14: The final pāda makes a little ring with 2c.

I.45 Agni

The theme of “hearing,” found also in the last two verses of I.44, is further explored here, with its complement, the “call” that the gods should hear.

I.45.1: My understanding of the structure of this verse is quite different from the consensus, which takes *yājā* of 1c as a 2nd sg. imperative, addressed to Agni, governing all the accusatives in the verse (“sacrifice to the Vasus ...”). I instead take *yājā* as 1st sg. subjunctive, governing only the accusatives of the 2nd hemistich, and supply *ā vaha* ‘bring here’ from 2d to govern those in the 1st hemistich. (This is supported by the fact that *trāyastriṃśatam* ‘three and thirty’ in 2d is a virtual shorthand for 1ab *vāsūn ... rudrām ādityām utá*, the three divisions of the gods, adding up to 33).

Despite the extra machinery, I think my interpretation better accounts for the contrast between the accusatives in ab and cd: the first set names the large generic groups of gods expected to attend the sacrifice, brought by Agni. The accusatives in the second set do not fit this category; in fact, their most likely referent is Agni himself: *svadhvarā-* ‘of good ceremony’ is primarily and characteristically applied to Agni, including in the previous hymn (I.44.8, a hymn that insistently associates Agni with the *adhvarā-* in 2b, 3d, 9a; see also 4c of this hymn), and *mānujāta-* ‘born of Manu’ cannot be applied to other gods, but is appropriate to Agni; see *mānuṣa-* ‘descendant of Manu’ in the previous hymn (10d) and also used elsewhere of Agni, as well as passages like VII.2.3 ... *agnīm mānunā sāmiddham* “... Agni, kindled by Manu.” It’s true that *ghṛtapruṣ-* ‘ghee-sprinkling’ is not a particularly Agnian epithet, though it could work if a passive interpretation of the root noun *pruṣ-* is allowed (‘ghee-sprinkled’; cf. I.58.2), and that *jāna-* is somewhat awkward as a designation of Agni (see my uneasy ‘being’).

Still, the standard interpretation of the verse is more awkward: if the accusatives in cd are held to refer to the gods (“the divine race”; see 10a *daívyam jānam*), they are described by adjectives that ill befit them; if Agni is held to be their referent (as supported by the above arguments), then the verse calls upon Agni to sacrifice to himself; if the accusatives refer to the human race, then the verse calls upon Agni to sacrifice to *humans*, which is entirely contrary to the Vedic model of sacrifice. By separating the two halves of the verse into different clauses and by interpreting *yājā* as a 1st singular, I account for the different referent types of the two sets of accusatives and avoid having Agni sacrifice to himself by providing another agent for the verb in cd.

I.45.3: On *vírūpavát* see comm. ad X.14.5. This is the only place in the RV where *vírūpa-* has to be interpr. as a PN.

I.45.4: *máhikeru-* is a hapax of unclear meaning. Mayrhofer (EWA s.v. *máhikeru-* and *céru-*) plausibly suggests a connection with *√ci* ‘observe, take note’; so also Old. Its

apparent structural similarity to *mahivrata* in 3c might invite a complementary semantic analysis.

The etymological figure *śukréṇa śociṣā* is not rendered so in English because “blazing blaze” strikes me as limp.

I.45.8: Note the phonetic figure in c: *bṛhád bhā bíbhrato havír*, playing with *b*, *bh*, and *h*; *r* and *r*.

Most tr. take *bṛhád bhāḥ* ‘lofty light’ as coreferential with *tvā* (=Agni), not as object of *bíbhrataḥ*, parallel with *havíḥ*. This in some ways makes better sense, though the word order weakly favors my tr. Old (SBE) also takes the phrase as the obj. of *bíbhrataḥ* and adduces a telling parallel, IV.5.1 *kathā dāśemāgnāye bṛhád bhāḥ*, where the phrase is emphatically not coreferential with Agni.

I.45.10: I tr. *sudānavaḥ* as “you of good drops,” rather than “of good gifts,” which is always also possible for this ambiguous stem, because of “the Maruts of good drops” (*marútaḥ sudānavaḥ*) who ended the previous hymn (44.14) in the same structural position. But as a general descriptor of the gods in this verse it might be better as “of good gifts.”

[I.46-47 JPB]

I.48 Dawn

I.48.1: The voc. *uśaḥ* was carelessly omitted in the published tr.

I.48.2: With most tr./comm. I follow Bloomfield in interpr. *viśvasuvíd-* as haplology for **viśva-vasu-vid-* (for details, see Scar 489–90). This, however, produces a three-member cmpd, very rare in the RV. For a somewhat similar cmpd with karmadhāraya as 1st member, cf. *puruvāra-puṣṭi-* I.96.4.

The pāda break favors taking *bhūri* with the verb, as most do (e.g., Ge “geben sie sich viele Mühe”), but semantically it goes better with pāda a. Cf. expressions like *bhūri te vāsu* (I.81.2, 6, VIII.32.8), *bhūri vāmam* (I.124.12, VI.71.4), and esp. *bhūri ... saubhagam* in 9c below.

On *sūnītā-* as ‘liberality, liberal (gifts)’, see Re’s discussion here (EVP III.17), summarizing previous work.

I.48.3: Most tr. take *jīrā* as agentive with an objective genitive (e.g., Ge “die Wagen in Bewegung setzend”), but I think this unlikely because it would be the only such usage of *jīrā-*. (*gō-jīra-* in IX.110.3 is sometimes so interpreted [Ge ‘die Kühe zutreibend’] but need not be.) Although not taking *jīrā* as transitive leaves *rāthānām* without any clear governing word, that seems preferable to claiming a unique value for *jīrā-* in this passage. That Dawn may be “the lady of the chariots” is also suggested by her hundred chariots in 7c.

The referent of *yé* in c and the affiliation of that rel. cl. are disputed. Ge takes the rel. pronoun as referring to the *rāthānām* of b. This has the merit of associating the rel. with an adjacent noun in the proper number and gender and keeping the relative clause

syntactically confined to the verse in which it appears. However, it affords these chariots more agency and significance than I think they deserve. Instead, the rel. cl. of cd seems to group more naturally with the identically structured *yé* clause in 4ab, which also has a 3rd pl. presential reflexive verb preceded by a loc. pl. and also contains a genitive referring to Dawn. The two clauses also begin with a metrically irregular 11-syllable pāda with a rest right before the caesura, an irregularity that also speaks for their association. This pair of relative clauses is resolved by the main clause in 4cd. Such an enjambed structure is characteristic of pragāthas. (Re also take the two verses this way.)

Then there is the question of the meaning of *dadhriré*. It belongs to the root \sqrt{dhr} ‘hold, support’, and in this (rare) middle usage seems to have reflexive value ‘hold oneself’/‘hold oneself fast’, with the possible pregnant sense ‘hold oneself ready’ (so Re, WG, Ge n.). I take it as having slightly different meanings in simile and frame (a favored poetic strategy of Vedic bards). In the simile it depicts sailors (or some sort of boatmen) standing firm against the rigors of the voyage, whereas in the frame the subjects (who are identified in the parallel rel. clause of 4ab as patrons) hold themselves ready to give, an action that is also the topic of that parallel rel. clause. In fact, one could almost construe (or supply) the *dānāya* of 4b with *dadhriré* as well as with its own clause.

I.48.4: This verse is somewhat oddly constructed, especially the distribution of elements in cd. The opening of c, *átrāha tād*, seems overburdened with functionless elements, esp. the *tād*, which has no obvious referent. As it turns out, this opening is found elsewhere (I.135.8, 154.6), with a likewise referent-less *tād*. I therefore assume that the *tād* here emphasizes the temporal/logical *átra*. Then we find two gen. plurals, *eṣām* and *nīṇām*, separated from each other, but probably ultimately coreferential. I assume that enclitic *eṣām* serves as the correlative for *yé* in pāda a (though we might expect *téṣām*) and that the unusually heavy opening of the pāda has bumped it into pseudo-second position after the first real word of the clause, *kāṇvaḥ*. But until we understand more about the interaction of the placement of these various elements, this is simply an after-the-fact description. It should be noted that *eṣām* generally does not show the standard Wackernagel’s Position behavior (modified 2nd position) that we might expect from an enclitic, and in particular has a tendency to take final position. The *nīṇām* at the end of the verse simply doubles and further specifies *eṣām*. I have tr. *nāma* twice, for ease of English.

I.48.6: The first pāda depicts the usual effect of Dawn – sending all creatures on their daily business.

ódatī. Though this form appears to be a fem. pres. participle to a Class I present (also in its other occurrence VIII.69.2), such an analysis is formally troublesome, because the feminine stem is weak (-at-ī), though a strong suffix is expected in Class I (e.g., *bhávantī*). Moreover, there are no other forms to the putative present **ódatī*; the standard present is nasal-infix *unátti* with transitive value. And *ódatī* lacks participial sense: it simply means ‘wet’. It thus seems best to take it as a non-participial -ant- adjective (as *járant-* is often interpreted). It is worth noting that Whitney (*Roots*) classifies it as a primary derivative of the root and gives no Class I present and that Gotō makes no mention of it in his monograph on Class I; it is likewise undiscussed in Lowe’s monograph on RVic participles.

As for its meaning here, it is used simultaneously in two senses: the literal one, ‘wet’, referring to the dew characteristic of early morning, and ‘lubricious’, referring to Dawn’s notorious hyperfeminine and sexual qualities, also reflected in 5ab *yóṣeva ... prabhuñjatī* “giving delight like a maiden.”

vājīnīvant- (also *vājīnī-vasu-*). This fairly common adjective is obviously a derivative of extremely well-attested *vājīn-* ‘prize-winning (horse)’, itself a possessive adjective formed to *vāja-* ‘prize’. The usual tr. of *vājīnīvant-* are rather attenuated — Gr ‘gabenreich’, Ge (here) ‘du Reichbelohnende’, Debrunner (AiG II.2. 875) ‘gabenreich’ — or render it as if it were identical to *vāja-vant-*; so Re. (here) ‘porteuse des prix de victoire’, WG ‘du Rennpreisbesitzende’. By contrast, I feel that both the apparent feminine *vājīnī* and the second possessive suffix (-*vant-* in addition to -*in-*) should be noted and I interpret the stem as meaning ‘possessing prize-winning mares’. *vājīnīvant-* is esp. characteristic of Dawn and other female figures (e.g., Sarasvatī), who might be expected to have female animals; though *vājīnī-vasu-* is almost entirely confined to the Aśvins, those gods are very closely associated with Dawn. Debrunner (AiG II.2.409) instead ascribes the -*ī-* to “Erweiterung durch -*ī-* nach Analogie anderer Wörter,” but doesn’t in this case suggest what other word(s) might be involved.

I.48.9: The standard tr. take the injunctive *uchat* as a modal (Ge “soll ... hinweg leuchten”), but since this verb is parallel to a presential perfect *nānāma* (so Kü 278-79, *pace* WG “hat sich ... gebeut”) and a pres. indic. *kṛṇotī*, I see no reason to ascribe modal value to *uchat*.

I.48.10: The publ. tr. “with your lofty chariot ... heed our call” implies that the chariot is the instrument of her hearing. This was not the intent: the chariot is simply one of her attributes.

I.48.11: *sukṛtaḥ* is multiply ambiguous. Though it literally means ‘doing/performing well’ / ‘of good action’, it is ordinarily specialized for performing the sacrifice well and refers to the human actors in the ritual. However, it can also on occasion be used of gods (e.g., X.63.9). In this passage most tr. take it as a gen. sg. referring to the sacrificer and dependent on *adhvarān* (e.g., Ge “zu den Opfern des Frommen”). However, this leaves *ā vaha* without an object. I therefore read *sukṛtaḥ* as acc. pl., and in fact I read it so twice — once as obj. of *ā vaha* and referring to gods (so also Gr) and once as the goal of *ā vaha* and referring to the mortal sacrificers. The first reading seems confirmed by the first pāda of the next verse, 12a, which “repairs” the less clear expression with *viśvān devāṃ ā vaha*, using the same verb. The second reading, referring to the sacrificers, allows the *yé* of 11d to have an antecedent of the right grammatical number. It would of course be possible to take *sukṛtaḥ* only once, as referring to the gods, assuming the gapping of a pronominal antecedent to *yé*, but this loses the neat equation of gods and sacrificers.

I.48.14: The relative clause of ab (lit. “which previous seers ...” *yé ... ṛṣayaḥ pūrve...*) has no explicit referent in the main clause, but implicit is the notion that our praises should receive the same favorable response from Dawn as theirs did, so there is a suppressed gen. pl. *téṣām* or the like. The other passage containing the 3rd pl. mid. pf.

juhūrē (VIII.8.6) is constructed almost identically to this one, though in dimeter meter, with a similar implicit understanding of the relation between subordinate cl. and main cl.

I.49 Dawn

On this hymn and, especially, on its “versified sandhi paradigm” (in JL’s felicitous phrase) and the aberrant voc. *uṣar* (4c), see Lundquist 2014. The appearance of this entirely anomalous form in the final verse of Praskaṇva’s Dawn ritual series (I.44-49) defines this series as a type of ring: *uṣar-* as an *-ar* locative occurred in the first verse of the series (I.44.1) in the compound *uṣar-budh-* ‘waking at dawn’.

The hymn itself has a simple ring structure: *bhadrēbhiḥ* in 1a (with which ‘rays’ is supplied on the basis of I.48.13) matches *rāśmibhiḥ* in 4a, *rocanāt* in 1b matches *rocanām* in 4b, while the genitive *divāḥ* of 1b anticipated in 3d.

I.49.1: The tr. of *aruṇāpsu-* as ‘of reddish breath’ is owing to Thieme (Fs. Schubring). See EWA s.v. *psu*.

I.50 Sūrya

Although this is the last hymn in the Praskaṇva group (I.44-50), it does not belong directly with the preceding hymns, which are clearly grouped in pairs and belong to the Prātaranuvāka litany.

I.50.3: I separate pādas a and b and supply a verb of extension with b. Most tr. take *ādṛśram* as the main verb of the whole verse. Although my interpretation requires more machinery, it takes account of the fact that *vī* is vanishingly rare with the root $\sqrt{dṛś}$ (though it must be admitted that there’s an example in the nearby Praskaṇva hymn I.46.11), while it is common with roots like \sqrt{tan} ‘stretch’, which also appears regularly with *raśmī-*. Cf. X.129.5 *vītato raśmīḥ*. However, the standard tr. is certainly possible. ET also suggests that since *vī* is fairly common with $\sqrt{bhrāj}$, that might be the verb to understand with bc: “... his rays flashing widely through the peoples like fires.” Of course, ordinarily participles with preverbs are unverbated, but not always.

I.50.4: I don’t understand Ge’s “pünktlich” for *tarāṇiḥ*, which does not seem to reflect any of the possible meanings of $\sqrt{tṛ}$ ‘cross over, surpass, etc.’. Here the idea is clearly that the Sun crosses the sky.

I.50.6: The first mention of any divine being but the Sun. The question here is whether we have two additional gods or one. The two vocatives *pāvaka* and *varuṇa* are in two different pādas (a, c), and the former is almost exclusively used elsewhere of Agni. However, already in the hymn (vs. 1) another standard epithet of Agni, *jātāvedas-*, has been applied to a different god (Sūrya), and so it may be that aspects of Agni, an alter ego of the Sun in some sense, are being distributed to other gods in this hymn. Moreover, the sun is regularly considered Varuṇa’s eye, but not, I think, Agni’s. Re, however, takes *pāvaka* as Agni.

The other question is the identity of the “bustling one” (*bhuranyānt-*). The root \sqrt{bhur} and its derivatives are sometimes used of Agni and this referent is possible here,

but I think it more likely that it refers to the human ritualist, who is active at the dawn sacrifice.

I.50.8–9: I assume that the seven mares of vs. 8 are the same as the sleek daughters (*śundhyúvah ... naptiāḥ*) (or granddaughters) of the chariot, but I do not know why the rare word *napti-* is used of them. Thieme (KlSch: 220), on the basis of *śundhyúvah*, thinks they are wild geese (“...hat sich sieben Wildgänse als Tochter des Wagens angeschirrt”), but this seems to introduce an unnecessary complication since *śundhyú-* can be taken in its literal meaning.

I.50.8: The reassignment of Agni epithets continues in this verse: *śocīṣkeśa-* ‘flame-haired’ is otherwise only of Agni.

I.50.9: *sūrah*: Although most take this as nom. sg. (Gr, Ge, Th, Lü), Re makes a good case for it as gen. sg. (followed, it seems, by WG), also adducing V.31.11 *sūraś cid rátham*.

I.50.12: ET comments “1.50.12 is AVS 1.22.4, AVP 1.28.4, the final verse of 4-verse compositions for getting rid of jaundice. However, it’s interesting that in both AV recensions the first verse refers to the sun, but it’s not the same as RV 1.50.11. The RV seems to have a *ṛca* which incorporates the verse that appears as 1.50.12 whereas AV tacks it on to a different *ṛca*. On the other hand, the 1st pl verb forms are jarring in RV 1.50.12, but in the AV they harmonise with other 1st pls.” This formal and structural argument suggests that the verse was taken over from Atharvan context, a possibility that its contents also support.

I.51 Indra

This vs. shares a number of details with X.99, an impossibly obscure Indra hymn. See the list in the intro. to the comm. Unfortunately, due to the nature of X.99, these parallels don’t help much in interpr. this hymn.

I.51.2: This verse displays a type of “poetic repair”: the first hemistich has a grammatical subject that is ordinarily inanimate (*ūtáyah* ‘[forms of] help’) with a verb that ought to have a personal subject (*abhí ... avanvan* ‘they attained to / gained’), with an object possessing a number of qualities, but unnamed; the third pāda solves this slight puzzle by giving names to both: the subject is the R̥bhus, the object Indra.

The spatial contrast in b between filling the midpace, but being himself enclosed by his own powers (muscle-bound?) is nice.

jávana- occurs only here in the RV, but the *-ana-* suffix ordinarily makes transitive nominals (*pace* Ge’s “raschhandeln,” Re’s “véloce”).

I.51.3: Though the verse starts promisingly, with two identifiable myths (Vala, pāda a; Atri, pāda b -- though the 100-doored [house] is unclear; see X.99.3 for an equally obscure occurrence), the second hemistich brings obscurity. As noted in the intro., the standard myth about Vimada involves the Aśvins bringing him a wife, usually with the verb (*nī*) *√ vah*. Is this the same story, with *vāsu* ‘good thing’ a generic substitution for

‘wife’, or is Indra’s relationship with Vimada of a different sort from the Ásvins’? As for pāda d, the action here is completely obscure (see Ge’s somewhat desperate note attempting to make this about a rocky nest [Felsenest] of robbers), and what it has to do with the Vimada story is equally puzzling. Since *nartáyan* in d is only a participle, it should be attached to the main clause in c rather than relating a separate myth. A final bit of obscurity is *saséna* ‘with grain’, which opens c. The stem *sasá-* generally shows up in enigmatic phrases referring, probably, to the ritual grass and/or the cereal ritual oblations.

I.51.4: This verse, by contrast, clearly concerns the Vṛtra myth and is for the most part unchallenging. It is worth noting that its first pāda is structured almost exactly like 3a and begins and ends identically: *tvám ... (a)vṛṇor ápa*. The verse also contains an occurrence of *vásu* (in b), which unfortunately doesn’t shed any light on the mysterious *vásu* in 3c. In fact 4b is the only part of this verse that is somewhat unclear: the *dānumad vásu* (‘drop-laden goods’, taking *dānu* to ‘drop’ with Gr and Re, rather than ‘gift’ with Ge [WG]) is of course the water confined in the mountain by Vṛtra, which Indra releases. But why does Indra hold it fast (*ádhārayaḥ*) in the mountain rather than releasing it as usual? The passage is similar to the Indra ātmastuti X.49.9 *ahám saptá sraváto dhārayam vṛṣā*. Perhaps he gave the waters, as it were, emotional support – but this doesn’t sound like either the Rigveda or Indra. At best we’re left with an attenuated meaning like “help out.” Or — a long shot — this is an expression like I.103.7 *sasántam ... abodhayó him* “you ‘awakened’ the sleeping serpent,” where *abodhayaḥ* is meant to evoke its opposite, ‘put to sleep’. See intro. to that hymn and Jamison 1982/83. In that case ‘hold fast’ would evoke ‘let go’. For a possibly similar passage with Indra “bringing to rest” the waters rather than releasing them, see V.32.1 and comm. thereto. However, the formulaic nexus between \sqrt{budh} ‘awake’ and \sqrt{sas} / *svap* ‘sleep’ is very strong, whereas \sqrt{dhr} is not regularly paired with, say, forms of \sqrt{srj} ‘release’, and so I advance this possibility only very tentatively. ET offers another intriguing suggestion. She cites the well-known Old Persian PN *Dāraya-vahu* (corresponding phonologically to Skt. **dhārāya-* + *vásu*, and wonders “Could the poet be deliberately using, perhaps even punning on, an inherited Indo-Iranian collocation of the verb **dhr̥* with object **vásu*?”

I.51.5: Note alliteration: ... *pipror ... prārujaḥ púrah, prá ...*

I.51.6: JL cleverly suggests that the verse contains a word play on the PN of Indra’s defeated opponent Arbuda: by characterizing him as ‘great’ (*mahānt-*), the poet implicitly evokes the semantic opposite *ārbha-*, *arbhaká-*, which resembles the PN phonologically and would help regularize the non-Indo-Aryan -b- in *arbudá*. So, “you trampled down Arbuda (the little one), though he was great.” As JL points out, support for this interpretation comes from 13a *ádadā árbhām mahaté ..., kakṣīvate vṛcayām ...* “You gave little Vṛcayā to great Kakṣīvant.

I.51.7: The phrasing of pāda b is conceptually backwards, strikingly so. Ordinarily Indra drinks the soma and is moved to be generous, whereas here his (latent) generosity rouses itself in anticipation of the soma.

vísṁāni carelessly omitted in publ. tr.: “all the bullish strengths.”

More alliteration: *vr̥scā śátror áva víśvāni vr̥ṣnyā*, with sequences of *v* with either *i* or *r̥*, followed by *ś* or *ṣ* (with a few more *v*'s and a *ś* thrown in).

I.51.9: The *avratá-* 'having no commandment' of 8b is transformed into the even less savory *ápavrata-* 'against/rejecting commandments' and contrasted with their opposite number, the *ánuvrata-* 'following commandments'.

The image of Indra's transformation into an ant (*vamrá-*) presumably concerns his ability to pass unnoticed in the enemy camp and then bring the fortifications down from within. However, "smashing apart" (*ví√han*) doesn't seem a likely action for an ant, or even a huge nest of ants, so the combined image is somewhat unsettled.

The identity of the enemy in this hemistich is not clear. The other occurrence of the phrase *dyā́m ínakṣant-* (X.45.7) refers to Agni, but that identification seems unlikely here. It should also be noted that the other genitive phrase referring to this enemy, *vr̥ddhásya cid vārdhataḥ* "the one who, though already full grown, kept growing," is grammatically problematic because the active present participle *vārdhant-* should be transitive, as the rest of this extremely well-attested active inflection is. Gotō (1987: 291) notes the problem but has no explanation either. Expected middle **vārdhamānasya* would of course not fit this metrical position, but that is not enough for a Rigvedic poet to contravene grammar. However, the active part. more nearly matches the paired ppl. phonologically: *vr̥ddha... vardha...*, and this may have influenced the poet to use the active form.

I.51.10: A nice adjacency figure, *nṛmaṇo manoyujāḥ*.

Ge (WG) supplies "with strength" with *pūryamānam* 'being filled', but Re's "with soma" (an alternative allowed by Ge in his n.) seems more likely on the basis of other "fill" phrases involving Indra. Esp. apposite is V.34.2, adduced by Ge, where Indra fills his belly with soma while Uśanā offers him a weapon, much as here. Indra's exhilaration in the immediately following verse here (11a) also supports the soma interpretation.

I.51.11: *vañkū vañkutārā* is generally taken as characterizing the speed of the two horses, and I agree that that is the general idea -- but think this meaning arises indirectly. Ge takes it as 'flying', Re as 'rapid', Hoffmann (Inj. 221) 'ever faster moving', WG 'ever faster galloping', but this basic meaning does not fit the root to which it most likely belongs, *√vañc* 'move crookedly', or the other occurrences of *vañkū-*, esp. I.114.4. I think the nuance here is the same one found in the deriv. adj. *vākva(n)-* 'billowing' → 'surging'. The non-linear movement of the root is here concretized as a wave motion, with the attendant speed and power associated with waves.

The c pāda presents some difficulties of construction, particularly the two accusatives *yayīm* and *apāḥ*, which do not match in number. Ge and Re supply 'mounts' (*ádhi tiṣṭhati*) from the end of pāda b (or perhaps *ā ... tiṣṭhasi* from 12a) and 'chariot' with *yayīm* and begin a new clause with *nír*. So, "the powerful one (mounted) the speeding (chariot); he released the water in a stream." Alternatively Ge suggests that c is a single clause, but that *apāḥ* is not an acc. pl., as is usual, but the rare gen. sg. construed with *srótasā*, so "the powerful one released the speeding (chariot) with the water's stream(speed) [mit des Wassers Strom(schnelle)]." Neither of these fussy solutions is

appealing. With regard to the latter, *nir apāḥ* [acc.pl.] \sqrt{srj} appears to be formulaic (cf. I.103.2, X.124.7, the only other examples of *nīḥ* \sqrt{srj} that I know of), and so a gen. sg. is unlikely; with regard to the former, it seems overly elaborate to supply so much material in a pāda that can be read as a unity. I follow Old in taking *yayīm* as an epithet of (so Old) or, better, an appositive or qualifier to the waters. Since *āp-* ‘water(s)’ is in essence a plurale tantum, a parallel singular would not be surprising. For *yayīḥ*-qualifying waters, cf. X.78.7 *sīndhavo ná yayīyaḥ* “coursing like rivers,” adduced by Old (also X.92.5). My tr. “for coursing” rather than “as coursing” or the like is a concession to English.

I.51.12: Another verse with tricky constructions. In the first pāda the loc. *vr̥ṣapāṇesu* goes misleadingly easily into English (“you mount the chariot to...” like “the bus to town”). Despite my tr. I think it more likely that *vr̥ṣapāṇesu* is functionally a loc. absolute of the type “when bullsh drinks (are available)” → “on the occasion of bullsh drinks / when there are bullsh drinks.”

In pāda b most tr. (Gr, Ge, Re, WG) take *prābhṛtā* as representing *-āḥ* out of sandhi – following the Pp., hence a nom. pl. m. past participle – but as Old points out, this is very disruptive to the syntax. Better, with Old, to interpret it as a loc. sg. to the *-i-* stem *prābhṛti-* ‘presentation’, a possibility suggested by Pischel (see Old) and mentioned by Ge in his n.

Pāda c is standardly taken as preposed to d and the verb is tr. as indicative (e.g., Ge “du ... deine Freude hast,” Re “tu prends plaisir”), but *cākānaḥ* is undeniably subjunctive; *yāthā* + subjunctive regularly builds purpose clauses, which are regularly postposed. I therefore take pāda c with ab: the purpose of Indra’s mounting of the chariot is the pleasure he will receive at the soma sacrifice.

In d all tr. take *ślókam* as ‘fame’, but the noun refers rather to a very perceptible noise or call that signals some event. The event is often the sacrifice and the *ślōka-*, the noise, is often issued by the pressing stones (e.g., I.113.3, 139.10, III.53.10); the noise of the *ślōka-* is loud enough to reach to heaven (e.g., I.83.6, 190.4). This pāda contains this same notion of the *ślōka-*, the audible signal of the sacrifice, going to heaven, but it seems also, oddly, to suggest that Indra follows it there. Perhaps this refers to Indra’s departure to heaven at the end of the sacrifice, a common theme.

I.51.13: Indra’s transformation into a human female is no more surprising than his changing into an ant in vs. 9, and is better supported. See Ge’s note, as well as my 1991 *Hyenas*, where in a widespread story in Vedic prose Indra is transformed into a female hyena.

I.51.14: The standard tr. take pāda b as a nominal sentence (“the praise song is a doorpost”), but the verb of pāda a, *asrāyī* ‘has been fixed, propped’, fits b very nicely, as Old argues. Ge suggests such an interpretation in his notes, without rendering it in tr.

The poet Kakṣīvant mentioned in vs. 13 is associated with the Pajras, who are mentioned a number of times in the hymns attributed to Kakṣīvant. ET points out that pāda b probably contains a pun on the PN *pajrā-*, which literally means ‘sturdy, steadfast’, a meaning which works well with the fixed doorpost.

I take *prayantā* in d as a periphrastic future, not a straight agent noun.

I.52 Indra

I.52.1: The verb *mahayā* can either be a 2nd sg. imperative (so Ge [/WG]) or a 1st sg. subjunctive (so Re). In favor of the former interpretation is the parallel initial verse of the last hymn, I.51.1. *abhī tyām meṣām ... madatā*, with imperative (2nd pl.); in favor of the latter is the other main verb in this verse, 1st sg. opt. *vavṛtyām*. Either is possible; I weakly favor the 1st ps. subjunctive.

Since *subhū-* ‘of good essence’ is adjectival, a noun should be supplied as the subject of pāda b (*pace* Ge, who simply tr. “Kräfte”). The likely solution is found in vs. 4 *subhvāḥ svā abhīstayāḥ* “his own superior powers of good essence,” and I have supplied *abhīstayāḥ* here. (So also, it seems, WG.)

The standard tr. take cd as a single clause, with the acc. *īndram* of d identified with the *rātham* of c. Although this is not impossible, turning the literal chariot of a god towards the sacrifice is a common practice in the RV, just as turning the god himself is, and an equation of Indra and the chariot is somewhat awkward. I therefore think we have two separate clauses, with *ā ... vavṛtyām* applicable to both.

The c pāda has, in my interpretation, a non-insistent but appealing syntactic play, with the compound *havana-syād-* “rushing to the summons” parallel to the simile *ātyaṃ nā vājam* “like a steed (rushing to) the prize” — the suppressed term being a form of the root *√syand* and the accusative *vājam* matching the first compound member *havana-*.

I.52.3: A challenging verse, describing Indra in unusual ways and deploying unusual words and constructions.

The first pāda contains the difficult but clearly related words *dvaró dvarīṣu*, which seem also to belong with *vṛka-dvaras-* (II.30.8) ‘having the X of a wolf’. Wackernagel (1918 [see details in EWA s.v. *dvará-*] = KISch 325-26) adduces the Avestan root *duuar-*, which expresses a daevic way of moving. If *vṛka-dvaras-* means ‘having the movement/gait of a wolf’, I tr. the words in this passage as ‘skulking, skulker’, as characteristic of a wolf.

The rest of the first pāda consists of *vavrā ūdhanī*. The latter is clearly a locative, but the former is taken by the Pp. as *vavrāḥ*, nom. sg. of *vavrā-* ‘cave, cavity’ out of sandhi, an interpretation followed by the standard tr. and argued for by Old. (Gr, however, takes it as a 3rd sg. pf. to *√vr-* ‘cover’, *vavré*.) The sense is taken to be “a cavity at the (soma) udder”; that is, Indra’s mouth, throat, and stomach are an enormous empty space to be filled with soma. By contrast I take it as a loc. to the same noun *vavrā-* and a simultaneous reference to the Vṛtra myth and the Vala myth, as well as fitting the image conjured up by the *dvar*-words. To start with the last, caves are good places to skulk and quite possibly a haunt of wolves. As for the Vṛtra myth, Vṛtra himself is called a *vavrā-* in V.32.8, while Vala is itself a cave and the word *vavré* is several times used of this myth and Indra’s involvement in it (IV.1.13, V.31.3). Thus Indra is “skulking” in the vicinity of these mythological enemies in the first part of this verse. The published tr. limits the reference of *vavré* to the Vṛtra myth; I would now expand that.

I then take the adjacent loc. *ūdhanī* as contrastive and construe it with pāda b: Indra skulks near his enemies (the “cavities”), but at the (soma-)udder he becomes roused to elation and display his golden foundation, that is, the riches he will dispense in return

for the soma. Indra's bright *budhná-* here contrasts with the *budhná-* associated with Vṛtra in vs. 6, where the latter lies on the *budhná-* "of the dusky realm" (*rájasah*).

The last part of the last pāda, *sá hí pápriṛ ándhasah*, is also problematic. It is universally interpreted as "he is filled / fills himself with soma," which makes good sense. Unfortunately it does violence to the grammar. First, *pápri-* does not otherwise mean 'filling' (in my opinion, but see, e.g., Grestenberger, JAOS 133.2: 271, though she does not give exx.), but either 'providing' or 'delivering'. Furthermore, reduplicated *-i-* nominals are otherwise agentive (AiG II.2.291-93) and regularly take accusatives (see esp. VI.50.13 *dānu pápriḥ* 'supplying gifts') (see Grestenberger JAOS 133.2). Ge is aware of the morphological problem (though not, it seems, the semantic one) and in his n. suggests that the form is either reflexive or that *jathāram* 'belly' should be supplied, but there is no basis for either of these solutions. Therefore, although I see the attractions of "is filled with soma," I do not see a way to wrest this meaning out of the text. Instead I take *ándhasah* as a causal ablative and *pápriḥ* in the same fashion as VI.50.13. The clause then paraphrases pāda b: Indra provides wealth because he becomes exhilarated on soma.

I.52.4: It is not clear to me why Indra's superior powers have barhis as their heavenly seat, but this does not license the grammatically impossible tr. of Ge and Re, who seemingly take *sádmabarhiṣah* as modifying *índram*.

For *avātá-* see comm. ad I.38.7 and VIII.79.7.

I.52.5: *svávṛṣṭi-* is found only here (and 14c below, in the same phrase), and the etymological identity of *vrṣṭi-* is not clear. Easiest (with Gr) would be to take the second member as *vrṣṭí-* 'rain', but 'having his own rain' doesn't make much sense. Ge (n. to 14bc) connects it with *várṣman-* 'height', *várṣiṣṭha-* 'highest', *vṛṣan-* 'bull', tacitly positing a root $\sqrt{vrṣ}$ 'be high/great' and tr. 'Eigengrösse'. One of the difficulties with this interpretation is that the word should be a bahuvrīhi (so Old) not a karmadhāraya, judging from parallel formations (cf. *svá-yukti*, *svá-vṛkti* [pace Gr, Old]). I prefer the interpretation that links the word to the IE root **uerg* 'work', found in Aves. *varəz* (and of course Engl. work, Grk. ἔργον) (see EWA s.v. *svávṛṣṭi-*). So, evidently, Re: "son action propre," though Re also takes it as a karmadhāraya. Because of the formal parallels, I interpret it as a bahuvrīhi 'having his own work', even though this causes some problems: in this clause Indra must be referred to both in accusative, in this compound, and in the genitive, in the phrase *asya yúdhataḥ*, which depends on *māde*. Nonetheless, as usual I don't feel we can ignore grammar whenever it complicates interpretation.

I.52.6: *durgṛbhiśvan-* clearly belongs with *durgṛbhi-*, but the *-śvan-* is curious. Probably best to explain it, with Scar (116) as a Kunstbildung based on *rjísvan-* and possibly *mātaríśvan-*. For this reason I've translated it as a nickname.

I.52.7: I take *yújyam* as having gerundive force, construed with *te*, rather than simply 'his own' < 'associated (with himself)' of other tr.

I.52.9: Another puzzling verse, and my interpretation is accordingly not at all certain. I take the first pāda, couched in the neuter, to refer to the sun (n. *svâr-*), the placing of which in heaven (as m. *sūryam*) was Indra's last act in vs. 7. In the 2nd pāda the subjects

of *ākṛṇvata* (note the middle, which should have self-beneficial force) make this sun into their own means of getting to heaven. As an *-ana*-nominal, *róhana-* (only here) should have transitive-causative force.

However, I think there is more going on here, for in the 2nd hemistich Indra is identified as the sun (n. *svâr*), while his helpers, the Maruts, are associated with humans, the descendents of Manu (*mānuṣa-*), and their activities. If Indra is the sun, then the sun of pāda a, which the Maruts/gods used to get themselves to heaven in pāda b, may well be Indra. For this identification note the *-(ś)candra-* reminiscent of Indra's *candra-* in 3b, and in 6a the glowing heat surrounding Indra and his flaring power seem to depict something very like a solar Indra. The Maruts' aid to Indra in the Vṛtra battle (4c, where they are called *ūtāyaḥ* as here) stood them in good stead, enabling them to bridge the distance between the human world and heaven by hitching their wagon to a star (=sun, =Indra).

I do not quite understand the *bhīyasā* of b, though it obviously must be considered in connection with the same word in the same metrical position in the b pāda of the next verse. I assume it refers here to the awe- and fear-inspiring aspects of Indra in his celestial form.

I.52.10: I agree with Ge (against Pp, Gr, Old, Re, WG) that loc. *vājre* should be read for Pp. nom. *vājraḥ* and that this locative is functionally, but not grammatically, parallel with *āheḥ svanāt* "from the sound of the serpent."

With Ge and Old (and back at least to Ludwig), I see no choice but to accent the apparent voc. *rodasī* as *ródasī*. In the publ. tr. it should therefore be marked with an asterisk.

I.52.11: I supply a form of *√tan* 'extend' in the first pāda, though with a general injunctive sense, not the subjunctive of *tatānanta* in b. The "ten coils" of pāda a invite an interpretation of increased or increasing space, as do the next verses with their emphasis on distance and vast space.

I.52.13: The 2nd sg. act. forms *bhuvah* and *bhūḥ* that serve as the main verbs of the first two pādas respectively are difficult to distinguish. (Note that Hoffmann [Inj. 214–15] translates them both as "bist.") The problem is made more acute by the fact that though *bhūḥ* is definitely a root aor. injunctive, *bhuvah* can either be the injunctive (on which see comm. ad IV.16.18) or the subjunctive to the root aor., as it is, in fact, in 11d. I have made an effort to distinguish them in tr., and given the general preterital cast of this verse and the previous one I am reluctant to interpret *bhuvah* as subjunctive ("you will become the counterpart of earth"), though that interpretation is not beyond possibility.

I.53 Indra

I.53.1: I am puzzled by Ge's (/WG) interpretation of this pāda, which introduces a thief with no support from the text ("Noch nie hat ja einer das Kleinod wie (ein Dieb) bei Schlafenden gefunden"). As far as I can tell, the proposed purport is that it's easy for a thief to find (and presumably steal) a treasure that belongs to people who are asleep, but not so easy for us to do so in this case. WG remark that stealing something from sleepers

is a favored theme in later literature. But it is not otherwise met with in the RV, as far as I know, and it doesn't fit the context very well. I think the point is rather simpler: we had better get to work presenting our praise to Indra because the lazy and somnolent don't get rewarded – “asleep at the switch” is an English idiom for people who don't pay attention.

I.53.2: The slightly slangy tone of the previous verse is continued here, in the repeated verb *durāḥ* ‘break out’ and the cpd. *ākāmakarśana-* ‘not shorting desires’, as well, perhaps, as *śikṣānarā-* (for which see AiG II.1.316–17, which classifies it with cmpds of the type *trasā-dasyu-* with verbal 1st member governing the 2nd). There is surely more to be said about *śikṣānarā-*; among other things, its accent doesn't match the *trasādasyu-* type. But at least for now I will avoid the very contentious topic of such cmpds. *śikṣānarā-* is also found in IV.20.8.

I.53.3: *mā ... kāmam ūnayīḥ* “don't leave the desire lacking” matches the compound *ākāmakarśanaḥ* “who does not short their desires” in 2c.

I.53.6: *tāni vṛṣṇyā* can be either nom. or acc. Most tr. opt for the former, but I do not see how “bullish powers” can be the agent of exhilaration in the same way that soma drinks are. Surely the point is to rouse Indra's bullish powers for the fight to come.

Ge (/WG) take *dāsa ... sahasrāṇi* as “ten thousand,” while Re separates the two numbers as I do. The former interpretation is certainly possible, although the distance between the words mildly supports taking them separately. The compound numbers in vs. 9 are adjacent to each other. However, note *navatīm ... nāva* ‘99’ in I.54.6d.

A little phonological play: *barhīsmate ... barhāyaḥ*.

I.53.7: Note the parallel complex double figures opening pādas a and b: *yudhā yūdham* and *purā pūram*, with instr. and acc. sg. of a root noun in each instance.

A certain Namī Sāpīya (or Sāyīya) is a client of Indra's in X.48.9 as well as VI.20.6. In the latter, Namuci is the joint enemy, as here. Given the patronymic in the other two passages, it seems likely that *sākhīyā* here is a pun on that name.

I.53.7–8: Indra's slaying of Karañja and Parṇaya for the benefit of / with the help of Atithigva also figures in X.48.8, just as Namī Sāpīya is found in the flg. vs. (X.48.9).

I.54 Indra

I.54.1: The *mā* prohibitive lacks a verb, and there is nothing nearby to supply. The universal solution, “leave, abandon,” does the trick, although it would be nice to have some support for it.

róruvad vānā is variously interpreted. I have taken *vānā* as extent-of-space, though construing it as a second object of *ākrandayaḥ* (WG) would also be possible, save for the fact that the same phrase recurs in 5b and WG must construe it with a different verb. There seems no reason to supply a separate verb to govern it, as Ge does: “(du knackest),” and taking *vānā* as agreeing with *róruvat* as Re does (“les arbres (ont) grincé-violemment”) introduces unnecessary grammatical complications. (Is he thinking of this as a variant on neuter pl. + sg. verb?) For an expression similar to my suggested

interpretation see *vāne ... vacasyate* “display his eloquence in the wood” in the next hymn (55.4).

I.54.3: The construction of the second hemistich is not entirely clear. Most tr. take *barhānā kṛtāḥ* together (e.g., Re “créé par une pression-violente”), but this requires supplying a verb with the first part of pāda d (e.g., Re “(s’est mis)”). I instead think the idiom is *purāḥ* √ *kṛ* ‘put in front’ (I.102.9, VIII.45.9, X.171.4, of which the first two have ‘chariot’ as obj. – e.g., VIII.45.9 *rātham purāḥ ... kṛnotu*). I do *not* take *hāribhyām* as an ablative, because 1) *purāḥ* + ABL is only dubiously attested, and 2) setting Indra-as-chariot in front of his horses would be literally putting the cart before the horse. I take *hāribhyām* as dative, and think the idea is that Indra/the chariot is set out front for the horses, that is, for them to be hitched up.

Ge and Re take *vr̥ṣabhāḥ* with *rātho hī śāḥ*, but this is basically impossible, given the position of the *hī*, which overwhelmingly takes 2nd position. Nonetheless I agree that Indra is being identified with the chariot (not, however, with Ge the chariot(-fighter)); WG supply “word” as the referent of *śāḥ*, but the striking equation of Indra and chariot better fits the extravagance of the praise of Indra.

I.54.5: *nī ... vr̥ṇākṣi* is here tr. ‘yank down’, whereas in the preceding hymn, 9d, I render *nī ... avṛṇak* as ‘wrenched down’. The two should have been harmonized in the publ. tr. More serious is the question of what object the verb takes here. Most tr. use *vānā*, which, admittedly, is the only available accusative, but I am reluctant to follow this interpretation for two reasons: 1) As noted above *rōruvad vānā* also appears in 1c, which suggests that these words belong together and one shouldn’t be extracted to serve as a complement for a different verb; 2) I really doubt that there’s an alternate version of the Śuṣṇa story that involves felling trees on his head. In fact Śuṣṇa himself serves several times as the object of (*ni*) √ *vr̥j* (I.101.2 *śuṣṇam aśuṣam ny āvr̥ṇak*, also VI.18.8, 26.3). In nearby I.51.11 Indra destroys Śuṣṇa’s fortified strongholds (*dṛṇhitāḥ ... pūrah*), and I’m inclined to supply them here, with Indra wrenching them down onto the head of their hapless defender. Note that Indra also destroys *pūrah* in the next vs. (6d). I would thus change the publ. tr. to “as you wrench down (the fortresses) of the snorting Śuṣṇa onto his head.”

The question in the last pāda, *kās tvā pári*, lacks a verb, but it does contain the preverb *pári*, which suggests the solution: *pári* √ *vr̥j* is a common idiom meaning ‘evade, avoid’, and since the root √ *vr̥j* supplies the main verb of the earlier part of the verse (5a *nī ... vr̥ṇākṣi*), there is support for supplying it here, with the pleasing effect that the two different preverbs used with it provide two different idioms.

I.54.6: Support for supplying ‘help’ in pāda c (from *āvitha* in a) comes from VIII.50.9 *yáthā prāva étaśam kṛtvye dhāne*, with the same root √ *av* ‘help’ and the same situation depicted.

I.54.7: As Ge notes, *prāti inoti* is not otherwise attested, and so its sense here is unclear (Ge “der sich an das Gebot hält,” Re “qui ... va au-devant de l’ordonnance,” WG “der ... das Gebot entgegensendet”). I prefer to read the *prāti* as adverbial ‘in turn’, not as a preverb, and *invati* in its usual transitive sense ‘drive, advance [smtg]’. See I.55.4.

On the apparent fem. *dānu-* ‘drop/gift’ see comm. ad I.32.9.

I.54.10: A poetically dense verse with striking images and concomittant difficulties.

The first problem is the isolated compound *dharúṇa-hvara-*, modifying *tāmaḥ* ‘darkness’ in pāda a. The compound is generally interpreted as a tatpuruṣa, with *-hvara-* in verbal sense governing the first member (e.g., Ge “die den Urgrund der Gewässer zu Fall brachte”), but the accent is wrong: we would expect final accent of the type *puram-darā-* ‘fortress-smashing’, *brahma-kārā-* ‘formulation-making’. By accent the compound should be a bahuvrīhi (so WG “deren Wölbung ihr Grund war”). The *s*-stem *hvāras-* means ‘snare, tangle’ (from the meaning of the root \sqrt{hvr} ‘go crookedly’). I suggest that *hvarā-* has a similar meaning and the whole compound means ‘whose tangles were the foundation (of the waters: *apām*)’. And what would this mean?

In order to decode it, we must first note the use of *dharúṇa-* elsewhere in the Savya hymns: 52.2: *pārvato ná dharúṇeṣu ácyutaḥ* “like a mountain, immovable on its foundations” and 56.5-6: *ví yāt tiró dharúṇam ácyutam ...* “when you traversed the immovable foundation” and ... *divó dharúṇam ... pṛthivyāḥ ...* “the foundation of heaven and of earth.” Given the connection of *dharúṇa-* with *ácyuta-* and *pārvata-* elsewhere, I think we can confidently take the *tāmaḥ* in a and *pārvataḥ* in b as coreferential (unlike Ge [WG], Re). Remember also that *Vṛtra* is associated with murky darkness (e.g., his lying “on the foundation of the dusky realm” in I.52.6). In other words the mountain within *Vṛtra*’s belly in pāda b is the pure darkness of pāda a. Its “tangles” represent the inability to see a clear path in the dark and may also represent what happens to vision as it gets dark, the blurring and distortion of objects. These tangles provide a foundation, and an enclosure, for the waters. If I am correct, it is a powerful image.

The second hemistich is also problematic. At issue is the meaning of *anuṣṭhāḥ*, which Indra smashes. The form must be acc. pl. feminine (though Scar [644] allows the possibility of a nom. sg. masc., which would necessarily separate it from the preceding *vísavāḥ*). The lexeme *ánu* $\sqrt{sthā}$ straightforwardly means ‘stand by, stand following, stand along’ and can be used for helpers who stand by a leader (as indeed in nearby I.52.4); see exx. adduced by Scar. Scar then reasonably suggests that *anuṣṭhāḥ* here refers to ‘Gefolgsleute’ (sim. WG). But this introduces a set of subordinates and helpers to *Vṛtra* that do not otherwise figure in this well-known myth. Ge takes it as “Einsperrer” (barriers), which makes sense but is hard to extract from the form. Re’s “les positions-successives” is apparently an attempt to render Ge’s translation in a lexically legitimate way, but it doesn’t make much sense. My “rows (of palings) ... in succession” is a similar attempt, with the palings a complete invention. I do not feel that a satisfying solution has yet been reached.

I.55 Indra

I.55.1: phonetic figure ... *ví papratha*, ... *pṛthivī* ... *prāti* #

I.55.1–2: The two stems *varimán-* and *várīman-* appear here in successive verses without clear differentiation in meaning (though they do appear in different grammatical forms, nom. sg. and instr. pl. respectively).

I.55.2: The object of the verb *prāti grbhñāti* in the frame, which would correspond to the rivers in the simile, is not expressed. Ge (/WG) supplies “die Somaströme,” Re “chants.” Given the liquid nature of the simile, Ge’s suggestion seems the most likely.

Unfortunately most of the examples of *vī√śri* are used of the opening of the divine doors in Āprī hymns, so there is no formulaic material to aid in determining what to supply.

The phrase *yudhmā ójasā* is repeated in 5b and *ójasā* alone in 6b, both in the same metrical position.

I.55.3: As Ge notes, *√bhuj* ‘enjoy, derive benefit’ is formulaically associated with mountains, however odd that association may be to us. The question is then what does Indra enjoy *like* a mountain. Ge takes it to be one of the elements in b, either the ‘principles’ (neut. pl. *dhárman-*) or the ‘manliness’ (neut. sg. *ṛmṇá-*), and interprets masc. sg. *tám* in pāda as attraction from *tāni* or *tád* respectively. This is not impossible, but I prefer to take the object in the frame as soma, which has the correct gender and number, appeared in the previous vs. (2c), and is certainly something Indra enjoys (although I have found no passages in which soma is explicitly construed with *√bhuj*). The message of this first hemistich of vs. 3 – that Indra displays manly power in order to enjoy the soma – is essentially the same as that of 2c, where he “acts the bull” to drink the soma.

Re rather trickily interprets the simile / frame construction with one verbal expression in the frame (*irajyasi* “tu règnes sur”) and one in the simile (*bhujé* “comme on jouit”), but this completely violates the structure of RVic similes, which always hold the verbal notion constant between simile and frame. See Jamison 1982 (IIJ 24). WG supply soma, as I do, but also supply the verb ‘drink’ in pāda a and separate it syntactically from pāda b. There seems no reason to do that.

In c I am very tempted to read **devātāti* with one accent, the loc. sg. of *devātāt-*, rather than the transmitted *devātāti*, that is, *devātā + āti*, with the adverbial instr. to *devātā* plus the preverb *āti*. (An asterisk should therefore be inserted in the publ. tr.) The loc. **devātāti* would convey essentially the same meaning as *devātā*, and though *prá√cit* is very common, *prá-āti√cit* would only occur here. For a parallel construction with *prá cékite + instr. and loc.*, see VI.61.13 *prá yā mahimnā mahínāsu cékite* “The one who by her greatness shines ever more brightly among the great (rivers).”

I.55.4: What’s going on in this verse is a little baffling, but it seems to concern Indra’s participation in the ritual as a (quasi-)priest-poet, speaking along with the other priests (*namasyúbhiḥ*)(a) and (b) announcing his own name at that ritual. (That ‘name’ should be supplied here is clear from I.57.3, another Savya hymn, with *nāma indriyām*.) Indra’s “singing along” with the human priests, as it were, is also found in the passages adduced in Ge’s n. to 4a. It is a familiar topic.

Indra also seems to be homologized to soma in the first pāda: the only other occurrence of *vacasyate* is found in a soma hymn (IX.99.6), where soma “displays his eloquence” while sitting in the cups (*camūṣu*). Our word *vāna-* ‘wood(en)’ is often used in the soma maṇḍala for the wooden cup in which soma is put, and a well-attested formula combines *vāne*, the bull (there =soma), and noisemaking, as here: IX.7.3 *vīṣāva cakradad vāne* “the bull has roared down into the wood(en) cup” (cf. IX.74.1, 88.2, 107.22). This superimposition of soma imagery on Indra contributes to the obscurity of

this pāda, esp. what “in the wood” means in reference to Indra. Ge (n. 4a) seems to think of a sort of summer camp in the woods for ṛṣis and their families, while Re suggests a “marche” in the forest. I doubt both scenarios, although I do not have a satisfactory solution of my own. If *vāne ... vacasyate* evokes the phrase *róruvad vānā* of the immediately preceding hymn (54.1, 5), it can on the one hand refer to Indra’s loud roar while doing battle in a natural setting; but in a ritual context it might refer to the sacrificial posts or to the wood for the ritual fire, though I am not entirely persuaded by either.

Indra’s benevolent aspect, despite his bullish nature, is emphasized in the second hemistich.

I.55.5: As noted in the intro., this martial verse contrasts with the peaceful preceding one, a contrast emphasized by their parallel structure.

Acdg. to JSK (DGRV I.286) this is one of only two exx. (though I think there are more) of *caná* in non-negative value. I do not understand its use in this vs. For further disc. of *caná* see comm. ad X.49.5 and other discussions referred to there.

A cute play in *nighánighnate*, where the preverb *ní* appears to repeat in the middle of the word, although the second *ní* consists of the root-final *n* of the intensive reduplication followed by an *i*-liaison.

I.55.6: This verse cannot be a single clause (as Re, WG seem to take it) because the finite verb *srjat* in d lacks accent, while *hí* in the first pāda should induce accent on the verb. But if we separate the last pāda from the rest, there is no main verb, just the pres. participles *vināśāyan* and *kṛṇvān*. Although present participles are rarely predicated (as opposed to past participles), there are cases of such predication (*pace* Lowe 2012), and I consider this one of them. In fact I connect the first three pāda of this verse with the preceding verse, 5cd – with 6abc giving the reasons why the people trust Indra – and the present participles in some sense reflect the intensive (that is, iterative-frequentative) participle of 5d: he “is doing” rather than “did/does” the actions; they are repetitive and ongoing.

I.55.7: “mind on” is the English idiom and is therefore used here, despite the Skt. dative *dānāya*.

I interpr. *yá indra te* as an embedded izafe-type relative cl.; see my “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian” (Fs. Mark Hale).

kéta- can belong either to gods or to men; here they must be Indra’s since they are identified with his *sāṛathi-* ‘coachmen, charioteers’. His intentions are presumably to come to the sacrifice for praise and soma and, more to the point from our point of view, to give to us, as expressed in the first pāda.

I.55.8: The etymological figure in b, *ásālham sāhaḥ*, rendered here with the somewhat awkward “undominatable dominance” and belonging to the root \sqrt{sah} ‘vanquish, conquer’, is notable in part because the two root syllables *śālḥ* and *sah* share no surface phonemes, since the past participle has undergone several regular phonological processes that obscure its relationship to *sah*. Nonetheless any Vedic speaker would instantly see the connection.

The simile in c is a little unclear in the absence of real-world knowledge of life in Vedic India. WG suggest that, on departure from a temporary stopping place, wells need to be covered over to avoid their getting filled in or otherwise damaged; this seems reasonable, although I don't see that this action needs to be restricted to camps that are being left. In general it makes sense also in permanent settlements to cover wells to avoid their being contaminated. In any case, the simile seems rather more pointed and precise than necessary: that Indra has many hidden powers, mental and physical, is a commonplace, and the image of wells seems, at least to me, a bit of a distraction.

I.56 Indra

I.56.1: A bit of a mess, but very clever, once decoded.

For the first hemistich two features of interpretation are crucial: 1) I read **avatásya* 'of the well' instead of *áva tásya*, a reading already suggested by Gr (s.v. *áva*). The 'well' word appears in the last verse of the preceding hymn (55.8c) and so belongs to Savya's diction. 2) The simile / frame structure of ab involves a disharmony, with the verb to be interpreted in two different senses. In the frame, *prá ... úd ayamsta*, with the medial *s*-aorist to *√yam* 'hold', has a fairly literal meaning: 'raised forth for himself'. The object is the "many dippers" (*pūrvīḥ ... camrīṣaḥ*) of the well (**avatásya*). (In the publ. tr. "this" should probably be replaced by "the," since *tásya* is by my reading no longer there.) The word *camrīṣ-* is found only here, but it appears to be related esp. to *camrīṣá-* (I.100.12), apparently 'beaker', and the 'cup' words (*camasá-*, *camū-*) specialized for the serving of soma. The well is of soma; in X.101.5-7 the preparation of soma is likened to raising water from a well. In the simile (pāda b) the verb is used reflexively: the horse "raises himself up and forward" to (mount) the mare, a pretty good representation of equine copulation. The acc. *yóṣām* in the simile is not parallel to the acc. *pūrvīḥ ... camrīṣaḥ* of the frame: the latter is a direct object, while the former is a goal. The excitement of the mounting stallion is implicitly transferred to Indra's excitement at the many drinks of soma in store for him.

In c I take *dákṣam ... hiranyāyam* "golden skill" as a descriptor of soma: golden because of its color, skill because drinking it gives Indra the ability to do battle. It is a bit like calling alcoholic drinks "Dutch courage." (In the next vs. Indra is, or has become, the "lord of skill.") The verb *pāyayate* is a lovely example of a reflexive double I/T (in the terminology of my 1983 book): "he causes himself to drink X," with the appropriate middle voice. It is hard to know what (if anything) to supply with *mahé*. I supply *kárman-* 'deed', whose only appearance in the RV is in the preceding verse (55.3), Ge (/WG) "Kraft," while Re takes *mahé* as standing for an abstract, "pour (sa) grand(eur)." Any of these is possible; none is highly favored over the others.

In d "ingenious" may not be the happiest tr. of *fbhvas-* as applied to an inanimate thing. The word refers to craft or skill, and Re's "habile(ment construit)" may be the point.

I.56.2: On *nemannísah* see the lengthy treatment by Scar (55-56). I take *pārīṇasaḥ* somewhat loosely, following Gr, as an adverbial ablative.

In c Ge takes *sáhaḥ* as a pāda-final truncation of instr. *sáhasā* as sometimes elsewhere, but this seems unnecessary. In the final verse of the preceding hymn (55.8)

Indra took *sáhas-* into his body. It does not seem odd that he would here be identified as *sáhas-* itself. The odd placement of *nū* may support this analysis: the NP *vidáthasya ... sáhaḥ* may be structurally parallel to *pátim dáksasya*, and the 2nd- position *nū* could mark the second NP as a new syntactic unit.

I.56.3: “Like a mountain peak, ... glints with its thrusting” – the image seems to that of a pointed, snow-capped mountain, with the snow shining in the sun and the point appearing to thrust into the sky, though of course it doesn’t move.

Again Ge suggests that pāda-final *śávaḥ* could be for instr. *śávasā*, though he doesn’t so tr. – only wistfully remarks that ab could be a single sentence if *śávaḥ* were instr.

I.56.4: *arhariṣváṇiḥ* is completely unclear; *-sváni-* is ‘sound, noise’, but the first member appears nowhere else and has no etymology. All tr. take it as a cry of triumph, but this unanimity reflects a dearth of other choices rather than conviction in its rightness. Ge suggests *arhari* might be onomatopoeic, but it’s hard to see what sound it’s imitating. One tack might be to play with MIA possibilities, but juggling the phonology according to known MIA sound laws has not so far yielded anything useful.

I.56.5: Though Gr and Lub take *tiráḥ* as the prepositional adverb, standard tr. interpret it as the 2nd sg. injunctive to *tiráti*, which is surely the correct analysis. There is a surprising disagreement among tr. as to what *ácyutam* ‘immovable’ should modify. I take it with *dharúnam* on the basis of Savya’s I.52.2 *dharúṇeṣv ácyutaḥ*. I take *rájah* as obj. of *átiṣṭhipaḥ*, despite the pāda boundary, since otherwise this causative aorist is left without an expressed object.

I.56.6: *pāśyâ* has neither an etymology nor a secure meaning; it occurs only once elsewhere (*pāśyôḥ* IX.102.2). Although the stem is given by Gr as (*pāśya*), *pāśía*, it is better taken to a *vṛkī*-type *-ī*-stem *pāśī-* (see Old ad loc.; AiG I. Nachtr. p. 126; tentatively also EWA s.v. *pāśāna-*). By this analysis both forms can be du., and both contexts support an interpr. as a twinned body part. In this passage it is used of something belonging to *Vṛtra* that gets broken apart, so “jaws” is a contextually attractive translation. Savya’s I.52.6 *vṛtrásya ... nijaghántha hánvor indra tanyatúm* “when you, Indra, struck your thunder down upon the two jaws of *Vṛtra*” is similar to our *ví vṛtrásya ... pāśyârujaḥ* “you broke apart the two *pāśī* of V.” In IX.102.2 the ref. seems to be to the two jaws of the soma-press. Despite the similarity of their aberrant phonology, it is hard to connect our *pāśī-* with later *pāśāna-* ‘stone’, widely distributed also in Middle and New IA. See EWA s.v. *pāśāna-* and, for the rejection of the connection, Old.

I.57 Indra

I.57.1: Unlike the standard tr., I take d to mean not that his generosity is meant to *display* his power, but rather that his generosity has opened up to, that is, has been set in motion by his exercise of power.

I.57.2–4: A bit of word play in the sequence *haryatá(h)* (2c), *haríto* (3d), *harya tád* (4d).

I.57.2: Note the Wackernagel particle *ha* positioned between the preverb *ánu* and the verb *asat*, despite the material preceding it in its clause.

With Ge I supply a verb of motion in b, because the “like waters to the depths” simile regularly appears with one (e.g., V.51.7 *nimnám ná yanti síndhavaḥ*).

I.57.3: The phrase *úṣo ná śubhre* is quite problematic. In the first place, it is syntactically odd to have a voc. in a simile (“X like o Dawn”). *úṣaḥ* may be vocative by attraction from an underlying nominative, as in I.30.21 *ásve ná citre aruṣi* “O you, dappled bright and ruddy like a(n o) mare.” Then, for reasons given in the intro., I am certain that the fem. voc. *śubhre* in b cannot be addressed to the Sacrificer’s Wife, despite the standard view, but that leaves the identity of the addressee baffling. Fem. *śubhrā-* is ordinarily used of Dawn herself, not someone or something *like* Dawn. However, its other standard referent is Sarasvatī or another river or rivers (III.33.1-2, VII.95.6, 96.2, V.42.12; waters V.41.12, maybe II.11.3; drops IX.63.26), so it is barely possible that the water similes of vss. 1-2 here evoke an actual river to bring the materials to the sacrifice. Better, but textually problematic: perhaps the identity of simile and frame should be reversed, and the phrase means “O Dawn, like a lovely (river), assemble ...” (assuming an underlying **úṣaḥ śubhrā ná...*). This would make fine sense in the passage: Dawn comes at the beginning of the sacrifice, bringing materials for it, and is compared to a river that picks up material from its banks. Although this requires more manipulation of the text than I would like, a sequence such as I just reconstructed, with the *ná* following two feminine singulars, might have seemed anomalous and been restructured to a more conventional order: X *ná* X’. On balance and with due caution, I endorse this solution and would now translate the phrase as suggested above.

As for the object of *sám ... ā bharā*, I supply ‘everything’, based on *vísvam* in 2a, also referring to the sacrificial materials.

The semantic basis for the simile in d is somewhat obscure. On the one hand, the “tawny mares” (*harít-*) are often the horses of the sun, so that Indra has been made a light (*jyótiḥ*) like the sun’s horses. On the other hand, Indra’s name and form (*dhāma ... nāmendriyām*) are as suited for fame as horses are for running.

In d *nāyase* is analyzed (starting with the Pp.) as *ná áyase*, but this produces a bad cadence. I do not see any obstacle to assuming a preverb *ā*, so *ná āyase* ‘for coursing hither’, which fixes the cadence.

I.57.4: The translation “Here we are -- those of yours” reflects the annunciatory *imé* as well as the *te ... té vayám*, which identifies the speakers as Indra’s own.

In c I take *cārāmasi* as an independent verb, meaning to ‘carry on’ with life and activities, though it is possible that it is an auxiliary verb with the gerund *ārābhya*, as Ge takes it.

On *kṣoṇī-* as ‘war-cry’, see Thieme (1978[79]: KZ 92: 46), EWA s.v.

I.57.5: *dyaúḥ bṛhatī* is one of the few supposed examples of fem. *dyaúḥ* (for a listing of which see the beginning of Gr’s entry *dív, dyú, dyó*). The gender here and sometimes elsewhere is carried by a fem. adj. in *-ī*, and in my view has been adapted from – and indeed may still express – a dual fem. referring to the two worlds (*ródasī*) / Heaven and

Earth. Cf. in this case nearby I.59.5 *brhatī ... ródasī*. For an example in which the placement of the *-ī* adjective appears to mark *dyaúh* as fem., but the context allows, indeed favors, a dual reading, see, e.g., I.22.13 *mahī dyaúh prthivī ca* “the great ones, Heaven and Earth.” Such passages allow the occasional extension of fem. gender to *dyaúh* in a Heaven-and-Earth context. For fem. deictics with *dyaúh* see comm. ad VII.40.4.

táva smasi is a paraphrase of 4a (*imé*) *te ... té vayám*

I.57.6: The “cut” in the first hemistich is ambiguous in English but is a past tense rendering pf. *cakartitha*. I added ‘apart’ despite the absence of *ví* because unadorned English “cut the mountain” sounds odd. The *vájreṇa vajrin* opening pāda b at least provides the desired *v-*.

Verbal play, in which two unrelated words mimic an etymological connection: *párvatam* (a) ... *parvaśāh* (b) “mountain ... joint by joint.” The two items are in the same metrical position, and each is in a pāda that begins with an alliterative pair: *t'vám tām* and *vájreṇa vajrin*.

I.58 Agni

I.58.1: Phonetic figure spanning the end of the first hemistich and the second (esp. its end): ... *vivásvatah*## #*ví*... , ... *havísā vivāsati*##

The lexeme *ní√tud* is generally taken to mean something like ‘spur on’, but that tr. fails to render the *ní*. I prefer to take it in the literal sense ‘push down, force down’, meaning that, in the English idiom, you can’t keep Agni down.

I connect pāda b with c, rather than with a, as the standard tr. do, because of the difference in tense (pres. *ní tundate*, impf. *ābhavaṭ*). This tense mismatch requires the *yád* of b to have the sense “ever since” (Ge/[WG] “seitdem,” Re “depuis que”), which does not seem to me to be natural to it. By contrast, Agni’s assuming the office of messenger in b leads directly to his journey in c.

I.58.2: In b *tiṣṭhati* can mean, as I take it, “stays (within)” or, with Ge, “stands up (in).” In the latter case, the image would be of a forest fire, fed by brush, flaring up. This is possible, but in the absence of the preverb *úd* or similar directional indications, I prefer the former.

I.58.3: On *krāṇā* ‘successfully’, derived from the old fem. instr. sg. of the med. root aor. participle of *√kr* in adv. usage, see Old (Fs. Kern [1903] 33–36 = KISch 1111–14 [details in EWA s.v. *krāṇā*]).

Since *ví/ āpa + ṛṇóti/ṛṇvāti* regularly refers to the unclosing of doors and the like (e.g., I.128.6 *dvārā vy ṛṇvati*; IX.102.8 *ṛṇór āpa vrajám*), the tr. ‘distribute’ (Ge ‘teilt ... aus’, WG ‘verteilt’, Re ‘répartit’) seriously manipulates the idiom. I therefore prefer ‘disclose’ – that is, uncloset and reveal to sight. (So also Old SBE.) In this usage the stem has clearly assimilated itself to *ūrṇoti* (*√vr*) + *āpa/ ví* ‘open’, and one wonders if they were felt to belong to different roots by the poets. For further on this stem see Kü 104–5.

I.58.4: The voc. *rúśad-ūrme* ‘o you possessing gleaming waves’ should, strictly speaking, not be accented. It may owe its accent to IV.7.9 *kṛṣṇám te éma rúśataḥ puró bhāḥ* “Black is your course, (though) you are gleaming; your light is in front,” with a gen. sg. part. *rúśataḥ* following an identical opening. (So tentatively Bl RR.) Or perhaps as the first of two voc., in post-caesura position, it was felt to begin a new syntagm.

I.58.5: On *pājas*- see Re ad loc. (n.; EVP XII) and EWA s.v., with lit. It seems to refer to a surface or face, then to shape, area, or dimension in general, often with the sense of ‘full dimension’, esp. in the instr. In the nom./acc. ‘leading edge’ often works better, esp. in dynamic contexts.

On *sthātúḥ* (in the pair *sthātús carátham* “the still and the moving”) as neut. sg. to the *-tar*-stem (< **-t̥*) see AiG I.23, 301; III.204 and most recently Frotscher 2012. Tichy (1995: 71) rejects this explanation, but her alternative (a masc. nom. sg. to a *-tu*-stem) breaks the tight rhetorical structure of this merism by pairing a masculine with a neuter (*carátham*). Thus, whatever phonological problems there may be in assuming an **-t̥#* > *-ur#* change (as opposed to **-t̥s* > *-ur* as in the gen. sg. of *-t̥*-stems), I have favored the older view. Frotscher’s suggestion that accented final *-t̥* develops to *-úr* may help solve the problem. In any case the nom./acc. neut form here would also be reinforced by the semantically identical *genitive* sg. phrase *sthāthús ca ... (jágataś ca)* (I.159.3, II.31.5). MLW has suggested to me that *sthātúr* was reinterpreted as an indeclinable on the basis of passages in which it is unclear whether the form was gen. or nom./acc. (He suggests II.31.5, where the interpr. is indeed difficult.) Certainly in the merism *sthātús carátham* here and in the nearby Parāśara hymns (I.68.1, 70.7, and in altered form in 72.6) *sthātúr* could present itself as indeclinable).

I.58.6: The last halves of the two hemistichs are parallel and complementary, referring to humans and gods respectively: b: ... *jānebhyaḥ#* / d: ... *divyāya jánmane#*

In c *mitráṃ* is of course ambiguous: it can refer simply to the god of that name (so Re), but more likely is at least a pun on the meaning of the common noun ‘ally’. Agni is often so called because he serves as go-between between gods and men.

I.58.7: The “seven tongues” (*saptá juhvaḥ*) are somewhat puzzling, or rather the phrase has several possible interpretations. Re takes it as a “pré-bahuvrīhi” (probably better expressed as “de-composed” bahuvrīhi), referring to the priests “having seven offering ladles” (*juhū-* meaning both ‘tongue’ and ‘ladle’); it is, of course, also possible to take the ladles as subject without reference to an underlying bahuvrīhi (so Old SBE, Ge), since inanimate things often have agency in the RV. But the other meaning ‘tongue’ could also be meant literally (either in a de-composed bahuvrīhi or not): (priests having) seven tongues, that is seven voices devoted to praising Agni. See Ge’s n. (also WG). This interpretation would make the first pāda semantically parallel with the second, where ‘cantors’ (*vāghátāḥ*) is the subject. And I will add another, more distant possibility, but one that makes better sense of the ‘seven’ – viz., the seven rivers or streams. The seven rivers are credited with giving birth to and nourishing Agni in a mystical passage in III.1.3–6, where they are also identified as seven *vāñīḥ* ‘voices’ (III.1.6d). Seven is a number especially characteristic of rivers, and since rivers are often said to be noisy (indeed the word *nadī-* ‘river’ is derived from the root *√nad* ‘roar’), calling the rivers

“seven tongues” here would fit semantically (and the long thin shape of rivers works visually with ‘tongue’ as well). In the end I don’t think that choosing one of these possibilities and eliminating the others is the right strategy; the phrase is meant to be multivalent, evoking a number of features of the ritual context.

I.58.8–9: Vs. 9 is essentially a paraphrase of vs. 8, with several parallel expressions. And the final pāda of 9 is the Nodhas refrain.

I.59 Agni Vaiśvānara

I.59.2: On *aratī-* as a spoked wheel, which often serves as the symbol for the ritual fire, see Thieme (Unters. 26ff., EWA s.v.).

I.59.4: The first pāda of this verse is metrically disturbed, which, in conjunction with its syntactic incompleteness, leads some tr. to consider the text corrupt. I’m afraid I find that reasoning too convenient.

This verse is variously interpreted, with its difficulties in great part arising from the fact that there is no finite verb, but it can be decoded by paying attention to the functional roles of the nominal complements. What seems to unify the verse is the presence of a dative recipient in pādas a, cd, and I therefore (with most tr., but not Ge) take the verse to be a single sentence, with the datives throughout referring to Agni. The objects presented to Agni are songs (*gírah* b), qualified as many (*pūrvīh* c), and implicitly compared to exuberant maidens (*yahvīh* d), based on the fact that *gír-* ‘song’ is feminine in gender. The grammatical subject is *hótā* in b, with parallel subjects in similes: the two world halves (*ródasī*) in the first pāda and “skill” (*dákṣaḥ*) in the second. The *manuṣyāḥ* in b I read twice: on the one hand, its position directly before *ná* marks it as the first word of the simile, going with *dákṣaḥ*, hence “Manu’s/manly skill,” but I believe it should also be read with the immediately preceding *hótā* (“manly/human Hotar”). In Agni hymns the title Hotar is ordinarily specialized as a designation of that god (see, e.g., immediately preceding I.58, vss. 1, 3, 6–7), and *manuṣyāḥ* here would make it clear that the human priest is at issue, with Agni himself the dative recipient. The last question is what verb to supply, and in a sense the exact identity of the verb is not terribly important, as long as it has approximately the right meaning and the right case frame. With Old (SBE, Noten) I supply ‘bring’ (*√bhr*), which is frequently used with *gírah* and a dative recipient (e.g., I.79.10 ... *agnáye / bhárasva ... gírah*), but ‘sing, present, give,’ etc., would all work. I do not see any reason for, or justification of, supplying a 1st-person subject, however, *pace* Old SBE (1st pl.), Ge, Re (1st sg.).

I.59.5–6: 5d pāda here = VII.98.3d, of Indra, and Nodhas uses a similar expression of Indra in I.63.7d. Vs. 6 is even more Indraic. As noted in the intro., this part of the hymn is designed to associate Indra and his great deeds with Agni.

I.59.7: The rest of pāda a essentially glosses *vaiśvānarāḥ*.

I take *puruṇīthá-* as a qualifier, not a personal name, contra most tr.

I.60 Agni

Taking off from my comment below on vs. 5, JL has further articulated the structure of this hymn. What follows is mostly verbatim from his comments, with some additions and light editing of my own:

I think this little hymn might have a slightly more elegant structure than has been appreciated (I thought of this following JL's mention ad vs. 5 of the "faint ring"). It seems to me that the 5 verses are nicely balanced rings within rings revolving around vs. 3, the omphalos-like *jāyamānam... jījananta*, harking back to Agni's double birth in 1c. The outer rings would be, as mentioned ad vs. 5, vss. 1c *rayīm iva praśastām* = 5 *pátim ... rayīnām, prá śamsāmaḥ*. Vss. 2 and 4 contain the same word *vikṣú*; note esp. the alliterative and partly etymological figure in 2d *viśpátir vikṣú vedhāḥ*. The hymn has not only a ring structure, but also forward momentum provided by the movement from the larger social organization of the *vis-*, in the full expression *viśpátir vikṣú* (2d), to the more intimate setting of the home, emphatically presented in 4c *dámūnā gr̥hapatir dāme*. The momentum can also be tracked in the expressions of lordship involving *pāti-*: *viśpāti-* (2d) to *gr̥hapāti-* (4c) and finally the solemnly pleonastic *rayipátī rayīnām* (4d). Agni, celebrated (*√ śams*) "like wealth" in 1c (*rayīm iva*), is transformed into the lord of wealth in 4d. This final title is repeated in 5a *pátim agne rayīnām*, with his name interposed between the two elements, and again the object of *√ śams*. The use of these three *-pāti-* compounds may convey the message that Agni will deploy his wealth in the arenas of clan and house.

I.60.2: *divás cit pūrvah* is standardly taken as temporal "before day(break)," but this case form of *div/dyu* is more often spatial than temporal (note *divás cid ... br̥hatāḥ* in the immediately preceding hymn, 59.5), and *pūrvā-* + ABL. has a spatial sense elsewhere in just this ritual context: e.g., X.53.1 *ní hí śátsad ántaraḥ pūrvo asmát* "for he [=Agni] will sit down (as Hotar) close by, in front of us." Cf. also II.3.3 *mānuṣāt pūrvah*.

I.60.4: Note the extraordinary pile-up of 'house' words in this vs.: *dámūnā gr̥hapatir dāma ā*. On the relation between the *dám(a)-* and *gr̥há-* designations for 'house' and their use in the RV, see my 2019 "The Term *gr̥hastha* and the (Pre)history of the Householder," in *Gr̥hastha: The Householder in Ancient Indian Religious Culture*, ed. Patrick Olivelle (pp. 3–19).

I.60.5: ab *pátim ... rayīnām, prá śamsāmaḥ* picks up 1c *rayīm iva praśastām*, forming a faint ring.

I.61 Indra

For general discussion of the intricate structure of this hymn, see the publ. intro. as well as Jamison 2007: 60-68.

I.61.1: *īcīṣama-*, an epithet of Indra, is an impossible word; Ge wisely refuses to tr. it. However, it is difficult not to see in it a combination of *īc-* 'chant, song' and *samā-* 'like, same', however obscure the morphological details are – and obscure they certainly are. The first member cannot, straightforwardly, be a case form of *īc-* because the case-ending should be accented. The length of the *-ī-* might be analogical to the long *ī* in phonologically similar *ījīpīn-*, *ījīśīn-*, but motivating a short *-i-* (in putative **īci-*) is hard

enough (Caland compounding form, like *śúci-*?). It is tempting (and some have succumbed to the temptation) to connect *-sama-* with another designation of ritual speech, *sāman-*, but the difference in vowel length is probably fatal. Note that in our passage the word is adjacent to another old crux, *ádhrigu-*, the controversies about which (see KEWA and EWA s.v.) should have been definitely settled by comparison with OAv. *drigu-* ‘poor, needy’ (Narten, YH 238–40). Both *īcīśama-* and *ádhrigu-* are disproportionately represented in the VIIIth Maṇḍala, the home of much aberrant vocabulary. In the end those who elect to tr. *īcīśama-* take it as a compound of the two elements suggested above: Re ‘égal à la strophe’, WG (somewhat peculiarly, though starting with the same elements) ‘der im Preislied (immer) als dieselbe Person erscheint (?)’; so also the publ. tr. ‘equal to song’. For further, see EWA s.v.

I.61.1–2: Here and throughout the hymn, there is a certain amount of phonological and lexical chaining (in addition to the repeated fronted demonstratives). Here 2b *bhārāmi* picks up both 1c *harmi* and 1d *brāhmāṇi*, and 2a *asmā́ id u prāyaḥ ... prá yaṃsi* playfully echoes 1a *asmā́ id u prá...*, with *prāyaḥ* of 1b substituted for the bare preverb *prá*.

I.61.2: In addition to the inter-verse echoes just noted, alliteration in 2c *mānasā manīṣā* and 2d *pratnāya pátye*. JL adds 2a *prāya iva prá yaṃsi*.

bādhe in 2b is universally taken as a dat. infinitive (as it is in I.132.5), but this makes semantic difficulties because $\sqrt{bādh}$ means ‘thrust, press, oppress’. Ge’s “um (ihn) ... zu nötigen(?),” Re’s “pour contraindre (le dieu),” and WG’s “um (ihn) ... zu überhäufen” thus misrepresent the sense of the verb. The $\sqrt{bādh}$ is esp. common with the preverbs *āpa* and *vī* in the meanings ‘thrust away, thrust apart’, but I here take the *prá* of pāda a with both verbs (*bhārāmi* and *bādhe*) in pāda b. As for morphology, I take *bādhe* as a 1st sg. mid. pres. (the root is always inflected in the middle), rather than as an infinitive, which allows the root to maintain its standard sense: I push the hymn toward Indra with particular forcefulness. As a finite verb, *bādhe* owes its accent to its initial position in the new clause.

suvṛktī- is a bahuvrīhi specialized for praise hymns (and occasionally the gods who receive them) and is often simply tr. ‘praise(-song)’ (e.g., Ge ‘Preis’ here). I prefer to render it literally; *-vṛktī-* belongs to the root $\sqrt{vṛj}$ ‘twist’, and the English idiom “good twist” refers to particularly clever turns in a plot or other verbal products.

Most tr. take c with d, not ab. This is possible, but not necessary.

I.61.4: As Ge suggests (in n. 3 to his n. to 4ab), the apparent pleonastic doubling of the simile particle (*rāthaṃ ná tāsṭā-iva*) may instead signal that two images have been crossed here: one with a simplex *hinomi* (“I impel the praise like a chariot”) and the other with *sām hinomi* and the addition of the carpenter as subject (“I, like a carpenter, put together praise, like a chariot”).

I.61.5: *juhvā* has its standard double meaning, ‘tongue’ and ‘offering ladle’, a pun that is enabled by the verb *sām añje* “I anoint”: anointing with the tongue means producing praise, while ‘offering ladle’ fits better with the literal meaning of the verb.

dānaúkas- is likewise of double sense, both ‘accustomed to giving’ and ‘accustomed to gifts’, representing the reciprocal trade in praise and sacrifice given to the gods, in return for the gods’ material gifts to us.

I.61.6: The *tváṣṭā* here has been prepared for by 4b *táṣṭā*, and both appear in alliterative phrases: *táṣṭeva tátsināya* and *tváṣṭā takṣat*.

Another word with a standard double sense: *rāṇa-*; both senses are possible here, also in vs. 9 below.

The position of *yéna* in this subordinate clause is anomalous, as we expect at most one constituent to precede the *yá-* form. I have no explanation, but there is much that is off-kilter in the deployment of sentence parts in this hymn.

I’ve tr. the participle *tuján* as it were a finite verb, because the English otherwise dribbles off into unintelligibility. In fact, because of the rel. cl. in c, it’s better to take d as a new cl. with *tuján* as predicated participle (“Gaining mastery, he was thrusting ...”). On this stem see comm. ad IX.91.4.

The unclear *kiyedhā-* is found only here and in vs. 12. See EWA s.v. and Scar’s (250–52) discussions of previous attempts at explanation. I favor the suggestion registered (and dismissed) by Scar that it consists of the weak stem of *kíyant-* ‘how much, how great’ + the root noun *dhā-*, with the development **-nt-dh- > *-adzdh- > *-azdh- > -edh-*, despite Hoffmann’s dismissal of the posited phonological development (Aufs. 400)—although I recognize the phonological problems of this solution. Re’s “lui qui confère (on ne sait) combien” represents this etymology one way or the other.

I.61.7: On the introductory gen. *asyá* referring to Indra, even though Indra is otherwise in the nominative in this verse (as subj. of *papivān* [b] and of *vidhyat* [d]), see disc. in intro. and in Jamison 2007 noted above.

The verse concerns Indra’s surreptitious drinking of his father’s soma right after birth, an act enabled by his mother (ab), and Indra and Viṣṇu’s vanquishing of the Emuṣa boar (cd), a rarely told tale. For Indra’s mother’s complicity in the soma-drinking, see esp. III.48.2–3. In our passage Indra’s father is not directly referred to (only by initial *mahāh* ‘of the great [one]’ in b), but the beginning of the next word promises the genitive of ‘father’ (i.e., *pitúr*), and only the final consonant of *pitúm* removes that possibility — one of the many tricks Nodhas plays on us in this hymn. (Ge ascribes the absence of *pitúh* to Worthaplogie, but I think rather that Nodhas is laying a trap.)

On the basis of other tellings of the Emuṣa myth, the word to supply with *pacatām* is *odanām* ‘rice-porridge’; cf. VIII.69.14, 77.6, 10.

The final pāda is quite artfully composed, beginning and ending with alliterative phrases: *vidhyad varāhām* and *ádrim ástā*. Moreover, the first of these is a variant of the very common formula that compresses the Vṛtra slaying, *áhann áhim* “he/you slew the serpent.” Here, with the victim beginning with *v-*, the poet substitutes a verb beginning with *v-*.

I.61.8: Although I tr. *devápatnīh* as ‘wives of the gods’, it is grammatically ambiguous, since it can also be a bahuvrīhi ‘having the gods as husbands’ (with the fem. stem *patnī-* substituted for the masc. equivalent *pati-* in this feminine adjective). Although the cmpd has apparent bahuvrīhi accent, *-pati-* compds vary in their accent; see, e.g., the tatp.

grhāpatnī- ‘mistress of the house’ (not bv *‘having a house as husband/master’). It reminds us of *dāsāpatnī*- ‘having a Dāsa for a husband’ or ‘wife of a Dāsa’, applied to the waters confined by Vṛtra, often identified as a Dāsa, most famously in I.32.11 but also twice elsewhere of the waters and Vṛtra (V.30.5, VIII.96.13). Since the context here is the Vṛtra battle (*ahihātye*), the complementary terminology is probably deliberate.

JL notes that there is complementarity also in the second hemistich: 8c has *pāri jabhre* with Indra as subject and *dyāvāprthivī* as object, while 8d reverses this: *nā ... pāri staḥ* with *dyāvāprthivī* as implicit subj. and Indra as implicit object (via his *mahimānam*). This theme and its lexicon are picked up in 9ab: *mahitvām / divās prthivyāḥ pāry antārikṣāt*.

I.61.9: The phrase “reverberant tankard” (*svarīr āmatraḥ*) is striking, but intelligible in R̥gvedic context. Indra is compared to a large drinking vessel because of his immense capacity and size, also described in 8cd and 9ab; “tankard” hints at his ability to drink vast quantities of soma and implicitly promises his generosity because he can contain vast quantities of goods. I follow Old in taking all forms of *āmātra*- as belonging to a single stem (*pace* Gr, Lub, and EWA). As for ‘reverberant’ (*svarī-*), it echoes *svarāḥ*, which opens the preceding pāda; it also suggests the deep sound made when a large (empty) vessel is struck and Indra’s own war-cries. (For a possibly similar image, see I.100.12.)

I.61.10: Numerous phonological plays in this verse: a *śāvasā śuśāntam*; b *vī vṛscad vājreṇa vṛtrām*; c *gā nā vrānā avānīr* (in this last example note the rhyme of the 1st two words with the 2nd one).

I.61.11: This verse nicely juxtaposes a well-known deed of Indra’s, when he stops the waters to make a ford for his client(s), with the even better known deed of releasing the stopped waters in the Vṛtra myth, treated in the preceding vs. (10). On the playful transition between these two myths here, see Jamison 2007: 113–14 n. 20. The stopping of the waters causes mild surprise immediately after a verse concerning their release.

tveśāsā is universally taken as belonging to Indra, whereas my published tr. ascribes it to the rivers. I would now probably correct this, also to take it as Indra’s: “just this one – with his turbulence/glittering,” because of the parallelism between 10a *asyéd evā śāvasā* and 11a *asyéd u tveśāsā*. But I am still disturbed by the form. Its accent suggests that it should be adjectival, not a neuter -s-stem abstract like *śāvas-*, despite AiG II.2.224, which implies that it is nominal despite its accent. It is curious that the expected root-accented neut. noun (**tvēśas-*) is not attested, and this is the only (supposed) attestation of the suffix-accented stem. If it is a real adjective, it could modify *vājreṇa* in pāda b, but this not only breaks the parallelism between 10a and 11a just noted, but, more seriously, would have to be extracted from one clause and plunked into the next. (Ge in his note suggests supplying *vājreṇa* in pāda a.) The *a*-stem adj. *tveśā-* is also sometimes used of waters, e.g., VI.61.8 *tveśāḥ ... arṇavāḥ* “glittering/turbulent flood,” which accounts for my original connection of *tveśāsā* with the rivers.

The distribution of elements in pāda b is odd, with the subordinating *yād* in normal 2nd position, but *sīm*, ordinarily another 2nd position element, just before the verb.

īśāna-kṛt- is variously interpreted, either with the 1st member in a direct object relationship with the 2nd -- “zum Herrscher, mächtig machend” (Scar’s tr; sim. also Ge, Re, WG) – or in a sort of appositive subject relationship, “als Herrscher handelnd” (Scar’s tr.; sim. Gr). Because the first member *īśāna*- is itself a participial form ‘being lord, showing mastery’, I prefer the 2nd alternative. Note also that independent *īśāna*- is used three times of Indra in this hymn (6d, 12b, 15b), and it is more likely that the same form in the compound refers to Indra’s masterful ways, not to someone else whom he makes masterful. Scar allows both, though somewhat preferring the 2nd.

More phonological play: c *dāśūṣe daśasyan*; d *turvītaye ... turvāṇih*.

I.61.12: On this very tricky verse, I simply reproduce (slightly paraphrased) my discussion of it in Jamison 2007: 66: The beginning of 12 appears to return us from the mythological past to the realm of the current-day poet of vss. 1-5; not only does it start with the dative pronoun after a series of verses with the genitive phrase but it continues with a standard lexeme for presenting a hymn to a divinity: *prā √ bhṛ. asmā́ id u prā bharā ...* Cf. from the same poet also with a dative recipient I.64.1b. *nódhaḥ suvṛktīm prā bharā marúdbhyaḥ* “O Nodhas, present a well-turned (hymn) to the Maruts.” But the phrase in 61.12 quickly goes awry. At the opening of the next pāda, where Indra’s name has been prominently placed in previous verses (*indrāya* 1d, 4d, 5b, 8b), we find, most shockingly, the name of his arch-enemy, *vṛtrāya*, immediately followed by the accusative object *vájram*, Indra’s weapon, not the word for hymn we were expecting. The relevant parts of the half-verse *asmā́ id u prā bharā...*, *vṛtrāya vájram...* must mean “Towards just this one, towards Vṛtra, bear down the mace...” The poet has simply tricked us, having laid a trap with conventional phraseology and syntax and with the stylistic patterns established earlier in the hymn. He also skillfully exploits the morphological ambiguity of the verb form *bharā*: given the pattern set in vss. 1-5 we are primed to interpret *bharā* as a 1st sg. subjunctive (cf. indicative *bhārāmi* in vss 2-3), but as the half verse unfolds, it becomes clear that *bharā* must rather be taken as a metrically lengthened 2nd sg. imperative. [end of citation]

In order to let the audience in on the trick, the poet has imported much of verse 6, the first mention of the Vṛtra conflict in this hymn: 6d reads *tujānn īśānas tujatā kiydhāḥ* “gaining mastery, thrusting with the thrusting (mace), while conferring (who knows) how much,” while 12ab echoes this with *... tūtujāno, ... īśānaḥ kiyedhāḥ* “thrusting, gaining mastery, conferring (who knows) how much.”

In d *īṣyan* echoes *īśānaḥ* of pāda b (as well as 11c) and anticipates *īṣṇānāḥ* of 13c.

I.61.13: On this verse as a species of “poetic repair” of verse 12, see Jamison 2007: 66–67. The expected offering of praise to Indra thwarted in 12ab is successfully effected in 13ab.

I.61.14: *dyāvā ca bhūmā* has the appearance of a dual dvandva, interrupted by the *ca* that connects it to the NP with which it’s conjoined, *girāyaś ca ḍṛihāḥ*. But the uninterrupted dvandva is actually *dyāvābhūmī*, with a different stem for ‘earth’, and *bhūman*-(n.) has no dual attested (and its dual should of course not be *bhūmā*, but probably **bhūmanī*). See the next hymn for a variant on this usage. It is likely that the lengthened N/A sg. form or the N/A pl. form is being used, but why? On this problem, see AiG II.1.152.

In the publ. tr., “other” was careless omitted at the end of the first hemistich: it should read “against each other.”

The mention of the poet Nodhas at the very end of the verse has perhaps been prepared by several not entirely expected *o*’s: *úpo ... jóguvāna oṇīm, sadyó*, only the last of which is a normal sandhi *o* < -as. The poet’s fondness for his own vowel may account for the appearance of several relatively rare words: the intensive *jógu-* and the noun *oṇí-*.

I.61.15: I follow Ge’s suggestion (in n. 15a, also followed by WG) that the unexpressed subject that is being conceded to Indra is the soma-drink. The parallel he adduces, V.29.5, contains the gods, the soma-drink, the concession, and Etaśa:

*ádha krátvā maghavan túbhyaṃ devā ánu víśve adaduḥ somapéyam
yát sūryasya harítaḥ pátantīḥ puráḥ satīr úparā étaśe káḥ*

Then according to your will, o bounteous one, all the gods conceded the
soma-drinking to you,

when you put the flying golden mares of the Sun behind, though they were in
front, in Etaśa(’s presence).

In the publ. tr. I take *eṣām* as a genitival agent, somewhat reluctantly. However, ET suggests a much more attractive solution, which rescues the syntax: that *eṣām* is dependent on *asmai* “just to this one of them [=gods].” The singularity of Indra would then be emphasized by the *ékaḥ* that begins the next pāda.

Etaśa is the horse of the Sun and is not, as far as I know, a soma-presser (the physical image is a little comical). Against all tr., I therefore do not take *súṣvim* in d as coreferential with *étaśam* in c, but rather as a second object with the verb. Nodhas is now juggling the mythic past (the aiding of Etaśa) and the desired future (the aiding of the soma-presser), as he nears the end of the hymn. I read the participle *paspṛdhānám* twice, once with each object, with a different desired goal in the locative for each. I also give the verb *āvat* two simultaneous morphological analyses, fitting its two objects: the first as augmented imperfect to the Class I present *āvati*, the second as perfect subjunctive to the pf. *āva* (cf. *āpas*, *āpat* taken by Hoffmann 1967: 64 n. 102, 101 n. 220, and Kümmel 2000: 118 as subjunctives to pf. *āpa* √ *āp* ‘attain’). Although such an interpretation might be too artificial in some cases, I have no hesitation in assuming Nodhas is capable of this.

Another phonetic play: d *saúvaśvīye súṣvim*

I.61.16: *hāriyojanā* is unaccented and therefore taken by most as a vocative addressed to Indra. I follow Old in emending to an accented form (*hāriyojanā*), modifying *bráhmāṇi*. See in the next hymn *bráhma hariyójanāya* “formulation for the fallow-bay-yoking.” As Old points out, taking it as a vocative with Indra requires either shortening the last vowel or allowing a lengthened vocative ending (which is not usual), and possibly also shortening the first vowel.

This verse is extra-hymnic in some ways: its opening breaks the pattern set in the previous 15 vss.; it makes a meta-announcement about the contents of the hymn just recited; and it ends with the Nodhas refrain. But it also forms a ring with the first verse, with the repetition of *bráhmāṇi*, and with the first part of the hymn concerning the presentation of praise-hymns, with the reappearance of *suvṛktí*, which was a signature word there (2b, 3d, 4c).

I.62 Indra

Shares much vocabulary with I.61 and sometimes plays off the turns of phrase in that hymn.

I.62.1: Rich with phonetic figures: a *śavasānāya sūṣām*; b *āṅgūṣām gírvaṇase āṅgirasvát* [note that *āṅgūṣām* participates in both: it rhymes with preceding *sūṣām*, but its initial matches *āṅgirasvát*, while *gírvaṇase* takes up the 2nd syllable of *āṅgirasvát*]; cd *ṛgmīyāya, ārcāma arkām* [this last also a clear etymological figure].

śavasānāya sūṣām recalls *śavasā sūṣāntam* of 61.10a in the same metrical position, with our phrase referring to Indra, the one in I.61 to Vṛtra.

The Pp. reads *stuvaté* in c, a reading that is universally followed. But this dative is awkward: if it is coreferential with the other datives in the verse, it must refer to Indra, and Indra “praising” is an odd concept in a hymn devoted instead to presenting praises *to* him. Although Indra occasionally joins in the verbal parts of the sacrifice (see above ad I.55.4), he does not ordinarily (or ever?) praise others. Nonetheless, this is Re’s solution: “(dieu) louangeur.” Schmidt (1968, B+I, 163) suggests a variant of this: “den mit guten Liedern (selbst) preisenden,” but self-praise suggests a medial form, not the active we have. If the participle does not modify Indra, another person in the dative needs to be introduced, despite the unlikelihood of a separate dative referent. This is Ge’s solution: “ihn [=Indra], der für den Sänger ... zu preisen ist,” construing *stuvaté* with *ṛgmīyāya*. So also WG with slightly different tr., though both they and Ge consider the “praising” possibility. But the difficulty disappears if, against the Pp., we read instead *stuvatāḥ*, genitive sg. of the participle, as I do.

I.62.2: This verse is in some ways a double of vs. 1. They both begin with *prá*, and the opening phrases *prá manmahe* and *prá vo mahé* rhyme, although the two *mahe*’s have entirely different analyses. (Note also the *mahé máhi* play in 2a.) The next phrase of 1a, *śavasānāya sūṣām*, is paralleled in 2b, with the first word identical and *sāma* substituting for the second (both *sūṣām* and *sāma* referring to the verbal product offered to Indra). At the beginning of the second pādas, *āṅgūṣyām* of 2b matches *āṅgūṣām* of 1a. “Like the Aṅgirasas” (*āṅgirasvát*) of 1b is picked up by the Aṅgirasas themselves *āṅgirasah* in 2d, and the heavy etymology figure involving the root *√ arc* ‘chant’ is reprised by the participle *ārcantaḥ* in 2d, which opens its pāda just as the finite verb *ārcāma* does in 1d.

I.62.3: I follow Janert (1956, *Sinne und Bedeutung des Wortes “dhāsi” und seiner Belegstellen im Rigveda und Awesta*) in taking *dhāśí-* as ‘wellspring’.

The post-caesura phrase in c *bhinád ádrim vidád gāḥ* contains rhyming verbs followed by their objects; the disyllable *ádrim* contrasts with monosyllable *gāḥ*, creating an almost syncopated effect. The strict parallelism of the two VPs may account for the unnecessary accent on *bhinát*, which functions rhetorically like a fronted verb, just like *vidát*. In fact, as my tr. indicates, I consider the initial subject *bṛhaspátiḥ* to be essentially extrasentential, a very topicalized topic. The same is true for the repetition of this pāda in X.68.7.

The second of the VPs is also a mirror-image of the final phrase in 2d *gā ávindan* (imperfect in 2, versus aorist in 3), and it can be considered a “repair” of the somewhat opaque *vidát ... dhāśím* “found the wellspring” that intervenes (3b).

I.62.4: The repetitions and lexical and phonological echoes that have served Nodhas well in the first three verses increase here, to an almost incantatory level. To point to a few of these: a *sá suṣṭúbhā sá stubhā* (again a syncopation, as in 3c); b *svaréṇa ... svaríyo ...*; c: *saranyubhiḥ* echoes the *sá*'s of a and the *s(v)ar*'s of b, while finding its own faint echo in the final *śakra* of the pāda; d *rāveṇa* is a virtual anagram of *svaréṇa* in b, *darayo* is almost a rhyme form of *svaríyo* in b in the same metrical position, and both *svaríyo* and *darayo* precede the hemistich-final words ending in *-gvaiḥ*.

All other tr. take this verse as a single sentence with 2nd ps. subj. However, as I have shown (1992: “sa figé”), *sá* with 2nd ps. reference is limited to imperatives and should not appear with an injunctive like *darayaḥ*. I therefore consider the first hemistich to continue the 3rd ps. reference of vs. 3, with a switch to 2nd ps. in the second half. This type of switch is quite common in the RV.

In c I do not take *saranyú-* and *phaligá-* as personal names, *pace* Ge et al. The tr. ‘bolt’ for the latter follows Hiersche (*Asp.*, ‘Riegel, Verschluss’), based on a possible connection with *parigha-* (Up+) ‘iron bar for shutting a door/gate’; see EWA s.v. However, as ET points out, a less specific sense such as ‘barrier’ would fit the contexts better and would also make fewer assumptions about early technology.

I.62.5: The instrumentals in b (*uśásā sūryeṇa góbhiḥ*) are not parallel with *ángirobhiḥ* in a. The Āngirases there are the agents of the passively used participle *gṛṇānāḥ* (and also potentially instrumental of accompaniment with the main verb, as Indra’s helpers: “along with the A’s you uncovered ...”). The instrumentals in b are the additional elements that Indra uncovered.

ándhaḥ is a potential pun, as a homophone meaning both ‘blind darkness’ and ‘soma stalk’. The former is surely the first reading in this treatment of the Vala myth, with the cave a black hole, as it were. So Ge, Re, WG. But soma is never far from Indra’s mind, and the cosmogonic deeds with which he is credited in the second hemistich are often performed under the influence of soma. Schmidt (p. 164) favors ‘(Soma-)Flut’, following Bergaigne and Lüders.

I.62.6: This verse has to be Nodhas’s joke. It is conspicuously placed, as the central verse of the hymn and thus a potential omphalos, and it announces Indra’s deed (*kárma*) with extraordinary fanfare, including two superlatives (*práyakṣatamam ... cārutamam*). But in a hymn so far devoted to what *is* one of Indra’s greatest deeds, the opening of the Vala cave, the poet springs on us instead a deed of utter obscurity involving the swelling of four rivers, an act with no other clear mentions in the RV. Ge valiantly seeks parallels, but the two passages he adduces (I.104.3–4 and I.174.7) have little or nothing in common with our passage and it’s not even clear that there are rivers in the second. Lüders (*Varuṇa* 335–37) predictably sees these as heavenly rivers — four because they flow “nach den vier Himmelsgegenden.” Re also sees them as associated with heaven, while Schmidt (*B+I* 164) and WG seem to see them as being “under” (something unspecified). I have no solution for the affinities of this scrap of mythology, although I tend to agree generally with Lüders that the rivers are more likely to be celestial than terrestrial, and I would suggest that it may have to do with producing rain. But I still think the point here

is that Nodhas has set us up for a grand announcement and then, by bait and switch, given us a myth that none of us has ever heard of.

The *astī* in this hemistich may provide another bit of evidence for this view. Unaccented *astī* almost always has existential value (“there exists...”) because the 3rd sg. pres. copula in equational sentences (“X is Y”) is regularly (indeed, probably by rule) gapped. But an existential sense here doesn’t work (“There exists this most conspicuous deed...”). I suggest that the overt *astī* here signals a strong assertion in the face of expected opposition (“This *is* his most conspicuous deed” – rather like American children’s quarrels: “*is too*” “*is not*”).

The disputed word *upahvaré* adds to the obscurity of this bit of myth. It is clearly a derivative of $\sqrt{hv\bar{r}}$ ‘go crookedly, deviate’, but the exact sense of this nominal derivative is not clear. In this passage Ge takes it as ‘lap’ (Schoss), Re as ‘fold, crease’ (repli), WG as ‘abyss, chasm’ (Abgrund), while Schmidt bypasses any literal rendering with “im Felsen.” Lüders considers it the name “für den Behälter des himmlischen Urquells,” which of course fits his larger picture of the heavenly ocean. I consider the word to convey in the first instance a visual image, that of a meander or deviation from the straight. In connection with rivers (as also in VIII.96.14) it refers to eddies, the circular or oval shapes produced against the current by uneven flow -- or to the “oxbows” or “meanders” created in a river’s course by such uneven flow (Google images are quite striking). In other geographical contexts it can refer to byways, detours from the straight path, and ultimately to remote places, the backeddies, as it were, of the mountains.

I.62.7: Nodhas continues to deploy his tricks in this verse. He has moved on from the obscure four-river reference in the preceding verse, to a more standard domain for Indra to display his power: the two world halves. But in the first hemistich Indra is not depicted as filling them or propping them apart or any of his usual actions with regard to them, but rather as “uncovering” them, using the same lexeme $\bar{v}i\sqrt{v\bar{r}}$ as was just used in a Vala-myth verse (5a $\bar{v}i\sqrt{var}$, 7a $\bar{v}i\sqrt{vavre}$). (That lexeme is close to being the signature Vala verb, though it is actually more commonly $\acute{a}pa\sqrt{v\bar{r}}$, with the same sense, but a different preverb.) Notice that the two occurrences of $\bar{v}i\sqrt{v\bar{r}}$ surround the pseudo-omphalos verse 6, in the usual manner in which concentric lexical rings signal an omphalos. So Nodhas thus presents this new mythological theme as if it were the old one, the Vala myth found in vss. 2-5, though he is entering different mythological territory.

He also reuses the \sqrt{rc} lexical theme from vss. 1-2, with *arkaīḥ* in b, which is apparently qualified by the middle participle *stávamānebhiḥ* (remember *stuvatá* in 1c). This participle is somewhat disturbing; like all middle participles to the root \sqrt{stu} , it is used passively here, but unlike all the other passive uses, its subject is not the god praised but the praises themselves. It may be that Nodhas want his audience to take notice of such an aberrant usage. However, I am tempted to read **stavamānaibhiḥ* here – that is, nom. sg. *stávamānas* + pron. *ebhiḥ*, with rare double application of sandhi: *-as + e- > -a + e- > -ai-*. The participle *stávamānas* would modify Indra, as would be expected; *ebhiḥ* occurs several times with *arkaīḥ* (IV.3.15, 10.13) and the passive of \sqrt{stu} also appears with this instr. (see passages adduced by Ge in n. 7b, where he suggests a similar, but far from identical, reanalysis of the form in the text, calling it “vielleicht Hypallage”). If the emendation is accepted, I would change the tr. to “the irrepressible one being praised by

these chants.” The *arkaiḥ* might also be construed secondarily as it currently is in the tr., with *vī vavre*, as the instrument with which he performed the uncovering.

ayāśya- regularly qualifies Indra; there is no reason to take it as a personal name, identifying a distinct second figure here (*pace* Ge, Re). For further on the stem, see HPS (B+I 165–66, 227–28) and comm. ad X.67.1.

Phonetic figure: *sanājā sáníle* taking up the *sa*’s in vs. 4 and prefiguring the *sa*’s that will be conspicuous in the next few verses.

The second hemistich contains a clever pun between simile and frame. In the frame (pāda d) Indra supported, that is, held up, the two world halves in familiar fashion (somewhat repairing the less standard uncovering he performed in ab, though cf. VIII.96.16). In this task he is compared to the god Bhaga (though it is not an activity that I think of as particularly associated with Bhaga). But in the simile *bhāga-* is used as a common noun ‘(good) portion’, which provides support for two consorts (*méne*) – the point presumably being that a man needs a particularly large portion of property to support two wives. I do not follow Hoffmann’s view (1960: 245; KZ 76) that *méne* here is an elliptical dual referring to concubine and lawful wife, and in fact I believe that *ménā* in general has a wider sense than he allows. He restricts it to concubines, but the derivation from *√mi* ‘exchange’ suggests a larger application, with the wife as an “exchange token” in the economic transaction of marriage.

I.62.8: From the spatial dual females of vs. 7 Nodhas now moves to the temporal: night and dawn, also dual females, whose activities have kept occurring “from of old” (*sanāt*), linking them lexically to the two world-halves of 7a who were born of old (*sanājā*).

In *dívam pári bhūmā* we encounter the not-quite-dvandva also met in 61.14; there in *dyāvā ca bhūmā*, *dyāvā* was definitely dual, but its partner *bhūmā* was either singular (with lengthened final) or plural. Here *dívam* is definitely singular, with *bhūmā* either of the choices just given, probably singular.

punarbhū- later (already in the AV) has a specialized legal application as a designation for a remarried widow (see Thieme Kl.Sch. 445-60 = KZ 78, 1963), but this sense does not seem to be in play here or in the other RV passages.

Though most take *aktā* (which only appears here) as the ppl. of *√añj* ‘anoint’, serving as a poetic designation for ‘night’, I favor a root connection with the ‘night’ word, with zero-grade in the root syllable, esp. since *aktú-* ‘night’ is probably so connected (*pace* EWA s.v.). See EWA s.v. and AiG III.234, though both are skeptical. Of course secondary association with *√añj* would be natural.

JL notes the chiasmic *kṛṣṇébhir aktā-uṣā rúsadbhiḥ* of c; for a similar chiasmus see 11c.

JTK suggests that *vāpus-* here and in other dawn/night passages refers to bridal clothing and suggests a tr. ‘finery’.

I.62.9: Although the first hemistich is perfectly easy to tr., it is not at all clear what it is referring to. First, what is the “partnership” (*sakhyām*)? Ge thinks it is with the beings named in vss. 7-11, while Sāy thinks rather of the sacrificers. Nothing in the context helps to define what type of partnership it is or with whom, and the verb that governs it, “supported” (*dādhāra*), seems oddly chosen. The subject of this verb is also not fully identified: the larger context of course points to Indra, and *sudāmsāḥ* ‘possessing very

wondrous power’ was just used in 7c of Indra (where he was likewise the subject of a form of \sqrt{dhr}), and see *dāmsaḥ* applied to his deed in 6b. But who is he the “son” (*sūnú-*) of? and more to the point, the epithet *śávasaḥ sūnúḥ* “son of strength” is ordinarily Agni’s. Here we have the variant *sūnúḥ ... śávasā* with instr., and *sūnúḥ śávasā* is used of Agni in I.27.2. On the other hand, *śavasāná-* is twice use of Indra in the beginning of this hymn (1a, 2b) and *śavasāvan* in 11d, *śavasāna* in 13c; cf. also the clear *śávasaḥ sūnúm índram* in IV.24.1. I tentatively suggest that there is an attempt to blur the lines between Indra and Agni here, and that the partnership or fellowship may be the mutually beneficial relationship between gods and men centered on the sacrifice, where Agni officiates. But I cannot point to hard evidence for this interpretation.

The paradox of the cooked milk in the raw cows is a standard one, often trotted out as a natural wonder to contemplate. Here it seems to be taken further: there are literal milk and literal cows in c, but in d the black and red cows are likely to be the nights and dawns (as in 8cd) and the “gleaming white milk” the early light known as the “milk of the dawn cows” (see Watkins MoreDawnCows). As far as I can see, this hemistich has no integral connection with the first half of the verse, and the shift from 3rd to 2nd person underlines this disconnect.

I.62.10: A nicely balanced alliterative pāda *sanāt sáníḷā avánīr avātā*, with the first phrase picking up 7a *sanājā sáníḷe*. Note also that the first word of b, *vratā*, echoes *avātā*. On *avātā-* see comm. ad I.38.7 and VIII.79.7.

Again the reference of this verse is somewhat obscure. Are the streams here the same as the four rivers in 6cd? or are they the streams released from Vṛtra’s confinement? (Ge suggests sensibly that Indra gave them the command to wander in I.61.12, though it is their own commandments, not Indra’s, that they safeguard here.) The identity of the sisters of cd, compared to wives, is even less clear. Are they the same streams as ab? or possibly praise-songs (*gíraḥ* appear with the same simile, *jánayo ná pátnīḥ* in I.186.7, and in our next vs., 11cd, “inspired thoughts” [*manīṣāḥ*] are compared to eager wives). Again, I think the reference is supposed to be shifting, with the literal streams of mythological time replaced by the thoughts and praises of the ritual here-and-now, mediated by the feminine gender of the words used of both streams and praises. The temporal shift in this part of the hymn, or rather the double temporal vision, is signalled by the repeated initial *sanāt* ‘from of old’ and related terms (8a, 10a, 11a, 12a, 13a) and its contrast with the present tense verbs that prevail in this section.

I.62.11: *sanāyú-* ‘age-old’ is found only here, and was clearly created to match the other pāda-initial *sanā-* ‘old’ forms in this section, while matching its nom. pl. *sanāyúvo* with *vasūyávo*, which opens the next pāda. JL suggests that part of the motivation for creating this particular hapax is to invoke the paradoxical juxtaposition of *sana-* ‘old’ and *yuvan-* ‘youth’. Verse 8 contains the same juxtaposition: *sanāt ... yuvatī* “from of old the two young girls,” and the theme of old and new runs throughout this hymn, indeed in this verse.

JL also notes the chiasmic *pátiṃ ná pátnīr uśatīr uśántam* of c.

I.62.13: *sanāyánt-* is likewise only here. Note its semantic opposite *návyam* at the end of the pāda, the same contrast as *sanāyúvo ... návyo* in 11a.

Like the last verse of the preceding hymn (I.61.16), this verse is extra-hymnic in some ways, but also has connections with the rest of the hymn. The “old” pattern continues to open the verse, and the voc. *śavasāna* in c forms a ring with the same stem in the dative in 1a.

I.63 Indra

I.63.1: The very first hemistich of this hymn presents us with a syntactic problem: although the most natural way to read this is with a rel. clause beginning with *yó ha* and continuing through the second pāda, the verb there, *dhāh*, is unaccented. There are three possible ways to handle this. The first, the one I followed in the publ. tr., is to assume that *dhāh* got de-accented for some reason. Several possible reasons are available, though none of them strong: 1) it lost its accent redactionally from being matched to (properly) unaccented *dhāt* in 2b, also at the end of its hemistich; 2) the same idiom *āme (...)* *dhāt* is found in nearby I.67.3 (unfortunately by a different poet) and this caused the loss of accent redactionally; 3) because the 2nd hemistich of the verse in question is also a subordinate clause (beginning *yād dha*), the previous subordinate clause lost its verbal accent and became a kind of “honorary” main clause, because the action of *cd* is based on that of the relative clause that precedes it. (This seems to be one possibility that Old floats, though he is rather sketchy about it.) Though Ge does not mention the lack of accent, he tr. the whole as a rel. clause.

The other two ways to deal with the problem involve having the rel. clause end at the end of the first pāda. Old also suggested the possibility that the rel. cl. is limited to *yó ha śúṣmaiḥ*. Re, Hoffmann (1967: 181), and WG all follow this path, with tr. of the type “You are great, Indra, who are (so) because of your *śúṣma*.” I rejected that because of its awkwardness, although I recognized that it solves the accentless verb problem, since the main clause can occupy pāda b without problem. A third way, also ending the relative clause with the end of the first pāda, seems to me to be less clumsy, and that is to make all of the first pāda the relative clause. Though *yāh* appears to be fairly far into that clause, in fact it is not preceded by more than one constituent (plus a vocative, which doesn’t count). This produces a tr. “(you) who are great because of your *śúṣma*-, you placed ...” This actually has a parallel in IV.22.3 *yó devāḥ ...*, ***mahó*** *vājebhir mahádbhīś ca śúṣmaiḥ* “The god who ... is great by reason of his prizes and his great *śúṣma*.” I would therefore now change the tr. accordingly, to this third option.

The next problem in this half verse is the construction of *āme √dhā*. All the standard tr. render it more or less as “you put Heaven and Earth in panic/fear.” This makes sense of the syntax, but attenuates the meaning of the noun: *āma-* is an attack or onslaught, or more abstractly offensive power, whereas ‘panic, fear’ suggests the opposite. Therefore, although slightly more machinery is required, I tr. this idiom (found also in I.67.3, IV.17.7) as “put X in the path/way of your onslaught.”

Notice that here Nodhas manages to deploy a perfectly orthodox de-coupled dual dvandva for Heaven and Earth (*dyāvā ... pṛthivī*). See remarks on I.61.14, 62.8.

The subject NP(s) of *cd* are neatly interwoven: with *vísṣvā ... ābhvā* (neut.) chained with *girāyaś cid ... dṛlḥāsah* (masc.).

Hoffmann (p. 181) argues convincingly that *naījan* should not be interpreted as *ná aījan* with the Pp., but with the injunctive *éjan*.

I.63.2: If my new parsing of the syntax of vs. 1 is correct, these two verses are structurally parallel, with a relative/subordinate clause in a, the main clause in b, and a further subordinate clause, esp. dependent on the main clause, in cd.

Note the phonological trick, where (*ā*) *yád dhá(rī)* opens 2a, apparently matching *yád dha* of 1c (which in turn shows *dha* for *ha*, found in the grammatically different rel. clause *yó ha* in 1a). The verse ends with more alliteration: *d púra(h)... puru- ... pūrvīh*.

The meaning of *vīvrata-*, several times of Indra's horses, but also with a few other referents, isn't entirely clear, because it depends on which of the many value of *vī* to assume. I favor 'having separate commandments', that is, acting independently but each in obedience to Indra, but it could also mean 'without commandments' (which must underlie Ge's 'widerspenstige' [stubborn], followed by Hoffmann [but with ?]).

The c pāda lacks a caesura and in its place has a somewhat bizarre compound, voc. *aviharyata-kratu-*. The second member is clear, and the whole must be a bahuvrīhi. The first member appears to contain the well-attested adj. *haryatā-* 'gladdening', but this presents certain problems: the present *hāryati* does not appear with the preverb *vī* and it is difficult to construct an appropriate meaning, esp. one that would harmonize with *krātu-* 'resolve'. Possibly, with double negation via *a + vī*, "whose resolve is not undelightful" – not a particularly compelling possibility. Nonetheless, this derivation seems the path of least resistance and is probably responsible for Ge's "dessen Rat nicht verschmäht wird" and WG's "... nicht unbeliebt ist" (possibly also Hoffmann's "... nicht zu unterschätzen ist" – it's hard to tell). But all of these must take the *-haryata-* in a passive sense, although the simplex adjective never has that value.

I think it's likely that the compound involves some complex word play, scrambling and recombining the (*d*)*hārī* and *vī(vratā)* of pāda a. Despite the ad hoc explanations required, I'm inclined to consider the *-viharyata-* somehow a derivative of *vī* √*hvr* 'deflect, swerve, overturn', a well-established idiom. (Re's "dont le pouvoir est incontrariable" seems to reflect this.) Two negated nominal derivatives of this lexeme are found in the RV: *āvihruta-* 'unswerving', jpb: 'not overturned' (V.66.2, X.170.1) and *āvihvarant-* jpb: 'not overturning' (IV.36.2). Unfortunately the morphological details are not going to be easy. Accounting for the loss of the *v* in a putative **avihvaryata-* is not so difficult: it can be ascribed to dissimilation, in combination with the word play on (*d*)*hārī* just mentioned. But what about the rest of the word. For the suffix *-ata-* I can only invoke the (small) class of *-ata-* adjectives with full-grade root syllable of the type *darśatā-* '(lovely) to be seen', *yajatā-* 'worthy of the sacrifice', and the aforementioned *haryatā-* 'delightful'. As for the intermediate *-y-* between root syllable and ending, I again invoke the play on (*d*)*hārī*, with the *-y-* representing the sandhi of *-ī-* before the suffix *-ata-*. If word play is indeed involved here, it's possible that a second reading of the first member could be "not without his fallow bays" and the whole compound means "who has no resolve without his fallow bays."

I am fully aware of what a house of cards this is and only sketch these scenarios because I think Nodhas is capable of such manipulations. I do think it possible, however, that the lack of caesura and the problematic compound are connected and that the transmitted text is not what Nodhas originally composed. It should be noted that the word division *yēnā viharyatakrato* is also a possibility, but this doesn't help either with the lack of caesura or the analysis of the compound.

I.63.3: I interpret *dhṛṣṇúḥ* as governing the acc. *etān*, though as a goal not a direct object..

I.63.4–7: *tvám ha tyád* provides the opening of the next four verses. Although *tyád* is a neut. pronoun and in 4a could function as the object of the otherwise object-less *codīḥ*, in the following verses it does not have pronominal function; the expression X *ha tyád* is a way of providing emphasis, particular of the 2nd ps. pronoun (cf., e.g., VII.19.2, VIII.96.16–18). I would now be inclined to tr. the vss. in this sequence with “It was just you who ...” rather than the rather recessive “You then, ...”

I.63.5: This verse contains many small problems of interpretation that hinder putting together the whole. I’ll start with the details and turn to the construction of the whole thereafter.

āriṣaṇyan is universally taken as intrans., patient-oriented ‘not receiving harm, not being harmed’, but in all cases this stem is better taken as ‘not allowing harm’. The finite verb *riṣaṇyāti* also has this meaning “intends harm, allows harm”. The parallel stem *āriṣaṇya-* in II.29.4 has the same meaning and takes a genitive (*āriṣaṇyā tanūnām* “not allowing harm to our bodies”), and I construe the gen. *mārtānām* in b with *āriṣyan*: “not intending harm to mortals.”

The next problem is *ḍṛḷhāsya*. Ge takes this as the causer of the harm to Indra (gen. agent), while Hoffmann, followed by WG, construe it with *ājuṣtau*, with the gen. pl. *mārtānām* dependent on *ḍṛḷhāsya* (KH “bei Missfallen selbst eines Feststehenden unter den Sterblichen”), but both the Ge and the WG interpretations require that *ḍṛḷhā-* be a person. This is unprecedented: this past participle is virtually always used of a place, a fortified stronghold. Indra is once (VIII.44.12) called *ḍṛḷhā-*, presumably because he is as steadfast as a fortress (in the vein of “a mighty fortress is our god”), but I know of no examples with people so called. If at all possible it should have the standard meaning here. I think this is possible, by reading the verb *ví ... var* of pāda c also with the first hemistich and supplying the word *dúrah* ‘doors’. In fact, the other two passages containing the gen. sg. *ḍṛḷhāsya* strongly support this solution, as they both contain the verb *ví√vr* and the headnoun *dúrah*: VI.62.11 *ḍṛḷhāsya cid gómato ví vrajásya, dúro vartam ...* “Open the doors of the cattle pen, even though it is shut fast” and VII.79.4 *ví ḍṛḷhāsya dúro ádrer aurṇoḥ* “you opened up the doors of the firm-fixed stone.” Note that *ví ... var* is rather more appropriate to this hemistich than it is to the pāda in which it’s found. (Recall the double use of *ví√var* in I.62.5 and 7.)

The last word to be accounted for in this hemistich is *ājuṣtau*. Unlike most tr. I take it to be Indra’s displeasure. The object of his displeasure is not expressed, but it is easy to supply — presumably Vala, since Indra is opening up his stronghold. His displeasure at Vala (or other demonic enemies) is implicitly contrasted with his benevolent care not to injure mortals.

I am less sure about what pāda c is conveying. I assume this is a racing image: Indra starts the race by opening the barriers at the starting line. Ge and Re take the injunctive *ví ... var* as a functional imperative, but this is certainly not necessary. I tr. as a past tense, in keeping with its rendering in the first hemistich, but it would be possible to take it as a present in c, as Hoffman/WG do. The phrase *asmád ā* “(coming) from us”

seems a bit heavy simply to express that it's *our* horse, so there may be some racing terminology embedded here.

In d *ghanéva* contains the old instr. *ghanā*. The same phrase is found in I.36.16 and IX.97.16.

I.63.6: The gerundive *atasāyya-* is taken by Ge as belonging to \sqrt{at} 'wander' and tr. "soll ... erreichbar sein," while most (Gr, Re (?), AiG II.2.286, Hoffman, WG) take it to mean "to be asked for/begged" and derived from the hapax *atasī-* supposedly 'beggar' (VIII.3.13). But this is entirely circular, with the meaning of each of these two words determined on the basis of the other, with an occasional nod towards \sqrt{at} 'wander' as their possible root (whose relevance Mayrhofer casts doubts on; see EWA s.v. *atasī-*). I instead take it as a negated gerundive to \sqrt{tams} 'tug, yank, shake', which forms a similar gerundive to its intensive, *vitantasāyya-*. Negated gerundives do not ordinarily take accent on the privative (AiG II.1.217), and the derivational opacity of *atasāyya-* would make it likely to receive the usual *-āyya-* gerundive accent. Ge also suggests the possibility of derivation from \sqrt{tams} in a note. See also disc. ad II.19.4.

I.63.7: "one after the other" is my attempt to render an "object-distributive" value for the intensive *dardah*. (For this notion see Schaefer 1994: 86–87, though she considers *dardar-* lexicalized and does not attribute this sense to it, pp. 135–36.)

The use of *vārg* 'you twisted' differs in tone in simile and frame. In the frame it is distinctly hostile and destructive, but in the simile it simply expresses the ritual action of twisting the barhis grass into seats for the visiting gods.

I.63.8: *āpah* in b can certainly be the old nominative plural used as an accusative, as occasionally happens in late RV (so Gr and implicitly most tr.), but as I suggested elsewhere (1982: 260), it may be the nominative plural it appears to be; this may be an example of case disharmony in a simile, exploiting the ambiguities in syntax of the verb \sqrt{pi} 'swell' that the poets were always happy to capitalize on. In the frame *pīpayah* is transitive ("you swell the refreshment"), but in the simile intransitive ("as waters [swell]").

I take *tmānam* as functioning as a reflexive pronoun ("extend yourself"), while most tr. take it as a noun (Ge 'Lebensgeist', WG 'Lebenshauch'). This is the only acc. to the truncated stem *tmān-*, and so its usage is hard to determine. The oblique cases (dominated by instr. *tmānā*) generally refer to the self ('by yourself, for ourselves', etc.), without a full-blown nominal sense, which accounts for my tr. However, the active form of *yāmsi* gives my pause, and so the standard tr. should be considered (though I am not ready to adopt it). "Extend nourishment to us" seems to be formulaic, with an active form of \sqrt{yam} , and so that voice may have prevailed here, despite the reflexive *tmānam*; cf. III.1.22 *prā yāmsi ... īṣo nah*, IV.32.7 *sā no yandhi ... īṣam*.

I.63.9: I supply 'hymn' as subject for *ākāri* in the first pāda and take *brāhmāṇy ūktā* in b as a separate nominal clause. It is of course grammatically possible to take the latter phrase as subject of *ākāri*, since neuter plurals famously can take singular verbs. But, fame aside, this construction is quite rare in the RV, and in this case there are two

different recipients, Indra in a and the horses in b. However, I do not consider the other interpretation impossible.

I.64 Maruts

I.64.1: Ge argues that *apó* (apparently the acc. pl. of ‘waters’) should be emended to **ápo* (neut. acc. sg. of ‘work’). His parallels are persuasive, and I previously accepted the emendation, suggesting that the accent shift may have been made redactionally, on the basis of vs. 6, which contains *apó* ‘waters’ in its first pāda and *vidátheṣv ābhúvaḥ* in its second, as here. However, the existence of other *apás-* forms that seem to mean ‘work’, not ‘worker’ or ‘waters’, esp. *apási* III.1.3, 11, give me pause, and I now think it likely that, beside *apás-* ‘having work, worker’, there are a few forms of neut. *apás-* ‘work’ (with the same meaning as the more morphologically orthodox neut. *ápas-* ‘id.’). This stem could owe its accent shift to the analogy of the vastly more common ‘water’ word, with root accent in nom. pl. *āpas* but suffix/ending accent in the oblique, esp. acc. pl. *apás*. On the other hand, it would be possible to take *apáh* here as the acc. pl. of waters and tr. “Wise in mind, with dextrous hands I anoint the hymns, like waters standing ready at the rites.” And a pun is always possible. By contrast WG accept the reading as given, but take it as “Werkmeister,” i.e., to the internally derived adjectival stem *apás-* ‘possessing work’. This would be appealing save for the fact that the masc. nom. sg. should be **apās* (i.e., *ápā* in this sandhi context), and their interpr. is therefore impossible. This morphological problem is not mentioned.

I.64.4: *vy āñjate* here responds to *sám añje* in 1d, though here the verb is reflexive and in the 1st vs. it is transitive but with subject involvement (“I ornament [my own] hymns”). I tr. the verbs slightly differently because the ‘anoint’ sense doesn’t work very well in vs. 1, esp. with the simile, whereas here the etymological figure with *añjībhīḥ* ‘unguents’ enforces the more literal sense.

Gr suggests emending *mimṛkṣur* ‘they rubbed’ to *mimikṣur* ‘they were fixed/attached’ (accepted by WG), since this verb *√myakṣ* is used elsewhere of spears in similar contexts. However, ‘rub’ makes fine sense, and the poet may well be playing with a well-known phrase. (This perhaps should give us pause about emending *apó* to *ápo* in 1.)

Pāda d *sākāṃ jajñire svadháyā* ... “They were born all at once by their own power” -- that the Maruts were self-born is asserted in I.168.2; see also V.87.2.

I.64.5: Very alliterative verse, esp. in 2nd half, with pāda c *duhánty ūdhar divyāni dhūtayo* (cf. also *dhúnayo* in pāda a) and d ... *pinvanti páyasā párijrayaḥ*. Cf. also b *vātān vidyútas (ta)vi(ṣībhir)*.

Most tr. take *ūdhar divyāni* together (e.g., Ge “die himmlischen Euter”). Although *divyā-* does modify *ūdhar-* elsewhere in similar context (e.g., IX.107.5 *duhānā ūdhar divyām mādhu priyām*), the collocation is not grammatically possible here, since *ūdhar* is definitely singular and *divyāni* is definitely plural. At best one would have to argue that short-vowel neut. plurals to *n*-stems, which are identical to their neut. sgs., provided some sort of model (cf., e.g., I.173.3 *sādma mitā* “fixed seats”) for interpr. *ūdhar* as a plural. Old (ZDMG 55.273 n. 1 [=KISch 732]) claims that this is a vicarious introduction (“ein

vicarirendes Eintretung,” whatever that means) of the sg. *ūdhar* since the plural of *ūdhar* doesn’t exist. (We would expect **ūdḥāni*, like *āhāni* to *āhar*, though Old bizarrely produces **ūdḥīṇi* instead.) I see no reason why **ūdḥāni* could not exist and assume its non-attestation is an accidental gap. But the issue here is not the singular of ‘udder’, but the plural of ‘heavenly’, which the poet could easily have made singular (as in the parallels) if he had wanted. The root √*duh* can take a double accusative, as in IX.107.5 just quoted: “milking the heavenly udder of its dear honey”), and this is how I interpret *divyāni* here, supplying a form of *vāsu* ‘goods’, which *divyā-* regularly modifies. In one way or another this alternative goes back to Gr and Delbrück AiS.80 and is accepted by WG. Again, Nodhas seems to be playfully evoking a familiar phrase but modifying it.

On *pārijrayaḥ*, supposedly a cmpd with root noun *-jri-*, lacking the usual *-t-* extension, see comm. ad V.54.2.

I.64.6: *vidātheṣv ābhúvaḥ*, repeated, as noted above, from 1d, is ambiguous. It can modify the waters of the first pāda, as Ge (/WG) take it, or the Maruts (so Re). I have tried to maintain the ambiguity. In vs. 1 the phrase qualified the hymns (fem. pl. *gírah*) and, if *apó* of pāda c is not emended, those waters as well.

I.64.8: *piśá-* in b occurs only here in the RV, so although the meaning assumed by most (‘mottled [deer]’ vel sim., beginning with Sāy) is plausible, it has no other support. The plethora of wild animals in this run of verses (7: buffalos, wild elephants, 8: lions, snakes) does suggest that this term names animals too. Re by contrast tr. the etymological phrase *piśā iva supísaḥ* as “bien ouvragés comme des oeuvres-peintes,” though he is more cautious in his n. Kulikov (JIES: 2009) suggests ‘cheetah’ or ‘leopard’ on the basis of the wild animal company it keeps in its AV occurrence (AVŚ XIX.49.4 = AVP XIV.8.4). This is plausible but by no means certain.

I.64.9: As noted in the intro., *ródasī* is a pun. In pāda a it refers to the two world-halves, but in cd the unexpressed subject is feminine and mounts the Maruts’ chariot. This can only be Rodasī, the Maruts’ consort (for mounting their chariot, see I.167.5–6), who ordinarily is accented *rodasī* but here must be generated by otherwise homonymous *ródasī* in pāda a.

āhimanyavaḥ should probably be unaccented, in a voc. phrase with *śūrāḥ*, but since the phrase *śávasāhimanyavaḥ* is exactly repeated from the preceding vs., 8d, where it is properly nom., it could hardly have failed to acquire an accent redactionally.

I.64.10: Properly speaking, the tr. should read “have taken their arrow in their fists,” since *íṣum* is singular. With dual *gābhastyoḥ* the passage is shorthand for “(each) has taken his arrow in his two fists.”

I.64.11: *payovídh-* has several possible values. In addition to the ‘milk-strong’ in the publ. tr., it would also be possible to take the *-vīdh-* transitively: “strengthening with their milk [=rain]” or “strengthening the milk [=rain]”; either alternative is supported by vss. 5–6.

The lexeme *úd√han* is quite rare and occurs with the verb stem *jíghna-* only here. Since the exact sense of the lexeme is not certain, it is difficult to know how to complete

the simile. I have interpreted the verb to mean ‘beat up’; with regard to roads there is a nice parallel in the English idiom “pound the pavement.” I assume that *āpathi-* refers to walkers on a path and supply ‘road’ as the object parallel to the mountains and their feet as the instrument of pounding that is parallel to the wheel-rims. ET compares the French idiom ‘frayer le chemin’, used of blazing a trail, which may well be the sense meant here. Ge takes the verb as ‘aufreissen’ (tear open/up) and supplies ‘stones’ as the object (sim. WG). I am a little puzzled as to why his Strassenfahrer would be tearing up stones, but I suppose it might be to clear a rugged path. Re: “... arrachent les montagnes, tels des frayeurs-de-voie.” I do not know what he means by this.

I.64.12: The word *sūnū-* ‘son’ in the singular takes one aback in a hymn devoted to celebrating the very plural Maruts. It clearly refers to the ‘flock’ (*gaṇā-*) in pāda c, but I have tr. ‘offspring’ to avoid the misleading “we hymn the son of Rudra...”

I.64.13: Ge (/WG) construes *āpīchyam krátum* with *ā kṣeti*, giving the latter the meaning ‘possess’. But this Class II present means only ‘inhabit, dwell’ (as opposed to Class I *kṣáyati* ‘rules over, owns’ to a different [synchronic] root $\sqrt{kṣ}$). Re clearly recognizes the problem and tries to reconcile the meaning of the root present with its construal with an object, producing the very odd “il habite une force-spirituelle digne-d’être-recherchée.” It seems preferable to me to take *āpīchyam krátum* with the previous pāda and tr. *ā kṣeti púsyati* separately. The two verbs (admittedly without the preverb *ā*) form a fixed expression (I.83.3, V.37.4, VII.32.9). The position of the preverb also does not favor construing the preceding accusative with *ā kṣeti*: we might then expect the preverb to begin the clause, though this argument is considerably weakened by the fact that the pāda would begin **ā āpīchyam*, in sandhi *āpīchyam*, and the separate preverb would be essentially lost. As for the sense of *bharate ... āpīchyam krátum*, I interpret it as what I think Re would call a “legère zeugma.” The first two objects of *bharate*, *vājam* and *dhánā*, are both physical objects that the subject carries from one place to another; the third proposed object is a mental attitude. The English idiom “carries himself” and the English noun “bearing” use ‘carry, bear’ in a similar sense, to refer to a person’s mental self-presentation, and the middle voice of *bharate* would neatly fit such a value.

I.65 Agni

I.65.1–2: The first halves of these two vss. contain the elements of the myth of the pursuit of the vanished and hidden Agni. In particular 1ab *paśvā ná tāyūṃ gúhā cātantam* and 1ab *sajóṣā dhîrāḥ padaír ánu gman* closely resemble X.46.2bc *paśūṃ ná naṣṭám padaír ánu gman / gúhā cātantam ...*

I.65.2–3: These verses contain 3rd pl. act. root aorists *ánu gman* (2b) and *ánu ... guḥ* (3b) to the associated roots \sqrt{gam} and $\sqrt{gā}$ respectively, with no apparent difference in semantics. Here one might almost invoke the much over-used explanation of metrical convenience: both of these 3rd plurals are always (*gman*) or almost always (*guḥ*) pāda-final, with the first “making position” with a preceding light syllable (often *ánu*) and the latter not.

I.65.3: The second half of this verse is very economically and ingeniously expressed. First, the syntactic modes of simile and frame are entirely different. The frame consists of a single noun, nominalized from an underlying verb (*páristih* ‘enclosing’ < *pári* √ *as* ‘enclose’), with the object (Agni, an underlying objective genitive) to be supplied from context (“the enclosing [of Agni]”). The simile contains both subject and object in the appropriate cases (nom. *dyaúh* and [presumably] acc. *bhūma*) but no verb, which must be generated from the noun *páristih* (“as heaven [encloses] the earth”), which in turn was generated from the underlying verb. Thus, the frame and the simile are in syntactic complementary distribution – the former with a verb (or verb substitute) but no overt nominal complements, the latter with nominal complements but no overt verb. That the verb-y half is expressed nominally and the noun-y half as if it contained a governing verb is a further bit of cleverness. This syntactic skew produces case mismatch, with the nom. “heaven” of the simile apparently compared to nom. “the enclosing” (*páristir dyaúr ná*), and, further, the mismatch between the single (presumed) complement of the frame and the two overt complements in the simile gives an impression almost of case disharmony of the type treated in Jamison 1982, although in fact the objective gen. “of Agni” that must be supplied matches the acc. object *bhūma* in the simile.

Or at least it matches *bhūma* acdg. to the standard renderings (Ge, Re, WG, Lü, *Varuṇa* p. 590, and the publ. tr.). However, *bhūma* is a neuter and ambiguous as to case, and heaven enclosing the earth does not strike me as a standard Vedic image — though it slips easily into our round-earth cosmological worldview. Far more commonly in Vedic heaven and earth together encompass something else (e.g., X.27.7, under an epithet) or fail to (II.16.3, again under an epithet), or they themselves are encompassed (see the expressions quoted in Jamison 1998). For a nicely balanced passage in which the two appear both as object and subject, see nearby (but attributed to a different poet) I.61.8cd *pári dyāvāprthivī jabhra urvī, nāsya té mahimānam pári ṣṭah* “He held encircled broad heaven and earth; they did not encompass his greatness.” I therefore now wonder if *bhūma* should be taken as a nominative parallel to *dyaúh*, with an object to be supplied (“... as heaven [and] earth [encompass X]”) or even if *dyaúh ... bhūma* should be recombined into a dual dvandva (cf. *dyāvā-bhūmī*, with slightly different 2nd member) and taken as an object (“as [X encompasses] heaven [and] earth”). (Note that the disyllabic reading of *dyaúh* could accommodate a *dyāvā*.) In any case, I believe that the poet kept these possibilities open by the ambiguous concision of his wording.

Yet another aspect of this little expression is its relation to other such expressions in this small group of hymns attributed to Parāśara Śāktya (I.65-73): twice elsewhere in this collection Agni is depicted as encompassing something else, with the lexemes *pári* √ *bhū* (I.68.2 *pári ... bhúvat*, I.69.2 *pári ... babhūtha*), while in I.72.2 something else is enclosing Agni, configured as a calf (*vātsam*), using *pári* √ *as*. (I wonder if the somewhat pleonastic presence of *bhúvat* in our passage is meant to resonate with those *pári* √ *bhū* passages.) Thus, though in our passage Agni is clearly the *object* of enclosure in the myth of his hiding in the waters, he himself can take the role of encloser in this tight-knit collection – allowing for the possibility that he might here be supplied as *subjective* genitive with *páristih*, save for the mythological context.

All in all, I.65.3cd packs a lot into its ten syllables and five words, as witnessed by the many more words (more than ten times as many) in this entry required to describe its syntactic and semantic tricks.

I.65.4: The initial sequence in this vs. *vārdhantīm* can, uncontroversially, consist of the 3rd pl. act. pres. *vārdhanti* and the enclitic pronoun *īm*, as the Pp. and all subsequent analyses take it. I wonder, however, if it should not be analyzed like nearby I.67.4 *vidāntīm* (q.v.; also a Parāśara hymn), where I segment the sequence as *vidānt īm*, with the old secondary ending *-ant preserved because it was misanalyzed as -ānti + īm. In I.67.4 there is stronger motivation to accept my reanalysis because *vidā-* is otherwise only an aorist stem and should not have indicative forms with primary endings. Here, of course, *vārdha-* is a present stem and *vārdhanti* would be perfectly at home. Nonetheless, the first four vss. of this hymn treat the disappearance of Agni and his concealment in the waters and are couched in the past -- note esp. *ānu guḥ* ‘they followed’ in 3a, the vs. paired with this one. I would therefore tentatively emend the published tr. to “the waters strengthened the lovely child.” For this and other such passages (esp. I.65.4 and I.85.11), see my 2019 “Hidden in Plain Sight: Some Older Verb Endings in the Rig Veda” in Fs. Yazuhiko Yoshida.

It is unclear with what part of the sentence the instr. *panvā* should be construed. I take it with the verb *vārdhant(i)* (though I do not go as far as Old, who suggests that the phrase is equivalent to *panāyanti*), while Ge (/WG) and Re, in slightly different ways, take it with *sūśīsvim*. The stem is a hapax and there is no obvious way to decide the matter, though the passages Re adduces for his instr. of characterization (IX.85.11, 86.31 *sīsum .. pānīpnatam* and III.1.13 *apām gārbham ... pāniṣṭham jātām*) may tip the scales in his direction. So I might modify the publ. tr. to “The waters strengthen(ed) the lovely child in his wonder” or (see below) “... strengthen(ed) the one growing well with/in wonder,” though construing it with *vārdhant(i)* still seems to yield more sense.

The matter is made more difficult by the fact that *sūśīsvi-* is also a hapax. It is generally taken as an adj. “schön wachsend” (ultimately to $\sqrt{sū}$ ‘swell’), and this is certainly possible. But because of *sīśvā*, instr. of *sīśu-* ‘child’, in 10c, I follow Old (SBE, “the fine child”) and Re (“le beau Nouveau-né”) in taking it as a noun.

I.65.5: It is tempting to take the adjectives *raṇvā*, *pṛthvī*, and *śambhú* as referring to Agni and specifying the term of comparison with the item in the simile (“broad like a place of peaceful dwelling,” etc.), and in fact Ge (mostly) and Re (entirely) give in to this temptation. However, all three adjectives agree in gender with the noun in the simile (fem. in the first two, neut. in the last), and although it would be possible to explain this agreement as “attraction” (so Re), a simpler solution is to assume that the adjective belongs with the comparandum. (So also WG.) The phrase *girī ná bhujma* poses a different problem, in that *girī-* is masc., and therefore if *bhujmā* is an adjective, it does not modify *girī* — unlike the otherwise entirely parallel expression in VIII.50.2 (Vālahk.) *girī ná bhujmā*. We should either emend the text (→ *bhujmā*, so Gr) to agree with that passage (“like a beneficial mountain”) or take it as a nominalized neut. “source of benefit,” the solution adopted in the publ. tr. On this characteristic of mountains, see, e.g., I.55.3.

I.65.6–7: The similes continue in these verses, but with less strict parallelism in structure.

I.65.6: The construction of *síndhur ná kṣódaḥ* is clarified by its occurrences in the next hymn, I.66.10 *síndhur ná kṣódaḥ prá nīcīr aīnot* “Like a river its gush, he has sent forth those [=butter offerings?] heading downward.” Hence the “(sending)” supplied here.

I.65.7: *ībhya-* is found only here in the RV, though it occurs later. It is a derivative of *ībha-*, which is slightly better attested in the RV and seems to mean ‘(group of) servants, retinue’. Tr. of *ībhyañ* split dramatically between ‘wealthy’ (Ge “die Reichen,” WG “die Begüterten”) and ‘vassal, servant’ (Re “les vassaux”), and the Pāli cognate *ibbha-* is also glossed with both, though with the ‘vassal’ sense first and dominant (see the newest ed. of the PTS dictionary, 2001 s.v.: “a member of a king’s entourage; a vassal; dependent; wealthy”). I will not enter into a reexamination of all the Sanskrit and MIA evidence, but in my opinion context here favors ‘vassal, dependent’ rather than ‘wealthy’. See Proferes’s disc. of vss. 7–9 (2007: 111–12); although he refuses to tr. *ībhyañ*, he argues that it refers “to those who are subordinated to the king,” quite possibly the clans — as the AV passage he adduces suggests: AV IV.22.7 *vīśo addhi* “eat the clans,” addressed to the king at his consecration.

I.65.9: Strictly speaking, given the position of *ná*, the *apsú* should go with the frame, not the simile: “he hisses in the waters, like ...” This is presumably a reference both to the myth of Agni’s hiding in the waters treated earlier in the hymn and to his identification with Apām Napāt, but the *haṃsá-* is surely sitting in the waters, too — though the primary point of comparison is the hissing noise both make.

How to construe gen. *vīśām* is not clear. I take it loosely as a datival gen. with the *cētiṣṭhaḥ*, while Re considers it dependent on a “virtual” *vīśpāti-* (“le plus remarquable ... de (ceux qui président aux) tribus”), and Ge and WG, in slightly different ways, take it as dependent on *uṣarbhūd* (Ge “der Frühwache der Ansiedelungen”; WG “der von Niederlassungen am Morgen wach wird”). Proferes’s rendering is quite awkward, but closest to my own in intent: “the clans’ brightest as concerns strategems.”

I.65.10: The simile in cd is unclear; its purport depends on what meaning is assigned to multivalent *vībhū-*, whose senses include ‘conspicuous’, ‘distinguished’, and ‘wide-ranging’, to which Ge adds ‘sich mehrend’, Re ‘abondant’, and WG ‘kräftig’. In Ge’s and Re’s readings, the point of the simile would be the size of the herd and its growth through the birth of its young. This is certainly possible, and the point of contact with Agni would be the growth, that is, the blazing up, of the fire after its kindling. However, I do not see ‘increase’ as one of the core meanings of *vī√bhū* and prefer ‘wide-ranging’ here, with the simile expressing the grazing behavior of herds and the frame the fire’s tendency to spread. See 8b *vānā vy ásthāt* “he has spread out through the wood.” The final word of 10, *dūrébhāḥ* ‘far-radiant’, may support this interpretation. I do admit, however, that *śísīvā* ‘with their young’ makes less sense than in the Ge/Re interpretation.

Note that the opening of the last hemistich of the hymn, *paśúr ná śísīvā*, “unpacks” the hymn’s first word *paśvā* in a type of ring comp., and that this phrase was in a sense anticipated by 4b *panvā súśíśvim*.

I.66 Agni

I.66.1: The fem. gender of *citrā* is a problem. The standard solution (see, e.g., Gr) is to assume that *rayī*, which is normally masc., is occasionally fem. (so also, supposedly, in nearby I.68.7, though see disc. there). I find this unsatisfactory and explain the gender by assuming that *citrā* modifies not only *rayī* but also fem. *saṃdṛk* and agrees with the latter.

Gr takes *sūrah* as the nom. sg. of the thematic stem *sūra-*; in this he is apparently followed by Re: “(propre à la) vision (des hommes) comme le soleil.” I find this unlikely, since *saṃdṛś-* regularly takes the gen., incl. *sūryasya* (II.33.1, X.37.6, X.59.5). I therefore take *sūrah* as gen. of *svār-*, with, apparently, Ge (/WG).

More problematic is *āyur nā prāṇāḥ*, where the first word should be the neut. noun *āyus-* ‘lifetime’, since Gr’s supposed adjectival stem *āyu-* ‘beweglich’ does not exist (only the neut. noun *āyu-*, also ‘lifetime’). Thus, properly speaking, we should have an equational simile “breath like lifetime,” represented in Re’s “souffle-animé comme la vie (même)” and WG “der Atem gleichsam als Leben.” Nonetheless I consider the interpretation as an improper compound, as in Ge’s “wie der Lebenshauch,” to make more sense.

I.66.2: Both *tákvan-* and *bhūrṇi-* have received diverse tr., which I will not treat in detail here. For \sqrt{tak} as ‘plunge, rush’, etc., see EWA s.v. *TAK*; here and in *takva-vī-* I take it to refer to a “swooping” bird of prey. As for *bhūrṇi*, it belongs to \sqrt{bhur} ‘quiver’, and I tr. it here as ‘restless’ to capture the constant circling and diving of birds of prey. How then can he ‘cling’ (*śiṣakti*) to the wood? The image must be of the flames of the fire constantly licking and dancing (to use our preferred metaphors in English), but always in contact with the wood. My “clings” is a more vivid version of the literal “accompanies, keeps company with.” To avoid the appearance of contradiction, the phrase might better have been rendered “ever restless, like a swooping (bird), he (yet) clings to the wood.”

Note that the second syllable of *vānā* somewhat echoes the *nā* simile markers of previous pādas.

The simile of c is syntactically problematic, consisting of a neut. NA sg. *pāyaḥ* ‘milk’ and a fem. nom. sg. *dhenūḥ* ‘milk-cow’, with the relation between them unspecified. Ge simply takes it as a functional compound (“wie die Kuhmilch”), though unlike “life-breath” in 1c, the order of the elements would be wrong; Re takes *dhenūḥ* as if it were gen. (“comme le lait (de) la vache-laitière”), while Old (SBE) and WG render it as two similes (Old “like milk, like a milch-cow”). I have supplied a verb “(yielding),” allowing *pāyaḥ* to serve as acc. object, on the basis of IV.57.2 *dhenúr iva pāyaḥ ... dhukṣva*. None of these solutions is immediately satisfying. One clue might be whether the adjectives in d (*śúcīr vibhāvā* ‘blazing/gleaming and ‘far-radiant’) are applicable to either the one or the other of the nouns in the simile, but this doesn’t turn out to be very helpful. Although both adjectives are regularly used of Agni, they are characteristic of neither milk nor cows. One exception is V.1.3 *śúcīr ankte śúcibhīr góbhīr agnīḥ* “blazing Agni is anointed with blazing cows,” but there the “cows” stand for products of the cow, either milk (so the publ. tr.) or, more likely, ghee, so that a metaphorical application to either noun is possible. And it may be that the simile in c is to be taken by itself, detached from the adjectives in d; see, e.g., 3cd, where the two pādas, one a simile, the other not, are semantically independent.

I.66.3: As Re notes, we might expect suffix-accented *jetā* with gen. *jānānām*. WG, following Tichy (1995: 343–44), interpret the gen. in dative function (“als Sieger für die Menschen”) to avoid nominal rection with a root-accented agent noun. But since this accentual “rule” is often broken, I see no problem with the standard interpr. as objective gen. “conquerer of peoples.”

On the comparison of Agni to a delightful home, see VI.3.3.

I.66.5: The two halves of this verse are conceptually more complex than those preceding. Most tr. take a and b as implicitly contrastive: Agni’s blaze is undomesticated but he is nonetheless intimately familiar -- e.g., Ge “Dessen Flamme schwer heimisch wird, (und doch ist er) eingeboren wie die Einsicht.” This is certainly possible. However, although I recognize the contrast between *duróka*- and *nitya*-, I think the poet is equating the two elements in a clever play: Agni’s flame can’t be controlled and “domesticated” anymore than a man in the grip of his own will.

As for the second half, I find it hard to believe that the poet is implying that one’s wife is at the disposition of everybody, with the distasteful sexual connotations this implies -- as in Re’s “(se mettent) à disposition pour chacun comme l’épouse sur la couche.” Rather I think this is the Papageno situation: all it takes for anyone to be happy is his own wife in his lap.

I.66.6: The “horse” generally supplied with *śvetāḥ* ‘white’ is based on the regular co-occurrence of that adj. with *ásva*- and other expressions for ‘horse’, including metaphorically of Agni (e.g., V.1.4). It of course also harmonizes nicely with the chariot of cd.

I.66.7: In the RV it’s necessary to allow *sénā*- to mean both ‘army’ and ‘weapon’; although the latter could make sense here (so Re), an army is more likely to produce an onslaught than a single weapon.

I.66.8: As discussed in the publ. intro., this verse is quite opaque and breaks the pattern of Agni-describing similes that has prevailed up to now in this hymn (and the last one). It has, not surprisingly, stimulated much discussion and some fanciful interpretations, all the details of which I will not rehearse here. The first question that must be addressed is what the first word (and the fourth), *yamáḥ*, represents here. Is it the PN Yama, naming the first man and the king of the dead? or the common noun ‘twin’? or even the common noun ‘controller’ (though we might then expect the accent *yáma*-)? What one decides about this question determines the direction of interpretation of the rest of the verse. Ge (/WG) take it as Yama, here identified with Agni; Re and Old (and I) as ‘twin’, with the two twins displaying different characteristics. The rhetorical structure of the verse favors this interpretation; not only do the first two pādas both begin *yamáḥ*, a repetition that invites (but does not require) a “the one ... the other ...” reading, but the contrastive characterizations found in cd also support it.

The next problem is the gender discrepancy between *jātāḥ* (m.) and *jānitvam* (n.) in what appear to be parallel equational clauses. To solve this Ge (/WG) simply supply a verb with the second, to which *jānitvam* serves as object: “als Yama (erzeugt er) das künftiges Geschlecht.” But this would disturb the balanced structure of the verse, and it

seems best to allow *jānitvam* to be predicated of *yamáḥ*, as Old and Re (and I) do. Where I differ from these latter is in my interpretation of the two equations. Old and Re take both twins to be identified with Agni, with each “twin” representing one aspect of Agni’s nature. I think that each twin is identified first with another entity, which is then secondarily identified with Agni. Although this might seem over-complex, it allows the other parts of the verse to bear more meaning than the exclusive “Agni = one twin, Agni = other twin” interpretation admits. As indicated in the publ. intro., I take the verse as reflecting the circumstances of the early morning ritual, when the fire is kindled at sunrise and the soma is pressed for the first offering. Under that interpretation the twin that has (already) been born (*jātáḥ*) would be the sun, at whose appearance the ceremony gets started. The twin that is the substance to be born (*jānitvam*) would be the soma. The two are not only twins of each other, but each is the twin of Agni. Soma and the sun are not infrequently identified (see, e.g., IX.66.18 *tvám soma sūra éṣaḥ* “you, Soma, are the sun”); the identification of Agni and the sun is a commonplace; and Agni can also be identified with Soma (see, e.g., the trca IX.66.19–21), and they frequently share epithets (like *śúci-*, discussed above 2d, though in another context).

I then take the two pādas cd as referring to the sun and the soma respectively. The sun is “the lover of girls” because he appears with the Dawns. For the same phrase, in the acc., referring (most probably) to the sun, see I.152.4. Whereas in IX.86.32 our same phrase *pátir jānīnām* is applied to Soma, where the “women/wives” are the milk-drinks with which he is mixed. As for the secondary reference to Agni, of these characterizations, either group of females (or both) might refer to the offering ladles (fem. *juhū-*) that approach the ritual fire with their oblations or the streams (fem. *dhārā-*) of melted butter being offered. See the fem. pl. *nīcīḥ* in 10b.

Despite the complications of this interpretation, it provides a rich reading of the enigmatic verse, which fits well with the two ritually centered verses that end the hymn.

I.66.9: As indicated in the publ. intro., I consider the last two verses of the hymn to reflect the ritual situation. This scenario is supported by the presence of 1st and 2nd pronouns (*vayám* and *vaḥ* respectively), with the 2nd ps. enclitic indicating, as often, the other human participants and observers besides the poet and priests, who are the “we.”

The crux in this verse is *carāthā*. The first problem with it is the long *ā* in the 2nd syllable, the only instance of such a stem in the transmitted RV beside regularly formed *carātha-* (13x). However, the situation is more complex: 4 of the transmitted *carātha-* forms occur in the Parāśara hymns (I.68.1, 70.3, 7, 72.6), but of these, 3 (68.1, 70.3, 7) would be metrically better if read **carāthā-*. I have no explanation for the variation and will not pursue the issue further. More interesting is the grammatical identity of the form and the semantic role it plays in the verse. Old (SBE, Noten) and Ge (/WG) take it as a nom. pl. ‘wanderers’, neuter if flg. the Pp., though Ge suggests that it might reflect masc. *carāthāḥ*. They further interpret it as conjoined with *vayám* (Old, Ge) or identified with it (WG). However, in the Noten (ad loc., fn. 1) Old allows the possibility that the form could be an instr. parallel with *vasatyā* (“mit Gehen und mit Verweilen”), an idea that Re develops, suggesting that the pair are semantically parallel to the contrastive pair *yóga / kṣéma* (roughly “activity and rest”). Re believes that the instrumentals characterize Agni (“(soit) dans (sa) marche, (soit) dans (sa) demeure”). This is possible, though it would be a slightly odd use of the instr. With Re I consider *carāthā* an instr. contrasting with

vasatyā, but think that the pair is applicable to “us”: we approach Agni with homage with both our movable goods, that is, the livestock that provides the butter and milk offerings, and our household establishment that supplies the rest.

The 3rd pl. *nākṣante* (*nākṣanta* in sandhi) does not agree with its 1st pl. subject *vayām*. With Ge I take it as attraction to the immediately preceding simile, *āstaṃ nā gāvah*. It is accented because it begins the pāda.

I.66.10: The fem. pl. *nīcīḥ* has almost too many possible referents -- waters, flames, cows, or butter offerings (configured as cows) – all of which have been proposed by one or more tr. I favor butter offerings. See also VIII.101.13, also containing *nīcī* and showing the same range of possibilities; sim. V.44.4. The cows of c may well be the same offerings metaphorically.

See publ. intro. for the ring compositional final pāda. As Re points out, *svār dṛśīke* is a nominalizing extension of the infinitive phrase *svār dṛśé* “to see the sun,” and we need not try to interpret *svār* as a genitive.

I.67 Agni

I.67.1: ‘Demand’ may push \sqrt{vr} ‘choose’ a bit, but the simile suggests a degree of coercion.

Adverbial *ajuryām* is lit. ‘undecaying, unaging’, but in the developed sense ‘unfailing’ or, in English idiomatic terms, ‘without fail’.

I.67.3: On the idiom *āme* $\sqrt{dhā}$ see disc. ad I.63.1; this expression must also be considered in relation to Parāśara’s *āmam* $\sqrt{dhā}$ in the preceding hymn (I.66.7). Although a tr. like WG “setzt er die Götter in Schrecken” is easier, I do not think we should lose the sense of ‘onslaught’ for *āma-* by redefining it as ‘panic’ or ‘terror’ in this idiom. Here I think the point is that the leaping flames of Agni put even the gods in his way, even though he is, for the moment, sitting undetected. The first pāda of the hymn (*vāneṣu jāyūḥ* “a conquerer amid the wood”) also implicitly contrasts his martial power with his apparently humble station.

I.67.4: The anomalous 3rd pl. *vidānti*, to the thematic aorist *ávidat*, is the only apparent primary indicative form to this stem and should belong to a present. However, I think it can be eliminated: rather than following the Pp. *vidānti īm*, we can instead read *vidānt īm*, an injunctive with secondary ending whose final *-t* was preserved in this ambiguous sandhi situation. No alteration of the text is required. The publ. tr. need not be altered either, though a preterital interpretation is in fact better: “They found him there when they recited mantras...” – since this passage appears to refer to the mythological tale of the gods finding Agni hidden in the waters. Cf. I.72.2 (also a Parāśara product), where the immortals did *not* find him (*nā vindan*) though they sought him; they are also described as *dhiyaṃdhā-*, as here. For this and other such passages (esp. I.65.4 and I.85.11), see my 2019 “Hidden in Plain Sight: Some Older Verb Endings in the Rīg Veda” in Fs. for Kazuhiko Yoshida.

I.67.5: Tr. of the subj. *ajāḥ* vary between ‘unborn’ (Ge, Re) and ‘goat’ (Old SBE, WG), but parallel passages show that it must be the shadowy divinity Aja Ekapad (“One-footed Aja”), whatever the *ajā-* signifies in that conjunction. (Old recognizes as much in his n.) Cf. esp. AV XIII.1.6 *tātra śísriye ’já ékapādó ’ḍṛmhad dyāvāprthivī bálēna*; also RV X.65.13 where *ékapād ajāḥ* is adjacent to *divó dhartā*. In our passage the word *padā-* appears in the next verse and gestures toward the epithet.

The pf. *dādhāra* is ordinarily always presential (Kü 261); Kü cannot decide whether the pf. of *√stambh* is presential or preterital, but at least in this context I think it matches *dadhāra* in value.

I.67.6: The verse is highly alliterative: ab: *priyā padāni, paśvó ní pāhi*; d: *guhā guhām gāḥ*. For the stylistic figure *guhā guhām* see Hoffmann, KZ 76 (1960) 242–48, esp. 246–47 [=Aufs. I.113–19]. Note that *guhā* has a different accentuation from adverbial *gūhā*.

I.67.7–8: These two verses are syntactically dependent on each other, consisting of three relative clauses (7ab, cd, 8ab) and a main clause with coreferential pronoun (8cd). However, this structure is complicated by the fact that, though two of the rel. clauses have singular rel. pronouns (*yāḥ* 71, 7c) and the pronoun in the main cl. is likewise singular (*asmai*), the intermediate rel. cl. (8ab) has pl. *yé*, though all seem to be roughly coreferential. There is no obvious solution for this jarring inconsistency; Ge simply labels it Anakoluthon. However, certain features of the larger context may have encouraged this syntactic anomaly. First, the relative/correlative construction is of the indefinite “whoever ...” type, where number is functionally, though not grammatically, neutralized. That is, it doesn’t matter how many (or few) people the definitional relative clauses identify: if many people perform the functions, they should all get the reward; if only one does, then only he would. Moreover, as Lüders argues (p. 448), vss. 7–8 respond to vss. 3–4. In those earlier verses Agni goes into hiding (3d), but the “superior men” (*nāraḥ*) find him after they produce and recite effective speech (4). In vss. 7–8 we seem to have the same situation, but in the human realm: he/they who has/have recourse to and do(es) service to the truth (7cd, 8ab) and perceive(s) Agni in hiding (7ab) receive(s) acknowledgement from Agni himself (8cd). Since in vss. 3–4 the discoverers of Agni, the gods, are plural, it may be that the plural crept in here, too. And finally this sequence may anticipate the next hymn, where it is emphasized that “all” (in the plural) perform the proper ritual and devotional functions, and in particular the almost identical phrase *ṛtām śāpantaḥ* (68.4c) echoes our *ṛtā śāpantaḥ* (67.8b).

I.67.8: The verb *ví ... cṛntānti* lacks an overt object, and several different ones have been proposed: Ge (in n.) suggests it’s “the stream of truth” from 7d; Re supplies “(l’énigme)”; and WG read *ṛtā* with this verb as well as the participle *śāpantaḥ* (“welche ... die Rtas aufknoten, (sie) pflegend”). Since the other two occurrences of this root (impv. *ví ... cṛta* I.25.21, ppl. *vícṛtta-*) are both construed with *pāśa-* ‘fetter’, that seems the likely object here as well. More speculatively, on the basis of VII.59.8 *druháḥ pāśān* ‘fetters of deceit’, I have supplied that whole phrase here, since ‘deceit’ contrasts nicely with the emphasis on *ṛtā-* ‘truth’.

The pf. *prā vavāca* is one of the very few pf. forms to *√vac* with full reduplication (against *uvāca*, etc.). On the basis of its agreement with Aves. *vauuac-*, Kü (p. 441)

considers this the older type of reduplication, with the newer type spreading from Samprasāraṇa roots.

I.67.9: The second half of the verse is metrically disturbed. As HvN note in their metrical commentary, it actually reads better as a Triṣṭubh, as is occasionally the case with Dvipadā Virāj.

The syntax of the verse is also problematic. The two *utá*-s of c are difficult to construe, and partly for this reason Gr, Old (SBE [disavowed in Noten]), Re, and Klein (DGRV 358) emend *prajā utá* to *prajāsu* (presumably then **prajāsūtá* in the Saṃhitā text, though it's not stated). If the original text had read this, it is hard to see why it would have become corrupted, given the two other loc. pl. in this verse. I consider the problematic *utá*-s and the problematic *prajāḥ* connected and suggest that the *utá*-s are connecting different entities: the first connects the nominatives *yáḥ ... utá prajāḥ* “who [=Agni] and his offspring” (not grammatical in English, of course, but possibly so in Skt; consider the common “X and which Y” construction), the second the locatives *vīrútsu ... utá prasūṣu antáḥ* “in the sprouts and within the fruitful (plants).” Both Agni and his offspring grow in both media; note that because of its sandhi position *ródhan* can be both sg. (*ródhat*) and pl. and thus construed with both suggested subjects.

Note also that the verse begins *víREL*, just like vs. 8, but with entirely different referents for the rel. pronoun. This might be another reason why 8ab shifts to the plural, to establish the difference between those who serve Agni and Agni himself.

I.67.10: The exact sense of *cittí-* and the syntactic disposition of *apām* are the two issues in this verse. Although *cittí-* ordinarily means ‘perception, insight’ and most tr. so take it, I prefer to make it the abstract to a different, but well-represented, sense of *√cít*, namely ‘appears’, hence ‘apparition’. I also, with Old SBE, take *apām* with *dáme* rather than *cittíḥ*. I find tr. like “la pensée active des eaux” (Re), “der Verstand der Wasser” (WG) hard to interpret, indeed even lacking sense. Since much of the hymn has dealt with the theme of Agni’s hiding – and since his hiding place was the waters, though this was not overtly stated earlier – I think that this verse describes him glowing in the waters (and therefore detectible) and also makes reference to him as *Apām Napāt*.

The *sádma* of c must be read with both simile and frame.

I.68–70 Agni

I consider these three hymns to be thematically and verbally linked, treating the Vaiśvānara fire and encoding this theme by deploying the two words underlying this vṛddhi compound, *vísva-* and *nṛí-*. The first, *vísva-*, dominates I.68, the second, *nṛí-* I.69, and they are juxtaposed in the climactic verses of I.70.9–10. See the introductions to the three hymns in the publ. tr., and for a detailed discussion, Jamison, Fs. J. S. Klein (“Inter-hymnic Rhetorical Structure in Ṛgveda I.68-70: Parāśara Śāktya’s Vaiśvānara Cycle,” 2016).

I.68 Agni

Note that Hoffmann tr. the entire hymn (1967: 141–42) because it contains 10 injunctives. I agree with Hoffmann’s tr. of these forms as presents, although I do not think this requires a Zeitlos-type interpretation.

I.68.1: For this interpr. of *śrīñān*, which lacks overt object, see Narten 1987: 281 (=KlSch p. 351).

Rather than taking *aktūn* as a second object with *vy ūrṇot*, I make it an acc. of extent of time, as it often is elsewhere (e.g., V.54.4).

On the metrical shape of *carátham* see I.66.9.

I.68.2: The second half-verse does not work as Dvipadā Virāj, since it would have pādas of 4 and 6 syllables. It has long been suggested (for reff. see Old SBE and HvN comm., both ad loc.) that putting *devó devānām* in the opposite order would fix this problem. However, Old argues in the Proleg. (97) that this is unnecessary, that Dvipadā Virāj has an affinity to Triṣṭubh, and that this line, though 10 syllables, configures itself nearly as a Triṣṭubh. See I.67.9 above.

The verb *pāri ... bhuvat* lacks overt object, and various suggestions have been made. I assume that its object is the same as the object of 1cd “the still and the moving.” Hoffmann (sim. WG) tr. the verb simply as “überraagt” (stands out), but this interpr. ignores the emphasis on “encompassing” in this set of hymn (see disc. ad I.65.3).

The unaccented gen. pl. *eṣām* presents a problem similar to that posed by *āsām* in vs. 7, though I account for them in different ways. Given its lack of accent, *eṣām* should be a pronominal, not adjectival, demonstrative, but it appears to be construed with *vísveṣām ... devānām* “of all these gods.” Because *devānām* is fairly distant from both *eṣām* and *vísveṣām* and appears to be bound to immediately preceding *deváh*, I would now take *eṣām ... vísveṣām* together, separate from *devānām* and emend the tr. to “When alone of all these, the god among the gods, encompasses ...” Though it may be difficult to maintain this in the face of vs. 7, as I argue in the forthcoming article cited above, the poet is doling out the genitive plurals here and does not want to specify that “these all” are the gods until the last minute, since masc. pl. “all” in this hymn otherwise refers to the unified worshippers of the Vaiśvānara fire.

I.68.4: The publ. tr. has “All have a share in divinity and its name.” I would now replace this with “... your divinity and your name.” As I argue in the art. cit., the “all” literally share the name Vaiśvānara.

The contrast between the joint enterprise of those unified by the Vaiśvānara fire, expressed by *bhājanta vísve*, and the separate actions of each of the members, expressed by *évaiḥ*, is the theme of this verse as well as vs. 8.

I.68.5: The logical and syntactic connections between the nominal expressions of ab and the clause in cd are not clear. Ge simply pronounces ab elliptical and suggests supplying *cakruḥ* from cd, while Re supplies “(telles sont/est)” with the two phrases. My assumption is that the promptings and vision of truth are the indirect cause of the actions in cd by defining the proper tasks that all should perform throughout their lifetimes.

I.68.7: There is a syntactic problem in cd that is ignored by all tr. as far as I can see, though Old treats it briefly (ZDMG 61 [1907]: 829 = KlSch p. 260; see below): the fem. gen. pl. demonstr. *āsām* is unaccented. Oblique forms of the *ayám* demonstrative are unaccented when used pronominally, but accented when used adjectivally. The two

accented forms of *āsām* appear with NPs, *pūrvāsām ... svāsīñām* “previous sisters” I.124.9 and *viśām .. ābhayāñām* “fearless clans” X.92.14, and unaccented *āsām* (25x) is always pronominal (for VII.34.10 and X.75.4 see disc. ad loc.) Yet all interpr. of our passage construe *āsām* with *rayīñām* (e.g., Ge [WG] “der Herr dieser Reichtümer,” Re “le maître de ces richesses”). This produces another anomaly: *rayī-* is overwhelmingly masculine and should not be modified by a feminine demonstrative. (On supposed fem. *rayī-* in I.66.1 belonging to this group of hymns, see disc. ad loc. It need not be, and in my opinion is not, feminine there either.) Although it introduces some complexity, I therefore think that *āsām* “of these” must stand for a different feminine noun also construed with *pāti-*. The problem then is what noun? It should already be present in the discourse, since unaccented forms of *ayām* are anaphoric, but there are no obvious candidates – indeed, no candidates at all if we limit ourselves to overt feminine plurals in the previous verses of this hymn. However, an underlying feminine referent can be generated from the context. I see two possibilities. 1) From *āpatya-* ‘progeny’ in the phrase *mānor āpatye* we can generate the synonym, fem. *prajā-* ‘offspring’ – note their juxtaposition in I.179.6 *prajāñ āpatyam*. The gen. pl. of *prajā-* does not occur in Vedic (indeed no gen. pl. to a root noun in *-ā* does; see Macdonell VG), presumably because it should be *prajāñ* and identical to the acc. sg. (though with possible distracted 2nd syllable). By this interpretation Agni would essentially be *prajā-pati*. 2) More likely, in my view: the underlying noun is *viś-* ‘clan’. Although no direct reference to clans is made in the hymn, as I point out in the publ. intro. and argue in more detail elsewhere (Jamison Klein Fs., 2016; see above), the repeated *viśve* ‘all’ triggers a pun with *viś-* in this set of hymns (see esp. I.70.4) and so would be present in the minds of the poet and his audience. Agni is regularly called *viśām pāti-* and *viśpāti-*, sometimes at the same time – e.g., III.13.5 *hótārañ viśpātiñ viśām*, which also contains *hótar-*, as also here. The mention of Manu might also have triggered the association; cf., e.g., V.4.3 *viśām kavīm viśpátim mānuṣīñām* “the poet of the clans, the clanlord of the (clans) of the sons of Manu.” If this solution seems too fussy, it is possible to follow Old’s explanation of the lack of accentuation (see ref. above): that *āsām* does not modify *rayīñām* but anticipates it (“he is the master of them, of the riches”), while being anaphoric to sg. *rayīm* in 6d. This does not eliminate the gender issue, however, and also seems over-tricky. The *eṣām ... viśveṣām ... devāñām* of vs. 2 makes some problems for my interpretation here, but see discussion there.

I.68.8: This verse has given rise to a number of different interpretations, which cannot be discussed in detail here. I interpret it in the framework of Proferes’s treatment of the joint clan-fire (see publ. intro.; also Fs. Klein), which must be kindled and tended by members of the separate clans working together. This cooperative and reciprocal enterprise is expressed by the phrase *mithás tanūṣu* “mutually among themselves” (at least in my interpretation; it has received varying tr., but with most rendering *tanūṣu* as ‘bodies’), by *sām jānata* “they agree, act in unison” to the resonant lexeme *sām √jñā* (see publ. intro. to I.68 and esp. I.68.9), and by the middle voice of *ichanta* “they seek (from each other).” The *rētaḥ* they seek is, I think, the means of kindling the fire, though I admit that this is not a usual sense of that word. Again, as in 4cd, there is a contrast between joint action (*sām jānata*) and each individual’s contribution to it (*svaír dākṣaiḥ*).

I.68.9: This verse returns us to vs. 3; the b-pādas of both are identical: *krátuṃ juṣanta* “They take pleasure in your/his resolve.” In vs. 3 the subject is “all”; here we can assume that the unidentified subject here is “all” as well, and, since vs. 8 follows easily on vs. 7, we can superimpose “all” as subject there too. In vs. 3 the “all” found this pleasure when Agni was born in cd; the parallelism between vs. 3 and vss. 8–9 supports my view that vs. 8 also concerns the kindling of the fire, and the birth metaphor of 3cd (*jāniṣṭhāḥ* ‘you are born’) further supports my suggestion that the *rētaḥ* ‘seed’ of 8a refers to the means of begetting the fire.

I.68.10: As Hoffmann points out, *vī ... aurṇot* is the only augmented form in the hymn and is esp. striking because it forms a ring with *vy ūrṇot* in 1d. The use of a clear past tense form seems to me to mark the conclusion of the ritual kindling of Agni and the attendant distribution of largesse. In other words, like so many final verses it summarizes the ritual activity whose general description precedes it. The final half-verse, in which Agni decorates the vault with stars, may seem out of place, but it also forms a ring, thematic not lexical, with vs. 1, where Agni approaches heaven and performs his tasks through the nights: the vault (*nākam*) reprises heaven in 1ab, and the stars are appropriate to the nights.

Strictly speaking, *rāyaḥ* is acc. pl., not gen. sg. (*rāyāḥ*), and a more literal translation would follow Ge’s “Er schloss die Reichtümer, die Töre (dazu), auf,” or – to match my tr. of 1cd and accommodate English idiom – “he disclosed riches, opened wide (its) doors.” However, Old strenuously argues that it should be interpreted as gen., and certainly the idiom *rāyó dūrah* (with the correct accent) is found nearby in Parāśara’s oeuvre (I.72.8)

What exactly is meant by Agni’s decorating heaven with stars is unclear. However, in a similar passage (IV.7.3) Proferes (p. 27) argues that the stars in the sky represent the domestic fires distributed though many households.

I.69 Agni

As discussed in the publ. intro. and in the art. cit., this hymn is twinned with I.68.

I.69.1: The etymological figure *śukrāḥ śusūkvān* is not as redundant as it seems, because both forms are found in similes with the sun — *svār ṇā śukrām* (II.2.7, IV.45.2) with the adjective and *svār ṇā śusūcīta* (II.2.10, X.43.9) with the perfect — both are found together in X.43.9 *svār ṇā śukrām śusūcīta*. In other words, since the similes “like the lover of Dawn” and “like the light of heaven” have the sun as their underlying referent, at least one of the *√śuc* forms is, as it were, bound to it formulaically.

I.69.2: This verse is parallel to its twin in I.68, with the same verb: *#pāri ... babhūtha* [*bhūvat* 68.2]... ; the emphasis on Agni’s status among the gods (*devó devānām* 68.2, *devānām pitā* 69.2); and an instr. in *-tvā* (*mahitvā* 68.2, *krātvā* 69.2), though to non-parallel stems (*mahitvā-*, *krātu-*). It is therefore surprising that tr. do not note the parallelism of the two verses or necessarily treat them in the same way. In particular, both Ge and Old (SBE) take the *pāri... bhūvat* in 68.2 as ‘encompass’, but *pāri ... babhūtha* in 69.2 as ‘be superior, excel’. (Re tr. both as ‘encompass’ and WG both as ‘excel’.) Given the focus on encompassing/surrounding in this set of hymns (see disc. ad I.65.3 above), I

think both lexemes should be tr. the same way, and each requires an object to be supplied. In 68.2 I supply “the still and the moving” from the previous verse; here I would use the conjoined world-halves, also from the previous verse.

The poet handles the parallelism between the two verses in almost a syncopated fashion. As just noted, each verse contains the idiom *pāri √ bhū*; in 69.2 this is contained within the first hemistich, whereas the finite form *bhúvat* opens the second hemistich in 68.2. But 69.2 has the almost identical form *bhúvaḥ* in that same position, but not as part of the idiom (see also *bhúvat* I.67.2, 65.3). As Hoffmann argues (e.g., 1967: 236–37), *bhuvah*, *bhuvat* are formally ambiguous, both injunctive to the thematic aorist and subjunctive to the root aorist of *√ bhū*. In the publ. tr. I render *bhúvaḥ* in I.69.2 as a subjunctive, but now I am inclined to take it as a presential injunctive “you become...” parallel to my interpretation of *bhúvat* in 68.2.

I.69.3: Agni is here identified with “the sweetness of foods” (*svādmā pitūnām*). The root-accented stem *svādman-*, which should be, and elsewhere is, neut. (nom.-acc. *svādma* in III. 30.14, 31.11; the other form is an endingless loc. in X.29.6) here shows a long final vowel in the nom. sg. The Pp. reads the form as *svādma*, implying that the Saṃhitā form is metrically lengthened (a heavy 2nd syllable being expected in Dvipadā Virāj). But, as Old points out, it could also be a root-accented masc., beside the expected suffix-accented *svādmán-*, with diagnostic masc. forms (*-ānam*, *-ānas*). The suffix-accented masc. form does not have the expected poss. adj. sense we associate with such internal deriv. (Paradebeispiel: *bráhmaṇ-* → *brahmán-*), but seems to be identical in sense to the root-accented form. For the form here I suggest a compromise: I would not posit a root-accented masc. *svādman-* as an item in the Vedic lexicon, but I think it’s possible that our *svādmā* shows a nonce lengthening not for metrical purposes but better to match the entity with which it’s identified, namely the animate masc. Agni: “Agni is ... the sweetness ...”

I.69.4: I supply *mitráḥ* ‘ally’ on the basis of a number of similar formulaic phrases: *jāne mitró ná* X.22.1; *mitráṃ ná jāne* VIII.23.8 (of Agni); *mitrá iva ... jāne* II.4.1 (of Agni). This would be via the collocation *mitrá séva*; cf. nearby I.58.6 *mitráṃ ná sévam divyāya jánmane* “favorable like an ally to the divine race,” also of Agni, with a different word for ‘people, race’ (cf. also *sévam mitráya* X.113.5, a diff. permutation). Note also, two hymns previously, I.67.1b *márteṣu mitráḥ*, where *márteṣu* is a reasonable equivalent to *jāne*.

āhūrya- is a hapax, universally taken to belong to *√ hvṛ* ‘go crookedly, go astray’; although this derivation is not impossible, it leads to some forced tr. (e.g., Ge Durchgänger [‘bolter’, of horses]). I take it rather as the gerundive to the set root *√ hṛ* ‘be angry’.

I.69.5: The phrase *víso ví tārīt* is variously interpreted. The first issue it raises is whether to take the acc. *vísah* as direct object (so Ge, Re, WG) or to construe it with the preverb *ví* as acc. of extent of space (Old SBE). Both usages are attested for *ví √ tṛ*, but it is worth noting that the latter usage is found in Parāśara’s oeuvre using the same form *ví tārīt* (I.73.1), and I adopt it here. In the simile, “traverse the clans” may refer to the year-long journey of the horse ultimately sacrificed in the Aśvamedha. In the frame it reflects the

idea of the Vaiśvānara fire spread through all the clans, not limited to a single household or small family group.

I.69.6: The intrusion of the 1st sg. speaker through *áhve* “I have summoned” is remarkable. Who is he? Although ordinarily in the RV the default referent of a 1st ps., esp. a 1st sg., is the poet, I wonder in this instance if it is not the leader of the united forces, the Kriegskönig, calling the clans and their leaders and best warriors to unite them for action.

My tr. differs syntactically in several ways from most tr., though it agrees with Re in both. First, I do not construe instr. *nṛbhiḥ* with *sānīlāḥ* (“of the same nest with the men”) but as an independent instr. of accompaniment. This would be the only ex. of *sānīla-* with an instr. By specifying “the clans along with their men,” the poet both refers to the whole social group and singles out its most conspicuous and important members, perhaps the *viśpāti*-s.

Second, I take *devatvā* as an instr. sg., not acc. pl. neut. with *viśvāni*. There are several reasons for this. The first verse of the next hymn (I.70.1) contains the same phrase *viśvāny aśyāḥ*, without further specification, and if at all possible the two phrases should be rendered in the same way. Moreover, as Re points out, no direct cases of the plural are attested in this type of derivative. It’s also the case that Agni is characterized by instrumentals in *-tvā* in this group of hymns (*mahitvā* I.67.9, 68.2; *krātvā* I.69.2), and his divinity is emphasized (I.68.2, 4, 69.2). I am, however, given pause by several passages containing *devatvām* (sg.) $\sqrt{(n)as}$: I.151.9 *nā devatvām paṇāyo nānaśuḥ ...* and III.60.2 *tēna devatvām ṛbhavaḥ sām ānaśa*.

I.69.8: The first hemistich has 11 syllables and is best interpreted as a Triṣṭubh, with HvN.

The verse is otherwise problematic, and my interpretation differs sharply from that of others. The crucial point of difference is *āhan*, which is universally taken as the 2nd sg. impf. of \sqrt{han} ‘smite’. This seems to me contextually very unlikely: \sqrt{han} is a very rare verb with Agni as subject, and when it *is* found, it is almost always of Agni’s special form as *rakṣo-hán-* (see IV.3.14, V.2.10, VI.16.29, and with a different object V.4.5). The context does not favor a verb of violence, and I find it hard to believe that \sqrt{han} would be attributed to Agni out of the blue, esp. without specifying an object and esp. announcing this action as his particular “wondrous power” (*dāmsaḥ*). Instead I take it as the loc. sg. of *āhar* ‘day’, in the formula *samāné āhan* “on the same day” (cf. I.34.3, 186.4), with the *samāné* suggested by (or suppressed by) adjacent *samānāḥ*. (Something like this possibility is considered by Old in his n. in SBE and attributed to Aufrecht in Noten.)

The major argument against this interpr, as far as I can see, is the double *yád*, which is unusual under any interpretation but passes better with two verbs (*yád āhan ... yád ... vivéḥ*) than one. I do not have a good solution for this doubling. Either it is rhetorical or simply pleonastic, or it marks off *nṛbhiḥ ... yuktāḥ* as a quasi circumstantial clause: “This is your wondrous power, that (*yád* 1) on the (same) day, when (*yád* 2) yoked with the same men, you ...” But I know of no parallels for such a usage. Another argument for seeing \sqrt{han} here, made by Old (Noten), comes from X.147.1, which contains both *āhan* and *vivér apāḥ* (see immed. below), but I do not think that very late hymn, dedicated to Indra, should overly influence our interpretation of this passage.

With Old (SBE and Noten) I read *vivér ápāmsi*, against Pp. *vivé rápāmsi*; Old's parallels are very persuasive, and this analysis does not require a change in the Samhitā text. Ge's tr. appears to follow the Pp. reading, however, as does Re's, though in his n. he accepts Old's reading.

I.69.9: The first pāda is identical to 1b and thus forms a ring.

Gr, Ge, Re (apparently), and Lub take *usráh* as gen. to *uśár-*, but since there exists a robust stem *usrá-* 'ruddy', I see no reason not to take it as nom. sg. to that stem, esp. since *vibhāvan-* doesn't otherwise take a gen.: the three passages Ge adduces are not compelling.

As discussed in the publ. intro., I do not follow the standard interpr. of *sámjñāta-rūpa-*, i.e., "having (his) well-known form," since the idiom *sám √jñā* has a quite specific meaning 'come to agreement'. The idiom is distinctive enough, and the compound is heavy enough, that that idiom is surely meant, esp. because it appears in finite form in I.68.8. Instead of being an anodyne description of the fire, this is a meaningful characterization of the shared clan-fire as the symbol of, and the product of, the mutual and unified ritual activity of the clans. Unfortunately, to render this comprehensibly in English requires a heavy and awkward locution.

The referent of *asmai* is not entirely apparent. The standard solution, going back to Sāy, is that it is the sacrificer. This is basically correct. However, the lack of accent on the pronoun should require that the referent is already present in the discourse. I suggest that it is to be found in the 1st ps. subject of *áhve* "I have summoned" in vs. 6, a subject that may be one of the ritual participants or, as suggested above, the Kriegskönig. Switch between persons is of course extremely common in the RV.

I.69.10: The phrase *dúro vy ṛṇvan* echoes *ví ... aurṇod dúrah*, which opens the last verse of the preceding hymn (I.68.10) and which itself forms a ring with *vy ūṛṇot* of I.68.1.

The *tmánā* 'by himself/themselves' must refer to the priests; since Agni is regularly the subject of *√vah*, as the conveyor of oblations to the gods and of the gods to the sacrifice, it is here emphasized that others are conveying *him*.

The last hemistich is identical with the last one of I.66.10, which itself forms a ring with I.66.1. This set of hymns is very tightly knit together! As argued in the art. cit., this verse marks the completion of the fire's transformation into the Vaiśvānara fire. Since that fire is identified with the sun, "all cry out on seeing the sun" is an expression of the unified group's first sight of and recognition of the fire that symbolizes their unity – which has been presented to them by the priests who carry it and throw open the doors for it to be seen in 10ab.

I.70 Agni

Again, for detailed discussion of the thematics of this hymn and its relation to the two that precede it, see the publ. tr. and the art. cited above.

I.70.1: It is perhaps appropriate that this last hymn in the Vaiśvānara series begins with the martial verb *vanema* "may we vanquish," since the function of the Vaiśvānara fire is to unite the clans as a force to oppose its enemies.

The Pp. reads *manīṣā*; most tr. read *manīṣā(h)* (see Old's disc [Noten]). However, I take it as both an instr. sg. -*ā* and acc. pl. -*āḥ*, with the poet, as so often, taking advantage of potential ambiguity. This double reading is supported by I.73.9 (also Parāśara's work), which contains the athem. opt. *vanuyāmā* corresponding to them. *vanéma* here and three pairs of instr. + acc.: *ārvadbhiḥ ... ārvato nṛbhir nṛn, vīraír vīrān vanuyāmā* "Might we vanquish steeds with steeds, men with men, and heroes with heroes."

I.70.3: *sthātām* and *carāthām* are pseudo-genitive plurals to this merism much favored by Parāśara. There's no orthodox way to generate them morphologically; Re's suggestion that *sthātām* is a compromise between **sthātrām* and something that looks more like a gen. pl. and that *carāthām* simply copied it seems a reasonable proposal, however sketchy the details.

I.70.4: A verse subject to numerous clashing interpretations. To deal with *ādrau* first – Ge cites several passages in which Agni is born from or is the son of a/the stone. I think it also likely that it is meant to contrast with *duroṇé*; the fire in the house is actual and visible, while the fire in the rock is merely latent and not easily acquired.

Most tr. take the two hemistichs as independent units, which then necessitates supplying something (what depends on the tr.) to make ab an actual clause. I prefer to take the whole verse as a single clause, with *svādhīḥ* as the predicate, whose complement is *asmai* ("... is very attentive to him [=Agni]").

This leaves the enigmatic expression *viśām ná viśvo amṛtaḥ*. Most tr. want this to refer to Agni; hence their interpretational separation of the two half-verses. I think rather that it refers to those who serve Agni, both gods and humans. The two groups are expressed in different ways and the connection between them is actualized by a pun on *viś-* 'clan' and *viśva-* 'all'; this pun in turn makes the secret connection with Vaiśvānara, the clan fire (see Proferes p. 48). In the phrase, *viśvaḥ* can be read both with *amṛtaḥ* ("every immortal") and with the gen. pl. *viśām* "every (one) of the clans," thus providing an indissoluble link between the mortal and divine realms. And the *ná* makes clear that gods are exactly like men in their devotion to Agni. I am reasonably convinced that this is the correct interpretation, but it does trouble me that it is apparently identical to Max Müller's (as reported by Old, SBE n.), "To him also who dwells in the rock and in the house, every immortal like every one among men is well disposed."

I.70.5: The interpretation of *kṣapāvānt-* as 'earth-protector', containing a zero-grade form of the archaic noun *kṣām-* 'earth', goes back at least to the Petersburg dictionary and is the overwhelming consensus in Western scholarship (see EWA, s.v. *kṣām-*). However, a connection with the root noun *kṣāp-* 'night' has a more ancient pedigree: the Pp. divides the word *kṣapā* 'vān, and Sāy comments *kṣapeti rātrināma / rātrimān / āgneyī vai rātriḥ*. At the very least we have a potential pun, and this pun is actually realized in this hymn, since vs. 7b, two verses later, contains the relatively rare root noun *kṣāp-*. Though vs. 5 has no mention of night and 'earth-protector' works fine in that context, the surfacing of *kṣāp-* 'night' so soon after might make the audience reconsider and produce a secondary semantic association for *kṣapāvān*. With a suggestion of Scarlatta (1999: 303), we could then analyze *kṣapāvānt-* as based on a syntagm with original predicative instrumental

(*kṣapā* “[he is] with night”), which was then provided with a *-vant-* possessive suffix. Scarlatta (1999: 303) also suggests other ways to incorporate *kṣáp-* ‘night’, e.g., by haplology from **kṣápā + pā-* ‘protecting by night’ (his reconstructed initial accent reflects a posited adverbial accent shift from inst. *kṣapā*, see p. 303 and n. 452). The exact details matter less than the fact that the Vedic audience could likely see a pun in this word, between *kṣa-* as a combining form of *kṣám-* ‘earth’ and *kṣap-* ‘night’. The publ. tr. “protector of riches on earth” reflects the standard Western interpr., though with an adjustment to incorporate *rayīṇām*; I do believe that the pun on ‘night’ was available to the audience, however. (See also X.29.1 and Jamison 2015 [Gerow Fs., IJHS 19].) It should also be noted, however, that the analysis ‘earth-protector’ for *kṣapāvān* is reinforced in the next vs. (6ab) by an apparent paraphrase *etā ... bhūmā ní pāhi* “protect these worlds.” The poet seems to be even-handedly offering alternative views of *kṣapāvān*.

Most tr. take ab as a nominal clause with suppressed dative (*asmai* or the like), the antecedent of the *yāh* of the rel. cl. (“Agni is the protector ... [for him] who...”). I follow the interpr. of Velankar (1993: 41), who takes *dāśat* as the verb of both main and relative clauses, accented in the former because it is initial in its pāda (and in a *hī* clause), in the latter because it’s in a subordinate clause. This grammatical and semantic reciprocity would match that of the (*asmai ...*) *asmai*, where the first, suppressed dative refers to the worshiper and the second overt one to Agni. The theme of reciprocity is prominent in this hymn group.

I.70.6: *mārtān* is almost surely an irregular gen. pl., rather than the acc. pl. it appears to be; see *devāñ jānma* in the next hymn (I.71.3), with the apparent irreg. gen. pl. *devāñ*, rather than *devānām* as here. (Though “knowing the races of the gods and (knowing) the mortals” is possible, the tight formulaic connection between gods and men/mortals throughout the RV strongly favors the gen. pl.) Whether it is an archaism or is simply following the morphologically sketchy lead of *sthātām ... carāthām* in vs. 3 cannot be determined.

I.70.7: The phrase *pūrvīḥ kṣapó vírūpā(h)*, lit. “many nights of differing form,” is convincingly taken by most commentators as an elliptical pl. for “... nights (and dawns)...,” since *vīrūpe* regularly modifies the dual dvandva *náktoṣāśā* ‘night and dawn’, including in Parāśara’s I.73.7. (See Old’s lucid presentation in SBE n.) Most tr. take it as the nom. pl. subject of *vārdhān*, but, with Ge, I take it as an acc. pl. expressing extent of time, supplying a pronominal subj. ‘they’, picking up “the races of gods and men” in the previous vs. Either interpr. is possible, and there is little to tip the balance one way or the other. Old argues that under the nominative interpr., which he favors, *kṣapāḥ* should probably be accented **kṣápāḥ* (there are no other nom. pl. forms), and the need to account for the wrong accent (if such it is) and the fact that almost all occurrences of *kṣapāḥ* express extent of time (save for VIII.41.3, where it’s a direct obj.) might favor the acc. interpr.

With essentially all Western commentators starting with Benfey, I read *carātham* for the Pp. *ca rátham*, producing yet again Parāśara’s beloved, but morphologically troubled, merism “the still and the moving.” With most tr. I take it as neut. sg. and a

second subject of *várdhān* (adjusted for number), though Ge interprets it as a gen. dependent on the “Keim” he supplies.

The ppl. *prāvīta*- always means ‘impregnated’ (of females) or, as here, ‘conceived’ (see Scar p. 501); WG’s “den vom Rta gesuchten” seemingly rests on the root etymology to $\sqrt{vī}$ ‘pursue’, without taking into account the idiom.

I.70.8–9: See Proferes (pp. 47–49), esp. for the identification of the Vaiśvānara fire in particular with the sun, and the publ. intro. and the art. cit, esp. for the encoding of the Vaiśvānara fire by the successive grammatical subjects *vísve* (9cd) and *nāraḥ* (10ab).

I.70.9: Note the vocabulary associated with human kingship: *prāśasti*- ‘panegyric, laud’ and *balí*- ‘tribute’. Since kings receive *prāśastis* rather than bestowing them and since the verb *dhiṣe* is medial (whatever else it is morphologically), the tr. of Old SBE and Ge whereby Agni bestows the *prāśasti* (e.g., Ge “du legst Wert auf die Kühe, auf die Hölzer”) seem incorrect to me, esp. with the semantic bleaching of *prāśasti* to ‘worth, value’ (Old ‘excellence’). Although the phrase is distinctly odd, I think the point of “you receive/acquire a laud among cows and firewood” is that both the butter oblations represented by the cows and the firewood make noise when in contact with fire, and this noise can be interpreted as an audible expression of praise. For another instance of *prá* \sqrt{sams} in Parāśara’s oeuvre, see I.73.2.

I.70.9–10: See Proferes (pp. 48–49) on these contrastive verses. Note the complementary *bhāranta* / *bharanta* beginning 9c and ending 10d respectively. Their relationship and their semantic contrast is emphasized by the *vī(...)*s: *bhāranta vī(śve)...* *vī ... bharanta*.

I.70.10: Neither of these hemistichs produces two proper Dvipadā Virāj pādas. The first divides into 4 / 6 and presents as a Triṣṭubh lacking a syllable; the second has 11 syllables and is simply a Triṣṭubh, though with an irregular break.

I.70.11: What referent to supply with the adjectives *sādhúḥ* and *gr̥dhnúḥ* isn’t entirely clear. I follow Ge with ‘horse’, because *sādhú-* several times modifies horses (see Ge’s cited parallels), though Re’s ‘warrior’ is equally plausible contextually.

As disc. in the art. cit., I do not believe, with Old (SBE, Noten) and others, that this verse is a later addition. Rather it is a summary verse of the whole three-hymn Vaiśvānara sequence, or even of all of Parāśara’s Dvipadā Virāj hymns to Agni, and describes the Vaiśvānara as the ideal warrior and leader for the united clans embarking on a joint enterprise.

I.71 Agni

I.71.1: The meter of this first verse almost serves as a transition from Parāśara’s Dvipadā Virāj hymns that precede it to his Triṣṭubh ones beginning here (–I.73), as all four pādas (as well as 2a) have openings of 5 (as if in Dvipadā Virāj) and the first two are syntactic units. The hymn then settles down into a pattern of mostly 4-syllable openings.

The underlying fem. subject of this verse is universally taken to be the fingers of the priest producing fire by friction from the kindling sticks. The qualifier *sānīlāḥ* can be

read with both the simile and the frame: the fingers belong to the same hand as the co-wives do to the same household. So Ge, etc. The sexual innuendo fits the friction context well, in addition to setting the stage for the incest theme to come.

The object phrase *śyāvīm āruṣīm* “the dusky and the ruddy [fem.]” is generally taken to refer to night and dawn (although Old [SBE and Noten] wishes to emend the text to fem. nom. pls. modifying the sisters, a generally bad idea). The identification with night and dawn is certainly supported by III.55.11, adduced by Ge, etc., with the same vocabulary. However, it would essentially duplicate the simile of d (“they delighted in night and dawn, like cows in dawn”), a clumsiness that seems uncharacteristic of Parāśara, and one also wonders why the fingers would care about night and dawn. I think, instead, that this is another of Parāśara’s tricks, using color terms associated with the two time periods to pick out another referent entirely, namely the *arāṇi-* (fem.) ‘kindling sticks’, which the fingers *should* care about, since they are manipulating them. The color differentiation is a little odd, but I don’t think it’s entirely out of the question. In X.184.3 the kindling sticks are called ‘golden’ (*hiranyayī*), and one can imagine that as the fire begins to catch hold, the upper stick might glow red, while the lower one would be wreathed in dark smoke.

I.71.3: A difficult verse with a discouragingly large number of competing interpretations. In outline, though not in detail, I follow Ge’s interpretation: pāda a concerns the production of poetry and the poetic vision by our side, in contrast to the poetic visions of the stranger, our rival, in b. After the stranger’s attempts are gotten rid of, the topic returns in cd to our poetic products, which have success. (WG basically follow Ge, while Old [SBE] and Re take b as coreferential with cd.)

The first hemistich, esp. its first pāda, is highly alliterative and rhyming: *dādhan ṛtām dhanāyann asya dhītīm, ād id aryó didhiṣvò víbhrtāḥ*. The two parallel 3rd pl. verbs *dādhan* and *dhanāyan* technically do not match in mood, since *dādhan* should be a subjunctive (the 3rd pl. injunctive to this redupl. pres. should be either **dadhat* or *dadhur*), and the subjunctive of the latter verb should be *dhanāyān*; see Hoffmann 1967: 271 n. 13, who produces a tr. with subjunctive contrasting with preterite. However, in this context I think *dādhan* was created as a nonce injunctive to match the two *an* sequences in *dhanāyan*. The subjects of these verbs are simultaneously the Aṅgirasas and the current poet-ritualists; the injunctive conveniently elides the difference between past and present action.

The beginning of b, *ād id*, generally has temporal value (“just after that”) and is so tr. in the publ. tr. But Parāśara uses the expression in causal value in I.67.8 and I.68.3, and a causal value is possible in the next verse (71.4); such an interpretation works better here, and I would therefore change the tr. to “because of that ...” The launching of their own poetic vision by the Aṅgirasas / our side scatters the visions of the opponents. The sentiment, but not most of the vocabulary, echoes that in I.70.1, where the *arī-* is also the opponent.

The desid. adj. *didhiṣú-* to *√dhā* is based on the middle value of that root (‘acquire’); so Heenen p. 165, though I do not subscribe to the additional semantic baggage Heenen attaches to the stem. Although this desid. *u*-adj. comes to be specialized in the sense ‘wooer’ (see, e.g., VI.55.5, X.18.8, and comm. ad X.26.6), it can have the

simple morphologically additive sense ‘desirous to acquire’, hence ‘greedy, voracious’. With most tr. I assume a pl. of *dhītī-* as the referent.

Just as the injunctives of pāda a can have either presential or preterital value, the lack of verb in b allows the temporal value to be set by the preceding clause, hence applicable both to the current ritual situation and its mythological model. The publ. tr. might be changed to “are/were dispersed.” There is no agreement on what *vībhṛta-* means here, but *vī*√*bhr* generally means ‘disperse, pull apart, carry away’, and the form also needs to be considered in conjunction with *vībhṛtaḥ* in the next vs.

The “unthirsting” *dhītī-* belonging to us/the Aṅgirases are implicitly contrasted with the voracious ones of the *arī-*, as Ge, etc., point out.

With Gr, Old, Re, I take *apāsah* as a nom. pl. fem.; Ge (/WG) rather as a gen. sg. masc. referring to the singer/priest. This is certainly possible and would provide a neat contrast to the gen. sg. *aryāḥ* of b. I would prefer, however, to keep the possible reference to the Aṅgirases alive.

I would prefer not to take *devān* in d as a truncated (or archaic) gen. pl. construed with *jánma* (or as a second acc. with *vardháyantīḥ* “strengthening the gods, their race”); therefore, despite the pāda boundary, in the publ. tr. I take it with *áchā*, which frequently governs *devān* (so, apparently, also Re); cf. esp. I.132.5 (=139.1) *devāṁ áchā ná dhītáyah*, which is our underlying phrase. However, since the apparent gen. pl. *devān* in this phrase *devān jánman-* in VI.11.3 and X.64.14 (see also VI.51.2) is harder to explain away, I suggest the alternative interpr. “... go to the race of the gods, strengthening (it) ...” The presence of *devānām jánma* in the adjacent hymn (I.70.6) supports that view. For further disc. and reff. to sec. lit. see comm. ad X.64.14.

I.71.4: Another difficult verse, though it is clear that it alludes to the theft of fire by Mātariśvan in the first hemistich. This theft is expressed through word play: the verse begins *máthīt*, which can mean either ‘churn, rub’ (to produce fire) or ‘steal’. In this Agni context, esp. given vs. 1, which concerns the churning of fire, ‘churn’ would be the most likely reading – and so it is tr. by Ge, Old (SBE), and Proferes (2007: 31). But the name Mātariśvan ends the pāda, and this mythological allusion would tip the balance towards ‘steal’ (so Re, WG).

The real problem comes in the middle of that pāda: the ppl. *vībhṛtaḥ*. This form should mean ‘dispersed’ or ‘carried away’, and grammatically it should modify *mātariśvā*. However, sense would require it instead to qualify fire, the underlying direct object in the clause; fire is often carried away and dispersed in various locations. Cf. *vī ... bharanta* in the preceding hymn I.70.10 and discussion there, as well as the passages adduced by Old SBE, n. to vs. 4. There is no solution that satisfies both sense and syntax. Ge suggests it’s a transferred epithet, from Agni to Mātariśvan; this seems a description of the problem, not a solution. Old suggests simply displacing it rightward to read it with the assumed subj. of pāda b, namely Agni (“When Mātariśvan had produced him by attrition, he ..., who was brought to many places, has come to every house”), and WG apparently follow. But this kind of extraction from one clause and insertion in another is not syntactically possible in my opinion, esp. given that in its clause it is placed between the acc. referring to Agni (*īm*) and the nom. *mātariśvā*, so that its grammatical affiliation is emphasized. Narten reports a clever suggestion of Hoffmann’s, that the *vī-* is really ‘bird’, and the form means ‘carried by a bird’ (“Das vedische Verbum *math*,” n. 38

[=KISch p. 23 n. 38]), but Mātariśvan should no more be carried by a bird than be dispersed. In the end the least jarring rendering is Re’s “s’étant transporté çà et là,” presumably referring to Mātariśvan’s journey. My “borne away” reflects a similar notion, and I also toyed with the possibility that “carried away” may have the same extended meaning as the English idiom, namely, “overcome with excitement.” No doubt Parāśara recognized the trap he was setting, forcing the audience to find a way to interpret *vibhṛtaḥ* with Mātariśvan rather than with the far more natural Agni.

As noted above, the subject of the next pāda must be Agni, established “in every house” (cf. V.11.4, X.91.2). Because of the accent on *bhūt*, the clause must be parallel to pāda a and is not the main clause, which is introduced by *ād īm* in c.

On the second half of the verse see Proferes 2007: 30–31. Agni’s role as messenger is of course well known: he travels between gods and men, heaven and earth. This regular route may be prefigured here by Mātariśvan’s theft in a, for elsewhere it is clear that M. stole fire from heaven (e.g., I.93.6). It is also said that M. bestowed the stolen fire on Bhṛgu (see nearby I.60.1), and so the epithet *bhṛgavāna-*, whatever its morphology, is apposite. What is unfamiliar is the simile, in which Agni serves as messenger as if for a more powerful king. According to Proferes, Agni is here “depicted ... as the symbol of the presence of a leader’s authority within each household.” I’m not sure, because Agni’s *dūtā* role involves traveling, not staying put. I am inclined to think the simile was generated simply from *dūtyām* and is not meant to apply directly to Agni and his relationship to royal power.

I.71.5: This vivid account of the incestuous attack of Father Heaven on his own daughter (elsewhere Dawn) comes as a surprise in this hymn. The connection must be the fact that this incest led to the birth of the Aṅgirasas, who were the subject of vs. 2 (and possibly vs. 3); this birth is mentioned in the other incest verse, vs. 8cd, though without naming the Aṅgirasas. The other connection is that Agni, unnamed, is the avenger in this verse, shooting Heaven as he released his semen into his daughter. Although the avenger is usually identified as Rudra on the basis of post-RVic passages (see Ge n. to vs. 5, Re, WG), I have demonstrated (Hyenas, 288–97) that the original avenger was Agni. Note that *āstā* ‘archer’ is used of Agni in the last verse of the immediately preceding hymn (I.71.11). I also take Agni as the subj. of pāda b: like a hunter on his prey, he creeps up on the pair, having noticed the caresses (*prśanyāḥ*) Heaven was bestowing on his daughter.

In addition I consider Agni to be the subject of pāda a (with most tr.), but the action there is harder to explain: how and why does Agni make the sap=semen for Heaven if he disapproves of Heaven’s sexual designs on his daughter and in fact punishes him for the rape? For one thing, fire is unlikely to produce anything we might consider sap; in a naturalistic sense, making *rāsa* for heaven would seem to be storing up rain. However, our notions of nature and Vedic India’s are often at odds. That the same semen (or possibly its delivery agent, the penis) is called *tvīṣi-* ‘spark, flare’ in pāda d and, even more telling, is referred to as “blazing semen” (*śūci rétaḥ*) in 8b, brings it into fire’s conceptual sphere. It may be that the flaring up of fire produces Heaven’s semen. But what is Agni’s motivation? I’m afraid this remains mysterious; perhaps it was involuntary, produced by the flaring up just suggested.

I.71.6: This verse returns us to the ritual here-and-now and is considerably easier to interpret than the scraps of mythology in the previous two verses. Still, there are a few puzzles.

The verb *vī bhāti* ‘radiates widely’ is surprising, since its subject must be the mortal worshiper, even though Agni (or occasionally Dawn) is ordinarily the subject of this common verb. Old (SBE, repeated in Noten) suggests emending it to *vī dhāti* ‘worships’ (in Old’s tr.). (I sometimes get the feeling that in the Noten Old felt the need to stick with emendations he’d suggested in his far more free-wheeling SBE tr., even though in his later years he was otherwise very reluctant to emend.) But a metaphorical sense of ‘radiate’ works fine in the passage, as Ge points out, citing parallels like VI.5.5, also of a mortal worshiper. And this would be an instance like *vībhṛtaḥ* in 4 in which the most natural referent of a word is not the grammatically supported one.

Old (SBE and Noten) also proposes to read dat. *uśaté* in b, or rather suggests that the underlying form in sandhi was a dat. *uśatá*, since the spellings *uśató ánu* and *uśaté ánu* “belong to the inventions of Vedic grammarians” (SBE n. 2 to vs. 6). This is certainly possible, but a gen. form *uśató* would reflect what we might call the “proleptic” use of the genitive for dative to express indirect object: the reverence was offered to you and so it is now yours. This colonization of the dative by the genitive is very common both in Vedic and in Classical Sanskrit, and already here it may reflect the weakening of the dative case that led to its disappearance in MIA. I certainly see no reason to take the transmitted *uśató* as acc. pl. with *dyūn*, as Old (Noten) and Ge (n. to 6b) tentatively suggest.

I.71.7: The second hemistich consists of two contrasting halves: in c the speaker complains that his (“our”) vitality (*váyah*), the same vitality that Agni was said to increase in 6c, is not to be seen throughout his kinsmen; this leaves Agni as the sole figure who will find solicitude (*prámati-*) for him among the gods. Put thus, the passage does not make much sense in English. It relies on the close relationship between ‘solicitude’ and kinship (see esp. I.31.9-10, I.108.1, X.23.7, also adduced by Ge) in the RV. The word *prámati-* denotes the kind of care and concern a father shows for his children (or sons) and is regularly associated with, and indeed identified with, the *pitár-* ‘father’ (see, e.g., I.31.9, 10, 14, 16) and secondarily with the kin-group; cf. X.23.7 *vidmā hí te prámatim deva jānīvát* “for we know your (fatherly) solicitude, o god, like that of kin.” Since in our passage the *jānī-* has proved disappointing, the poet turns to Agni for satisfaction. The question then is what is the relationship between vitality and solicitude, which seem conceptually distant. This is less clear, but the connection is also found in the *prámati*-heavy I.31 already cited; cf. I.31.10ab *tvám agne prámatis tvám pitāsi nas, tvám vayaskṛt táva jāmayo vayám* “You, Agni, are (fatherly) solicitude, you a father to us. You are creator of vitality; we are your kin.” In the immediately preceding verse (I.31.9) Agni is also called *tanūkṛt-* ‘body-creator’. The balanced pairing of *tanūkṛt-* and *vayaskṛt-* in a paternal context suggests that in producing children the father creates both the physical body and the intangible essence of life that together make up a living being – ‘life-force’ might be a reasonable rendering of *váyas* – and the father’s *prámati-* seems to be the catalyst that brings them together. Moreover, at least on the evidence of our passage, *váyas-* seems to be something that can be shared by the kin-group, but in this case is not, and in such circumstances if one cannot rely on the shared vitality of his relatives, he

must look only to his father and his father's solicitude. For another association of vitality and the father in Parāśara's work, see I.73.1.

The publ. tr. does not convey this very well. In c I would replace "is not widely perceptible" with "is not widely evident" or "does not appear throughout." I also question my supplying an object (vitality) with *cikivān*; I now think this simply characterizes Agni as the perceptive one or indicates that he perceives the situation as a whole. The same word *cikivān* does seem to take an object in 5b, however.

Against the Pp. I prefer to take *vidā* as a lengthened 2nd sg. imperative rather than subj. *vidās*, though there are no real implications either way.

I.71.8: The incest myth treated in vs. 5 returns here with no more clarity. The various alternative treatments are too numerous to discuss here, so I will present only my own version, some of whose details I have adopted from others. The first hemistich describes again Agni as the avenger, loosing his weapon at Heaven in the midst of the latter's sexual encounter with his daughter. In pāda a the *téjaḥ*, the sharp point of the arrow, reaches the lord of men (=Agni, in my view), so that he can shoot it. I do not understand why his preparation for shooting should be described thus, and in a phrase *ānaḥ* + ACC we might expect the acc. to express the target of the arrow. Nonetheless, Heaven is not otherwise called *nṛpāti*-, and it would be odd to give him this positive epithet in this situation. For Agni as an archer whose arrow has a *téjas*- see VI.3.5 *sá íd āsteva prāti dhād asiṣyāñ, chíśīta téjò 'yasā ná dhārām* "He, just like an archer, has aimed (his arrow), about to shoot. He has whetted its point like a blade of copper." I take *iṣé* in this pāda as an infinitive to *√iṣ* 'impel, send' (others interpret it as 'to enjoy'); I then supply a form of this same verb in the next pāda, which otherwise lacks one.

Note that the product of this incest, the young troop (*śárdham ... yúvānam*), is characterized as both 'faultless' (*anavadyām*) and 'well-intentioned' (*svādhyām*), asserting their goodness despite the circumstances of their birth.

I.71.9: As mentioned in the publ. intro., the reason for including this verse, containing the Sun and Mitra and Varuṇa but no mention of Agni, isn't clear. However, it may be that Mitra and Varuṇa, the guardians of the moral and ethical order, and their all-seeing eye, the Sun, who observes all behavior, are brought in as witnesses of the shocking incest of the last verse and the appropriate punishment inflicted by Agni.

I.71.10: Another apparent non sequitur. I have nothing to say about the morphology of the famous crux *vidúḥ*, which occurs also in VII.18.2 in the same phrase with the same irregular sandhi (*abhí vidúṣ kavíḥ sán*). I do consider it a nom. sg., not acc. pl. For further disc. see comm. at VII.18.2.

I.72 Agni

In the published intro., the sentence "and their ritual service to him in vs. 3 allow them to acquire their own ritually worthy names and to make their own bodies also worthy of ritual service in vs. 4" should be corrected to "vs. 3ab ... vs. 3cd."

I.72.1: The lexeme *ní√kr*, literally 'make/do down', idiomatically means to surpass one's opponent with regard to some quality by "putting" or "bringing" [them] "down." Indeed

the English idiom “put down” is very close, but I chose not to use it because it doesn’t convey quite the right sense with the right case frame. The verb generally takes an acc. of the quality in question; the person who is outdone can be either in the acc. (X.49.8), hence a double acc., or gen. (II.23.12), and there is some disagreement among tr. about which construction we have here, since *vedhāsaḥ śāsṡvataḥ* can be either gen. sg. or acc. pl. Ge opts for the acc. pl. in the tr., but offers the gen. sg. as alternative in his n.; Old, Re, WG choose the sg., as I have done, though for no principled reason.

The *nāryā* ‘manly powers’ in b contrasts both with *kāvya* in a and *amṡtāni* in d. The first contrast would be between, roughly, warrior skills and verbal skills, the second between human (though of course *nṡ-* can often be used of gods, too) and divine. For the latter pairing note that the two acc. pls. are construed with similar verbs: middle participles to reduplicated formations, *dādhānaḥ* and *cakrāṇāḥ*.

I.72.2: After the general proclamation of Agni’s universal powers in vs. 1, the hymn turns to the myth of the disappearance and recovery of Agni.

The immortals’ inability to find Agni “among us” (*asmé*) is contrasted with the success of the mortal who finds him “on the highest track,” presumably in the realm of the immortals, in vs. 4.

The acc. phrase *vatsām pári śántam* is ambiguous, since the participle can either modify *vatsām* (“the calf enclosing ...”) or take *vatsām* as object (“enclosing the calf”). Ge (WG) interpret it as the latter, Old, Re the former. Ge is surely correct: *pári śántam* elsewhere (IV.1.15, VI.17.5, adduced by Ge) qualifies the rock that is the Vala cave and takes “cows” as its object; cf. VI.17.5c ... *ādrim pári gāḥ ... śántam* “... the rock enclosing the cows.” Although in the usual myth of the disappearance of Agni, he is hidden not in a rock but in the waters, this transference of Vala phraseology is enabled here because Agni is called a calf, and cattle were enclosed in the Vala cave.

There is a slight phonological play in the phrase *amṡtā āmūrāḥ*. Also note *visṡve amṡtāḥ* “all the immortals,” a variant of *visṡve devāḥ*. The use of this phrase is telling because in Parāśara’s Vaiśvānara series (I.68–70) *visṡve* is reserved to evoke “all (men).” See discussion esp. in I.68 and in Jamison Klein Fs. 2016. I.68.8 also contains a pāda-final *āmūrāḥ*, there referring to men.

Although the perfect of $\sqrt{sthā}$ without preverb is almost always presential (see Kü p. 580), in this mythological narrative it must be preterital (or at least so tr. into English), like the injunctive *vindan* in pāda a; perhaps we can think of it as a sort of “honorary” injunctive, whose temporal value is determined by context.

The form *cāru* (so Pp.; Saṃhitā *cārv*) is taken as a locative by Sāy. (*cāru cāruṇi śobhane*). This unlikely analysis is followed explicitly by Ge and Old (SBE, more doubtfully Noten) and implicitly by Re and WG. (Gr. takes it as an adverb.) I take it rather as the neut. acc. it appears to be and an alternative locational expression to the adjacent loc. *padé paramé*, supplying *nāma* ‘name’ on the basis of *nāmāni* in the next verse (3c) and the frequency of the collocation *cāru nāma*. It’s worth noting that *cāru nāma* can be hidden or secret (e.g., II.35.11, IX.96.16), and so it would be appropriate to this tale of the hidden Agni. What exactly it would mean to take their stand at his name is not clear, perhaps at the place where Agni’s name is invoked in ritual performance. This would fit with the following verse. It’s also possible that if Agni’s dear name is what’s at

issue, then the *padé paramé* might be the highest word, as well as or instead of the highest track. (See 6ab below.)

I.72.3: For my interpr. of the purport of this verse in a Tānunāptra context, see publ. intro.

The identity of the subjects in this verse is disputed: Ge “die Erzväter,” Sāy the Maruts, Re the gods. I consider this vs. a continuation (of sorts) of vs. 2 with *visve amṛtāḥ* still the subject. I have no explanation for the “three autumns.”

The interpretation of the verb form *saparyān* is quite problematic. It certainly appears to be a subjunctive, and contrasts with the 3rd pl. injunctive *saparyan* that Parāśara places in the same pāda-final position in I.70.10. But a subjunctive does not sit comfortably in the dependent clause whose main clause contains a preterital perfect (*dadhire*) and an augmented imperfect (*āsūdayanta*). Ge (also Re) compares *vārdhān* in I.70.7 (which I take differently) and calls it the subjunctive “bei Zeitangabe” (n. to I.70.7ab), whatever that means. He tr. it as a preterite. Hoffmann calls it a “Konjunktiv in präterital Sachverhalt” (p. 244). Re “ont honoré et honoreront encore,” attributing what seems to me a unique interpretation to the subjunctive. I consider the form a straight preterital and have an admittedly quite ad hoc way to account for the apparent subjunctive. The present participle to this stem, *saparyānt-*, is found 7x pāda-final as nom. sg. masc. *saparyān*; I suggest that in order to make it clear that the form here is not that pres. participle, the final vowel was lengthened, perhaps redactionally. This lengthening has no metrical consequences, of course. The lengthening did not happen in *saparyan* in I.70.10 because it was unaccented and couldn’t be mistaken for a participle. I am quite unhappy with this explanation but even more unhappy with the idea of a subjunctive in this context.

I.72.4: I consider *rodasī* a word play. It is of course a dual, referring to the two world halves, but it also evokes *rodasī*, the consort of the Maruts. Properly speaking she should be in the acc. sg., hence a putative *rodasīm*, but that form is not attested. In I.167.4 we find *rodasī* in acc. usage: the singular consort has simply been grammatically assimilated to the dual world halves in all her appearances.

The intensive part. *vévidānāḥ* could technically belong either to √*vid* ‘know’ or √*vid* ‘find’, whose middle generally means ‘acquire’, and it is somewhat difficult to know which root is supposed to be represented in Ge’s “Gehör finden bei” and Re’s “trouvant-accueil près de.” With Old and Schaeffer (p. 183–85) I take it with ‘find, acquire’, though I am somewhat puzzled by what the intensive part is supposed to contribute – perhaps the sense of constantly keeping their acquisition close by; this would work better for the consort than the two worlds. Schaeffer’s tr. (p. 185) “nachdem sie die beiden hohen Rodasī gefunden haben” has no intensive nuance, and she indeed suggests that the form does not really belong to the intensive, but is a substitute for the perfect participle (**vividānāḥ*) on metrical grounds, hence her preterital tr. I find this substitution hypothesis unlikely, given that the intensive is quite a marked formation and the accent patterns of the two formations are different.

The Pp. reads *rudrīyā* (neut. pl.), not *-āḥ* with most tr. As Ge and Old (Noten) point out, the Pp. reading is not impossible, but the masc. pl. works better. If the first pāda makes reference to Rodasī, a nom. pl. referring to the Maruts makes better sense.

Tr. differ on the interpretation of *nemádhītā*; I render it as close to my interpr. of its other three occurrences, ‘when facing the other side’, used of battle arrays (VI.33.4, VII.27.1, X.93.13). That it refers to men and gods being divided (so Ge, WG) seems farfetched and ignores the evidence of the other identical occurrences and inserts a referent (men and gods) that is simply not there. I do not understand why the accent of the first member *nemá-* differs from that of its simplex (*néma-*).

The last pāda echoes 2d, except it is Agni standing on the highest track, not his pursuers.

I.72.5: On this verse as an expression of the Tānunāptra ritual see Proferes 2007: 59.

The verse begins with a form of the resonant idiom *sám √jñā* ‘come to an agreement, act in harmony’ that was so important in Parāśara’s Vaiśvānara cycle (see I.68.8, 69.9 and disc. there and in Jamison Fs. Klein 2016). Here it expresses the unity not of all men, as in the Vaiśvānara cycle, but of the gods, even including their wives. Or so I interpret it; Ge and Re thinks the group includes both gods and men. This seems unlikely to me, in part because *pātnīvant-* only qualifies gods (except for pressed soma drinks in VIII.93.22). As I have discussed elsewhere, I do not think that the Sacrificer’s Wife later called *pātnī* was yet established in the RV; she was only being introduced (and this introduction contentious) in the latest strata of the text.

Most tr. take *rīrikvāmsas tanvāḥ kṛṇvata svāḥ* to mean “having abandoned their former bodies, they took on their own (new bodies),” but this is somewhat incoherent: were their old bodies any less “their own” than the putative new ones? Proferes’s tr. (p. 59) seems self-contradictory, “Having yielded their bodies, they made [their bodies] their own,” but his explanation makes sense of this: they “overcome their atomization by relinquishing their ‘bodies’ in the course of a fire rite; they thus make their own (*svāḥ*) the collectivity of their own individual bodies, which is to say that each individual within the group identifies with the ‘bodies’ of all the others.” By taking *kṛṇvata* as reciprocal, as I do, rather than just reflexive, this sense can be found in the passage directly.

I.72.6: The Pp. reads unaccented *avidan*, but accented *ávidan* should be extracted from the ambiguous sequence *padāvidan*.

As often with RVic numerology, the identity of the three times seven secret *padā* is not clear. Ge tr. *padā* as *Wörter* (sim. Re), which is certainly possible and has parallels (see Ge’s disc. in n. to 6ab), but the *padé paramé* that figured significantly earlier in the hymn (2d, 4d) should be kept in mind. Moreover, in the next vs. Agni is said to be “inwardly knowing the roads (*ádhvanaḥ*) leading to the gods” (7c), and since the *padā* were found *in* Agni here, it may be that these *padā* are tracks and identical to the *ádhvanaḥ* that he inwardly knows. As I argued in the publ. intro., I think the *padā* are the “tracks” of the ritual.

What *amṛitam* refers to is also unclear; it could be, as Sāy suggests, Agni, or simply “immortality, the immortal principle” (so Re). It unfortunately cannot be the body, which is fem. Note the “way towards immortality” (*amṛtatvāya gātúm*) in 9b below.

The phrase *sthātṛn carátham ca* with its number mismatch shows Parāśara’s fondness for this merism (I.66.9, 68.1, 70.3, 7) and the grammatical anomaly found in most of its occurrences in his oeuvre; see disc. ad locc. Since we would expect **sthātúr*

carátham ca, as in I.68.1 and I.70.7, I wonder if **sthātúr* has been adjusted to *sthāṭṛn* to match the number of preceding *paśūn*. The meter would not be affected. If *sthāṭṛn* here is secondarily generated in context, the only form really belonging to this stem would be *sthātúr*, which has both gen. sg. and nom./acc. readings, the latter of which is of course problematic for an *r*-stem (see disc. ad I.58.5). MW's suggestion (see I.58.5) that *sthātúr* has been reinterpr. as indeclinable on the basis of passages where its case form is ambiguous makes sense.

I.72.7: The referent of “for them” in the tr. of b is the “settled peoples” of a.

On the possible relationship between the *ádhvanaḥ* here and the *padā* of 6b, see disc. there.

I.72.8: The first pāda lacks an overt verb, but it is easy to read *ví ... ajānan* from b (with most tr.), rather than supplying an entirely different verb as Ge does (“brachten”). The identity of the subject is likewise not given, but, with Ge, it is quite likely the Āṅgirasas. The qualifier *svādhī-* ‘very attentive’ is a signature word of Parāśara’s (I.67.2, 70.4, 71.8); the occurrence in 71.8 is applied to the troop, presumably the Āṅgirasas, that Agni begets in punishing Heaven’s incest.

The “seven youthful ones of heaven” are the heavenly rivers; note the corresponding phrase in the previous hymn, I.71.7 (though in a simile) *sravātaḥ saptaḥ yāhvīḥ* “the seven youthful streams,” and for *divó yāhvī-* III.1.6, 9, VII.70.3. The position of *ā* between *divāḥ* and *saptā yāhvīḥ* does give one pause, however, since postposed *ā* with abl. can mean ‘from’. Perhaps this is a mixed construction: “from heaven they discerned the ... maidens of heaven.” I do not know what the seven maidens of heaven are doing here.

The VP “discerned the doors of wealth” (*rāyó dúro ví ... ajānan*) is a variant of “opened the doors (of wealth)” found twice earlier in the Parāśara collection: I.69.10 *ví rāyá aurnod dúraḥ ...* and I.70.10 *duró vy ṇvan*.

I.72.9: This verse is the most baffling in the hymn, both for its contents and for its connection to the rest of the hymn. Ge has a very busy interpretation (followed by WG) that involves the Āṅgirasas and the Ādityas separating themselves from the earth and contending to reach heaven. His interpr. rests on scraps of later mythology, and it is very difficult for me to see where he finds contending parties in the passage, much less the signs that would identify them as Āṅgirasas and Ādityas. It also requires an unlikely reading of *ví√sthā* as ‘separate’, rather than the usual ‘spread out’ (as Re points out). All in all, the interpretation requires a superstructure that the verse cannot support, and examining the passage without the presuppositions Ge brings to it yields a very different picture. Unfortunately, however, the picture isn’t appreciably clearer.

I think that the verse continues the theme of the original discovery of the hidden “tracks” of ritual performance: having discovered them (see 6ab), the subjects of 9ab, the gods most likely, perform the required ritual actions, which lead both to offspring and to “immortality.” The second hemistich is considerably more difficult, but I tentatively suggest that it also depicts a primal sacrifice. The “stretching” of the ritual ground in an ordinary sacrifice, that is, the laying out of its boundaries and the positioning of the offering fire, is here expressed in cosmic terms: the earth herself spreads out to provide

the ritual ground; she does this through the actions of her sons, the ritual participants. And she then “suckles the bird.” Most take the bird as Agni, whatever else they do with the verse, and the suckling, that is, the tending of the ritual fire with wood and oblations, would work fine in this scenario. Re thinks rather the sun, and again the sun as cosmic representative of the ritual fire is thinkable.

I will now treat some of the elements of the verse in more detail. Although *svapatyá-* can be substantivized to mean “good descendants,” it is originally and more commonly an adjective, and even when a head noun is absent, it can be supplied. In this case I interpret the word in the same way as VII.91.3c *vísṣvén nárah svapatyāni cakruḥ* “The men have done all (ritual actions) bringing good descendants.” Here the governing verb is “mount” (*ā ... tasthuḥ*), which I take as metaphorical for ‘embark on’. With the journey theme of pāda b, the (actions of) the sacrifice can be conceived of as a chariot, as so often in the RV.

The *yé* of ab is picked up by the “great sons” of cd (*mahádbhiḥ ... putráḥ*). These can be the offspring produced by the ritual in pāda a or, more likely in my opinion, the performers of those actions – the gods or, perhaps more narrowly, the Ādityas – who are responsible for the cosmic sacrifice in which their mother, the earth herself, spreads out as the ritual ground. I would slightly alter the publ. tr. to “by means of her sons ... the earth ...” Keep in mind that the gods are the sons of Heaven and Earth (cf. the bahuvrīhi in the dual *devá-putre* ‘having the gods as sons’), so Earth is their mother. I am inclined against restricting the subject to the Ādityas. I think rather that mother Earth is called Aditi because Aditi is an archetypal mother, but her sons are all the gods, not just the Ādityas. The next verse (10b) simply refers to the immortals, in what seems to be a continuation of this narrative, and the default subject throughout seems to be the gods in general.

Note that “to suckle the bird” (*dhāyase véḥ*) is a paradox that would be recognized by any reasonably alert observer of nature (as the Vedic people certainly were), in that birds aren’t mammals and don’t suckle. The sense of *dhāyase* can of course be bleached to something like Old’s (SBE) “for the refreshment of the bird,” but I prefer to think this paradox was meant to be savored, along with the paradox of the sons bringing about the action of their mother.

I.72.10: The first half of the verse may return to the Tānunāptra theme. Although I would prefer a middle verb rather than active *ní dadhuḥ*, the first pāda could depict the joint deposit of their shared *śrī* in the ritual fire (cf. the echo of *nīhitā* in 6b), while the second pāda continues the cosmogonic theme of the previous verse. I confess, however, that the very parallel I.73.4c *ádhi dyumnám ní dadhur bhūry asmín* gives me pause. Either I need to interpret that as also a Tānunāptra passage or delete the reflexive implication here. Because of the active verb, I am inclined to change my Tānunāptra interpretation and tr. simply “they deposited dear splendor in him,” although since *cāru-* can have a quasi-reflexive sense ‘own dear’, it may be possible to interpret the two passages differently.

As for the second hemistich, the rivers of pāda c are most likely the oblations poured into the fire. The referent of the fem. pl. *nīcīḥ ... áruṣīḥ* is less clear, and in fact most tr. (Ge, Old SBE, Re, WG) take the two feminines separately, with one nom., the other the acc. object of *prá ... ajānan*. I think rather that the two words belong together as subj. and refer again to the oblations. The lexeme *prá √ jñā* does not otherwise take an

object, but just means ‘know the way, think ahead’. As underlying referent of the feminine adjectives I would supply *dhāṛā* ‘stream’ vel sim.; ‘downward facing’ certainly applies to the oblations, though ‘ruddy’ is more difficult. However, fem. *āruṣṭī-* can be used of cows; since the ghee poured into the fire is a product of cows, it can be so described, even though ghee is of course not ruddy itself.

I.73 Agni

I.73.1: For the complex relationship between ‘vitality’ (*vāyaḥ*) and the father, see disc. ad I.71.7. The “wealth acquired from one’s father” also reminds us of I.70.10, where the sons divide and carry away the property of their aged father.

Agni’s traversing of the (sacrificial) seat (*sādma ... ví tāṛīt*) in my opinion refers to the removal of what is later called the Āhavanīya fire from the Gārhapatya fire at the west end of the ritual ground and its ceremonial placement at the east end. See 2d.

I.73.2: Pāda a is more literally “who, like Savitar, possesses realized thoughts,” but I have adjusted the English to avoid awkwardness.

In c most tr. take *satyāḥ* as the shared term in the simile *amátir ná* (Ge “wahr wie ein Bildnis”) or as modifying *amátih* in the simile (WG “wie eine verwirklichte Erscheinung”). The latter is impossible because *amāti-* is feminine. The former does not convey much sense. The purport of the simile of course depends on the meaning of *amāti-*, which I consider to be more concrete and specific than the usual glosses ‘appearance, form, picture’. An *amāti-* can be golden (III.38.8), broad and wide (V.62.5, VII.38.2, 45.2); it is associated with lordship (V.69.1 *amátim kṣatríyasya*), can be displayed on a chariot box (I.64.9), and is unloosed or unfurled (V.45.2, VII.45.3). All of this suggests that it is a pennant or ensign or other flag-like object. On the basis of its association with lordship, I suggest that it can be a royal emblem and that that is the basis for the simile here. As discussed ad I.70.9 and in my 2007 *Rig Veda between Two Worlds*, *prá √ śams* ‘proclaim, laud’ is a lexeme particularly appropriate to kings, and here Agni is lauded by many like the royal emblem, which is the symbol of the king. This interpretation leaves pāda-final *satyāḥ* somewhat stranded, and I read it with the following pāda. Perhaps it was stationed in the c pāda because of *satyá(manmā)* in almost the same position in the a pāda. Alternatively it can simply be another qualifier of Agni in b, independent of the simile: “lauded by many like a (royal) emblem, real ...”

Most tr. give a rather vague and general rendering of the morphologically elaborate desiderative gerundive *didhiṣāyyaḥ*, “desirable to hold/win”. I think it has a more technical ritual sense, referring to the installation of the fire (so also in the other occurrence of this form in II.4.1). This would reflect the same sense of *√ dhā* as the adjective *puróhita-*, of the fire ‘placed/installed in front/to the east’ and the later ritual complex the Agnyādhya ‘establishment of the fire(s)’. If my interpr. of 1d is correct, namely that the offering fire has been taken from west to east, then the next step would be its installation in the east.

I.73.3: For the first three pādas, cf. III.55.21.

The construction of this verse is more complex than the two preceding ones and, in my opinion, displays some tricky relationships with Parāśara’s phraseology elsewhere.

To begin with, the first simile as it stands is pleonastic at best: Agni should not be “like a god,” since he *is* a god. Nor should he be “like a god who dwells on earth,” since in fact Agni is the only god, or (counting Soma) the primary god, who dwells on earth. I suggest tentatively that the opening *devó ná* is there to match *ná rájā* at the end of the hemistich. Even more tentatively I suggest that what is really being compared is *pr̥thivīm viśvādhāyā(h)*. Note first that in the preceding hymn (10cd) mother earth spread out “to suckle the bird [probably =Agni]” (*dhāyase véh*) and elsewhere earth is called “all-nourishing” (II.17.5 *pr̥thivīm viśvādhāyasam*). I think here that Parāśara is covertly comparing Agni to the earth with regard to this well-known trait of hers, but does so playfully and allusively by stationing acc. *pr̥thivīm* next to nom. *viśvādhāyā(h)* (in the same metrical position as II.17.5 though in Triṣṭubh not Jagatī cadence) and by the intertextual associations evoked by his stating that earth suckled Agni in I.72.9. So the, or an, underlying meaning of pāda a is “the god who, all-nourishing like the earth, ...,” though both the position of the simile marker and the case of ‘earth’ disallow this as a surface meaning. (Let me make clear that I am *not* suggesting emending the text to **pr̥thivī*.)

The two compounds *hitā(mitra-)* (b) and *purāḥ(sādaḥ)* may make implicit reference to the word I suggested is to be associated with *didhiṣāyyaḥ* in 2d, namely *puró-hita*, as a descriptor of the installed ritual fire. The second, *purāḥsād-*, is essentially a synonym of *puróhita-*.

Although I try to avoid explanations like “attraction,” I am afraid I must follow Ge in taking the common term of the similes in c and d as “attracted” to the comparandum: *purāḥsadaḥ* to the pl. *vīrāḥ* from putative sg. **purāḥsad*, *anavadyā* to the fem. *nārī* from putative masc. **anavadyāḥ*. Although it would be possible to avoid the attraction analysis by reading both terms as part of the simile proper (“like heroes stationed in front and stationed for protection, like an irreproachable wife pleasing to her husband,” so WG), this puts the simile marker one element too far to the right and it also submerges the common term. This would be particularly unfortunate in the first simile, since there is a play on two slightly different senses of *-sād-* there. (In I.65.5 a similar gender mismatch is found, explained by Re as attraction, an explanation I rejected. But there it does not involve a misplaced simile marker.)

I.73.4: As noted at I.72.10 our c is almost identical to pāda a there. The publ. tr. treats the first as a Tānunāptra passage (“deposited their own *śrī*”) but not this one, and the two should probably be brought into harmony. I now favor taking neither one as a Tānunāptra expression, but see disc. ad I.72.10. In this case the deposit of ‘heavenly brilliance’ (*dyumnā-*) may be what allows Agni to become the foundation of riches.

I.73.5: The verb *vī ... aśyuh* should be read with both pādas, but, in my opinion, with slightly different senses. In pāda a *pr̥kṣaḥ* is a straight acc. object to the lexeme in the meaning ‘reach, attain’; in pāda b *viśvam āyuh* may be one too (“attain a whole lifetime”) as most take it, but it may also be an acc. of extent of time (“reach through a whole lifetime”). The meaning is almost the same, but it would be like Parāśara to put the constructions slightly off-balance, and the compound *viśvāyuh* is something of a signature word for Parāśara (see the immediately preceding vs. 4d, plus I.67.6, 10, 68.5)

as an adverb expressing extent of time (“lifelong,” etc.). Note the phonetic echoes, pāda a: *ví ... aśyur*, b: *ví ... āyuh*; the first of these distracted sequences also evokes *viśvāyuh*.

Pāda c *sanéma ... aryó* is reminiscent of I.70.1a *vanéma ... aryó* ...

The phrase *bhāgām devēsu ... dādhanāḥ* is almost a paraphrase of I.68.4a *bhājanta ... devatvām*. I would therefore change the publ. tr. “a portion among the gods” to “a share in the gods.”

I.73.6: The referents of the “cows of truth” (ab) and the rivers (cd) are unclear, nor is it clear whether they refer to the same thing. But I think they must be evaluated in the context of this hymn, in which men (vs. 4), patrons (vs. 5), and gods (vs. 7) all serve Agni in one way or another and seek rewards from him; the cows and the rivers then must be another set of devotees and aspirants to his favor, esp. since the same phrase *sumatīm bhīkṣamāṇā(h)* “seeking a portion of favor” is used of the rivers (6c) and the worship-worthy (gods) (7a). I would tentatively suggest a twofold interpretation: 1) A naturalistic one: the swelling cows are the rains, “apportioned by heaven,” with their bellowing the thunder and the udders the clouds. The rains both *are* the (heavenly) rivers and feed the (earthly) rivers. Recall the seven heavenly rivers of I.71.7 and 72.8. Thus, the natural world pays heed to Agni, along with men and gods. 2) A ritual one: as Ge points out, these can be the milk and the water needed for the soma sacrifice, though I confess I would prefer ritual substances more associated with Agni. See I.72.10 where I suggested that the rivers were streams of ghee. I do not believe that we need to see a reference to the Vala and Vṛtra myths here, as Ge suggests.

I do not think that the rivers flow *through* the rock, *pace* Ge, etc., but rather over. There are three passages in IX with *samáyā* and *vá*+VERB OF MOTION, all dealing with soma going across the fleece (IX.75.4, 85.5, 97.56; cf. IX.85.5 *vy āvyáyam samáyā vāram arṣasi* “You rush across the sheep’s fleece all at once.”). So I think the rivers are flowing across or over the rock, but it would help tremendously if I had any idea what the rock represents.

I.73.7: The voc. *agne* was inadvertently omitted from the publ. tr., so “o Agni” should be inserted after “in you.”

The second pāda could also mean “they acquired fame in heaven.” The phrase should be read with 5d *bhāgām devēsu śrávase dādhanāḥ* and 10c *ádhi śrávo devābhaktaṁ dādhanāḥ*. The latter passage, especially, suggests that ‘acquire’ is the better rendering.

The accented *cakrūḥ* in c can be explained, following Klein (DGRV I.176–77), as triggered by the “rhetorically complementary nature of pādas c and d.” There is no need to take the *ca* in c as a subordinator, particularly because subordinating *ca* introduces conditional clauses. Note the contrast between *ví(rūpe)* and *sām (dhuḥ)*, a common rhetorical pairing.

I.73.9: Note the echo of I.70.1, with optatives to the same (synchronic) root and a likely identical case frame. See disc. ad I.70.1.

The second hemistich reprises material from earlier in the hymn: “wealth acquired from their fathers” is exactly the same phrase, though in a different case, as the simile that begins the hymn (I.73.1a); the patrons with their long lives were encountered in 5b.

I.73.10: Ge's interpr. of pāda c is persuasive. II.5.1 *śakéma vājino yāmam* (also III.27.3, VIII.24.22) contains the missing horses supplied here. I take *sudhúraḥ* as proleptic.

For pāda d cf. 5d and 7b; for *devābhakta-* cf. *dyúbhakta-* in 6b.

I.74 Agni

Several verses in this hymn are linked in relative cl. / main cl. structures: 1/2, 4/5. Vs. 6 may also be connected to 4/5. See disc. below.

I.74.2: This interpr. of *sn̥hitiṣu* rests on a metaphorical use of the original sense of *√snih* 'snow'. On this root as warrior slang, see Hoffmann MSS 18 (1965) = Aufs. 447ff.

I.74.4: The second pāda contains two forms of *√vī* 'pursue', which by most tr. get reduced to one, with the finite *veḥ* seemingly playing merely a modal or auxiliary role: Ge "du ... die Opferspenden entgegenzunehmen wünschst"; Re "tu vas pour agréer ses oblations"; Old (SBE) "to whose sacrificial food thou eagerly comest for feasting." The doubling is, however, captured by WG: "der du (die Götter) aufspürst, damit sie die Opfergaben aufspüren," resting on observations of Scar (498–99). I am in independent agreement with WG on this construction. The root *√vī* regularly takes both gods and oblation(s) as object; here the oblations are overt, but the gods are the missing first object – the initial goal of Agni's pursuit, to cause them in turn to pursue the mortal worshiper's oblations as underlying subject of the infinitive *vītáye*. Cf. I.77.2 (also a Gotama hymn) *agnír yád vér mártāya devān* "When Agni, for the sake of the mortal, pursues the gods," where the gods are surface object of *véḥ* and the benefit for the mortal worshiper is emphasized. In our own hymn vs. 6 has a full surface realization of the structure presumed here, with the gods as subj. of the infinitive and the oblations its object, though with a different main verb: *ā ca vāhāsi tām̐ ihá, devān ... / havyā ... vītáye* "You will convey the gods here to pursue the oblations."

I.74.5: I recast the acc. to nom. in English, in order to be able to preserve verse structure.

I.74.6: There is no obvious reason for the accent on the verb *vāhāsi*. Ge (/WG), Re, Klein (I.243–44) take it as triggered by a subordinating *ca*, as does, somewhat tentatively, Old (ZDMG 60: 733 = Kl Sch 208). But this verse does not work very well as a conditional clause for vs. 7, and in fact Re recognizes this semantic disconnect by ending his tr. of vs. 6 with suspension dots. If vs. 6 is subordinated to anything, it would be better to connect it with vs. 5, repeating the message of vs. 4, which is likewise subordinated to 5. I would simply call attention to several passages with this same conjunction of elements with an accented verb and no clear motivation for the accent: III.43.4 *ā ca ... vāhātaḥ*, X.110.1 *ā ca vāha ...* We may be dealing with a catchphrase or with spread of the accent redactionally from a passage in which it was correct to superficially similar phrases.

On the *vītáye* construction, see disc. ad vs. 4.

I.75 Agni

I.75.1–2: Note the play between the two final words of these verses: *āsāni* / *sānasī*. The two verses also contain four superlatives in *-tama-*, each to a stem ending in *-as*.

I.75.3–4: As noted in the publ. intro., only the first of the questions in vs. 3 is answered in vs. 4, though the latter *appears* to be structured as the replies.

I.75.5: The three pādas contain three 2nd sg. verb forms belonging to √*yaj*, two pres. imperatives *yājā* (a, b) and a so-called “*si*-imperative” *yākṣi* (c). Though “*si*-imperatives” do often function as imperatives, they are haplogized *-s*-aorist subjunctives by most accounts. I so tr. *yākṣi* here, since the poet could easily have repeated *yājā* in this context; it would have been metrically fine and in fact would have produced a more iambic pattern. It is accented because it follows an extrasentential voc. For another *si*-imperative that is better rendered as a subjunctive see *ní ... satsi* in I.76.4 in the next hymn.

I.76–77: These two Triṣṭubh hymns are out of sequence, in that they both contain five verses. The preceding hymn I.75 in Gāyatrī also contains five verses, and among hymns of the same number of verses to the same divinity, those in the longer meter (in this case Triṣṭubh) should precede. Curiously, Old does not remark on this. The proper sequencing is restored with I.78, five verses in Gāyatrī.

I.76 Agni

I.76.1: As often, *vā* ‘or’ doesn’t present two balanced choices, but could be paraphrased as “or, to put it another way...” That is, it rephrases and varies (often substantially) a previous statement or question.

The first and last pādas contain forms of *mānas-*, which I have tr. differently. The first, in the phrase *mānaso vārāya*, is idiomatic in English as “heart’s desire,” not “mind’s desire/choice/wish.” The expression in the last pāda, *kéna ... mānasā*, might better be rendered “in what spirit,” though I’ve chosen to stick closer to the ‘mind’ sense.

The pf. of √*āp* can be used presentially (so also Kü, though not with ref. to this passage), and that value works best here: the focus in all four clauses is what we can do to best serve Agni, not what someone has done in the past.

I.76.3: The accent on *dhākṣi* is unmotivated. WG label it as antithetical accent, but that is only found in sequences that are more tightly bound rhetorically than this one. (If all imperatives in sequence received “antithetical accent,” there would be many more of them, beginning with *ní śīda* and *bhavā* in 2ab.)

Ge and Re both assert that the referent of *asmai* in d, the recipient of the guest reception (*ātithyām*), is Agni. This seems perverse to me, though grammatically possible. Agni is urged to bring Indra (“the lord of soma”) to the ritual ground; the guest reception is surely for this new arrival and will consist of the usual ritual offerings given to Indra, including soma. It is of course true that Agni is regularly called ‘guest’ (*ātithi-*), but that doesn’t seem relevant here.

The two hemistichs end with two unusual *-van-* forms: (*abhiśasti-*)*pāvan-* and (*su-*)*dāvan-*. Though parallel in formation, they are in different cases (nom. and dat. respectively), which somewhat conceals their morphological match. They are near

hapaxes: the first is found only once elsewhere in the RV (VII.11.3) in a similarly constructed pāda, the latter only here.

I.76.4: Although the contents of this verse are pretty straightforward, the syntax is particularly nasty.

The major problem comes in the first hemistich, with *huvé*, whose identity and function are not clear. Or rather what it appears to be is not easily compatible with the context. The form *huvé* and its unaccented counterpart are extremely common and always 1st sg. mid. to $\sqrt{h\bar{u}} / hvā$ ‘call’, with the sense “I call / invoke X.” If we take it in this sense and construe it with the nominative of pāda a, *váhnih* ‘conveyor’, there is semantic mismatch. The most likely referent of the expression *váhnir āsā* “the conveyor by mouth” is Agni, who carries the oblations to the gods in or with his mouth; see *havyā júhvāna āsāni* in the previous hymn (I.75.1) and the next and final verse of this hymn where he performs sacrifice *juhvā* “with his tongue.” He should properly be the object of *huvé*. Old and Ge (WG) interpret the *váhnir āsā* instead as the human poet, who brings the god(s) to the ritual by mouth, that is, by his hymns. This is a clever idea and does allow the 1st ps. interpretation. The problem then is the accent of *huvé*, though it could be classified with the problematic accent in *ā ca váhāsi* in Gotama’s first hymn (I.74.6), which shares the opening *ā ca*. Re does not want to give up the identification of the *váhnir āsā* with Agni (nor do I), and attributes the syntax to anacoluthon: the first pāda is a nominative expression describing Agni, which breaks off and gives way to an abrupt imperative “je (I’)appelle.” The verbal accent remains a problem. I have another equally ad hoc solution: that *huvé* is an infinitive (built like *bhuvé* to $\sqrt{bh\bar{u}}$) and used predicatively, as *huvādhyai* can be. This would solve the problem of accent, but the drawback is inventing an otherwise unattested form that is homonymous with the extremely well-attested 1st sg. mid.

Note the sequence (*vā*)*casā ...āsā (ā) ca ... ca sa(tsī)*.

The other syntactic issue in the verse is the predicated vocative phrase in d: *bodhī prayantar janitar vāsūnām*. My tr. fails to render the predication; others (e.g., Ge) fail to render the voc. There is no good way to do this in English (or German). Note that *vāsūnām* is accented, although oblique cases that are part of voc. phrases often are not (type *sūno sahasaḥ* “o son of strength”).

I.76.5: The comp. *satyatara* is, predictably, rendered as “truer / more truthful” by most, but I think it rather refers to the comparative “reality” of Agni, who is a physical presence at the ritual, against the notional presence of the other gods. Hence my “most truly present,” which should be corrected to “more truly present (than the other gods).” Re’s “plus réel (que tout autre)” is close. See also nearby I.79.1.

I.77 Agni

I.77.1: All tr. take the *kṛṇóti* in d as if it were *ā kṛṇóti* as in 2b, with the meaning “attract the gods hither.” But the *ā√kṛ* idiom in vs. 2 is medial, and there is no *ā* here. I prefer to take *kṛṇóti* as a dummy verb, standing for *yájati*, extracted from *yájiṣṭhaḥ* ‘best sacrificer’. Hence “does so,” that is “sacrifices.” This also helps account for the *íd*.

I.77.2: On the basis of VI.49.6 I most likely want to rethink my interpr. of *tám ... ā kṛṇudhvam* from “attract him here” to “make him your own.” See comm. VI.49.6. Among other things, since “him” is Agni and Agni as ritual fire is already here, we need not attract him here.

The injunc. *véḥ* (*vér* in sandhi) is by most analyses a 3rd sg. to the root pres. to $\sqrt{vī}$ ‘pursue’, despite the -s ending. The same form with the same 3rd ps. value is found in II.5.3 and IV.7.7; see comm. ad locc. I would now be inclined to alter the tr. to “when Agni ... pursues,” to avoid the appearance of an aoristic interpr.

The verse contains yet another example in Gotama’s collection of anomalously accented verbs, here *bódhati* in the sequence *sá cā bódhati*. Cf. *ā ca váhāsi* (I.74.6), *ā ca huvé* (I.76.4), as well as *dhákṣi* (I.76.3). Although it would be desirable to have a uniform treatment of these verbs, esp. those following *X ca*, a unitary account does not come to mind, and I have explained them in separate ways. Here I suggest that we read the adverb *sácā* at the beginning of d and group it with c (“... pursued the gods altogether”). Lubotsky gives only two examples of lengthened *cā*, this one and III.57.5, out of over a thousand occurrences of *ca*, so, as Old (Noten) points out, the form is suspect. Old also considers but rejects a reading *sácā*, though without giving reasons (beyond “kaum wahrscheinlich”). If *sácā* goes with the preceding pāda, *bódhāti* begins a new clause and its accent is correct. Note that in the previous hemistich (2ab), *yáh ..., hótā tám ū ... ā kṛṇudhvam*, the second pāda begins with a nom. *hótā* that likewise belongs to the previous pāda, and a new clause begins with the second word *tám*, whose clause-initial status is emphasized by following *ū*.

I.77.3: Note the verbal play in ... *ná bhūd ádbhut(asya)* ...

I.77.4: There are a number of interconnected difficulties in this verse, mostly focused on what is happening in cd and the relation of this hemistich with the first one. I take ... *ca yé maghāvānaḥ* ... as the second part of an “X and which Y” construction with *naḥ* in pāda a in Wackernagel’s Position: “... for us and (for those) who, our benefactors ...” Old (SBE), Re, and WG (if I am reading this last correctly) also consider “us” and our benefactors to be the conjoined terms, though with differences in detail. Ge, however, takes the benefactors as conjoined with Agni, and they should also $\sqrt{vī}$ our hymns and thought along with Agni. The frequency with which *maghāvānaḥ* (and also *sūrāyaḥ* ‘patrons’) are conjoined with forms of the 1st pl. favors the non-Ge interpr.

Another issue is the identity of the verb *iṣáyanta* in d. Ge seems to take it with the fairly well-established stem *iṣáyati* ‘prosper, derives benefit’ (“... soll günstig aufnehmen”), similarly Re (“jouissent”) and WG (“sich ... erquicken”). With Old (SBE) I take it as meaning ‘send, propel’ and ultimately a deverbal formation from *iṣnāti*, via **iṣāyāti*, of the type *gr̥bhñāti*, *gr̥bhāyāti*, *gr̥bháyati*.

The final problem is the form *tánā*. Ge (/WG) and Re take it as an instr. of accompaniment “along with their offspring/descendents.” This is not impossible, but this meaning is ordinarily found in the collocation *tanvā tánā ca* (e.g., VI.49.13). By itself *tánā* occurs several times with *girā* (e.g., I.38.13, II.2.1) “with song at length,” and I take it that way here as well, semantically construable with *mánma* ‘prayers’ at the end of the hemistich.

I.78 Agni

See the publ. intro. for the structure of this rather dull hymn. Not only is the third and final pāda identical in the first four (of five) verses, but in these same verses the opening of the first pāda is also rigidly structured: *abhī tvā* (vs. 1), *tām u tvā* (vss. 2-4). The remainder of the first pāda of these verses consists of two variant pairs: *gótamā girā* (vs. 1), *gótamo girā* (vs. 2); *vājasātamam* (vs. 3), *vṛtrahāntamam*. It is thus only the second pāda of each verse that contains fully independent material. The *tvā* in the various a-pādas has a slightly different syntactic status in this seemingly rigid schema. In vs. 1 it serves as the goal of the verb in pāda c, with doubling of the preverb *abhī* (a, c). (Alternatively one can supply a verb in ab and an object in c, as Ge (/WG) do, but this seems uneconomical.) In the following two verses it is governed by a verb in pāda b (2 *duvasyati*, 3 *havāmahe*), leaving *nonumaḥ* in c without an expressed object. In vs. 4 it is again the goal of the verb in c, with an apparent embedded relative clause in b.

I.78.4: The use of the epithet *vṛtrahān-*, esp. in the superlative, for Agni is of course striking since this is overwhelmingly an Indra descriptor. The name *agnī-* hasn't yet figured in the hymn, but *jātvavedaḥ* in vs. 1 clearly announces him as the recipient of this praise.

As noted above, the second pāda is technically an embedded relative (assuming that *nonumaḥ* in c governs *tvā* in a).

I.78.5: As noted in the publ. intro., this final verse breaks the pattern of the rest of the hymn, although it maintains the refrain. The aorist *āvocāma* “we have spoken” marks this as a typical summary verse, referring to the activity in the rest of the hymn.

I.79 Agni

See the publ. intro. for the structure of this hymn (or rather the four hymns collected here) and for an analysis of the first three verses.

I.79.1: As Ge notes, the identifications of Agni with sun (a), lightning (b), and fire (cd) are Ludwig's.

Most comm. take *rājasah* as a subjective genitive with *visāré* (most clearly in Ge's “wenn der Raum sich weitert,” referring to morning in his view). I take it rather to refer to the light of the sun's rays (his golden hair) spreading through the midspace at dawn.

The third pāda refers to the blazing up of the ritual fire at dawn. The fourth pāda consists only of a simile, couched entirely in the feminine plural. The referent of these feminine adjectives and the point of comparison with Agni are both unclear. Ge supplies Frauen; Re suggests waters; Old (SBE) waters or dawns. The dawns seem most likely (so also WG), since a sg. dawn already appears in c and dawns make sense in this ritual context. Dawns are called *apāsas* ‘busy’ in I.92.3, also a Gotama hymn, and Uṣas is *yāsasvatī* in X.11.3. If the feminines are the dawns, the point of comparison may be *śúcibhrājāḥ* ‘having bright blazing’, since the dawns are also bright. If instead it is one of the adjectives in pāda d (‘glorious’ *yāsasvatīḥ*, ‘busy’ *apasyúvaḥ*, or ‘actually present’ *satyāḥ*), we must assume that an original masc. sg. adj. has been attracted into the fem. pl. in the simile – not a problematic assumption.

I.79.2: Again, the interpretation of the image in pāda a depends on what the referent is. Most (Ge, Re, WG) take *suparṇā(h)* as referring to Agni's flames as birds. These flames transform themselves (*ā ... aminanta*) into storm clouds. As indicated in the publ. intro., I instead think this verse develops the image of Agni as lightning found in 1b. The *suparṇāh* are then the lightning flashes. This entails a somewhat bold interpretation of the verb (though I would say no bolder than 'transform themselves', for which no parallels are cited), from 'change, exchange, alternate' to the physical image 'zigzag', from 'change/alternate back and forth'. The middle of $\sqrt{m\bar{r}}$ is several times used of night and dawn swapping their colors back and forth (I.96.5, 113.2), which can be conceived of as an alternating pattern like zigzags. Against the flickering light of the lightning there appears the black bull, that is, the thunder cloud, in b.

The nonce perfect *nonāva*, backformed to the intensive (see the repeated *nonumaḥ* of the immed. preceding hymn I.78), I take as presential, with Narten (1981 "Vedisch *lelāya*," p. 2 with nn. 7, 8, = KISch. p. 234), against most comm., although no harm would come of taking it as a preterite.

The pāda-final tag *yādīmām* is curious. It cannot be part of what precedes, since *nonāva* is unaccented. The same phrase is found at IV.5.11, where I tr. "if it is here." I interpret it in the same fashion here, but in addition assume an enjambement with the following pāda. Others keep it within its half verse (which I would prefer), but in their interpretation the phrase seems like mere filler (e.g., Ge's "wenn dies (so ist)").

The smiling females of c must be the lightning flashes (so also Ge, Re); cf. V.52.6 *vidyútaḥ ... jājjhatīr iva* "lightning flashes like giggling (girls)." Old (SBE): rain showers, WG (tentatively): dawns. The "he," subject of *āgāt* is the black bull of b, the thundercloud as roaring fire.

For the semantic connection between these parts of the thunderstorm and the aspects of fire see the publ. intro.

I.79.3: I take ab as a parallel and paraphrase of 2c, with Agni/the thunder cloud leading (*nāyan*) the lightning flashes, while himself swollen with rain. Others supply different objects, and a radical (and in my view misguided) view of the passage makes *nāyan* a 3rd pl. finite verb with Agni as its object – quite awkward because he is in the nominative in pāda a (*pīyānaḥ*). Those who hold that view resolve the syntactic problem in ad hoc ways, by emendation (**pīyānaṃ* Old [SBE], subsequently rejected in Noten) or by taking *ṛtāsya pāyasā pīyānaḥ* as a parenthetical (Re).

It is unclear whether *pārijmā* is meant as an epithet of Varuṇa or a separate entity. Arguments can be made either way: in VII.40.6 the adjective qualifies wind and is associated with rain, and having Wind (Vāta) involved in this thunderstorm context would be understandable. On the other hand, a fourth god would break up the unity of the standard Āditya triad. The same pāda is found in X.93.4, but in the context of a longer list of gods.

Ge, Re take the "skin" as that of the earth, but I think it is rather the clouds in the lower atmosphere. So, more or less, Old (SBE) and WG. Cf. nearby I.62.5 (attributed to a Gautama) *divó rāja ūparam astabhāyaḥ* "you propped up the nearer realm of heaven."

I.79.5: The irregular sandhi of *vāṣuṣ kavīḥ* may be based on that in nearby *vidúṣ kavīḥ* in I.71.10, though the hymns are attributed to different poets. On this sandhi phenomenon in general, see comm. ad VII.18.2.

I.79.6: I take the point of the double *utá* construction (probably, with Klein DGRV 359, a nonce based on *ca ... ca*) to be the contrast of the two time periods: at night Agni must burn against the demons by himself (*tmánā*), but when Dawn comes, her light helps him out.

I.79.7: Since this is the first verse of a hymn in Gāyatrī (vss. 7-9), I take *gāyatrasya* as a reference to a composition in that meter, rather than just a song.

On the basis of X.4.1 *vándyo no háveṣu*, I construe the loc. in c with the gerundive.

I.79.9: I supply *bhara* from 8a; giving the matching verse openings, *ā no*, and the same object *rāyīm*, this seems the correct choice (so also Ge, Re, WG). It would also be possible to make *rāyīm* here the object of *dhehi* (so Old [SBE]). There are no consequences either way.

I.79.10: The middle voice of the impv. *bhārasva* is correlated with the self-addressed of the poet. See Jamison 2007: 104; 2009 [Skjaervo Fs.], esp. p. 70, and VII.88.1.

I.79.11: The unusual post-verbal, pāda-final *sāḥ* is a nice match for the initial *yāḥ* that it picks up.

I.80 Indra

I.80.1: Old takes *śasā(h)* to $\sqrt{śā}$ ‘sharpen’ rather than $\sqrt{śās}$ ‘order’ (as does Re, judging from his portmanteau and barely comprehensible tr. “as-chassé-comme-en-aiguissant”), but there seems no advantage in this. Neither root is found elsewhere with *nīḥ*, but a literal additive tr. of *nīḥ* $\sqrt{śās}$ works well here. And $\sqrt{śā}$ does not have a reduplicated form of this shape, whereas $\sqrt{śās}$ has a pf. *śasāsa* (etc.), to which this can be a (plupf.) injunctive. So Kü (521), as well as Gr, etc. The *nīḥ* found in vss. 2 and 4 (also 10), also of the expulsion of Vṛtra, may account for the use of this preverb here: it seems to be a signature word of this hymn.

I.80.3: As noted in the publ. intro., this verse represents a quoted example of the “cheering on” alluded to in the refrain.

I.80.4: Ge suggests that the waters are “accompanied by the Maruts” (*marútvatīḥ*) because the waters here are storm-rains. Although in a Marut context this would seem reasonable, in this Vṛtra-smashing context the waters should not be rain but the rivers confined by Vṛtra, and this interpretation is in fact possible here. Note that Sarasvatī, the river par excellence, is called both *marútvatī* (II.30.8) and *marútsakhā* (VII.96.2); this association must be a mediated one: the river is accompanied by or the companion of the Maruts because their storm-rains swell the rivers.

I.80.5–6: I don’t see any real difference between *áva jighnate* (5) and *ní jighnate* (6) that could account for difference in case frame: acc. in 5, loc. in 6.

I.80.7: In c I supply a preterital form of the redupl. *jighnate* of the last two verses (**ájighnathāḥ*, though no forms with sec. endings exist to the stem), because the main clause verb is the suppletive aorist to \sqrt{han} , *avadhīḥ*.

I.80.8: On pl. *vájṛāsah* see publ. intro.

I.80.9: With Re I take the numbers to refer to the people producing the songs, rather than the songs or song-types themselves (as in the interpretation of Ge [/WG]). The problem is that *vimśatīḥ* is undeniably nominative, so the tr. “zu zwanzig” (and parallel “zu tausend”) (Ge, [/WG]) misrepresents the grammar.

I.80.12: Ge tr. *vépasā* as “durch seinen Wortschwall,” with the verbal (“Wort-“) component presumably on the basis of *vípra-* ‘inspired poet’. But near-adjacent *vépete* in 11b, which refers only to physical trembling with no verbal component, is surely the word against which to interpret it.

Augmented *āyata* is one of the few clear occurrences of a thematic med. pres. to \sqrt{i} .

I.80.13: The expression in ab is striking, with Indra presiding over a fight between *Vṛtra* and his (=Indra’s) missile, but such is the usage of *yodháyati*, as opposed to *yúdhyati* ‘attacks’ (see Jamison 1983: 151)

I.80.14: The phrase *yát sthā jágac ca* is curiously formed, though the meaning is clear. Because the verb *rejate* is unaccented, the *yád* cannot mark a “real” subordinate clause. I wonder if it does not involve the imposition of an “X and which Y” construction on an indivisible merism. In other words, with an “X and which Y” we might expect **sthā yác ca jágat* “the still and what is moving”; cf. X.88.4 (also adduced by Ge) *sthā jágad yád* with a similarly pleonastic and apparently misplaced *yád*. But *sthā jágat* is a fixed expression and nothing can be inserted into it.

Note the repetition of *cít táva manyáve* from 11a, again with a verb of trembling (*vépete* 11b, *vevijyáte* 14d) and an instr. of fear (*bhiyāsā* 11b, *bhiyā* 14d).

I.80.15: *ná ... káḥ* must be read as a negative indefinite (“no one”) despite the absence of an indefinitizing particle like *cít*.

I.80.16: Although the first hemistich begins with a rel. pron. (*yām*) and the second with a form of *sá / tám (tásmīn)*, this is not a rel. cl. / main cl. structure, as the difference in gender between *yām* and *tásmīn* shows. The latter has Indra as referent, and the former, which modifies *dhíyam* ‘poetic vision’ in b, is loosely picked up by *bráhmāni ... ukthā* “sacred formulations and hymns” in the main clause. In fact, I think the referent slippage is deliberate, with *bráhmāni* being the culminating product in our day of the age-old *dhí*

of ab, attributed to legendary priest-poets. Recall that this verse is in ring-compositional relationship with vs. 1, where a *brahmán-* creates poetry in the new style.

I.81 Indra

I.81.2: see vs. 6 below.

I.81.3: Note the alliteration in b: *dhṛṣṇáve dhīyate dhánā*, a phrase that also contains an example of neut. pl. with sg. verb (*dhīyate dhánā*).

I.81.6: This verse paraphrases and expands vs. 2. The nominal expression in 2b *ási bhūri parādadiḥ* is turned into the verb *parādádāti* in 6b; *śikṣasi* in 2d is echoed by *śikṣatu* in 6c; the phrase *bhūri te vāsu* is repeated verbatim (2e, 6d); and the dative beneficiaries in 2 (*yájamānāya* 2d, *suvaté* 2e) are replaced by *dāsúṣe* (6b) and, more tellingly, *asmábhyam* (6c). The source of the wealth that Indra distributes is also made clear: it belonged to the stranger and is presumably plunder.

I.81.7: Most tr. render ab in the 3rd ps., but there is no 3rd ps. verb here, and the phrase is surrounded by 2nd ps. constructions (*táva* 6e, 2nd ps. impv. *grbhāya* 7c). Nothing forbids an underlying *tvám* in ab.

Ge supplies “us” with *śísīhi*, but, although this collocation does occur, I don’t feel it’s necessary in this context.

I.81.9: On *antár√khyā* see disc. ad V.30.9. I suggest there that ‘detect’ is a semantic development of ‘look within’, but also that a diff. tr., ‘distinguish between’ might be a worthwhile alternative: Indra would be distinguishing between the possessions of the unworthy, which he should bring to us, and those of the deserving.

I.82 Indra

I.82.1: *artháyāse* owes its accent to *íd*.

I.82.2: Most tr. take the two verbs *ákṣann amīmadanta* as parallel (e.g., Ge “Sie haben ja geschmaust, gezecht”), but the position of the *hí* after the second verb strongly suggests that the second verb belongs to a separate clause that provides the causal grounds for another clause. My translation reflects this: “for they have brought themselves to exhilaration” explains what “they have eaten” actually refers to: the consumption of soma or soma plus food-offerings. Then in b, as a consequence of their having received nourishment from us, they repay us with goods.

Most tr. take *priyā(h)* in b as nom. pl. masc. referring to the Maruts; this requires supplying an object for *adhūṣata* (e.g., Re “des biens”). I take it rather as an acc. pl. fem., implicitly referring to a fem. noun like *īṣaḥ* ‘refreshments’; cf. X.134.3 *áva tyā brhatīr īṣaḥ ... dhūnuhi* “shake down these lofty refreshments,” with the same VP.

With Old, etc., *vīprā* must be a fem. instr. sg. modifying *matī*.

I.82.3: The exact sense of the hapax *pūrṇāvandhura-* ‘having a full chariot box’ is not entirely clear. Ge suggests that it is full either because Indra has drunk so much or because he is taking Opfergabe home with him; Re goes for the latter: “plein (de biens).” This seems unlikely, since Indra is supposed to *bring* goods to distribute to us, not take them away with him like party favors. Moreover the *vandhúra-* appears to be the place where the charioteer stands (cf. the cmpd *vandhureṣṭhā-*, as well as I.139.4, III.14.3), not a container for cargo. Although a jocular interpretation like Ge’s is possible, I wonder if a “full chariot box” is simply one that has the driver in it; in other words, Indra has mounted the chariot and is ready to go. In any case, *pūrṇá-* here has to be read in the context of the same word in the next verse.

I.82.4: I am puzzled by the reference here. The referent of *cd*, the one who makes sure Indra’s cup is full, should be the sacrificer, but the sacrificer should not be mounting Indra’s chariot. We might entertain the possibility that Indra is actually the referent (and is looking out for his own interests by making sure the cup is full), but, though switch between persons is very common in the RV, referring to the same referent in both 2nd and 3rd persons in the same clause does not happen, as far as I know – and there’s a voc. *indra* in the 3rd ps. *yāh ... cīketati* clause.

I.82.6: With *dadhiṣé* we can supply either ‘reins’ or (as sometimes elsewhere with √*dhā* and a loc. of ‘hand’) the *vájra-* (cf., e.g., VI.45.18 *dhiṣvá vājraṃ gābhastyoh*). The presence of voc. *vajrin* in d might support the latter interpr.

The Pp. reads *amadaḥ* in d. This causes interpretational difficulties: Indra was ordered to leave the ritual ground and drive off to his wife in the immediately preceding verse; he is still here in this verse, so how can he have already become exhilarated in the company of his wife? Re must have recognized the problem, given his tr. “tu t’es (tousjours) enivré avec ta femme,” but this doesn’t work very well. However, nothing prevents us from reading *pátnyā madaḥ*, with an injunctive, not an augmented form. It is true that injunctive forms are quite rare to this stem, but this does not seem to me a decisive argument. (I now see that WG also take it as an injunctive, independently.)

I.83 Indra

I.83.1: Most tr. take *vícetas-* as ‘perceptive’ vel sim. (Ge “die verständigen (?) Gewässer,” Re “les eaux discernantes”), but in this context it makes more sense to use the intransitive sense of the root √*cit* ‘be perceptible, appear’ rather than the I/T ‘perceive’; hence, with *ví*, ‘widely perceptible, conspicuous’. The point of the simile is surely that the goods with which Indra supplies the worshiper are abundant enough to be easily visible, like the sparkling waters filling a river. Note the case disharmony: logically the waters are compared not to Indra, but to the goods he bestows.

I.83.2: This verse presents a number of small problems of interpretation, and it helps first to determine what the verse is about in general. It seems to involve the gods’ ritual approach to the place of the soma-pressing. They are compared to the goddess waters in *pāda* a because waters are brought at the soma-pressing to mix with the pressed soma (cf. IX.69.4, e.g.). The identity of “the one who seeks the gods” (*devayú-*) in c is not entirely

clear, but my assumption is that it is soma. I also assume that the acc. in d does not refer to the soma, but rather to the priest-poet, though it is not impossible that the two accusatives have the same referent, most likely in that case the priest-poet.

In b (with Ge [/WG]) I take the shared term of the simile to be *vítatam* ‘extended, extensive’. Both Ge and WG supply “Opfer” in the frame, but I would suggest that it is, more specifically, the soma-filter, which is elsewhere so qualified. Cf. IX.83.2 *tápoṣ pavítram vítatam divás padé*, where the filter has cosmic dimensions, as it would here.

In d *brahmaprī-* is universally taken as ‘loving the formulation’, and this interpr. would match that of well-attested *brahma-dvís-* ‘hating the formulation’. However, both here and in its other occurrence in I.152.6 I take it instead as ‘pleasing [someone] with the formulation’ with the transitive value of act. *prīṇāti*, etc. In this passage it makes more sense that the gods would delight in someone attempting to please them, rather than someone who is himself deriving pleasure from something else. The passage in I.152.6 invites a similar interpr. See also *yajña-prī-* in X.122.6 and comm. thereon.

I.83.3: With Ge (/WG) I take the two as the Hotar and Adhvaryu priests, with pāda a appropriate to the former and b to the latter. Although it is something of a surprise to find the charged word *mithunā*, which is usually used of a sexual pairing, applied to two males, it is presumably because the two priests have complementary duties. I do not think that it refers to the sacrificer and his wife, contra Old (flg. Benfey). As I have argued at length elsewhere (Jamison 2011, 2016 [2007 UTexas Vedic conf.], and 2018 [2006 World Skt. Conf. Edinburgh]), I consider the ritual Patnī to be a ritual role introduced only in the late RV and very controversial at that time, and I doubt that she would be so casually alluded to here.

I.83.4: Assuming a thematic stem *āṅgira-* here is unavoidable, next to the far more common *s-stem āṅgiras-*.

In order to give *ād* its usual temporal reading (“just after that”), I follow Old in assuming that pāda b provides the grounds for the *Āṅgiras*’ acquisition of life-force.

The standard tr. (Ge, Re, WG) take *prathamām ... váyaḥ* as a syntagm (“first youth,” vel sim.), whereas I take *prathamām* as an adverb. Their evidence is VII.97.1 *prathamām váyaś ca*, but there the position of *ca* favors separation of *prathamām* and *váyāḥ*. See comm. ad loc.

Ge and Re supply a verb in d, but this seems unnecessary; the accusatives here can simply expand on *bhójanam* in c.

I.83.5: This verse seems to jumble together a lot of primal mythology that does not seem to be connected (or, rather, whose connection eludes me). As noted in the publ. intro., vss. 4–5 describe the first institution of the sacrifice and touch on a number of the primordial players. It is esp. noteworthy (but I don’t quite know what to do with it) that vs. 4 contains the *Āṅgiras*es and vs. 5 *Atharvan*, reminding us of the old designation for the *Atharva Veda*, *atharvāṅgirasah* (see, e.g., Bloomfield, Intro. to *Hymns of the Atharvarveda* [SBE 42, 1897]).

The form *tate* is a pseudo-perfect to \sqrt{tan} ; at this period we would expect **tatne* (which we in fact get at X.130.2). The light root-syllable is metrically guaranteed. Kü (210) points out that it is formed as if to a root $\sqrt{tā}$, and such a root morpheme could have

been extracted from the passive *tāyāte*. I would add that, as with many aberrant forms, the context invites this form: note the immediately following word, opening the next pāda, *tātaḥ* (recall also *vītatam* in 2b).

Note the chaining of *ājani* (b) ... *ājat* (c) ... *jātām* (d), with the middle term belonging to a different root (\sqrt{aj}) from the first and last (\sqrt{jan}).

I.83.6: The relation between the three subordinate clauses (abc) and the main clause is irregular in that *tāsya* in d does not pick up a relative pronominal referent. I take it as referring to the sacrificer who has been regularly present in the hymn (the present-time vss. 1-3). Ge and Re may well be right that the *kārū-* ‘bard’ of c, which is identified with the pressing stone, is its logical referent.

I.84 Indra

See the publ. intro. for the structure of this composite hymn.

I.84.1: Unlike the standard tr., WG take *rājāḥ* ‘Raum’ with the frame, not the simile: “... soll dich (und) den Raum erfüllen, wie die Sonne ...” I assume this is because the simile particle *ná*, which usually follows the first word of a simile, here follows the second word, by most interpretations (*rājāḥ sūryo ná raśmībhiḥ*). This does not seem to me sufficient reason to split apart this cosmological image. I attribute the position of *ná* to the particularly close association of *sūrya-* and *raśmībhiḥ*, which are frequently adjacent (cf. esp. the identical simile but without a third term ... *sūryo ná raśmībhiḥ* in VIII.43.32, IX.41.5).

I.84.2: Note the chiasmic structure of cd: [*īśīṇām* (GEN.) *ca stutīḥ* (ACC.)] *úpa* [*yajñām* (ACC.) *ca mānuṣānām* (GEN.)]. This could have been sketched in tr. by “up to the seers’ praises and the sacrifice of the sons of Manu.”

I.84.7–9: Bloomfield (RR, ad I.7.8) suggests that each of these three verses reads like a brahmodya, with the last two words (the four-syllable tag *índro aṅgá*, which he considers to be prose “quite out of the metre”) serving as the answer. This analysis works best for vs. 7, but his separation of the two-word tag from the rest of the verse is clearly correct for all three verses -- though I do not think we need to consider *índro aṅgá* “simple prose.”

I.84.7: I take *índro aṅgá* as the main clause corresponding to the rel. cl. introduced by *yáḥ*.

I.84.8: The hapax *kṣúmpa-* is universally rendered by modern tr. as ‘mushroom’, though there is no unanimity in earlier interpretations (cf., e.g., Gr: Staude [perennial plant]). There is some etymological support for ‘mushroom’ from modern languages (see EWA s.v.), and ‘mushroom’ works well in the simile, since kicking many varieties of mushroom demolishes them, whereas a perennial plant is generally a sturdier entity. I might go so far as to suggest specifically a puffball, since kicking puffballs releases a satisfying cloud of dust (easily viewed on various YouTube videos), and puffballs do appear to be found in the appropriate geographical area.

I.84.9: A broken construction. The subject of the 3rd ps. verb in c (*patyate*) must be Indra, though he is represented by 2nd ps. *tvā* in the apparent rel. cl. of ab. (The parallel in III.36.4b *ugrām śávaḥ patyate dhṛṣṇv ójaḥ*, where Indra is undeniably the subject, makes it clear that the mortal soma-presser of our ab cannot be the subject of *patyate*.) The *yá*-clause of ab thus has no direct grammatical connection with what ought to be its main clause in c, and I therefore take *yás cid* as the functional equivalent of the indefinite *kás cid*.

I.84.10-12: See publ. intro. for the structure of this *trca* and its relation to I.80. The subjects of all three verses are feminine (*gauryàḥ*, *yāḥ* ... *sayāvarīḥ* 10; *tā(h)* ... *prśnayaḥ*, ... *dhenávaḥ* 11; *tā(h)* 12; *vāsvīḥ* 10-12), but, in my opinion, the hidden referent of all three verses is the Maruts. See also comm. on vs. 16.

I.84.10: Ge (followed by Re, WG) takes the feminine plurals as referring to the milk streams, mixing with the soma, here called honey. This of course accords well with the feminine gender, and I agree that this is the first layer of reference. But both the refrain, echoing the refrain of I.80, which has the Maruts as one set of subjects, and *sayāvarīḥ* ‘fellow travellers, driving along with’ point to the Maruts as a second layer. The adj. *sayāvan-* is used 3x (out of 6) with the instr. pl. of *devá-*, once (X.113.2) quite clearly of the Maruts along with Indra. Moreover, the root *√subh* (here in the dat. *śobháse*) is characteristic Marut vocabulary. Why would the hyper-masculine Maruts be referred to with feminines? I think the point is to conflate two of the sources of Indra’s mastery: the soma-milk mixture animatized as cows, which enhances his physical strength, and the Maruts, who provide verbal encouragement and moral support.

I construe instr. *vṛṣṇā* with *sayāvarīḥ* rather than with *mádanti* as most tr. do. The latter is of course possible.

I.84.11: This verse contains another clue that the Maruts are the underlying referent. The fem. subjects are identified as *prśnayaḥ* ‘dappled’, but *prśni-* is also the name of the Maruts’ mother. They would be called *Prśnis* here, just as they are regularly called *Rudras*, after their father *Rudra*.

Note the phonetic figure *prśanāyúvaḥ* ... *prśnayaḥ*.

I.84.13: The use of the bones of *Dadhyañc* as a vajra-substitute is a particularly puzzling part of this puzzling version of the *Dadhyañc* myth. The appearance of this motif in the JB and MBh versions (see Ge n. on vss. 13–15) seems to me an after-the-fact rationalization of the verse here.

I.84.14: The syntax of this verse is somewhat unclear. I take ab as a rel. clause with the pres. part. *ichán* functioning as the main verb and an unusual, indeed disturbing, position of the rel. pron. *yád* (we might expect **ichán yád áśvasya* ...), which is then picked up by *tád* in the main clause of c. Most other tr. take *ichán* as part of the main clause and the *yád* as the marker of an embedded rel. cl.: roughly “seeking the head of the horse, which was set away in the mountains, he found it...” But not only would I prefer not to allow

embedded relatives in the RV, but the position of *yád* makes this interpretation difficult, too (expect **ichánn áśvasya śírah yád ...?*).

I.84.15: I confess myself to be entirely baffled by this verse, though the grammar is straightforward. Ge's reconstruction of the mythology (n. to vs. 15) is not entirely compelling, nor is that found in WG.

I.84.16: The consensus of modern tr. is that the objects that the subject is struggling to yoke are the priests (see esp. Ge), but I find this unlikely. The violent adjectival descriptors seem uncharacteristic for priests, but quite suitable for the Maruts, to whom the poet of this hymn (now drawing to a close) will dedicate the next four hymns. Note esp. that both *śímivant-* and *mayobhū-* are used of the Maruts, once in the same hymn (VIII.20.3 and 24 respectively; for *mayobhū-* see also I.166.3, V.58.2). I therefore take the Maruts as referents of the acc. pls. and also suggest that this verse is the pivot for the Marut reference found also (in my interpretation) in vss. 10–12. In that *ṛca* the Maruts are referred to in the guise of clearly feminine bovine figures; here the cattle (*gāh*) are the first acc. object we encounter. Because *gó-* has fluctuating gender, this form can of course be feminine (as the bovines were in 10–12), but the immediate following adjectives establish it decisively as masculine. If both 10–12 and this verse refer to the Maruts, this verse returns them to their proper grammatical gender. Lüders (*Varuṇa* II.455) also thinks the Maruts are the referents.

ṛtásya can be construed with either *dhurí* or *gāh*, and tr. divide on which they choose. I attach it to the chariot pole in part because *ṛtásya* is often construed with a place (e.g., frequent *ṛtásya yóni-*), but the other is not impossible: cf. I.73.6 *ṛtásya ... dhenávaḥ*.

I.84.17: Contra the interpretation of *ibha-* as 'elephant' in Vedic (so Ge), see EWA s.v.

I.84.18: *yajātai* is, as far as I can tell, the only RVic examples of a medial 3rd sg. subjunctive in *-tai*, the form that takes over beginning with the AV, spreading from the 1st sg. As such it may be a sign that at least this part of this last hymn in the Indra group is late.

Pāda c presents a problem that has been glossed over by most modern tr.: the active of *ā́ vah* should take an acc. of what is being conveyed, but it is distinctly odd to say that the gods are bringing the oblation here. Ge (Re, WG) avoid the difficulty by interpreting the verb as intrans. 'fahren' ('arriver-en-char'), a usage associated with the middle, with *hóma* an acc. of goal. Old, however, disapproves of this makeshift (as do I), setting out the arguments very clearly. Though he agrees that "der Gedanke befremdet," he sticks to the expected syntax (as do I) and cites a number of passages in which gods do bring oblations. The closest is V.41.7 in which Night and Dawn bring the sacrifice to the mortal (V.41.7d *ā́ hā vahato mártiāya yajñám*). I suggest that the role-switch in this verse (gods bring the oblation, rather than coming to our oblation to take it away) is also found in the next verse, where the god praises the mortal.

I.84.19: As in the last verse the usual ritual roles of god and mortal are reversed, with Indra producing a *praśasti* of a mortal. I do not understand why, but, unlike 18c, there is

no way to wriggle out of the undeniable purport of this verb phrase – thus supporting the “gods convey the oblation” interpretation of 18c.

tvám aṅgá reprises the tag of vss. 7–9, *índro aṅgá*, with of course the same referent.

I follow Ge (/WG) in taking vs. 20 as the quoted *vācaḥ* of pāda d, though it would be equally possible to interpret *vācaḥ* as referring to what precedes, indeed even to the whole of the hymn.

I.84.20: It is tempting to take *dabhan* as related to or contextually assimilated to *dabhrá-* ‘paltry, few’ in the meaning ‘come up short’, though the *asmān* would be more difficult to construe.

I.85 Maruts

On the concatenative repetition in this hymn, see publ. intro.

I.85.1: Because of the frequent association of the root $\sqrt{su(m)bh}$ with verbs of motion, esp. $\sqrt{yā}$ ‘drive’ (cf., e.g., nearby I.88.2 *śubhé kām yānti* and cmpds *śubham-yā(van-)*), I interpret *prā ... śumbhante* more dynamically than most tr. (e.g., Ge “Die sich wie Frauen schön machen...”), esp. given *yāman* in the same clause.

The connection of the relative clause in pāda a with its presumed main clause in d is interrupted by the *hí* clause in c. Ge convincingly suggests that the *hí* clause gives an explanation or exemplification of the “wondrous power” attributed to them in the last word of b, *sudāmsasaḥ*, and he is followed by most tr. including me.

This clause contains a periphrastic causative *cakrīré vṛdhé* with a medial perfect as its base (see Zehnder, *Das periphrastische Kausativ im Vedischen*, pp. 23, 50–51). Although there is no doubt that the construction is a periphrasis, the reason for its use is unclear. As Zehnder points out (pp. 23, 51), the imperfect of the well-attested morphological causative occurs with just this object in VIII.12.7 *yāt ... ródasī ávardhayat*. The context here, which contains two present indicatives (*śumbhante* a, *mādanti* d), does not call for a perfect. I suspect (but cannot demonstrate) that the use of this periphrasis with the perfect has something to do with the middle voice of *cakrīré*, which is also apparently unmotivated in the periphrastic construction, and that there is an underlying pun -- on *rodasī*, the consort of the Maruts -- namely “the Maruts made the two worlds/*Rodasī their own” (*ródasī ... cakrīré*), which would require a medial form. Since, as I demonstrated long ago (“Voice Fluctuation in the Rig Veda: Medial 3rd Plural -*anta* in Active Paradigms” *IJJ* 21 [1979]), 3rd pl. medial secondary forms in -*anta* to -*āya*-formations are almost universally interpretable as re-marked actives in -*an*, using **avardhayanta* here would not allow the proposed double reading, with a true medial value in the pun. A different pun is also possibly latent here, involving a reflexive reading of the middle: “they made *themselves* grow strong” (*cakrīré vṛdhé*). This interpretation would feed naturally into the beginning of verse 2: *tá ukṣitāsaḥ* “once grown,” and 7a *té ‘vardhanta svátavaso mahitvanā* “Those self-powerful ones strengthened themselves in their greatness” would echo this reflexive interpretation. In both of these suggested puns, one of the words in the pāda has to be ignored (*vṛdhé* in the first, *ródasī* in the second), but the suggestive if partial phraseology in both cases would resonate with the audience.

It is also worth noting (though I don't quite know what to do with this fact) that of the fifteen occurrences of *cakiré / cakrire* in the RV, four of them are found in this hymn (vss. 2, 7, 10 in addition to this one), a strikingly large percentage. And that the three finite verbs in vs. 2 are all medial 3rd pl. with strong subject involvement: pāda a *mahimānam āśata* “obtained (their own) greatness,” b *cakrire sādah* “made (their own) seat,” and c *ādhi śrīyo dadhire* “put on (their own) splendours.”

I.85.2: On the verbs in this verse, see final comments on vs. 1.

I.85.3: The pf. *dadhire* of b is not in harmony with the three pres. forms, *śubháyante* a, *bādhante* b, *rīyate* c; in particular, the tenses of the subordinate-main clause dyad in ab clash: “when they beautify themselves ..., they have put on ...” (The tr. avoids the clash by using simply ‘put’, ambiguous between present and past in English, but the Sanskrit is not so amenable.) It is difficult to wring a stative/resulative meaning (“they have put on and now have on ...”) out of *dadhire*, esp. given the identical form in preterital use in 2d. It may be best to assume that *dadhire* here just echoes the form in 2d, though it might be worth noting that the 3rd pl. mid. present indicative to the redupl. pres., *dádhate*, which we might expect here, is quite rare. However, there is another possible solution to this clash. The pres. *śubháyante* in the *yád* clause in pāda a appears before vowel-initial *añjībhīḥ* in the cadence, with, as is usual, the final -e scanning short in hiatus (that is, probably as *-a’). It is possible that the underlying form of the verb was actually the injunctive **śubháyanta* and that the primary ending -*ante* was substituted editorially to prevent the redactional contraction that might have resulted (**śubháyantāñjībhīḥ*). This would allow a past-time reading of the first hemistich, “When they beautified themselves ..., they put on ...”

I.85.4: This verse contains no main clause, just two different subordinate clauses introduced by *yé* (ab) and *yád* (cd) respectively, with the first couched in the 3rd ps., the second in the 2nd ps. Although such switches of person in the middle of a verse are far from rare in the RV (see in fact vs. 5), in this case it seems best to consider the first half of this verse a pendant to vs. 3 (also in the 3rd ps.) and the second half an anticipation of vs. 5 (also in the 2nd ps.), esp. since 5a is an abbreviated duplicate of 4cd.

The adj. *manojúvaḥ* ‘mind-swift’ could equally well be a nom. pl. masc. modifying the Maruts or an acc. pl. fem. modifying *pr̥ṣatīḥ*. Most tr. opt for the latter, I think correctly on thematic grounds, but grammatically and semantically either is possible. Gr and Macd (Vedic Reader) take it as a nominative; certainly its position right before *marutaḥ* in pāda a, with *pr̥ṣatīḥ* appearing only in the middle of the second pāda, suggests that the initial audience interpretation would be as a modifier of the Maruts.

I.85.4–5: Verse 5 is an intrusive Triṣṭubh in this Jagatī hymn. (The final verse is also in Triṣṭubh, but meter change is more usual in concluding verses.) The transition between the meters is cleverly managed here (as Old already pointed out): the final word of 4d (in Jagatī) and 5a (in Triṣṭubh) is *áyugdhvam*. The ending has the distracted reading -*dh^hvam* in 4d, but is simply -*dhvam* in 5a. The reason for the change in meter is unclear to me.

I.85.5: As noted ad vs. 4, the person changes from 2nd to 3rd in the middle of this verse. But this is not the only disruption: the main clause of 5cd begins with *utá*, which has nothing to conjoin. Klein (DGRV I: 451) is puzzled and suggests, somewhat desperately, that the *utá* “focuses on and emphasizes the second action of the Maruts.” This seems to open the usage of *utá* unacceptably wide. It is possible instead to see it as an example of “inverse *utá*,” conjoining the actions of the two clauses of cd, with the parallel verbs *vī syanti* and *vy undanti* (so also explicitly Macd, Reader). Or it may be signaling the resumption of 3rd ps. discourse after the 2nd ps. intrusions of 4cd–5ab.

The inundation of the skin in pāda 4 presumably refers to the wetting of hides in the tanning process (so Ge).

I.85.6: In vs. 1 the Maruts were themselves called *sáptayah* ‘spans’, but here that image is “repaired” by separating the Maruts from the spans of draught animals that bring them here.

The two *raghu*- cmpds. pick up *raṁháyantaḥ* in 5b.

The phrase *urú vah sádas kṛtām* could technically be in apposition to *barhīḥ* and hence accusative -- “Sit on the barhis, the broad seat made for you” -- but none of the standard tr. so render it. The position of the *vah* favors, but does not impose, this nominal sentence interpretation. For another reason supporting a separation into two clauses see comm. ad I.85.7.

The seat made for the Maruts on the ritual ground is here contrasted with the one they made for themselves in heaven in 2b (*diví ... ádhi cakrire sádaḥ*), which event is then repeated in the next verse, 7b *urú cakrire sádaḥ*, though there the seat is in/on/above the “vault” (*nākam*).

I.85.7: I tr. *avardhanta* as reflexive, rather than (with most tr.) intransitive ‘grew strong’, in part because *svátavas*- suggests that their power comes by their own efforts and in part because of its resonance with one interpretation of 1c, for which see above.

On pāda b see comments ad 6c and the similar phrase in 2b. The accent of the apparent main verb *tasthúḥ* is surprising. Macd (Reader) invokes the principle that the first of two antithetical verbs is accented, but this seems a feeble explanation of this particular situation. Ordinarily such antithetical verbs are adjacent to each other and the semantic antithesis is clearer: “they mounted” and “they made” do not seem particularly antithetical. I see two possible explanations: either the *ā ... tasthúḥ* clause should be taken as an unmarked subordinate clause (“[when] they mounted the vault, they made ...”) or the “antithetical” explanation is correct, but the verb to which it is antithetical is not the following *cakrire*. Instead it is found in 6c, whose two clauses are in patterned contrast to 7b:

6c	<i>sīdatā barhīr</i>	<i>urú vah sádas kṛtām</i>
7c	<i>ā nākam tasthūr</i>	<i>urú cakrire sádaḥ</i>

The second part of both pādas contains *urú sádaḥ* √ *kṛ*, the first parts contain the preverb *ā*, main verbs built to the semantically oppositional roots √ *sad* ‘sit’ (*sīdata*) and √ *sthā* ‘stand’ (*tasthúḥ*), and an acc. of goal, again oppositional, in that the *barhīḥ* of 6c is on the earthly ritual ground and the *nākam* is in heaven. I therefore think it likely that the accent on *tasthúḥ* is meant to signal the contrastive relationship between the two pādas.

The Pp. analyses *dhāvad* as *ha āvat*, and most tr. follow this interpretation, as containing an imperfect of *√av* ‘help’ (Ge “Als Viṣṇu dem ... Bullen ... beistand...”; Re “eut aidé”; Macd “helped”). (An injunctive *āvat* would also be possible.) However, we are likely dealing with a double, or even a triple, word play here, for *dhāvat* can also simply be the 3rd sg. injunctive belonging to the root (or rather roots) *√dhāv* ‘rinse’ and ‘run’. This is recognized by WG, who translate with the second, “Als Viṣṇu zu dem vom Rausch bewegten Stier läuft...,” but in the notes also raise the possibility of ‘rinse’, referring to Gotō (*Präsensklasse* p. 186 n. 333), who in turn refers to Pirart (*III* 27 [1984] 102ff.).

I think that the two primary readings are “rinsed” and “aided” and that the acc. object *vīṣaṇaṃ madacyūtam* has different referents depending on the interpretation of the verb, namely soma and Indra respectively. This ambiguity is made possible by the fact that *vīṣan-* ‘bull’ is very commonly used of both Indra and soma. The modifying cmpd. *madacyūt-* also has two different interpretations, enabled by the functional ambiguity of root noun compounds like this. Root noun second members regularly have transitive force, governing their first members, hence here “arousing exhilaration.” And in fact this compound is common in this sense, modifying soma (IX.12.3, etc.). But passive value of the root noun with an instrumental or other oblique sense of the 1st member is also possible, hence here “roused by the exhilarating drink / roused to exhilaration.” For general disc. see Scarlatta pp. 128–29. In this second sense Indra would be the obvious referent, as he is elsewhere (e.g., I.51.2).

While ‘rinse’ may strike the casual reader as an odd choice of words, in fact rinsing is one of the standard steps in the preparation of soma. For Viṣṇu’s participation in this process, see VI.17.11cd *pūṣā vīṣṇus trīṇi sārāṃsi dhāvan, vṛtrahānam madīram aṃśūm asmai* “Pūṣan, Viṣṇu (and the others) rinse the exhilarating Vṛtra-smashing plant, three lakes (full), for him [=Indra].” In the ‘aided’ interpretation, Indra is the referent of the accusative and the allusion is to Viṣṇu’s help given to him in various exploits including the Vṛtra-smashing. In the “ran to” reading, which strikes me as the least interesting, presumably Indra is also the referent of the accusative, though WG don’t make this exactly clear.

I.85.9: The array of tenses in this verse requires comment. The subordinate–main clause dyad of ab/c contains an imperfect *āvartayat* in the *yād* clause and a present *dhatté* (*dhattá* in sandhi) in the main clause. Pāda d, which describes actions that necessarily follow the one in pāda c, then has two imperfects (*āhan* and *aubjāt*). I consider the imperfect / present combination in the first sentence to be a makeshift attempt to convey anteriority in a language without a semantic pluperfect. That is, there is no structural means in Rigvedic Sanskrit to convey past anterior action (“when he had X-ed, he Y-ed”) via a finite verb (though see recent work by IH with a contrary opinion), since the “pluperfect” is simply the past tense to presential perfects. In later Sanskrit the gerund serves as a non-finite way to express the value (“having X-ed, he Y-ed”), but the gerund barely exists in the RV. In the RV the perfect participle does serve this function, in contrast to finite forms of the perfect system. Here the relative tense values are conveyed by the imperfect followed by the present, since the imperfect does express action prior to that of the present tense. The imperfects in pāda d then re-establish the past-time context. I therefore tr. the imperfect and present of abc with the English pluperfect and preterite.

On *náry ápāmsi* see disc. ad VIII.96.19.

I.85.11: Old suggests a clever, but ultimately unsatisfactory, reading in pāda a: rather than *táyā díśā* with the Pp., he divides *tá(y) ādíśā*, with the instr. of *ādíś-* and the older sandhi form of *té* ‘they’. This would make the end of the pāda more parallel to 10a ... *tá ójasā*. He thinks that the Maruts performed the action in 10a with brute force, but that in 11a “durch klugen Anschlag.” Although I am drawn to this idea because of the persistent parallelisms in this hymn, I cannot accept it in the end. For one thing *ādíś-* does not occur in the instr., and it generally means ‘aim, intention’, which does not fit here. Old’s proposed reading also involves altering the accent from *díśā* to *ādíśā*, so that it is not merely a matter of redividing the Saṃhitā text. There is also the serious question of why *táj* would be preserved in one prevocalic environment but not in another, in adjacent vss.

The sequence *ā gachantīm* in c appears to contain the 3rd pl. pres. *gachanti* + *īm*; this is certainly the default interpretation. However, as with *vidántīm* in I.67.4 and *várdhantīm* in I.65.4, I now think it should be analyzed as *gachant* + *īm*, an injunctive with the inherited **-ant* ending preserved because it was early misanalyzed the primary ending fused with the enclitic pronoun *īm*. Vs. 11 relates how the Maruts brought rain to “thirsting Gotama”; the first two pādas contain preterities (pf. *nunudre*, impf. *ásiñcan*; note also vs. 10, devoted to the same theme, with 3 pfs. *nunudre*, *bibhiduḥ*, *cakrire*), while pāda d has the functionally ambiguous injunc. *tarpayanta*. Only present *gachanti* intrudes. The publ. tr. moves from past to present in vs. 11 (allowing for a presential reading of *tarpayanta*): “They *pushed* the well aslant in this way. They *poured* out the wellspring for the thirsting Gotama. / They *come* hither to him with help -- they of bright radiance. They *satisfy* the desire of the inspired poet through their own essential qualities.” But the narrative sequence would flow better with “they came ... they satisfied,” and I would emend the published translation accordingly. For this and other such passages (esp. I.65.4 and I.85.11), see my 2019 “Hidden in Plain Sight: Some Older Verb Endings in the Rig Veda” in Fs.. Kazuhiko Yoshida.

I.86 Maruts

On the structure of this hymn and its syntactic patterns, see publ. intro.

I.86.1: I do not understand the function of *hí* here, which is doubly unusual in occurring both in a relative clause and in the initial clause of a hymn. Hettrich (*Hypotaxe*, p. 181) also finds it puzzling. Finding *hí* in the opening pāda of a hymn is not unprecedented (cf., e.g., IV.1.1, VI.1.1, VI.2.1), but the relative clause is a further complication.

The abl. *diváh* is construed by Ge and Re with the voc. *vimahasah* (Ge “ihr ausgezeichneten (Mannen) des Himmels”), but we might expect *diváh* to lose its accent in the vocative phrase, like *dívo narah* (II.36.2, V.54.10) and *dívo duhitar* (IV.51.10, etc.). It is better taken with *√pā* ‘protect’, which is elsewhere found with the ablative (e.g., X.158.1 *sūryo no divás pātu*), indicating the location of the protector and hence the direction from which the protection comes. So also WG.

I.86.2–3: As discussed in the publ. intro., the syntax of these two verses is to be interpreted in the template provided by vs. 1, namely a relative clause (or clauses) expressing the beneficiary of the Maruts’ favor with the genitive *yásya* and a main clause

assigning a reward to him. The full structure is seen in 1ab (rel. cl. with *yásya*) / 1c main clause with coreferential *sá*. Verses 2 and 3ab serve as the relative clauses to the main clause of 3c, also beginning *sá*. However, the relative pronoun is suppressed until 3a and the structure of parallel relative clauses is only conveyed by the repeated *vā* ‘or’ (2a, 2b, 3a). Indeed, though 2b contains a genitive of the human beneficiary (*víprasya*), 2a lacks even that: we must infer a *yásya* to limit the *yajñāñh*, as well as a verb to construe with that instrumental. I would diagram the structure as follows, with what is to be supplied in parentheses:

template, vs. 1:
yásya ... pāthā (2nd ps. pl. verb) (1ab) / *sá*
 for whom ... you Maruts perform benevolent action (1c) / he is (rewarded)

complex variation, vss. 2-3
(yásya) yajñāñh vā (2nd ps. verb) (2a)
 or by (whose) sacrifices (you were attracted?)

(yásya) víprasya vā ... śṛṇutā (2bc)
 or of (which) poet ... you heard

utā vā yásya vājīnaḥ ... átakṣata (3ab) / *sá*
 or of which prize-seeker ... you fashioned / he is (rewarded)

This interpretation differs significantly from that of other tr. In particular, vs. 2 is generally taken as an independent sentence that does not parallel the *yásya* structures of vss. 1 and 3 and that has *śṛṇutā* as the verb of a main clause, not of a subordinate clause, as I take it. (By that account *śṛṇutā* is accented because it follows the extra-clausal vocative that opens the pāda.) Although my interpretation requires several elements to be supplied, esp. in vs. 2, most other tr. also supply a verb with 2ab, and they fail to capture the structural parallelism that allows the ellipses to be filled in a principled fashion.

I.86.2: My interpretation requires *matīnām* to be construed with *hávam* “the call of the thoughts”; for this expression see, e.g., VI.69.4 *hāvanā matīnām*.

I.86.3: As noted in the publ. intro., I take the *vājín-* here to be the patron, for whom the Maruts create a worthy poet.

I take *gántā* as a periphrastic future. VII.32.10 *gāmat sá gómatí vrajé* is entirely parallel, save for having a subjunctive (*gāmat*) in place of the agent noun here, which suggests a future sense for the latter.

I.86.4–5: As indicated in the publ. intro., the genitive of the human worshiper is continued in these verses, though with the demonstrative, not relative pronoun.

I.86.5: The condensed expression of the earlier part of the hymn continues here, and there is no consensus on how to construe pāda c, which has no overtly signaled connection with the rest of the verse. For example, Ge takes it as a simile, marked by *cīd*, with its

comparandum in pāda b (roughly, “who dominates the peoples like the flowing nourishments the sun”). But even if *cīd* could mark similes (and I don’t think it can), the simile doesn’t make sense. I will not rehash here the various possibilities floated by other interpretations. My own generally follows Renou’s in supplying *asyā* from 1a as the oblique predicate of a possessive nominal sentence: “(his) are ...” It would also be possible to take the perfect participle *sasrúṣīḥ* as the predicate: so WG “Sogar zur Sonne sind (seine) Nahrungen gelaufen (erreicht),” but the exact value of such a predicated perfect participle eludes me.

I.86.6: There is an abrupt shift from the unidentified 3rd sg. worshiper rewarded for his work who dominated vss. 1–5 to the 1st ps. plural, but the rhetorical structure invites the audience to identify the “us” of vs. 6 with the 3rd sg. of the earlier verse. The *dadāśimā* ‘we have done pious work’, combined with the causal *hī* ‘for’, seems to offer a summary of the activities of the previous verses. The repetition of the pl. *carṣanī-* in 5b and 6c also supports this identification: he who “dominated” the *carṣanī-* in 5b can be the same as the “we” who accomplished what we have done with the help of the *carṣanī-* in 6c. This lexical chaining should have been signaled in the translation, where instead the two words are rendered differently: “bordered domains” (5b), “separate peoples” (6c). I would now use “separate peoples” also for 5b.

I.86.7: The 3rd sg. protagonist and the syntactic structure of vss. 1–5 return here, but with the syntax reversed: *sá ... yásya*.

I.86.8: I take the *vā* here as inverse, connecting the two double gen. phrases *śaśamānāsya ... svédasya* and *kāmasya vénataḥ*, though it appears after the first word of the first gen. phrase (*śaśamānāsya vā ... svédasya ...*). Klein (DGRV II: 205) also thinks an inverse reading is possible (though he doesn’t use the term), but he also suggests *vā* here might be equivalent to *vaí*. This seems unnecessary, and the inverse interpretation gets some support from the inversion of the syntax in vs. 7.

Note the chiasmic structure of the two genitive phrases: in the first the personal participle *śaśamānāsya* depends on the material *svédasya*, while the likewise personal participle *vénataḥ* depends on *kāmasya*.

I.86.9: The first two pādas show a nice syntactic conversion: the 2nd member *śávas-* of the voc. bahuvrīhi *satya-śavas-* ‘having real strength’ (unaccented, but would be *satyá-śavas-*) is implicitly extracted from the compound and represented by *tát*, object of *āviṣ karta*.

The third pāda has a striking phonetic figure *vídhyatā vidyútā*, which was already anticipated by pāda-initial *vidā* in 8c.

I.86.10: Another phonetic figure in a: *gūhatā guhyām*, whose *-atā* also echoes *vídhyatā*.

In the publ. tr. *guhyām* would have been better rendered as “to be concealed” than “concealable,” since the concealment is not merely possible but desirable.

I.87 Maruts

I.87.1: Ge tr. *usrā(h)* as “Sternbilder (?)” because he considers the interpretation with dawns as “kein naturwahres Bild.” But at early dawn stars are still visible.

I.87.2: On *upahvarā-* see disc. ad I.62.6.

I.87.4: As noted in the publ. intro., in contradistinction to all standard tr. I take the *gaṇāḥ* of d to refer to the poet Gautama, whose patronymic is Rāhūgaṇa, and consider the 2nd sg. reference of the 2nd hemistich as Gautama’s self-address. The other tr. assume that the flock of Maruts is being addressed.

All standard tr. also take pāda d as a single clause (e.g., Ge “darum ist die bullenhafte Schar ein Gönner dieser Dichtung”). But this interpretation fails to account for the medial position of *āthā*, which is otherwise almost invariably initial. (Klein, *DGR* VII: 70–71, notes the anomalous position here but follows the standard tr.) I take *āthā* as clause initial, proclaiming Gotama’s identification with the Marut flock on the basis of the shared qualities stated previously.

I.87.5: See the publ. intro. for discussion of the contents of this verse.

It may not be too farfetched to note, in connection with pāda d, where the Maruts acquire “their names worthy of worship” (*nāmāni yajñīyāni*), that in 1d they were explicitly unidentified and undifferentiated (*ké cid* “whoever they are”). The acquisition of these names follows their “reaching” (*āśata*) Indra, presumably to render him moral support in the Vṛtra battle with their chants (*īk-*) (pāda c). In other treatments of the aftermath of this battle they successfully negotiate with Indra for a share in the soma sacrifice (see I.165, etc.), and the expression “acquired names worthy of worship / sacrificial names” may be a way of expressing this incorporation of them into the dedicands of the soma sacrifice. Note that in VI.48.21 the Maruts assume *Indra*’s sacrificial name (*dadhire nāma yajñīyam*), also in connection with the Vṛtra battle.

I.87.6: It is odd that the Maruts, just called *īkvan-* themselves (5c), here join themselves with *īkvabhiḥ*. Ge suggests either that they have an “Anhängerschaft” of singers or have gone among singers themselves; Re that it’s an instrumental of identification (“en tant que chantres”). Gr invents, for this passage alone, a meaning ‘Glanz, Strahl’ for *īkvan-*. Given the identification of the human poet with the Maruts in the same capacity in vss. 4–5, the singers of 6b may be human singers, although the other instrumental attributes in this verse do not fit this picture. Ge points out that in the first verse of the next hymn, I.88.1b, the Maruts’ chariots are *svarkā-* ‘equipped with lovely chants’, and so the *īkva-* here might refer to their chariots, which are conspicuously absent from the list in pādas a–c. This is the explanation I currently prefer.

The word *īsmín-* is glossed by Gr as ‘eilend, stürmend’ (followed by WG), while Ge and Re take it as ‘possessing arrows’, deriving apparently from a suggestion of Bloomfield (see EWA s.v.), a suggestion emphatically rejected by Mayrhofer (loc. cit.). Certainly a derivation from *īsu-* ‘arrow’ is, to say the least, not without problems. But in two of its other three occurrences, *īsmín-* is found in a weapons context as it is here, and the derivation therefore seems worth attempting. Starting from *īsu-*, the *-in-* possessive would be **īsvín-*. It is possible that the normal distribution of *-vant-* and *-mant-*

possessives, with *-mant-* regularly built to stems in *-u-* (*paśu-mánt-*, etc.), as opposed to *-vant-*, would make **iśvín-* beside *iśu-* appear anomalous, and it was “corrected” to *iśmín-*. Note the regularly formed *iśumant-* (2x).

I.88 Maruts

I.88.3 As indicated in the publ. tr., I take the so-far-unnamed poets (who appear as the Gotamas in the next verse) as the subject of *kṛṇavante*. They are erecting their thoughts like trees for the Maruts to chop down with the axes in pāda a. By contrast, most tr. take the Maruts as subject of *kṛṇavante* (so explicitly Re, implicitly WG; Ge hesitates between the Maruts and the poets).

The simile in pāda b causes some minor grammatical problems. The Pp reads *medhā*, but if this word belongs to *medhā-* (fem.) ‘wise thought’, we should rather read *medhāḥ* (so Ge, Gr.). This is of course possible in this sandhi context, but pāda-final *ūrdhvā* is not amenable to such an analysis: it must be neuter plural and therefore can’t modify a fem. *medhāḥ*. Gr sets up a neut. *medhā-* ‘Schafft’ for just this passage, presumably to deal with the apparent gender disharmony. But it is simpler to assume that *ūrdhva-* has been attracted into the neuter by the *vānā* in the simile (so Old).

The epithet *tuvidyumná-* is otherwise only used of gods, save for IX.98.1, where it modifies the wealth brought by Soma. The only other plural form (V.87.7) modifies the Maruts, but the standard tr. assume that it here qualifies the priests, because the Maruts appear in the dative in pāda c and should therefore not be the subjects of the verb in the same clause. The difficulty disappears if we read c with b, rather than d. I then take the Maruts to be the subject in d, with the epithet appropriate to them, and also take the middle *dhanayante* as intransitive with an acc. of goal, rather than transitive “set the (pressing) stone in motion” with other tr.

I.88.4: For the imagery here, see the publ. intro.

The sequence *páry ā va āgur* with doubled preverb is curious. Ge provides numerous parallels in his n. 4a, but none like this, with the two preverbs separated only by an enclitic pronoun and contained within a preverb (*pári*) – verb sequence. I have no explanation for this, though I would note that of the 8 occurrences of supposed *aguḥ* / *āguḥ*, 7 are pāda-final and are unverbated with the preverb *ā*, as *āguḥ*.

The hapax *vārkār'yām* is of course very obscure. Ge simply takes it as an unanalyzable name of the “Sangeskunst” of the Gotamas. However, it is clearly a compound and the compound members are easily identified: *vār-* ‘water’ and *√kr-* ‘make’, and so it should be susceptible to meaningful analysis. As indicated in the publ. intro. I believe that it has the same underlying referent as *anubhartrī* in 6a, namely the musical instrument, in my view the *vīṇā*, and that the poet was playing with the paradox that the instrument is grammatically feminine but in some forms looks remarkably like male genitalia. I therefore follow Gr’s gloss ‘Wasser ... schaffend’ and assume that it refers to the penis. The problem is what kind of formation it is, and how to get an agentive-like meaning out of *kār'yā-*. First, note that the formation does not have gerundive accent and is therefore not a conventional gerundive despite the *ṽddhi* in the root and the shape of the suffix. Formally it is most likely a verbal abstract ‘water-making, Wasserbeschaffung’, as Old takes it (so also AiG II.2.832 following Old). However,

because it was a *feminine* abstract, I think that it was secondarily available to be identified with the underlying feminine referent, the *vīṇā*, and animatized as a quasi-agent.

Note the phonological play between *vārkār-* (b) and *arkaír* (c).

I.88.5: All standard tr. take *ná* as negating the verb *aceti*. It seems unlikely to me that an annunciatory aorist would be negated (“this very thing has *not* just been seen”), and its clause-internal position, not immediately preceding the verb, also seems unusual for such an interpretation. I take it instead as negating only the following word *yójanam* and expressing the surprise that what has just appeared is very close, not (even) a trek away.

I thus take *yójana-* as a measure of distance, as it generally is, rather than as “Gespann,” with most tr. Rather than *yójanam* I take the referent of *etát tyát* to be the formulation (*bráhma*) that the Gotamas made in the previous verse. This formulation, also referred to as a *dhī-* ‘insight’ in 4b, providentially appears at the same moment as the Maruts approach. In what sense does the formulation “appear”? I interpret this verb to mean that the poem that Gotama created in private (*sasvár* 5b) is now being performed in public (i.e., at the ritual welcoming the Maruts). This interpretation also entails supplying the verb “made” in 5b (echoing *kṛṇvantaḥ* in 4c), rather than “saw” (with most tr., anticipating *pásyan* 5c).

My last departure from the standard tr. in this verse is in taking the acc. pl. masculines in cd, *híraṇyacakrān, áyodaṃṣṭrān ... varāhūn* as comprising two separate but conjoined NPs without overt conjunction (as so often), rather than one single NP, since I find “golden-wheeled boars” an unlikely entity even in the RVic universe of discourse. With ‘golden-wheeled’ in c it is natural to supply ‘chariots’; the “copper-tusked boars” in d can easily be an extravagant characterization of the Maruts.

I.88.6: For detailed disc. of this verse, see my 1981 article, “A Vedic sexual pun: *ástobhayat, anubhartrī*, and RV I.88.6,” *Acta Orientalia* 42 (1981[82]) 55-63. The gist of the article is the interpretation of *anubhartrī*, a feminine agent noun built to *ánu √ bhr-*, a euphemistic idiom that refers to sexual penetration -- e.g., in the cosmic incest myth (X.61.5). The paradox of creating a *feminine* agent noun from this idiom is the trick of the verse and echoes the use of *vārkāryā-* in vs. 4 -- both, in my view, referring to the *vīṇā*, a feminine noun but a musical instrument with a characteristically phallic shape. The hapax causative *ástobhayat* ‘cause to sound’ (beside the simplex *stobhati* in b) has as its implicit subject the (male) player of the instrument and taps into the (probably universal) notion of a man playing a woman like an instrument in sexual encounters, with the added fun of the gender reversal in *anubhartrī*. The instrument both sounds (*práti stobhati*, b) and is caused to sound (*ástobhayat*, c), a reasonable dual view of what a musical instrument does. I take *vīthā āsām*, with its unidentified fem. gen. pl., as referring to all women, who, in male fantasy anyway, all “want it” -- conveyed by my somewhat loose tr. “the way women like it.” Other tr. supply ‘songs’ or ‘chants’ with *āsām*, for which there is no particular support.

I.89 All Gods

I.89.1: The subjunctive of \sqrt{as} plus infinitival *vṛdhé*, lit. “will be for the increasing/strengthening of...,” i.e., “will be (ready/available/amenable) to increase/strengthen” is found also in 5c: 1c *vṛdhé ásan*, 5c *ásad vṛdhé*.

On *áprāyu-* see comm. ad V.80.3.

I.89.2: A form of *devá-* is stationed at the beginning of every pāda, the first three being the gen. pl. *devānām* -- an effect difficult to capture in English without awkwardness.

I.89.4: Ge (/WG) take the repeated *tád*’s of a-c (but not the one in d) as referring to the *mayobhú ... bheṣajám* “the remedy that is joy itself” and supply verbs in pāda bc to support this object. Re by contrast takes the repeated *tád* as adverbial, ‘ainsi’. This is more or less what I arrived at, though ascribing somewhat more meaning to the adverbially used neuter pronoun. I assume it refers to the call embodied in the *nivíd-* of 3a (though *nivíd-* itself is fem.), which call is finally the suppressed object of *tád ... śṛṇutam* “listen to this” in d.

I.89.6: The rigid parallel structure of the four pādas is resolved by the final word of the verse *dadhātu*, which verb must be supplied for the first three pādas. This rigid structure, *svastí naḥ* GOD EPITHET, also allows the metrical irregularity of the first two pādas to be kept under strict control. Under HvN’s interpretation each of those two pādas has a rest after the *s^uvastí naḥ* opening, with the GOD EPITHET phrase taking the rest of the line. Old suggests reading trisyllabic *indrā*, as often, as well as *pūṣā*, with distracted *ū*. The former seems more likely than the latter, but because of the parallelism of a and b in HvN’s reading, I prefer theirs.

I.89.7: The identify of the *mánavaḥ* in c is not clear. I take it as a continuation of the description of the Maruts, though it is the case that *mānu-* and its derivatives do not otherwise characterize the Maruts. Ge (/WG) suggests that it refers to men who have become gods or been assimilated to the gods, like the Ṛbhus, while Re thinks c belongs with d and refers to the All Gods, though this explanation runs into the same problem as the Marut identification.

I.89.9: The publ. tr. takes *āyuh* as obj. of *rīṣata*, but it may be better to take *naḥ* as the obj. of that verb and construe *āyuh* with the inf. *gāntoḥ*. Cf. Krick’s rendering (316): “Schädigt (tötet) uns nicht mittendrin, bevor wir die volle Lebensdauer erreicht haben.” I would differ from Krick in taking *gāntoḥ* as a gen. dependent on *madhyā* “Do not harm us in the middle of our going through our lifetime.” For *madhyā* + gen. inf., cf. *madhyā kártoḥ* I.115.4, II.38.4.

I.89.10: Pāda b is a textbook example of gender attraction of the pronoun in equational clauses. Since the referent of the pronoun is feminine Aditi, we might expect **sā pitā *sā putrah*, but the gender of the predicated noun is transferred to the pronoun.

I.90 All Gods

I.90.2: On the small class of *-āna*-nominals to *-u*-stems (with guṇa of the suffixal vowel), mostly personal names, see AiG II.2.275.

I.90.4: It is unclear from Ge's 'aussuchen' (/WG's 'auswählen') whether they attribute *√ci* to *√ci* 'pile' or *√ci* 'observe', since the proposed meaning would require metaphorical stretching for either root. With Gr (and, judging from his 'dégager', also Re), I take it to the 'pile' root, with the literal sense being 'pile [obstructions, detritus, etc.] apart or away', thus 'clear', of paths. This idiom is found several times elsewhere of paths: IV.37.7, IV.55.4, VI.53.4 (passages collected also by Ge ad IV.55.4).

I.90.6: Supplying 'blow' as the verb of pāda a not only conforms to universal good sense, but is supported by vs. 4a of the previous hymn (I.89) *vātaḥ ... vātu*.

I.91 Soma

I.91.1: The multiple possible meanings of the root(s) *√cit* and the unclear morphological identity of (*prā*) *cikitaḥ* make the interpretation of the first pāda somewhat difficult. I follow Thieme's solution (*Plusq.*), adopted also by Kü (176-77), that it is underlyingly a medial injunctive to the perfect stem (that is, an unaugmented pluperfect), patterning with pf. *cikitē*, etc. But the underspecification of this posited **cikita* caused it to be re-marked with an active ending (like root presents of the type *aduha-t*). It should not be a subjunctive, despite its thematic appearance, because of the zero-grade root syllable, and, *pace* WG, it should not be a trans./caus. reduplicated aorist because of the light reduplicating syllable (expect **cīkitas*) -- although I do have to admit that *acikitat* in VII.80.2 does seem to function like a redupl. aorist. WG supply *panthām*, from b, as object in a, but this seems unnecessary. On a potential ring made by *prā cikitaḥ* here and *prā cikitsā* in the last pāda of the hymn (23d), see publ. intro.

The other question in pāda a is whose inspired thought is at issue. I assume that it is ours (that is, the poets'), in that the priests and poets create the ritual that makes soma manifest.

I.91.2: This verse is structured by a series of etymological figures involving a nom. sg. modifying soma and an instr. pl. specifying his qualities -- a: *krātubhiḥ sukrātuḥ*, b: *dākṣaiḥ sudākṣaḥ*, c: *vṛṣā vṛsatvébhiḥ*, d: *dyumnébhir dyumnī*. It is not a subtle device, but effective. On the first hemistich see further ad vs. 14.

I.91.3: Soma is here identified with the three principal Ādityas. This vs. is identical to IX.88.8, though the two publ. tr. differ in pāda b. I would now alter the tr. here to "yours is his lofty, deep domain, o Soma." See disc. ad IX.88.8.

The (pseudo-)gerundive *dakṣāyya-* has attracted a number of different renderings -- in this passage alone, Ge "zu Gunst geneigt," Re "qu'on doit-servir-efficacement," WG "als Zufriedenzustellender." I prefer to tie it more closely with *dākṣa-* 'skill', as "whose skill is to be sought," despite the awkwardness of the English gloss. In this passage Soma was just credited with skill (2b) and will later dispense it (7c; cf. also 14c), and in both I.129.2 and VII.97.8 the ability of Indra and Bṛhaspati to bring about good things is emphasized. JPB in VII.1.2 prefers "to be skillfully tended," quite close to Re's rendering

above. This latter tr. would work for Agni (II.4.3, VII.1.2), who requires ritual tending, but less well for Indra, Bṛhaspati, and (here) Aryaman.

I.91.4: The perennially difficult *dhāman-*, found also in 3b, is a bit difficult to interpret here as well. In both 3b and 4ab the *dhāman-* appear to be concrete and locatable in space, for which the tr. ‘domain(s)’ fits well (cf. also WG “Stätten”). But then in cd Soma is urged to accept our oblations with them, which seems difficult to do with a place and edges closer to Ge’s “Formen,” a nebulous and all-purpose rendering that I try to avoid with this word. Re’s “structures” doesn’t help either. I must assume that “accept with all your (domains)” is a compressed way of saying “wherever you are, accept.” The same problem is found, to some extent, in vs. 19.

I.91.6: A good example of subordinating *ca*.

On the use of *vānaspāti-* ‘lord of the forest’ for soma, see comm. ad IX.12.7. This usage is found only here and in IX.12.7. Because our phrase *priyástotro vānaspātiḥ* is almost identical to IX.12.7 *nītyastotro vānaspātiḥ*, I am now inclined to translate the bahuvr. ‘who has praise as his own’, not ‘to whom praise is dear’.

I.91.7: As Ge and Re both point out, the dat. *yūne* ‘youth’ in b suggests that the parallel *mahé* in a refers specifically to an adult.

I.91.10: I take the pf. part. *jujuṣānāḥ* as expressing an action anterior to that of the main verb, impv. *upāgahi*. If this is correct, the verse is constructed chiasmically, with *imám yajñám* construed with *upāgahi*, while the call that precedes Soma’s arrival at the sacrifice is nested in between (*idám váco, jujuṣānāḥ*). However, the simpler interpr., with both acc. construed with the part. (“delighting in this sacrifice, this speech, come ...”) is also possible – though perhaps pragmatically less likely. Coming to the sacrifice may be a consequence of having enjoyed the speech inviting the god to it.

I.91.11–12: The two alliterative root noun compounds *vacovíd-* (11b) and *vasuvíd-* (12b) nonetheless contain the two synchronically separate roots, ‘know’ and ‘find’.

I.91.14: Although it is tempting to take *dákṣa-* as adjectival here (so Ge, WG), I am somewhat dubious that this stem can be an adjective, and in any case the emphasis on the skill associated with Soma in this hymn (vss. 2b, 3d, 7c) suggests a nominal reading here. Although the pairing of an abstract quality (skill) with an animate being (poet) might seem awkward, I see it as a variant reprise of 2ab, where *krātu-* (‘intention’) and *dákṣa-* were paired; as discussed ad I.2.7–9, *krātu-* and *dákṣa-* are two of the three qualities required to bring an action about and are regularly associated. Here *kaví-* stands in for *krātu-*. This substitution is enabled by the syntagm “the poet’s *krātu-*, as in the cmpd. *kaví-krātu-*. (Re’s interpr. is similar; see his n.)

I.91.19: Here again, as in vs. 4, the *dhāmāni* of Soma are recipients of the oblation; Ge’s Formen again works more smoothly, but I still consider these to be the locales listed in 4ab, each of which can be a site of sacrifice.

Note the disharmony in number between the neut. pl. subj. (*tā viśvā*) and the sg. pred. nom. (*paribhūḥ*) and verb (*astu*). This could be an example of the inherited construction of neuter pl. with a singular verb, but I think it's more likely just a constructio ad sensum, with "all these" summarizing the plural subjects of the rel. cl. as if in a mass. English "all this" can be similarly used, after a listing of discrete entities. The Sanskrit has just been more punctilious about maintaining number agreement.

Ge, Re, WG all supply 'lifetime' as the implicit object of *pratāraṇaḥ*, rather than my 'us'; they are most likely correct, given how common the idiom *āyus- prā √ tī* is. I might change the publ. tr. to "lengthening (our lifetime)."

I.91.20: Ge (/WG) takes the final phrase of d *yó dādāśad asmai* as expressing the indirect object with *dadāti* in b ("gives [to him,] who ..."), rather than as a qualification of *vīrām* (or even of *pitr-*, as Re almost seems to). I think this is correct, but it is mildly disturbing that there is no overt expression of the datival recipient in the main clause; we would expect *tāsmāi* (see Ge's n. 20d). It may have been gapped because of the *asmai* in the rel. clause. Note that *asmai* cannot be a part of the main clause and refer to the indirect object, the man who does pious service, because it is unaccented; it must be part of the rel. cl. and refer to Soma.

I.91.21: This verse plays a minor syntactic trick. It consists of a string of acc. sg. masc. qualifiers; since the previous vs. also consists largely of an acc. sg. masc. NP headed by *vīrām*, the audience would be likely to assume that the new series of grammatically matching adjectives are also qualifiers of *vīrām*, esp. since this type of syntactic dependence between verses is not uncommon in the RV. It is only when we arrive at the middle of the final pāda that we encounter *tvām* and discover that the accusatives of *this* verse refer to Soma, not to the hero he gives us in 22.

Ge accounts for the curious hapax *bhāreṣu-jā-* 'born at raids' by the fact that soma is especially offered before battle. This is probably correct, though the semantics could be tighter. Scar essentially accepts this explanation and cites III.51.8 (of soma) *jātām ... mahé bhārāya*, though he explores some other possibilities as well.

I.91.23: In the phrase *devéna ... mānasā* we again confront a noun (*devā-*) that seems to be used adjectivally (see vs. 14 above). I have half given in to this temptation, with "god(like)."

The verb *ā tanat* in c poses some difficulties in interpretation. Surprisingly, none of the standard tr. who discuss the phrase notes that the same lexeme (*ā √ tan*) appears in the previous verse (22c) in the same metrical position and in a common, almost clichéd usage. I think that *ā tanat* here is a slangy expression, deliberately contrasting with the high-style cosmic-description usage of *ā tatantha* in 22. I take the subject to be the wealth (or share of wealth) of b, rather than the *mānas-* of a, as Ge (/WG) take it, nor would I follow Re in taking it as an impersonal construction.

It is not entirely clear who the "both" are in d: Ge singers and patrons, Re men and gods.

Ge supplies 'path' with *prā cikitsā* ("sei ... der Pfadfinder") on the basis of IV.47.20. This is possible, and might even be supported by the *panthām* in vs. 1, since *prā cikitsā* seems to form a slight ring with *prā cikitaḥ* in 1a. However, the verb does not need

an object, in my opinion; the desiderative here can express a general intention to be alertly perceptive.

I.92 Dawn

As indicated in the publ. intro., vss. 1–4 and 5–8 appear to be parallel hymns, the first with multiple Dawns, the second with just one.

I.92.1: In pāda a my tr. differs slightly from the standard ones. I suggest that the dawns have transformed themselves into a beacon, while in the standard interpr. they have created/manufactured a beacon for themselves.

In b following Proferes 2003 (JAOS 123, pp. 330–31), I suggest, on the basis of the fuller expression in the parallel verse 5c, that their “beam” is being anointed like the sacrificial post (*svāru-*) at a ritual.

In c the poet exploits the syntactic ambiguity of the middle participle *niṣkṛṇvānā-*. In the frame he takes it as a reflexive, “presenting themselves,” but in the simile it is transitive “presenting arms.” The middle voice is still justified, however, because the weapons belong to the subjects of the participle.

I.92.3: The standard tr. are in agreement that *ārcanti* only means “they sing” here and that the meaning ‘shine’ for this verb stem is dubious. This judgment seems short-sighted and unresponsive to the poetics of this hymn, and even if ‘shine’ is not the normal sense of *ārca-*, the nominal derivatives like *arci(s)-* ‘ray, flame’ (see *arcis-* in 5a) would allow a ‘shine’ sense under the proper circumstances. And these *are* the proper circumstances. This verse-initial verb, following on two verses describing the color, brightness, and beams of the dawns, would most naturally be interpreted with a ‘shine’ sense. The simile that follows, involving women at work, would then cause the audience to rethink this assumption, producing the interpretation ‘sing’, with the women singing work songs at their labors. But ‘sing’ makes little sense for the frame of the passage: do dawns ‘sing’? While ‘shine’ makes little sense for the simile: do working women ‘shine’? As in 1c the poet uses the ambiguity of the verbal pivot to craft two incompatible but verbally impeccable pictures, but this time he relies not on syntactic ambiguity as in 1c but synonymity -- a pun on the verbal root underlying the verb form. The pun may be even cleverer than so far presented. Although the primary sense of *ārcanti* for the dawns should be ‘shine’, it is possible that there is a secondary sense ‘sing’, in that birds begin to sing at dawn [note that the activity of birds at dawn is already metaphorically referred to by *ūd apaptan* in 2b], and the ritual recitation also begins at that time. Similarly, although ‘sing’ should be the primary sense for the women in the simile, they may also be said to shine if they are glistening with sweat from their labors. (Recall the old expression “men sweat, but women ‘glow.’”) It should be noted that Ludwig thought the verb was “doppelsinnig” (see Ge n. 3a).

In terms of the publ. tr. (and other standard tr.), the simile particle *nā* is late, since the simile is assumed to start with *nārīḥ*. However, it is possible that *nārīḥ* characterizes the Dawns, and the simile consists only of *apāso nā viṣṭībhiḥ*. In that case, the chanting workers could be men: an alt. tr. “The ladies chant [/shine] like workers at their labors.” The nom. pl. adj. *apāsah* serves for either masc. or fem.

Pace Gr and Lub, *áha* should be taken not as the particle, but as short neut. pl. to *áhar/ áhan-* ‘day’, with *vísṣvā*, cf. the well-attested expression *áhā vísṣvā*. For another short-vowel pl. *áha* see X.89.13.

I.92.4: *bárjaha-* in b is a hapax, but related to dual *barjahyè* in AV XI.8.14 in a list of body parts, found between the ribs and the sides. Whitney/Lanman tr. ‘nipples’ there. The consensus tr. ‘udder’ seems reasonable, esp. on the assumption that *usrā* ‘ruddy’ designates a cow. However, the purport of the simile is a little unclear. Since cows don’t wear clothes, their udders are not covered to begin with and uncovering is unnecessary. Ge suggests that the simile is proleptic: Dawn’s breast becomes as visible as a cow’s full udder, but this interpretation requires that the verb (‘uncovers’) that should mediate between frame and simile has been semantically elided.

The simile in d is similarly “off,” since cows don’t have the capacity to open their own pens. Macdonell (*Hymns from the Rigveda*, 1922) tr. “as when cows break from their stalls,” which makes more sense, but again misrepresents the pivotal verb.

The apparently wrong sandhi *āvar támaḥ* is, as has long been known, an ex. of degemination in context: *āvar* represents the older 3rd sg. root aor. **āvart*. See Old, Prol. 424 n. 1, AiG I.304–5, 336.

I.92.5: As noted before, vs. 5 seems to match vs. 1 and begin a new hymn parallel to vss. 1-4, but adapted for a single dawn, not the multiples in vs. 1. The return of the words *bhānū-* ‘beam’ and *√añj* ‘anoint’ (1b) is particularly salient, as also *√śri* (2d), *√arc* (3a), and *pésas-* (4a).

The poet produces yet another complication of simile structure in cd. The Daughter of Heaven in d is clearly the subject of the clause, but the simile occupying c has a participle in the masc. nom. sg., *añján*, which cannot modify the grammatical subject. We must here supply a masculine ritual officiant, who is propping up and anointing the sacrificial post, as Dawn props up and anoints her beam. (Note that *bhānūm* served as object of both verbs in the earlier parts of the hymn: 1b *bhānūm añjate*, 2d *bhānūm ... asísrayuḥ*.) The two distinct objects in simile and frame are mediated by the word *pésas-*, which is appropriate to both. Dawn has just donned her own *pésāmsī* in 4a, but *pésas-* can also be used of ritual paraphernalia -- e.g., the pressing stones, which are called *adhvarásya pésaḥ* at VII.42.1.

I.92.6: *vayúnā kṛṇoti* reprises *ákran ... vayúnāni* in 2c.

chāndaḥ is somewhat problematic. Gr takes it as a masc. nom. sg. to a them. adj. *chānda-*, with the developed sense “der Gefallende, Schmeichler oder Buhle,” and this tack is followed by the standard tr. (incl. the publ. one). But the only other supposed occurrence of this stem, in VIII.7.36, I took in the publ. tr. to the much better established *s*-stem neut. *chāndas-* ‘metrical vs.’. However, I have since reconsidered that interpr., primarily because the *s*-stem has decidedly late distrib. (see disc. ad V.52.12 and VIII.7.36), and I am more sympathetic to the standard solution, both there and here. It does not help this interpr. here that Dawn is being compared to a masc. being, esp. since smiling is almost always a feminine action, so I am not completely convinced that the standard solution is correct. See also disc. of *chandāḥ* in VI.11.3.

saumanasāyājīgaḥ yields a bad cadence: — — — x. This could be fixed by emending to unaug. **jīgaḥ* (*saumanasāya* **jīgaḥ*). I’m inclined to do that, though it should be noted that there are no other injunctive forms to this stem.

Redupl. (*a*)*jīgaḥ* must be a transitive redupl. aor. beside *jārayati* ‘causes to awaken’. Cf. I.113.4-6: *uṣā ajīgar bhúvanāni vísvā*. I supply ‘us’ as obj. here, on the basis of the 1st pl. subj. in pāda a.

I.92.7: Note the etymological, though no longer semantic, relationship between *sūnītānām* (a) and *nṛvātaḥ* (c).

I.92.7–8: Contra Gr, *ásva-budhya-* cannot mean ‘durch Rosse bemerkenswerth’ with a gerundive to *√budh*, among other things because of the bahuvrīhi accent. Rather it belongs with *ásva-budhna-* ‘having a foundation of horses’, by way of **-budhnya-*, an analysis that goes back to Aufrecht. All 3 occurrences of this stem (I.92.7–8, 121.14) qualify wealth or prizes. On the related hapax *ásva-budhna-* see comm. ad X.8.3.

I.92.8: ‘Forelock’ for *pravarga-* may seem slightly flippant, but I wanted to capture the ‘twist’ sense of *prá√vrj*, in contrast to the anodyne ‘having slaves at the front’ found in the other tr.

The final *brhántam* of d obviously refers back to the *rayīm* so carefully detailed in ab, but is separated from that phrase by a considerable amount of material, including a rel. cl. Rather than making it a long-delayed part of that NP, in the publ. tr. I took it as a pseudo-goal with *vibhāsi*, with *vāja-prasūtā* giving grounds for that goal. CL suggests taking it directly with *vāja-prasūtā*, hence perhaps “propelled with prizes to lofty (wealth).” It’s appealing to take *vāja-* here almost as an instr. of accompaniment: “propelled to lofty (wealth) along with prizes,” but I think this is probably too radical a construal of the cmpd.

I.92.8–9: *vibhāsi* (8c) and *vī bhāti* (9b) should have been rendered with the same English verb, either “radiate” or “shine.” I would now change the publ. tr., to ‘radiate’ in both cases.

I.92.9: Unfortunately it is not possible to render the three fronted forms of *vísva-* (pādas a, c, d) in non-awkward English.

cákṣuḥ in b can be either nom. or acc. Most tr. take it as the latter, with Dawn facing either the eye(s) of, presumably, humans (so Ge [WG], Re) or the eye of the sun (so Macdonell [*Hymns from the Rígvēda*], Maurer). The latter is unlikely on pragmatic grounds: although the eye of the sun is a standard trope in the RV (see in fact 11d), the sun rises after dawn, and Dawn surely wouldn’t be looking behind her, to the east. The former is certainly possible, but I prefer to take *cákṣuḥ* as nominative, referring to Dawn as an eye, since she has just been said to oversee (*abhicákṣyā*) all creatures.

I’m not entirely sure what pāda d refers to, but perhaps it means that by dawning she has stimulated ritual speech and therefore “finds” it.

I.92.10: Note that the final word of the vs. *āyúḥ* is a near rhyme to (*man*)*āyóḥ* ending vs. 9.

Although *vīj-* (also II.12.5) is ordinarily tr. ‘stake’ vel sim. (see Schindler, Rt Noun s.v., with lit.), in fact if it is the root noun to \sqrt{vij} ‘be agitated’, Gr’s ‘flüchtig’, of the dice, seems more apt. Recall, for the constant movement of the dice, the first vs. of the gambler’s hymn, X.34.1: *prāvepāḥ ... pravātejā́ írine vārṣṭānāḥ* “The quivering (nuts) ..., the ones born in a windy place, constantly whirling in the gaming hollow ...” So perhaps ‘agitated ones’ here.

I.92.12: This last verse of the trimeter portion of the hymn plays more tricks with simile structure. In pāda a *prathānā* functions like *niṣkṛṇvānā* in 1c; that is, it has both reflexive and transitive values. In the frame it is reflexive (“spreading herself”), in my view, though Ge, Re, Macd., Maurer all supply “rays” as the object, on no contextual grounds. (However, Ge does allow for the reflexive possibility in his notes 12a, 1c.) In the simile *paśūn* is the object; the assumed subject might be “cowherd” or the like (so tentatively Re). But the simile is quite appropriate to Dawn for two reasons: first, it is often said that livestock go out to pasture at dawn and return to the fold at night; second, the rays of Dawn are often referred to as cows (see in fact vs. 2 above), and though I don’t think the stem *paśú-* is so used, it inhabits the same semantic space as the more usual terms that participate in this metaphor.

The second simile, *síndhur ná kṣódaḥ* in b, is taken by Ge, Re, Macd., Maurer with the verb of b, *vy āśvait*. Because this verb ‘whitened’ is intransitive, this requires either taking *kṣódaḥ* adverbially (Re “comme le fleuve (en son) remous”) or construing *síndhuḥ ... kṣódaḥ* as a loose compound (Ge “wie die Stromflot”). Although either is possible, the syntactic difficulties disappear if the simile falls within the verbal domain of *prathānā*, “like a river spreading its surge.” Given this poet’s particular delight in manipulating similes, it is entirely in character to end this section of the hymn with a triple play.

WG interpret the similes more or less as I do.

Pāda c is structurally parallel with 11c, using the same verb *mī* ‘diminish, belittle’, though here in the negative (11c *praminatī*, 12c *áminatī*), both playing off *āminānā* in 10c. The relationship between 11c and 12c is particularly close, with the human and the divine playing off each other: 11c *praminatī manuṣyā́ yugāni*, 12c *áminatī daívyāni vratāni*.

I.92.13–15: This *ṭṛca* to Uṣas is unified by two verse-initial vocc. *úṣaḥ* (13, 14) and a verse-final voc. *uṣaḥ* at the end of 15.

I.92.14: The tr. “rich in ... / richly...” implies that there is an etymological connection between *gomatī*, *áśvāvati* and *revát*, which of course there is not. But “possessing cows and horses” seems too flat.

I.92.15: The *hī*+ imperative followed by *áthā*+ imperative is the same structure as I.10.3; see the commentary thereon.

I.92.16: $\sqrt{yā}$ is the usual verb that governs *vártis-* (I.34.4, I.116.18, etc. etc.), and I supply a form of it here.

The publ. tr. implies that *sámanasā* is a vocative, but, by its accent, it's a nominative and would better be tr. "as like-minded ones."

I.92.17: Gautama's penchant for clever exploitation of syntactic possibilities returns in this verse, after a series of unremarkable Uṣṇih verses (13–16). The verb in b, *cakráthuḥ*, by my interpretation takes two different types of predicates and exhibits slightly different root meanings: in pāda a "make your call to heaven," that is, make the call reach heaven; in b "make, i.e., create, light." I am in agreement with the standard tr. of pāda b, but diverge from them in a, where Ge (/WG) supply a separate verb ("erhebt") to govern *ślókam* and interpret *ā divāḥ* temporally ("zu dieser Stunde des Tages"), not spatially. Although *ā divāḥ* is sometimes used temporally (e.g., in the expression *trír ā divāḥ*), I take the *ā* here in the meaning "all the way to" (Gr's "Praep. mit folgendem Abl. ... *bis an, bis hin* (räumlich)"). This usage of *ā* was prepared for in the immediately preceding vs., 16a *asmād ā* "all the way to us" (though in opposite order). For a closely parallel expression, in a Dawn hymn, cf. III.61.4 *āntād* [i.e., *ā antād*] *divāḥ* ... *ā prthivyāḥ* "all the way to the end of heaven and of earth." For the *ślōka*-reaching heaven, cf. I.83.6, 190.4, and for *ślókam* as object of *√kr*, IV.53.3.

I.93 Agni and Soma

I.93.1: The expression in d *bhāvatam ... máyaḥ* echoes the compound in the final verse of the immediately preceding hymn *mahobhūvā* (I.92.18) -- both dual, though applying to different divine pairs, the Ásvins (I.92.18) and Agni and Soma (here). It is possible that this final hymn of the Gautama sequence, with its unique dedication to Agni and Soma (see publ. intro.), was attached just here because of the duplication of phraseology. This connection would be clearer in the publ. tr. if they were tr. in the same way. I would therefore change "become refreshment" to "become joy" in this verse.

I.93.3: On the case frame of *√dās* here, see comm. ad VI.16.31.

I.93.4: As noted in the publ. intro., Bṛsaya, with his very non-Indo-Aryan name, and the destruction of his offspring are found elsewhere only in VI.61.3, a hymn devoted to Sarasvatī. The theft of the provender (*avasá-*) from the niggard (*pañí-*) is also found in that hymn, in vs. 1. The connection between the two hymns to different gods, found in different parts of the Saṃhitā, is not clear to me, but the strong similarity of the passages at least suggests that Bṛsaya is a *pañí-*.

I.93.5: Pāda b contains an inverse *vāyav* *indraś ca* construction: *agníś ca soma*.

I.93.7: The three imperatives in b, *vītām háryatam ... juṣéthām*, all belong to roots that ordinarily take accusatives, yet all must be construed with the fronted gen. *haviṣaḥ prásthitasya* in pāda a. I don't quite understand the case syntax, but assume that these three verbs have been lumped together generically as verbs of consumption and enjoyment, for which gen. complements are often possible.

In c *bhūtām* can be either imperative or injunctive and is taken as injunctive in the published translation (as also by Ge and Re). However, since the immediately preceding

hymn (I.92.15) contains the clausal diptych *hí*+ imperative, followed by *áthā*+ imperative, exactly matching the structure here, I now think it would be better to interpret *bhūtām* as impv. here as well: “Become providers ..., then establish ...” (So WG.) An imperative interpretation also works better with the three abrupt imperatives that precede in b. For further disc. see comm. ad VII.99.3.

I.93.8: *saparyāt* in b echoes *saparyāti* in 2b, but displays the more usual case frame: acc. (god) + instr. (means of service). The instance in 2b takes acc. (means of service) + dat. (god), which is only otherwise found at X.37.1. The occurrence in this verse thus functions as a species of poetic repair.

I.93.9: The purport of the final pāda isn’t clear to me, but it may indirectly comment on the unusual nature of the joint dedication of the hymn to these two gods.

I.93.10: *dāśati* echoes *dāśāt* in 3b.

I.93.10–11: 2nd du. *dīdayatam* (10c) and *juṣatam* (11b) are somewhat problematic forms. They belong to redupl. thematic stems; other forms to these stems are subjunctives to the perfect. However, they have secondary endings, and the act. 2nd and 3rd du. subjunctive endings should be primary. Lub identifies them as impvs. (Gr also *juṣatam*); Kü (35) treats them as “hybrids” -- morphologically belonging to the subjunctive but functioning as imperatives. They differ from some other secondarily thematized pf. impvs. in having full grade of the root syllable, like the subjunctive (versus zero-grade in *pīpyatam* √*pi*, √*vāvrđhāsva* √*vṛdh*, etc. -- but cf. *pīprāyasva* √*prī*). In the publ. tr. they are treated as subjunctives (“you will shine,” “you will enjoy”), but they would might be better rendered as imperatives. For further disc. of such forms, see my 2018 “The Vedic Perfect Imperative and the Status of Modal Forms to Tense-Aspect Stems” in Fs. Lubotsky.

I.94 Agni

I.94.1: BR corrected *sám mahema* to *sám ahema* ‘we would bind together’ to √*nah*, an emendation accepted by Gr, Ge, Old (tentatively), KEWA I.153. Although I also accepted it in Jamison 1983: 87, I now follow Gotō (1987: 243; accepted in EWA s.v.) in seeing it as a form of √*mah* ‘bring about’, etymologically separate from √*mah* ‘magnify’. Although I do not like multiplying entities, Gotō’s etymological connections look reasonable; an interpretation with ‘make great’ is difficult; and a thematic pres. or aor. stem *aha-* to √*nah* does not exist and the zero-grade (<**nh*) that would have to underlie it is not otherwise found to √*nah*.

I.94.2: *yásmai* √*yaj* presents the classic parasmaipada configuration: “sacrifice for someone else,” but *āyājase* is resolutely middle. I do not have a good explanation for this beyond the fact that the functional distinction between act. *yājati* and mid. *yājate* is not well developed in the RV, esp. with preverb *ā*, and also that Agni, the subject, is essentially sacrificing to himself in any case.

Although act. *sādhati* can be transitive (and WG so tr. it), it also has intransitive/absolute uses (cf. the same tag in VI.70.3). Moreover, in this hymn *sādhāyati* (3a, 4c) serves as the transitive counterpart; the poet seems to have constructed an *-ati/-āyati* Grundverb/Kaus. relationship.

I.94.3: A choppy series of clauses, five in the first three pādas, with only the last dependent in any way on another.

I.94.5: *gopā(h)* in pāda a can be either sg. or pl. All the standard tr. take it as the former, referring to Agni, but this makes grammatical difficulties. Ge interprets the following *asya* as a word-haplology for **asy* **asyā*, thereby getting the 2nd sg. copula but gratuitously accenting the pronoun. Old reads **asy* for *asya* and suggests accenting **cāranti*. Re takes *viśām gopā(h)* as a 3rd sg. expression (“Agni est ...”) and seems to leave the following text alone. But all such tr. must introduce an accent on whatever word they think follows the short initial clause, since, as it stands, two unaccented words, *asya caranti*, would open that clause. These difficulties can be avoided by interpreting *gopāḥ* as plural, subject of *caranti* and coreferential with *jantāvaḥ*. Pl. *gopā-* is elsewhere used of Agni’s sidekicks, presumably his flames, in VI.8.7. Though it is true that this same expression *viśām gopā(h)* is found two hymns later (I.96.4) as an undoubted singular referring to Agni, the grammatical complications resulting from taking it as a singular here outweigh that argument for me.

Most tr. take the two-footed and four-footed as appositional to *jantāvaḥ* and therefore as those who roam by night. This is contrary to the usual RVic vision of the creatures settling down at night. Agni’s flames make more sense as the roamers, evoking the flickering firelight that provides nightly illumination. The flames are called “herdsmen” because people and animals gather around the fire then, like a flock. This interpretation does raise the question of how to construe the nom. case of that expression *dvipāc ca yād utā cātuṣpat*. I take it as a definitional relative clause expanding on *viśām* (so also Old). The *ca ... utā* is a mix of two “both ... and” constructions: X *ca* Y *ca* and *utā* X *utā* Y, with the first half of the conjoined NP fronted around the subordinating *yād*. This construction is very similar to 9b *dūrē vā yé ānti vā ké cid*, complete with the fronted first element.

The etymological relationship between *citrāḥ* and *praketāḥ* in c is not easily rendered in English.

I.94.7: On *talīt-* see comm. ad II.23.9. Here we might substitute “hard by.”

I.94.10: All standard tr. take b *vṛṣabhāsyeva te rávaḥ* as the main cl. to the *yād* cl. beginning in a, while I take it as a part of that *yād* cl. There is no way to tell, since the second cl. lacks a verb whose accent or lack thereof would settle the matter. There are also no semantic implications; I weakly prefer mine because of the fairly emphatic *āḍ* ‘then, just after that’ beginning the second hemistich.

All tr. take *vanīnaḥ* as ‘trees’ (lit. ‘possessing wood’). This is doubtless the primary sense here, since this sequence of vss. describes a forest fire, but ‘winners’ is also possible, since the metaphorical context is that of a chariot race; see esp. 10a, 11c.

I.94.11: I supply ‘makes’ on the basis of 9c *sugám kṛdhi*, though strictly speaking “that is an easy way” is perfectly acceptable.

tāvaká-, the vṛddhi derivative of the genitive of the 2nd ps. pronoun, enlarged with *-ka-*, is a striking form, though exactly what special effect it is aiming at is unclear. For the use of *-ka-* in pronominal derivatives, see Jamison 2009 (IIJ 52). As discussed there, the *-ka-* tends to signal a lower register or slangy tone.

I.94.12: Most tr. take Mitra and Varuṇa as the objects of *dhāyase*: approx. “Agni is for the suckling of Mitra and Varuṇa.” But Agni is the one more likely in need of suckling (that is, feeding the fire); cf., e.g., II.5.7. In particular, in the next hymn, I.95.1, Agni is the object of the transitive/causative *dhāpayete*. I therefore take the gen. *mitrásya varuṇasya* as dependent on *hēḷaḥ* in b, parallel to *marútām*. *hēḷa(s)-* is characteristic of Varuṇa (cf. I.24.14, VII.84.2; in VII.62.4 Mitra is included).

avayātām is the problem in the second pāda. Most tr. take it as a 3rd sg. imperative (e.g., Re “qu’il exorcise”), but if so, it must be a *middle* root pres. imperative, and there are no middle forms to this root $\sqrt{yā}$ (as opposed to $\sqrt{yā}$ ‘implore’). There is also the problem that the form should not be accented on the stem but on the preverb (**áva yātām*; see Ge n. 12b). Lub appears to take it as a gen. pl. of the act. part. to the root pres., but in the absence of a tr. it is hard to know how he would interpret it in context. Best to follow Old (who follows BR) in emending to **avayātā*, the nom. sg. agent noun. Re is tempted by this reading, save for the fact that with the acc. complement *hēḷaḥ* we should expect the accent *ávayātā*. However, the “rule” about the case of complements to agent nouns is broken so often that this objection is not cogent. The final *-m* could have been acquired from the following *marútām* (so Old), and since $\sqrt{yā}$ ‘drive’ is a characteristic Marut verb and a genuine example of the gen. pl. part. *yātām* is used of the Maruts in the refrain V.55.1–9, it may have been rhetorically natural to transform the agent noun into this participle.

I.94.13: Both a and b turn on interpreting one word as both an appellative and a proper name: *mitráḥ* in a, *vásuḥ* in b, though they occupy different places in the parallel structures.

I.94.15–16: The meter here changes to Triṣṭubh, and the intra-hymnic refrain is dropped. The 2nd hemistich of vs. 16 contains the first example in the Saṃhitā of the Kutsa refrain.

I.94.15: Contra standard tr., I do not take *anāgástvam* as the obj. of *dádāsaḥ*, since $\sqrt{dās}$ seldom takes an object that is not a god, and when it does, it is a ritual offering. Instead I take it as belonging to a parallel nominal clause, still in the domain of *yásmai*.

The final phrase that is the ostensible main clause, *té syāma* “might we be they,” violates number agreement: pl. *té* cannot properly pick up sg. *yásmai*. This is a variant of a common tag and feels tacked on.

I.94.16: Because *sá* with 2nd ps. reference is restricted by rule to imperatives (see Jamison 1992 [HS 105]), ab must be a single clause, *pace* Ge.

I.95 Agni

I.95.1: Ge suggests that the sun is referred to in c, Agni in d. But it seems more likely that Agni is the referent of both (or at least the first referent: since Agni = Sun is a common identification, there may be secondary association), and the point is simply that fire looks different in the daylight from at night.

I.95.3: The riddles in this verse have given rise to much more speculation than can be covered here. In the first hemistich the major question is whether the three births of pāda a (*trīṇi jānā*) are matched by three birth locations in b or only two. That there are three locatives (*samudré ... diví ... apsú*) might support the first view; that there are only two *ékam*'s the second. Despite their polarized positions in the pāda, I believe that *samudré ... apsú* refer to one place of birth, *diví* to another. X.45.3, where *samudré ... apsú* is one place of kindling (pāda a), *diváh ... ūdhan* a second (b), and a third is referred to in cd, supports the two-locale view. This then allows the third birth to be the ritual kindling described in the first vss. of the hymn, while very tentatively we might identify the birth in waters as that of Apām Napāt and that in heaven as that of the sun. The three births can also refer to the three ritual fires, and that notion is taken up obliquely in the second half of the verse, in my opinion.

The second hemistich describes the carrying of the kindled fire to the east end of the ritual ground, to become the Āhavanīya fire (not so called in the RV, but clearly referred to often in the text). This pacing out of the ritual ground also establishes the other ordered elements in the ritual, hence the VPs of pāda d. Gr and Old both read **pradísam* for *prá díśam*, as also in IV.29.3. I am not certain that that change is necessary here, though interrupting the *pūrvam ānu ... díśam* phrase with the preverb is somewhat disturbing (though note that *prá* immediately follows the caesura).

I.95.4: As indicated in the publ. intro., this vs. describes the kindling of the fire in typically enigmatic fashion, with multiple referents possible for each entity. (See the various tr. and comm. for disc.) It also contains in pāda b a version of the beloved paradox in which the child gives birth to his parents, though in this particular case I am uncertain what exactly is meant. The *janayata* in 4b picks up the *janayanta* in 2a, but with the subject and object reversed: in 2a the ten (fingers) begat the infant (fire); here the calf (fire) begets his mothers. Note that, while *janayanta* in 2a is a standard, formal -*anta* replacement (see my “Voice fluctuation in the Rīg Veda: Medial 3rd plural -*anta* in active paradigms,” *III* 21 ([1979] 146–69), *janayata* here seems to be a real middle: the mothers Agni begets are his own. For further disc., see comm. on the near-identical expression in IX.95.1. On the basis of the echoing of 2a, I assume that the mothers here are the fingers, though waters are also a popular suggestion -- one that does not fit the ritual context, in my opinion. The hard-working women in c are probably also the fingers, though kindling sticks are also possible, esp. on the basis of 5b.

svadhā(-van)- is a signature word of this part of the hymn: 1c, 4b, 4d.

I.95.5: The hymn began with unnamed dual feminines attending to the young fire; this verse also contains unnamed dual feminines in the same role. But the identities of the two pairs are different: Night and Dawn in 1, the world-halves in 5cd, 6a.

Note the word play of *pratīcī ... prāti*, with slightly different meanings.

I.95.5–6: The middle caus. (*prāti*) *joṣayete* in 5d, 6a literally means “they two cause (him) to take pleasure (in themselves),” but this tr. seems too heavy, esp. in adjacent pādas.

I.95.6: The position of simile-marking *ná* is aberrant, preceding the simile’s noun *méne* and following the verb. Since the full simile is *bhadré ... ná méne*, it seems that this syntagm was distracted in some fashion, with the verb placed in its middle. On *méne* see I.62.7.

The etymological figure in c, *dákṣāṇām dákṣapatiḥ* “skill-lord of skills,” then participates in a phonological figure with semantically distinct *dakṣīnatāḥ* “from the right (/south)” in d.

I.95.7: I take the first half-verse as a description of fire both sending its flames upwards and stretching out horizontally. Most tr. interpret *yatate* in b as transitive (e.g., Ge “er eifert beide Heeresreihen an”), but the medial forms of this pres. stem are intransitive or reflexive. I instead take *ubhé sícau* as an acc. of extent and assume that it refers to the seams between the two world-halves found in vss. 5–6. With these two halves, heaven and earth, meeting at the horizon, as it were, the seams between them would stretch horizontally.

The “new clothes” he leaves for his mothers in d are probably the ashes that fall on the kindling wood as he burns it.

I.95.8: The first three pādas of this verse sounds very somian: the cows [=milk] and the waters of b are the standard ritual substances mixed with soma in the IXth Maṇḍala; the beginning of a, *tveṣám rūpám kṛṇute*, is also found in a soma hymn, IX.71.8; and $\sqrt{mṛj}$ ‘wipe, groom’ in c is a signature soma verb. This may be an example of the covert equation of the two ritual gods, Agni and Soma. Pāda a is easily interpreted in an Agni context; b makes more difficulties: the cows can here be the ghee poured into the fire (which could cause the creation of an “even higher” form in a), but the waters would obviously have a diminishing effect on the fire if it actually “mingles” with them. Ge (n. 8b) suggests that the vedi is being sprinkled with water, but that’s not what the text says. I think better to assume that this is an incompletely adapted somian description.

The final piece of pāda a, *úttaram yāt*, is an izafe-like relative and embedded in the larger sentence, which continues in pāda b. On the type see my forthcoming “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian.”

Pāda c has caused interpretational difficulties, in particular because of the apparent equation of the poet (*kavīḥ*) and the insight (*dhīḥ*), both nominative and both apparent subjects of *marmṛjyate*. Ge takes them as conjoined nouns with suppressed conjunction, “the poet (and) his thought,” which are both tending to the Unterlage of Agni. This is not a bad solution, but it assumes that the *kavī-* is the human poet. Since Agni was identified as a “great poet” (*mahān kavīḥ*) in 4d, it’s desirable to maintain this identification if at all possible. Another solution is to take *dhīḥ* as a separate nominal clause, as Re does (“il est la Vision-poétique”). He takes the referent of both *kavīḥ* and *dhīḥ* to be Agni. WG seem to take *dhīḥ* as the object of the verb, though without comment. This is presumably inspired by the fact that acc. pl. *dhiyāḥ* does elsewhere

serve as object to *marmṛjyáte* (IX.47.4). However, making *dhīh* into an acc. pl. is grammatically difficult (though, I suppose, not impossible).

My solution involves reading the intensive *marmṛjyate* simultaneously in two syntactically different ways, both of which are paralleled elsewhere in the RV. The stem *marmṛjyáte* is one of the new-style -*yáte* intensives, which have medial inflection and passive accent even if they have active semantics and pattern with active stems in their averbo. See, for example, IX.47.4 just cited. (On this type and its origin, see Jamison 1983 [MSS 42: 41–73].) Thus, the poet can be stroking the *budhnám* in this transitive interpretation, like the many active forms of this root including the act. athem. intensive *mármṛj-*. But several instances of medial *marmṛjyá-* have the passive value the morphology implies (e.g., IX.62.13 *marmṛjyámāna āyúbhiḥ*, of soma), and I take *dhīh* as the subject of the verb read this time as a passive. This syntactic pun might be clearer in the publ. tr. if the same word had been used for both readings; better might be “... keeps stroking ... is being stroked,” though ‘groom’ is actually better with the insight as subject.

On the syntax and sense of d, see comm. ad X.11.8.

I.95.9: Ge (/WG) assume that pāda a treats the Paryagnikaraṇa or the ritual act of circling around an object with a firebrand, but *jrāyāḥ* ‘expanse, expansion’ seems to me rather to depict the horizontal spread of the fire out from its original kindling place.

I.95.10: In pāda a *srótaḥ* can be either nominative, as appositive to the underlying subject Agni, or accusative, an object parallel to *gātúm ūrmím*. I chose the second alternative, contra Ge / Re, but either is possible and the meaning is virtually identical.

I.95.11: *revát* in b may be either adverbial (as I’ve taken it) or the object, with supplied noun, of *vī bhāhi* (so, e.g., Ge “Nun strahle ... reiches (Gut) aus”). Again either is possible and the effect is essentially the same.

I.96 Agni

The first verses of this hymn connect Agni with the semi-divine ancestors and culture heroes of the Ārya: Āyu, Manu, Vivasvant (vs. 2), Bharata (vs. 3), Mātariśvan (vs. 4).

I.96.1: Most tr. interpret *mitráṁ ... sādhan* as “they conclude an alliance” (so Re; Ge “Freundschaft”), but since *mitrá-* is so often a descriptor of Agni as the go-between between gods and men, I assume that Agni is the referent here as well. So also Old SBE.

I.96.2: This verse attributes primal creative power to Agni first in the ritual realm (ab), then in the cosmic realm (c). Ge (/WG) supply a different verb in c (“bescheint”), presumably because Agni is not usually credited with cosmogonic powers. But there is no contextual support for a new verb here, and in parallel clauses containing only one verb the default interpretation is to supply the same verb with the second clause. Given how much generative power is ascribed to the Vedic sacrifice, it is not surprising that Agni’s ability to engender Manu’s people, that is, those who sacrifice like Manu, can then be extended to his ability to beget the major cosmic features -- esp. as in this enterprise he is

partially identified with the sun. Note that in 4c he is explicitly named as “the begetter of the two worlds” (*janitā ródasyoh*) as well as “the finder of the sun” (*svarvíd*).

I.96.3: On the Bharata fire as “the focus of worship of multiple *ārya* clans,” see Proferes 2007: 37.

Though *sṛprá-* receives various tr., it must be related to *sarpís-* ‘melted butter’. See EWA s.v. *sarpís-*; it has nothing to do with $\sqrt{sṛp}$ ‘creep’. Its semantic range seems to cover ‘buttery, glossy, sleek’

I.96.4: Contrary to the standard tr., I take pāda a as containing a separate predication: in his capacity as Mātariśvan he ensures prosperity, while as Sun-finder he finds the way.

I.96.7: The full integration of the refrain into the syntactic structure of the verse is signalled by the shift from nominative reference to Agni to accusative, clear first in *kṣām* in b, since *sādanam* in a is neuter and could be in either case -- the common use of a morphologically ambiguous form as pivot.

I.96.8: With the refrain having finally been integrated into the verse in 7, it is abruptly dropped and its final and most salient word, *draviṇodā-* explodes in vs. 8.

Though *sānara-* is a hapax, ‘having superior men’ seems a fairly safe bet, esp. given semantically parallel *vīrávant-* in the next pāda. We might of course prefer **sānara-* given the init. laryngeal of the ‘man’ word, but in a nonce creation the phonological history of the 2nd member would no longer be available.

I.97 Agni

The grammatically incomplete refrain of this hymn (*āpa nah śósucad aghám* “blazing away the bad for us”) is introduced first as the first pāda of this hymn and then repeated as 1c. In that verse, the refrain’s participial construction is integrated into the verse structure, modifying the subject of the main verb *śúsugdhi* in b. This integration is not found again until vs. 6 and continues thereafter till the end of the hymn (vss. 7–8). However, the semantic distance between the verse proper and the refrain narrows as the hymn progresses. In vss. 2-3 there is no explicit mention of Agni, but in vss. 4–5 he appears, as enclitic pronoun + voc. (*te agne*) in 4 and gen. (*agnéh*) in 5, though neither is in the appropriate case to match the refrain.

I.97.1: It does not seem worthwhile to try to replicate the difference between the two reduplicated forms, the intensive participle (*śósucat*) and the perfect imperative (*śúsugdhi*) in tr. — Re’s tr. of the inten. part., “écartant-par-ton-éclat-puissant,” is a cautionary example of why. WG’s “immer wieder wegflammend” is somewhat less clunky but still gets wearisome in repetition.

I.97.3–5: These three middle verses, before the refrain becomes reintegrated into the verse, begin identically: *prá yát*, though the sense of *yád* in 3–4 differs from that in 5.

I.97.3: The referent of *bhāndiṣṭha eṣām* “the most fortunate one of these” is not clear. However, since he is conjoined with “our patrons” and patrons are often conjoined with

“us” (as in the next verse), referring to the poet-performers (explicitly II.2.12 *stotārah ... sūrāyaś ca*), it is likely a singer or poet, perhaps even this very poet, referring to himself in the 3rd ps.

I.98 Agni

I.98.2: As noted in the publ. intro., I take this verse as an allusion to the well-known story of Agni’s disappearance and the gods’ search for him (treated in detail in X.51–53). (So also Old SBE.) However, this mythic allusion must be mediated by reference to the here-and-now, given the hope for Agni’s protection expressed in the final pāda. This mediation is perhaps signaled by pāda b, where Agni’s hiding place is identified. Instead of the waters, where Agni takes refuge in the myth, he has entered “all plants” (*vīśvā ōṣadhīḥ*). Agni’s hidden presence in plants, the quality that allows him to be born from them, is a standard trope in hymns treating the kindling of the ritual fire and is in fact alluded to at the end of a nearby Kutsa hymn, I.95.10d *antār nāvāsu carati prasūṣu* “he roams within the new, fruitful (plants).”

I.99 Agni

The only single-verse hymn in the RV, it closes Kutsa’s Agni cycle. Though attributed to Kaśyapa Mārīca by the Anukramaṇī, it shows clear connections with other parts of Kutsa’s Agni hymns, for which see publ. intro.

I.100 Indra

I.100.2: In c, the presumed main clause to the relative clauses of ab, I have supplied a verb of motion (“should come”), but it might be better, with Ge and Re, simply to take c as the anticipatory qualifier of the subject (*índrah*) of the refrain in d.

The *svébbhiḥ* of c is positioned between two other masc. pl. instr. and could perhaps be taken with both, though I have tr. it only with *évaiḥ* because *svébbhir évaiḥ* appears to be a fixed expression: I.62.8, VIII.8.13, VIII.97.3, X.67.11.

I.100.3: Pāda a with its simile is interpreted variously, with the differences primarily dependent on the construal of the participle *dúghānāḥ*. On the basis of III.31.10 *páyah prathāsya rétaso dúghānāḥ* “milking out the milk of their age-old semen,” I take the participle to be transitive and supply as object acc. *páyah*, on which gen. *rétasah* is dependent. Since these are the only two occurrences of the stem *dúghāna-* (as opposed to *dúhāna-*, etc.) and they share the word *rétas-*, it seems best to interpret them in the same way. Ge, however, though adducing III.31.10, takes *dúghānāḥ* as passive, “wie die gemolkenen (Ströme) des Himmelssamens” (sim. Re). Both Ge and Re also take *divāḥ* as dependent on *rétasah*, while I take it as parallel to *yásya*, both dependent on *pánthāsaḥ*. The parallel expression in vs. 2 *yásya ... sūryasyeva yāmaḥ* “whose course, like that of the sun...” favors my interpr. of *divāḥ*, though the passages adduced by Ge. (V.17.3, IX.74.1) do show that *divāḥ* can also qualify *rétas-*.

Determining the syntactic structure here requires figuring out what image in being depicted. We can begin with the gender paradox that figures prominently in any interpretation: the milk(ing) and the semen. I do not think this can be separated from Indra’s “male powers” (*paúmsyebhiḥ*) in c, and therefore think, contra most other interpr., that it is Indra’s “paths” that are producing the semen-as-milk. Most interpr. avoid this difficult image by taking *dúghānāḥ* entirely as part of the simile (the milked-out [streams]), with the property shared by the frame (Indra’s paths) and the simile only the anodyne verb *yánti* ‘go’. I freely admit that the image produced by my interpr. is, to say the least, not straightforward, but it can be made intelligible and it produces a richer semantics than the alternatives. In vss. 2 and 3 the trajectory of Indra’s journeys is depicted as cosmic: his “course” (*yāmaḥ*) in 2 is like that of the sun, his “paths” (*pánthāsaḥ*) like those of heaven in 3. (See also his ‘routes’ in 4c.) I therefore see these journeys as visually inscribed in the sky, almost like contrails (however anachronistic that image is for the Vedic period). The cosmic equivalent of these paths of Indras are likely the clouds, which produce rain. Now the refrain of this hymn emphasizes Indra’s connection with the Maruts, and the Maruts are, among other things, the gods associated with the thunderstorm and the monsoon and are closely associated with the production of rain. So, Indra’s journey across the sky with the Maruts can also be seen as producing rain, figuratively called semen because of the Indra’s intensely male character. His “paths” on this journey are compared to the clouds, whose visual “paths” as they move across the sky are deeply familiar and which are the quintessential producers of rain.

I.100.4: In b *sán* is one of the (fairly few) examples of the nominative of the pres. part. to \sqrt{as} that is not concessive (expect “although being ...”). The phrase *sákhībhiḥ sákhā sán* is, as Ge points out (n. 4b), structurally identical to I.76.5 *kavíbhīḥ kavīḥ sán*, where the *sán* also lacks concessive force.

I.100.4–5: The pattern of instrumentals set in vs. 4 -- “X with the X-es,” that is, “X among the X-es” -- appears to continue in 5a and c, but the instrumentals there are used differently.

I.100.5: The participial phrase *śravasyāni tūrvan* has a close parallel in VIII.74.10c *yásya śrávāṃsi tūrvatha*. I translate the latter as “whose claims to fame you bring to triumph.” Given the similarities I would change the tr. here to “along with the nest-mates bringing to triumph (deeds) worthy of fame.”

I.100.6: The general opinion is that *samádana-* is simply an extension of *samád-* ‘battle’; Mayrhofer (EWA s.v. *samád-*) suggests that it’s a blend of *samád-* and *samáraṇa-* ‘clash, battle’. I consider it rather a blend (with suffixal extension) of *samád-* and *máda-* ‘exhilaration, elation’, hence ‘battle-elation’ or, in Re’s felicitous tr. ‘l’ivresse-du-combat’. In a nicely balanced expression, just as Indra reduces the battle-fury of the enemy (*manyu-mīḥ*) he raises the battle-elation of those fighting with him. This notion is continued in the next verse, where in pāda a the Maruts cause Indra to enjoy the battle.

Ge and Re tr. *sanat* as a modal here (but not the repeated examples in vs. 18). The form of course cannot be a subjunctive, given the augmented thematic forms that belong to this paradigm (*ásanat*, etc.), and though injunctives can sometimes be modal, there is no contextual reason for such an interpretation.

I.100.7: The abstract *ūtí-* ‘help’ is here personified, representing the Maruts. Cf. I.52.9 where the identification of *ūtáyah* and *marútaḥ* is explicit.

karúṇa- is found only here in the RV; neither here nor in its very few other occurrences in early Vedic (AV 1x, TS 1x) does it exhibit any semantic kinship with later *karuṇa-* ‘pitiful’, *karuṇā* ‘pity’, though Mayrhofer (EWA s.v.) makes a valiant effort to connect the meanings.

I.100.8: The apparent 3rd pl. med. verb *apsanta* is difficult. Ge simply refuses to translate. Old suggests a connection with \sqrt{sap} but without conviction. Re and WG (though both without disc.) must take it as a desiderative to $\sqrt{āp}$ ‘reach, obtain’ (“... cherchent à gagner,” “... wollen ... erreichen”). But, though the standard desid. to this root, *īpsati*, is not attested until the AV, the lack of reduplication and the short root vowel make the stem *apsa-* an unlikely desid. (This analysis is also rejected by Ge in n. 8a.) I tentatively suggest that it belongs to the putative root \sqrt{bhas} ‘breathe’, which Thieme (*Gramm. Kat.* 539) suggests underlies the various compounds in *-psu-*, as well as Grk. ψυχή (see EWA s.vv. *psu-* and *bhas*²) and that it means ‘inspire’. It would then be the imperfect of a root pres. (or possibly a root aor.). Though we might expect a weak form of the middle ending, **apsata*, this may well be an *-anta* replacement for act. *-an* of the type identified and described in Jamison 1979 (IJ 21). Old rejects a derivation from \sqrt{bhas} , but presumably referring to the other \sqrt{bhas} ‘bite’.

I.100.9: The standard tr., also Old and Tichy (1995: 42), take *sámgrbhītā* as the nom. sg. of an agentive *-tar-* stem, parallel to *sānitā* in pāda c, a form that should have full-grade in the root syllable, **sámgrabhītā*. I see no reason to reject the past participle it appears to be, in order to assume a wrongly formed alternative. Although RVic poets often make use of morphological parallelism, it is not a compositional requirement; in fact, they often take pleasure in expressing semantically parallel notions in morphologically dissimilar garb (see a nice example in 6a above, not to mention instr. *savyéna*, loc. *dakṣiṇé* in this same hemistich). The verb *yamati* of pāda a can easily be read with b as well, and *sámgrbhītā* also modifies the neut. pl. *kṛtāni* with no grammatical difficulty.

I.100.10: On *grāma-* as ‘horde, roving band’ see comm. ad X.27.19.

I.100.11: The verb *samájāti* lacks an overt object; the standard tr. supply ‘booty’. This lexeme sometimes takes an acc. expressing the prize one wins (e.g., cows in I.33.3), but other times the enemy one defeats (e.g., VII.32.7), and I see no way to decide here.

Note how (*saṃ*)*ájā(ti)* echoes *jā(mibhir)* ... *ájā(mibhir)*.

I.100.12: On a variant of pāda b, see comm. ad X.69.7

The hapax *camrīṣá-* is taken by the standard tr. as a personal name. This tactic may be safe, but it ignores the word’s similarity to several others, particularly the hapax *camrīṣ-* in I.56.1, a word usually rendered as ‘ladle’. Old, ad I.56.1, makes the offhand suggestion that our *camrīṣá-* is related to *camara-* ‘yak’, a word not attested until the grhya sūtras. Although ‘yak’ might work in our passage, the gap in attestation and the morphological differences make this connection quite shaky. More promising are several words found in the RV for soma cup/beaker: *camasá-* and *camū-*, as well as the root *cam* ‘sip, slurp’ (see Gotō 1987: 136). *camrīṣá* (and *camrīṣ-*) may be secondarily built to a **cam-ra-* derived from this root (for the suffixes *-īṣá-* and *-īṣ-* see AiG II.2.462–63 and 364–67 respectively) and thus derivationally parallel to *cam-ū-* and *cam-asá-*. I therefore take *camrīṣá-* as belonging to the same semantic sphere as *camasá-* and *camū-* and as the designation of a large cup or beaker. The problem that then arises is why Indra would be compared to such a thing; this aberrant simile may be responsible for the resistance to connecting *camrīṣá-* with the other *cam-* words. But this is only an apparent problem. The point of comparison is Indra’s vastness (*śávasā*), the capaciousness with which he encompasses the peoples and natural features of the world (see also 14ab). An exactly parallel image is found in I.61.9, where Indra is called “a reverberant tankard” (*svarír ámatraḥ*).

I.100.13: Most tr. take a and b as separate clauses, to avoid direct comparison of the mace (*vájraḥ*) with the bellowing (*raváthaḥ*), but I consider this another example of the condensed and deliberately off-balance syntax of this hymn: the mace that roars is compared directly to the similar sound emanating from heaven; in other words, the verb *krandati* in the frame is transformed into the noun *raváthaḥ* in the simile.

I.100.14: Having described the vastness of Indra’s power throughout the hymn, the poet now implicitly attributes the same vastness to his own hymn (*ukthám*) by juxtaposing it

with Indra's *mānam* 'measure', which encompasses the two worlds. With Old I take *mānam ukthām* as "coordinated and asyndetic."

I.100.17: The first hemistich appears to contain a pun on the patronymic of the poets named in cd, *vārṣāgirāḥ* -- with *vṛṣṇe* in a, corresponding to the 1st compound member, and (*abhī*) *grṇanti* in b, to the root \sqrt{gr} 'sing, greet' found in the 2nd. The pun supports the derivation of *vārṣāgirā-* from **vṛṣā-gír-* 'having a bullish song' (so Gr) rather than from **varṣā-gír-* 'welcoming the rain', as suggested by Scar (112) and endorsed by Mayrhofer (*Personnamen*, 82–83). The semantics of the proposed bull-compound seem superior to the proposed rain-compound, and the pun provides further evidence in its favor.

I.101 Indra

I.101.1: Supply *púraḥ* with fem. *kṛṣṇāgarbhāḥ* in b. So, explicitly, Old, but standard tr. follow.

I.101.2: The adj. *asúṣa-* almost always occurs with *súṣṇa-* (6 of its 7 occurrences: II.14.5, 19.6; IV.16.2; VI.20.4, 31.3, and here) and is a textbook example of a phonological figure. It is generally taken as a derivative of \sqrt{as} 'eat', meaning 'gefrässig' (standard tr., as well as Gr, AiG II.2.491, EWA s.v. *as*) -- hence my 'insatiable', which is meant to produce a similar phonetic figure. I do wonder, though, if it's not a derivative of \sqrt{svas} 'snort, pant', which would make it also an etymological figure with *súṣṇa-*, used proleptically to mean "(wrenched him down) (to become) breathless." The phrase is almost always the object of a verb of violence, as here, and the proleptic adjective fits these contexts. For similar accent on a negated *-a*-stem compound, cf. *akṣára-* 'imperishable', *ajára-* 'unaging', *adābha-* 'undeceptive'. Vs. 5c has a similar proleptic phrase, *dásyūñr ādharān* "(brought) the Dasyus low."

I.101.3: Pāda a lacks a verb. Tr. supply variously: Ge "sich fügen," Re "ont assigné," WG "folgen." I supply a form of $\sqrt{vṛdh}$ 'strengthen, increase' on the basis of formulaically similar VIII.15.8 *táva dyaúr indra paúmṣyam, pṛthivī vardhati śrávaḥ*, and other passages where *paúmṣyam* is obj. of $\sqrt{vṛdh}$ (I.155.3, VIII.6.31).

I.101.4: For the putative root $\sqrt{ār}$ 'recognize' (< 'recognize as an Ārya'?), see comments ad VIII.16.6 as well as Old (Noten) on this vs.

I.101.6: The nonce form *jigyúbhiḥ* to a supposed stem *jigyú-* is surely an attempt at an instr. pl. of the pf. part., which is well attested (*jigīvān, jigyús-*), but whose instr. pl. ought to be the monstrous **jigivádbhiḥ* or (improperly using the prevocalic weak stem) **jigyúrbhiḥ* or **jigyúbhiḥ*.

I.101.7: For the ring that connects this last Jagatī vs. with vs. 1, see publ. intro.

For the buried pun involving *pṛthú jráyaḥ* and the referent of *yósā*, Rodasī, see comm. ad I.168.7.

I.101.8: Ge and Re take *mādāyāse* only with b and supply the copula with a. The strict parallelism of the two clauses favors taking the verb of b with both, as I do, but the question may be whether Indra can reach exhilaration in heaven or can only do so at a human soma offering.

I.101.10: The referent of the dual *dhéne* “two streams” is not clear to me. Ge takes it as ‘lips’ (< ‘the sucking ones’; see ad I.2.3), but in no other passage is ‘lips’ a possibility (though this doesn’t stop Ge). Bloomfield (JAOS 46) suggests it is an elliptical dual, for prayers and libations, expressed by *dhénāḥ* and *dhārāḥ* respectively in III.1.9, but this relies on an outdated interpretation of *dhénā-* (see comm. ad I.2.3). H.-P. Schmidt (Fs. Nyberg) also considers it an elliptical dual, but is himself somewhat elliptical about what the ellipsis would be -- it seems that he considers it both literal (streams of milk) and figurative (streams of song). But RVic poets elsewhere do not resort to the dual to express a literal/metaphorical split. Re takes it as two streams of soma (without identifying which these would be), and WG as two milk-streams (again unidentified). I am inclined to assume that it has been attracted into the dual from the more regular pl. *dhénāḥ* by the immediately preceding *śípre* ‘two lips’, given the strict parallelism in syntax and phonology in the two clauses in this pāda: *ví syasva śípre ví sijasva dhéne*, although the existence of another dual *dhéne* in V.30.9 in an obscure context, may weaken this attraction hypothesis.

I.102 Indra

I.102.1: As indicated in the publ. intro., I interpret the first half-verse very differently from the standard tr. The three major deviations from the ordinary interpretations are the following: 1) I take *te* in pāda a as referring to the poet, who is also the subj. of the 1st ps. verb *prá bhare*. This is the most radical of the departures and requires the most special pleading. 2) Rather than the loc. sg. of neut. *stotrā-* ‘praise song’ (a loc. not found elsewhere in the RV), I take *stotrē* as the dat. sg. of the agent noun *stotár-* ‘praiser’, coreferential with *te* in a. This dat. is very common in the RV. 3) I take the first two words of b (*asyá stotrē*) with the main cl. in a, starting the rel. cl. with *dhīśāṇā*. This accords better with the placement patterns of *yá-* subordinators, which ordinarily do not follow more than one constituent.

As for the first departure, as I have pointed out elsewhere (see comm. on I.70.10), the 2nd sg. middle forms of the impv. (*prá*) *bharasva* *bhārasva* (I.79.10, VII.88.1) are specialized for the self-address of the poet. Here, with the middle *prá bhare* I think the poet is speaking in the 1st ps. but addressing himself in the 2nd. I do have to admit that *prá* √ *bhr* + DAT. otherwise has the divinity in the dative and so the *te* in 2nd position in the verse would immediately be interpreted as referring to Indra -- and, I have to argue, only as the verse unfolded would the referent be reinterpreted as the poet. Despite the complications of my interpretation, it solves the difficulties that arise from the standard interpr. First, that interpr. must take the *mahāḥ* as coreferential with *te* (e.g., Re “à toi (qui es) grand”), but this makes the whole phrase genitival, and, as noted, the *prá* √ *bhr* construction takes a dative (of the many exx., cf. I.143.1 *prá ... dhītúm agnáye, ... bhare*). Then a referent must be supplied for the *asyá* opening pāda b; most supply “the singer.” (Under my interpretation, the genitives *mahāḥ ... asyá* are construed together and refer to

Indra, while *te ... stotré* is the dative phrase.) And the problems I already mentioned, that *stotré* is otherwise only the dative of the agent noun and that *yád* comes too late to govern the whole b pāda, also remain in the standard tr.

But what does it mean, in my interpretation, when the poet says “I present to *you* this thought,” with both “I” and “you” referring to himself. As I suggest in the publ. intro., the poet is announcing that he has finished composing the hymn, which can now be recited to the god at the ritual performance, also by himself (the poet). A slightly attenuated alternative would be to take *te* as referring to a different member of the larger group of ritual performers, who is charged with reciting the hymn that “I” have just composed.

I.102.2: The phrase *dyāvākṣāmā pṛthivī* is striking because *pṛthivī* ‘earth’ either doubles the less common ‘earth’ word *kṣāmā* in the du. dvandva or else serves as the epithet (‘the broad’) it historically was. Indeed because *pṛthivī* is grammatically ambiguous (sg. or du.), it could modify both heaven and earth, or it could stand as a second elliptical du. referring to both. The same phrase is found in III.8.8 and, with *-bhūmī* rather than *kṣāmā*, in X.65.4.

I believe that there is a closer connection between the two halves of the verse than the standard tr. seem to. In my opinion the sun and moon roam alternately in order to provide constant illumination, so that we can see Indra’s “wondrous form lovely to see” (*darśatām vāpuḥ*) and therefore put trust in him, that is, in his existence. Remember that a constant source of worried speculation in the RV is whether Indra exists or not -- a worry that is regularly alleviated by his epiphany on our ritual ground. Here the mere sight of his form will allay our worries and allow us to trust that he exists. Ge attributes the actions of cd just to the fact that Indra is the creator of sun and moon, while Re has us looking at the sky.

I.102.3: Re takes c with d as a single clause, but I follow Ge (/WG) in supplying ‘help’ from ab as the verb of c. Passages like I.176.5 *ājāu ... prāvah... vājīnam* support this latter interpr.

I.102.5: *hāvamānā(h)* is one of the uncommon, but not vanishingly rare examples of a pres. part. functioning as the main verb of a clause. See also 103.4 below.

Given the fronted full pronoun *asmākam* in c and its contrast with the various peoples in ab, more emphasis should have been placed on “our” in the publ. tr.

I.102.6: I tr. *amita-* as ‘matchless’ rather than ‘immeasurable’ because of its etym. connection with *pratimāna-* ‘match’ (6c, 8a), *amātrá-* ‘matchless’ (7c).

The Pp. reads *akalpāḥ* in c, and following this reading has led to very “free” (so Old) tr. of the word and interpr. of the syntax (e.g., Ge “Durch seine Stärke macht Indra ein Gegengewicht unmöglich”; Re is even freer), where “(macht) unmöglich” for *akalpā-* seems distinctly odd and the syntactic relation between it and *pratimānam* is loose at best. The difficulties disappear if we instead read loc. *akalpé*. As Old points out, by accent the word should be a bahuvrīhi. The one example of *kálpa-* in the RV seems to refer to arrangements, ritual or martial (IX.9.7: *ávā kálpeṣu naḥ pumas, támāmsi soma yódhyā* “help us in our arrangements, o male; the shades of darkness must be fought”), and a

bahuvrīhi “without arrangement/order” modifying an underlying ‘battle’-word (perhaps *khaja-* ‘tumult’ extracted from immediately preceding *khajamkarāḥ*) makes perfect sense in context.

This leaves an equational sentence *índrah ... pratimānam ójasā* “by his strength Indra is the match,” and we need only supply the specification of what he is the match for. I sc. ‘all’ on the basis of II.12.9c, also describing Indra: *yó víśvasya pratimānam babhūva*. However, esp. in conjunction with 8ab, it might instead be the earth, or heaven and earth. Cf. I.52.13 (also of Indra) *tvám bhuvaḥ pratimānam pṛthivyāḥ* (also 12); X.111.5 *índro divāḥ pratimānam pṛthivyāḥ*.

I.102.7: As in 2b we find an original epithet of the earth, *mahī* ‘the great one’, which comes to be used as a straight designation of it, doubling a word that may also refer to the earth, *dhiṣāṇā*. This combination also occurs elsewhere (III.31.13, X.96.10); the former passage is an esp. close parallel to this one, in that *mahī ... dhiṣāṇā* sets Indra on the attack. With Kü (224: “Dich ... hat die Dhiṣāṇā entflammt”) I therefore take *títviṣe* here as transitive, though in its other occurrences it is not. For another passage in which the earth aids Indra in his heroic deeds, see IV.16.7b *prāvat te vājram pṛthivī ...*

I.102.8: Contra most tr., I prefer to take ab as separate clauses, rather than as anticipating *bhūvanam* in c.

The difference between *triviṣṭi-dhātu-* and *tri-dhātu-* (used of *bhūma* in IV.42.4) is not clear to me. The stem *triviṣṭi-* on its own (IV.6.4, 15.2) qualifies Agni’s ritual actions as performed “with triple toil” (\sqrt{vis} ‘be active, labor’), but that sense doesn’t work here. As far as I can see, it’s a way of indicating that the divisions each have three divisions of their own, but the semantic pathway to this value is unclear.

I.102.9: The standard tr. take *upamanyú-* as a PN. Mayrhofer (*Personenname*) voices skepticism, however, and I see no reason not to take it as an adjective qualifying the bard (*kārú-*). Though *manyú-* ‘battle fury’ can be a negative quality, it often is not so viewed (esp. when it belongs to the gods), and the passionate energy it implies would be a good trait for a poet.

The impv. *kṛnotu* in d should be read (with the standard tr.) with both c and d, with slightly different values: in c it has a straight “make X Y” sense, while in d it participates in the idiom *purāḥ √kṛ* ‘make (i.e., put) in front’.

I.102.10: On the sense of *ná dhánā rurodhitha*, see comm. ad X.42.9.

In b the singular loc. *ājā* appears to be modified by two loc. plurals *árbeṣu* and *mahátsu* (so Old, Ge, Re); cf. I.81.1 *mahátsu ājísūtém árbhe* with a different imbalance of number. WG take the plurals separate from the singular (“im Wettkampf um kleine (Dinge) und um grosse”) (see their note). This is possible but unnecessary.

I.103 Indra

I.103.1: On the interpr. of this verse, see publ. intro. Although my interpr. generally follows Ge et al., I take the first two pādas as referring disjunctively to the two locations

of Indra's power (not just to the heavenly one), an idea that is more straightforwardly expressed in c, which I consider grammatically connected to ab.

For the notion in d of a *ketú*- linking heaven and earth, see III.55.2 and VII.9.1. Despite its position I take *iva* as marking the following *ketú*- as a simile.

I.103.2: The presence of the shadowy Rauhiṇa here (otherwise only II.12.12) is an intrusion in this Vṛtra-oriented verse. The verb that governs him, *ví*√*bhid* 'split apart', returns in the next verse with 'strongholds' as its object. The distraction of verb and preverb with object in the middle (*ábhīnad rauhiṇám ví*) is almost iconic for the splitting apart. For a potentially similar ex. see V.30.7.

I.103.3: The iconic splitting of verb and preverb in 2c is complemented here in b by the polarized positioning of the NP "Dāsa strongholds," the object of *vibhindán*, at the beginning and end of the pāda: #*púraḥ ... dāsīḥ*#, while the preverb+verb are unverbated in the participle (as against 2c).

Ge (WG) take *śraddádhāna ójaḥ* as transitive-reflexive, "trusting in his own power," but as Old argues, *śrād*√*dhā*, a signature word of this set of hymns, expresses the trust that people have in Indra, and the medial participle should therefore be taken as a passive (so also Re). For the other occurrences of *śrād*√*dhā* that support this interpr., see vs. 5 in this hymn (structurally paired with 3; see publ. intro.), as well as I.102.2, 104.6–7.

I.103.4: The syntax and purport of this verse are somewhat murky, and my interpretation differs from the various other standard ones (though it is closest to Re). I will only present mine here, without cataloguing the differences from the others. First, I take *tád ūcúṣe* as a separate clause, with a new clause beginning in the middle of pāda a with *mānuṣemā yugāni*, which I take as an acc. of extent of time, as it is several times elsewhere (e.g., II.2.2).

The rest of the verse concerns the epithets or "names" Indra has and, in part, how he acquires them: *maghávan*- 'bounteous' in b, *vajrín*- 'mace-bearer' in c, and *sūnúḥ* (*śávasaḥ*) 'son (of strength)' in d. Note that the names are all in the nom., though appositional to acc. *nāma*. For a parallel see, e.g., X.28.12. On Indra's acquisition of a sequence of names, see also VIII.80. I take c as containing the predication of the main clause, with the pres. part. *upaprayán* functioning as the main verb (see I.102.5 above).

The referent of *tád* in the first clause is unclear. Though it may be *nāma*, as most tr. think, I'm inclined to take it as an internal reference to the hymn that the poet is presenting to him.

In d the expected epithet "son of strength" is truncated, lacking the *śávasaḥ*, but the phonologically and derivationally parallel *śrávase* that immediately follows *sūnúḥ* would evoke it.

On this verse as an omphalos, see publ. intr.

I.103.7: For the "deep-structure pun" in pāda b, see the publ. intro. and Jamison 1982/83 and 2007: 110-12. That the action in this clause is not to be taken literally is, I think, signalled by the *iva* in the main clause in pāda a, which introduces the heroic deed (*vīryām*) supposedly depicted in b. My "as it were" renders the *iva*.

In c Ge takes the wives (*pātnīḥ*) as the wives of the gods, but in this Vṛtra context it makes more sense to take them as the (fem.) waters whom Indra had just released. Recall that in the great Indra-Vṛtra hymn I.32 (as well as in V.30.5, VIII.97.18), the waters are called *dāsāpatnīḥ* (vs. 11), “whose husband was a dāsa” (that is, Vṛtra). This might be clearer if the publ. tr. read “His wives.”

The interpretation of the final part of this pāda, *vāyaś ca*, is disputed. Ge (/WG) and Re take it as an acc. of *vāyas-* conjoined with *tvā* (“dir ... und deiner Kraft”). However, already Sāy considered it the nom. pl. of *vī-* ‘bird’, which is equally possible grammatically, and I have adopted this interpr. (Old seems tacitly to accept this interpretation, by citing X.80.5, which also contains birds.) Sāy’s suggested referent is the Maruts, which makes good sense. The two groups on site at the Vṛtra battle and able to give encouragement and praise to Indra then were the waters and the Maruts, who, in many accounts of the myth, provided Indra with moral and tactical support.

I.103.8: *kūyava-* ‘bringing bad harvest’ is ordinarily an epithet of Śuṣṇa, and I so take it here even though it is separated from *śuṣṇam* by another PN. I ascribe this position to the fact that *kūyava-* always appears after the caesura. However, in the next hymn (104.3) Kuyava seems to be an independent personage, or rather there is no overt mention of Śuṣṇa -- so perhaps he should be accorded an independent existence here as well (with the standard tr.).

I.104 Indra

I.104.1: As noted in the publ. intro., *s^uvānó nārvā* in b contains a triple pun, since the participle *s^uvānāḥ* can be read in three different ways: 1) as nom. sg. to the adj. *svānā-* ‘sounding’ (\sqrt{svan} ‘sound’)(so Old, Re, WG); 2) as athem. med. part. to $\sqrt{sū}$ ‘impel’, used passively (so Ge); 3) as athem. med. part. to \sqrt{su} ‘press’, also used passively (mentioned by Ge in n. 1b). In this last case the simile would compare Indra seating himself on the ritual ground to soma placed at the soma press. The diction in the rest of this hemistich is quite similar to that found in soma hymns. Cf., e.g., IX.70.7 *ā yónim sómah súkṛtaṁ ní śīdati*, with *yóni-*, a form of \sqrt{kr} characterizing it, and the verb *ní√sad*. In the publ. tr. only the first of these is given, because including a set of bracketed alternatives -- “[/ like a steed having been impelled [/ like (soma) the steed being pressed]” -- seemed disruptive and distracting.

Pāda b contains the word *vāyaḥ*, which raises the same question as in 103.7: is this the plural to *vī-* ‘bird’ or the neuter sg. *s-*stem *vāyas-* ‘vitality, vigor’? Neither of them is an entirely natural object to *vimúcyā* ‘having released’ in this context. Ge (/WG) opt for the latter, Old and Re for the birds. In the publ. tr. I treat it as a pun, but I am not certain what either phrase would represent.

In d *vāhīyasaḥ* is of course a comparative, but, again, so rendering it would be awkward.

I.104.2: Unlike the standard tr. I take the two acc. plurals in b, *tān ... ádhvanah*, separately, with the first referring to the ‘men’ (*nāraḥ*) of pāda a. One might object that since they “have come” (*guh*) to him in that pāda, he has no need to go to them in the next, but, at least in English, “go to for help” is tantamount to “ask for help” and need not

involve any actual travel on the part of the men. And in any case he would need to join them at the place of battle. I.71.9, which contains the phrase *ádhvanaḥ sadhá éti* without *tán*, may support me.

For the pf. opt. *jagamyāt*, see Jamison 2009 (*East and West*); as exhaustively demonstrated there, the pf. opt. has no special “perfect” value and here means simply “should go.”

The publ. tr. reflects the emendation of *ścamnan* to **śamnan*, suggested by Gr and argued for in Jamison 1983: 103 n. 62. I am now less certain about this emendation than I was then, being more sympathetic to Old’s questioning how this corruption could have arisen. On the other hand, the Aves. gerundive *scqθβa-* (V.13.40), adduced by Ge as a cognate to a supposed root $\sqrt{\text{scam}}$, provides no support for a separate etymon of this shape, since it is, with Insler, better attributed to the root **skand* ‘break’, well attested in Avestan and elsewhere in Iranian. For details see Jamison 1983 loc. cit.

I.104.3: For my general interpr. of this verse see publ. intro. I will not discuss the various other interpretations in detail here or repeat what I said in the intro. I *will* point out that most tr. take the subject of both a and b to be the Śiphā river in 4, but this assumes that a and b are essentially repetitions of each other, which would constitute an unartful duplication in a very artful hymn. Since pādas cd contain dual feminines, it makes more sense to take ab as an implicit “the one ... the other” construction, with the two subjects the same as the duals in cd. One problem with this interpr. is that the verb *áva ... bharate* in pāda a lacks an overt object; I suggest in the intro. that it might be defilement or pollution that is also removed ritually by the *avabhṛthá* bath at the end of the classic Vedic sacrifice.

In d we find a periphrastic passive construction: *haté ... syātām* “may the two be smashed.” Though this periphrasis is somewhat unusual, even a stray thought of what the 3rd du. middle opt. of the passive of $\sqrt{\text{han}}$ would be (**hanyeyātām*) may explain the substitution. According to Macdonell (VG), such forms are not attested in Vedic.

I.104.4: Likewise consult the publ. intro. for my interpr. of this verse.

In b *prá ... tirate*, whose regular object is *āyus-* ‘lifetime’ (which I supply here), plays off the name Āyu in the previous pāda. With Old and WG I supply ‘dawns’ with *pūrvābhiḥ*, on the basis of V.48.2, adduced by Old.

I supply Sarasvatī in c, because the only other occurrence of *vīrápatnī* (VI.49.7) refers to Sarasvatī.

I.104.5: Again, consult the publ. intro. As noted there, I think the unidentified female in b is Dawn, who leads the Ārya forces across the river(s) and against the Dasyu. The other standard tr. take her rather as Saramā, Indra’s canine sidekick, on the fragile basis of III.31.6: the only point of contact between the two passages being the rather generic *jānatī gāt* “recognizing, she went.” I see no reason to introduce Saramā here; Dawn has been anticipated by the apparent reference to the dawns in 4b (*pūrvābhiḥ*), and the revealing (*ādarśi* -- a standard item of Uṣas vocabulary) of the Dasyu’s streambed/strategy could easily happen at dawn.

In d *niṣṣapín-* is a hapax, but ‘without care, careless’ ($\sqrt{\text{sap}}$ ‘serve, care for’) makes sense.

I.104.7: The *śrād* √ *dhā* lexeme is repeated here from the immediately preceding pāda (6d; cf. also I.103.3, 5). Curiously the announced “trust” seems to be undercut by *manye* “I think.” The phrase *te asmai* expressing the recipient of the trust requires some comment. Ge seems to take *te* as a dative, parallel to *mahatā indriyāya* in 6d, and *asmai* adverbially (“dafür”). But 6d also contains a *te*, which must be the genitive limiting the dat. phrase, and such an interpretation fits better here, with *te* dependent on *asmai*. What is the referent of *asmai*, whose referent should already be present in the discourse because of the lack of accent on *asmai*? The easiest interpretation is that it simply picks up *indriyāya* of 6d (so Re), but again, as in 3ab, this would seem an unartful duplication. Although my interpr. requires taking into account a longer stretch of discourse, it avoids the repetitive scenario. In I.103.1 Indra is credited with *indriyā-* in two locations, heaven and earth, and I think the dual nature of this *indriyā-* is what is at issue here: the heavenly one in 6d, the one right here (hence the near-deictic *asmai*) in 7a. So although *asmai* picks up the *indriyāya* of 6d, it also refers to a different aspect of this referent.

Hoffmann (1967: 53, followed by WG) tentatively suggests taking cd as a single clause. This avoids the need to supply a verb in a, but the “unprepared womb” (Hoffmann’s “an unbereiteter Stätte”) of c does not seem to have much to do semantically with d.

The object phrase *vāya āsutīm* in d, in conjunction with the dat. part. *kṣūdhyaḍbhyaḥ* ‘hungering’, invites an interpretation of the pair as “food and drink” (Ge “stärkende Speise und Trank”; Hoffmann just “Speise und Trank”; WG “Nahrung und Trank”). But the abstract nature of *vāyas-* should be respected, and I also doubt that *āsutí-* is just any drink, rather than referring to the soma pressing. As for what it all means -- I would suggest that cd be interpreted in the context of the rest of the hymn, particularly the outer framework depicting Indra’s aid to the Ārya in conflict. They are here asking him not to drop them into battle without proper means (“into an unprepared womb”); the d pāda then expresses what they need: vital energy, that is, the physical and mental vigor required for combat, and the soma pressing, that is, the ritual means to attract Indra and secure his aid. Vs. 9 then issues the invitation to the soma drinking.

I.104.8: This verse details various possible bad outcomes if they do not manage to secure his aid. As indicated in the publ. intro., I take the “eggs” (*āṇḍā*) and “cups” (*pātrā*) as slangy references to male and female genitalia, or in the latter case perhaps better ‘wombs’. I tr. *-jānuṣāṇi* loosely ‘contents’, but if the “cups” are wombs, then ‘progeny, offspring, brood’ would work.

I.105 All Gods

For the structure and meaning of the hymn as a whole see the publ. intro. as well as Jamison 2007: 82-85. In what follows here I will comment only on the details of particular verses.

In discussing previous interpretations of the hymn, I misrepresented Bloomfield, who seems to have meant his interpretation of the old poet out of a job only for X.33, which contains our vs. 8 distributed across two vss. (X.33.2, 3).

I.105.1: The waters in which the moon finds itself are probably, with Lü (577–78), the heavenly ones, though I generally resist Lüders’s celestial floods. The waters here may be the same as the heavenly waters in vs. 11, as Lü suggests.

Most tr. take *suparṇāḥ* in b as referring to the moon (*candrāmāḥ*) in a, but in fact when *suparṇā-* refers to a single heavenly body (see vs. 11), it is always the sun. In keeping with the depiction of cosmic and earthly order at the beginning of the hymn, the regular alternation of the journeys of sun and moon opens the verse.

Most tr. take *vidyutaḥ* as referring not to the lightning flashes the word usually denotes, but to stars -- a departure that is simply incomprehensible to me. The point of this verse seems fairly clear: three different sources of light in heaven are mentioned: moon, sun, and lightning. The alternation and the courses of sun and moon are predictable and regular, but that of the lightning is not -- as “they do not find your track” announces.

As stated in the publ. intro., I think the refrain is calling on Heaven and Earth to bear witness to the poet’s musings. The double genitive (or dat.-gen.) *me asyá*, with accented demonstrative, contrasts with *te asmai* in the last hymn (by the same poet), I.104.7a. In that passage I take unaccented *asmai* as picking up a referent already in the discourse, *indriyá-* in 6d (in accord with the usual distribution of the accented and unaccented oblique forms of the demonstrative). Here I take it as referring to a referent not yet in the discourse, the poet’s speech, again in accord with the usual distribution. Ge (/WG) oddly tr. as if it were a loc. (“in solcher Lage” / “in dieser Lage”; sim. Scar). Re takes it as coreferential with *me*: “moi tel (que je suis).” Old (ZDMG 61.826 [KlSch.257]) is closest to my interpr. For a somewhat similar expression see II.32.1ab, also X.10.5 in the Yama/Yamī hymn, in which Yama asserts that Heaven and Earth know “this” about them: *véda nāv asyá prthivī utá dyaúḥ*.

Note the juxtaposed contrastive verbs: *vindanti* (d) to *√vid* ‘find’, *vittám* (e, refrain) to *√vid* ‘know’.

I.105.2: Although pāda a lacks a verb, the parallel VIII.79.5 *arthíno yānti céd ártham* suggests a form of ‘go’.

The rest of the verse depicts sex between a married couple, a particularly important activity in maintaining earthly order and continuity. The mutual action, expressed by the middle dual *tuñjāte*, probably refers to the expressing of semen, as in d, although the sexual juices of both husband and wife might be meant. In d either the husband or the wife may be the subject of *duhe*, depending in part on which root the gerund *paridāya* is assigned to: *√dā* ‘give’ (with *pári* ‘deliver, surrender’) or *√dā* ‘bind’. I favor a pun.

I.105.3: The first half-verse expresses fears about cosmic order, the second about earthly order as maintained by the sacrifice. The verb in b, *áva pādī*, also picks up the sex/procreation theme of 2cd, in that *áva √pad* is an idiom specialized for miscarriage (Jamison, *Hyenas*, 203–4).

I.105.4–6: The questions that the poet asks Agni (in my view, vs. 4) and the gods (vss. 5–6) are reminiscent of the questions the poet (/Zarathustra) regularly directs to Ahura

Mazdā in the Gāthās, esp. Y 44, all of whose vss. except the last (20) begin “This I ask you – tell me straight, o Ahura.”

I.105.4: Most tr. take *avamám* as modifying *yajñám*, but I take it as referring to the addressee, namely Agni (more clearly identified by his messenger role in b, *dūtáḥ*), in the usual double acc. construction with \sqrt{prch} . For Agni as *avamá-* see IV.1.5 *sá tvám no agne 'vamó bhavotí*. The poet asks Agni about the fate of the sacrifice/hymn (the “truth,” *ṛtám*) when it has been offered: where does it go and does anyone get and keep it (in heaven). He wants Agni to answer, because Agni, as the messenger, has access to both worlds.

I.105.5: Just as Agni was located in his realm, as the nearest one, in vs. 4, here the gods’ location is given before they are asked their questions. The poet now worries about what happens to his “truth” once it disappears from his sight and enters the realm of the gods -- is his “truth” theirs? Where did the offering he dispatched to them end up? The opening of the vs., *amī yé*, anticipates the omphalos in vss. 9–10.

The first pāda lacks a syllable. Old suggests reading *devā(h)* as a trisyllable, but particularly since the identical voc. is disyllabic in 3a and nom./voc. pl. thematic endings (-ās) are not normally (/ever?) so resolved, I am not convinced. Rather I think that the metrical disturbance here may deliberately call attention to the opening *amī yé* and thus prepare for the omphalos verses that also begin that way. If the poet had wanted a trisyllabic voc. here he could easily have used the extended *devāsaḥ*.

Note the number discrepancy in *triṣú ... rocané*. Though it is possible to separate the two words (so WG) “in the luminous realm, in the three (worlds),” this seems unnec., esp. in light of expressions like I.102.8 *trīṇi rocanā*, V.69.1 *trī rocanā*. Better to assume a truncated *rocané(ṣu)*. I wonder if this truncation is also meant to complicate the audience’s processing of this vs., as preparation for the omphalos vs.

I.105.6: The formation of the reasonably well-attested adj. *dharmasí-* is unclear; AiG II.237 classifies it as having the almost unparalleled suffix *-así-*, and if it is formed to $\sqrt{dhṛ}$, as seems likely, the intrusive *-n-* is another problem (though cf. RV hapax *dharmī-*). The *-n-* could perhaps be gotten from an extreme reduction of the *-man-*stem(s) *dharmán-* / *dhárman-*, but the rest is hard to generate.

The function of the word in its pāda is also unclear, as there is no obvious neut. for it to modify. (This adj. is otherwise always masc. and generally modifies soma, which does not help here.) I take the two syntactically parallel pādas a and b as each incomplete, to be completed by the other. In other words, I supply neut. *cakṣaṇam* from b in a, and the neut. adj. *dharmasí* from a in b.

The publ. tr. fails to tr. *vaḥ* in a, so modify the tr. to “Is your (vision) of truth steadfast?” This helps solve one of the small puzzles of the verse: given Varuṇa in b and Aryaman in c, we might expect Mitra in a -- but instead we have “you,” as in 5c, referring to the gods in general. As for the larger meaning of the questions, it may be that the poet is asking whether *ṛtá* is always the same (= *pūrvyám ṛtám* of 4c and *pratnā ... āhutiḥ* of 5d) or whether the gods change the rules on us.

I.105.7: I take the force of *purā* + PRES as past progressive / habitual: “was always speaking, used to speak.”

Since the verse contrasts the previous behavior of the speaker (a good ritualist, a hard-working poet) with his current mentally unhinged state, I take *tām mā* as “this (same) me” -- -- identifying the new careworn me with the old unfazed me. However, the nearly rhyming 8a (see below) may have had something to do with the *tām* here.

Note that *ādhīyaḥ* occupies the same metrical position as *dūdhīyaḥ* in 6d.

I.105.8: This vs. breaks the pañkti meter by substituting a 12-syllable pāda for 8 in c. (The vs. is also found distributed across two vss. in X.33.2, 3.) This metrical disturbance may set up the omphalos vss. that immediately follow.

Pāda a is almost a rhyme form with 7c *tām mā viyanti ādhīyaḥ* / 8a *sām mā tapanti abhitaḥ*, and 8c *vī adanti mādīyaḥ* cleverly picks up *vīyanti ādhīyaḥ* of 7c in a different metrical form (post-caesura trimeter, instead of dimeter).

Unlike the standard tr., I take the ribs (*pāśavaḥ*) as a second simile, not marked with a simile particle (unless also covered by the preceding *iva*) because in the hymn in general the poet seems to express a “higher” distress than a backache -- instead a questioning of his previous mode of existence and his religious beliefs. That *prṣṭyāmayī* ‘having a stitch in his side’ in 18d is also in a simile gives further support to the simile interpr. here.

I.105.9–10: As noted in the publ. intro., these verses are the omphalos and are marked, as often, by responsion and numerology. They seem to express the poet’s vision of his connection with his distant ancestor Trita Āptya and also his vision of (somewhat unclear) cosmic phenomena.

I.105.9: Various referents have been suggested for the seven reins. I tentatively take them as the seven seers (note the phonological echo between *raśmāyaḥ* and *īṣayaḥ*), which would allow a connection to be established both with the poetic tradition and, if the seven seers are already equated with the stars in the Big Dipper (in the Great Bear) as they are later, with that astronomical structure. That the next verse also presents what appears to be an astronomical image supports this interpr. Moreover the phrase *tātrā me nābhīr ātatā* “to there my umbilical cord is stretched” recalls the idiom “tie navel to navel” (*sām / ā √dā*), which asserts a family connection between the earthly poet and divine or semi-divine figures and elements in heaven. See comm. ad I.139.1.

The verb ‘rasps’ (*rebhati*) may convey the sound of old man’s voice, as would be appropriate for an ancestor.

I.105.10: I have no idea what the exact referent of the “five oxen” is, but given their stationing in the middle of heaven and their apparent retrograde motion, it seems that an astronomical body (a constellation?) is referred to. Ge (/WG) take *nī vāvṛtuḥ* as “sind ... verschwunden,” but *nī √vṛt* ordinarily means ‘turn back / home’, of bovines, and given that the subject is oxen, albeit metaphorical ones, this idiom works fine in the passage. It also works nicely as a characterization of the 2nd vs. of the omphalos, on which the poem turns, leading back to the step-by-step verses that brought us to the center, but in reverse conceptual order. It is possible that *tasthūḥ* should be tr. “stand still / are standing still”

rather than just “stand” – a frequent usage of $\sqrt{sthā}$ without preverb (see, e.g., the negated *ātiṣṭhant-* ‘not standing still’ of the waters in I.32.10). This moment of stasis would precede the about-face to the return journey.

Ge eliminates the metaphor by rendering *ukṣāṇah* directly as “Sterne” (see his n. 10a) and in his n. 10 simply asserts that the vs. depicts the ending of the night. This oversimplifies the image and blurs the structural position this vs. occupies in the architecture of the hymn.

I.105.11: I am completely baffled about what this verse actually describes, although an astronomical reference is very likely. The many clashing interpretations of the verse do not inspire confidence in any of them. I will simply point out that we seem invited to identify the *suparṇāḥ* here with the *ukṣāṇah* of 10a on the basis of the repetition of the phrase *mādhye (...)* *divāḥ* and the semantic match between *tasthúḥ* “they stand” (10b) and *āsate* “they sit” (11a), though the sg. *suparṇāḥ* in vs. 1 should also be recalled. The waters here are likely to be the same as those in vs. 1; see above.

I.105.12–15: This set of verses forms a small internal ring: 12 and 15 contain *ṛtām* and *nāvya-* / *nāvyaḥ* (though not to the same stem: *nāvya-* in 12, the comparative *nāvya-* in 15, both neut. sg.), while 13–14 contain the responsive *sattó (...)* *manuṣvād ā, devān ... vidūṣtarah*.

I.105.12–13: Each vs. contains a form of *ukthya-*, which probably should have been tr. identically. However, note that the two nouns they modify are quite different: in 12a *ukthyā-* refers to something spoken, probably a hymn; in 13a it refers to friendship, which should be celebrated.

I.105.12: The *supravācanām* in b recalls *pravācyam* in 10c.

Note the contrast of *ṛtām* and *satyām*.

I.105.13–14: I do not know why 13cd and 14ab are virtually identical, save for switch in person (Agni in 2nd ps. in 13, 3rd in 14). Perhaps it shows that the poet/sacrificer can now make the ritual happen. The *yakṣi* of the 13d is a praise of sorts, and then the poet somewhat triumphantly reports that his command worked. Agni, the god on earth and the messenger to the gods in heaven whom the poet questioned in vs. 4 has (re-?)established the ritual links between earth and heaven.

I.105.13: The pāda-final *āpīyam* recalls the likewise pāda-final patronymic *āptīyaḥ* in 9c.

I.105.16: Contains echoes of a number of previous vss. First, the *asaú yāḥ* opening recalls the *amī yé* openings of the two omphalos vss. (9–10), as well as the *amī yé* of 5a, which anticipates the omphalos.

The “Ādityan path” (with one of the very rare instances of *ādityā-* used adjectivally), which is not to be overstepped (*nā ... atikrāme*), recalls exactly 6cd ... *aryamṇāḥ ... pathā, āti krāmema* “Along the path of Aryaman might we pass beyond [step over] ...” The path theme is also found in 11c and later in 18b.

The *pravācyam* of b repeats the proclamation theme that has also been prominent in the hymn: *pravācyam* in 10c (an omphalos vs.), *supravācanam* (12b).

I.105.17: This verse, which provides Ge (and the Sanskrit tradition from which he got it) with his “Trita im Brunnen” interpretation, does not seem to me to fit into the rest of the hymn, though Trita is found in 9cd in a context much more in harmony with the rest. In the next hymn, I.106.6, it’s Kutsa the poet who find himself in the same plight and calls upon Indra for help. The situation fits I.106 much better than I.105, and I wonder if it has been adapted from I.106.

I.105.18: On the destabilizing effect of this verse on the structure of the hymn, see publ. intro.

The pāda-final position of *hī* in b is quite curious.

I.106 All Gods

I.106.3: *supravācana-*, here used of gods, is found also in the preceding hymn, I.105.12.

I.106.4: The singular part. *vājāyan* in pāda a clashes with the 1st plural verb *īmahe* in b. With Ge (/WG) we can supply a 1st singular verb (“bitte ich”) in the first pāda, but the discordance could be ascribed simply to the loose structure of this hymn.

I.106.5: Ge (/WG) take the 1st member of *mānurhita-* as functionally a dative (“für Manu bestimmt.” Although this fits smoothly into the passage, I think it likely that the standard agentive reading of 1st members of ppl. compounds should stand here. Ge cites I.114.2 as parallel -- *yác chām ca yós ca mánur āyejé* -- but that passage states that it was Manu who won the luck and lifetime by sacrifice. In other words he was the agent, as he would be here in this compound.

I.107 All Gods

I.107.1: I take *ā ... vavṛtyāt* as transitive, with *vah* as object, contra all standard tr. An intransitive tr. is tempting (and see VII.59.4), but this stem is overwhelming transitive elsewhere.

In the phrase *aṃhóḥ ... varivo-vittarā* the abl. *aṃhóḥ* depends on the first member of the cmpd. For a nearly synonymous expression see II.26.4 and comm. thereon.

I.108 Indra and Agni

I.108.1: The image of the chariot looking upon the creatures is a slightly odd one. Elsewhere (VII.61.1, X.85.18) almost identical pādas are used of the sun, and it may be that Indra and Agni’s chariot here is identified with the sun, though such an identification would be unusual for these gods. Bl (RR) thinks rather that the poet “has borrowed and applied with a rather frenzied metaphor” the image of VII.61.1. It is worth quoting his characteristically acerbic comment on the image: “The students of the Rig-Veda are

steeped in the experience of its bold, often grotesque figures of speech, so that even a chariot that looks down from heaven excites no unusual emotion.”

I.108.3: The signature word of this vs. is *sadhryàñc-* / *sadhrīcīnā-* ‘joint(ly), conjoined’, which occurs prominently in the first three pādas. The final pāda is dense with phonological and etymological play: *vṛṣṇaḥ ... vṛṣaṇā vṛṣethām*.

Ge (explicitly) and Re / Klein (DGRV I.373) / WG (all implicitly) take *vṛtrahaṇā* in b as a predicate vocative (so, “you two, conjoined, are Vṛtra-smashers”). I would prefer this interpretation, but think that the lack of accent should be taken seriously. Moreover, given the repetition of *sadhryàñc-* / *sadhrīcīnā-* just noted, it may be that the conjunction of Indra and Agni is what is being highlighted, not their Vṛtra-smashing.

I.108.3–4: As noted in the publ. intro., vs. 3 attributes Indra’s characteristic deed (Vṛtra-smashing) to both gods, while vs. 4 attributes Agni’s characteristic ritual behavior to both.

I.108.4: Ge (/WG) construes the instr. phrase of pāda c with *ānājānā* of pāda a (thus, “being anointed with soma”). Since pāda b intervenes, depicting two further ritual actions, I consider the syntactic connection of a and c unlikely, although I am sympathetic to the desire to find something to construe the instr. *tīvrañ sómāḥ páriṣiktebhiḥ* with. I take that phrase rather as a loose circumstantial instrumental, almost equivalent to a loc. absolute.

Another reason not to take this instr. with ‘being anointed’ is that soma is an unlikely anointing medium for Agni, since it is more likely to quench the fire than to make it blaze up. An unexpressed ‘ghee’ is the likely medium in a.

This argument leads indirectly to an issue that all comm. (Ge, Old, Re, WG, Kü [p. 577]) raise: the actions of the first 3 pādas should be performed *for* the two gods, not *by* them. Much energy is expended in these comments in trying to make the gods into recipients, with the unexpressed agents being priests (e.g., Old’s quotation of Benfey’s tr. of pāda b “für welche der Opferlöffel und das Barhis ausgebreitet ist” [my italics]). This energy seems to me misplaced and the grammatical interpretation over-fussy. One of Agni’s standard roles is that of priest, and the actions ascribed to him (and Indra) here fall squarely within this role. Since Indra is identified with Agni, he is just along for the ride, as it were -- just as Agni was in the preceding vs. as Vṛtra-smasher. Though it may seem a bit strange to have the gods already present on the ritual ground, performing the preliminaries to the sacrifice in abc, but, in pāda d, driving to the sacrifice, this merely switches the viewpoint to Indra’s perspective: he always drives to the sacrifice; Agni is always already there. Since the two gods are identified here, we see the characteristic actions of each separately, but ascribed simultaneously to both.

I.108.5: I read *cakrathuḥ* of a also with b, though in a different sense. Ideally for this sense (‘assumed, made your own’) the verb of b would have been med. *cakrāthe*.

The referents of *tébhiḥ* in d are syntactically the neut. *yā(ni)* phrases in abc, but it doesn’t make much sense to “drink with” those particular referents. It would be possible to tr. *tébhiḥ* more heavily as “because of these” or the like, but I think the answer is simpler: rhetorical patterning trumps semantics. The poet is leading up to the loosely

attached refrain of vss. 6–12, whose last pāda is identical to 5d but with *áthā* rather than *tébhiḥ*; the *tébhiḥ* here serves as a transition between the earlier verses, where the d pāda is integrated into the verse and the refrain-marked verses to come. It is grammatically connected to but semantically estranged from the first three pādas of 5.

I.108.6: See the publ. intro. for the place of this vs. in the structure of the hymn.

The “choosing” of pāda a reinforces the priestly roles of Agni (and Indra) in the preceding vs., since the sacrificer’s choosing of the priests is one of the first actions of the sacrifice -- particularly common is choosing Agni as Hotar.

The lexeme *ví√hvā* means ‘vie in invoking’, generally referring to our competition with other sacrificers in attempting to bring the gods, esp. Indra, to our sacrifice. This is precisely the sense that it has here, in my view. With W. E. Hale (*Asuras* 84–85), I take *ásuraiḥ* as referring to other human ‘lords’, in competition with us for the attention of the gods. Given the almost complete absence from the RV of the Asuras as a semi-divine group hostile to the Devas (for which see Hale passim, also Jamison [2016 = Staal Ged.]), and given the standard use of *ví√hvā* for competition between mortals, I cannot follow the near-universal assumption that the later Asuras are present in this passage. The competitors that the poet is thinking of may well be the brahmin and king in 7b and the various named groups in 8ab.

The phrasing of pāda c is unusual, and the interpretation depends crucially on one’s interpretation of *śraddhā*. As I have discussed elsewhere (1996: 176–84), I take this resonant term to mean ‘trust’, particularly the trust between the parties involved in a hospitality relationship (of which the sacrifice is a most important and fraught subtype). Here the trust (*śraddhām*) of the 1st ps. speaker that his choosing will bear fruit and his competitive invocation will be successful comes true (*satyām*) and serves as a concretized goal of the gods’ journey that demonstrates that the trust was not misplaced. *satyā-* is almost a proleptic adjective here. Most of the standard tr. approximate this interpr; Re’s is closest to mine.

The *hí* in the refrain fragment *ā hí yātām* (through vs. 12) is difficult to account for under its usual functional headings. I have tentatively taken it as emphatic (a cop-out, I realize) and tr. it as “yes!” I am not convinced by Hettrich’s treatment (*Hypotaxe* 376, 379–80) ascribing its use to a conditional structure.

I.108.8: For the named peoples in ab as the sacrificers with whom the poet is competing in vs. 6, see comments on that vs.

The two-pāda refrain of the rest of the hymn has finally taken shape here, out of partial phrases found earlier. Note also that the beginning of the c pāda (*ātaḥ*) and that of the d pāda (*áthā*) are phonologically very close.

I.108.9–10: I do not see the purpose of two almost identical vss., but with the relative positions of the various earths reversed. Re calls it a “renversement formulaire, d’un type exceptionnel” (EVP XIV.122).

I.108.11: The locations in pāda a are appropriate to both gods, but those in b are distinctly odd, esp. for Indra. An almost identical pāda is found also in I.91.4, of the domains of soma, where all three terms are fitting, and in I.59.3 of the locations of goods over which

Agni presides. A similar listing but without the mountains is found in III.22.2 of Agni (*yād ōṣadhīṣv apsv ā ...*), which again is apt for Agni. One has the feeling that the poet is trying to multiply the “wherever you are” verses and is not too scrupulous about his sources.

I.109 Indra and Agni

I.109.1: The kinship theme of the first hemistich is continued in pāda c, with *prāmati-* ‘solicitude’, since this abstract noun is regularly identified with the father -- e.g., I.31.10 *tvām agne prāmatis tvām pitāsi naḥ*. See further disc. ad I.71.7.

I.109.1–2: These two vss. are parallel in structure, with an initial *hí* clause with a 1st sg. augmented verb of perception (‘see’, ‘hear’), with kinship terms in the second pāda, and in the last pāda a 1st sg. verb of production (‘fashion’, ‘beget’) with a verbal product as obj. (‘thought’, ‘praise’).

I.109.2: The standard word for son-in-law is simply *jāmātar-*; the *ví-* is presumably a disparaging prefix (see Ge’s n. 2a), here rendered by “no-count.” *syālā-* is found only here in the RV, but is reasonably well attested in later texts and has good MIA correspondents.

I.109.3: The context of this verse is clearly the soma sacrifice, but there is no general agreement on the identity (/ties) of the participants. I am inclined to see the pl. bulls as the pressing stones, which are then renumbered as dual in the last pāda. Pressing stones are called bulls, are yoked, have reins, and are plural in pressing-stone hymns (for all these, see, e.g., X.94, esp. vss. 6–8). But it is also possible that the bulls here are the priests guiding the stones. I find highly unlikely Old’s view that the two stones in d are Indra and Agni.

I.109.4: In the ritual actions depicted in pāda d, *apsú* most naturally goes with *ā dhāvatam* and *mādhunā* with *prīktām*. Old insists that this must be the interpr., and all standard tr. follow him one way or the other. However, both the word order and, more importantly, the accent on *prīktām* make that impossible, if we take the text seriously. The poet must have meant the ritual reversal.

I.109.5: The first hemistich echoes 2ab, with a 1st sg. past tense of *√śru*, a dual pronominal obj. referring to Indra and Agni, of which a compared adjective (comparative / superlative) is predicated. See also Watkins 1995: 187.

In d I read with Old (and the standard tr.) *prācarṣaṇī*, see also Thieme (KlSch 252). This requires no change to the Saṃhitā text, but only to the Pp., which analyses the sequence as two words. The next pāda begins *prā carṣanībhyaḥ*, which definitely consists of two words, which could easily have led to the Pp. separation.

I.109.7: I do not entirely understand the purport of the second half-verse. Ge compares VII.76.4, which shows some similarities and which refers to the forefathers finding the light of the dawn cows in the Vala cave. Much closer by is vs. 12 of the last hymn

(I.108), in which Indra and Agni are urged to become exhilarated at sun rise in the middle of heaven. One way or another this must be a reference to the dawn sacrifice.

I.110 Ṛbhus

I.110.1: As Ge points out, the mention of the All Gods (*viśvādevya-*) marks the ritual reference as the Third Pressing, which is dedicated to the All Gods and in which the Ṛbhus have their share. This suggests that the repeated stretching in pāda a need not refer only to the periodic nature of Vedic sacrifice over the ritual year, but also perhaps to the repeated rites of the Soma pressing day. Since the theme of the “left-over” is prominent in the Third Pressing (see Jamison 1996: 129–32), “being stretched out again” fits this context.

I.110.2: As indicated in the publ. intro., the wandering Ṛbhus seem here to be compared to the poet and his ilk, tramp craftsmen in search of skilled work -- as Ge already suggests. (For more on itinerant priests and poets, esp. the Prātaritvan, see Jamison 1996: 184–89.) This transposition of divinities into a milieu conceived as human may account for the use of *dāśvāms-*, a stem ordinarily used of mortal worshipers, for Savitar – with the god Savitar standing in for a pious man to whom the itinerant poets might offer their services. For more on divine *dāśvāms-*, see comm. ad X.104.6.

In pāda b *āpākāḥ* is universally interpreted as ‘westward’, derived from *āpāñc-*, contrasted with immediately following *prāñcaḥ* ‘facing eastward’. So, e.g., Ge “Als ihr ... westwärts, ostwärts weiter zoget.” Although the direction words frequently co-occur, one might expect the stem formations here to be parallel, that is, using a form of *āpāñc-* rather than a derivative. Cf., e.g., *prāḡ āpāḡ údāk* (III.53.11, VIII.4.1=VIII.65.1). Moreover, the Ṛbhus’ journey seems to be purposeful and directed, given the two *prā* forms (... *prā ... aítana ... prāñcaḥ*) and the fact that they reach a goal. I take *āpāka-* instead as a privative form of *pāka-* ‘callow, simple(ton)’, hence ‘not simple; clever, shrewd’; cf. *āmūra-* ‘not stupid, no fool’ to *mūrā-* ‘stupid’.

The tone of the locution *māma ké cid āpāyaḥ* is somewhat hard to read; it is reminiscent of V.52.12 *té me ké cin ná tāyávaḥ*. The effect seems to be approximative -- “some kind of X,” “more or less like X” -- and slightly slangy. The referent of the *māma* is the 1st ps. speaker of vs. 1, contra Re, who takes the phrase as the direct speech of (one of?) the Ṛbhus.

I.110.3: *āsuva-* ‘impelled’ is of course a pun on Savitar, its subject.

The final pāda is parallel to 2a: ... *prā yád ichánta aítana / ... yác chravayánta aítana*, each with a pres. part. combined with the main verb *aítana*. What exactly is happening in 3d is unclear, since Agohya is a shadowy figure in Ṛbhu mythology. In Ṛbhu hymns they sleep in his house (I.161.11, IV.33.7); the most similar passage to ours is I.161.13, where the Ṛbhus after their sleep ask him *ágohya ká idám no abūbudhat* “O Agohya, who has awakened us here/now?” In our passage the mirror-image action seems to be depicted -- they’re making him heed, that is, waking him up. I do not know what to do with this observation, however.

I.110.4: I do not understand why the Ṛbhus are called *vāghāt*- here, since this term is ordinarily used of ritual officiants (see comm. ad I.3.5) and the Ṛbhus only indirectly participate in ritual. Ge tr. “die fahrende (?) Sānger,” but he provides no support for the itinerant part of the tr.

As Ge points out, *sūra-cakṣas*- is characteristic of gods; in I.89.7 it is used almost as a definition of such. So it may well here be an ancillary indication that the Ṛbhus achieved divine status.

I.110.5: *ūpastutā* in the Saṃhitā text is universally taken, flg. the Pp., as the nom. pl. of the past part., *ūpastutāḥ*. I take it rather as the loc. sg. of *ūpastuti*- ‘praise-invocation’. It doesn’t make sense to me that, after having been praised, they would be “crying in want” and seeking (further?) fame, whereas if they lack praise at the praise invocation, their seeking fame is understandable. Loc. sg. *-ā* to *-ī*-stems is found only interior in the pāda as here, but almost always before consonants. However, AiG III.152 counts 9 occurrences before *-u/-ū-*, as here.

Ge and Re take *upamām* as the obj. of *nādhmānāḥ*, but that stem is never transitive (as Re admits), and it appears in the preceding hymn (I.109.3) in clear intransitive usage. I take the adj. with *śrávaḥ* in d. It would also be possible to take it as an adverb: “in utmost need.” WG construe it with the cup in b; this seems the least likely possibility, since the miraculous deed of the Ṛbhus is depicted only in the first hemistich, quite separately their quest for fame in the second.

I.110.6: The conceptual basis for the common trope of “pouring prayers” is made clear here by the simile “like ghee with a ladle.”

Because of its lack of accent *asya* cannot modify *pítuḥ* and it should have a referent already present in the discourse. The referent is generally taken as the cup of vs. 5 and its father as Tvaṣṭar. I do not have anything better to offer.

Ge’s tr. of c seems very loose and somewhat puzzling: “... die die Pünktlichkeit seines Vaters erreichten ...” He seems to be taking *taraṇitvā* as neut. pl. rather than instr. sg. (like *taraṇitvéna* in 4a) and imposing a meaning “erreichten” on *saściré* that stretches the semantics of that stem. Re makes a good case for the instr. interpretation, and supplies an acc. “(l’exemple)” that allows the usual ‘follow’ sense for the verb. My tr. is similar.

vāja- in d is a low-key pun on the name of one of the Ṛbhus.

I.110.7: In my interpr. the individuation of the Ṛbhus continues in ab, though not with their usual names.

Note the switch in number between the opening of 6d *ṛbhávo vājam* (pl. – sg.) and that of 7b *ṛbhúr vājebhiḥ* (sg. – pl.).

In b the instr. pls. *vājebhir vásubhiḥ* are ordinarily taken as proper names and instr. of accompaniment. I instead take them as defining the quality for which the Ṛbhu gets designated ‘good one’ and ‘giver’. My tr. also assumes a chiasmic structure in *vājebhir vásubhiḥ vásur dadīḥ*, with the first instr. construed with the last nom. sg. and the middle two terms belonging together.

The analysis of *prtsutí*- is debated (see, e.g., Re EVP XIII.108; AiG II.2.640 §473aßA.; III.73, §29b; II.1 Nachtr. 67). On the one hand, it appears to be a compound consisting of the root noun *pít*- and a primary *-ti*-stem, probably to *√sū* ‘impel’ (with

shortening, like *sū-ṣuti* to the other root $\sqrt{sū}$ ‘give birth’). On the other, since the root noun *pṛt-* is only attested in the loc. pl. *pṛtsú* (though the root is also found in the derivatives *pṛtanā-*, etc.), *pṛtsutí-* appears to be a secondary *-tí-* stem anomalously built to a case form. This seems to be the current standard view. However, it seems entirely possible to me that we are dealing with a haplology of **pṛtsu-sutí-* (or *-sūtí-*), and my tr. reflects this analysis.

I.110.9: Again the standard tr. take *vájebhiḥ* as a proper name.

I.111 Ṛbhus

I.111.1: *vidmanāpasah* is formally odd, though clear in meaning. Given the independent instr. *vidmánā* in the preceding hymn (I.110.6), we might expect a phrase **vidmánā *apasah* “working with know-how,” with the internally derived *apas-* ‘laboring’ to neut. *apas-* ‘labor’. But though the sandhi would support this interpr., the accents are wrong on both words. For Wackernagel’s somewhat confused treatment of the cmpd., see comm. ad I.31.1. The correct analysis is, in my view, *vidmanā-apas-*, a bahuvrīhi built to the neut. *s-*stem *apas-* ‘labor’, work’, with the instr. to *vidmán-* as 1st member. The 2nd member receives the accent, somewhat unusually for a bahuvrīhi, like some other cmpds. with *-as-*stems as 2nd member.

Ge refuses to tr. *vīṣaṇvasū*, which seems just peevish, given the far more difficult words he’s willing to tr.

I.111.3: On \sqrt{mah} ‘bring to pass’, see comm. ad I.94.1.

I.111.5: Ge takes *bhārāya* as a (quasi-)infinitive with *sātīm* as obj. (“dass wir den Gewinn davontragen”), but the other exx. of dat. *bhārāya* do not show such verbal usage.

I.112 Aśvins

On the structure of the hymn, see the publ. intro. The challenging verses are the first four. I will not comment on the many obscure mythic fragments that constitute the Aśvins’ various rescues, nor attempt to etymologize the many personal names.

I.112.1: *pūrvácittī-* is variously interpreted and much discussed: see the long notes of Ge and Re ad loc., as well as Old, KISch 1152–56 (=NG 1916). The stem always occurs in the dat. and displays (quasi-)infinitival usage. Although it would be possible to take it as “(for me/us) to think first (of them)” and in the first pāda of a hymn this would be easily interpretable as a ritual reference, I consider it to have the opposite value: “(for them) to think first (of me/us).” Kutsa repeatedly calls on Heaven and Earth to be witness to his speech in the refrain of I.105: *vittām me asyá rodasī*. Cf. also X.35.1 *mahī dyāvāprthivī cetatām āpah* “Let great Heaven and Earth take cognizance of (our) work.” For further on *pūrvácittaye* see comm. ad IX.99.5.

The stem *iṣṭí-* is a perennial problem, since it can belong to several different roots: $\sqrt{iṣ}$ ‘desire, seek’, $\sqrt{iṣ}$ ‘send, impel’, or \sqrt{yaj} ‘sacrifice’. Ge (n. 1b) takes it here to an intransitive *iṣ* ‘rasch, gern willig kommen, eilen’, though his tr. ‘sich beeilen’ might seem to connect it with a reflexive sense of ‘send, impel’. By isolating *iṣṭāye* from the acc.

gharmám, he then needs to supply another verb to govern that acc., namely “(zu kochen).” Old (KISch 282–84 [=ZDMG 62 (1908)]), however, gives good reasons to connect our *iṣṭáye* with ‘seek’, though his interpr. of this pāda differs somewhat from mine. So also Re (see his n.). WG opt for ‘send’.

I.112.2: This verse is very dense and has been subject(ed) to a variety of interpretations, the details of which can’t be laid out here. The first hemistich depicts gifts or some other desirable things mounting the chariot of the Aśvins to be given. The gifts are qualified as *subhārāḥ* ‘easy to carry (away?)’ and ‘inexhaustible’ (*asaścatāḥ*); the latter word generally qualifies ‘streams’, objects that are not ordinarily capable of mounting anything. This already odd image (of gifts [implicitly compared to streams] performing the mounting) is made odder by the simile in b, which compares the chariot to something eloquent (*vacasām*) for thinking (*mántave*). It is of course not unusual for a verbal product (a hymn vel sim.) to be compared to a chariot, but the semantic distance traversed in this hemistich is quite far. This outré simile referring to the chariot may anticipate 4c below.

I wonder if the hapax thematic *vacasá-* (in acc. *vacasām*) is wrongly accented for **vacásam*, which could be an internally derived possessive adj. to the neut. *s*-stem *vācas-* ‘speech’. Although this putative **vacás-* ‘having speech, eloquent’ would likewise be a hapax, it would belong to a standard derivational type. BR (and Monier-Williams) take just this word as a derivative of √*vañc* ‘move waveringly’, which certainly would better fit a chariot. But the following the following *mántave* strongly favors a derivative of √*vac*, given the common conjunction of thought and speech.

The final phrase of c, *kárman iṣṭáye* echoes that of 1b *yāman iṣṭáye*, and the two forms of *iṣṭáye* should therefore be interpreted in the same way. I take *dhíyaḥ* ‘insights’ as the object of the seeking and supply “(us)” as the subject of the infinitive. Others tr., with different interpretations of *iṣṭáye*, have taken different routes.

I.112.3: The phrase *divyásya praśāsane* can be read in (at least) two different ways: either the Aśvins are “in command” of the divine (that is, they command the divine) or “at the command” of the divine (that is, the divine gives them the command). I follow Ge in taking it as the latter; he cleverly suggests that this shows the Aśvins in their proper position between gods and men -- in other words, they are middle management.

I.112.4: As discussed in the publ. intro., this verse seems to display extended double reference between three gods associated with the morning pressing and the Aśvins’ chariot, an association produced by shared epithets, though I must admit that there are many loose ends in this interpretation. See also Re’s n.

In pāda a *párijman-* ‘earth-encircler’ is a standard epithet of their chariot (I.20.3, IV.45.1, X.39.1, X.41.1, IV.3.6)(and, in the dual, of the Aśvins themselves: I.46.14, X.106.3). In a verse in an Aśvin hymn in which this is the first real word, it is hard to imagine that an audience would not first think of their chariot. However, the term also qualifies the Wind (e.g., VII.40.6, II.38.2), and the rest of pāda a, *tánayasya majmánā*, fits a divinity better than a chariot.

In its other three occurrences *dvimātár-* ‘having two mothers’ refers to Agni, as produced by the two kindling sticks. It is somewhat difficult to see how this word could

refer to the chariot, unless the Áśvins are configured as two mothers. On the other hand the phrase *dhūrṣú tarāṇayaḥ*, like our *tūrṣú tarāṇiḥ*, is found in an Áśvin hymn (VII.6.78) qualifying their horses in a verse also containing their chariot. (Cf. also *tarāṇi-* twice in another Áśvin hymn [IV.45.5, 7], but used of a priest, probably Agni.) Note also that *tūrṣú* not only plays on the *dhūrṣú* in the passage just cited, but also phonologically matches the *ū śú* of this hymn's refrain. On the adj. *tarāṇi-* see III.11.3; here I would slightly alter the tr. to “advancing in his advancing,” though that doesn't help very much.

In c *vicakṣanā-* ‘wide-gazing’ is otherwise esp. found as an epithet of Soma, though occasionally of other gods. As a qualifier of a chariot, it could mean ‘conspicuous’ (< ‘widely seen’). What it would mean for either Soma or the chariot to be ‘of triple thought’ (*trimāntu-*) is not clear to me. The word is a hapax, but it should be interpreted along with the *māntave* of 2b, where the word is connected with an image (however attenuated) of a chariot. It's worth keeping in mind that the Áśvins' chariot is characterized as having three of everything in I.34.2, 9, 12, and its three wheels are mentioned elsewhere. As for a potential connection with Soma, the ‘three’ of course suggests the three soma pressings, though exactly what the *-māntu-* would have to do with them isn't clear to me. Perhaps more likely is the three types of ritual speech deployed in the soma sacrifice.

Note that there is an implicit numerical ordering of the subjects of the three pādas: (*pārijman* = 1), *dvimātār-*, *trimāntu-*.

In sum, although the vocabulary of this verse has tantalizing resonances with other passages and although I am fairly certain there is a pervasive double meaning, I do not feel I (or anyone else) has entirely “cracked” this verse. The tack taken by Ge (/WG) of simply taking Parijman, Dvimātār, and Trimāntu as PNs is the easy way out but does not advance the interpretation.

I.112.5: In “rasping Rebha” (*rebhā-*) I have incorporated the gloss into the name. The word occurs in the next hymn (I.113.17) in its lexical meaning.

I.112.6: On *āraṇa-* see comm. on VIII.70.8.

I.112.9: The adjs. *mādhumantam āsaścatam* might better be tr. proleptically: “you revived the river (so that it was) honied and inexhaustible.” Ge (/WG) simply supply a verb in pāda a: “(machtet).”

Note the phonetic echo in *śrutāryaṃ nāryam*.

I.112.10: *atharvī-* as ‘den Weg verfolgend’ from Hoffmann (see EWA I.805 and Scar 496–97). Ge's “pfeilschnelle (?)” is distinctly odd, and I don't know the basis for his interpr.

I.112.11: Kaksīvant is the next poet in the collection after Kutsa. He's explicitly identified as an Auśija in I.18.1 and by implication in I.119.9, 122.4–5. What the merchant (*vaṇij-*) is doing here I have no idea – unless it's just the echo of the unusual suffix *-ij-*.

I.112.15: On the lexeme medial $\sqrt{v}pā$ ‘extract by drinking, separate fluids by drinking’ see disc. ad VII.22.4. Why this lexeme is used here of an ant (or someone so called) isn’t clear. Perhaps it reflects a folk belief or observation about the eating/drinking habits of ants. Popular Science Monthly (of May 1877) reports that “Some species—such, for instance, as the small brown garden ant—ascend bushes in search of aphides. The ant then taps the aphids gently with her antennæ, and the aphids emit a drop of sweet fluid, which the ant drinks.” This could possibly be considered extraction. And a more recent article (Smithsonian.com, Aug. 16, 2012) has photographs of transparent Indian ants whose abdomens change color depending on the color of what they drink. The photographs of the ants’ mouth parts attempting to penetrate drops of colored water could also be viewed as extraction.

I.112.16: Though some of the occurrences of $\acute{s}ayú-$ have been reinterpreted as meaning ‘orphan’ (see comm. ad IV.18.12), given the density of PNs in this set of vss. and the lack of particular “fit” of ‘orphan’, I would keep the PN here, and probably likewise in the other Aśvin catalogue hymns I.116.22, 117.20, 118.8, 119.6.

Śyumarśmi in the publ. tr. is a typo for Śyumaraśmi.

I.112.17: Note the phonological play in $pá\theta harvā\acute{j}á\theta harasya$. Because of its accent, Ge (/WG) take $\acute{j}á\theta hara-$ as an adjectival deriv. of $\acute{j}á\theta hára-$ ‘belly’, hence ‘paunchy’ (supposedly of his wagon). But I think it likely that its accent simply follows its phonological twin $pá\theta harvā$, which immediately precedes (see also Old). The only possible indication of the independent existence of $\acute{j}á\theta hara-$ is $\acute{j}á\theta hala-$ in I.182.6.

I.112.18: The problem of the sg. voc. $an\acute{g}irah$ is treated by Old.

The verb $niranyá\theta ha\acute{h}$ is also problematic; in fact Ge declines to tr. it. Re suggests that it might be a corruption of $*ni(r)-ri\acute{n}\theta ha\acute{h}$ to $nír\sqrt{r}\acute{r}$ ‘let flow, let escape’, but the corruption involved would have to be fairly massive and would be unmotivated. Old sees it as a denom. to a form derived from \sqrt{ran} ‘take pleasure’. WG tr. “ihr ... innerlich Freude habt,” following Gotō 1987: 258 n. 582, who accepts Gr’s connection with \sqrt{ran} ‘take pleasure’, though he attributes the accentuation not to a passive stem $ran\acute{y}á-$ (as Gr does, despite the active ending) but to a shift from the standard pres. stem $rá\acute{n}ya-$ by association with denominatives like $turanyá-$ (or perhaps to its being a denominative itself). This analysis is accepted by Kulikov (Vedic $-ya$ -presents, pp. 605–5), with further discussion. Although a connection with \sqrt{ran} makes more sense than Re’s suggestion, it does not make much sense in context -- or rather, although the tr. is harmless and not jarring, it has nothing to do with the Vala myth treated in the following pāda. It is also the case that \sqrt{ran} does not otherwise occur with $ní$ and forms of this root are also almost always construed with a source from which the pleasure is derived. By contrast, my tr. follows a suggestion of Brereton’s that it is haplologized from $*nirayana-yá-$ ‘seek/find a way out’. Despite the further machinery required, this interpr. makes more sense in the Vala myth context.

I.112.19: The original desid. stem $\acute{s}ikṣa-$ to $\sqrt{s}ak$ ‘be able’ has become essentially independent of its root and is extraordinarily well attested. In my view it means ‘do one’s best / exert oneself’ by way of a more literal ‘seek to show one’s ability’. It is

overwhelmingly construed with a dative of the lucky recipient; cf. a passage chosen almost at random: VI.28.2 *índro yájvane pr̥ṇaté ca śíkṣati* “Indra does his best for the man who sacrifices and delivers in full.” There is no other case complement with the simplex forms. Here, however, we encounter *ā śíkṣa-* (*ā ... āśíkṣatam*) with an acc. (*aruṇīḥ*). Ge tr. “die Rötlichen zu gewinnen (?) suchen”; Pirart (Nāsatya I.150 “vous avez procuré les Aruṇi [...] ...,” without registering the desid. morphology. (Re [EVP XVI.11] suggests rather “gratifier qq’un (de dons),” without further support; for a different interpr. see Klein [DGRV II.193] “ye tried to master(?) the ruddy ones.”) My tr., “did your best to obtain,” is similar to Ge’s. I think that *ā* with *śíkṣa-* functions in the same way as in the idioms *ā√yaj* ‘obtain [i.e., (bring) here] by sacrifice’, *ā√pū* ‘obtain [i.e., (bring) here] by purifying’. There is another disguised ex. of *ā śíkṣa-* in X.48.2 (q.v.). The preverb *úpa* also triggers an acc. complement with *śíkṣa-*; see I.173.10, III.52.6, IX.19.6, X.42.2, X.95.17.

Gr assigns *sudevyām* to a them. stem *sudevyā-* ‘Schar der guten Götter’, and Ge tr. it as “Göttergunst.” However, in his (bottom of the page) n. 1 he offers the alternative “die Sudevī heimführet,” and others have followed the PN interpr.: see Re (EVP XVI.11), Klein (DGRV II.193), Macd./Keith (Ved. Index s.v. Su-dās), somewhat dubiously Remmer (Frauennamen, p. 95) – rejected by Pirart (Les Nāsatyas I, ad loc.). There are two stumbling blocks to this interpr.: 1) the *vr̥kī-*inflectional form to the eponymous *devī-* stem; 2) the same form found in X.35.4, where this interpr. isn’t possible (but see comm. at that passage). As for 1), AiG III.179 cites a few *vr̥kī-*forms to *devī* nouns, and Remmer cites as parallel the *vr̥kī* name *yamī-*. Given the syntactic and lexical parallelism between pādas a and c in this vs., with the verb *√vah*, an acc. obj. (clearly fem. in pāda a), and the dative of a male PN, and given the “wife-bringing” theme of pāda a, I favor the personal name interpr. despite the morphological issue.

I.112.20: The problem in these obscure fragments of tales is to decide which of the words are PNs and which are adjs. In c Ge takes the three fem. acc. as separate names, but I prefer to take *omiyāvatīm* and *subhārām* as proleptic adjectives, since both stems are found earlier in the hymn in full lexical usage (*omyāvantam* 7b, *subhārā(h)* 2a). Sim. Scar (p. 639), Remmer (Frauennamen, p. 85).

I.112.21: Pāda c presents a major disruption of the pattern that has monotonously structured this hymn since vs. 5; this disruption may signal the approaching end of the hymn. Unlike every c-pāda in the hymn (starting indeed with vs. 1) save for the immediately preceding one, the pāda doesn’t begin with *yābhiḥ* (11c doesn’t actually *begin* with *yābhiḥ*, but it is found within the pāda). Moreover the verb *bharathaḥ* is not accented and therefore cannot be in even a notional relative clause, despite the *yád* that immediately follows it. Curiously, most interpr. ignore or explain away these deviations. Ge. tr. as a “wenn” clause and considers *yád* “Attraktion für *yābhiḥ*” (attraction to what he doesn’t say). Old ascribes *yád* for *yābhiḥ* to metrical needs and wishes to accent *bharathaḥ*, because switching to a main clause is “recht unwahrscheinlich.” Since the poet clearly had no problem maintaining his template in verse after verse, I find it impossible to believe that the departures from this structure here are not deliberate -- a kind of putting on the brakes before the end, just as the full template took awhile to take shape at the beginning of the hymn. More recent tr. reflect the verse’s structure better: WG make c

a parenthetical clause (though, oddly, repeating the “attraction” explan. in the n.); Scar (p. 444) also treats the clause as parenthetical.

The formally ambiguous *sarāḍbhyah* is taken by Ge (/WG) as dative, but given real-world knowledge -- bees produce honey and don’t need it brought to them -- it surely makes better sense as an ablative (so also Lü., Scar.), in what looks almost like an izafe construction: *yāt sarāḍbhyah*.

I.112.24: To avoid vegetative confusion, ‘fruitful’ would be better tr. as ‘profitable’ (*āpnasvatīm*). See *āpnaḥ* in the next hymn (I.113.9d).

Ge tr. *adyūtyé* as “wo nicht der Würfel entscheidet”; this is certainly possible, but I think it more likely refers to a situation dire enough that we don’t want to take chances.

I.113 Dawn

I.113.1: Ge suggests, probably correctly, that b concerns Agni.

Though most tr., explicitly or implicitly, take Night as subj. of c as well as d, it makes more sense to me for Dawn and Night to be contrastive subjects of the final two pādas, with Dawn going forth as Night cedes her place. The balanced contrast is brought out strongly in the next two vss.

I.113.4: Ge and Re take *citrā* as the subj. of *vī ... āvaḥ*, not of *āceti*, but the phonological and etymological figure *āceti citrā* and the position of the preverb *vī* in tmesis (surely initial in its syntagm) make this unlikely.

I.113.5: The form *ābhogāya* (thus in sandhi) has been much discussed. With Old I take it as a loc. *ābhogāye* to the same stem (whatever its source) as *ābhogāyam* in a previous Kutsa hymn, I.110.2. I do not think it is a dative, either in infinitival use or as a dat. obj. parallel to *rāyē* of the infinitival *iṣṭāye*.

I.113.6: Ge takes *ārtham iva* as a real simile, containing a pun on *ārtha-* (though he does not call attention to it): “um (an sein Geschäft) wie nach einem Reiseziel zu gehen,” with *ārtha-* ‘business’ in the frame and ‘goal’ in the simile. This is clever and may well be right. In my publ. tr. I take *iva* as a sort of indefinitizer: “whatever his goal.” WG by contrast seem to take it as a definitizer: “um just zum Ziel zu gehen,” which seems an odd use of *iva*.

The standard tr. construe c with d and the phrase *vīsadrśā jīvitā* as object of *abhipracākṣe* (e.g., Re “Afin qu’ils considèrent les (modes d’) existence divers, l’Aurore a éveillé toutes les créatures”). I am skeptical of the syntax, because the d-pāda is a refrain. Although in some refrain hymns, the refrain is sometimes integrated into the verse as a whole, this refrain does not seem to work that way. Moreover, the sense conveyed seems contrary to what preceded it: the creatures in 5–6ab seems single-mindedly intent on their own particular goals, not open to contemplating different “lifestyles.” I therefore take c as an independent clause, summarizing 5–6ab: different people have different aims. This requires taking neut. *jīvitā* as ‘living beings’, rather than ‘modes of living’. I would prefer that it was not neut., but cf. neut. *bhūvanāni* (in the

refrain and often elsewhere) ‘creatures’. *jīvitā-* is found only once elsewhere in the RV in IV.54.2, where it seems to mean ‘lives’.

I.113.7–13: These verses have a surprising density of forms of *ví*√*vas* ‘dawn forth’ (7b, d, 8c, 9b, 10b [2x], 11b, 12d, 13a, b, c), whereas vss. 1–6 lack any such forms -- though there’s a teasing echo in 4b *ví* ... *āvaḥ* ‘She opened, uncovered’, belonging, however, to √*vṛ*. See also comments on vs. 14.

I.113.10: As noted in the publ. intro., this is the most challenging verse of the hymn.

Note the phonetic figure *kíyāti(y) ā yāt samáyā bhāvāti*, which may help account for the unusual lengthening in *kíyāti* (for expected *kíyati*, which is the Pp. reading). The only other occurrence of this loc. (II.30.1) is also followed by *ā*, though the figure stops there. See AiG III.256 for various alternative explanations of the long *ā*.

The crucial term for the interpr. of the verse is the instr. adverbial *samáyā*, which is universally taken as ‘in the middle’ in its various occurrences, presumably from something like “with the same (on both sides).” But this doesn’t really make sense here: since today’s Dawn is precisely in the middle between the former ones and the ones to come, at what point she will be there is *not* a question we need to ask. A different interpr. of the word arises from examining all the occurrences in context. Every passage crucially contains the preverb/particle *ví* (save for VII.66.15, where *visvam* takes its place):

- I.56.6 *ví vṛtrāsya samáyā pāsyārujaḥ*
- I.73.6 *ví síndhavaḥ samáyā sasrur ádrim*
- I.113.10 *kíyāty ā yāt samáyā bhāvāti yā vyūṣúr yās ca nūnām vyuchān*
- I.163.3 *ási sūmena samáyā vípṛktaḥ*
- I.166.9 *ákṣo vaś cakrá samáyā ví vāvṛte*
- VII.66.15 *śīrṣṇāḥ-śīrṣṇo jágatas tasthúṣas pátiṃ samáyā visvam ā rájaḥ*
- IX.75.4 *rómāṇy ávyā samáyā ví dhāvati*
- IX.85.5 *vy ávyáyam samáyā vāram arṣasi*

Since *ví* ‘apart’ and *sám* ‘together’ are oppositional preverbs that frequently work formulaically with each other, *samáyā* seems to partake more in the semantics of *sám* than of *samá-* ‘same’ and to mean ‘altogether’, ‘all at once’, or ‘together with’. I take it in the last meaning here: the question being asked is when the current Dawn will be (re)joined with her sister Dawns, both preceding and following her.

I.113.11: With Gr (et al.) I take *praticákṣyā* as the gerundive; cf. I.124.8.

I.113.12: Pāda b contains complex phonetic echoes: *sumnāvārī sūñṛtā īráyantī*, with repeated *su/ū* as well as mirror-image *ārī/ īrá* mediated by *ṛ*; the *n* in each word and the final *ī* of the first and third could be added.

In c the phrase *bíbhṛatī devāvītim* is somewhat puzzling; *devāvīti-* generally refers to humans’ ‘pursuit of the gods’, that is, the fervent invitation to the gods to partake of our sacrifice. It should not, therefore, be something that Dawn “brings,” as she brings prizes, for example. I therefore take the fem. part. *bíbhṛatī* in its birth sense: she bears / brings to birth our pursuit of the gods by waking us up to initiate this pursuit. Cf. a similar birth context in 19d.

I.113.13: Note that in this verse a single Dawn subsumes the various temporal dawns of the surrounding vss.

I.113.14: This verse plays on the lexeme *ví√vas* that dominated vss. 7-13. The verse begins with the preverb *ví*, setting up the expectation that a form of *√vas* will follow. But instead the pāda ends with *adyaut*, a near synonym. The next pāda does end with *āvaḥ*, which matches (*vy*) *āvaḥ* of 13b but belongs instead to the root *√vr* ‘(un)cover’. The verb is here construed with pāda-initial *āpa*, but the dominant preverb *ví* is implied by the immediate preceding word (*de*)*vī* (*devy āvaḥ*). Cf. also remarks on 4b *ví ... āvaḥ* ‘She opened, uncovered’ above.

I.113.15: Another in the series of *ví* SHINE verbs is found in d *vy āśvait*, whose *ví* is reinforced by the pāda-initial *vi* in *vibhātīnām*.

Note also the chiasmic phonetic figure in b: *citrām ketūm kṛṇute cekitānā*; the distribution of *i* and *u* vowels is also chiasmic, but skips the verb. This is also a triple etymological figure, of course (minus *kṛṇute*).

I.113.17: Ge and Re take the singer, the subject of ab, as the human singer, which in turn requires them to interpret the mid. part. *stāvānaḥ*, which is overwhelmingly passive in value, as having active meaning. I (and independently WG) take the referent in ab to be Agni (so already, tentatively, Old). This not only allows *stāvānaḥ* to be interpreted in its usual fashion, but also fits the rest of the lexicon. Agni is regularly called *vāhni*- in his standard role as conveyor of the oblation, and he is also called ‘hoarse-voiced’ because he crackles (cf. I.127.10, VI.3.6, VI.11.3).

I.113.18: My interpr. of the 2nd hemistich differs in several respects from the standard. In d I take *asvadā(h)* ‘giving horses’ as acc. pl. fem. with the dawns (so also Re, Scar), not nom. sg. masc. with the soma-presser. Although the latter is possible (and *asvadā*- is elsewhere used of mortal patrons), it seems here to belong with the characterizations of the dawns in pāda a: *gōmatīḥ ... sāravāīrā(h)*. Note that Dawn is addressed as *asva-sūnṛte* ‘liberal with horses’ in V.79.1–10.

More radical is my interpr. of pāda c, which is much discussed (see elaborate notes of Old, Ge, and Re; also Scar 66–67, somewhat differently 202, 617). Most take the simile *vāyōr iva* to refer to the surging up of gifts *as swiftly* as the wind; in other words the unexpressed common quality is the speed with which the gifts come. I think rather that the hapax *udarkā*- refers to the ‘raising’ of the litany that accompanies the distribution of the dakṣiṇās at the Morning Pressing. (Cf. *udṛc*- RV 2x “when the chant is raised.”) And this litany is compared to the one accompanying the first offering of the Morning Pressing to Vāyu. Note that personified *sūnṛtā* is closely associated with Vāyu in the two nearby Vāyu hymns I.134.1 and I.135.7. That it is not the physical aspect of wind that is at issue is suggested by the use of *vāyú*- not *vāta*-, as Re points out.

I.114 Rudra

By RVic standards this hymn is almost laughably simple and elementary, very different from Kutsa’s usual products.

There is much repetition and chaining of vocabulary in this hymn: *kṣayādvīra-* is prominent at the beg. (1-3, + 10), with *vīra-* reprised in 3 and 8. See also *śām* 1, 2; *aśyāma* 2-3; *sumatī* 3, 4, 9 + *sumnāyān* 3, *sumnā* 9, 10; *nī hvayāmahe* 4-5 [*havāmahe* 8]; *nāmasā* 2, 5 + *nāmaḥ* 11; *tvēṣam* 4-5; *kapardīn-* 1, 5; *mṛḍā* 2, 6, 10 + *mṛḍayātama* 9; *tokā-tānaya-* 6, 8; *haviḥ* 3, *haviṣmant-* 8; *rāśva* 6, 9; *pitār marūtām* 6, 9; *vṛṇimahe* 4, 9; *āre* 4, 10; *śārma* √*yam* 5, 10). The first 5 vss. are also marked by 1st pl. verbs.

I.114.2: The weak pf. form (*ā*)*yejé* is anomalous in two regards: it does not agree with the standard weak pf. *īj-* and it produces a bad cadence here. The form is found twice elsewhere in the RV: *āyejé* in X.63.7 where *Manu* is also the subj. and the form is in the same (bad) metrical slot – the two passages seem to be connected – and VI.36.2 with the preverbs *ānu prá* and in an acceptable metrical slot. The weak pf. stem *īj* is not found with preceding preverb. The forms are disc. at length by Kü (391–92) with ample citation of previous lit. Schindler considers *īj* the older form, to the laryngeal-initial root (PIE**H₂jaḡ*) with reduplication **Hi-Hiḡ*-, in contrast to **ja*-initial roots, which redupl. **ja-iC*. For Schindler the *yej* forms are metrically driven replacements and serve to avoid the coalescence of the vowel of the preverb + *īj*, esp. in the cadence. (Neither he nor Kü seems to recognize that the *yej* forms produce bad cadences, a problem that undercuts the arguments that both of them use to explain their appearance in this context.) Kü by contrast questions Schindler’s posited distinction in redupl. between initial laryngeal roots **H₂jaC* and glide-initial **jaC*, since the development of super-weak forms of the type *ūcūr* to √*vac* happens to roots without initial laryngeals, only glides. Kü argues that whether or not the root had a preceding initial laryngeal the redupl. to a *(*H*)*il₂uaC* root was originally always *(*H*)*il₂ua-*. The *u/i*-type redupl. developed by analogy to *(*H*)*ail₂u₂C-* roots. Therefore *īj* is an inner-Vedic development, not an archaism per Schindler. Yet – even though he thinks *yej* shows the older reduplication pattern – he still allows the possibility that it’s a new formation nonetheless. Kü’s disc. is ultimately indecisive.

As for the metrical problem, Ludwig and Arnold want to emend to **āyajé*, of somewhat dubious morphological provenance. I very tentatively suggest another possibility, that in this preverb-verb combination the underlying form was **ā (H)i(H)ij-ai*, with the *i*-reduplication becoming a glide between *ā* and the redupl. syllable, which was then originally short: **āyijé*. The drawback to this explanation (or one of them) is that there is no obvious source for the *-ej* that was substituted at some point in the redaction.

I.114.3: Note the cognate acc. in *juhavāma ... haviḥ*.

I.114.4: *vañkū-* is variously interpreted and etymologized; see EWA s.v. In this passage Ge takes it as ‘den fliegenden’ with ?, Re sim. (‘volant’ without ?); WG refuse to tr., but mention the common gloss ‘krumm’ in their n. Assuming (with most) that it belongs to √*vañc* ‘go crookedly, meander’, I take it here as ‘meandering’ → ‘wandering’, characterizing an itinerant poet. See *ā cara* in the previous vs. (3c), which suggests such wandering. For a different specialization of the root meaning, see I.51.11.

I.114.5: Note the rhyming figure *śārma várma chardír*.

I.114.6: With Klein (DGRV I.190) I take *ca* in c as conjoining the two impvs. in polarized position in the hemistich: *#rāśva ca ... mṛḷa#* in an X *ca* ... Y construction.

I.114.7: “wee little one” reflects the suffixation of the (sometimes) diminutive *-kā-* to *ārbha-*, which already means ‘small’.

I.114.8: The bahuvrīhi *āriṣṭa-vīra-* ‘possessing heroes who cannot be harmed’ in 3d is echoed by *vīrān mā ... vadhīḥ* “Don’t smite our heroes,” with the cmpd evoked by *rīriṣaḥ* ‘don’t harm’, which ends the preceding pāda. I suggest that the pattern of pāda-init. *mā* found through all of vs. 7 and the 1st half of 8 is broken here so that *rīriṣaḥ* / *vīrān* can be juxtaposed.

The final pāda of the vs. also recalls vs. 3, in a somewhat sly way: 3d ends *juhavāma te havīḥ* “We will pour you an oblation,” with an etymological figure as noted above. Compare 8d *haviṣmantah ... tvā havāmahe*, also with a form of *havís-* and a 1st pl. verb, which, despite its superficial similarity to *juhavāma*, belongs to the separate root $\sqrt{hū}$, *hvā* ‘call’, which has been amply represented in the hymn by the alternative pres. stem *hvayāmahe* (4b, 5b).

The adv. *sādam* ‘always’ is almost always followed by *id*, which seems to add no special nuance.

I.114.10: The standard tr. supply ‘weapon’ with *goghnām ... pūruṣaghnām*, and this is certainly possible. I supply ‘anger’ (*hēlas-*) because of the similarity of this clause (*āré te goghnām utā pūruṣaghnām* to 4c *āré asmād daívyam hēlo asyatu*.

On neut. *dvibārḥaḥ* see comm. ad VII.24.2; for the phenomenon in general comm. ad II.31.5.

I.115 Sūrya

For a more confident interpr. of the enigmatic verses 4–5 than is found in the publ. tr., see comments on those vss. below.

I.115.2: The image of men stretching their yokes across may refer in part, as Ge suggests, to the beginning of the “Tagewerk des Landmanns.” But as most interpr. mention, it surely also (or, in my opinion, primarily) is a reference to the beginning of the morning sacrifice: the root \sqrt{tan} ‘stretch’ is regularly used of the sacrifice (probably because of the “stretching out” of the sacrificial ground by carrying the offering fire to the east). That the men are characterized as “seeking the gods” (*devayāntaḥ*) supports a sacrificial interpr.

I.115.3: For *étagva-* see comm. on VIII.70.7.

I.115.4–5: As indicated in the publ. intro., although at the time I was not certain what these verses depict, I was (and remain) skeptical of the notion that the two hemistichs refer to the so-called day-sun and night-sun respectively, as Ge (/WG in part) and Re take it. Among other things, I find it unlikely that the unequivocal proclamation of the Sun’s supremacy that begins this verse (*tāt sūryasya devatvām tán mahitvām* “This is the Sun’s divinity, this his greatness”) would pertain to what these scholars see in 4d: the rather

ignominious bundling up of the Sun in Night's garment to sneak him back across the sky to rise again the next day. I now feel I have a much clearer understanding of what is going on in these verses -- I think I have cracked their code -- and it all refers to the rising sun. I will lay it out below.

I.115.4: Pāda b fairly clearly refers to Night interrupting her weaving of darkness and gathering up her work when the Sun hitches up his horses for his morning journey. I take Night to be the subject of *sām jabhāra*, not the Sun (as do Ge, Re, Maurer), based on the similarity to II.38.4 *pūnaḥ sām avyad vītatam vāyanti, madhyā kārta ny ādhāc chākma dhīraḥ* "Once again the weaver has wrapped up what was stretched out; in the middle of his work the mindful (worker) has set down his craft," where the weaver is the one who wraps up his own work.

I would now likely connect c with b, rather than only with d: "in the middle of (her) work (Night) has gathered together what was stretched out, when he (=Sun) has yoked his tawny horses from their seat." This would more clearly explain what the divinity and greatness of the Sun consist of and sketch a cause-and-effect relationship between the sun's beginning his journey and Night's breaking off her work.

This leaves pāda d. As noted above, Ge and Re think Night covers the sun with her dark garment and turns him into the night sun (see Ge's n.: "Die Nacht hüllt jetzt den Sūrya in ihr Gewand, d. h. in Dunkel; sie macht die Tages- zur Nachtsonne.") However, the actual wording of the Sanskrit text doesn't work particularly well in this night-sun scenario: stretching the garment for him is not the same as wrapping him in it. Still, on the surface it works even less well in my scenario in which only the day-sun is depicted in this verse. Others take this pāda as I do, as continuing the depiction of sunrise, but have not produced convincing ways to make the Sanskrit work that way. Maurer tr. "then upon herself Night spreads her garment," with the comment (p. 174) "she puts the garment she has woven upon herself, thus removing it from the world and allowing the light of the sun to take its place." This would solve the problem, but "herself" must render *simāsmāi*, which must be masc. (or neut)., not fem. (though see Ge's suggested way out of this difficulty in his n. 5 to his n. 4d: that *simāsmāi* stands for a reflexive like *ātman-* and is therefore masc.). WG also believe that this verse concerns only the morning sun. See disc. in the notes, though I am puzzled by how the disc. and the tr. relate. Their interpr. of d seems to me to fall short.

In my view Night's stretching her garment for him is in part a gesture of submission: she recognizes the sun's ascendancy (both literally and conceptually) and removes her black garment and spreads it out for him to pass over, to indicate that she yields to his superior power. (Fortunately she doesn't have Clytemnestra tendencies.) But this image also depicts a real-world phenomenon, that of the sun rising through morning mist or dark clouds clustering at the horizon. These can be seen as the remnants of the darkness of Night, the garment she has discarded at the place on the edge of the visible world where the sun first emerges. The pāda begins with *ād* 'just after that' -- namely, just after he has yoked his horses from their seat, the beginning of his journey -- suggesting that this is the first moment of sunrise.

I.115.5: This verse (esp. cd) works better in the day-sun / night-sun model than vs. 4, but I am still skeptical about that interpr. and can provide one that allows the verse to confine

itself to sunrise. I am especially dubious about the version of the day-sun / night-sun model promulgated by Ge (/WG), Re -- that the two surfaces of the sun are Mitra (bright) and Varuṇa (dark) respectively -- since this interpretation is likely anachronistic, as it rests on a later Vedic conception of the two deities. Freed from that model, I take the genitives *mitrásya varuṇasya* of pāda a as dependent not on *rūpām* in b with most tr., but with *abhicākṣe*, following Maurer's rendering of the syntax, hence my "for Mitra and Varuṇa to see." This interpr. may be syntactically problematic, as we would expect a dative subject -- and do find a dative subject with this infinitive, even several times in Kutsa's oeuvre (I.102.2 *asmé sūryācandramāsābhicākṣe* "for us to see the sun and moon"; I.113.6 *dabhrām pásyadbhya urviyā vicākṣe* "for (even) those who see (only) a little to gaze out widely"). The case discrepancy troubles me, but I must assume that, given that infinitives are verbal *nouns*, nominal rection prevailed here. It might better be translated "for the sight /seeing of M+V."

This interpretation fits the verse better conceptually and makes a nice thematic ring with 1b, which contains the common trope of the sun as the eye of Mitra and Varuṇa, using the word *cākṣuḥ*, derivationally related to (*abhi*)-*cākṣe*. The expression in our vs. is ambiguous; it could be turning the notion of sight on its head -- M+V are seeing the sun, not seeing by means of him -- or, more likely, intends the same idea as "the eye of M+V" in 1b, "so that M+V can see (the world)."

The position of *anyád ... anyád* in cd requires that they be definite and in a "the one ... the other" relationship (so all tr.). The gleaming surface of c fits well into my scenario -- it is another image of the bright eye of M+V depicted in ab. I think it is called *anantá*- 'unbounded' to represent the fact that it is not possible (certainly not advisable) to look at the bright sun in the sky and see its outline, its edge. But the complementary black surface of pāda d seems, on first thought, to impose the night-sun image. However, it is easily interpretable within the framework provided by the other troublesome d-pāda, 4d. As I just argued, the garment that Night stretches for the sun in 4d is her discarded black raiment that lingers at the horizon as mist and clouds. When the sun rises through clouds, it can seem almost dark, certainly in comparison to an unclouded sun, and its outline is clearly visible, as opposed to the *anantá*- surface of the bright sun in pāda c. At such an occluded sunrise, individual bright rays can shoot out of the clouds. In our passage these would be the *harítaḥ* 'tawny horses' that are jointly bringing him (*sám bharanti*), the same *harítaḥ* he hitched up in 4c before beginning his journey through the mists of 4d.

Thus we can construct a consistent and convincingly naturalistic interpr. of these two verses as referring only to sunrise, without the dubious baggage of the "night-sun." The second of the two verses, which is the last real verse of the hymn, also forms a ring with vs. 1: not only is the sun identified as the eye/sight of Mitra and Varuṇa (1b, 5a), but the "brilliant face" (*citrám ... ánīkam*) of 1a is reprised by the "gleaming surface" (*rúśat ... pájāḥ*) of 5c.

[I.116–20 JPB]

I.121 Indra or the All Gods

This is a very problematic hymn, and both the publ. tr. and this comm. are tentative and tenuous on many points. There are some quirks that reappear throughout the

hymn: a remarkable no. of pāda-final *góḥ* (2b, 2d, 7b, 9a) – is this some sort of hidden encoding? It’s also part of a pattern of favoring pāda-final monosyllables (*vrām* 2c, *rāt* 3a, *dyūn* 3b, 7c, *dyām* 3d, *vaḥ* 4d, *nṛn* 12a, 13a, *dāt* 12c – and, flg. Hoffmann, *daḥ* 10d). Also a fondness for *pári* and *prá*, the former esp. in opaque contexts.

I.121.1: Ge (/WG) take pāda a as a separate clause and consider *pātram* ‘cup, vessel’ a metaphorical designation of Indra (“Ist er wohl das rechte Gefäß für solch gottergebene Männer?”). With Old I consider this to be an anachronistic application of the much later sense of ‘cup, bowl’ to mean ‘appropriate recipient’. (It is true that Indra is referred to as a ‘tankard’ [I.61.9] and a ‘beaker’ [I.100.12] elsewhere, but in those cases it is his capacious size that is at issue.) Old and Re both avoid the Indra = cup interpretation by supplying a verb (different verbs in each case). I see no reason to supply a verb, since *pātram* can be an acc. goal with *turanyán* (see X.61.11 for another acc. of goal with the same stem), a possibility also allowed by Old.

Although in the publ. tr. I took *nṛn* as gen. pl., flg. Old, Ge, etc. (see in general AiG III.211–12), I now believe that all or almost all instances of this form are actually the acc. pl. they appear to be. In this case I would emend the tr. to “hastening to the men, to the cup of those seeking the gods.” Note the acc. pl. *nṛn* in vs. 12 in similar context. See comm. ad I.146.4, X.29.4.

I.121.2: Ge and Re take *náro* as the nom. sg. of a thematic form of the ‘man’ stem, a nom. sg. that is otherwise not found in the RV (save possibly in *svàrṇara-*) and only very sparingly in the rest of Vedic (see AiG III.212). I follow Gr, Old, and WG in taking it as a gen. sg. of the athematic ‘man’ stem, even though the other two occurrences registered by Gr are better taken as nom. pl. It replaces expected **nur* (cf. Aves. *nərəš*). It is parallel here to *góḥ*, and this gen. expression characterizes the type of *dráviṇa-* that Indra is providing as a prize. Since *dráviṇa-* is a derivative of *√dru* ‘run’, it really is ‘moveable wealth’, and both cattle and men would qualify. The pair *náro góḥ* is echoed by the more conventional expression *cātuṣpade ... dvipāde* in 3d, which also contains the qualifier *náryāya*.

The opening *ṛbhúr vājāya* contains the names of two of the three Ṛbhus, though the words are not so used here.

As indicated in the publ. intro., the second hemistich is much discussed, and I will not treat other interpretations in detail. It depicts a buffalo (*mahiṣá-*) gazing after (and probably longing after) three females, or, in my interpr., one female in three different shapes. These shapes are three standard female roles, arranged chronologically: marriageable girl (according to my interpr. of *vrā-* as ‘chooser’; see comm. VIII.2.6), wife/consort (*ménā-* < ‘exchange token’; see comm. I.62.7), and mother. The *mahiṣá-* is Indra, as often; this word also evokes the term for the chief wife of a king, *māhiṣī-*, thus indirectly adding another female role. I identify the female referent of all three as Dawn. Kakṣīvant calls Dawn “begetter of cows” (*gávām jānitrī*) in nearby I.124.5, like our *mātáram góḥ*, and also compares her to a *vrā-* in I.124.8. Since Dawn is always depicted in motion, “gaze after (a retreating figure)” is an appropriate verb. (Cf. IV.18.3 where Indra *anu* *√cakṣ* his mother who is going away: *parāyatīm mātáram ánv acaṣṭa*.) If the referent is Dawn, then the horse whose consort she is is probably the sun. For Dawn and the horse = sun, see VII.77.3.

The term *svajā-* ‘self-created’ has two applications in the passage. On the one hand, it characterizes the *vrā-* particularly. Since she is a ‘chooser’, the female protagonist of a *svayamvara* (self-choice) marriage, she is ‘self-created’ because she is not being given to someone by someone else, but is doing it herself. If marriage is the equivalent of *upanayana* and second birth for women, then she’s her own parent. On the other hand, it can characterize all the role transformations she undergoes in cd, loosely “(re)creating herself as ...” For further on *vrā-* and this passage in general, see Jamison 2003 (Fs. H.-P. Schmidt) pp. 45–47, also X.111.3.

I.121.3: In the publ. tr. this verse is couched in the English future because I took two of the three verbs in the verse (*nákṣat* and *tastámbhat*) as subjunctives and the third (*tákṣat*) as an injunctive but a rhyme form to *nákṣat*, each of them beginning a hemistich. I considered the verse a continuation of the prospective questions in vs. 1. about Indra’s coming to the sacrifice. I have now accepted the view of Narten (Sig.Aor. 160; see also Hoffmann Injunkt. 144) that *nákṣat* is instead an injunctive to the thematic stem of the enlarged root $\sqrt{nakṣ}$. This then seems to strand *tastámbhat* as a lone subjunctive in this sequence; Kü (575) labels it a subjunctive in preterital context. However, the passage may originally have had the indic. pf. **tastámbha*, and *tasthámbhat* may have picked up a final dental from the initial of the following word: *tastámbhad dyām#* to match preceding *nákṣat* and *tákṣat*. Since *dyām* begins with a cluster, the meter is unaffected by a reading **tastámbha dyām*. The cadence is terrible (four heavy syllables), but the only thing that would improve it is reading **tastabha(d)*, with a zero-grade root syllable appropriate neither to the indicative nor to the subjunctive. On this and similar forms see my “False Segmentations and Resegmentations in the Rigveda: Gemination and Degemination,” to appear in a forthcoming Fs.

Revising my understanding of the morphology requires revising the translation as well. I would now take the whole verse in the past: “The surpassing king *came* through the days to the age-old call of the clans of the *Āṅgirasas* for the ruddy (cows). He *fashioned* the mace, his team-mate; he *propped* up heaven for the sake of the two-footed and four-footed belonging to men.” The verse then provides a reassuring model in the past for Indra’s hoped-for activity in the present. Note that *nákṣat* picks up the aor. *ānaṭ* (approximately) from 1c and *tastámbha(t)* the aor. *stámbhīt* of 2a.

Ge takes *aruṇīḥ* as nom. sg. fem., appositive to *rāt*, which must then be fem. and mean ‘queen’ (“die Morgenröte, die Königin”). Both of these are grammatically possible: *rāt* must be fem. in V.46.8; *aruṇīḥ* must be nom. sg. in IV.1.16, 14.3. But this leaves the apparent masc. nom. sg. adj. *turáh* without a head. I therefore take *aruṇīḥ* as acc. pl., loosely construed with *hávam*. See Old. The ruddy ones are presumably the cows imprisoned in the Vala cave, who reappear (with a different color term, *usríya-*) in vs. 4.

I.121.4: Unlike the standard tr. I take c with ab rather than with d. I also take the subject of that pāda, the referent of *trikakúb* ‘three-humped’, as the herd, not Indra with most tr. The problem is the verb, *nivártat*. On the surface it is the only active form to the quite well-attested them. pres. *vártate*. It could be taken as an oppositional transitive active built (however temporarily) to the intransitive middle. Since $ní\sqrt{vrt}$ generally means ‘turn back’ (of bovines), it could mean ‘(make) turn back’, with Indra as subject (called *trikakúb*). The problem is that this doesn’t make a lot of sense in context. He has just

released them (or so I take ab); why then at their “forward surge” (*prasárgē*) would he make them reverse direction? What I think the pāda depicts is the cows milling around in cow-like fashion and beginning to move, but something stops or confuses them, turning them back (pāda c), and Indra has to step in and show them the way out (pādas ab, d). A (partial) solution to this difficulty was seen by Hoffmann (Aufs. II, 590), who identifies several forms as belonging to an *intransitive root aorist* to \sqrt{vrt} , to which this would be the subjunctive, rather than belonging to the them. pres. stem. Since the forms are intransitive, this solves my valency problem, but the subjunctive causes some difficulties. Hoffman takes pāda c as a purpose clause “Damit er beim Losrennen (der Kühe) als Spitzentier zurückkehre,” but why, again, would Indra turn back? To make it fit my scenario, with the herd as subject, I need to read it as a past prospective. Indra got them on the way to truth when they were going to / would have turned back. I would slightly amend my tr. to “when the three-humped (herd) was going to turn back in its forward surge.”

There is another possible conceptual solution, also utilizing Hoffmann’s intransitive root aorist subjunctive. As already noted, *ní√vrt* means ‘turn back’ of bovines -- see the extraordinary concentration of this lexeme in X.19, a hymn urging the cows to return. If we assume that once the cows trapped in the Vala cave are released, they will *return home* (which would be expressed by *ní√vrt*), then *nivártat* is compatible with *prasárgē*: “so that the three-humped (herd) will return (home) in its forward surge” – a possible alternative tr.

In d I take *ápa ... vaḥ* in two slightly different senses with two different objects: ‘uncover’ with *drúhaḥ* ‘deceits’ and ‘unclose’ (= ‘open’) with *dúraḥ* ‘doors’ (note the phonological similarity of the two objects). Unlike many tr. I therefore do not take *drúhaḥ* as gen. dependent on *dúraḥ*; I also consider *mānuṣasya* as a gen. of benefit rather than construing it with *drúhaḥ* (for both, cf. Re’s “les portes du Mal humain”).

I.121.5: Under this elaborate disguise, the verse is simply about soma and Indra’s possession of it. The parents are, acdg. to most, Heaven and Earth. The second hemistich is also found in X.61.11, which is painfully obscure. See disc. there.

One of the things glossed over in the publ. tr. is the difference in number between the dual parents of ab, who brought the soma to Indra, and the unidentified plural subjects who acquired it through sacrifice in pāda c. In X.61.11, also in the context of the Vala myth, I identify those plural sacrificers as the Navagvas, who are named in the previous vs. (X.61.10). Here I suggest the Aṅgirasas, even more likely actors in a Vala context, who are mentioned in vss. 1 and 3, with their sacrificial activity prominent in vs. 1.

For other shared phraseology between the two vss., esp. *śúci ... rékṇaḥ*, see comm. ad X.61.11.

I.121.6: Another verse about soma.

Note the position of *ná* in the simile, where it is placed after the two-word DET+NOUN phrase (*asyā uśásah*) rather than after the first word. I do not know if this placement is by rule; it might be worth looking for other examples with this configuration. In fact, see I.129.1g with *imām vācam ná*.

The syntax is somewhat clotted in the 2nd hemistich. With Ge I take *yébhiḥ* as standing for **yád ebhiḥ* vel sim., since there is no masc. pl. referent in the main clause.

Ge (/WG) and Re construe the instr. without further verbal support (Ge “mit Hilfe der ihren Schweiss opfernden (Priester)”). I supply ‘being impelled’ to account for the instr.; such expressions are relatively common in soma hymns; cf. IX.30.2 = 107.26 *índur hiyānāḥ sotṛbhīh*, etc. For sweat as an oblation, see Jamison 2015 (“Avestan *xšuuīd*ː A Relic of Indo-Iranian Ritual Vocabulary,” BAI 25).

The *siñcán* of d causes some conceptual problems. Active forms of this very common stem are transitive (‘pour x’), but if the subject remains the drop (*índuh*), a passive ‘being poured’ would seem to make more sense. However, this attribution of agency to the drop -- to pour himself, as it were -- fits with the general tendency to animatize soma and attribute exceptional powers to him.

WG take *jarāṇā* as a nom. sg. fem., an abstract “Langlebigkeit,” conceived of as a goddess, as opposed to its standard interpr. as a neut. pl. adj. modifying *dhāma* and essentially identical to differently accented *jarāṇā*ː ‘old’ (Ge, Re, though not Gr). For WG this goddess is the one who pours with the spoon and reaches the seat. This is clever but runs into difficulties. First, forms to *√jr* generally convey a negative sense of ‘age’ -- not ‘long life’. And it interferes with a standard soma trope, of the pressed soma going to / reaching his “domains,” which is straightforwardly present here as long as *índuh* remains the subject. And as far as I know, there is no other evidence for this goddess.

I.121.7: Another very obscure verse with multiple competing interpretations. I will only discuss my own. As indicated in the publ. intro. I think the larger point of the verse is that Indra’s presence alone is sufficient for an effective sacrifice, even if the standard ritual trappings (like the wood for the fire) are absent. This rests in part on very different interpr. of the individual lexical items from the standard ones, esp. in pāda a.

To start there, the hapax *vanádhitī*ː is interpr. by Ge (/WG), Scar (57), going back to Sāy, as an axe, the Holzmacherin, in part because of the phonological play with a standard word for ‘axe’ *svádhitī*ː. I follow Gr (Old, Re, Schmidt B+I 147) in taking it rather as the pile of wood for the kindling of the ritual fire, formed like *vásu-dhiti*ː ‘treasure chamber, depository of goods’; cf. also *mitrá-dhiti*ː in the adjacent hymn (I.120.9). The verb in this clause, *apasyāt*, is universally considered a subjunctive to a denom. stem *apas-yá*ː ‘be active’ (a stem that would appear only here, though there are related nominal forms); I interpret it rather as the optative of *ápa √as* ‘be’ (hence *apa-syāt*) ‘be away, be distant’. True, this lexeme is not common -- I have found only one other RVic example (X.83.5) -- but it would be easy to create, with additive semantics, and semantically parallel *ápa √bhū* is better established.

There is no agreement on the sense of pāda b or even its syntactic status: because it lacks an overt verb, it is not clear whether it continues the subordinate clause of pāda a or functions as the main clause. (With Ge et al., I assume it is the main clause, since otherwise the verse consists only of subordinate clauses.) It is generally assumed that a finite verb should be supplied with *pári*; I supply the inoffensive ‘go’. My interpr. of the pāda is, on the other hand, rather bold -- there seems no other choice with pādas like these. I take the cowpens (*ródhanā góḥ*) as a reference to the ritual ground or to the vessels containing the milk to be mixed with soma or perhaps to places where animals are kept for sacrifice. The “sun” that goes around them is either Agni performing the *paryagnikarāṇa*, the circling around ritual objects or sacrificial animals (the latter might

make more sense with cowpens), or Soma circling through the purifying filter. Both Agni and Soma are frequently identified with the sun.

But the mediating image for pāda b is the radiant Indra of pāda c. When *Indra* (such is my identification of the subj. of the 2nd sg. *prabhāsi*) shines forth, there is no need of wood for the fire (pāda a). He can stand in for the ritual fire and/or the gleaming soma and bring the sacrifice to a successful conclusion by himself, as it were.

My identification of Indra as the subj. of c makes him unavailable to be the referent of the datives in d, as Ge, Re take them. In my view, the poet Kakṣivānt is a better candidate (see WG, who suggest “Sippenführer,” so at least not a god). For one thing, if the curious hapax compd *ánarviś-* contains the (pseudo-)loc. *ánar-* to *ánas-* ‘cart’, it seems unlikely that this would qualify anyone directly associated with Indra -- the cart is not a warrior’s vehicle -- while on the other hand the Pajras, Kakṣivānt’s clan (cf., e.g., I.116.7, 117.6), are *ánasvant-* ‘possessing carts / wagons’ (or, more accurately, compared to people who are *ánasvant-*) in I.126.5. Although *turá-* was used of Indra in 3b and would here be applied to Kakṣivānt, this poet would surely not mind getting a little reflected divine glory. Note, in passing, the phonetic echo in *ánarvīše pas^u vīše*.

I.121.8: The major puzzle in this verse is the grammatical identity of its first word, *aṣṭā*. Ge takes as the agent noun to $\sqrt{aś}$ ‘attain’, which is not otherwise attested (and for which we should expect full grade **naṣṭár-*), while Old, Re, Scar (602), WG take it as ‘eight’ (which of course requires some clever manoeuvring with its head noun, dual *hárī*). I follow Sāy, Gr in taking it as the ppl. to $\sqrt{(n)aś}$.

On *ādaḥ* see comm. ad II.12.4.

On the sense of *vātāpya-* see comm. ad IX.93.5. The scansion of this stem is unclear: HvN give it as *vātāpyam*, that is, presumably, *vāatāpyam*, Arnold (p. 294) *vaatāpyam* (with short first vowel), but Old *vātaāpyam*. Ad IX.93.5 he also suggests *vātāpiyam* (which wouldn’t work here), pronouncing the scansion favored by HvN the least likely. Gr also goes for *-piya-*.

I.121.9-13: Hoffmann (Inj. 191 and n. 157) transl. and comments on these mythological verses.

I.121.9: The puzzle in this verse is what is happening to the cow (*góḥ*) -- which depends on what case the word is in and on the interpretation of the VP *práti vartayaḥ ... áśmānam*. If the VP is taken as hostile (“turn the stone against X”), *góḥ* is difficult to fit in, since as a gen.-abl. it can’t easily be a target. See the standard tr., plus Hoffmann (Inj. 191), for various attempts to wrestle with this possibility. However, the VP can instead mean “roll the stone back,” with *góḥ* an ablative “from the cow” and the action depicted a friendly and helpful one. I consider this to be a variant of the Vala myth, referring to the opening of the cave. The problem is that the Vala myth does not ordinarily intersect with the Śuṣṇa story, which occupies the 2nd hemistich, but, as indicated in the publ. intro., the two myths are woven together in this part of the hymn. See also X.61.13 where the same intertwining seems to occur.

The publ. tr. omits the dat. *kútsāya*. It should read “when ... vanquishing Śuṣṇa for Kutsa, you kept encircling him [=Śuṣṇa] ...”

Another problem is the present tense *pariyāsi* of d, in a hymn otherwise couched in the mythological past. In conjunction with *anantā-* ‘endless’, I suggest that the present is used here to express a past continuative ‘kept Xing’.

I.121.10: The sequence of tense/mood in this verse is somewhat puzzling, with an impv. in the first hemistich (*asya*, pāda b) followed by a 2nd sg. impf. (*ā-adar*, so Pp.) or injunctive (*ā-dar*, so Hoffmann, Inj. 191). This discrepancy must be why Ge puts the first hemistich in quotation marks, though he doesn’t explain who is speaking.

In my opinion the first hemistich concerns the Vala myth: the word *phaliḡā-* ‘bolt’ is associated with the Vala myth in two of its three other occurrences (I.62.4, IV.50.5), once of the Vṛtra myth (VIII.32.25), never of Śuṣṇa. However, if this is the Vala myth it is somewhat puzzling why the sun is *entering* the dark, since the Vala myth is usually set at dawn. Perhaps this refers to a version in which the sun is also trapped in the Vala cave.

I supply ‘fold’ in the temporal abl. expression in pāda a, since I would expect an acc. of goal, and *pāthas-* ‘fold’ is common with *āpi* √*i* (I.162.2, II.3.9, III.8.9, VII.47.3). On the other hand, perhaps the abl.(/gen.) *tāmasaḥ* is simply by attraction to the abl. infinitive *āpīteḥ*.

As noted earlier, *ādaḥ* is analyzed by Hoffmann as an injunctive in mythological context. Note also that it probably belongs to √*dr* ‘tear’, not √*dā*, despite *ādo* to the latter root in 8a. However, it could technically be underlyingly identical to *ādo*, and that pāda also contains a *divāḥ*. In that case it would mean “you took ...”

I.121.11: Hoffmann (191 n. 157) insists that *ānu ... madatām* must be an impv. This interpr. is of course possible, but I do not see its necessity. He also interprets *siṣvapaḥ* as a subjunctive. This is also possible, esp. because the other two forms to this redupl. aor. are athematic (*siṣvap*). However, again it is not necessary, since redupl. aorists are overwhelmingly thematic, and old athematic ones get thematized (cf. augmented *ādīdharat* beside *dīdhar*).

I have no idea why it’s worth mentioning that Heaven and Earth have no wheels, a seemingly obvious fact, unless to contrast them with Etaśa and the Sun’s wheel in 13b.

In d the easiest thing to do with acc. *varāhum* ‘boar’ is to take it as an appositive to *vṛtrām* (much earlier in the hemistich). But the problem, of course, is that Vṛtra isn’t a boar but a cobra (/serpent). Indra’s boar opponent is Emuṣa, and that may be the referent. (See I.61.6–7, where the Vṛtra and Emuṣa myths are told in two successive verses.) However, given that the Śuṣṇa myth is related here in the two preceding verses (9–10), I think that Śuṣṇa may be the referent. He does, after all, snort (e.g., I.54.5 *śvasanāsya ... śūṣṇasya*).

I.121.12: Pāda a contains two ambiguous forms: *yān*, which can be either acc. pl. masc. of the rel. pronoun or pres. act. part., nom. sg. masc., to the root pres. of √*yā* ‘drive’; *āvaḥ*, which can be either the 2nd sg. injunc. act. of the them. pres. to √*av* ‘help’ or the acc. sg. neut. of *āvas-* ‘aid, help’. If we take *yān* as a rel. pron., there is the problem that there is no referent for it in the main clause (save for the Wind’s horses, which are not likely). Despite the majority of tr., I therefore take it as the participle, with the consequence that *āvaḥ* is a noun, serving as acc. of goal, rather than a finite verb. (Its accent would be a problem in a non-relative clause.) As it turns out, there are no

injunctives to the thematic present of this root: we find either augm. *āvāḥ* (etc.) or subj. *āvāḥ* (etc.); this is an additional, if weak, argument for not taking it as a finite verb.

The adj. *mandīnam* ‘exhilarating’ in c seems semantically far enough from its apparent referent, *vajrām* in d, that Ge supplies a verb “(trink)” to produce a new clause and allow *mandīnam* to qualify the expected soma (see the same adj. in 8c). This is unnecessary. Uśanā Kāvya’s major job is to give Indra the mace (see also V.34.2) and for Indra to reach exhilaration in his company (I.51.11). In our passage it seems as if these are conflated, and the vajra itself is what provides the exhilaration (= the energy to kill Vṛtra bez. Śuṣṇa).

I.121.13: I take *nṛṇ* as a gen. pl. (see 1a) in beneficial sense.

For *nāyām* see comm. on VIII.2.28 and Jamison 2013 (“RV *sá hināyām* (VI.48.2) with a Return Visit to *nāyām* and *nānā*,” Hock Fs.).

In c *rathyāḥ* could simply mean ‘charioteers’, a parallel gift to the prizes (*vājān*). So WG.

I.121.15: The root affiliation of *sām ... varanta* is disputed. Most take it as belonging to \sqrt{vr} ‘choose’ (Ge, Re [apparently, see below], WG); I follow Gr and Lub in assigning it to \sqrt{vr} ‘cover’. Although it is difficult to judge, there are more clear root aor. subjunctive middle forms to ‘cover’ than to ‘choose’ (though cf. I.140.13 where *varanta* does belong to ‘choose’ and takes *īṣam* as object). Moreover, *sām* does not appear to be found with ‘choose’, but is at least marginally attested with ‘cover’ (cf. VIII.17.7 and X.16.7).

The other question about this verb is what is its subject. Ge takes *īṣaḥ* as the acc. pl. obj. and supplies the singers or rich patrons as subj. (sim. WG): “Sie bitten sich alle Genüsse (als Lohn) aus.” Inserting a 3rd ps. subject is a bit awkward in a verse in which the human petitioners are otherwise in the 1st ps. (a *asmāt*, c *naḥ*, d *syāma*). Re takes *īṣaḥ* as the subject, in one of his finer sleights of hand: “Puissent les jouissances-rituelles affluer (-comme-par-choix!),” where the supposed root verb appears only in the parenthesis and the Sanskrit justification for “affluer” is entirely unclear. I take *īṣaḥ* as the subject, with ‘us’ supplied as object: “completely cover (us)” expresses the abundance of refreshments Indra will provide.

I.122 All Gods

I.122.1: On *pāntam* see Old’s lengthy n. ad loc. The stem *pānt(a)-*, generally read with distracted root syllable, occurs 8x in the RV. As Old demonstrates, there are most likely two different stems involved: a them. noun *pānta-* ‘drink’ and the act. part. of the root aor. of $\sqrt{pā}$ ‘drink’. The noun is the more common (6x), while the part. is most likely found only in vs. 4 of this same hymn (du. *pāntā*) and as nom. pl. in IX.98.8 (q.v.). This distribution of forms is found in Lub, with the part. listed under $\sqrt{pā}$ (‘drink’) and the nom. stem *pānta-* separate.

The construction of the second hemistich is much discussed, including the function of the instrumentals. See esp. Old and Re.

In this context “the lord (*āsura-*) of heaven” is most likely Rudra (see also Hale, Asuras, 75), who is also the gapped object of the verb *astoṣi*: his heroes are his sons, the Maruts mentioned in d.

On *iṣudhyā* and the related verb, see comm. ad I.128.6 and my 2020 “Vedic *iṣudhyā*- and Old Avestan *išud-*, *išūidiia-*: The Aim of Praise” (Fs. Lamberterie). In light of my reconsideration of the word family of *iṣudhyā*- in that article, I now interpr. this vs. somewhat differently from the publ. tr. Instead of taking *ródasyoḥ* as the target of the aiming expressed by *iṣudhyā* (“as if aiming at the two world-halves”), I now take *iṣudhyā* as an independent instrumental adverb of manner, with a dependent “praise” understood: “... as if by the aiming (of an arrow of praise).” The simile particle *iva*, which here, unusually, does not mark an explicit simile, draws attention to the underlying metaphor of the aiming of praise. This image is especially appropriate for Rudra, a god of course famous as an archer, and the Maruts, who are depicted in I.64.10 *ástāra iṣum dadhire gābhastyoḥ* as “archers taking arrows in their fists.” As for *ródasyoḥ*, I take it as semi-parallel to *diváh* in c, with the two locations positioned at the beginning and end of the hemistich. Just as Rudra is the “lord of heaven” (*diváh ... ásurasya*), the Maruts are associated with the midspace defined by the two world-halves, not to mention their association with their consort Rodasī -- so this is also a pun. I would now tr. the hemistich as “I have praised (him) along with the heroes of the lord of heaven; (I have praised) the Maruts of the two world-halves as if by the aiming (of an arrow of praise).”

I.122.2: The root affiliation of *vyūta-* is disputed. WG (flg. Rau) take it to $\sqrt{vā}$ ‘weave’ and tr. ‘geflochten’; so also Gr. and (ultimately) Re (though he vacillates in his n.). Most other tr. to $\sqrt{vī}$ *vyu* ‘separate’. My ‘cast-off’ comes via ‘separate, i.e., set aside, get rid of’. Re’s “serti (d’étoiles)” (sertir = ‘to set’, of jewels) does not seem to have much to do with ‘weave’, but supplying “with stars” (*stṛbhiḥ*) as a play on *starīḥ* is clever enough to make his interpr. appealing, though I do not in the end accept it. A bejeweled Night does not fit well with her being *starī-* ‘barren’: the contrast is as usual between dazzlingly beautiful Dawn and dreary dark Night. Cf. the black garment Night spreads at the horizon for the Sun in I.115.4. Night does get her chance at ornaments in the one hymn addressed to her, X.127.

I.122.3: The 2nd member of the cmpd *vasarhā* is taken by Gr and Re as *-hān-*, hence ‘striking at dawn’, but a connection with $\sqrt{hā}$ ‘change position, move’ makes more sense (so Ge [WG], tentatively Scar 700). Wind does regularly rise at dawn, but it is hard to conceive that it smites then. This probably requires us to take the underlying form as *-hās*, contra the Pp. The 1st member *vasar-* is only attested here, as a variant to the (likewise secondary) locative *uṣar*. See Lundquist 2014 (25th UCLA IE Conf., Proceedings). The somewhat better attested *vanar-* ‘in the wood’, also found as 1st cmpd member, may have provided the model for the shape of *vasar-*.

Ge (WG) construe *apām* with *vīṣanvān* as “der Fuhrmann [coachman, teamster] der Gewässer,” while I follow Re in tentatively supplying ‘child’ with gen. *apām* on the basis of the next verse, which contains *nāpātam apām*. Note that elsewhere in the hymn (12b / 13a) an incomplete expression (*dāśatayasya*) is repaired by the fuller form (*dāśatayasya dhāśéḥ*). I don’t see how ‘possessing bulls’ would develop to ‘coachman’. In any case, neither of the alternatives makes much sense as a designation of the wind; I do not know why he would be a coachman of the waters, but I also don’t understand why he’d be the child of the waters -- perhaps because of the association of wind with rain or because wind blowing over open water is very perceptible? (For another interpr., see

Keydana, Inf., 315 n. 126 “der Besitzer der Wasserhengste [water-stallions],” which seems to split the difference between the ‘bull[s]/male[s]’ of the nom. and the fem. waters in a way not exactly sanctioned by grammar.)

The curious dual dvandva *indrāparvatā* ‘Indra and Mountain’ is found 3x in the RV (I.132.6, III.53.1 as well as here), always in the voc. I interpret the ‘mountain’ as a reference to Indra’s *vájra*-. For other passages with the *vájra*- as ‘mountain’, see VI.22.6 and VII.104.19, as well as Re, EVP XVI.117 (ad VII.104.19).

I.122.4: The first hemistich is structured like vs. 2, with a nom. subject of a purpose infinitive.

The root \sqrt{svit} is a Dawn word (see I.92.12, 113.15, 124.11, the last in a nearby Kaksīvant hymn); I wonder if *śvetanā-* is feminine because it’s evoking Dawn as the brightener.

Despite their similarity, with most tr. I take *pāntam* in 1a and *pāntā* here as belonging to separate stems, the first to *pānta-* ‘drink’, the second to the act. part. to the root aor. of $\sqrt{pā}$ ‘drink’ (see disc. above ad v. 1). Immediately preceding *vyāntā* can be the clue to its participial identity; for the sequence see I.153.4 (of Mitra and Varuṇa) *vītām pātām páyasā* ...

The second hemistich with *prá vah* ... *kṛṇudhvam* echoes 1ab *prá vah* ... *bharadhvam*, though in vs. 1 the verb is further distanced from the clause opening.

rāspiná- is a hopeless hapax, surely related to the likewise hopeless hapax *rāspirá-* in V.43.14, a passage that also contains a mother (*mātúṣ padé*) and *āyóḥ*, though not in the same configuration or meaning as here. Ge (/WG) wisely fail to tr. Re: ‘fougueux’ (fiery, ardent), or, in his notes, ‘bouillant’ (boiling), though without serious argumentation. (For other possibilities see KEWA s.v.; AiG III.215.) Although it is foolhardy even to sketch derivational possibilities, I will toss out several, with no conviction. My tentative tr. ‘abundant’(?) depends on a possible deformation of reasonably well-attested *virapsín-* ‘id.’ (beside *virapsá-* ‘abundance’) (derived in turn from *vīra-p(a)śu-*, in a well-known and generally accepted etym.). The initial *vī-*, perceived as a preverb, could be lopped off, and the unusual internal cluster *-pś-* metathesized and normalized to *-sp-*, whose order of segments and sibilant type are both more phonologically natural. The apparent vṛddhi might be like that of *māhina-* though they are differently accented. To account for *rāspirá-* we must assume that *rāspiná-* was analyzed as containing a *-ná-* suffix, for which *-rá-* was substituted for no discernible reason. Another even less good possibility, which partly goes back to Bollensen (ZDMG 22; see KEWA s.v., AiG III.215), starts from the fact that in context both *rāspiná-* and *rāspirá-* could use an extra syllable. The first member could be analyzed as a *y*-less genitive **rāás* to *rayí* / *rāy-* ‘wealth’, compounded with a form of \sqrt{pi} ‘swell’. (Note that *rāyás* regularly shows *-s* sandhi in syntagms before *p*: esp. *rāyás póṣam*, but cf. also *rāyás pūrdhi*.) However, our current understanding of the historical morphology of the ‘wealth’ word makes it well-nigh impossible to get such a *-y*-less form (since *rāyás* < **raHj-as*) without a series of arbitrarily constructed analogies. Thus, the second possibility is essentially ruled out, and, insofar as I think it’s worth even thinking about an etymology here, I favor the deformation from *virapsín-*.

I do not know what role *Āyu* is playing here, as is often the case with this figure.

I.122.5: Again the first hemistich has a predicated infinitive, like 2ab, 4ab. In fact the structure is identical to that in 4: *ausíjō huvádhyai*# (4b, 5a). But otherwise the verse is difficult to comprehend (as Ge says in n. 5, “Voll dunkler Beziehungen”), and tr. differ considerably. I will not treat them in detail.

The object(s) of *huvádhyai* should first be sorted out: the two acc. *ruvanyúm* and *sámsam*. Are the two coreferential and what is/are their referent(s)? *ruvanyú-* is a hapax but clearly derived from the denom. (/deverb.?) stem *ruvanya-* (also a hapax) and ultimate from the root \sqrt{ru} ‘bellow, roar’. Ge (/WG) takes *ruvanyúm* as a qualifier of *sámsam*, which he treats as a PN (“den lauten Śaṃsa”), perhaps standing for Nāraśaṃsa. This is not impossible, but given the mysterious *āyóḥ* in 4d and *ausíjāḥ* in both 4b and 5a, I am reminded the phrase *usíjāḥ sámsam āyóḥ* (IV.6.11, V.3.4). In both passages we (SWJ and JPB respectively) take *sámsam āyóḥ* “the laud of Āyu” as a designation of Agni; in both we take the form *usíjāḥ* as the nom. pl. designation of a type of priest, who do homage to Agni under this name. Note also that II.31.6 contains *sámsam usíjām*, with the Āyus featuring in the next verse (II.31.7b) as makers of hymns. I therefore think that *sámsam* in this verse should be combined with the mysterious *āyóḥ* at the end of the previous verse into a putative underlying phrase **sámsam āyóḥ*, referring to Agni, modified by *ruvanyúm*. Incomplete phrases straddling verse divisions are found in vss. 3–4 and 12–13 (though in those instances the complete phrase appears in the 2nd vs.); see comm. above on vs. 3. I would thus change the text of the publ. tr. to “It is for (Kakṣīvant), son of Uśij, to call the bellowing, the ‘Laud (of Āyu)’ [=Agni], for you.” Agni can be characterized as ‘bellowing, roaring’ because of the crackling of his flames. The “you” are the priests (etc.) on whose behalf Kakṣīvant is acting. Agni was ritually presented in the previous hemistich (4c) under a different epithet, and his “mothers” (the kindling sticks) in 4d. A “roaring” Agni would come into being following the kindling about to take place in 4d. An invocation to Agni’s comrades ends this verse (5d). The context thus favors Agni.

The next problem is *ghóseva*. Ge (/WG) takes this as the fem. PN *Ghoṣā*, the erstwhile spinster, found in a nearby Kakṣīvant hymn (I.117.7) where the Áśvins bestowed a husband on her, as well as in the famous sequence of hymns X.39–41 attributed to her (with the patronymic *Kākṣivātī*) and her son. Despite the close connection of Kakṣīvant with this *Ghoṣā*, I doubt that she figures in the strictly liturgical context here, and those who think she does must assume that Arjuna is the name of her acquired husband, for which there is no evidence. I take the form rather as the old instr. *ghóṣā* to the masc. common noun *ghóṣa-* ‘shout, cry’, though I admit the simile seems a bit flat. Re’s grammatical interpr. is the same as mine; his tr. “semblable à une rumeur (de guerre)” is less flat, but even less supported.

námśé occurs twice in the RV, here and in 12b in this hymn, both times preceded by a genitive. There seems no reason not to take it, with Gr etc., as the loc. sg. to a stem *námśa-* ‘at/on the attainment’ construed with the gen. As for *árjunasya*, lit. ‘silver(y)’, I suggest that it refers to soma; cf. *ṛjīśín-* ‘possessing the silvery drink [=soma]’ (so Thieme), with the Caland form *ṛjī-* to this same etymon. Unfortunately *árjuna-* doesn’t elsewhere characterize soma. Nonetheless, the fact that the other occurrence of *námśé* (12b) takes a genitive that also probably refers to soma gives some support to this interpr.

The initial *prá* in c, echoing those in 1a and 4c, suggests that this hemistich has a structure parallel to those two. Hence my “(put him) forward”; other tr. supply other material to complete the clause. The meter of this pāda is deficient, lacking three syllables. Various restorations have been suggested (see Old, Prol. 113 n. 1 [=Engl. tr. 133 n. 3]; HvN metrical notes ad loc.). Old (Prol.) suggests an impv. like *arcata* or *gāyata*, noting the structural similarity to 4c, but in the Noten he suggests that the metrical irregularity of Kakṣivānt’s I.120 might indicate that the text here is correctly transmitted and that the meter must be taken as is. It is certainly difficult to see how a trisyllabic verb form would have simply got dropped here.

I do not understand how Pūṣan comes to be named in this august divine company, and I wonder if the abbreviated meter of this pāda has something to do with the dedicand: the only hymns addressed solely to Pūṣan in the RV, VI.53–58, consist entirely of dimeter hymns save for the last. The 8-syllable pāda here might signal his more humble stature.

vasútāti- is another word that occurs in the RV only here and in vs. 12 of this same hymn. Its formation is of course transparent, but its meaning is less so. Most take it as a true abstract to *vāsu-* ‘good(s)’, but with a slight twist to ‘generosity’ (Freigebigkeit). But the lexeme *ācha* √ *vac* seems to be a technical ritual term for ‘invite’ (cf. *āchokti-* and the later priestly title *acchāvāka-*) with gods as the object. Gr suggests the meaning ‘Schaar der Guten, d.h. der Götter’ for the occurrence in vs. 12 (but not this one), which I have adopted for both instances. It would be equiv. to *devātāti-* ‘assemblage/conclave of gods’. The pāda would then refer to the group of divinities that Agni regularly conveys to the sacrifice.

I.122.6: This last verse before the dānastuti is free of the manifold difficulties that clot the first five verses of the hymn, but it is not devoid of Kakṣivānt’s poetic flourishes. Note first the play on √ *śru* ‘hear’, which reaches a climax in pāda c: *śrótu naḥ śróturatiḥ suśrotuḥ*. What is particularly clever here is that though the pāda contains three forms *śrótu*, the first is completely different from the second two: it is the 3rd sg. act. root aor. impv., while the other two belong to the nominal stem *śrótu-* and are 1st and 2nd compound members respectively. The pāda has only 10 syllables, with a likely rest after *śrótu naḥ*, which would call attention to the phonological identity / morphological difference.

The phrase *viśvátaḥ sīm* occurs 5x in the RV; I have discussed this formula at length elsewhere (“Rigvedic viśvátaḥ sīm, or why syntax needs poetics”, *Mír Curad*, Fs. C. Watkins [edd. J. Jasanoff, H.C. Melchert, and L. Oliver], 1998, pp. 291-300). The two occurrences in Kakṣivānt’s oeuvre (I.116.20 and here) ring changes on the basic formula in his usual deft and unexpected ways. I will not reproduce the entire discussion, but summarize the main points. Four of the five passages (all but this one) concern the theme “surrounding,” marked by *pári* + VERB. In three of these (all but the two Kakṣivānt examples) the object is the two worlds / heaven and earth. In I.116.20 it is the *subject* (the Aśvins), not the object, that is dual. In other words, Kakṣivānt has transformed the underlying formula by transferring the abstract grammatical category DUAL from one of the arguments of the verb to the other.

This analysis of I.116.20 is necessary to understand the more attenuated -- and more radical -- instantiation of the formula found in our verse here. As in I.116.20 the

DUAL that is inherent in the formula surfaces on the subject, here Mitra and Varuṇa, but the “surrounding” motif is not present, except in *viśvātaḥ* ‘on all sides’ itself, which seems to have no semantic connection with the rest of its clause. Why is it here? Because it is crossed with a different formula through surface phonological similarity. Consider the word *sādane* in the same pāda, which has connections with another RVic formula. The phrase “in the seat of Vivasvant” occurs five times in the RV (I.53.1, III.34.7, III.51.3, X.12.7, X.75.1), twice as pāda-final *sādane vivāsvataḥ*## (I.53.1, X.75.1). This provides an almost perfect phonological scrambling of our pāda ending. (In fact, according to Oldenberg [Noten, ad loc.], Ludwig suggested emending *viśvātaḥ* to *vivasvataḥ* [no accent given].)

sādane vivāsvataḥ##

sādane viśvātaḥ sīm##

Thus our phrase may have been employed in order to evoke the other formula, which is a kenning for “der Opferplatz,” so Geldner ad I.53.1. Thus Kakṣīvant deftly marries the grammatical deep structure (the dual) of the *viśvātaḥ sīm* formula with the surface phonology of *sādane vivāsvataḥ* in a way that allows the semantics of both to be alluded to. (Perhaps an appreciation of the formulaic manipulations involved here would have led Bloomfield (RR) to reconsider his assessment of this verse with its “hysterical repetition of the root śru” as “secondary clap-trap.”)

I do not understand why the Sindhu is esp. gifted with hearing.

I.122.7: The transition between the All God portion of the hymn and the dānastuti is eased by verbal repetition: Mitra and Varuṇa, who were the last gods invoked (6ab), are again called on here, though in opposite order and not in a dvandva but in individual vocatives (*varuṇa mitra* versus 6a *mitrāvaruṇā*). Independent *rātīḥ* picks up the 2nd cmpd member in *śrōtu-rātīḥ* (6c) and the PN *śrutāratha-* (7c) also echoes *śrōtu-rātīḥ*.

Accented *stuṣé* I take as a (quasi-)infinitive with passive value, though unaccented *stuṣe* is generally 1st sg. with “active” value.

The locc. *pajré / śrutārathe priyārathe* mark these men as givers, which makes some trouble, since Kakṣīvant’s family seems to be called Pajra (quite possibly in the next verse and in I.126.4–5) and Kakṣīvant himself *pajriyá-* (I.116.7, 117.6, 120.5). Nonetheless, grammar can’t be gainsaid, and they must be patrons here. See Ge’s n. 7bc for attempts to reconcile the discrepancies.

I.122.7–8: The passively used 3rd sg. *stuṣé* (7a), *stuṣe* (8a) contrast in function with the great majority of *stuṣé / stuṣe* forms, which are 1st sg. and “active” in sense (“I [will] praise”). This rare usage may be mediated through the perception of the accented forms as infinitives; see disc. ad X.22.1.

I.122.8: See Old on this vs. I follow him in taking cd as a single rel. cl. hanging off Nahus in b, rather than a rel. cl. / main cl. structure. The uncertainty about the relationships of the various named patrons makes any interpr. tentative. See publ. intro.

I.122.9: This cautionary example of what happens to men who cheat the gods of proper offerings is clearly meant to warn stingy patrons.

Note the echo between the openings of b #*apó* and d #*āpa*, which are entirely distinct grammatically. As for the latter, as Kü also notes, various forms of the perfect of $\sqrt{āp}$ have presential value.

I.122.10: Ge refuses to tr. *dāṃsujūta*-. Re “ayant été mû (comme) par miracle,” clearly connecting it with *dāṃsas*- ‘wondrous power’, etc.; my tr. makes the same connection. The stem *dāṃsu*- is probably also found in *dāṃsu-patni*- (IV.19.7), though this is disputed. WG tr. *dāṃsujūta*- “als Heimkehrer,” with the 1st member the loc. pl. of *dām*- ‘house’ -- so, more literally, ‘in die Häuser eilend’. This is clever, and the two independent uses of *dāṃsu*, both nearby (I.134.4, 141.4), do seem to be that loc. pl. However, *jūta*- means ‘sped, spurred on’ and the fairly numerous compds in which it occurs have a 1st member that provides impetus (cf., e.g., *vāta-jūta*- ‘wind-sped’); ‘sped into the house’ sounds more like an act of cowardice or retreat than of triumph.

bālhasṛtvā in c is even more problematic (though Ge does tr. it: “geht er [*yāti*] festes Ganges”). Independent *sṛtvān*- means ‘running, streaming’; *bālha*- means ‘thick, squeezed’, to \sqrt{bamh} . Although it would of course be possible to attenuate that meaning to ‘firm, powerful’, I think that Kakṣivānt, by using this unusual compound, and esp. the unusual 1st member, had something more precise in mind than a firm stride -- esp. in a *dānastuti*, where slang is most at home. I have therefore used the Engl. idiom ‘pumped up’ (approximating the ‘squeezed, dense’ sense of the Skt.), which is defined by an online dict. (<http://www.thefreedictionary.com>) as “tense with excitement and enthusiasm as from a rush of adrenaline,” with the following example: “we were really pumped up for the race.”

I.122.11: The dual part. *gmāntā* of pāda a does not match the pl. impv. *śrótā* of b nor the pl. voc. *rājānaḥ* in the same pāda. Drawing the distinction did not seem worth it in the publ. tr. -- which would have to be something like “as you two go ..., (do all of you) hear ...” The number discrepancy is generally (see, e.g., Old, Ge)—and in my opinion correctly—interpreted as first a reference to Mitra and Varuṇa and then to the Ādityas as a group. M+V were prominent earlier (vss. 6–7, 9; see also 15c, the final vs.) and in fact in vs. 7 ushered in the *dānastuti*. The plural phrase in b is used precisely of the three principal Ādityas, including explicitly M+V, in X.93.5: *té ghā rājāno amṛtasya mandrā, aryamā mitrō varuṇaḥ* ... In my opinion there is no reason either to emend the text (as Gr does) or to take *gmāntā* (with Lowe, Part. 185 + n. 30) as a “pseudo-absolutive.”

This parallel also shows that Scar’s clever idea (171, followed by WG) to construe *amṛtasya* with the verb *śrótā* cannot be correct.

In c Old takes the hapaxes *nabhojū*- and *niravā*- in full lexical value, rather than as PN, and, at least acdg. to Mayr. (PN, svv.), this remains a live possibility. However, in the *dānastuti* context names are more likely, though they can be speaking names. That -*jū*- echoes -*jūta*- in 10a and -*ravā*- echoes *ruvanyū*- in 5a (assuming an analysis *nī-ravā*- with Old, rather than *nīr-avā*- with Gr) is presumably no accident: puns on personal names are a standard RVic poetic device.

I.122.12: My interpr. differs from most (though it is closest to Old’s). There are two major reasons for the different interpr. in pāda a: 1) most take *dhāma* as part of the rel. cl., but this is impossible because the verb is unaccented; 2) most take *śārdham* as a

reference to the Marut troop. This is, of course, its standard use, but in this hymn it should first be interpreted in conjunction with *śārdhastara-* ‘more forceful’ in 10b, where it qualifies an unnamed patron. Here we want to establish our patron (*sūri-*) as such a force. In my interpr. the rel. cl. is a nominal cl. consisting only of *yāsya sūrēḥ*, in which **vayām* (or **smās[i]*) can be supplied (from the 1st pl. inherent in *dhāma*), as an expression of possession: “of which patron (we) [are],” i.e., “who is (our) patron.” Cf. the type VIII.92.32 *tvām asmākaṃ tāva smasi* “you are ours; we are yours.”

The speakers in b are the poet(s) and priest(s). The gen. *dāśastayasya* ‘tenfold’ must be interpreted in light of the fuller expression *dāśastayasya dhāsēḥ* in 13a “tenfold gush,” probably a kenning for soma, though there is no agreement on its sense. The fact that the fuller expression serves as a complement of the verb *māndāmahe*, a standard soma verb, in 13a supports this identification. The ‘tenfold’ characterization is not clear; Old plausibly suggests that it refers to the number of servings to be divided among that number of priests.

Ge (/WG) and possibly Re take cd as a resumption of the direct speech of pāda a. This is not impossible, but the 3rd persons of c and d have no clear referents in a.

I take *dyumnāni* in c as a fronted object of *sanvantu* in d, more or less following Old. This technically makes *yēṣu ... rārān* appear to be an embedded rel. cl., which I’m afraid I will just have to live with.

As indicated in the comm. to vs. 5, I take *vasūtāti-* here as a reference to the collectivity of good ones, namely gods. I then take the pl. *viśve* opening the next pāda as referring also to the gods. In this Viśve Devāḥ hymn, the poet cleverly makes reference to them here in this off-kilter expression, with *devāḥ* suppressed and anticipated by the sg. *vasūtāti-*. (The full expression is found in 3d.) My only reservation about this interpr. is that in a dānastuti it should be mortals who are doing the winning, and certainly the phrase *prabhṛthēṣu vājam* “the victory prize in the forays” fits a mortal context better. I might then modify my tr. to remove the bracketed “[=gods]” and leave the identity of the subject open. It may in fact be that the two objects *dyumnāni* and *vājam* will be won by gods and mortals respectively, and *viśve* refers to both, hence “let all (the gods) win the brilliant things in which the assemblage of good ones takes pleasure, and let all (the mortals) win the victory prize at the forays.”

I.122.13: On the phrasal repair of 12b *dāśatayasya* by *dāśastayasya dhāsēḥ* see comm. vss. 3, 5, and 12.

The “twice five” in pāda b may be the fingers, as I suggest (almost the default identification in a RVic ritual context), or the number of priests, indirectly conveyed by the tenfold soma of 12b and 13a. Ge (/WG) takes the “twice five” as directly characterizing *ānnā*: the twice five foods.

Ge (/WG) and Re take *iṣṭāśvaḥ* and *iṣṭāraśmiḥ* as PNs of patrons. (Actually Re omits the first, presumably inadvertently.) I also take them as referring to patrons but with full lexical value: the one who has “desirable horses” and “desirable reins” [latter probably a stand-in for “chariots”] to offer. That “those showing mastery” (*iśānāśaḥ*) are patrons is strongly suggested by I.141.3, where that participle modifies *sūrāyaḥ* ‘patrons’. The Saṃhitā text *tāruṣa* is analyzed by the Pp. as *tāruṣaḥ*, which could be a gen. with *iśānāśaḥ* (so Gr, Re, WG) or nom. pl. (so Ge). Old suggests that it could also be read as dat. *tāruṣe*, against the Pp., which is how I take it. I then interpr. *nṛṇ* as referring not to

the singers (so Ge et al.) but to still other patrons with whom they are competing to provide the best recompense to the singers.

I.122.14: As is recognized by all, the flood (*árṇah*) is the herd of gift cows, whose constant turbulent motion must have suggested the metaphor. Accentless *maṇigrīvam* Old considers a “monstrosity” due to faulty transmission. It must be a bahuvrīhi like immediately preceding *híranyakarṇam*, and I now wonder if the phrase *híranyakarṇam maṇigrīvam* actually represents a dvandva consisting of two bahuvrīhis (‘possessing golden ears and ornamented necks’), which could account for the single accent. The geminate *m* across the compound boundary (*-karṇam maṇi-*) might have been redactionally introduced from **-karṇa-maṇi-*). The first members of the two compounds *híranya-* and *maṇi-* are the constituents of the phrase *híranyena maṇínā* in I.33.8, on which see my extensive discussion in “A Golden Amulet in Vedic and Avestan” (2018, Ged. H. P. Schmidt). Against my interpr. of the forms as one cmpd is the fact that cmpds of more than two members are vanishingly rare in the RV.

Pāda b is repeated verbatim from 3d, but because it has an object (the flood) it has a slightly different sense from there.

The reason for the doubled *ā* in c is not clear to me.

cākantu is taken, plausibly, as haplogitized from **cākanantu*. See, most recently, Kü (131).

I.122.15: In the publ. tr., there should be a comma after “victorious.”

What verb to supply in ab seems up to the interpreter.

I do not understand the image in *syūma-gabhasti-* ‘with hands as its guiding rope’.

I.123 Dawn

After the almost impenetrable last two hymns, the Dawn series comes as a welcome relief, though it does not lack puzzles or Kakṣīvant’s characteristic flourishes. Note also the prevalence of āmreḍitas and similar expressions (*grhām-grham*, *divé-dive*, *śásvat*, and *ágram-agram* all in vs. 4; then *ékaikā* in 8 at long remove, *bhadram-bhadram* in 13).

I.123.1: Against the Pp (and standard tr.) I read dat. *dákṣiṇāyāi* rather than gen. *-āyāḥ*. If it’s a gen., it has to be construed with *ráthaḥ* “the chariot of the priestly gift.” The identification of the chariot and the dakṣiṇā in 5d supports neither of these interpr.

I.123.2: The vs. begins and ends with *pūrva-* (*pūrvā ... pūrvá(hūtau)*), a very tight species of ring composition.

punarbhū- here seems to lack its later technical sense (a remarried widow) and have only its literal meaning ‘come into being again’.

I.123.4: The hapax *ahanā* is difficult. Gr connects it with (*áhar/*) *áhan-* ‘day’. Ge tr. ‘unverwüstliche’ (indestructible); he does not comment, but judging from the tr. I assume he takes it from a negated derivative of *√han* ‘smite’. Old tentatively suggests a connection with *√ah* ‘say’, though he doesn’t gloss the result (for perhaps obvious reasons). Re ‘lascive’ with caution, connecting it possibly with *āhanás-* ‘swollen, lusty’

(usually of soma). WG refuse to tr. but suggest in the n. an adverbial derivation of the particle *áha* ‘certainly’. My tr. rests on the possibility that it represents **máhanā*, with the initial *m* lost after the final *m* of the preceding word: *grhám-grham ahanā* ... This would make for better meter; otherwise there are four consecutive light syllables, spanning the (early) caesura, and in addition Arnold (194) deems × – ∼ ∼ an “occasional” (that is, relatively rare) pattern of the trimeter opening. But what would such **mahanā* represent? I suggest that it should be grouped with the trisyllabic form *mah·nā* (IV.2.1, X.6.7 [possibly; see comm. ad loc.]); this appears to be a variant of *mahinā*, the longer version of the instr. sg. to *mahimán-*, whose shorter version is the very common disyllabic *mahnā*. The medial *-a-* here would result from matching the second vowel of *mahánt-*, *mahá-*, *mahás-/máhas-*, as well as the combining form *mahā-*. Or it might actually reflect a different syllabification of the inherited instr. **magH-mn-aH* as **magH-m̃n-aH*, with the suffixal *m* vocalized between two consonants, rather than the preceding laryngeal.

I.123.5: The final phrase *dákṣinayā ráthena* with two instr. identifies the dakṣinā and the chariot, unlike either of the proposed readings in 1a (see comm. there). Gr, followed (perhaps surprisingly) by Old, suggests reading **dákṣināyā(h)* here, with the gen. supposedly found in 1a. Old ascribes the change to attraction to the instr. *ráthena*. The proposed emendation would do no violence to the meter (and would in fact produce a somewhat more common break), but since the text is easily comprehensible as transmitted, I see no reason to emend.

I.123.7: The du. *parikṣitoh* is universally taken (Ge [/WG], Re, Old, Scar [p. 96]) as referring to Heaven and Earth (e.g., Ge “das Dunkel der beiden umgebenden (Welten)”). In favor of this interpr. is the fact that the two other occurrences of the form do refer to H+E (III.7.1, X.65.8). However, I prefer to take it as referring to the pair already in the discourse, Night and Dawn. The cycling and circling movements of these two are highlighted in 7ab (and note *pári yanti* in 8d of the pl. Dawns). I also do not understand what “the darkness of H+E” would refer to, whereas Dawn’s role in hiding the darkness of night is well known. There is also a weak syntactic argument in favor of my interpr. Definite *anyá-* forms ordinarily take 2nd position (see Jamison 1997, Fs. Beekes); note the position of the two *anyád* in pāda a, each after the fronted preverb in its clause. (The *anyāḥ* in 11d belongs to the “(all) the other” construction, which is positioned differently.) If *parikṣitoh* is loosely connected with what follows, *anyā* here follows the first real word of the clause *támaḥ*; otherwise it appears late.

I.123.8: I take *pári yanti* in two different senses, one with each pāda of the hemistich: in c the verb describes the literal circuit of the thirty days whereas in d it is used in the metaphorical sense ‘encompass’, hence ‘achieve’. The two pādas also contrast the series of dawns needed to add up to the thirty-day cycle (c) with what each one of them accomplishes in a single day (d).

I.123.9: I think *ná* in c does double duty: first and primarily as the negative with *mināti*, but also as a simile marker following *yóṣā*. The rest of the simile (*niṣkṛtām ācárantī*) follows in the next pāda. For *yóṣā* explicitly in a similar simile see VI.75.4 *té ācárantī sámaneva yóṣā* “The two ..., like a maiden faring forth to (festive) gatherings.”

I.123.10: On $\sqrt{śad}$ see comm. ad X.120.5.

I.123.11: In the publ. tr. “auspicious one” sounds like a vocative, which it is not. Perhaps better “as the/an auspicious one.”

I.123.12: Likewise “easy to invoke,” which is not a voc. either. Better “as one easy to invoke.”

I.124 Dawn

I.124.2–3: *áminatī* (2a) and *ná ... mināti* (3d) (cf. also *ná mināti* I.123.9) receive different tr. here both because they have different objects and because *áminatī* is contrastively paired with *praminatī* (2b).

I.124.4: My interpr. follows that of Thieme (KZ 79 [1965] -- KISch 214–27), cited also in the publ. intro.; for doubts, esp. about the interpr. of pāda b, see Scar 272–73.

I.124.5: The hapax *aptyá-* is connected by Gr, Old, and, tentatively, EWA (s.v. *ánapta-*) with ‘water’. Ge leaves it untr.; WG as ‘äussere’ without comment. I follow Re’s tentative suggestion ‘inaccessible au vol’ (to \sqrt{pat}), with perhaps more enthusiasm than he shows for it.

I.124.7: On the female figures here, see publ. intro.

The first simile (in pāda a), *abhrāteva puṃsá eti pratīcī* “Like a brotherless (girl) she goes right up to men” (publ. tr.), I take as expressing wanton behavior on the part of a girl who lacks a brother to protect her and/or to identify potential husbands for her and who therefore must seek opportunities herself. However, it is often interpreted as a reference to the institution of the *putrikā* ‘appointed daughter’, the daughter of a sonless father whose offspring will serve as descendants of her father, not her husband’s father and who is therefore a poor marital prospect. See for example P.V. Kane, “Vedic Basis of Hindu Law,” JBBAS 26 [1922] 57–82, at 58–60, who sees it as a forerunner of the provisions in VDS XVII.16 concerning the *putrikā*. (See also YDŚ I.52–53 on not marrying a brotherless girl.) (Ludo Rocher several times cites Kane’s treatment; see *Studies in Hindu Law and Dharmaśāstra*, 47, 64.) Kane’s tr. reflects this interpr.: “As a (woman) without a brother comes back to (her) male (relations).” This view does not seem sufficiently supported.

As for b, though most interpr. (see recently Scar [463], WG) see only a male figure in the simile in b (a charioteer seeking prizes), I find it unlikely that the middle simile of three, the two outer of which depict striking female types, would compare Dawn only to a male. As indicated in the publ. intro., I think it is a double entendre, with not only the prize-seeking male competitor on his chariot seat but also a prostitute displaying herself on a platform or stage for money (or whatever counted for money in that period).

The root noun cmpd *gartārúh-* ‘mounting a seat’ has *gárta-* as first member. It is therefore tempting to interpr. the 2nd member as *ārúh-*, belonging to the lexeme \sqrt{ruh} ‘mount, climb on’ (as in the cmpd. *ārúh-* X.44.6). Scar (463–64) rejects this interpr. on

the grounds that rt. noun cmpds with direct object noun as 1st member do not also contain preverbs, a statement with which I am in agreement; see my disc. in “Vedic *iśudhyá*-... (Lamberterie Fs., 2020: 486) on the gapping of *práti* in such a cmpd. (See now my forthcoming “Limits on Root-noun Compounds in Indo-Iranian.”) Scar attributes the long *ā* to the effect of the root-initial laryngeal, as in *upārúh*-, etc. This is certainly possible, but I wonder if, in what must have been a nonce formation, the lexeme *ā* √ *ruh* didn’t play a part. On *puru-niṣṣídh*-, see comm. ad I.10.5; on *karmaniṣṭhā*- and *puruniṣṭhā*- see comm. ad X.80.1 and VIII.2.9 respectively; on *viśva-ābhū*- X.50.1. The only true exception (and even it may not be) is *yajña-niṣkīt*- X.66.8; see comm. ad loc.

I.124.7–8: *suvāśā(h)* in 7c is neatly echoed by *svāsā* opening 8a.

I.124.8: As indicated in the publ. intro., I believe that this verse continues the series of female portraits, this time with two vignettes of the *svayamvara* (‘self-choice’) marriage.

On the basis of I.113.1, Ge suggests persuasively that the subj. of pāda a is Night and her older sister is Dawn. Nonetheless, I take the subj. of b to be Dawn, who is going away from Night. The crucial word in b is *praticākṣyā ā* (latter Pp.), which can be either a gerund (-*ā*) or a gerundive (-*ā*). Most (though not Old) take it as the latter, as I do, but with the sense “to be seen again” (e.g., Ge “die man wiedersehen soll”), that is, as one who will return. But this is not the standard meaning of *práti* √ *cakṣ*, which simply means ‘gaze upon’. Here I think “to be gazed upon” represents the display motif of the *svayamvara* marriage: before the girl exercises her choice among the assembled suitors, she enters the arena (vel sim.) and is announced and displayed for all to see (for disc. see esp. Jamison 1999 [Penelope] and for this passage in general Jamison 2003 [Fs. H.-P. Schmidt], pp. 42–44).

The choosing maidens (*vrah̥*) of the same marriage type are the topic of pāda d.

I.124.12: The “one being at home” (*amā sánt*-) may contrast implicitly with the “Early-coming” one (*prātarítvan*-) who forms the subject of the 1st half of the next hymn (I.125). In that hymn the *Prātaritvan* engages in dialogue with a person who is probably a householder, that is, in the words of our verse, one being at home.

This vs. is identical to VI.64.6; for further comm. see there.

I.125 (The Early-coming one) Svayana’s Dānastuti

For a sustained treatment of the “early-coming one” (*prātarítvan*-) see Jamison, Sac.Wife 184–89.

I.125.2: The first three pādas of this verse are in the standard high Rigvedic register and present the unsurprising themes of prosperity and reciprocity, but the fourth pāda violently wrenches the verse in an unexpected direction. The placidly happy relationship between host and guest depicted in vss. 1 and 2abc takes a sinister and coercive turn, but what precisely that turn consists of is partly obscured by the fact that pāda d contains two hapaxes (*muṣṣjā*- and *pādi*-) and a very rare lexeme (*úd* √ *sāl sí*, otherwise only AV VI.112.2–3). What is clear is that the host derives great benefit from the visit of the early-coming one *if* he forces him to stay -- “ties him up” in fact.

A simile adds precision to this picture, or it would if we understood it: *mukṣṭjāyeva pádim* “(binds you up) like a *pádi* with a *mukṣṭjā*.” Ge tr. “wie den Vogel in der Schlinge,” which certainly yields sense though it is essentially contextually inspired guesswork. (In content it is reminiscent of the clearer III.45.1 “Let no one hold you down, as men using snares do a bird.”) I have tried pushing it further, though with no confidence in the correctness of my speculations.

I treated *mukṣṭjā* elsewhere (Ged. Cowgill, 1987, pp. 89–91). I suggested there that the word is a deformation of *muṣká*- ‘testicle’ and that Kakṣīvant is making a play on his own name (which may itself mean ‘having a crotch’), esp. the *-kṣī*, with this deformation -- as he does elsewhere in his oeuvre. Taking this further, the *-jā*- may be the root noun to \sqrt{jani} , a root noun very common as a 2nd compound member (see the numerous exx. in Scar. 132–53). Those compounds are invariably accented on the *-jā*-; I would attribute the accent here to the poet’s play on his name *kakṣīvant*-. But what would this baroque confection *mukṣṭjā*- mean? If it literally means ‘originating from/at the testicles’, it could refer to a loin cloth, a strip of cloth that covers the genitals -- a thong -- and as a long strip of material it could be used to bind or tie up an animal.

My interpr. of *pádi*- rests on even less evidence. I suggest, *very* tentatively, that it comes from a MIA form **pr̥dī*-, related to the Iranian forms borrowed into Greek as *πάρδαλις*, etc., as well as to Skt. *pr̥dāku*-. In earlier lit. this word was said to mean ‘leopard, panther, tiger’ only in lexical texts, while its earlier occurrences mean ‘spotted snake’; see EWA, KEWA s.v. Mayrhofer attributes the later lexical meaning to borrowing from Iranian. But it clearly refers to a large wild feline in AVP II.18.1, since it is parallel to *simha*- ‘lion’ and *vyāghra*- ‘tiger’; see Zehnder, *Atharvaveda-Paippalāda, Buch 2*, p. 59. In keeping with the racy tone in these two hymns, it could also be a pun on $\sqrt{pr̥d}$ ‘fart’ (though this root is not attested in Vedic [see EWA s.v. *pard*], its representation in the younger language and in Iranian, incl. Avestan, suggests that it was known to Vedic speakers), and the desire to make the pun would have led K. to use an otherwise obscure word for wild animal here. Given the discrepancy in morphology (no forms of the shape **pr̥dī*- are attested in any relevant language) and the chronological gap, this gossamer hypothesis probably should be discarded -- but there is nothing stronger to take its place (and it gave me the opportunity to use the English word ‘pard’).

I.125.3: *iṣṭēḥ putrām* “the son of my seeking” picks up the immediately preceding part. *ichán* ‘seeking’ to the same root and means essentially the product of my successful search.

Indra is the likely recipient of the soma in c and the strengthening in d, but the epithet *kṣayādvīra*- (8x) is never applied to Indra, rather usually to Rudra (5x). But Rudra is highly unlikely to be the target here.

I.125.4: The two conjoined phrases *ījānām ca yakṣyāmānam ca* (b) and *pr̥ṇāntam ca pápurim ca* (c) have the same referent, and their syntactic parallelism invites a completely parallel interpretation of their verbal semantics. But the pairs are not morphologically parallel: the first phrase consists of a perfect part. and a future part., the second of a present part. and a reduplicated *-i*-stem adj. In the publ. tr. I render *pápurī*- as preterital (“who ... has granted”), but following Grestenberger (JAOS 113.2 [2013]) I now see such forms as imperfectives, often with habitual or iterative sense; unfortunately in this

context the conjoined phrase then seems almost pleonastic, though perhaps “the one who grants and keeps granting” would work.

I would also slightly alter the tr. of the phrase in b to “the one who has sacrificed and will sacrifice,” to make the parallelism of the two phrases in bc clearer and also to rule out a reading in which the two participles in b have different referents.

I.125.6: The dakṣiṇā (priestly gift, more literally gift-cow) theme comes to the fore here.

I supply ‘bounties’ (*rādhāṃsi*) with *citrā* ‘bright’ on the basis of the cmpd *citrā-rādhas-* and the numerous occurrences of the phrase *citrā-rādhas-*.

I.125.7: I do not entirely understand pāda c, which must contrast with d. I assume the referents of *tēṣāṃ* are the generous patrons of ab, who are distinguished from the *āpr̥ṇantam* ‘non-granter’ of d. This non-granter is to be entirely engulfed (*abhī sám √ i*) by *śókāḥ*. The stem *śoka-* and the various forms of the root to which it belongs (*√ śuc*) otherwise refers to blazing flames in the RV, but in later Skt. it has come to mean ‘pain, affliction’. I think that both senses are present here, hence my portmanteau tr. “flames of pain.” The flames in this pāda may help in interpreting the previous one. One of the uses of *paridhī-* ‘enclosure’ is for the “enclosing sticks” placed around the Āhavanīya fire (already X.90.15 and common in ritual lit.). If the non-giver is being surrounded by flames in d, the givers in c deserve a different and benign enclosure (*anyāḥ ... paridhīḥ ... kās cid*), not the *paridhī-* that ordinarily surrounds the fire. Its nature remains unspecified: both the initial position of *anyā-* and the final *kās cid* mark the referent as indefinite.

I.126 Kakṣīvant’s Dānastuti

I.126.1: Negated *āmanda-* ‘not feeble’ contains the adj. *manda-* ‘stupid, lazy’, which is otherwise not attested until the Up. and epic. The audience’s first interpr. of *āmandān* would be as a form of *√ ma(n)d* ‘exhilarate’, though obviously *manda-* ‘stupid’ must have existed in everyday speech to allow it to be used here. As with *śoka-* in the last verse of the preceding hymn (I.125.7), Kakṣīvant is availing himself of words/meanings belonging to a different register to spice up the discourse. The prominent placing of *āmandān* as the initial word of the hymn calls further attention to this stylistic departure.

I.126.2: The root *√ nādh* ‘(cry/be) in distress’ is often used of people in dire straits (see, e.g., in Kakṣīvant’s I.118.10); here the king’s distress comes not from danger but from want of fame. There may be a touch of humor in this overdramatization of his plight, though see I.110.5 where the Ṛbhus cry out in want at an invocation, likewise seeking fame (*śráva ichámānāḥ*, exactly as in our 1d).

On *ādam* see comm. ad II.12.4.

The patron–poet reciprocal bargain is managed with striking economy here: the king seeks fame in 1d, the poet receives many goods in 2abc, and the desired fame is dispatched to heaven in 2d.

I.126.3: The temporal expression *abhipitvé áhnām* is universally taken as a reference to evening. In the RV dakṣiṇās are distributed at the morning sacrifice (hence their association with Dawn), though in classical śrauta ritual the time has changed to the

midday rite. Perhaps Kakṣīvant knows an alternative practice, or he's slyly indicating that the largesse was so enormous that it took all day to distribute. I favor the latter.

I.126.5: Having employed a no-nonsense style in listing the gifts he acquired in vss. 2–4 (for a similar detour into straightforwardness, see the expression of his desires in I.121.14–15), Kakṣīvant returns to his tricks in the last vss. of this hymn.

Since I discuss this verse at length in Jamison 2003 (Fs. H.-P. Schmidt) pp. 47–51, I will not repeat the details here. The first hemistich is reasonably intelligible and continues the listing of gifts. It's notable that the amount that Kakṣīvant managed to acquire “for you” (*vaḥ*) is a small fraction of his own haul. One question is who the “you” are: I take them as the Pajras, his kin, who cleaned up with him in 4d and are mentioned again in 5d, though in the 3rd ps.

As I point out in the Schmidt Fs., the elaborate simile in cd seems typed as a wedding scene by the telling words *ānasvant-* ‘possessing carts’ and *vrā-* ‘female chooser’. The cart (*ānas-*) is the wedding vehicle par excellence and hardly appears in the RV except in conjunction with females, particularly in marriage context, and, as I argue in that art., *vrā-* is the designation for a girl exercising her choice at a svayamvara marriage. The image presented in the simile is of well-connected young men traveling to svayamvaras in hopes of acquiring a bride (that is, being chosen by a bride) of acceptable family and clan. I therefore take the *vrāḥ* phrase as acc. pl., not nom. with most interpr. and take the simile as beginning with *subāndhavaḥ*.

I.126.6: On the meaning ‘smell’ for the intensive *jāṅgahe* see Lubotsky (JAOS 117 [1997]: 562–63 [rev. of Schaeffer, Intensiv]); Griffiths and Lubotsky (JAOS 119 [1999]: 480–81). The word *kaśīkā-* is found only here. If it refers to a mongoose (or perhaps the related civet cat), the naturalistic description makes sense, as Lubotsky (JAOS 117) argues: squeezed on the back, mongooses release a musky odor. (This is characteristic of both sexes at least of civet cats, though Lubotsky seems to think it is only true of males mongooses.) As I have argued elsewhere (Ged. Cowgill, 1987, p. 89), this hapax may appear in this passage because Kakṣīvant is making another play on his own name (see above, comm. I.125.2).

The second hemistich appears to be a fairly graphic depiction of sexual intercourse and, like other such passages, is difficult to interpret because of the obscurity of the vocabulary and the slangy style. The difficulties here reside primarily in the hapax *yādurī* and the near hapax *yāśu-*. The rest -- *dādāti máhyam ... bhojyā śatā* -- is relatively straightforward: “She gives me 100 ...” I differ from the standard tr. in taking *bhojyā* not as acc. pl. neut. ‘pleasures’, but as a fem. sg. gerundive. Although we would expect the accentuation **bhójyā*, the suffixal accent here may be a redactional change to follow *bhojyā* in nearby I.128.5 after our passage was no longer understood. I take this gerundive as belonging to both roots *√bhuj* ‘enjoy’ and ‘bend, coil’: the woman in question is to be coiled around (in sex) and thus to be enjoyed.

As for *yāśu-* this word appears a few other times in compounds: *budbudáyāśu-* (X.155.4), where it seems to refer to ejaculations (as insubstantial as) bubbles; fem. *suyāśutarā* (X.86.6), where Indrānī boasts about herself -- I tr. “gives better sex” -- and *ayāśú-* (AV VIII.6.15) as an epithet of hideous minor demons tormenting pregnant

women, where Whitney plausibly but tentatively tr. ‘impotent’. I take it to mean something like ‘ejaculation’, which I’ve rendered as ‘spurts’ to avoid a clinical tone.

yādurī- appears to belong to the marginal root $\sqrt{yād}$ ‘unite’ (see EWA s.v. *YĀD*); I render the nominal here by ‘fusing’.

As often, I think the presence of these rare words serves more than one purpose — in this case to produce an encoded pun on the root \sqrt{yabh} ‘fuck’. Note the repetition of *yā*’s, starting with *yā* in b, but taking off in cd: ... (*mah*)*ya yā(durī) yā(sūnām bhojī)yā* ... This repetition of the initial of the root might have the same effect as the English expression “the f-word,” and it also gives the impression of a stutterer saying “*ya ... ya ... ya ...*” while the *bh* eludes him -- until he reaches *bh(ojyā)* and finally achieves the whole word.

I.126.7: This is presumably the speech of the woman whose charms were described in vs. 6. I have tr. it with what I consider appropriate vulgarity.

In pāda a *ūpopa* ‘nearer’ and *pārā* ‘away’ might seem to be preverbs that would cancel each other out, but here their conjunction perhaps invites the interpr. that she’s asking for ever more intimate contact (*ūpopa*) with parts that are usually off limits (*pārā*).

Ge (WG) take *dabhrāṇi manyathāḥ* to mean “think that (my hair) is meager” vel sim., with the hair borrowed from the second hemistich. I think rather that *dabhrā-* \sqrt{man} means ‘belittle, think little of’, but that *dabhrāṇi* should also be read as the object of that compound verb. This latter *dabhrāṇi* I take as a euphemism for her private parts (‘little things’), in the way that *priyā* ‘dear things’ is used by Indrāṇī in X.86.5 to refer to the same. (The contexts -- explicit female boasting about sex -- are similar, not to mention rare.) I thus take *dabhrāṇi* twice.

Although it is clear why a ewe, even a little ewe (*avikā*), would be a fine example of a hairy female, I have no idea why *Gandharī* ewes would be especially hairy. Cold climate, one assumes.

I.127–139 Hymns of Paruchepa Daivodāsi

This sequence of hymns, composed primarily in Atyaṣṭi meter, is one of my favorite collections in the RV. The elaborate meter showcases the patterned repetitions, echoes, and variations that are one of the specialties of Rigvedic poets. The meter is configured as 12 12 8 / 8 8 / 12 8, generally with exact repetition, rhyme, or some kind of controlled variation between pāda b + c and f + g. This series is the only sustained set of Atyaṣṭi hymns in the RV; to Paruchepa’s son (/descendant) Anānata Pāruchepi is attributed the short Soma hymn IX.111.

I.127 Agni

I.127.1: The patterned connections of the 8-syllable pādas to their preceding pādas are detailed in the publ. intro. to this hymn group.

I.127.2: Although “earth-encircling heaven” fits easily into our modern cosmology, I don’t know what is meant by this in a Vedic cosmological context. This problem clearly troubles both Ge and Re, who both supply the sun to do the circling, with heaven as the object (Re: “Lui qui circule autour (de l’aire) comme (le soleil autour du) ciel”).

Although I understand the impetus, these interpr. introduce too much extra machinery into a simple two-word simile.

Agni was compared to a *vípra-* in 1c and then addressed as one in 2b. In 2c we invoke Agni with our own *vípra-s*, with *víprebhiḥ* occupying the same position as *vípram* in 1c. This type of implicit identification between Agni and his mortal worshipers is also found in 2a, where we sacrificers (*yájamānāḥ*) invoke him as best sacrificer (*yájīṣṭham*).

2f is a relative clause that lacks a verb; the verb ([*pra-*]*ávanti* vel sim.) can be supplied from the verb in the 8-syllable tag (2g), which contains the impv. *prāvantu* with the same subj. (*vísah* ‘clans’). The g-pāda also adds an infinitival dat. to this verbal complex, indicating what the clans help Indra to do. Constructing the verb in 2f from the one in 2g is not a matter of simple gapping, because imperatives cannot appear in relative clauses. Ge supplies a different verb in f (huldigen) from that in g (ermutigen), but this ignores the patterned interplay characteristic of the 8-syllable pādas with what precedes them.

I.127.3: This verse is richly studded with problems. One of the lesser ones is the referent and grammatical identity of *purū* in the first pāda. Gr classifies it with singular (presumably NA neut.) forms; Ge. takes it as an adv. ‘gar sehr’; WG as instr. sg. (?) with *ójasā* (“mit ohnehin viel ... Körperkraft”). On the basis of the sequence (3d) *vīlú cid*, (4a) *dṛḥā cid*, (4f) *sthirā cid* (also with *ójasā*), all containing neuters, most plural, I take *purū* as the neut. pl. it appears to be (so also Re: “qui brille en maint endroit”). Each instance of *cid* ‘even’ in this sequence emphasizes the formidable targets Agni is exercising his will upon. Unfortunately this value of *cid* is not so much in evidence in our phrase *purū cid ... dīdyānaḥ* because ‘shining’ (at least as expressed with the root *√dī*) is not ordinarily a forceful or hostile act. I have therefore (reluctantly) not rendered the *cid* here, though I feel I have missed something, since the phrasal parallelism is otherwise so clear. Perhaps *dīdyānaḥ* has something of the sense of similar forms of *√suc* ‘blaze (against)’: so “shining (against) even the many with his radiant might.”

Pāda b and its tag-pāda c contains a śleṣa, whose correct interpretation goes back at least to Benfey (see Ge’s n. 3c). As indicated in the publ. intro. to I.127–1 n39, *druhaṃtarāḥ* has two possible analyses: *druhaṃ-tarā-* ‘overcoming deceit’ or *dru-hantara-* ‘better at striking wood’. The first is appropriate to the first instance of the word, but in c the presence of *paraśúḥ* ‘ax’ forces the ‘wood’ interpr.

The verb of de, *śrúvat*, is the problem in that clause. Wh (Roots) takes it as a (zero-grade) 1st class pres. to *√sru* ‘flow’, but *√sru* has no such zero-gr. formations (and there’s the problem of the initial sibilant of course). Gr puts it with a root *√śru* ‘zerinnen, zergehen’ (separate from *√śru* ‘hear’), but the formations he assigns to said “root” are a hodgepodge (and see Old on the likely nonexistence of the root). Re (flg. Cardona, see Re’s n.) takes it to *√śru* ‘hear’, but this requires *supplying* the verb of destruction (by his interpr. ‘fall’ [tomber]) required by the context, with the perception verb that is actually found in the passage superfluous: “on les entend (tomber) ...” (The same root assignment seems to underlie the WG tr., though with a different overall interpr., which I confess I don’t understand.) Even if the semantics worked better, there are no such stems to *√śru* ‘hear’. Ge attributes it to *√śṛ* ‘crush’, which is reasonable on both semantic and textual grounds; see esp. the parallel he cites X.89.6 *śṛṇāti vīlú rujāti sthirāṇi*, with very similar phraseology. Unfortunately I can see no way to get a stem *śrúva-* from *śṛ*. Old

questioningly suggests a connection with \sqrt{ru} ‘break’, but needless to say the initial \acute{s} can’t simply be omitted. I dare to suggest yet another root: $\sqrt{sr\acute{iv}}$ ‘abort’. Although some forms of this root (caus. *srevayet* [KS], RVic part. *sreváyant-*; aor. *asrāvīt* [JB]; pres. *srīvyati* [AB]) have an initial dental sibilant, others have the palatal: AV *śrīvayāmi*, MS *śrīvayeyuh*, *śrevuka-*. (On the forms, see Narten [Sig.Aor.] 282–83. Jamison [āya-] 145.) Such phonetic fluctuation is not surprising in a root that presumably was at least partially tabooed and was also probably more at home in a lower register, with, perhaps, the MIA neutralization of sibilants. Although a stem *śrúva-* or *srúva-* is not otherwise found to this root, the spotty attestation to this root in general makes its isolation unsurprising. The stem would probably be a zero-grade thematic injunctive (aor. or pres.?), though a root subjunctive can’t be ruled out (though less likely in context). The loss of the \acute{i} / i would follow the same pattern as $\sqrt{d\acute{r}v}$ / $d(y)\acute{u}$, $\sqrt{s\acute{r}v}$ / $s(y)\acute{u}$, via $*sR\acute{i}uH \rightarrow *sRuH$. I do not understand the accent, however. As for ‘abortion’ in this context of destruction, see, inter alia, the use of the caus. part. *sreváyant-* in VII.18.8, the Battle of the Ten Kings; possibly also *áva* \sqrt{sru} in nearby I.129.6.

The final two pādas (fg) of this verse also present their share of difficulties. We can begin with the final word of each pāda, *nāyate* in the Saṃhitā text. The Pp. (followed by HvN) analyses this as *ná ayate*, but this produces a very bad cadence: we should expect a heavy syllable as the first syllable of the verb. This is easily remedied, without emending the Saṃhitā text, by *āyate* (i.e., prev. \acute{a} + *ayate*). This analysis was also tentatively suggested by Gotō (1st cl., 92 n. 10).

Most tr. (and Old) take the point of *yamate nāyate* to be that though Agni is victorious, he doesn’t go further: he stays in his hearth. See, e.g., Re “(Bien que) triomphant, il tient (les rênes), il ne va pas (plus loin).” But the preverb *nā* ‘forth’ (with \sqrt{sah} only here and in the root noun *niṣṣáh-*) seems to presuppose motion (hence my ‘going forth to conquer’), and certainly most treatments of Agni victorious depict him laying waste to his surroundings, as in the immediately preceding two pādas and in the following verse (4). The notion that Agni is suddenly showing self-restraint here seems contrary to the message of the context. I therefore take *yamate* as meaning not ‘hold himself back’, but ‘hold/keep his place’ (against counterattack) and *āyate* (*/ayate*) as a quasi-passive ‘be moved’. Medial forms of \sqrt{i} are rare enough that a consistent meaning to such a stem is hard to determine, and though some forms of *áyate* probably belong to a thematized stem (so Gotō, 92ff.), the parallelism with the root aor. subj. *yamate* here strongly suggests that our form is also a subjunctive (to the root pres. *éti*) and thus further separated from the thematic indicative forms. I therefore think that the somewhat idiosyncratic meaning I have attributed to the form is plausible, esp. as a negated semantic twin to *yamate*.

The final problem in the verse is the compd. instr. sg. *dhanvāsáhā*. This is almost universally (Gr, Old, Ge, Re, Scar 603) interpreted as ‘conquering with a bow’ (*dhánvan-*), which interpr. generally requires an additional personage to be supplied, generally Rudra. Gotō (1st cl., 92, n. 10) seems to favor this interpr., but also suggests the possibility that the first member is *dhánvan-* ‘Land’: “auf dem das Land ersiegenden [Weg],” with the whole pāda meaning that Agni will not go further and burn the land. WG have adopted this latter interpr. (though the ‘bow’ interpr. is referred to in the n.): “Auf dem trockenen Land ersiegenden (Weg) eilt er nicht hierher.” I also am convinced that *dhánvan-* ‘wasteland’ is the correct interpr. of the 1st member. Given that the ‘tree’

theme is prominent in this verse and a ‘bow’ theme lacking, a reference to another landscape feature fits the context better. There is the problem that cmpds with *-sāh-* are ordinarily adjectives modifying animates (see the numerous exx. in Scar.), and my tr. assumes an abstract sense or at the very least an instr. manner adverb (“in/with his wasteland-conquering [manner]”). Despite this slight difficulty, this solution seems more economical than inserting Rudra into a context that has no other allusion to him.

I.127.3-4: In the publ. tr. *ójasā* in 3a and 4f should have been tr. the same, rather than ‘might’ and ‘strength’ respectively.

I.127.4: I generate the subject “(the pious man),” i.e., *dāśvān*, from its verb *dāṣṭi*.

I.127.5: After the respite of vs. 4, this verse returns to puns and word plays in full force. The syntax of this verse is complicated enough without unintended ambiguity in the English. In the pub. tr. “This fortifying power of his might we acquire ...” ‘might’ is a modal verb (“might we acquire”), not an abstract noun (*“his might”).

In my opinion the hapax *dīvātārāt* in bc is a śleṣa somewhat like *druhamtarāḥ* in 3bc, again utilizing the echo pāda (c) to instantiate a 2nd value for a word found in both pādas. Most take the word as a nonce substantivization of the adverb *dīvā* by the addition of the comparative suffix found also in the preceding *sudārśatarāḥ* ‘more beautiful’ (see AiG II.2.608; Re n. ad loc.). I agree that this is one reading, but I also think that *-tara-* can be a thematic nominal to $\sqrt{tṛ}$ ‘cross over’ (cf. *tāra-* etc.), and that the whole compound can mean ‘traversing [the sky] by day’ as a descriptor of the sun. For a similarly formed rhyme word, also referring to the sun, cf. *dīvākarā-* ‘day-maker’ (AV+).

The hapax *āprāyuse* in c also poses difficulties. On the one hand, it is very similar to *āprāyu-* (3x) ‘unremitting, not faltering’, which most deriv from *prá√yu*; Old and Re opt for this analysis (Re “à (l’homme qui veille) infatigable”). However, I am persuaded by Ge’s pointing out (n. 5) the unity of theme provided by *āprāyuse* (c) ... *āyuh* (d) ... *ajārāḥ* (fg), if *āprāyuse* contains the ‘lifetime’ word. However, I do not think either Ge’s “ohne zu altern” or WG’s “zum Nichtverschwinden der Lebenskraft” is the correct analysis. Rather I think the word evokes the common idiom *āyuh pra√tṛ* ‘lengthen lifetime’ and refers to a man whose lifetime has not *yet* been lengthened. Note that the $\sqrt{tṛ}$ part of the idiom can be pulled out of *dīvātara-* (a 3rd sense for this compound). Agni is called *viśvāyu-* ‘providing/affording all lifetimes’ in the next hymn (I.128.8) and is also regularly asked to lengthen (*prá√tṛ*) our lifespan (e.g., I.94.16, VIII.44.30). I now also believe that *āprāyu-* also contains the ‘lifetime’ word (the less well-attested *āyu-* beside *āyus-*); see comm. ad V.80.3.

In the next pāda Agni’s own lifespan (that is, his immortality, more explicit in fg) is a model for our own: it provides a handhold (*grābhāṇavat*) or, as we would say, “a leg up” for the man hoping to have his lifespan extended.

I don’t quite understand *bhaktām ābhaktam vā*. It is probably an implicitly temporal expression: the help that has already been apportioned and the rest that has not yet been apportioned (but will be, we hope).

I.127.6: The verse has an extra pāda (h), which serves as the tag-pāda to g. Given the difficulties in the verse, the extra pāda just provides more occasion for bewilderment.

The hapax *iṣṭāni-* in the paired pādas bc has been variously interpreted. Gr takes it to *(n)is + √stan* ‘thunder’ (‘thunder’ explicitly rejected by Old). Ge does not comment but his tr. ‘sich ausbreitend’ suggests a derivation from *√tan* ‘stretch’; his tr. is echoed by Re (‘s’*étendant*’), though in his n. he suggests that the first element is the zero-grade root noun to *√yaj* ‘sacrifice’, encouraged by Old. The currently prevailing interpr. is probably Hoffmann’s (reported in KEWA, EWA) ‘spreading nourishment’, found in WG. This is certainly possible; however, I favor *√stan* ‘thunder’, despite Old’s disapproval, but with the preverb *vi*. The Saṃhitā text reads ... *urvārāsviṣṭānir* (b) / *ārtanāsviṣṭāniḥi* (c), but both loc. plurals require metrical distraction: *urvārās^uviṣṭānir* (etc.). The Pp. reads *urvārāsu* / *iṣṭāniḥ* (etc.), but nothing prevents reading *urvārāsu* / *viṣṭāniḥ* from the distracted *-s(u)vi-* sequence. Although *vi√stan* is not found until very late, it would not be a difficult idiom to create, esp. given the widespread *vi√dyut* ‘flash forth as lightning’ in the same pragmatic sphere. The thunder would thematically continue the noise of the first pāda and the association with the Maruts, storm gods.

Pāda c contains a 2nd hapax, *ārtanāsu*, which both Ge and WG refuse to tr. (though see WG n. for a different suggestion) and Old, having offered a few suggestions, refuses to analyze. Re tr. “les terres steriles” but without comment (though the tr. probably stems from Gr’s ‘übel, öde, Misernten bringend’). My own suggestion is quite speculative, but in this situation there seems no other choice. The pāda is a syllable short; HvN in fact divide up the first vowel, reading *ā ārtanāsu*, but a stem *ārtanā-* does us no more good than *ārtanā-*. I suggest supplying the syllable *nir* to open the pāda (and the word, hence **nirārtanāsu*); this *nir* can be generated from the final syllable of the preceding pāda (*iṣṭān*)*nir*, or rather we can imagine a haplology: *iṣṭānir*, **nirārtanāsu*. This posited stem **nirārtanā-* would belong to *nir√r*, most prominent in the well-attested *nirṛti-* ‘chaos, disorder, dissolution’. The loc. pl. pairing in bc would then contrast the productive (*āpnasvant-*) fields/meadows with their negative counterpart, disorderly and useless.

Note the alliteration in d: *ādad dhavyāny ādadīr*, followed by *ādha* beginning f (as well as *ād* beginning 5d).

As Ge points out (n. 6d), *ādat* can be the impf. to *√ad* ‘eat’ as well as belonging to *ā√dā* ‘take’ (on which see comm. ad II.12.4), though he doesn’t incorporate this pun into his tr. Agni as the eater of oblations is of course a common trope.

hārṣato hṛṣīvataḥ in f is a nice etymological figure, though in the context of this hymn barely deserving mention.

Most tr. take the *nāraḥ* of h as ordinary, human men, but I think it refers rather to the Maruts. *śubhé* (and *śubh-* in general) is one of their signature words; cf., e.g., I.88.2 *śubhé kām yānti* and, with *nāraḥ* referring to them, V.52.8 ... *té śubhé nāraḥ*. The mention of the Maruts here would form a ring with their appearance in pāda a.

I.127.7: Most take *kīstā-* in pāda as a PN, a further specification of the Bhṛguś, and this is a tempting way to avoid dealing with the word. However, it is more difficult to take it as a PN in its only other appearance in the RV (and indeed anywhere) at VI.67.10. I therefore follow the interpr. going back at least to Sāy, ‘praiser’. EWA has a reasonably plausible scenario for getting it as a hypersanskritization of a MIA form of **kīrtha-*, beside *kīrti-* ‘praise’, etc.

I take *mathnántaḥ* in c as a pun on $\sqrt{\text{math}}$ ‘steal’ (referring to the Bhṛgu’s theft of fire; see Narten, KISch. 23-24) and ‘churn, rub’, a common word for the production of the fire on the ritual ground.

The identity of the “dear coverings” is not clear. Ge suggest, for example, that they are what keep Agni within the kindling sticks, WG that they are everything a fire burning in a field would incorporate in itself. Since Agni is identified as the holder (*dharmī-*) of goods in e, I wonder if the coverings are the enclosure itself -- though what this means physically I’m not sure.

On the isolated precativ *vanīṣṭa* see Narten (SigAor. 236-37), who points out that its object is also a hapax and considers it an “Augenblicksbildung des Dichters.” The “wise one” (*médhira-*) is probably Agni himself, as often, and the med. form of the verb would support this identification.

I.127.8: This verse begins straightforwardly enough but its syntax deteriorates (or gets more convoluted) towards the end.

The three-member cmpd. *satyágirvāhas-* in c is implicitly analyzed by Ge as *satyágir-vāhas-* (“ihn den wahrhafte Reden anziehen”; sim. WG), but, on the one hand, *gírvāhas-* is an established bahuvrīhi (8x; “whose vehicle is songs” -- that is, the god [Indra] who is conveyed to the sacrifice by the songs dedicated to him) and, on the other, *satyá-* never modifies *gír-* as far as I can tell. Old (SBE) tr. “who truly art carried by prayers as by a vehicle,” with the correct internal structure, in my opinion. My “trusty” for *satyá-* may be pushing the term a bit, but the idea is that the song-vehicle is real and so a trustworthy conveyance.

The *ca* in f is generally rendered ‘also’, and it is one of only three examples (out of approx. 1100) of *ca* to which Klein (DGRV I.212-13) attributes that value. None of the examples is strong, and all can be interpreted with functional values more commonly found with *ca*. In this case I think *amī ca víśve amītāsaḥ* is conjoined with a gapped *vayám* ‘we’, as in exx. like VII.88.3 *ā yád ruhāva váruṇas ca nāvam* “When [I] and Varuṇa boarded the boat ...,” though with pl. rather than sg. 1st ps. gapping. The 1st ps. pl. is found in the opening verb of the verse *havāmahe*, and although some pādas intervene, that main verb still has domain over the whole verse (save for the last pāda), with ef a rel. cl. attached to that main clause. True, the verb in this rel. clause must also be supplied. I suggest a medial form of $\sqrt{\text{dhā}}$, meaning ‘acquire’; see in fact *dhīmahi* in this meaning in 5a -- all that is needed is an accent. For the identical VP *vāyas-* + med. $\sqrt{\text{dhā}}$ in this same hymn cycle, cf. I.136.2 *āthā dadhāte ... vāyaḥ* “then they two [=Mitra and Varuṇa] acquire vigor,” and for a 1st pl. in this collocation (including the instr.) see II.23.10 *tvāyā vayām uttamām dhīmahe vāyaḥ* “Through you might we acquire the utmost vigor.” In nearby I.141.13 (though not a Paruchepa hymn) *amī ca* is overtly conjoined with *vayām*, as I suggest is covertly the case here: *amī ca yé maghāvāno vayām ca* “those who are our patrons and we (ourselves) ...”

As for pāda g, which also lacks a verb, my publ. tr. assumes an active imperativ form of the same root $\sqrt{\text{dhā}}$, addressed to Agni. Agni quite regularly participates in such collocations; in this case the verb might well be the imperatively used root aor. injunctive *dhāḥ* or else the redupl. pres. impv. *dhehi*. This short pāda blends two constructions: “set oblations among LOC” and “establish vigor for DAT,” both with $\sqrt{\text{dhā}}$. For the first, with Agni as subject, see, e.g., V.14.1 *havyā devēsu no dadhat*, for the

second, likewise with Agni as subject, see, e.g., II.4.9 *smát sūrībhyo gr̥naté tát váyo dhāḥ* “establish this vigor for the singer along with his patrons.” Since in our passage the recipients of the *váyas-* have already been identified in the previous pāda ([us] and all the immortals), the dative recipient with the second construction need not be specified. A more literal tr. of my understanding of this pāda might then be “(place) the oblations among the gods and (establish) vigor,” but this seemed too clotted for the publ. tr.

The trick of this tag-pāda then is that the final *ā váyaḥ* is twice the object of an unexpressed form of the root *√dhā*, but with two different valences. Unusually for tag-pādas, g is not syntactically parallel to f.

I.127.9: The hapax splv. *sāhantama-* does not require the positing (with Gr) of an otherwise unattested *n*-stem *sāhan-*. A nonce derivation from the pres. part. *sāhant-* (with simplification of the cluster *sāhan(t)-tama-*, with AiG II.2.597, etc.) is certainly possible, and the full grade with nasal might have been constructed as a partial match for its parallels *śuśmíntama-* and *dyumníntama-*.

I.127.9-10: The ends of both a-pādas are variants of each other: 9a ... *sāhasā sāhantamaḥ*, 10a ... *sāhasā sāhasvate*, each following a metrical rest.

I.127.10: The first three pādas are an esp. nice example of the syntactic complementarity between the tag-pāda c and what precedes. The subject and the verb are withheld until c (*stómaḥ* and *babhūtu* respectively), with the preverb determining the verbal lexeme (*prā*) and the possessive pronoun limiting the praise (*vaḥ*) found in the first pāda -- and the recipient *agnāye* the only thing held in common between ab and c. Thus neither ab nor c is complete in itself: their elements need to be intermingled to produce the full sense. The name of the recipient is also held until the end of the two-pāda opening, though prepared for by a series of datives.

Schaeffer (Inten. 114) argues persuasively that the intens. *joguve* is “lokaldistributiv” with the loc. phrase *vísṣvāsu kṣāsu* “in all lands.”

I.127.11: The latter part of this verse shows a nice phonological pattern, with the initial words in the pāda being c *mahó*, d *māhi*, f *māhi*, but g *máthūr*. The first three all belong of course to the *mah* (‘great’) family, but the last is a verb form whose apparent near match with the two preceding *māhi* belies its independent grammatical identity.

There is probably also a phonological impetus for the use of *sācanas-* instead of the much more common *sajóṣas-* in b: *sācanās* better matches *sucetúnā*.

In de most tr. (including me) take *māhi ... nas kṛdhi, samcákṣe ...* as an infinitive phrase, “make us regard (something) great.” Keydana (Infin. 342) allows this possibility, but also raises the possibility of an adjunct usage: “make something great for us, for seeing.” Although I recognize that the latter is not excluded, I think the infinitive reading is the more likely -- on the basis of the other dative phrase in e, *bhujé asyaí*. The final position of *asyaí* here is odd, and in fact the use of it at all is odd, given that an unadorned *bhujé* ends 8b and its tag-pāda 8c. I think that we have a demonstrative adj. with *bhujé* in this verse in order to anchor *bhujé* as a noun and to distinguish it from the immediately preceding dative, also built to a root noun, but in infinitival function. In other words, the *asyaí* serves to polarize the grammatical functions of two identically formed nominals.

In *máthīh* I see the same pun on the two roots \sqrt{math} as was found in 7c. Here the plundering sense is appropriate to the simile *ugró ná śávasā* “like a mighty (warrior) with vast power,” while the churn sense is attached to Agni as fire the substance. Although the ritual fire is churned (passively), we can imagine Agni using the same means that produced him (churning) to produce something for us. (So, more or less, Ge.) Narten (KISch 24; followed apparently by WG) feels that *máthīh* here can only have the ‘rob’ sense, because only fire can be the obj. of the ‘churn’ sense, but this opinion displays, at least in my view, the often deficient poetic and imaginative sense of the Erlangen school.

I.128 Agni

I.128.1: The phrase *mānuṣo dhárīmaṇi* is variously rendered. Re takes it as an infinitive (“pour être porté par l’Homme”); Gr and Old (SBE) interpret it in an abstract or ethical fashion (“nach altem Brauch”; “in Manu’s firm law”; sim. Brereton in his survey of *dhárman-*). Hoffmann (Inj. 121, fld by WG) as ‘hands’. But given the emphasis in the verse on the activity on the ritual ground (bc) and indeed the fire’s placement on said ground (fg), Ge’s “im (Feuer)behälter des Manu” seems the most likely interpr. -- rendered by me as “the foundation of Manu,” making reference to the fact that Manu was the first sacrificer and so every subsequent ritual ground can be ascribed to him. See 7a *mānuṣe vrjāne* ‘in the ritual enclosure belonging to Manu’ for another association between Manu and a physical location on the ritual ground.

As usual the line between human priests and Agni as priest is blurred in bc. Agni is regularly identified as an *uśīj-* (I.60.4, etc.) but *uśījah* in the plural are humans.

“In the footprint of refreshment” (*ilās padé*) is a standard kenning for the ritual ground or, more narrowly, the place where oblations are offered; a similar expression is found in Old Avestan, at Y. 50.8.

I.128.2: My interpr. of *ápi* \sqrt{vat} roughly follows Tichy’s (Die Spr. 26 [1980]: 3–5, esp. n. 8 [= KISch 108–10]) ‘mit etw. (Akk.) bekannt, vertaut sein’ (contra Thieme’s Fs. Weller)—though perhaps with a bit more oomph.

I construe *ṛtásya pathā* in b with *yajñasādhām* in a, flg. Lü (Var. 463) -- contra most interpr., who take it as roughly parallel to the other instr. expressions in b. It is true that there is some distance between the two expressions I put together, and Ge also cites two parallels where *ṛtásya pathā* is adjacent to *námasā*. However, in both those instances the two instrumentals are better taken with different parts of the verse, and since Lü’s interpr. yields richer sense, I maintain it here.

I.128.3: The standard tr. (as well as Scar. 110-11) take *-gír-* in *muhurgír* to $\sqrt{gṛ}$ ‘sing’, rather than, with Gr, to $\sqrt{gṛ}$ ‘swallow’. This is certainly possible, though “‘plötzlich, augenblicklich willkommen geheissen’ (?)” (Scar 110; sim. WG) does not have much to do with what proceeds or follows in the verse. I prefer to keep Gr’s ‘auf einmal verschlingend’. The expression completes the description of Agni’s journey in the preceding pāda. The speed of his journey around the world, completed in a single day, is conveyed by the image of “swallowing up” the route instantly -- similar expressions are found in English. EWA (s.vv. *GAR*ⁿ, *GAR*ⁿ) is uncertain of the root affiliation.

I.128.4: The part. *iṣūyānt-* in d is generally tr. ‘shooting arrows’ (though cf. Re’s “qui cherche la jouissance-rituelle”; sim. Old SBE [but not Noten]), but *shooting* arrows seems out of place in this context, even with Ge’s suggestion (n. 4d) that the priest is compared to a shooter because his words are arrows. Although I maintain the connection with ‘arrow’, I think it means simply ‘go (straight) like an arrow’, readily translatable into the English idiom ‘straight-arrow’, namely a person of utmost rectitude.

On *yātaḥ* √ *jan* see comm. ad III.10.6. Here it could also be rendered “as soon as.”

On the interpretational difficulties of *-śrī-* cmpds see comm. ad III.26.5. I am now open to a transitive interpr. such cmpds with ritual items as first members and suggest as alt. here “bringing the ghee to perfection.”

I.128.5: A complex vs., esp. in its earlier parts, with a variety of tr. I will treat only my own. But first a few textual adjustments. In b I read (with most interpr., going back to Ludwig; see Old and Ge’s n. 5b) *agné ráveṇa* rather than Pp. *agnér áveṇa*. Note also that the sandhi between b and c has been wrongly resolved by HvN into *bhojye / a...* rather than *bhojyā / i...* (here Pp. is correct). And the first word of c has the wrong sibilant in the HvN text: it’s correctly *iṣirāya*, not *iśirāya*.

Also in b I take the simile as consisting only of *marútām ná* rather than including *bhojyā*. This genitive modifies *ráveṇa* and is parallel to *agné(r)*. The roaring of Agni is being compared to the roaring of the Maruts, personifications of the thunderstorm. This syntactic distribution is found in Old SBE, but subsequent tr. have not followed him.

I take the *bhojyā* as nominative and the subject of an intrans./passive use of med. *prñcāte*, a usage found elsewhere. However, it is not impossible that this med. form is transitive -- cf. *ā ... prcīmahi* in the next hymn (I.129.7) -- in which case I would supply ‘priests’ as subj.: “(The priests) infuse the (offering-)foods into his forces.”

In pāda a I take *táviṣṭsu* ‘forces’ as a reference to Agni’s flames. Although *táviṣṭ-* ordinarily belong to Indra, see, e.g., III.3.5, 26.4 for *táviṣṭbhiḥ* in conjunction with Agni.

I tentatively take Indra as the referent for *iṣirāya* in c, as he is addressed as *iśira* in the first vs. of the next hymn (I.129.1) and is several times the referent of this stem elsewhere. But I do not insist on this identification.

The *ca* in de is problematic, and this problem is connected with the question of the affiliation of *vásūnām*. Ge (fld. by Klein, DGRV I.234) takes *ca* as a clausal conjunction and supplies a 2nd verb “(beschenkt)” in d, parallel to *ínvati* in c. This requires that *vásūnām* be construed with *majmánā* (“mit einer Fülle von Gütern”). But *majmánā* does not take a genitive of specification but only of possession and in any case its contexts favor ‘might’ over ‘abundance’. Several times it appears parallel with *krátvā* (including nearby I.141.6, 143.2) in the collocation “with resolve and with might,” as it would here, though at some remove (see *krátvā* in pāda a). Forms of *vásu-* regularly occur with forms of √ *dā* ‘give’, however, and so the most natural collocation here would be *dānam ... vásūnām* “the giving of goods.” But what, then, to do with the *ca*? I think the clue is to be found in X.50.7 *vásūnām ca vāsunaś ca dāvāne* “for the giving of goods and of good”; in other words, I think the *vásūnām ca* in our passage is a truncated formula, with *vāsunaś ca* gapped. But the omitted sg. *vásu-* is immediately inserted in the first pāda of the next verse (6a) and the number-neutralized stem occurs three times in vs. 8: *vásudhitim* (8a), *vasūyávaḥ* (8f, g). Note also that a different form of *vásu* appears to be gapped in 6ab. The poet slyly sets the *vásu-* agenda in 5de by introducing it with an off-balance

expression that requires repair. For a similarly problematic *ca* involving (in my opinion) gapping, see the previous hymn, I.127.8 and disc. there.

The phrase *śámsād aghāt* corresponds to the well-attested bahuvrīhi *aghásamsa-* ‘possessing evil speech’, found in the next hymn (I.129.6).

I.128.6: With Ge, Re, and Old I supply an acc. pl. *vásū(ni)* as obj. of *dadhe*, on the basis of IX.18.4 *vásūni hástayor dadhé* (cf. also X.54.5). The gapping of a form of *vásu-* here, accepted by most, corresponds nicely to the gapping of the same stem I suggest for the previous vs. Thieme (Unters.), fld. by WG, instead take *dadhe* as passive: the fire “is taken in the hand” (of the priest, so Th). This seems pragmatically unlikely: although firebrands are ritually carried about under certain circumstances, picking up the entire ritual fire (as *vīhāyāh* and *aratīh* seem to imply) would be risky and painful. Moreover, the rest of the verse depicts the good things that Agni does for people, and taking goods in his hand fits this context.

The rarely attested verbal stem *īṣudhyá-*, here in the part. *īṣudhyaté*, has a counterpart in Old Avestan, *īšūidiāmahi* 3x in the Yasna Haptañhāiti, which exists alongside a noun *īšud-*. The form is carefully discussed by Narten (YH 159-61), who accepts Humbach’s etymology (Gathas 1959, II, ad Y 31.14; repeated 2nd ed. 1991): *īšud-* is a compound of *īš-* ‘nourishment’ and the zero-grade of **√vadh* ‘lead’, to which root noun compound a denom. is built meaning ‘strengthen’. (For a rehearsal of the history of this scholarship, see Scar 63.) I am not convinced. I prefer to see it (couched in Vedic terms for the moment) as a compound of *īṣu-* ‘arrow’ and *√dhā* ‘place’. That lexeme is specialized in the meaning ‘aim’ and is a well-attested metaphor for the “aiming” of a praise-hymn towards the divine recipient; cf. IX.69.1 *īṣur ná dhānvan prāti dhīyate matīh* “Like an arrow on a bow, my thought is aimed.” (For the affinity of *īṣu-* and *√dhā* cf. also I.64.10 *ástāra īṣum dadhire gābhastayoḥ* “The archers have taken their arrows in their fists” and the cmpd. *īṣu-dhī-* ‘quiver’.) Such an analysis works also for the Avestan forms, since Avestan has both the ‘arrow’ word and the verb, and I see no reason why it could not be reconstructed for Indo-Iranian. An ‘arrow’ derivation works extremely well in our passage because *īṣudhyaté* echoes *īṣūyaté* (‘going straight like an arrow’) in vs. 4, likewise ending the d-pāda, likewise a denominative participial dat. of benefit. For extensive and updated disc. see my 2020 “Vedic *īṣudhyá-* and Old Avestan *īšud-*, *īšūidiia-*: The Aim of Praise” (Fs. Lamberterie).

The 2nd person of pf. *ōhiṣe* is puzzling in a verse, and a hymn, in which the god is otherwise entirely referred to in the 3rd ps. (see the surrounding verbs in this vs.: *dadhe* (a), *śísraṭhat* (bc), *ṛṇvati* (fg) -- with pāda f esp. entirely parallel to de with 2nd ps. *ōhiṣe*). I think it must be a transposition of the phrase found in VIII.19.1 *devatrā havyām ōhire* “They have carried the oblation among the gods.” The expected 3rd sg. pf. *ōhe* would not fit the meter here.

Though pādas f and g share both a subject (Agni) and a verb (*ṛṇvati*) they seem semantically somewhat at odds. This semantic disparity is, however, ameliorated by the fact that their objects, *vāram* and *dvārā* respectively, are phonologically very close, which similarity was already pointed out by Re.

I.128.7: *jénya-* is of unclear formation (see EWA s.v.), and opinion is generally split between a derivation from *√jan* ‘be born’ (e.g., Gr ‘edel’) and *√ji* ‘win’ (e.g., WG

‘siegreich’), with EWA tentatively opting for the latter. In contrast, I find that a meaning ‘noble’ vel sim. better fits most passages and consider it a pseudo-gerundive to \sqrt{jan} , built to the zero-grade formant $jā-$ (cf. in this hymn $jāyata$ 1a, $ājāyata$ 4f, g), with the semantic development ‘(worthy) to be born, noble, thoroughbred’; its use with inanimate $vāsu$ (e.g., the compd. $jenyā-vasu-$ ‘having noble goods’) is simply an extension comparable to English “noble metals” (vs. base metals).

I.129 Indra

This hymn is particularly studded with indefinite expressions: $pṛtanāsu kāsū cid$ 2a, 4d, $kām cid$ 3b, $kāyasya cid$ 5a; later in the hymn $rātham kām cid$ 10d, $anyām ... kām cid$ 10f.

I.129.1: Pādas de show two different constructions with $\sqrt{kṛ}$ ‘make’. On the one hand, $abhīṣṭaye kārāḥ$ is a periphrastic caus. “make to prevail,” with $abhīṣṭaye$ parallel to the infinitival $medhāsātaye$ ‘to gain wisdom’ in 1a; on the other hand, $kārāḥ ... vājīnam$ is a predicate adj. construction “make (it=chariot) a prize-winner.” Separating the two constructions is the embedded tag $vāśaś ca$ “if you wish,” with subordinating ca (see Klein DGRV I.250). Though subordinate clauses are almost never embedded, this functions as a parenthetical like later $manye$ ‘methinks’ and it also intervenes between two clauses.

Most tr. supply the chariot as subj. of f, but this makes difficulties with the acc. of g, since, by the conventions of Atyaṣṭi meter, f and g should form a syntactic unity. I assume instead that $sā$ here refers to Indra in the 2nd ps. and an imperative should be supplied to make a classic “sa figé” construction (see Jamison 1992); note that the next vs. begins with a stripped-down version of the same construction: $sā śrudhi$ “Listen!” As to what imperative to supply, I generate it out of the participial voc. $tūtujāna$ ‘o thruster’ to the root \sqrt{tuj} . Alternatively, it could be generated from the verb found in bc $prā(...)$ $nāyasi$, hence “lead forth.”

In g the word order of $imām vācam nā$ makes difficulties. If $imām vācam$ is a simile, then we might expect the order $*imām nā vācam$. However, note I.121.6 $asyā uśāso nā$ discussed above, also with deictic + noun followed by the simile marker, so it may be that the placement is by rule (though this requires more investigation). Note also that in 5b of this hymn the $nā$ follows a clear two-word simile (without deictic), similarly, if I’m correct, 8g and 5g (cf. also 130.2, 9). Another factor that may have helped determine the placement of $nā$ here is that f ends ($tūtujā$) $na vedhāsām$ and g $nā vedhāsām$, so the displacement of the simile particle would facilitate the echo pattern. Alternatively we might separate $imām$ and $vācam$ and take the former as part of the frame “(thrust forward) this one like speech.” If “this one” refers to the chariot, we must then assume gender attraction from $*imām$. WG’s tr. reflects a separation analysis, but with $imām$ also representing $vācam$: “... dieses (Wort) wie das Wort der Vertrauenswürdigten.”

I.129.2: The exact semantic relationship between the noun $dākṣa-$ ‘skill’ and the related (pseudo-)gerundive $dakṣāyya-$ is unclear and may be somewhat fluid. Here ‘besought, approached for skill’ seems to fit the context better than ‘to be skillfully served’ vel sim. (e.g., Re’s “(apte) à être servi-efficacement”). See disc. I.91.3.

The cmpd *bhāra-hūti-*, here tr. as ‘battle cry’, actually contains part of the quoted cry as its first member: “the cry ‘carry (the day)’.” That is, I interpr. *bhāra-* as derived from the impv. *bhāra* with omitted object. For the analytic version of this expression see V.29.8 ... *viśve ahvanta devā, bhāram indrāya yād āhim jaghāna* “all the gods called “*bhara*” to Indra when he smashed the serpent.”

Pādas de show nicely balanced alliteration, *śūraiḥ s^ḍvaḥ sanitā ... viprair vājam*, with responsion between *yāḥ / yó, -aiḥ / -air*, and the final *-itā / -utā*.

The verb *iradhanta* and nearby inf. *irādhyai* (I.134.2) are the only two forms showing the formant *iradh*. I connect them with *√rdh* (*irādh*) ‘succeed, bring to success’, though the morphological details escape me.

In g the simile marker *nā* is superficially positioned as in 1g, after the first two words of the pāda, but in this case the placement is correct, since the simile only begins with the second word, *ātyam*.

I.129.3: What “swell the bullish skin” means isn’t clear. Ge suggests that it refers to Indra giving in abundance. I interpr. it in conjunction with the phrase in the next hymn, I.130.8, *mānave ... tvācam kṛṣṇām arandhayat* “he made the black skin [=barbarians] subject to Manu.” If “black skin” is characteristic of our enemies, I suggest that the successfully swollen “bullish skin” refers to us, primed for battle.

My “(in that)” introducing c follows Ge: some sort of subordination is required to account for the verbal accent on *parivṛṇākṣi*, since otherwise **pāri vṛṇākṣi* would be expected.

The placement of *utā* ‘and’ in d is peculiar, since it precedes a series of concatenated datives lasting through pāda g. See Klein DGRV I.357-58, though he can only describe, not explain, this effect.

I.129.4: Both abc and de are constructed pleonastically. In a(bc) the phrase *uśmasiṣṭāye* (i.e., *uśmasi iṣṭāye*) “we wish to seek” is semantically but not etymologically pleonastic (roots *√vaś* and *√iṣ* respectively), while in cd *ūtāyé, ‘vā* (i.e., *ūtāye, āvā*) “help to help” is both. When in fg we encounter the etymological figure *stárate stṛṇóṣi (... stṛṇóṣi)*, we expect another pleonasm, but here of course the etymologically related words do not duplicate each other functionally because they have different subjects, though they do essentially mean the same thing: “(he) will (not) lay (you) low (whom) you lay low.”

Because of this structural pattern in the verse, I do not follow Ge’s (and others’) attempts to mitigate the pleonasm of abc (e.g., Ge “Wir wünschen, dass ... Indra ... gern komme”).

The *vaḥ* in a is difficult to render in tr. I take it as the usual offhand address to the patrons on whose behalf we, the ritual officiants, perform all our actions. Because of the awkwardness I omitted it in the publ. tr., esp. since the benefit to 1st ps. “us” is so heavily emphasized by fronted full genitive *asmākam* (also in d). These fronted pronouns were also impossible to render in that position without violence to the English.

The positioning of *yām* in g is worth a brief note. In f it appears immediately after the first word of its clause, *stṛṇóṣi*, a standard position. This happens also to be the last word of its clause. In the tag pāda g *stṛṇóṣi yām* takes the same position as in f, but since more material has been added at the front, the *yām* is now out of position.

I.129.5: I borrow *śátru-* ‘rival’ from 4fg to construe with the indefinite *káyasya cid*; cf. VIII.25.15 ... *vanúṣaḥ ... abhímātiṃ káyasya cid* “the arrogance of every zealot.”

The phrase *téjīṣṭhābhir arāṇibhiḥ* “with piercingly hot kindling sticks” appears in Paruchepa’s I.127.4, which suggests that this phrase must constitute the simile and the *ná* is displaced to the right as in 1g. (WG try to avoid this difficulty by construing *téjīṣṭhābhiḥ* first with *ūtībhiḥ*, but the nearby parallel makes that unlikely.)

The relation between d and e is not clear. Ge makes e part of the *yáthā* clause, but *purā* seems to call for a past tense and *mányase* is a present. Moreover, as Old points out, *yáthā purā* is a common self-contained tag. The problem, though, is that *mányase* is accented. Old suggests that it is accented because the clause is by its nature a Nebensatz. The publ. tr. should probably have signaled this by “(in that)” vel sim.

What is going on in f is unclear, since, as Ge points out, Pūru is depicted in a positive light in other nearby Paruchepa passages (I.130.7, 131.4). He suggests supplying *énāṃsi* with *viśvāni*, flg. Sāy, thus “carry away all (the guilts) from Pūru.” But this won’t work with g (as it should in the Atyaṣṭi template), because the guilt would be coming to us. Perhaps the poet is urging Indra to redistribute the goods of the patron (Pūru) to us.

This verse is one of the very few places in the Atyaṣṭi series in which the strict verbal repetition at the end of fg is breached (see also the next vs.). Here *váhniḥ* should be final in the pāda, but has been displaced by *no ácha*. I have no real explanation for this, save for the fact that when *no ácha* are adjacent they go last (I.165.3, III.35.1, IV.34.10), but this hardly seems a sufficient reason.

The g pāda is a syllable too short. I suggest that the simile particle *ná* has been haplologized in the sequence *āsā váhnir *ná no ácha*. The descriptor *āsā váhni-* (X.115.3) or more usually *váhni- āsā* (I.76.4, VI.11.2, VI.19.9) ‘conveyor by mouth’ is otherwise used of Agni, which makes ritual sense; here, without the simile particle, it would have to be applied to Indra, which does not (hence Ge’s diluted “Wortführer”). If I am correct, this is another example of a displaced *ná* simile marker; of course in this case *āsā váhniḥ* would be a quasi-compound ‘conveyor-by-mouth’.

I.129.6: The vs. begins a little oddly with a solemn proclamation to a drop (*índave*), but in my opinion this is actually indirectly evoking the word-play, esp. common in Maṇḍala IX, between *indu-* ‘drop’ and *indra-*, the more natural addressee here. The transition between drop and Indra is effected by the beginning of the next pāda, *hávyo ná*. I take *hávya-* as a pun; though the occurrences of this stem are overwhelmingly associated with the root $\sqrt{hū}$, *hvā* ‘invoke’, hence ‘to be invoked’, it could technically also be built to the root \sqrt{hu} ‘pour’, hence ‘to be poured’ (see the differently accented but identically formed *havyā-* ‘oblation’). I read *hávyaḥ* with both meanings here, with ‘to be invoked’ in the simile and referring to Indra and ‘to be poured’ directly referring to the drop. Both Indra and the drop stimulate the verbal skills of the poet. I see no reason to assume that the referent is Bhaga, *pace* Ge, Re (and tentatively Old). The *rakṣohán-* ‘demon-smasher’ in c may be, as often, soma, but is more likely Indra, given *hantā pāpāsya rakṣásah* and *rakṣohānam*, both of Indra, in vs. 11.

The repeated final verb *rējati* (bc) is nicely echoed in e by (*vadhai*)r *ajeta*.

The compd. *aghā-śamṣa-* finds its analytical parallel in I.128.5 *śāmsād aghāt*.

The lexeme *áva* \sqrt{sru} , lit. ‘flow down’, appears only here (fg) in the RV; I suggest that it may idiomatically mean ‘be miscarried, aborted’, and the *ksudráṃ* ‘speck’ in g is

the embryo/fetus. For abortion in a hostile context in this group of hymns, see I.127.3, at least acdg. to my interpretation; the phonological similarity of the two verbs (in I.127.3 and here) supports this interpr.

Like the last verse, this one, quite unusually, disrupts the strict final repetition of the fg pādas, with *áva sravet* opening f, but distracted to *áva ... sravet* in g. I again have no explanation for this.

I.129.7: The pun on *hávya-* in 6b is continued by the same double meaning in *hótrā-*, a stem that by most accounts does belong both to $\sqrt{hū}$ and \sqrt{hu} . (The standard tr. only render it by ‘oblation’ here, however.)

The fem. *citāntī-*, which looks like a participle to a 6th cl. pres. or (so Wh Rts.) a root aor., is formally isolated and requires metrical distraction. Gr suggests (on no particular basis) emending to **cetáyantyā*, but how would such a corruption arise? WG’s **citáyantyā* is more plausible but perhaps unnecessary. Lowe (*Participles* 289) takes it as a Caland adjective beside *citrā-*, but this also seems unnecessary.

The part. *sántam* in c at first seems pleonastic; it does not have its regular concessive value. But it was most likely included here in order to indicate which noun the adj. *raṇvám* modifies. By itself *raṇvám* could qualify either *rayím* or *survīryam* in b, but *sántam* identifies it as a masc. and therefore belonging to *rayím*, since *survīryam* is neut. (WG’s use of *survīryam* as an adj. with *rayím* in bc is contrary to the usage of this stem elsewhere.)

I.129.8: With the repeated *prá-pra* I supply a form of the copula for the idiom *prá√as* ‘be preeminent’.

Note the common use of instr. pl. adj. (here *sváyaśobhiḥ*) with (apparent) sg. pāda-final *ūtī*. This interpr. seems preferable to WG, who supply “gods” with the pl. adj. and take *ūtī* separately.

As in 4a this clause contains both a full 1st pl. pronoun (*asmé*) and the enclitic 2nd pl. *vah*. As there, I think the 2nd ps. referent is the patrons, in addition to the 1st ps. ritual officiants, but, once again, a tr. “be preeminent among us for you” seems clumsy, and I did not render the *vah* in the publ. tr.

I take the fem. subject of d-g to be personified *durmatī-*, with Ge. Others, going back to Sāy, take it to be the *jūrñi-* of g (see Ge n. 8d), but I think that belongs to a simile.

The opening of d, *svayám sã* echoes that of 6d *svayám só*.

Ge refuses to tr. *vakṣati* and feels that it cannot belong either to \sqrt{vah} or to $\sqrt{vakṣ}$. I take it with $\sqrt{vakṣ}$ / *ukṣ* ‘grow’, as a malformed nonce subjunctive to *úkṣa-* / *ukṣá-* (or preferably a derivationally prior, unattested root formation).

In g I take *ná* as both the simile marker and the negative. (This is rather like the haplology of **ná no* I posited for 5g.) “Like a firebrand ... she will *not* ...” If I am correct this is yet another example of the *ná* simile marker displaced to the right.

I.129.9–10: Note identical openings to these two vss: *tvám na indra rāyā ...*, with the final word of the pādas showing very close phonological patterning: *pārīṇasā / tárūṣasā*.

I.129.9: On the basis of my reeval. of *anehás-* (ad X.61.12), I would now change the tr. in b from “faultless path” to “flawless path,” describing physical rather than moral perfection.

I.129.10: The standard tr. construe e with fg, such that *rátham* of e is the referent of *anyám* in f. But this seriously violates the structure of Atyaṣṭi, where de always constitute a unit. Moreover, “another chariot than us” would be a strange expression; we expect the *anyám* to refer to an animate opponent in such a construction, esp. if it is “intending harm” (*rírikṣantam*). I therefore generate a verbal form ‘help’ from the agent noun voc. *ávitar* that ends d: √av + *rátham* is found elsewhere (I.102.3, 112.12, etc.).

I.129.11: I do not understand the participle *sán* in c. It does not have concessive force, nor does it serve (like *sántam* 7c) to anchor an unclear gender assignment. It may convey something like “since you are a god / in your capacity as god,” though this hardly seems necessary to express of Indra, whose divinity isn’t in question here.

I.130 Indra

I.130.1: After my reconsideration of *nāyám* (see disc. ad VIII.2.28), I would delete “to the landing site” from the publ. tr.

In c the simile marker *iva* seems to be displaced to the right, like *ná* several times in I.129 (1b, 5b, 5g, 8g). Such placement seems to be characteristic of Paruchepa.

I.130.2: *áhā víśveha* in g (repeated in 9g) appears to show the same displaced simile particle found elsewhere in the Paruchepa hymns; see disc. ad I.129.1.

I.130.3: Nice phonetic figure in d *vrajám vajrī (ga)vām iva*. Note esp. the floating *r* in *vrajám vajrī* and the syncopated *ī ā (...)* *vā/a*.

I.130.4: In f the standard tr. take *vanínaḥ* as an acc. pl., the object of *ní vṛścasi* in the frame, parallel to acc. *vṛksám* in the simile. But after all the build-up earlier in the verse towards the smashing of Vṛtra, I find it hard to believe that Indra is just cutting down trees here, and the doubling of ‘tree’ in *vṛksám vanínaḥ* seems flat (“like a carpenter a tree, you cut down wooden things [=trees]”). Instead I take *vanínaḥ* as gen. sg. referring collectively to a forest (the thing that has wood) and supply Vṛtra / the serpent as object in the frame. Both *vṛtrám* and *āhim* are found elsewhere as obj. of *vṛśca-* (though, I admit, not with *ní*, but usually with *vī*).

I.130.5: For *vṛthā* in this context see II.15.3.

For *itá ūtīḥ* see comm. ad VIII.99.7.

I.130.6: Pādas bc show one of the only alterations of syntax and conceptual structure between ab and its tag-pāda c in the Atyaṣṭi corpus. The Āyus fashioned speech *for you* (*te*) in ab, but fashioned *you* (*tvām*) in c. The rest of the verse is then applicable to both speech and you.

One of the rare scramblings of the ends of the fg pādas, which are ordinarily identical. Here the last two words get flipped: f *sātāye dhānā* / g *dhānāni sātāye*. For other such instances (though not so neatly structured) see I.129.5, 6. The flip in g here allows it to match the opening of 7g *viśvā dhānāni* ...

I.130.7: Note in pāda a ... *pūro* ... *pūrāve*# and see I.131.4.

I.130.8: Following Ge, I read *tatṛṣṇām* in both simile and frame. In the simile it is the dried material that feeds the fire; in the frame the thirsty or greedy.

The PN *arśasānām* in g neatly matches *tatṛṣṇām* in the same position in f. On the formation see comm. ad X.99.7. I would now suggest a tr. “Harmer” for the straight PN.

I.130.9: As indicated in the publ. intro., this verse, which treats Indra’s theft of the sun’s wheel and his visit to Uśanā Kāvya, is quite opaque. The first pāda straightforwardly announces the mythical deed at issue, but things disintegrate after that.

The next two pādas (bc) introduce a theft of speech and a figure identified as *aruṇā*- (‘ruddy’) that are not elsewhere associated with the myth. However, since the verb *muṣāyā*- ‘steal’ and the temporal expression *prapitvé* are found in other accounts of the myth (I.175.4, IV.30.4, VI.31.3 and IV.16.12, VI.31.3 respectively), these pādas must contain at least some covert reference to the myth. However, I treat them as parenthetical because pādas de seem to follow directly from a, and the present tense *muṣāyati* does not fit well with the injunctive *prá vṛhat* of a and the plupf. *ájagan* in e.

Pādas de depict Indra’s journey to Uśanā’s dwelling, an incident associated elsewhere with the wheel-theft narrative. First, note that initial *īśānā(h)* in c is echoed by init. *uśānā* in d. I have treated the peculiar morphology of *uśānā* at length (Jamison 2007 Fs. Jasanoff) and concluded that the stem is essentially uninflected and that it is therefore possible to take *uśānā* here, with Ge, as an acc. of goal (or as gen. with a gapped ‘house’), however odd such interpr. may seem at first. Esp. in later Skt. Uśanā is seldom found without his patronymic *kāvya*-, and in the RV even when the patronymic is absent there is often an indirect reference to it. Here that is found in the voc. *kave*, addressed to Indra, which ends pāda e; #*uśānā* and *kave*# thus occupy polarized positions in this two-pāda unit.

I have even less idea of what fg really mean than the rest of the verse. The repeated word *turvāṇiḥ* usually means ‘surpassing, victorious’ -- see nearby I.128.3 -- but this sense does not fit this passage well, esp. with the acc. *sumnāni*. I have therefore taken *turvāṇi*- as expressing a simple motion sense, but have no confidence in the correctness of this interpr. (and in fact fairly strong confidence in its error).

I.131 Indra

The hymn contains a concentration of intensive forms: *ānamnata* 1a, *kārikra* 3f, *carkiran* 5a, *sanīṣṇata* 5fg. This parade of intensives may express the prolonged and continuous struggle of the Ārya to subdue their rivals and gain territory with the constantly sought help of Indra.

I.131.1: A form of *īndra*- is positioned at the beginning of all structurally significant pādas (a, b, d, f) in Atyaṣṭi.

The intens. *ánamnata* in my opinion expresses habitual action. Schaeffer suggests that it is a “Hin- und Her-” or “Auf- und Ab-” motion, but I don’t see the dignified and stately Heaven and Earth bobbing up and down.

I.131.2: Pādas de contain what we would call a mixed metaphor: “we would place you at our chariot-pole like a boat.” In a RVic context this does not seem a solecism, but simply an example of the usual piling of image upon image.

I am uncertain of the value of the part. *citáyantaḥ* in f. In keeping with the zero-grade root syllable it should mean ‘appear’ or ‘perceive’, but the case frame makes these interpr. hard to impose. In the publ. tr. I take it as a double I/T (in the term used in my 1983 book) ‘make (Indra) take notice’, that is, ‘cause to perceive’, but I am disturbed by the mismatch of the formal and the functional: in this meaning it should be full-grade *cetáya-* and there is no easy way to explain a redactional change to zero-grade. (Ge, Re tr. ‘auszeichnen’, ‘distinguent’ respectively, but this doesn’t conform to any standard meaning of *citáya-* or *cetáya-*. WG take it as an intrans., “wir glänzenden Nachkommen des Āyu,” which respects the formal shape but leaves the rest of the pāda without a syntactic skeleton.) Since it has the same value that I ascribe to *īkṣáyat* in the next hymn (I.132.5), it may be that *citáyant-* here adapted the sense of *īkṣáya-*, since they both have apparent zero-grade stems.

Another problem with this final sequence is the function and position of *ná* in f. It should mark *índram* as the compared term in a simile (“... like Indra”), but since Indra should be the target of sacrifice and praise, deflecting him to the simile is unlikely and leaves us without a corresponding term in the frame. I am loosely taking *ná* as having domain over the whole pāda, which implicitly compares *us* (the subject of *dhīmahi* in e) with the Āyus, though this is not how simile marking generally works -- and will also not work if “we” are identical to the Āyus rather than compared to them. The mention of the Āyus in the preceding hymn, I.130.6, and in I.139.3 (also Paruchepa) allows but does not require this identification. In sum, the interpr. of fg is quite uncertain.

I.131.3: Although the general semantic range of the root-noun cmpd *niḥśíjaḥ* in bc is fairly clear -- it refers to the releasing of the cows enclosed in the cowpen -- its grammatical identity is not. It can be either a transitive nom. pl., as I take it in the publ. tr. (so also tentatively Old and, it seems, Re, Narten [SigAor. 266–67]), or a gen. or abl. infinitive (so Scar, WG). In a sense it scarcely matters.

I follow Narten (Sig.Aor. 266–67) in taking *sákṣanta(ḥ)* [-aḥ so Pp., not -e] to \sqrt{sah} ‘conquer, be victorious’ rather than \sqrt{sac} ‘accompany’ (so Gr; Ge’s and Re’s tr. do not easily reflect either root). WG take it as a type of desiderative with -s-formant, but also to \sqrt{sah} . Support for this root affiliation comes from *sāsaḥānāḥ* in the next verse, likewise opening the c-pāda.

Note the paired opposition of the two verbs *ví√taṃs* ‘yank (apart /) back and forth’ and *sám√ūh* ‘shove together’, with complementary subj./obj. pairs: people (yank) Indra / Indra (shoves) people. The point is that the opposing forces fight over having Indra on their side, each trying to pull him to its side, while Indra sets the two sides to fighting by pushing them together.

Again I take the intens. *āvīṣ kárikrat* as expressing habitual or continuous action: Indra is always showing off his mace.

I.131.4: Note the word play across the pāda boundary of a-b: *pūrāvaḥ, pūro*. The same play is found in I.130.7a ... *pūro ... pūrāve*#, though not so neatly juxtaposed.

In d *tām* is somewhat curiously positioned; it may have been displaced to allow the verb *śāsas* to take initial position in order to echo *sāśahānāḥ*, which opens the previous pāda.

I.131.5: I take *kārām √kṛ* in d as an expression from gambling: lit. “to do (the decisive) deed,” “to make ‘game’,” that is, “to win.” See *kārām √hvā* in V.29.8.

I.131.6: I take the final *juṣéta hí* of pāda a as a parenthetical remark, contrary to the standard tr. The rest of the verse (as well as the preceding verse) addresses Indra in the 2nd ps.; moreover, the position of *hí* is most easily explained if *juṣéta* opens the clause, and a gen. complement with *√juṣ*, as suggested by Gr, would be (almost?) unprecedented. The standard tr. (Ge, Re, WG) take *asyā uśásah* as a temporal expression “on/during this dawn here,” but supposed exx. of this usage elsewhere are not convincing. The collocation in fg ... *asyā vedhásah ... śrudhi ...* is structurally identical to *asyā uśásah ... bodhi*, a parallelism that supports my interpr.

If, as I believe, *asyā uśásah* is to be construed with *bodhi* in b, the first term in b, *arkásya*, can serve as transition, since this word means both ‘chant’ and ‘ray’; as ‘ray’ it would group with *uśásah*, as ‘chant’ with *havíṣah* ‘oblation’, linking the coming of dawn with the dawn sacrifice.

I.131.7: The standard tr. take the *yó no aghāyāti* clause as the only obj. of *jahí* in d (“smash [him] who wishes us ill”). This may be correct, but I have opted for the “(X and) which Y” construction.

I.132 Indra

I.132.1: In the publ. tr. I treat the first member of the three-member cmpd *índratvotāḥ* as if it were a voc., since the lit. “aided by you, Indra” seems clumsy.

The verb *ádhi vocā* could also be a 1st sg. subj., but with most tr. I take it as 2nd sg. impv.; “I” am a less likely advocate for the presser than Indra is.

With Ge I consider *ví cayema bháre kṛtām* (f) a gambling expression; for another such expression see the previous hymn, I.131.5d.

I.132.2: Pādas abc consist entirely of four locative expressions (with their genitives); this heavily signposted syntactic pattern allows (/forces) the first word of d, *áhan(n)* to be interpreted as the loc. sg. of *áhar* ‘day’ rather than the 2nd/3rd sg. root impf. of *√han*, which otherwise would be strongly favored in an Indra context. (Note that the identical opening, *áhann índro*, is found at IV.28.3, with the verb.) The locatives in 1d, f also reinforce the loc. reading, esp. *asmín áhani* (1d). I don’t know exactly what to call this poetic trick -- it is aggressively a non-pun.

āprá- in a is a hapax, and there is no consensus on its meaning or derivation; see EWA s.v. I am inclined to follow Ge (etc.)’s connection with *āprī-* (a noun that doesn’t occur in the RV, though the verbal syntagm does) with a meaning ‘propitiator’ vel sim.

This fits its dependence on *vákmani* ‘at the speech’ and may also thematically echo *ádhi vocā* ‘advocate, speak on behalf of’ in 1e. It could indeed refer to the reciter of Āprī hymns. The other leading etymological candidate is *ā√pr* ‘fill’ (so WG; see Old), but “the filler” seems to have less connection with speaking than “the propitiator.”

The way the reflexive adj. *svásmin* works in bc is a little tricky: “of X, at his very own anointing.”

On the basis of I.134.2 I follow Ge in taking *krāñāsya* as passive and referring to the soma. Thus in bc we find the anointing (*āñjasi*) of the two primary ritual substances, fire (b) and soma (c). Alternatively, if it seems desirable to keep the referent the same in the two pādas, one can follow Re, WG in taking *krāñā-* as “active,” referring to Agni.

The use of ‘head’ (*śīras-/śīrṣān-*) to refer to an individual person is not, as far as I know, otherwise found in the RV, though the semantic dev. is obvious and preceded in English.

I.132.3: A very opaque verse, which has received multiple interpretations. I will discuss only my own, very tentative, one here.

I take pāda a as the announcement to Indra of the “pleasurable offering” (*prāyaḥ*) currently set out for him at this sacrifice (*asmín yajñē* 1f); see nearby I.134.1, 135.4 for similar usage of *prāyas-*. This glittering offering reminds the poet of a previous one (*pratnāthā*). I take the next two pādas (bc) as describing this previous one; the relative locative *yásmin yajñē* is a temporal expression that picks up the temporal *pratnāthā*.

The crux in bc is the pair *vāram* (b), *vār* (c). Since the former is an obj. of *ākṛṇvata* and the latter a (possible) subj. of *ási*, an analysis as a masc. (or at least gendered) root noun suggests itself, but such a noun has at best a precarious existence (see Schindler WurNom s.v.). Nonetheless, I think it must be posited here; the other solutions, which include taking the two forms to two separate stems (see, e.g., Gr, Lub) or decomposing them into *vā + a...* (Hoffmann apud Schindler, WG), do too much violence to the patterns of Atyaṣṭi meter. With Ge and Re in their separate ways (“Schirmer(?)” “protecteur”) I take the form to *√vr* ‘cover’ and tr. ‘shield’ (as in X.93.3). In b this noun in the acc. is in apposition to unexpressed *tvā* ‘you’, i.e., Indra -- which is the first obj. to a double acc. *√kr* construction ‘make X into Y’. (For Indra as a home, see 5fg. For *kṣāya-* in a metaphorical sense, see the next hymn, I.133.7a.) In the tag-pāda the construction has been switched from acc. to nom., and the 2nd sg. ref. is now overt (*asi* ‘you are’). A nom. *vār* conforms to this case switch; however, since *kṣāya-* is masc., we should expect **kṣāyaḥ* here. I explain the anomaly by the pressures of Atyaṣṭi, which requires strict identity between the finals of b and c; *kṣāyam* is simply repeated from b or made an honorary neut. for the occasion. It is possible to avoid this problem by assuming that *vār-* has verbal rection (so implicitly Ge “der Schirmer(?) des Hauses”; see also Schindler WurNom), but this introduces further complications, and I prefer the double acc. interpr. anyway.

If bc refers to a time in the distant past when Indra was made into our protector, d may then call for the restatement of this fact at the current ritual (depicted in pāda a by my interpr.) The expression *nū itthā te pūrvāthā ca pravācyam* “Now in the current way and in the earlier one it is to be proclaimed of you” in 4a supports my interpr. of the larger structure of this verse, namely that it concerns the conceptual intersection of the current ritual and the previous one and that what has been said before needs to be restated at the

current sacrifice. Note also that, though the form of \sqrt{vac} , *voceḥ* in this case, now has the preverb *ví*, the sequence *vocer ádha*, with the adv. *ádha*, echoes *ádhi vocā* in 1e.

In e I take *raśmībhiḥ* as a temporal expression “with the rays (of the sun),” identifying the time as dawn, as is very common. The standard tr. take it as an instr. of the means of seeing; this is not impossible, but seems less idiomatic. See further ad I.135.3.

I don’t quite know what to do with *ánu* in f, but given the other difficulties in the verse, this is a minor problem.

I.132.5: For *īkṣáyat* see Jamison 1983: 123. It has the same double I/T value I also ascribe to *citáyanta(h)* in I.131.2f.

In de I take *bādhē* as an infinitive with *tásmai* [=Indra] as subj. and *āyuh prajāvat* as obj. This requires $\sqrt{bādh}$ to have a positive value (‘thrust [s.th. good] towards [s.o.]’), rather than the usual negative ‘thrust away, repel’, but see I.61.2 for a similar positive sense.

I.132.6: The dual dvandva *indrā-parvatā* ‘Indra and Mountain’ raises the question of the identity of ‘Mountain’; as in III.53.1 I think it is a designation of Indra’s mace (*vájra*). That the mace shows up in the instr. in the same pāda as the dual verb that has Indra and Parvata as implicit subj. (c *vājreṇa ... hatam*) does not, I think, rule out this interpr.: as “Mountain” the mace is animatized; in the instrumental it is an inanimate instrument.

The *tām* of pāda a is an anticipatory placeholder for *tām-tam id* in b, c.

Re and WG take *chantsat* (\sqrt{chand}) in d as meaning ‘appear’: “there will appear a *gáhanam* for him ...” -- that is, ‘come into view, take shape’. But though ‘appear’ in modern European lgs. can cover that sense, the ‘appear’ sense of \sqrt{chand} is generally ‘have the appearance of, look like’. Ge’s interpr. is more complex: he takes the *vájra*- to be the underlying subject, which to the fugitive will look like a *gáhanam*. This interpr. represents the sense of \sqrt{chand} better, but at the cost of producing something close to nonsense, at least as I tried to understand it. I instead use the developed sense ‘be pleasing’ of \sqrt{chand} : the point is that once Indra and Parvata start smiting him, even falling into an abyss will be preferable.

I.133 Indra

I.133.1: The popular, Atharvan-like character of the first hymn of this composite (see publ. intro.) (vss. 1–5) is partly signalled by the two *I*-forms in this verse: *abhivlágya* and *vailasthāná-*. Both forms are found only in this hymn. The first belongs to the putative root \sqrt{vlag} , confined to this hymn (this gerund 1c, 2a; nominal *abhivlaṅga-* 4b); the second, in the variants *vailasthānaká-* and *mahāvailastha-*, appears also in 3c, d. Neither has an agreed-upon etymology. For \sqrt{vlag} EWA suggests a connection with \sqrt{vrj} ‘twist’. I see it rather as an *I*-form of \sqrt{vraj} ‘proceed, advance upon’, which in several of its (few) occurrences also appears with *abhí*. The nasal in *abhivlaṅga-* might be a problem, but roots ending in *-j* are prone to secondary nasals (\sqrt{raj} , *rañj* ‘color’, \sqrt{saj} , *sañj* ‘hang’, probably \sqrt{svaj} , *svañj* ‘embrace’).

As for *vaila(-sthana-)*, it also has been subjected to multiple etymologies (see disc. WG ad loc.). I take it as an *I*-form of $\sqrt{vṛddh}$ *vīrā-* ‘hero’; the $\sqrt{vṛddh}$ *r*-form is found

in *vaíra(-deya-)* (V.61.8) ‘(payment) of wergeld’. The ‘place of *vaira-/vaila*’ would be ‘the place of heroes or heroism’, i.e., the battlefield.

Note the juxtaposition across pāda-boundary of *rténa* ‘with truth’ and *drúhaḥ* ‘deceits’. I take *anindrāḥ* as implicitly contrastive with *mahīḥ*: though the lies may be great, they lack Indra and therefore lack ultimate power.

I.133.2: *vaṭūrín-* (*/mahāvaṭūrín-*) in cd is an impossible hapax, and the wisest course (taken by Ge, WG) is not to tr. it. (Re tries out *éperonné* ‘spurred on’, with no indication of where he got it.) Unwisely I tender both a tr. (‘overcoming obstacles’) and an etymology, though more in a spirit of adventure than with any confidence that they are correct. I start with the idiom *vṛtrá-* √ *tṛ* ‘overcome obstacle(s)’, found, e.g., in the fairly well-attested neut. noun *vṛtratūrya-* and adj. *vṛtratúr-*. A hypothetical Middle Indic form to an underlying **vṛtratū/ur-* would be **vaṭṭa-tū/ur-* (since dentals following original **r* often undergo retroflexion: see von Hinüber, *Mittelindisch*² 165). This could then undergo haplology to **vaṭṭū/ur-* and then simplification of the cluster (though we might expect **vāṭṭū/ur-*) to the form to which an *-in-* suffix was affixed. This is more machinery than should be deployed to explain a hapax, but the explanation falls (loosely) within the realm of possibility -- and a MIA source would fit with the other words in the hymn belonging to a lower or aberrant register. Still it would probably be more sensible to follow Kuiper (see EWA s.v.) in taking it as a non-Indo-Aryan word.

Even leaving aside *vaṭūrín-*, the verse doesn’t make a lot of sense: what does it mean for Indra to cut off heads with his *foof*?

I.133.3: In an unpubl. paper Arlo Griffiths argues that *armaká-* means ‘mudflat’.

Note the *-ka-* forms, *vailasthānaká-* and *armaká-* (2x) -- pleonastic *-ka-* often being a sign of colloquial register (see Jamison, *-ka-*). Since diminutivization (or diminishment/belittling) is one of the apparent nuances of the *-ka-* suffix, it is somewhat amusing that we find “diminutivized” *vailasthānaké* beside *mahāvailasthe*.

I.133.4: I have tr. the fem. gen. pl. rel. *yāsām* as ‘when’, to make the structure of subord. cl. (ab) – main cl. (cd) work better. However it is possible (and perhaps preferable) to take the *yāsām* cl. as simply continuing vs. 3: “Smash down the troop of those witches ... of which (witches) you scattered afar thrice fifty.” 4cd would then be an independent sentence.

Who the subject of cd is depends on what the verb *manāyati* means. Ge takes the subj. as a generic, or at least unidentified, “er”: “das merkt er sich fein von dir.” Re thinks the subj. is one of the witches, but like Ge he takes *manāya-* to mean something like ‘pay attention, note, understand’. The verb is an obvious denom. to *manā-*, which is interpr. by some as ‘Andacht’ (prayer, reverence) (see EWA s.v. *MAN*¹), with the verb then meaning ‘andächtig sein’ (be reverent towards)(so WG here, again with a generic subject, “man”). But since I interpret *manā* as ‘zeal’, for me the verb means ‘display zeal’, with the implicit subj. Indra’s deed, represented by the neut. pronouns *tát* (c) and *takát* (d).

Pronominal *-ka-* forms, like *takát*, are an extreme sign of colloquial register -- or rather of the poets overtly signalling their conscious deployment of this register.

I.133.5: This last verse of the colloquially bloodthirsty first hymn of the composite pulls out all the stops with striking interlocking phonetic figures in ab: #*piśāṅga* ... #*piśācim* ... and (*piśāṅg*)*abhṛṣtim ambhṛṇām*# ... (s)*ām mṛṇa*#

The latter sequence helps explain why we have another impossible hapax: *ambhṛṇā*; as often, difficult words appear in contexts that play on their phonological shape. Again, wisdom would suggest leaving it untr. or at least tr. with a vague contextually generated term like ‘monstrous’, but I have had the temerity to suggest another very shaky etymology. I suggest that this is a colloquial deriv. of the lexeme *ānu* √*bhr*, a euphemistic idiom that refers to sexual assault and penetration -- e.g., in the cosmic incest myth (X.61.5). See comm. ad I.88.6 and Jamison 1981 (“A Vedic sexual pun: *āstobhayat*, *anubhartrī*, and RV I.88.6,” *Acta Orientalia* 42 [1981] 55-63). The initial *am* would represent an apocopated form of the preverb *ānu*, a change that fits the register in the rest of the hymn. My ‘ballsy’ is an attempt to capture the slangy irreverence. Since Piśācas are later associated with sexual misconduct towards women -- at least on the basis of the Piśāca “marriage” (e.g., MDŚ III.34), which involves taking advantage of a maiden who is asleep, intoxicated, or disordered -- a sexual interpr. of the adjective qualifying the Piśāci here would be entirely fitting. The same idiom, with an even more MIA cast, may be found in AirĀr *ambhaṇa*- ‘Bauch der Laute’ (belly of the lute); as discussed in my 1981 paper, the *vīṇā* bears some resemblance to male genitalia and jokes about its shape are still current in South Asia.

I.133.6: Although the adverb *avār* ‘downward’ occurs only here, beside more common *avās*, it is probably not the result of secondary alteration of *avās*-, since it has an Old Aves. correspondent *auuarē* (Y. 29.11).

The accent on *dādrhī* must be owing to its juxtaposition with immediately following *śrudhī*.

āpūruṣaghna- is universally taken as ‘not smashing men’, and this is certainly possible. However, since the focus of this composite hymn is on Indra’s destruction of various demonic beings, I think an interpr. ‘smashing non-men’ fits better. The context remains violent, so remarking on Indra’s forbearance towards men would break the martial mood.

I.134 Vāyu

I.134.1: For *makhā*- as ‘bounty’, see disc. ad I.19.8.

I.134.2: *vāyav indavo* somewhat echoes the double voc. construction *vāyav indraś ca*, several exx. of which are found in the next hymn.

I.134.3: In f *prā cakṣaya rōdasī vāsayoṣāsaḥ*, *rōdasī* is most naturally the obj. of *prā cakṣaya* and *uṣāsaḥ* of *vāsaya*, but this seems to leave unaccented *vāsaya* opening its clause. The solution is easily found: in the tag-pāda g the same sequence *vāsayoṣāsaḥ* is preceded in its clause by *śrāvase*. Whether we attribute lack of accent in f to redactional erasure (so Old) or assume that *vāsaya* was originally unaccented because of its repetition in the tag-pāda does not matter much.

I.134.4–6: Fronted forms of the 2nd sg. pronoun begin most of the metrically significant sections in this sequence of vss. (4a, d, 5a, d, 6a).

I.134.4: I take *dám̐su* here and in I.141.4 as the loc. pl. of the root noun *dám̐* ‘house’ (so also WG) rather than as adv. ‘wondrously’ (Gr, Re). Ge refuses to tr.

As with *raśmībhiḥ* in I.132.5 I take *raśmīsu* here as a temporal expr., contrary to the standard tr. The extended phrases in I.135.3, 137.2 support this view.

On *vakṣāṇā* ‘belly’ as a pl. tantum, see comm. ad X.27.16.

I.134.5: Note the plethora of *-an*-forms in abc: *turaṇyávaḥ*, *iṣananta*, *bhurváṇi* (2x).

In b *iṣananta* *bhurváṇi* is echoed by *iṣanta* *bhurváṇi* in the tag-pāda c. WG take *iṣananta* and *iṣanta* to two different verbs (“treiben” and “wünschen” respectively), but as Re remarks, the formal variation is insignificant in Atyaṣṭi (see *duhre*, *duhrate* in 6fg below), and it would be far more disruptive to this structure to change the verb root in the echo. This twinning of *iṣananta* and *iṣanta* here makes it likely that the former has only minimal connections to the other forms belonging to a stem *iṣaṇa-*, otherwise confined to the Indra hymns of IV. See comm. ad IV.16.9.

I take *bhurváṇi* as an adverbial complement to the verb (“set themselves aquiver”)(sim. Old and Re, AiG II.2.900), and therefore in c I am reluctant to construe *apām* with *bhurváṇi* as Ge (and differently WG) do. My solution, which is admittedly ad hoc, is to supply a simile containing **ūrmáyaḥ* (cf., e.g., IX.95.3 *apām ivéd ūrmáyas tāturaṇāṇḥ* for soma drinks [as here] compared to waves of water constantly in motion). On the interpr. of some scholars of *bhurváṇi* as a loc. infinitive, see Keydana (Inf. 190–91), who rightly rejects it.

In its two occurrences (I.151.5, X.91.2) *takva-vī* ‘(in) swooping pursuit’ refers to a bird of prey. In this passage most tr. take *tsārin-* ‘stealthy one’ as a hunter in pursuit of game; this may be correct and is reflected in the publ. tr. However, it’s possible that the stealthy one is the bird of prey, becoming weary as he circles in the air (“in his swooping pursuit” *takva-vīye*). It might seem odd for the bird to “reverently invoke” Indra, but this is hardly beyond the range of RVic discourse.

The verb *pāsi* in fg is universally taken as belonging to $\sqrt{pā}$ ‘protect’, and this is morphologically the easier interpretation: it would be a straightforward root present. However, context favors a connection with $\sqrt{pā}$ ‘drink’. As Old points out, *dhármaṇā* is used in IX.25.2, 63.22 to refer to Vāyu’s right to the first drink of soma, and the next verse here, 6abc, spells out this entitlement in almost over-literal detail; it can be considered a species of poetic repair, making it clear that *pāsi* here belongs to ‘drink’. (See also I.135.1de.) Moreover, “protect from every creature” seems an odd expression, since “creatures” are generally positively viewed or at least neutral. The problem with ‘drink’ of course is that this root makes a root *aorist*, not a root present. But at least one other form with primary endings is universally taken to the ‘drink’ root: *pānti* in II.11.14, which in fact describes the same situation as here, Vāyu’s first drink of soma: *prá vāyávaḥ pānti ágraṇītim* “The Winds drink the first offering.” These two primary forms may be nonce presents or subjunctives (in which case the tr. here should be “you will drink ...”), or *pāsi* here could be a nonce *-si* imperative.

I take the two abl. in fg in different senses: *vísvasmād bhúvanāt* as a temporal expression, but *asuryāt* as causal.

I.134.6: For abc as a “repair” of *pāsi* in 5fg, see disc. there.

Most supply barhis as the obj. of the perf. part. *vavarjūṣṭhām*, and this is quite possibly correct. By contrast I take it in the metaphorical sense “twist s.o. towards oneself,” that is, attract to the sacrifice -- though we might prefer a medial form in that sense. And the mention of barhis at the beginning of the next hymn (I.135.1a) may support that standard view. As Kü points out (461 and n. 873), there’s no obvious explanation for the full-grade stem (expect **vavṛjūṣ-*).

I.135 Vāyu

I.135.1–3: The fronted forms of *tvám* (etc.) found in I.134.4–6 continue here, though not as densely: 1d, 2a, d, 3d.

I.135.1: Unaccented *niyutvate* in bc appears to be a voc. to an otherwise unattested *-i-* stem *niyutvati-*, whose formation would be morphologically peculiar (a secondary *-i-* stem built to a *-vant-* stem?!). It must be a nonce manipulation of the standard *-vant-* stem *niyútvant-*. As Re points out, vocatives in *-pate* may have had some influence in producing this rhyme form. Since Vāyu is almost the only referent of *niyútvant-*, it is highly unlikely that the form represents a dative to the *-vant-* stem that lost its accent for some reason.

I.135.2: On *vāha vāyo niyúto yāhy asmayúḥ* see disc. ad VII.90.1.

I.135.3: As indicated in the publ. intro., this hymn is divided into ṛcas and each ṛca was probably originally a single hymn. This then is the final verse of 1–3, and it exhibits very heavy ring-composition: 3b ... *úpa yāhi vītāye* reprises 1a *úpa no yāhi vītāye* almost exactly, and 3ab ... *niyúdbhiḥ śatínibhiḥ ... sahasrínibhiḥ ...* echoes 1bc *sahásreṇa niyútā ... śatínibhiḥ*. Note also 3d *távāyám bhāgáḥ ...*, which is identical to the beginning of 2d.

As discussed ad I.134.3, the expression here, *sāraśmīḥ sūrye śacā* “accompanying the reins [=rays] when the sun (rises)” seems to me a fuller version of the temporal expression *raśmīṣu* (*/raśmībhiḥ*) “at/with the reins=rays.” See also I.137.2e *sākām sūryasya raśmībhiḥ* “simultaneous with the reins=rays of the sun.”

I.135.4–6: As indicated in the publ. intro., this ṛca is constructed in parallel to 1–3, but addressed to the two gods Vāyu and Indra rather than Vāyu alone. I will not call attention to the pervasively parallel phraseology: a simple skimming of the two sets of verses will amply demonstrate it.

I.135.4: The *vāyav índraś ca* construction here unfolds over two pādas.

I.135.7: Here the *vāyav índraś ca* construction is stretched from a to c, and in f the sequence *índraś ca yāthaḥ* (lit. “and Indra, you two drive”) presupposes a 2nd ps. sg. to produce the conjoined subject. This latter construction further attenuates the *vāyav índraś ca* construction.

Note the little figure *sasató ... śásvato*.

I.135.8: As indicated in the publ. intro., I have no idea what the figtree represents here. Some of the verse seems anagrammatic for *vāyú-*: the repeated *jāyávo* (bc) and *yávo* (d). The accent on *súvate* in d must result from juxtaposition with *pácyate*.

I.135.9: The references here are also murky, but I am inclined to see the plural referents as both Maruts and soma drinks. In favor of the Maruts: 1) they are called *bāhv-òjas* -in VIII.20.6; 2) they are sometimes called *ukṣán-* (e.g., V.52.3); 3) the non-waning cows of 8ef are also found in the Marut hymn V.55.5 *ná vo dasrā úpa dasyanti dhenávaḥ*; 4) they fly (e.g. V.59.7), and they're associated with the shaking of mountains and the flowing of rivers (flying in the river could be rain); 5) approaching the figtree in 8b might be like V.54.12, where they "shake the gleaming berry (*píppalam*)" -- the pippala is supposed to be a fig.

nadī is one of the rare loc. sg.s to a *vṛkī*-fem.; see *sarasī* in VII.103.2, *gaurī* in IX.12.3, and AiG III.170. I would now consider these forms endingless locatives (rather than the result of contraction of the stem vowel with a loc. sg. ending *-I*, on the basis of TY's disc. of this type; see comm. ad VII.103.2.

I.136 Mitra and Varuṇa

I.136.2: In the publ. tr. I blindly followed Ge and Re in supplying *jyótiṣe* 'light' with *uráve* in a. Although this makes fine sense, neither scholar cites parallel passages. It is certainly true that *jyótiṣ-* is qualified by *urú-* elsewhere (e.g., I.117.21, II.27.14, VI.3.1) and that *jyótiṣmant-* is found twice in the next vs. (I.136.3), but I think I would now be inclined to be more circumspect about what *uráve* refers to.

I.136.3: fg is somewhat hard to construe, in that there are three gods and two occurrences of *yātayáj-janaḥ* 'setting the peoples in order'. Moreover, Varuṇa and Āryaman are directly adjacent to that epithet, but it is Mitra whose stable characteristic it is (cf., e.g., III.59.1 *mitró jánān yātayati ...*). Mine is only one of the ways to handle the 3-into-2 problem.

I.136.4: The punctuation in the publ. tr. may not make it sufficiently clear that it is Soma "who gives shares in the drinking places." On *avapāna-* see comm. ad VII.98.2 and X.43.2.

I.136.6: As noted in the publ. intro. there is abundant evidence of ring composition between this verse, the real final verse of the hymn, and vs. 1: 1a *bṛhán námo* / 6a *námo ... bṛhaté*; 1bc *mṛláyadbhyām* / 6c *sumṛlīkāya*; 1e *úpastutā* / 6d *úpa stuhi*. Cf. also 2d *dyukṣám* / 6e *dyukṣám*, and 2c *bhágasya* / 6e *bhágam*.

I.137 Mītra and Varuṇa

I.137.1–2: *ā yātam* is parenthetical and in 2nd position, breaking up syntactic constituents (*suṣumá ... ádribhiḥ* and *imé ... índavaḥ* respectively), in the initial pādas of both these verses.

I.137.2: For the temporal expression in e, see disc. ad I.135.3.

I.138 Pūṣan

I.138.2: Note *kṛṇvā ṛṇávo* in b.

The rather surprising appearance of the camel in c is best explained as Ge does: the simile is incomplete and should read “as a camel (does) its load.” Still the camel adds a specificity that seems out of keeping with the context.

I.138.3: The syntax of this verse is quite contorted.

The hapax *sārī* is problematic. Flg. Old, I think it must be interpr. in the context of the idiom *vājam* √ *sṛ* ‘run for the prize’; cf. the root noun compd. *vāja-sīt-* and passages like I.62.16 *sómo vājam ivāsarāt*. But what sort of form is *sārī*? Gr takes it as an *-in-* stem, which would be the simplest solution save for the accent, which should fall on the suffix (**sarī*). AiG II.2.328 explicitly rejects this analysis, suggesting instead (p. 407, flg. a brief mention by Old, in turn inspired by Ludwig) that, with following *bhava*, it is an early example of a *cvi* construction. But again, we should expect suffixal accent (see Whitney, Gr. §1093), and moreover the *cvi* construction is at best embryonic at this period (*akhkhalīkṛtya* VII.103.3 being the only fairly certain example in the RV, though see my disc. of *suśāmī abhūvan* in X.28.12). Taking it as a *rathī*-type masc. confronts the same issue with accent. Since an analysis as an *-in-* stem encounters only the accentual problem, not the chronological one of the *cvi* construction, and since *-in-* stems are considerably better attested than *rathī*- masculines, an *-in-* stem analysis with unexplained accent retraction seems the best among the poor choices. As for my tr., since “be a runner after” seemed clumsy, I have substituted “be a contender.”

I.139 All Gods

I.139.1–2: For the sense of these vss., see publ. intro.

I.139.1: The pass. aor. *saṃdāyi* is taken by Gr (etc.) to √ *dā* ‘tie’, surely correctly. But there are several other occurrences of this lexeme *sām* √ *dā* that also appear to express the same idiom, but, with different morphological realizations, are generally assigned to √ *dā* ‘give’ (though see, e.g., Kü 244). The idiom, in its fullest expression, is *sām* √ *dā* *nābhim* [ACC] *nābhā(u)* [LOC] ‘tie navel to navel’, that is, to assert a family connection (often between gods or semidivine figures like seers and us humans). In the passive the first navel is of course in the nom. – a nom. that is gapped in this passage. Another ex. of the idiom is found in IV.44.5, also passive, this time with the loc. gapped (or substituted for by a prn.): *sām yād dadé nābhiḥ pūrvyā vām* “because (our) ancient umbilical tie is attached to you (or, to your [navel]),” of the Aśvins. Instead of *sām* the preverb can be *ā*: see IX.10.8 with the fullest form of the idiom, containing both case forms of ‘navel’: *nābhā nābhim na ā dade* “he has bound his navel to our navel.” Also IX.79.4 *divī te nābhā paramó yā ādadé* “It was in heaven, to its navel, that your highest (navel) was bound.” (This last tr. is different from the publ. one; see comm. ad IX.79.4 for the alteration and the difficulties in the passage.) Another ex. of the idiom is probably found

in the noun *saṃdadī-* in IX.99.7, though the telltale navel is absent. See disc. there. The other occurrence of *saṃdadī-* in II.39.7 even more attenuated, but still expresses the sense of attachment. A variant of the idiom, *ā√tan nābhim* LOC is found in I.105.9; see comm. there.

I.139.2: With Ge (etc.) I supply ‘throne’ with *hiranyāyam* in e on the basis of V.62.8.

I.139.3: The part. *āśrāvāyanta(h)* is best taken as predicated, substituting for a main verb. The standard tr. supply a finite verb (“invite” vel sim.), but this seems unnecessary.

This form also participates in a fine example of case disharmony in a simile (in the sense of Jamison 1982): *śrāvāya-/śravāya-* can mean both “cause to be heard” and “cause to hear.” In the simile (pāda b) it takes *ślókam* as obj. and means “cause to be heard”; in the frame (pāda a) it takes *yuvām* and means “cause to hear,” while in the tag-pāda (c) it likewise takes *yuvām* but also a 2nd acc. *havyā*, with the meaning “cause X to hear (about) Y.” With Ge I supply “of the pressing stone” with *ślókam* on the basis of 10e *ślókam ādreḥ*.

Unlike the standard tr. I supply “chariot” as the obj. of *anuśāsātā* and take *rājāḥ* as an acc. of extent.

I.139.7: On the difficulties of interpr. of this verse, see publ. intro.

In f Ge and Re take *aryamā* as subject of *duhre* and are then at pains to assemble enough other personnel to count, at least conceptually, as a plural with pl. verb *duhre*. (Cf. Re “Aryaman (ainsi que) l’officiant (et autres) l’ont traite-à-fond.”) But not only does this not work grammatically but it does not make sense: since the gods gave the cow to the Aṅgirasas (de), surely *they* are the ones who have milked her dry. Although major syntactic breaks in the middle of pādas are rare, in this case we must take sg. *aryamā* as starting a new sentence (so also WG). Note that pāda a also seems to have a syntactic break after *śṛṇuḥi*, though it is less jarring because the subject of the next clause remains the same.

As for the sense, I am quite baffled. The Aṅgirasas seem to have mistreated the cow, or at least gotten everything they can out of her. But Aryaman also has knowledge, and perhaps use, of her. I suggest very tentatively that since Aryaman is associated with the householder’s fire and with hospitality rites, this may be an early and oblique reference to a division between what will later be known as śrauta rites and grhya rites. But I have no confidence in this.

I.139.8: On *asmād abhī* see comm. ad V.33.3.

The standard tr. supply ‘word’ (*vācaḥ* Ge n. 8a) as the neut. sg. subject with *yád ... citrām ...* in de, but a singular form of *paúṃsya-* in ab is more easily supplied from context, and deeds can easily “resound” by semantic transference.

I interpr. the structure of d–g differently from the standard interpr., which take *tád* as the antecedent both of the *yád* clause in de (*yád ... ghóṣāt ...*) and the one in f, *yác ca duṣṭāram*, echoed by g. By this interpr. the two *yád* clauses are overtly conjoined (*yád ... yác ca*) around the main clause referent (*tád*), with the 2nd embedded in the main cl. before the verb *didhṛtā* in the echo pāda. Klein explicitly accounts for this disruption of structure by asserting that the *yác ca* clause “has been postposed in pāda c because its

required repetition in d provides a coherent punaḥpadam” [he must mean f and g respectively]. This seems like a bit of a cop out to me – it wouldn’t be “required” to be repeated if it hadn’t ended up in that position in the first place, for other reasons. Contrary to this analysis, I take f(g) as containing an “X and which Y” (*tád ... yác ca*) construction of the familiar type, with two different referents. The X is also further specified by the preposed rel. cl. in de (*yád vaḥ ... ámarṭyam*), but the *yád* clause in de and the one in f (echoed by g) are entirely unconnected and have different referents. The placement of the *yác ca* clause and the *ca* seem to me strong evidence for my interpretation.

As for the referent of *yác ca duṣṭáram* (fg), I supply *dyumnám* also from context (b *dyumnāni*); cf. also III.37.10 *dyumnám dadhiṣva duṣṭáram*.

I.139.10: The praīṣa quoted at the beginning of this verse, matching the one opening the hymn, situates this verse in the ritual here and now, and such a context gives clues for the solution of some of the difficulties. Because the context is the soma sacrifice (the praūgaśastra is part of the morning soma pressing; see also the pressing stone in e), I follow Ge in taking *vanínaḥ* as the gen. sg. of ‘wooden’ (rather than as the nom. pl. of a putative *vanín-* ‘winning’, with Re). The ‘wooden’ is the wooden cup and by extension its contents: soma. This interpr. in turn makes it unnec. to take *vanta* as a haplogy of 3rd pl. **vananta* (see Old). The bulls of b are likewise interpretable in a ritual context as the soma drinks.

Pāda f contains an incomprehensible hapax *araríndāni*, which, as so often, may have been stimulated by the phonological context: *ádhārayadararíndāni*. Given the construction of the tag-pāda g it should refer to something compatible with *sádmāni* ‘seats’. My ‘fittings’ is only a placeholder, loosely implying a connection with \sqrt{r} ‘fit together’ (also in *ará-* ‘wheel-spoke’, etc.) and inspired by the (presumably entirely accidental) echo of ἀραρίσκω. What *-ind-* would be under this analysis is utterly unclear.

I.140 Agni

I.140.1: The referent of *dhāśi-* ordinarily ‘wellspring’ (see comm. I.62.3), which is identified here as Agni’s *yóni-* ‘womb’, is unclear. In VIII.43.7, 29 and III.7.3 (also perhaps III.7.1) the *dhāśi-* is the plants (=firewood) to be “eaten,” i.e., burned, by the fire, hence the source (‘wellspring’) of the fire’s growth. Since whatever it is here can be carried (*prá bharā*), firewood makes sense, and this interpr. is supported by the fact that the plants that Agni burns are an important theme in this hymn (vss. 2ab, 6–8). Though in I.122.13, a passage adduced by WG, I render *dhāśi-* as ‘gush’ (developing a different aspect of ‘wellspring, fountain’; cf. also VI.67.6), that sense does not work well here because it must be identified with the *yóni-* and capable of being carried.

I.140.2: I take *trivṛt* as a qualifier of *ánnam* ‘food’ (so also Re, Old [SBE], Sāy, WG); however, I am not sure what tripartition of food is meant. Ge in his n. (2a) suggests wood, ghee, and soma (more or less flg. Sāy), but because the next pāda concerns only the plant food that Agni has eaten and that regenerates in a year, I am reluctant to divide the focus. It is also possible to take *trivṛt* as an adverb, as Ge does (“... eilt dreifältig ...”), but this merely transfers the problem.

In the second hemistich “the one / the other” are easier to identify. Pāda c concerns the ritual fire, while d treats the wildfire, each represented by a characteristic animal: in c the “thoroughbred bull” (*jéṇyo vīṣā*), which, despite its power, is a domesticated beast, while the (wild) elephant (*vāraṇāḥ*) of d rampages in the forest.

I don’t understand the position of *ī ī(m)* and *sīm* generally occupy Wackernagel’s position. In this case it may mark *jagdhām* as a notional relative clause, as in my tr. “what was eaten,” though the following word *púnaḥ* unfortunately must be construed with the main verb *vāṇrdhe*.

In c the initial position of *anyásya* violates my rule (1997, Fs. Beekes) for definite *anyá*-placement, but *anyéna* in d is correctly positioned.

I.140.3: The middle voice of *tarete*, fairly rare for forms of $\sqrt{tṛ}$, is responsible for my “move athwart each other,” against a more standard “hasten towards” or the like. It is also a reasonable representation of the movement of the kindling sticks rubbing against each other.

On the sense of \sqrt{dhvam} s see comm. ad IV.19.7; on the intrans. value of *dhvasáya*- see my *-áya*-Formations pp. 54–55. On the supposed transitive sense of the form in X.73.6 see comm. ad loc.

Both *sácya* and *kúpaya*- are hapaxes, though the likely root affiliation of the former with \sqrt{sac} ‘accompany, attend upon’ makes its interpr. easier. With AiG II.2.793, 798, I take it to be a gerundive to this root. As for *kúpaya*-, I find it hard to separate it from the root \sqrt{kup} ‘quiver, quake’, despite the unclarity of its formation (suffix? accent?), and find the alternative analysis as *ku-paya(s?)*- (most recently, tentatively WG) unlikely.

várdhanam pitúḥ “the increaser of his father” is one of the RVic poet’s beloved paradoxes. The priest generates the ritual fire and is therefore its father, but the well-tended fire in turn produces prosperity and increase for the ritual officiants.

I.140.4: The thrust of this vs. is a pile-up of adjectives describing Agni’s flame-horses, set within a frame consisting of the verb *úpa yujyante* “they are harnessed,” postponed until the final pāda, and a dative of benefit occurring in the first: *mānave mānavasyaté*.

mānavasyaté is found only here, and both its sense and its formation are unclear. It is generally rendered as if it were a denominative (Ge ‘dem Menschenfreundlichen’, Re ‘agissant en homme’), but this would assume a *-yá*-formation built to a $\sqrt{vṛddhi}$ -derivative pseudo-*s*-stem **mānavas*- (beside *mānavá*-, loosely like *mānus*- beside *mānu*-). I instead interpret it as a (pseudo-)future participle in *-syánt*- built to the common $\sqrt{vṛddhi}$ deriv. *mānava*-. The future suffix reinforces the sense of the $\sqrt{vṛddhi}$ deriv. ‘descending from Manu’ by emphasizing the fact that (some of) these descendants are still to come. (If such a derivation seems too radical, it could be mediated by a denom. **mānava-yá*- + *-syánt*-, which underwent haplology.)

asamaná- means lit. something like ‘not together, not gathered’; ‘breaking ranks’ seems a dynamic tr. of the underlying concept (Re ‘allant en sens divers’). (See also VII.5.3.) It thus forms a semantic pair with *mumukṣvāḥ* ‘seeking to break free’ in a. I do not follow Ge (/WG) in their derivation from the extended meaning of *sámana*- as ‘battle’, hence (Ge) ‘ohne Kampf’.

Note the phonetic figure opening the vs.: *mumukṣvò mānave mānavasyaté*.

I.140.5: The vs. contains three “intensive” participles: *kárikrataḥ*, *mármṛśat*, and *nānadat*. All three, in my opinion, express repetitive or repeated action. In particular *kárikrataḥ*, in my tr. ‘making and remaking’, nicely reflects the constantly changing shape of the smoke rising from the raging flames.

I take *mahīm* ‘great’ (fem.) separately from *avānim* and referring to the earth; by this interpr. the whole earth serves as Agni’s course (‘stream bed’).

I.140.6–8: This trio of verses treats the union (by burning) of the hyper-masculine Agni/fire and the plants (feminine). This must be the “der erotische Grundton” of the hymn that Ge mentions in his intro. This sexual union leads to the death of the plants (8b) and their regrowth and transformation into a different form (7cd, 8). Or so is my interpr.; acdg. to some, the flames are sometimes the referents, rather than the plants. This proposed split reference seems to me to break the thematic unity of the verses and the climax in 8 of the death and renewed life of the females who unite with Agni.

I.140.6: The concentration of intensives continues in this verse: *námnate* (a), *róruvat* (b), *davidhāva* (d).

The ‘bending’ of pāda a of course describes the flickering motion of the flames.

Because of the theme mentioned ad vss. 6–8, of the bodily transformation of the plants by burning, I take *tanvās* in c as referring to the bodies of the plants, not, with most tr., that of Agni.

I don’t entirely understand the position of *ca* in c. Klein (DGRV I.222–23, 259–60) suggests that it has been bumped by the participle opening the clause and pāda. It is certainly the case that *ca* could not immediately follow that first word without metrical distress: five-syllable *ojāyāmānaḥ* entirely fills the opening, and since the caesura cannot precede an enclitic, placing *ca* after the participle would result in an opening of 6.

I.140.7: The idiom *punar√vṛdh* ‘grow again’ recurs from 2b, again referring to the plants immolated by the fire (at least in my opinion; others take the subject to be the flames). Here their regeneration is linked with their contact or merger with divinity.

The final pāda is variously interpreted. I take the plants still to be the subject and the form “different from their parents” refers to their burned residue as ash and cinders, as opposed to the branches and leaves that were fed to the fire. But if *pitróḥ* is taken as a loc., the referent may be different; some take it as referring to Heaven and Earth (Sāy, Old [SBE], WG).

I.140.8: Again there is a difference of opinion as to referent. With Old (SBE) I take the plants once again as the subjects of pāda a (so, partly, WG), contra Sāy, Ge, Re, Kü (419), who interpret them as flames.

I.140.9: The hapax *tuviḡrá-* in b is generally interpr. as having a thematized form of $\sqrt{gṛ}$ ‘swallow’ as 2nd member, hence ‘powerfully swallowing’ vel sim. But to a set root we should probably expect **-gira-* (like *-túr-*: *-tira-*; *(-túr-*: *túra-*). I follow instead a suggestion of Insler’s, that it represents a haplologized **tuvi-viḡrá-* ‘powerfully spirited’. See comm. ad II.21.2 on the related hapax *tuviḡrí-*.

With most, I take *śyēnī* as the fem. of the color term *śyetā-*, rather than, with Ge, as the fem. of *śyenā-* ‘falcon’ (Adlerweibchen). Among other things, we would probably expect the fem. of ‘falcon’ to have *vrkṣ-* inflection, like *vrkṣ-* itself and *śimhṣ-* ‘lioness’ to *śimhā-* ‘lion’; it should therefore have suffixal accent, and in this sandhi context the nom. sg. should have come out as **śyēnīḥ*. Moreover there is no obvious role for a female falcon in context. The white trail of ash here contrasts nicely with the black furrows (*kṛṣṇāsītā-*) the fire creates in 4b.

I.140.10: I read pāda b with cd, contrary to the standard tr., which take it as independent. I might now, however, replace the tr. of *ādha* as ‘then’ with ‘and’ or the like.

The first word of c, *avāśya*, is generally taken as the gerund to *áva √as* lit. ‘throw down’. I am dubious about this interpr., since that lexeme is not found elsewhere in the RV or, acdg. to Monier Williams, anywhere else in Sanskrit. I therefore derive it rather from *áva √sā/ si* ‘let loose, unhitch’, despite the formal difficulties. The idiom is used regularly for letting loose horses, to which Agni’s flames are compared here, and see X.61.20, where Agni is the subject of *áva syati*, a verse that contains vocabulary that resonates here: *dvivartanī-* and *śísu-*. The problem is that we should expect *avasāya* with full-grade root and root accent (cf. I.104.1) or possibly **avas’yā* (this zero-gr. form is recorded in Whitney’s Roots). I can only explain the accented long vowel in *avāśya* as arising from confusion produced by augmented forms (cf. *āvāsuh* ‘they unhitched’ I.179.2).

I take the *śísumatīḥ* ‘(females) possessing young’ to be Agni’s flames; they have young because flames beget more flames as they spread.

I take d as a paradox: the fire is in constant circling motion (*parijārbhurāṇaḥ*), but still produces a protective encirclement like armor.

I.140.11: Most take the expression in b to mean “let it be dearer to you than a dear thought”; this seems to me nonsensical or at least rhetorically weak. I suggest that there is a pun on *priyā-*, which can mean both ‘dear’ and ‘own’. Here the poet suggests that his composed thought will be dearer to Agni than anything the god himself might produce.

I.140.12: See publ. intro. for speculation on the “foot” of the boat.

Ge suggests persuasively that “chariot and house” are used metaphorically for (times of) war and peace.

I.140.13: The problem in this verse is to determine which pādas go together. Ge and Re construe ab and cd together, but this leads to a gender problem: the subj. of cd should be fem. pl. *arūṇyāḥ* in d, but c contains a nom. pl. *masc.* part. *yāntaḥ*. (Old [SBE] suggests that this form is corrupt because of the metrical problems in the pāda; he treats these at length in Noten, but does not seem to favor emendation of the participle.) The problem is not entirely solved by taking c with (a)b, as Old (SBE) and I do, but it becomes somewhat attenuated by the variety of possible subjects: Agni (m.), Heaven and Earth (*dyāvā-kṣāmā*, dual dvandva, whose gender is listed by Gr. as fem., but there are no diagnostic passages), the rivers (*sīndhu-*, sometimes fem., sometimes masc. [see common acc. pl. *sīndhūn*]) -- with masc. prevailing either because masc. is the default in such gender clashes or because *sīndhavaḥ* is the closest subject to *yāntaḥ*. WG also take d with

the nominatives of b, by somehow taking *aruṇyāḥ* as a temporal expression “bei den (Morgen)röten,” but one would expect a loc. for this meaning (as opposed to the extent of time in the temporal *dīrghāḥ* “through the long days” of c).

I.141 Agni

See published intro. for discussion of enjambement and other special effects in this hymn.

I.141.1: On *yáto jáni* see comm. ad III.10.6; the phrase could also be rendered here “as soon as he was born.”

Most tr. take the subj. of *úpa hvarate* to be the same as that of *sādhate*, namely the thought (*matíḥ*), and therefore must take the subord. cl. as concessive (more or less “even if / although it moves crookedly, it goes straight ...”). However, I take Agni as the subj. of *úpa hvarate*, which expresses the usual crooked motion of fire, and the *īm* in this clause as standing for *matíḥ*, the subj. of the main clause and the goal of *úpa hvarate*. (*īm* and *sīm* almost always have real accusative reference; see Jamison 2002, Fs. Cardona, and *īm* in 3a and 3c below.) The verbs do of course contrast -- the zigzagging motion of the fire as opposed to the straight path of the poetic thought -- but this is the result of the different natures of their two subjects, which are acting in tandem for the success of the sacrifice. That *hvārā-* is used of Agni in 7b supports taking him as subj. of *hvarate* here. However, see comment in I.142.4 below.

Most tr. take the streams of truth (*ṛtāsya dhénā(h)*) as acc. pl. and the object of *anayanta*, and supply various subjects: e.g., Ge “wise ones” (*dhīrāḥ*), largely on the basis of V.45.10, which has *dhīrāḥ* as subj. of *anayanta*. Since that passage in a Viśve Devāḥ hymn has no other points of contact with ours, I see no reason to supply an otherwise unrepresented subject here and to bump the possible surface subj., fem. pl. *dhénāḥ*, into the acc. I would adduce rather I.148.3 (also Dīrghatamas), where Agni is the obj. of *prá ... nayanta*, as I think he is here. It is true that I.146.4 has *dhīrāsaḥ ... kavāyah* “clever poets,” who guide (*nayanti*) Agni’s step (*padām*), which would give a nearer parallel for the *dhīrāḥ* supplied here by Ge (who oddly doesn’t cite this nearby passage), but the phrase “streams of truth,” that is, true poetic formulations, seems to me just another way to refer to “clever poets” and actually supports taking the fem. pl. expression as the subj. and Agni as obj.

I.141.2: This verse concerns the three forms of Agni, with “form” expressed by neut. *vāpuḥ* in a, which should be supplied with *dvitīyam* in b and *tṛtīyam* in c. (Contra Ge [WG], who take *vāpuḥ* as an adjective and the ordinals as adverbs. Since *vāpuḥ* is clearly nominal in 1a, an adjectival usage in the following vs. would be surprising, esp. as there are, in my opinion, no certain exx. of adjectival *vāpus-*.)

In a I take *prkṣāḥ* as the gen. sg. of *pṛkṣ-*, rather than the nom. sg. of *pṛkṣā-* (so Gr, Old [SBE], Ge, WG) or acc. pl. of *pṛkṣ-* (so Re). It is a descriptive or qualifying gen.: the “wondrous form of nourishment.” It is not entirely clear what this phrase refers to, but I would suggest that it is the plants, which are often said to contain the fire in embryonic form (thus wondrously). In this form he is “abounding in food” both because the plants feed the fire and because plants supply nourishment to the living world. Such a qualifying gen. is also found in *vṛṣabhāsya* in c acdg. to my interpr. (but not those of others). The

root noun *pr̥kṣ-* is probably found also in *pr̥kṣúdh-* in vs. 4 below, qualifying plants (*vīrúdhah*), which supports my interpr. here.

The second wondrous form is the fire in the waters, which has come to be identified with Apām Napāt. The “sevenfold-kindly (*saptásivāsu*) mothers” must be the seven streams. The compound is oddly formed, and Gr, inter alia, suggests reading **saptá* **sivāsu*, an unnecessary emendation, particularly if we maintain the compound reading of *dásapramatim* in d (see immed. below).

The third form of fire, presented in cd, appears to be the ritual fire produced by the kindling sticks wielded by the fingers, which are characterized, as so often, as “young women” (*yóṣaṇah*). The cmpd. *dásapramatim* ‘having ten(fold) forethought’ suffers from the same formational oddity as *saptásivāsu* and has been even more eagerly emended to **dása* **prāmatim* (see, e.g., Old, Noten, who keeps *saptásivāsu* as a cmpd but supports emending the other to two words). The *dása*, liberated from the compound, would qualify the fingers, as often. However, in my opinion we must either keep both compounds or neither, and since the cmpds are the more difficult readings and Dīrghatamas is a tricky poet, I see no reason to emend.

Note that *janayanta* in b rhymes with *anayanta* in 1d in the same metrical position.

I.141.3: This verse describes several mystical and, probably, mythical productions of fire, couched in the present (clear pres. *mathāyāti* in d, which suggests that the injunc. *kránta* in b has the same temporal value). I do not completely understand either of the scenarios, esp. fire’s hiding in the mixing vessel in cd.

Ge’s suggestion that the first hemistich deals with Agni in the waters is supported by the parallel passages he adduces, and so it may continue the theme of 2b.

In d *mathāyāti* is entirely ambiguous between ‘churns, rubs’ (Old [SBE] ‘produces ... by attrition’, Ge ‘ausreibt’) and ‘steals’ (Re, WG), and both are appropriate: ‘churns’ would continue the theme of fire-production, but ‘steals’ would refer to Mātariśvan’s theft of fire from heaven. No doubt both are meant, and there is both a mythical and a ritual application of the passage. Cf. I.148.1 *máthīt ... mātariśvā*.

I.141.4: This vs. concerns the production of fire by the friction of the two kindling sticks.

His “highest father” (*pitúḥ paramāt*) is probably Heaven (Dyaus Pitar), as most take it; it also contrasts with the “depth” (*budhnāt*) that is his source in 3a. The pāda-final *pári* is probably not to be construed with the verb (*prā*) *nīyate*, though *pári* is common with *√nī*, but, as often, governs the abl. (*pitúḥ paramāt*), despite the intercalation of the verb between the abl. phrase and this postposition.

The hapax *pr̥kṣúdh-* in b is variously explained. E.g., Old (Noten) suggests that it is modeled on the immediately following *vīrúdh-* and also *śurúdh-*. In the published tr. I followed Humbach’s explanation (*Gathas* [1st ed. 1958] II.28; accepted by Narten, YH p. 161), which takes *-udh* as a zero-grade root noun belonging to widespread PIE **√yedh* ‘convey’, otherwise unattested in Indo-Aryan. But I now no longer believe that etymology (see my 2020 “Vedic *iṣudhyá-* and Old Avestan *iṣud-*, *iṣūdiia-*: The Aim of Praise” [Fs. Lamberterie]), and I would now follow Old’s suggestion. Note the progression and phonetic play in the pāda: *ā pr̥kṣudho vīrúdho dáṃsu rohati*. I would also slightly change the published tr. from “nourishment-bringing” to “nourishing.”

On *dāmsu* see I.134.4. As noted there, I take it as a loc. pl. to the root noun *dām-* ‘house’ (so Old [SBE], tentatively Ge, WG), rather than as an adverbial deriv. of *√dams* ‘be wondrous’ (Gr, Re). Here it presumably refers to the domestic fire established in the house(s); since words for ‘house’ in the plural often refer to only a single domestic establishment (presumably because it is made up of several buildings), “in the house” rather than the publ. “in the houses” is also possible.

Pāda c contains a curiously doubled *yád* in a single clause (*ubhā yád asya janúṣaṃ yád ínvataḥ*), which has attracted little attention. Old (SBE) notes it but makes no attempt to explain it, and otherwise the standard tr. (including mine) do not reflect or mention it. The exception is WG, who take the pāda as a kind of stuttering set of false starts: “Wenn die beiden seine Geburt -- wenn (sie überhaupt) -- antreiben.” This seems to be the only way to represent what the text has, since it is impossible to manufacture a separate clause dependent on the second *yád*. But since both clauses in the WG rendering share subject, object, and verb, and the adverbial addition “überhaupt” reflects nothing in the Skt., it may be just as well to pass over the doubling in silence, assuming that the second *yád* comes from the occasional tendency for the relative pronoun to immediately precede a pāda-final verb. Cf., e.g., for this verb stem, I.55.4d *kṣēmeṇa dhénām maghāvā yád ínvati* (also V.28.2c, VIII.13.32c ... *yám ínvasi*).

Pāda d contains an augmented impf. *abhavat*, which contrasts with the presents *nīyáte* (a), *róhati* (b), and *ínvataḥ* (c), esp. since it begins *ā́d íd* “just after that,” which suggests that the past tense action of d should follow the actions of the earlier part of the verse. Most tr. (Old [SBE], Ge, Re, WG) take c and d together, separate from ab, which produces a jarring sequence of tense: “when they spur on ..., then he became ...” I connect c rather with ab and indeed with vs. 3 and start a new syntactic sequence with 4d, which is continued by the preterital expressions *ā́d íd + ā́viśat* in 5a, *ví vāṽṛdhe* in 5b, and *áruhat* in 5c. Although this is not a complete solution, in that the *ā́d íd* “just after that” of 4d and 5a begs for a sequentially prior preterite, it keeps the disharmonious sequence of tenses from inhabiting the same sentence. This division is also compatible with the syntactic enjambement characteristic of the hymn.

I.141.5: The mothers (*mā́tṛīḥ*) of pāda a contrast with the father (*pítṛíḥ*) of 4a.

The standard tr. take *ví vāṽṛdhe* in b as the verb of a rel. cl. begun by *yā́su* in a. The problem is that *vāṽṛdhe* is not accented. Ge suggests that it lacks accent because the rel. pronoun is in a different pāda, but this separation does not pose problems elsewhere (cf., simply within this hymn, 3ab *nír yád* ..., ... *kránta*, 3cd *yád* ..., ... *mathāyāti*, 6cd ... *yád* ..., ... *véti*); Old is in favor of emending to *vivāṽṛdhé*. Taking the text as given, I construe the rel. clause with *yā́su* as a nominal locational clause; similarly (but independently) WG with a different distribution of elements. It is true that there are several *yā́su √vṛdh* passages; cf. esp. II.13.1 ... *apāḥ* ... *ā́viśat yā́su vārdhate* “he [=Indra] entered the waters, within whom he grows strong” (cf. V.44.1), but I think we must take the lack of verbal accent more seriously than these few phraseological parallels.

Again, contrary to most, I attach c to ab and take d separately, on the basis of the distribution of verb tenses.

I.141.6: Another instance of *ā́d íd*, which seems, in this hymn, to mark the progress of the ritual.

With *bhágam iva papṛcānāsaḥ* in b compare *bhágam ... papṛcāsi* in 11b. The difference of voice is significant: in 6b the mortal officiants “(en)gorge themselves (med.) with/on good fortune” while in 11 Agni engorges (i.e., swells)(act.) good fortune for us.” The similarity of these striking expressions makes it unlikely that *bhágam* in 6b is primarily the goal/object of *ṛñjate*, as Ge, Re, WG take it.

The phrase *mártam śámsam* may be a de-compounded version of *nárāśámsa-* with lexical substitution. Note that *nárāśámsa-* is found in the next hymn, the Āprī hymn I.142.3. See also *devānām śámsam* in 11d of this hymn. The double object of *véti* -- *devān* and *mártam śámsam* -- is a zeugma of sorts, made possible by the fact that $\sqrt{vī}$ can take both animate and inanimate objects.

I.141.7: I take this entire verse as dependent on vs. 6. It is full of rare and unclear words, but the pile-up of descriptors of the violently moving fire is exhilarating.

In b *hvārā-* (to \sqrt{hvar} ‘move crookedly, twist’; cf. *hvárate* in 1c) is taken by Ge and Re as ‘bird’, but I am persuaded by Roth’s suggestion, enshrined in Gr (and see Old [Noten]), that the referent is a snake -- the creature of “twisting/serpentine motion.” The quality held in common between the *hvārā* and fire is *vákva-*, derived from the root $\sqrt{vañc}$ ‘undulate, curl, meander’, and the image is that of fire winding its way through the dried-up plants that serve as its fuel. From this tr. it is clear that I take *jarāṇā* as *jarāṇāḥ*, with the Pp., and as an acc. pl. fem. ‘old (things = plants)’. Gr. identifies it as an instr. sg., and this interpr. is followed by others (most recently by WG), but the sandhi situation, with *-ā* before *a-* essentially excludes it (though see Old [Noten] who finds it barely possible).

The sense of *ánākṛta-* is likewise unclear, though its formation is transparent. The tr. of Old (SBE “whom it is not possible to drive to a place”; sim. Noten), Ge (“ohne Antrieb”), Re (“sans y avoir été poussé”) seem to reflect a sense of the common idiom \sqrt{kr} ‘bring here’ extended to ‘push/force (here)’, with the ‘here’ elided. However, in his n. 7b, Ge adduces PB XXIII.13.4.5, which concerns wild animals that are *anākṛta-*. Caland tr. ‘unfostered’, but I see another possible extension of ‘brought here’, namely ‘kept here’ → ‘confined’, with its negative then ‘unconfined’. This certainly fits the PB passage and also matches Sāy’s gloss *anivāritaḥ* (Ge’s tr. ‘ungehemmt’).

The second hemistich is entirely couched in the gen., save for the loc. *pátman* ‘flight’ off which all those genitives hang. I construe *pátman* with *ánākṛtaḥ* in b. Although ‘flight’ may seem to support the ‘bird’ interpr. of *hvārā-* in b, note that *hvārā-* is in a simile syntactically independent of the rest of the sentence; moreover, Dīrghatamas hardly feels constrained to confine himself to one image at a time.

dakṣúṣaḥ is a pseudo-perfect-participle, like the pseudo-desiderative-adjective *dákṣu-* (II.4.4) to \sqrt{dah} ‘burn’. Both are hapaxes.

On *-jaṃhas-* see comm. ad VI.12.2 and VI.3.5.

vyādhvan- can contain either *ví* ‘without’ or *ví* ‘through, wide(ly)’ (so also Old [SBE], Re). I have opted for the latter, but others (Ge ‘wegelosen Flug’, WG ‘Wegelosen’) for the former. Either would work, though the phrase *rāja ā* seems to me to express extent of space and to favor my interpr.

I.141.8: What quality of a chariot is expressed by the ppl. *yātā-* to $\sqrt{yā}$ ‘drive’ is unclear. Because of the phrase “made by dexterous (men),” which seems to refer to the chariot as

object rather than to its current situation, I suggest that it's a particular type of chariot, perhaps one made for long journeys. But it is also possible that it refers to the current situation, in which case it could mean "like a driven chariot" (i.e., one that is speeding).

Pāda c is full of difficulties, esp. the unaccented *dakṣi* and the semantically anomalous *sūrāyaḥ* 'patrons'. There is also the question whether the pāda is syntactically independent or forms a clause with d. With Ge (but contra most other interpr.) I take cd together. Otherwise pāda c would be a nominal clause of some sort, but the introductory *ād* (recalling *ād id* of 5a, 6a) seems to call for a dynamic verb. As for the "black patrons" I take this to be, as it were, a two-part phrase: "black" first refers to the plumes of smoke, picking up *kṛṣṇājaṃhas-* 'having black plumage' in 7c; the clouds of smoke surrounding the fire are then implicitly likened to the sacrificial patrons who would gather around the ritual fire.

What then to do with *dakṣi*? Two main solutions are found in the lit.: it is a 2nd sg. impv. (or *si*-imperative) to *√dah* 'burn' as it is in II.1.10 (Re), or it is a voc. of a nominal stem of unclear formation likewise built to *√dah* (Old, WG). Ge refuses to tr. and AiG II.1.408 floats both possibilities. The first (impv.) has the merit of matching an actual existing form, but otherwise has little to recommend it. In particular, if it forms a parenthetical independent clause it should be accented. The second (voc.) does not create syntactic problems but leaves the question of the morphology unresolved. I do not favor either of them, because either one requires 2nd ps. reference, which I think would violate the structure of the hymn. As noted in the publ. intro., the first 8 verses are couched entirely in the 3rd person describing the fire and entirely lack the word *agnī-*; both the 2nd ps. and *agnī-* are forcefully introduced at the beginning of vs. 9 (*tvāyā hy āgne*), and this 2nd ps. address prevails in the next three vss. (9–11). I find it difficult to believe that the wily Dīrghatamas would spoil his schematic division by introducing a muddled 2nd person in vs. 8. Moreover, the *asya* in 8c surely has Agni as its referent, which should probably preclude a 2nd ps. reference to him in the same pāda. Unfortunately I do not have an acceptable solution to *dakṣi*, however. With the others I take it as an unclearly formed nominal derivative of *√dah*, but as the 1st member of a tatpuruṣa with *sūrī-*, hence 'the patron(s) of the burning one', but this is a solution of desperation and carries no conviction.

The grammar of d is scarcely less contorted than that of c. The verb *īṣate* belongs to a clear thematic stem and should therefore of course be 3rd sg., but the apparent subject, *vāyaḥ*, is ordinarily a nom. pl. 'birds' to the stem *vī-*. To make the grammar work, it needs to be interpreted as a neut. s-stem collective in the nom. sg. ('bird flesh, poultry'; cf. Re's 'la gent-ailée'), a formation that is found later (already AV) but not otherwise in the RV. Moreover, if pāda c is to be construed with d, its pl. subj. *kṛṣṇāsaḥ ... sūrāyaḥ* also clashes in number with the verb *īṣate*. My somewhat uneasy solution to this is to assume that *vāyaḥ* here has been reinterpreted as a singular collective and, as the noun closest to the verb, has determined the number of the verb. But since *vāyaḥ* refers to the collectivity of birds, the pl. *kṛṣṇāsaḥ ... sūrāyaḥ* can match it in sense and therefore function as subj. of *īṣate* as well. (Another possible solution is to assume that *īṣate* has been assimilated to the athematic formations of similar shape, *īrte*, *īrate* and, esp., the near rhyme *īṣte*, *īṣate*, with 3rd plural in *-ate*. This does not seem impossible to me, esp. since their 1st sgs. in *-e* would coincide.)

The publ. tr. reflects a double reading of initial *śūrasya* ‘of a champion’ with partial emendation to **śūryasya / śūrah* ‘of the sun’ in its 2nd reading. In my view, the juxtaposition across pāda boundary of *śūrāyaḥ* and *śūrasya* was designed to bring to mind a third term, the sun, sharing its initial with *śūrāyaḥ*, its gen. case with *śūrasya*, and its -*ūr-* with both. Though the patrons might shrink from the attack of a champion, birds are more likely to shrink from the flaring of the sun, either retreating from its heat or avoiding flying too high and therefore too near it. This double reading helps unify the two-part NP of c, the black (plumes) = patrons, and takes us back to the flight of the bird Agni in 7cd.

I.141.9: After the extravagances of the last few vss., this vs. brings us back to earth and opens the last section of the hymn, addressing Agni and praising his benefits.

The morphological and phraseological parallelism of *vibhūḥ* (c) and *paribhūḥ* (d) are difficult to convey in tr. On the basis of the *viśvāthā* ‘everywhere’ with the former and the passages containing *viśvā* (...) *paribhū-* (I.91.19, II.24.11, III.3.10), I have supplied ‘everything’ with the latter (so also Ge, WG; sim. Old [SBE]).

As in I.37.9 I construe *ānu* with preceding *sīm* “following them.”

I.141.10: *dhīmahi* in d is probably has a slight double meaning: we want to acquire Agni like good fortune, but in the technical ritual sense we want to install / establish him. For the technical sense see *dādhānaḥ* in 13b.

There is also a pun on *bhāga-*, both ‘good fortune’ and the name of the god, a pun continued in the next vs.

I.141.11: Ge (also Kü 306) takes pāda a separately from b and supplies ‘give’, but this seems entirely unnecessary.

For *bhāgam* √*prc*, see comments ad 6b. *bhāga-* also participates in a nexus with the previous verse: in 10d it appears in a simile, but here it has been promoted to the “real” object to which other entities are compared. In the first hemistich the common noun usage of the stem is dominant, but in the 2nd it is the god Bhaga.

Contrary to Ge (/WG/Kü) but with Old (SBE) and Re, I take *dāmūnasam* as an adj. with *rayīm* rather than as an independent nominal referring to the master of the house (Ge ‘Hausgebieter’).

Note *devānām śāṃsam* here matching *mārtam śāṃsam* in 6d. As there, the object of the verb *yāmati* here involves a zeugma, of animates (the races of gods and men) and the inanimate laud of the gods.

The last clausal tag in d, *ṛtā ā ca sukrātuḥ* could simply be taken as a nominal sentence with copula to be supplied (“and he is of good resolve in truth” vel sim.). However, I supply a passive form of √*yam* (presumably ppl. *yatāḥ*) corresponding to the act. subj. *yāmati* of c. Cf., for *ṛtā ā*, VI.7.1 *ṛtā ā jātām* “born in truth” and, for *yatā-* + LOC, VIII.92.7 *viśvāsu gīrṣv āyatam* “held in place amidst all your hymns” (also V.44.9). I recognize that this extra material may be unnecessary, however. On the other hand, see comm. on I.144.3 for possible support.

I.141.12: The acc. goals in d, *vāmām suvitām vāsyah*, may be a triplet (with *vāmām* and *suvitām* separate; so Ge, Re, WG); it is not easy to tell and has little effect on sense.

The hapax splv. *nēṣatama-*, to the unattested *a*-stem **nēṣa-*, is generally taken as agentive (‘best leader[s]’; e.g., Ge “mit den besten Führen”), but I see no reason for this. The expression seems parallel to II.23.4 *sunītībhīr nayasī* “you guide with good guidance,” X.63.13 *nāyathā sunītībhīḥ*, where agentive readings are out. (Note that in both passages the abstract is in the plural, as here.) Moreover, since Agni is doing the leading, he would not need additional leaders (though WG suggest that they are the horses in pāda a). In any case note the ring with *anayanta* in 1d.

I.141.13: The *arkaīḥ* of pāda a can refer both to the chants of the ritual participants and to Agni’s flames, though only the first sense is registered by most tr. In the second sense the instr. is not an agentive/instrumental phrase with passive *āstāvi*, but an instr. of accompaniment/description.

The “further forward” (*pratarām*) of b presumably refers to the installation of the new Āhavanīya fire, carried towards the east. The *dādhanāḥ* of this pāda forms a ring with *dhāyī* of 1a.

In cd the mixed 3rd and 1st ps. pl. subject *amī ca yé maghāvāno vayāṃ ca* “both those who are our bounteous (patrons) and we (ourselves)” takes a 3rd pl. verb, *nīṣṭatanyuh*. I take *nīḥ* with the frame (“extend outward”) and *āti* with the simile (“extend beyond”).

I.142 Āprī

I.142.4: *mātīḥ ... vacyāte* “the thought is twisting its way” gives potential support to the interpretation of *ūpa hvarate* in the previous hymn I.141.1 as having *mātīḥ* as its subj. (contrary to my view), but the other considerations raised ad loc. weigh more strongly for me. As for *vacyāte*, the “passive” accentuation of this apparently intrans. verb of motion is treated at length by Kulikov (-*ya*-presents, pp. 218–23), who acknowledges the standard functional interpr. of this pres. but attempts (rather too ingeniously in my view) to take it as originally passive (“is being directed towards you” in his tr.). Since *√vañc* seems to me to express precisely *non-direct(ed)* action, this interpr. does not capture the sense. I do not have a good explanation of the suffix accent, beyond noting that there are other non-passive medial -*yá-* formations, most notably *mriyāte* ‘dies’, that have failed to retract the accent.

I.142.5: Ge (/WG) treat this verse as containing an anacoluthon, with the *plural* pres. part. *strṇānāsaḥ* modifying the 1st *singular* pres. *vṛñjé*: “(We) strewing ..., I twist ...” This seems unnecessary to me. I take the participle as predicated in a main clause, with the *vṛñjé* clause parallel: “They ... are strewing the ritual grass; I twist (the grass) ...” Although predicated present participles are much rarer than their past participle equivalents, they are not non-existent: the commentary so far as identified a fair number of examples that can be so interpr. and whose alternative interpretations are forced.

I.142.7: The part. *bhāndamāne* is the only verbal form of this root outside a small group of passages in III. Our passage is clearly based on III.4.6, also an Āprī hymn. Our *ā bhāndamāne upāke, náктоṣāsā supésāsā* has been expanded into two dimeter pādas from the Truṣṭubh in III.4.6 *ā bhāndamāne uṣāsā upāke*.

Ge takes the two duals *yahvī* ... *mātārā* as signalling two different relationships between Night+Dawn and truth, depending on chronology – both mothers and daughters (supposedly *yahvī*). This interpr. doesn't pass for the repetition of the pāda in X.59.8, where it refers to Heaven and Earth (see comm. ad loc.), though Ge deploys the same tr., and it seems too tricky here.

I.142.10: On *turīpa-*, whose sense is fairly clear but whose etymology is not, see EWA s.v. It is found only in Āprī hymns, this one and III.4.8=VII.2.9.

purú vāram is emended by most to the bahuvrīhi *puruvāram* 'having many choice things', but there seems no reason not to accept the text as given. (The odd Pp. reading *vā āram* can be ignored.)

I.143 Agni

I.143.1: I now find 'seasonal, at its season' a somewhat misleading tr. for *ṛtvīya-* in a ritual context and would substitute 'at the proper time' here; see comm. ad III.29.10, X.28.5.

I.143.2, 4: The two examples of *majmánā* (2c, 4b), both characterizing Agni (in my opinion), should have been rendered in the same way in the publ. tr., rather than as by "might" and "greatness" respectively.

I.143.3: The bahuvrīhi *bhātvakṣasaḥ* in c is generally taken as a gen. sg., modifying Agni, who is amply represented by genitives in b and in the two forms of *asyā* in a. I prefer to take it as a nom. pl. modifying the beams (*bhānāvah*) that remain the subject of the sentence. However, either interpr. is possible.

The rest of pāda c presents other difficulties: it contains two apparent nominatives, sg. *aktúḥ* and pl. *sindhavaḥ*, both apparently part of the same simile. Moreover the prep./prev. *āti* has nothing to govern or construe with. Old allows an emendation to acc. pl. **aktūn*, producing the prep. phrase *āti *aktūn* "across the nights," which produces good sense. Ge refines this by suggesting that there is really a word haplology from **āty aktúm aktúr*, with *aktúr* and *sindhavaḥ* forming what he calls elsewhere a loose karmadhāraya, tr. "gleich dem Farbenspiel der Flüsse" (sim. Re "comme la surface-oïnte (des) fleuves"). Since both also render the haplologized **aktúm /aktūn* as 'night(s)', they are also silently assuming a pun on *aktú-*, both 'night' and a derivative of *√añj* 'anoint, adorn'. My interpr. also assumes a haplology of **aktūn* (or *aktúm*), in order to account for the *āti*, which several times appears with an acc. of a word for 'night' (VI.4.5 ... *āty ety aktūn*; cf. also *āty aktúbhiḥ* with instr. I.36.16; with acc. pl. *kṣapāḥ* VIII.26.3, X.77.2). For *aktúḥ*, however, I suggest very tentatively that we are dealing with a gen. sg. to a (pseudo-)-(t)ar-stem to the 'night' word (see Nomen in idg. Lex. 505 for a few apparent *r*-stem forms elsewhere) -- hence, "the rivers of the night." If this morphological suggestion seems too radical, the "loose karmadhāraya" interpr. of two nominatives might produce the same effect. In any case, the expression is reminiscent of the curious phrase *aktúr apām* "the 'night' of the waters" in II.30.1.

I.143.5: *senā-* can mean either ‘weapon’ or ‘army’. Despite the publ. tr. (and most other tr.), ‘weapon’ might work better with *aśāniḥ* ‘missile’ than ‘army’.

I.143.6: The verb *āvārat* in b is morphologically problematic. Given the context, its root affiliation is surely to \sqrt{vr} ‘choose’ rather than to \sqrt{vr} ‘obstruct, hinder’ (despite nearby *vārāya* [5a] belonging to the latter). But forms to \sqrt{vr} ‘choose’ are overwhelmingly medial -- save for a tiny collection of forms resembling this one, with the preverb *ā*, full-grade of the root, an apparent thematic vowel (which is more likely the subjunctive marker), and act. endings: *āvārah* VIII.13.21, 19.30. In the publ. tr. I render both as “you (will) choose,” but it is possible that “you (will) grant” would be better. The answer depends on what gave rise to these active forms. By one scenario we might view them as contrastive actives generated to the middle, specifically the middle root aorist found in a few forms like (*ā ...*) *av^ari* (IV.55.5). In that case the complementary reciprocal active sense to medial ‘chose’ would be ‘grant’. However, there is another possible pathway to the act. forms, suggested by Dīrghatamas’s own usage. In I.140.13 the final VP is *iṣaṃ vāram ... varanta*, which I tr. “they will choose refreshment as their boon (for us?).” *varanta* is a well-formed 3rd pl. med. subj. to the root aorist; however, because of its *-anta* ending it could have been interpr. as an *-anta* replacement to an active form (**varan*) of the same meaning (for *-anta* replacements see Jamison 1979 [III 21]). On this interpr., further act. forms could have been generated to this supposed act. stem. Although this explanation might work best for the form in this hymn (as opposed to those in VIII) because it is also a Dīrghatamas product, the problem is that our form here pretty clearly means ‘grant’ not ‘choose’, as the scenario would suggest. (Unless of course *varanta* in I.140.13 actually does mean ‘grant’, which is not impossible.) In short, these forms are morphologically puzzling and their meaning(s) not entirely clear.

I.143.8: With most interpr., I take unaccented *iṣṭe* at the end of c, also found at the end of its pāda in VI.8.7, as a voc. to a *-ti*-stem, built to $\sqrt{iṣ}$ ‘seek’. Although such a form and usage would be unusual, Ge’s suggestion, that it is truncated from **iṣṭébhiḥ* (Ge ‘lieben’), seems less likely. See Old’s scathing criticism of the same emendation ad VI.8.7 in ZDMG 55.296 (=KlSch. 755).

I.144 Agni

I.144.3: This verse contains a number of elements reminiscent of I.140 and I.141. E.g., Agni’s wondrous form (*vāpuḥ*) is found also in 141.1, 2; the repeated transverse movement of the kindling sticks, expressed by the intensive part. *vitāritratā* here, echoes *tarete* in 140.3; and *bhāga-* reprises the numerous exx. of that stem in 141 (6b, 10d, 11b). The opening of c, *ād īm*, reminds us of the ritual-ordering expression *ād īd* in 140 (4d, 5a, 6a; cf. simply *ād* in 8c). The *īm* in our pāda c is functionless; that is, there is no possible acc. role it can fill in its clause, and it may have been substituted for **īd* because of the 2nd position *īm* opening the next two verses (4a *yād īm*, 5a *tām īm*).

I differ from the standard tr. in my interpr. of the rest of cd. The others divide the two clauses at the pāda boundary, with *sām asmād ā* belonging with the rest of c. This would of course be the default syntactic division. However, this assumes that *sām* is construed with *hāvyaḥ* ‘to be invoked’. But $\sqrt{hū}$ is not otherwise combined with *sām*, and

moreover preverbs should be unverbated with gerundives (e.g., *vihāvya*- II.18.7). To my mind, the material beginning with *sām asmād ā* belongs with d, and the *sām* that opens it is repeated right before the verb in d (*sām ayamsta*). This repetition indicates a complicated structure, and, in my opinion, the whole also bears a complicated relationship to 141.11. The repeated *sām* signals two different uses of the verb *sām ayamsta*. The first is transitive, with ‘reins’ as object (*vólhur ná raśmīn* “... (as if) holding firm the reins of a draught-horse”), and it matches the similar expression in 141.11 *raśmīṃr iva yó yāmati* “who will hold [them] fast like reins,” though with a different voice, tense stem, and mood of \sqrt{yam} . The voice difference is crucial, because act. *yāmati* in 141.11 can only be transitive, whereas med. *ayamsta* admits both transitive (as in the simile here) and passive interpretations; for the latter, see nearby I.136.2 *pānthā ṛtāsya sām ayamsta raśmībhiḥ*. And that is what I think is found in the frame of this passage: Agni, who is compared to a chariot-driver actively holding the reins in the simile, is in turn held by us in the frame, with a rare but not unprecedented abl. agent *asmād ā* with the passive sense of *ayamsta*. In other words, this is another example of case disharmony in similes of the type discussed in my 1982 article (IIJ 24). Taking *ayamsta* as passive in the frame also avoids the problem of the lack of second object parallel to ‘reins’, which the various tr. struggle with and mostly deal with by supplying ‘reins’ a second time.

Now recall that in 141.11 I wanted to see a similar passive value in the final tag *ṛtā ā ca sukrātuḥ* “and (who himself), of good resolve, (is held fast) in truth.” To achieve this, I had to supply (that is, invent) a passive form of \sqrt{yam} , namely the ppl. *yatāḥ* to contrast with act. transitive *yāmati*. But in 144.3, because of the dual value of *ayamsta*, both transitive and passive, it is not necessary to supply anything, but simply to read the verb twice, once each with each occurrence of *sām*. I therefore think that 144.3 reinforces my interpr. of 141.11 and that, in turn, 141.11 supports my double reading of 144.3.

Note that Old in SBE follows the syntactic division at pāda boundary in our 3cd, but in the Noten explicitly changes his view, taking *asmād ā* with what follows as I do. I cannot follow his interpr. thereof, however: “Agni lenkt die Fahrt zu uns hin.”

I.144.3–4: The pair *sāvayasā* ‘of the same vigor’ in these two verses have been variously identified: Sāy, Old (SBE, by implication), Hotar and Adhvaryu; Ge, Re, the two arms of the fire churner. I think it rather to be the two kindling sticks. As noted above, the dual participle in *vitāritratā* 3b here reminds us of the dual verb *tarete* in I.140.3, whose subj. is, by consensus, the two kindling sticks. In that same passage they are described as *sakṣītā* ‘sharing the same abode’, which matches *samāné yónā ... sāmokasā* “in the same womb ... sharing the same dwelling” in our 4b.

I.144.4: The phrase *dīvā ná náktam* is universally taken as “by night as by day” (that is, “always,” as Sāy points out), with a very extended sense of the simile marker *ná*. I take *ná* rather as the homonymous negative: “by day, not by night.” This would reflect the simple fact that the ritual fire is kindled only in the morning and draw attention to the oddity of this practice, since in everyday terms fire is more needed and desired at night, for light and warmth. The position of *ná* allows either interpr.: it is in expected 2nd position for a simile, but in my interpr. it immediately precedes the word it negates, which is standard when *ná* is not a sentential negation, but negates a single word in a clause.

I render the verb in this clause as preterital, in keeping with the Pp. reading *yúvā ajani*. However, to match the presential *saparyátaḥ* of pāda a and the generality of the statement about his birth it would be possible to read (without emending the Saṃhitā text) *yúvā jani*, with an injunctive, which could have presential/timeless sense: “he is born ...”

I.144.5: *vríś-* is a hapax, but the generally accepted meaning ‘finger’ seems well supported by context. Though suggested etymological connections do not enforce this sense, they do allow it. See EWA II.597 and lit. referred to there.

In 5d I have followed the Pp. and tr. augmented *adhita*; however, as in 4c the sequence *návādhita* could be read *návā dhita* with injunc., which would have presential/timeless value to match the presents *hinvantī* (a), *havāmahe* (b), and *ṛṇvati* (c). Although no other unaug. *dhita* forms occur, there is no reason it should not exist.

I.144.6: Opinion is divided over whether the two females of cd are Heaven and Earth or Night and Dawn. On the one hand, the heavenly and earthly realms of ab seem to favor the former pair; on the other, Heaven and Earth are not easily movable and would find it difficult to come physically to the ritual ground. (On this issue see Jamison, Staal Mem. Vol., 2016[.]) Night and Dawn might make better sense, in that the kindling of the ritual fire occurs at their temporal intersection and so they might appear to be both present at that moment. For such a sentiment see I.146.3. *vákvarī* ‘surging, undulating’ is also a more likely epithet of Night and Dawn (with their changing light) than of Heaven and Earth. Remember Agni’s beams churning “like the rivers of the night” in the immed. preceding hymn I.143.3.

I.145 Agni

I.145.1: I take the two occurrences of *īyate* in b as passives to $\sqrt{yā}$ ‘implore, beseech’ (with putative underlying accent *īyáte*)(so also WG), not to *īyate* ‘speeds’ as most do. This echoes *tám prchata* “ask him!” that opens the verse and the two forms of \sqrt{prch} opening vs. 2.

As recognized by all, *sā nv ...* is difficult. Since a feminine subject is pretty much excluded, I interpr. *sā* as *sá ā* (already floated as a poss. by Old [Noten]). In this clause, repeating immediately preceding *īyate*, *ā* and *nú* add locational and temporal specificity. (The publ. tr. might make this clearer with “he is here and now implored.”)

Although I think the primary sense of *iṣṭáyaḥ* is ‘wishes’ (nicely contrasting with *praśiṣaḥ* ‘commands’), the secondary sense ‘offerings’ (to \sqrt{yaj}) can also be present. Although that sense is rare and usually associated with root-accented *iṣṭi-*, puns often ignore accent, and moreover, since root-accent is secondary in this class and spreading in Vedic (see Lundquist, -*tī*-stems), it is likely that there existed an old (*)*iṣṭi-* ‘offering’ that underwent accent retraction in the course of time.

I.145.2: In b *yád* can be the neut. sg. acc. object of *ágrabhīt* (so most tr.), rather than a subordinating ‘since’ as I take it. Either is possible, and there is little appreciable difference between them. If it is an acc. obj., we must supply a dummy obj. to *prchati* in

the main clause: “he does not ask about (that) which he has grasped ...” As in English (“... ask about what he has grasped ...”) this dummy obj. can be easily gapped.

In d Ge, Re, WG take the subj. to be an unidentified other man (Re “(tout homme)”), not Agni, as Old and I do. The question in part rides on *asyá*. Those favoring a change of subject may have done so in part because they wished to avoid having *asyá* be coreferential with the subject. However, this is a non-issue: there are abundant exx. of such coreferential constructions; a reflexive pronominal/adjective isn’t required. On the other hand, they may be correct in this passage, in that b opens with an overt reflexive expression *svéna ... mánasā* “with his own mind” marking Agni as subj. of the verb in that clause, and so *asyá* might be used contrastively, to mark the referent of the pronoun and the subject of *sacate* as different. On balance, though, I consider Agni still to be the subject, in part because the focus is so relentlessly on him otherwise.

I would, however, change the “resolve” of the publ. tr. to something more in keeping with the rest of the verse, perhaps “intellect, mental force.”

I.145.3: The identity of the ‘mares’ (*árvatīḥ*) is unclear; it should simply be a ritually related entity of fem. gender used in the plural, which leaves the field pretty wide open (hymns, prayers, ghee streams, etc.). It is unlikely to be the ladles (*juhvaḥ*) though they are feminine and plural, because the *tám ... tám* construction invites two different subjects, like the *tásmin ... tásmīn* constr. in 1c.

Apropos of *-praiṣa* in c, Ge (fld by WG) claims that this does not refer to the technical ritual sense of *praiṣa-* found in the later ritual. I would disagree. The word clearly is meant to mean something different from *praśís-*, also ‘command’ (though to a different root entirely), in 1c, and this verse (3) is quite ritual-centric. See further at I.180.6

I.145.4: As indicated in the publ. intro., this vs. seems meant to illustrate the secret knowledge that we are begging Agni to impart. It clearly concerns (some of) Agni’s actions at the ritual in conjunction with other being(s), but, in the usual fashion of such RVic riddling descriptions, the identity of the referents is left blank and the verbs are not sufficiently precise to define the actions. The publ. tr. gives some tentative identifications, and others are suggested by other tr.; I will not go further here.

I.145.5: As noted in the publ. intro. this vs. forms a ring with vs. 1 (so already Ge n. 5cd). Note also that *vy ábravīd vayúnā ...* “he has declared the (ritual) patterns ...” recalls *vayúnā návādhita* “he has established the new (ritual) patterns” in the preceding hymn (I.144.5).

The *īm* of pāda has no function, that is, no possible accusative reading. See *īm* in I.144.3 (though that had a possible explanation).

Because of the position of *hí* in d, contra the standard tr. I do not think that *agnír vidvān* should be construed with this last part of the verse (*ṛtacíd dhí satyáḥ*), despite the pāda break that seems to put them together. Rather the *hí* clause explains why Agni is knowledgeable and can provide the answers requested so forcefully at the beginning of the hymn.

I.146 Agni

I.146.1: The “three” and “seven” have received various identifications; mostly likely for the “three” in my opinion are the three sacrificial fires, for the “seven” perhaps the priests or, as a generic number, his flames.

Most (explicitly Old [SBE], Re) take Agni’s two parents to be Heaven and Earth, and certainly some cosmic resonance may be secondarily meant. But the repeated focus on the fire-churning sticks in the birth of Agni in Dīrghatamas’s oeuvre (see reff. in publ. intro.) and the fact that the expression *pitróṛ upásthe* is used elsewhere of Agni’s birthplace in the kindling sticks (most clearly III.5.8, VI.7.5) make it likely that they are meant here as well. If so, this provides a solution for the two gen. sg. in c, *cárate dhruváśya*. Instead of supplying yet more cosmic entities here (e.g., Old “and of whatever moves or is firm”), I take the two gen. singulars as specifying the two entities making up the pair in the dual gen. *pitróḥ* “of the two parents [lit. fathers]” in b, with one kindling stick held firm and the other moving across it to produce friction. I take the *asya* in c as referring to Agni; because it is unaccented, it should be used pronominally not adjectivally (despite WG “... dieses Gehenden”), and it should refer to something already in the discourse (as Agni is).

I.146.2: This verse seems to transition from narrow reference to the growth of the kindled fire at the kindling sticks to an enlarged frame involving Heaven and Earth. I take the dual *ene* in pāda a as referring still to the kindling sticks of vs. 1, but as Agni stands up in b, he reaches further -- putting his feet down on the back “of the broad one” (*urvyāḥ*), a clear reference to ‘earth’, and licking the udder, presumably of heaven -- thus filling the intermediate space between them.

I.146.3: This verse has another unidentified dual as subject, here almost surely Night and Dawn (cf. also I.144.6), although a simultaneous reference to the kindling sticks cannot (and should not) be excluded.

The contrastive *saṃcárantī/ ví carataḥ* is hard to capture in tr.

I.146.4: Pāda c is universally taken as a reference to Agni’s flight, his hiding himself in the waters, and the gods’ discovery and recovery of him there. I find this unlikely, but I do not have a better idea.

nṛ̥ṇ at the end of d is problematic. Ge takes it as a truncated gen. pl., hence “the sun of men,” but I would prefer to avoid such grammatical inventions. Sāy takes it as a dat. (*nṛ̥ṇ nṛ̥bhyaḥ*), and Old (SBE and ZDMG 55: 286–88 [=KlSch 745–47]), with a delicate adjustment of that interpr., states that *nṛ̥ṇ* can “stand for” different cases, in this instance the dative, though it is an acc. pl. in form. This interpr. makes it functionally parallel to *ebhyaḥ*, hence Old’s (SBE) “He the Sun became visible to them, to the men.” I would prefer to keep it functionally the acc. pl. it appears to be formally, and I therefore construe it as a goal with *sūryaḥ* “the sun towards men.” The syntax of my interpr. is pretty dubious, however. The same phrase, *sūryo nṛ̥ṇ*, is found in III.14.4, where it is also possible to wring out an acc. pl. interpr.

I.147 Agni

I.147.1: All other tr. take *dadāsúḥ* as preterital (e.g., Ge “... haben ... aufgewartet”), but Kü (243) interprets this pf. stem as having presential meaning with an implication of past action (“präsentische Bedeutung mit Implikation einer vergangen Handlung”), and I take both this verb and injunc. *raṇáyanta* in d as presential, establishing the ritual situation as so often in Dīrghatamas’s hymns. The present moment continues in vs. 2.

I.147.2: Ge (/WG) and Re take *tanvām* in d as a reflexive pronoun and tr. “I extol myself” (e.g., Re “(étant) ton laudateur, (c’est en fait) moi-même (que) je loue.”) Although I accept this as a secondary reading, I think the primary sense of *tanvām* must be ‘body’ here, namely the body of Agni. Such is Sāy’s interpr., followed by Old (SBE). The expression seems just a variant of V.28.4 *ágne vānde táva śríyam* “O Agni, I extol your glory”; moreover, *tanvām* is found in a number of Agni passages referring to ritual procedures done on/to the body of the fire (e.g., III.18.4, VI.11.2, VII.8.5).

I.147.3: In this vs. (which is also repeated as IV.4.13, where it is transparently secondary; see comm. there) the masc. pl. rel. *yé* seems to have a referent in the main cl. expressed by a form of the *sá/tám* prn., as would be expected: acc. *tān sukṛtaḥ* “those of good (ritual) action.” The publ. tr. reflects this apparently transparent relative / antecedent relationship: Agni’s protectors are themselves protected by Agni. However, the problem is that the *sukṛtaḥ* would normally be the sacrificers, not Agni’s protectors (*pāyāvah*), who should be helping Agni to protect the *sukṛtaḥ*. Hence the move by Ge and Re to supply a parenthetical “with them” in the main cl.: “your protectors who guarded ..., (with them) he guarded those of good action.” The instr. pl. *pāyúbhiḥ* is elsewhere used in constr. with an impv. ‘protect!’ addressed to Agni (I.31.12, 95.9, 143.8). In contrast to Ge and Re, Old (Noten) argues for interpreting the syntax as it stands, and the renderings of WG and Kü (412) also do not supply an instr. in the main clause. I am of two minds; on the one hand, a rendering with supplied instr. seems to reflect the usual RVic situation better, but, on the other, syntactically the *yé ... tān* construction is unimpeachable and the poet may have been aiming to express something slightly out of the ordinary. In the end I’ll let the publ. tr. stand, but with some question.

The juxtaposition of impf. *arakṣan* in the rel. cl. and *rarákṣa* in the main cl. is striking and begs for some functional differentiation. Kü (412) tr. “schützten” and “geschützt hat” respectively but doesn’t otherwise discuss. The action of the rel. cl. took place in the (semi-)mythological past while the main cl. may refer to the ritual near-past with present relevance.

I.147.5: On the curious and isolated form *dhāyīḥ* see my disc. in Jamison 1999 (*dheyām*, Ged. Schindler, 174–75), contra Hoffmann (Injunk., 63–64), who takes it as reformed from a passive aor. (**dhāyī*). In brief, I take it instead as a 3rd sg. act. precative that has been “precativized” from a 2nd sg. root aor. opt **dhāyās*. (For details consult the original article.) Although the standard tr. (Ge, Re, KH [Injunk. 63] take the form as 2nd sg., in my view *mā́kis* only has 3rd ps. ref. (see comm. ad X.11.9).

I.148 Agni

I.148.1: As in I.141.3 the homonymous roots \sqrt{math} ‘steal’ and ‘churn’ probably both contribute to this passage, with the former in mythological, the latter in ritual context.

The identity of the second member of the hapax cmpd. *viśvāpsu-* here and in the apparently related *viśvāpsu-* (3x) is disputed. The explanation now current (accepted by Mayrhofer, EWA s.v. *psu-* and reflected in WG’s tr.) is Thieme’s derivation (Gram.Kat. 539) from \sqrt{bhas} ‘breathe’, hence ‘ganz aus Atemhauch bestehend’. However, this sense does not fit the passages very well, and for these compounds I therefore prefer Re’s derivation from *vāsu-* (EVP 3.29, 12.107–8), despite Thieme’s criticisms and the phonological difficulties. Dīrghatamas seems to play with this word: note the scrambling in pāda d *vāpuṣe*, and in his I.162.22 *viśvāpūṣam* ‘all prospering’ seems another variant. Somewhat more tenuous, note that the companion qualifier here, *viśvādevyam* twice elsewhere appears with *pūṣān-*, once also in I.162., vs. 3 (also X.92.13).

I.148.2: Kü (239), WG take *mánma* as the subj. of *dadabhanta* (Kü: “Den Spender werden wirklich nicht schädigen die Gedichte”). This avoids having to invent an unidentified set of beings inimical to Agni, but raises the question of why anyone would think that *mánma*, which are generally benign and positively related to the ritual, would harm Agni. (See, e.g., the *mánma* in I.151.6–8, also a Dīrghatamas hymn.) I don’t think it’s a question of “sticks and stones may break my bones, but words will never hurt me” - a very non-Vedic sentiment.

I.148.4: The expression in pāda a, “dissolve with his fangs,” sounds odd, but since Agni’s fangs are surely his flames, the image is less contorted than it first seems.

I.148.5: Contra the Pp., Gr, and all standard tr., I read *reṣaṇā* and take it as a cognate instr. with *reṣáyanti*, rather than reading *reṣaṇāḥ* and interpreting it as a nom. pl. The instr. possibility was suggested by Re in a note, though he follows the standard interpr. in his tr. There is no crucial difference between the two interpretations, however.

I.149 Agni

I.149.2: As noted in the publ. intro., the name Agni does not appear in this hymn, and in the earlier verses there is some ambiguity as to who the referent is. E.g. in 1c the stones (*ádrayaḥ*) might suggest Soma. In this vs. also there seems to be dual reference to Agni and Soma, esp. in the compound *jīvāpītasargaḥ* (already unusual for having three members, a rarity in the RV). The middle term *-pīta-* can belong either to $\sqrt{pā}$ ‘drink’ or $\sqrt{pyā}$ ‘swell’. In the former case the cmpd means ‘whose surge is drunk by living beings’ vel sim. and should refer to Soma (and most emphatically not to Agni, if ‘drink’ means what it usually does -- though “to ‘drink’ smoke” is an idiom in certain languages); in the latter ‘whose surge is swelled by living beings’ and should refer to Agni, whose flames are fanned by the priests (though Soma would also be possible). Most interpr. (Gr, Old [SBE], Ge, WG) opt only for the ‘drunk’ interpr. without fully explaining how the word can qualify Agni. Old (Noten) has second thoughts and suggests instead ‘swell’, which Re also goes for. I think the poet intended the ambiguity.

Pāda c, however, might seem to tip the referential scales towards Agni: fire can easily be envisioned as running forward (with its spreading flames) while not moving

from its original place of kindling. This is not an appropriate image for soma, which is always on the run after its pressing -- flowing towards the milk it will be mixed with and towards the cups from which it will be drunk. But the “remain fixed” interpr. depends on *śísṛīta* having a root affiliation with \sqrt{sri} ‘prop, fix’. So, inter alia, Gr and Kü (528), who takes it as a pf. mid. opt. to \sqrt{sri} (as do I and WG). However, other interpr. assign it to \sqrt{sri} ‘mix, etc.’ (Old [SBE] ‘has ripened’, Ge ‘gemischt(?) wird’) or an unprecedented verbal form beside root noun *śrī*, hence \sqrt{sri} ‘être beau’ (Re ‘resplendit’). Narten (“Ved. *śrīṇāti* ...,” 281 = KISch 351) is uncertain which root to assign it to, though her tentative tr. (“angelehnt bleiben dürfte”) reflects a \sqrt{sri} affiliation. In any case, if *śísṛīta* could belong to *śrī* ‘mix, prepare’, it could easily apply to Soma (“was mixed/prepared in his womb”), since Soma is regularly the object of forms built to this root. The poet may well have meant this ambiguity, which my publ. tr. does not reflect. I would therefore tentatively emend the tr. to “would still remain fixed [/was prepared] in his womb.”

Note the phonetic figure *sasrāṇāḥ śísṛīta*, with redupl. + *r*-cluster involving two different sibilants, plus *a* .. *ā* matched by *i* ... *ī*

I.149.3: *nārmīṇīm* in pāda a is a hapax. Ge and Re take it as a place name qualifying *púram* ‘stronghold’: Ge “die Burg Nārmiṇī.” This is of course a safe choice, but the fact that the pāda lacks a syllable and that each of the other pādas contains a simile marked by *ná* invite a reading *ná ārmīṇīm* “the/an *ārmīṇī*- like a stronghold.” This possibility was already noted by Old (SBE). I suggested that it is derived from *arma(ká)*- ‘flatland’ (see also Gr s.v. *nārmīn*-); the same deriv. must underlie WG “der wie auf eine verödete Palisade leuchtete,” with the meaning ‘ruined place’ attributed by some to *arma(ká)*-. If such a derivation is accepted, a few questions arise. First, *-in*-stems are always accented on that suffix, as are the *-ī*-stems that serve as their feminines (cf. *garbhīnī*- ‘pregnant’). Hence we should expect *ná *armīṇīm*. This might be easily solved by assuming the second accent was lost when *nārmīṇīm* was re-interpreted as a single word. The second question is why we need a feminine in the first place. There are several possibilities: 1) **armīṇī* refers to something inherently feminine; 2) it has been “attracted” into the fem. by fem. *púr*- in the simile; 3) *púram ná *armīṇīm* is to be interpr. as a single unit (with WG) “illuminated as if (illuminating) an *armīn*- stronghold.” If **armīn*- does mean ‘having flatland, low-lying’ or the like, the third possibility is not likely, because of the discrepancy in meanings (strongholds/fortresses presumably generally have commanding sites) -- though other proposed senses of the word might be more compatible with ‘stronghold’.

Although problems remain with *nārmīṇīm*, like many hapaxes it participates in phonetic play: note b *nārvā*, read *ná ārvā* and 2a *narām ná r*-.

I.149.5: The annunciatory *ayám sá hótā* “here he is, the Hotar ...” opening the verse is a typical final-verse signal of the epiphany of a god. Because Agni is on the ritual ground already, he doesn’t usually have an epiphany, but this phrase may indicate here the first sight of the kindled fire. The effect is particularly noticeable here because vs. 5 repeats some of the key portions of vs. 4: (4 ... *dvijánmā* ..., *vísṽā* ... / *hótā* ...; 5 ... *hótā* ... *dvijánmā*, *vísṽā*).

I.150 Agni

I.150.1: On “the great goad” as the sun, see comm. ad VI.6.6.

I.150.2: This vs. is constructed in opposition to vs. 1. In vs. 1 the poet declares himself under the protection (*śaraṇē*) of Agni (gen.) as if under that of the sun (gen.); vs. 2 contains a number of genitives qualifying a negatively perceived person, who is therefore implicitly contrasted with the genitives of vs. 1. To support this balanced structure I supply “from the protection” (**śaraṇāt*) for the genitives to depend on (sim. WG) and a verb of motion with the preverb of separation *ví* that opens the verse (hence “(I go) away (from ...)”). There are, of course, other ways to supply the supporting structure.

aninásya ‘of the one lacking force’ in pāda a recalls *iná inásya* of I.149.1b.

I.150.3: As Ge (/WG) suggest, the exaggeratedly successful mortal in ab is probably meant to be the speaker himself. I have therefore supplied *voce* from 1a. The lack of a verb in our ab keeps the description from being typed as 3rd ps.; even the *sá* can have 1st ps. ref. (see Jamison “sa figé”).

I.151 Mitra and Varuṇa

The publ. intro. gives a conspectus of the hymn, esp. the difficult first 5 vss.

I.151.1: For the ritual application of the various portions of this vs. see publ. intro. Most tr. take *gósu* and also perhaps *apsú* as the desired objects of battle (e.g., Ge “(im Kampf) um die Rinder”), but these seem to me to refer rather to the accoutrements of the soma sacrifice. The cows and the waters reappear in ritual context (at least in my view) in 4d and 5b respectively.

The standard tr. also supply a verb with pāda d, but this seems unnecessary.

I.151.3: As noted in the publ. intro., I consider the birth described here to be that of Agni (as throughout the rest of Dīrghatamas’s corpus and esp. in vs. 1 of this hymn), not of Mitra and Varuṇa (with the standard tr.). I construe the Wackernagel-positioned *vām* with *dákṣasē* in b. This *dákṣas-* is then the referent of *īm* in c.

I also take c as subordinated to d (with Re), not ab (with the others). That both c and d have 2nd du. pres. verbs (*bhárathaḥ ... vīthaḥ*) is suggestive, and the present in c does not work very well with the mythological past in ab.

I.151.4: The voc. *asura* with short final probably stands for the expected dual *asurā* (so read in the Pp. and accepted by the standard tr. and AiG III.53), though it is barely possible that only Varuṇa (or Mitra) is addressed. The numerous duals (*ítāvānau*, *ghoṣathāḥ*, *yuvām*, *yuñjāthe*) make this unlikely.

I consider the *dákṣam* in c to be Mitra and Varuṇa’s (like the *dákṣas-* of vs. 3) and take *divó brhatáḥ* as an abl. of source: \sqrt{yuj} + abl. ‘yoke from’ is a fairly common idiom.

Re takes *apáh* in d as ‘labor’ (“l’oeuvre (sacrée)”), but the accent is wrong (though see below). Both Old and Ge opt for ‘waters’ (though Ge. suggests the possibility of ‘work’ in his n. 4cd). I also think “waters” is the correct interpr.: as indicated in comm. to vs. 1, the waters here make a pair with the cows of 5b, both as ritual substances.

However, on the likelihood of a secondary neut. *apás-* ‘labor’, see comm. ad I.64.1, so this interpr. is not excluded, as a pun or an alternative.

I.151.5: The standard tr. take *mahī* in pāda a as a loc sg. (Ge ‘auf Erden’). Since loc. sg. *-ī* is extremely rare, I prefer to take it as the du. nom./acc. it appears to be, referring to the two world halves (see *ródasī* in 1c) in an unmarked simile.

In b the root noun *tújah* is grammatically ambiguous; with Gr, Ge, WG, Schindler (RtNoun) I take it as nom. pl., against Re (gen. sg.). (Old considers both nom. and acc. pl., without deciding.) The image, in my view, is of a herd of cows milling around in confusion on the ritual ground, but not raising dust as a real herd would do -- because, after all, the “cows” are really milk.

In cd, following Re’s interpr., I see reference to the times of the three soma pressings. With Re I tr. *uparātāti* as zenith, referring to the sun’s position at the Midday Pressing; *ā nimrúcaḥ* is an abl. with *ā* “until its setting,” referring to the Third (or evening) Pressing. Unlike Re I do not take *uśásaḥ* as ‘à l’aurore’ (as if a loc. sg.), but rather as an acc. of extent of time, “through the dawns,” though an abl. sg. with the preceding *ā* (Ge “(bis) zum Morgen”) might be possible -- in any case, a ref. to the Morning Pressing.

On *takvavī-* see also I.134.5. The stem occurs also in X.91.2, which is perhaps the passage in which the ‘bird’ sense is the clearest. Although ‘swoopingly/swiftly pursuing’ need not have a bird as its referent, and in our passage here the standard tr. take it as simply a pursuer (presumably human; e.g., Ge [WG] Verfolger), I am inclined to take it as a bird of prey rather than simply a hunter, because *taktá* (and other \sqrt{tak} forms) seem to be used esp. of birds and beasts considered to be like them; see comm. ad IX.32.4. In our passage the point of comparison between the cows in the frame and the *takvavī-* has to be the crying out (*svárantī*), which fits the sharp squawking of birds of prey, but not the general behavior of human hunters.

I.151.6: Pāda-final *gātúm árcathaḥ* seems to echo likewise pāda-final *gātúm árcata* in 2c, but in fact, at least according to me and the other standard tr., the similarity is misleading. In our passage *gātúm* is surely the object of du. pres. *árcathaḥ*, but in 2c *gātúm* is better taken as the object of the preceding verb *vidatam*, and *árcata* in sandhi before *utá*, which opens the next pāda, is better taken as having the underlying form *árcate* (so Pp.), the dat. sg. act. participle, rather than du. injunc. *árcataḥ*, which is technically possible. This teasing but false superimposability seems the opposite of “poetic repair” -- “poetic breakage” perhaps?

I.151.7: *vīthó adhvarám* exactly matches *vītho adhvarám* in 3d (save for the accent). Here, unlike the false identity in vs. 6 just discussed, the phrases have identical sense and reference.

In b the nominatives *kavīḥ* and *hótā* seem each appropriate to one part of the rest of the pāda: the poet to *manmasādhanaḥ* and the Hotar-priest to *yājati*. Re’s tr., with his trademark verbosity, makes this division of labor explicit.

I.151.8: I take b with c, rather than with a as do the standard tr., since the NP “the yoking of mind,” whatever it may precisely mean, harmonizes better with the thought, songs, and

mind of the rest of the verse than with the more physical manifestation of the sacrifice in pāda a. As for the meaning of the phrase, I assume that it is part of the larger conceptual complex likening the sacrifice and its various elements to a chariot and its associated elements. The yoking or harnessing of mind refers to embarking on concentrated and deliberate mental effort for the sake of the sacrifice. Cf. Mitra and Varuṇa's yoking of their skill in 4cd.

“Yoking of mind” actually contains the pl. *práyuktiṣu*, but the pl. form is probably the result of a mechanical metrical adjustment: *mānaso ná práyukti* (short-vowel instr.) is found at pāda end in X.30.1 in a Triṣṭubh cadence, and this phrase was converted into a Jagaṭī cadence here by the addition of *-su*. The other two occurrences of the stem *práyukti-* are likewise pāda-final in Triṣṭubh and end in *-ti(h)*. One of these, ... *ná práyuktiḥ*, is found two hymns after this one, in I.153.2, where I (so also Re) take the phrase as abbreviated from **mānaso ná práyukti-*, as here.

I.151.9: The voc. *nārā* in b was carelessly omitted in the publ. tr. Insert “o superior men.”³

In c the phrase *dyāvó 'habhiḥ* is rendered “the days with their daytimes” by all standard tr. However, although there are undeniable instances of pl. *dyāvaḥ* meaning ‘days’ (e.g., VI.24.7, 38.4) and *āhabhiḥ* is suggestive, I prefer ‘heavens’, which is the more common meaning of nom. *dyāvaḥ*. I.130.10 *āhobhir iva dyāuḥ*, with the nom. sg., where ‘heaven’ is the only possible interpr., supports ‘heavens’ here. The context of our passage gives no help either way: *dyāvaḥ* is conjoined with *síndhavaḥ* ‘rivers’, which would not seem to form a natural class either with ‘heavens’ or with ‘days’ (though see Klein, DGRV 2.144 for other exx. of ‘heaven’ conjoined with waters of some sort), and the statements “the heavens have not attained your divinity” and “the days have not attained your divinity” are almost equally puzzling -- though I’d give the edge of sense of the former.

I.152 Mitra and Varuṇa

I.152.1: Ge (/WG) take the “garments of fat” to be rain, though WG consider a reference to a libation also possible. Given the ritual focus of the previous and following hymns, and esp. I.151.8a *yuvāṃ yajñaiḥ prathamā góbhīr añjate* “They anoint you first with sacrifices and with cows,” I take the garments of fat to be the oblations offered to them.

Pāda b is likewise unclear, in part because the sense of *māntu-* is not entirely understood: see comm. ad IX.73.6. Assuming ‘counsels’ is a reasonable rendering, I think the point is that M+V provide us with an unending stream of good advice.

I.152.2: On the basis of *acítam bráhma* in 5c, I tentatively supply *bráhma* as the referent of *etád* here, which is the object of *ví ciketat*, and of *tád* in 3b, the object of *ciketa*. The web of neut. sg. + *√cit* is tight in these vss.; note also that our *bráhma* is touted as the ultimate weapon in the last hemistich of the hymn (7c). Pādas a and b in this verse are implicitly contrastive, so the referent of *etád* should be something that harmonizes with *mántra-*, but it cannot be *mántra-* itself, because that word is masc. Neut. *bráhman-* fills the bill.

The gen. pl. *eṣām* could be dependent on *tvāḥ* ‘many a one’ (so Ge [WG]), rather than on *etād* (Old, Re, me). In either case the referent is not clear. If it limits *etād*, as I think (based partly on *tād vām* 3b; so Old), then it may refer to the gods, esp. Mitra and Varuṇa, or to mortal poets inspired by the gods, in contrast to the hapless ‘scorners of the gods’ (*devanídaḥ*) in d. If it is dependent on *tvāḥ* I assume it refers to the general run of clueless mortals. As argued in the publ. intro., I take ab to mean that, whether or not it is comprehensible to ordinary people, speech properly pronounced by poets comes true.

Whether the four-edged and three-edged weapons have precise referents is not clear. Old and Ge [WG] state that *cáturaśrí-* is used of the *vájra-* in IV.22.2; this is actually conjecture and probably false. The bahuvrīhi *cáturaśrí-* is used without a head noun in IV.22.2a, as the object of the part. *áśyan* ‘hurling’ (or ‘shooting’). The next verse contains a form of *vájra-* (3c), but the context is not a direct restatement of 2a; in other words, the two words need not have anything to do with each other. Closer to the occurrence of *cáturaśrí-* in 2a is *ásman-* ‘stone’ in 1d (i.e., the pāda immediately before). Since stones can be hurled (cf. I.172.2 *ārē ásmā yám ásyatha*), and this is not a standard characteristic of a *vájra* (though see I.130.4, as well as Slaje’s recent assertion [Vájra: *Zur Schleuderwaffe im Rigveda*, 2022] that the *vájra* is a slingshot, specifically the projectile launched thereby), if *cáturaśrí-* has any clear referent in IV.22.2, it is probably the stone, not the mace. It is perhaps worth noting that IV.22.1c contains a string of words referring to ritual speech: *bráhma stómam ... ukthā*, which suggests at least an indirect connection between ritual speech and the four-edged weapon, as here. This leaves the three-edged weapon. Does it have a precise reference (say, a trident associated with non-divinities) or is the poet simply expressing the truism that higher numbers beat lower ones and four edges is better than three?

I.152.3: See the publ. intro. for my view of the structure of this verse. I do not believe that the four pādas need to fit into a consistent cosmological scheme, as other tr. seem to, and in particular I do not think that cd refers to the morning sun or the like.

The accent on *píparti* in d probably results from its being in an antithetical construction with *ní tārīt*, though antithetical accent generally arises when the verbs are directly adjacent.

I.152.4: The description of the Sun’s garments in c uses two technical weaving terms, one of very limited distribution. *ví√tan* describes the stretching out of a piece of (unfinished) cloth on the loom for weaving; the very rare root *√prajj* refers to the ‘abbrechen’, ‘abschliessen’ of the finished garment (EWA s.v. *PRAJJ*, flg. Hoffmann, Fs. Knobloch = Aufs. 813ff.; Rau, Weben, 18), that is, presumably, the removal from the loom and tidying up of the completed fabric. The garments (or fabrics) that the Sun is wearing here are therefore *not* completed. Ge renders *ánavaprṇā* very loosely, as ‘endless’ (“ohne Ende”) and further interprets the garment without end as time (die Zeit); WG’s tr. is scarcely more precise (“nicht abgeschlossen”) and in their n. they follow Ge’s time interpretation. But it is hardly likely that such an outré form to a root confined to technical usage (and found in the RV only here) would be used for such a simple concept, which could easily have been expressed by *anantá-*. Re’s “denués de franges” (without fringe) at least reflects the textile associations of the word (which Ge’s and WG’s do not), but otherwise seems somewhat bizarre. The poet must have something very particular in

mind: the Sun's garment is unfinished, still stretched on the loom. But what visual image corresponds to this bit of weaving lore? I am not certain but suggest that the sun is rising through mist (the garments, or, better, fabric) stretched along the horizon, and the ragged edges of this mist look like the unfinished edges of fabric still on a loom. For a similar image see I.115.4 and my comm. thereon.

This interpretation helps explain the first half of the verse, in which we see the Sun when he is going forth (pāda a: *prayāntam*) but not when he is settling down near (b: *upanipādyamānam*) -- near to the maidens presumably (a: *kanīṇām*), who are, also presumably, the Dawns. I think we need to read these participles in reverse chronological order. The settling down near the maidens happens before the visible rising of the sun, the going forth. The Sun is nestled cozily (and erotically) with the maidens below or at the horizon, and the ragged fabric provides a welcome veil of modesty over their activities.

I.152.5: The first hemistich is taken universally as a reference to the Sun, and my publ. tr. follows this understanding. However, this identification may not be very strong: although, as Ge says, the Sun is sometimes imagined as a horse, sometimes as a chariot, it can scarcely be thought to whinny (*kānikradat*) -- this detail must simply be attached because of the horse image -- and the 'high' or 'arched' back (*ūrdhvāsānu-*) may be appropriate to the path of the sun across the sky but does not fit the round shape of the actual heavenly body. Nonetheless, I don't have a better idea.

In the publ. tr. the rendering of *acīttam* in c should be "(Though it) cannot be comprehended ..." not "(Though it cannot be) comprehended ...," since the negation is plainly there. This should be corrected also in the first line of the intro. I do not understand the unusual accent (rather than expected **ācitta-*). AiG II.1.226 cites a few other examples (e.g., *amīta-*) but gives no explanation.

In the publ. tr. "their ordinance" does not sufficiently make clear that it's the ordinance of Mitra and Varuṇa (as in 4d *mitrāsya varuṇasya dhāma*), not that of the youths.

I.152.6: The son of Mamatā is, of course, Dīrghatamas, our poet.

In my view, the verse is describing the feeding of the fire with streams of ghee, the milk-cows (*dhenāvah*) of pāda a; the "same udder" (*sāsmin ūdhan*) is the fire place. Ge (WG) see the cows instead as the rains and give a more cosmic spin to the whole verse. But pāda c esp. supports a ritual interpr., as does the instr. 'by mouth' (*āsā*) in d, so characteristic of the ritual Agni.

For my transitive interpr. of *brahma-prī-* 'pleasing x with the formulation' (contra 'loving the formulation' or 'friend of the formulation' of all others, including Scar [338]), see comm. on I.83.2. In that passage the transitive value is strongly favored by context; here, given Agni's usual middle-man role as both sacrificer and sacrificed to, it is less clear. I could accept 'loving the formulation, pleased by the formulation' here.

In d the literal sense of *ā-dīti-* 'boundless(ness)' works well with the main verb *uruṣyet* 'he should make broad space'. What, if anything, the goddess Aditi is doing here is unclear to me. Ge suggests that the sense vacillates between the goddess and the abstract noun, with the goddess the obj. of *avivāsan* 'seeking to win' and the abstraction of *uruṣyet*. This seems reasonable: because Agni's mouth is the conduit of the oblations

to the gods, “seeking to win” the goddess “with his mouth” would mean attracting her to the sacrifice to consume the oblation by means of his mouth (/flames), while the abstract sense of the word expresses our own wish for boundlessness or freedom. I would now emend the publ. tr. accordingly to “Seeking to attract Aditi with his mouth, he should make broad space for boundlessness.”

Note that Aditi is identified with a milk-cow in I.153.3 below, a hymn with many verbal and ritual ties to I.151–52. There Aditi the cow herself swells (*pīpāya dhenúr áditiḥ*), while the cows in this passage cause Agni to swell (*pīpayan*).

For a quite different interpr. of the vs., see JPB’s R̥gvedic Ādityas, pp. 200–1.

I.152.7: The first hemistich, inviting Mitra and Varuṇa to come here and partake of our oblation, seems like a fuller and more straightforward version of 6d *āsāvívāsann áditim* just discussed, with the 1st ps. poet substituting for Agni as the enticer of the gods.

In cd the two fronted *asmākam* have somewhat different uses, which are not sufficiently reflected in the published tr. In c the formulation (*bráhma*) is one produced by us -- ‘ours’ in that sense. But in d we should be the recipients of the heavenly rain; we do not produce it. Ge (/WG) and Re convey the difference more clearly. I would slightly emend the publ. tr. of d to “for us should be ...,” supplying a copula with its optative value borrowed from precative *sahyāḥ* in c.

I.153 Mitra and Varuṇa

This brief hymn reprises a number of the ritual tropes found in the preceding two hymns, I.151–52.

I.153.1: In the second hemistich the clause beginning *ádha yád* raises some syntactic/interpretational issues. The standard interpr. (also incl. Klein DGRV II.127) assume that *yád* stands here for *yébhiḥ*, rendering the clause, in Klein’s tr., “and (with) what(ever) they bear among us for you with their (poetic) thoughts, (just) as the Adhvaryu’s (do).” Besides arbitrarily modifying the relative marker, this interpr. also requires supplying a 3rd pl. subj. for *bháranti* different from *adhvaryávaḥ*. I prefer to keep *yád* as a subordinating conjunction and read *ná* as having domain over the whole clause, not just *adhvaryávaḥ*. Although I am unhappy with this stretching of the function of *ná*, the other alternations seem to me more radical. For a similar use of *ná* (in my interpr.), see I.131.2fg and comment thereon. What Adhvaryus bear to a god is soma (II.14.1 *ádhvaryavo bháraténdrāya sómam*; cf. I.135.3).

I do however now note that *bháranti* with unidentified subject is found in I.151.7, where they bring songs (*gírah*) along with thought (*mánmanā*) to the gods. Given the verbal connections among these three hymns (I.151–53), I may need to rethink the interpr. here along the lines of the standard tr: “They bring you (songs) along with insights (*dhítibhiḥ*), as Adhvaryus (do soma).”

I.153.2: As discussed ad I.151.8, I take *ná práyuktiḥ* (-ir in sandhi) as short for *mánaso ná práyukti-*, as in that passage and X.30.1. I would in fact now go further and suggest that the nom. sg. *práyuktir* here is a redactional change for *práyukti*, the short-vowel instr. found at VI.11.1, X.30.1, and I would change the publ. tr. to “as if *with the yoking up (of mind).” The form would have been changed to match the two other nom. sg.s to -ti-

stems in this hemistich, *prástutir* and *suvṛktīḥ* (both given in their sandhi forms), and it would also avoid hiatus over the pāda boundary.

As for *dhāma*, I take it, as I do in I.152.4d, as an accusative of respect: “following/with regard to the ordinance.”

This verse has another reminiscence of the preceding Mitra and Varuṇa hymns in pāda c: the Hotar here anoints (*anākti*) Mitra and Varuṇa as an unidentified plural set of ritual officiants do in I.151.8 (*yuvām ... añjate*), the same verse containing the yoking of mind.

I.153.3: As noted ad I.152.6, that verse contains both milk-cows (*dhenávaḥ*) and Aditi, though not identified with each other as here. In that verse the cows cause swelling, rather than swelling themselves. Nevertheless, I see thematic connections between the passages. *áditi-* ‘boundlessness’ (with one reading of the word in I.152.6d) perhaps qualifies the swelling milk-cow here: she swells without limit for the good sacrificer. Again, an emended tr. might read *“(The milk-cow swells as boundlessness for ...”

All the standard tr. take *ṛtāya* as an adj. qualifying the *jána-* (e.g., Ge “für die rechtwandelnden Mann”), but adjectival uses of *ṛtá-* are rare to non-existent and the conjunction of an abstraction and an animate being is not rare. Cf. in one of the associated hymns, I.151.3 *yád īm ṛtāya bháratho yád árvate*, where the double *yád* shows that two entities are in question (“for truth and for the steed”). Again, in I.151.6a *ā vām ṛtāya keśínīr anūṣata*, where the dat. *ṛtāya* is universally interpr. as the abstract *ṛtá-*.

The standard tr. take d as a continuation of c, whose referent is still the man who gives offerings who was first met in b. Since this man is clearly human, it seems awkward to *compare* him to a human Hotar (*mānuṣo ná hótā*). I take d separately, with the initial *sá* signaling here a new, nominal clause, whose referent is Agni. The simile then makes sense, because Agni, though a god, regularly plays the role of Hotar at the sacrifice (and could in fact be the Hotar in 2c). Agni is elsewhere qualified as *rātāhavya-* (I.31.13, IV.7.7.), as are other gods (V.43.6, VII.35.1, VII.69.6), so this epithet does not require a human referent.

I.153.4: The med. 3rd pl. *pīpayanta* here echoes act. 3rd pl. *pīpayan* in I.152.6b and both are transitive: the form in our vs. is simply an *-anta* replacement/variant of the usual type. Both have cows as (partial) subjects (*dhenávaḥ* and *gāvaḥ* respectively), but in I.152.6 the cows are, in my view, the streams of ghee swelling the fire, while here the cows and waters are the usual additions to the soma drink. Agni is not absent, however, at least in my view: the lord of the house in c is probably Agni, and his position as ‘foremost’ (*pūrvyáḥ*) refers to his placement to the east as the Āhavanīya fire.

In d the naked *vītām* can be fleshed out by comparison with I.151.3 *vītho adhvarām*, despite Ge’s “Bekommet Lust” and Re’s “Goûtez”; WG’s “Verfolgt!” at least reproduces the same verb they use for *vīthaḥ* in I.151.3.

I.154 Viṣṇu

I.154.1: The hymn begins with an almost exact echo of the famous opening pāda of the Indra hymn I.32 *indrasya nú vīryāṇi prá vocam*. In place of *indrasya* we have *vīṣṇoḥ* and the missing syllable is made up by inserting the fairly functionless particle *kam* after *nú*.

I.154.2: The covert identification with Indra continues in pāda b, which is identical to X.180.2a, where Indra is the referent.

I.154.6: *bhūriśṛṅga-* is tr. by all as ‘many-horned’, but this doesn’t make a lot of sense: each cow should have only two horns, unless Viṣṇu and Indra’s dwelling is a place of fantasy creatures. I have therefore rendered it ‘ample-horned’, meaning that the horns are quite sizeable. ‘Many-horned’ would be possible if the reference is to the whole herd of cattle: each cow has two horns, but the collectivity has many. I still prefer ‘ample’.

I.155 Viṣṇu and Indra

I.155.1: 2nd pl. *vaḥ* is one of those vague oblique references to the ritual personnel, here something like “on your own behalf.” Because such a throw-away Sanskrit word requires such a heavy English tr., I omitted it in the publ. tr.

pāntam here belongs to the nominal stem *pānta-* ‘drink’; see comm. ad I.122.1.

As Ge points out, loc. *sānuni* and instr. *ārvatā* show case disharmony between frame and simile, in this case presumably because instr. *ārvatā* is idiomatic. This is one of the few instances in the RV referring to horseback riding.

I.155.2: The Pp. interprets *sutapā* as *sutapāh*, hence a nom. sg., and this interpr. is accepted by Re and WG. However, Ge argues persuasively for du. *sutapā*, and I follow him. The others must invent a mysterious soma-drinker who gives wide space and freedom to Viṣṇu and Indra; as indicated in the publ. intro. I assume that the clash (*samāraṇam*) in pāda a is what opens up the space.

The stem *uruṣyá-*, the verb ending both b and d, must be read in two different senses (as recognized by all tr.); ‘go wide’ is a useful English idiom for an arrow or other missile missing its target.

I.155.3: As noted in the publ. intro., the sense of these enigmatic paradoxes is not clear, as so often when family relationships and implied incest are in question. The females who “strengthen his great masculine nature” are left unidentified, but in some sense this scarcely matters: the point is that *feminine* beings strengthen his *masculine* nature and shortly thereafter there’s semen in play. The dual *mātārā* can (and probably does) stand for the two parents and is so tr. by all; however, it is more piquant for the two mothers to enjoy the semen presumably of their son, and the mother word contrasts with the father in c. For other contextually appropriate use of the dual parental designations, see Dīrghatamas’s I.159.2–3.

In c it might be better if “names” were in parentheses: although *nāma* in d can be either sg. or pl. (and is the former in conjunction with flg. *trīṣyam*), it can’t be dual, as the pair of adj. *āvaram páram* “lower and higher” might require.

I.155.4: With Ge (/WG) I take the pronominal āmreḍita *tād-tad* as emphatic rather than distributive, despite the identical pāda in X.23.5, where I opt for a distributive sense because of context.

I.155.6: *vyāti-* from **vi-yati-* (*√yam*), flg. Re.

Re takes *vimímānaḥ* in d as reflexive ‘se mesurant’, and Ge’s ‘sich richtend’ is close. Since med. forms of (*vñ*) *√mā* are regularly transitive (cf. *vimamé rájāmsi* in the previous hymn, I.154.1b, sim. I.154.3cd), I would supply an object here. In the publ. tr. I tentatively suggest “the realms,” as in 154.1, but given the contents of this verse I would now supply “the year.”

I.156 Viṣṇu

I.156.3: The Pp. reads *vidá* here, the 2nd pl. act. pf., though *vidé* or indeed *vidáh* would be equally possible in this sandhi situation. Old says we’re not obliged to read *vidé*, and the standard tr. follow the Pp. The cross-pāda sandhi *-a ṛ-* suggested by the Pp is impeccable. As Dieter Gunkel points out to me (pc 11/5/15) “‘underlying’ */-e ṛ-/*, */-a ṛ-/*, and */-as ṛ-/* are all transmitted as *<-a ṛ->* in the saṃhitā text. Where the hemistich boundary intervenes, as here, they are also metrically identical, and therefore identical in the restored text. I gathered examples of */-a ṛ-/* at hemistich boundary from the first four books and found these: 1.15.12ab, 1.68.4ab, 1.116.23b, 1.152.3cd, 2.35.8ab, 3.14.” Nonetheless, against the Pp. I opt for the 3rd sg. mid. *vidé*, which is common in this phrase (*yáthā vidé*).

The standard tr. interpr. *pipartana* in fairly generic ways: Ge “ihn heget,” Re “comblez (le de louanges)” (taking it to *√pṛ* ‘fill’), WG “den ... fördert.” In the context of the birth motif found in pāda c as well as in 2c, I take the verb as more precise and idiomatic: the usual ‘carry (to the far shore)’ narrowed to ‘carry to term’ of birth. The same sense is found in VI.48.5 (a passage adduced by Ge) *gárbham ṛtásya píprati* of Agni’s birth.

nāma in c is ambiguous as to number (sg. or pl.), but is taken by all standard tr., I think correctly, as plural. Given that Viṣṇu is being identified with a number of gods in this hymn, he has multiple names, and this middle verse gives the clue to this trick of the hymn.

I.156.4: The publ. tr. “does ... follows” should be corrected to “follow.”

I don’t know why Varuṇa, the Áśvins, and the Maruts -- gods that don’t usually interact -- appear together as followers of Viṣṇu’s *krātu-*. Syntactically it is mildly interesting that a singular nom. (*váruṇaḥ*) and a dual nom. (*ásvínā*) together form the subject of a plural verb (*sacanta*). By simple addition this is what we would expect, but verb agreement often is governed by more local rules.

I do not understand the second hemistich either. Part of the problem is the cmpd. *ahar-víd-* ‘knowing (or finding) the days’. I interpret it in light of the last verse of the previous hymn, I.155.6, concerning Viṣṇu’s apparent control over the days of the year. Since Viṣṇu is several times in this hymn (including in this vs.) called *védhas-* ‘ritual expert’ (2a, 4b, 5c), the reference may be rather to knowing the ritual day, as in I.2.2. But others see pāda d as depicting the Vala myth, and WG interpr. *aharvíd-* in this Vala context: “das Tageslicht zu finden.”

I.156.5: The lexeme *ā* √ *vī* unusually takes a dat. inf. with dat. subj. as complement (*sacáthāya ... índrāya*), at least by my interpr. Despite the superficial similarity to X.6.2 (*ā yó vivāya sakhyā sakhibhyaḥ*), the two passages have very different syntax.

[I.157–58 JPB]

I.159–60

On the structural near identity of these two hymns see the publ. intro. to I.160.

I.159 Heaven and Earth

Alliteration is especially prominent in this hymn: e.g., 2ab ... *manye ... máno*, *mātúr máhi*; 3a *sūnávaḥ s^dápasah sudámsaso*; 3d *putrásya pāthaḥ padám*; 4c *návyam-navyam tántum ... tanvate*.

I.159.1: *prá* √ *bhūṣ* is found only here (though cf. *úpa-pra* √ *bhūṣ* in III.55.1 and *ánu prá* √ *bhūṣ* in IX.29.1) and the meaning of √ *bhūṣ* in all its manifestations is notoriously slippery. My tr. here is somewhat illegitimate: I generally tr. the lexemes in III.55.1 as ‘tend to’, ‘attend upon’; my ‘tender’ here (a verb that has nothing to do synchronically with ‘(at)tend’) is a pun on the English. Nonetheless, something like it seems called for here: busy oneself with something to present and bring it forward.

I.159.3: The identity of these sons as the gods is clear from *deváputre* in 1c: ‘the two [=Heaven and Earth] having the gods as sons’.

The referent of the son in d is disputed. Sāy (followed by WG) takes it as the sun, on the basis of I.160.1; Ge as “jedes lebende Geschöpf”; Re as the human son. I suggest rather that it is Agni. In 2 of the other 3 occurrences of *advayāvin-* it modifies *hótar-* (III.2.15, VII.56.18), and in at least one (III.2.15) it’s clearly Agni. It’s also the case that Agni is frequently associated with *padá-*. The hemistich may convey that Heaven and Earth protect the general world of reality (c) and the specific world of the ritual (d). I think it esp. unlikely that it is the Sun here, because of the complementary relationship between I.159 and I.160, with the latter being the realm of the Sun. See publ. intro. to I.160.

I.159.5: As Ge notes (n. 5ab), the first hemistich is reminiscent of the Gāyatrī mantra (III.62.10), with our pāda a *tád (rádho adya) savitúr váreṇyam* an expanded version of III.62.10a *tát savitúr váreṇyam* and our b *devásya ... manāmahe* perhaps meant as a partial paraphrase of III.62.10b ... *devásya dhīmahi*, with a misanalysis of *dhīmahi* as belonging to √ *dhī* ‘think’, rather than being the root aor. med. opt. of √ *dhā* ‘place’ — hence the subj. *manāmahe* ‘we will think about’. This may provide significant evidence of the status and interpr. of the Gāyatrī mantra at this early period.

I.160 Heaven and Earth

I.160.1: It is striking that the Sun, by most interpr., is called a poet (*kaví-*).

The fem. stem *dhiṣāṇā-* is a perennial problem, with a distressing number of interpr. and no agreement on etym. (see EWA s.v.). I take it, in part flg. Pinault, as “Holy

Place,” referring esp. both to the Earth and to the ritual ground. Support for this comes, in the first instance, from two sources. On the one hand, a surprising proportion of the attestations of this stem are dual (*dhiśāṇe*) (7, as opposed to 21 sg. and 3 pl.), as here, and a number of these are clearly associated with Heaven and Earth, also as here. See also VI.8.3, 50.3, 70.3; X.44.8. Such usage is reminiscent of the use of pregnant du. *pr̥thivī* for (Heaven and) Earth, as well as of fem. du. *ródasī*. In the sg. *dhiśāṇā* is sometimes qualified by *mah̥*, a regular modifier of Earth (I.102.7, III.31.13, X.96.10). That the *dhiśāṇā* is also conceived of as a goddess follows from the divinity of the Earth. That a word used of Earth would also be applied to the ritual ground is, of course, not surprising, since the ritual ground is conceptually the concentrated essence of the Earth. In some passages the ritual paraphernalia are located “in the lap of the Dhiśāṇā” (I.109.3, X.17.12) or she herself performs ritual activities (e.g., I.102.1, 109.4; IV.34.1; X.30.6). The use of the word in other passages is more attenuated, but the balance of the evidence favors this interpr.

I.160.2: Old suggests emending *sudh̥ṣṭame* ‘boldest’ to **sudṛṣṭame* ‘loveliest to see’, but this not only seems unnecessary but weakens the striking image. The girls, dressed in their best by their father, presumably to attract potential husbands, seem to be on public display -- a very bold move for previously sheltered damsels.

I.160.3: Note the alliteration in ab ... *putráḥ piṭṛóḥ pavítravān, punāti* ...

The standard tr. take *śukráṁ páyaḥ* as two entities, “semen (and) milk,” against my “blazing milk.” I do not know of any passages in the RV where *śukrá-* must mean ‘semen’; it is overwhelmingly adjectival, and I prefer to render it so here. The “blazing milk” that the Sun milks is presumably sunlight. I take the *asya* here as referring to the Sun and thus coreferential with the subject of the sentence. As discussed ad I.145.2, overt reflexive forms are not required in this syntactic situation. By contrast Ge thinks *asya* refers to Heaven and Earth (/the cow and the bull), but conceived of as a single person and hence represented by a singular pronoun. Re takes *asya* as referring only to the bull.

I.160.4: Ge and, apparently, Re (but not WG) take *āṇṛce* not to \sqrt{rc} ‘chant, praise’, but to a different root ‘hold’ (with *sám* ‘hold together’). (See also Old’s disc., though he ultimately opts for ‘praise’.) But as Kü says (106), such recourse to “eine sonst unbekannte Wurzel” is not helpful. Though Ge claims that in context ‘chant, praise’ is excluded, in the context of the whole verse it works fine, as Old points out. That the first verbal form in the next verse is *gr̥ṇāné* ‘being sung’ (though modifying Heaven and Earth, not the Sun) supports this interpr., esp. since *āṇṛce* and *gr̥ṇāne* are near anagrams.

[I.161 JPB]

I.162 Praise of a horse (Aśvastuti)

I.162.1: Although the collection of gods serving as witnesses in ab seems somewhat random, the same set recurs in V.41.2, as Ge points out. The reason for their association there is no clearer than here.

Pāda d, *pravakṣyāmaḥ* (*vidathé*) *vīryāṇi*, is a variant on the famous opening of I.32, the great Indra hymn, *īndrasya nú vīryāṇi prāvocaṃ*. The gen. *īndrasya* of I.32.1 is matched by the long gen. phrase in our c: (*yád*) *vājīno devājātasya sápteḥ* “of the prize-winning, god-born race-horse.” For another variant on this phrase in Dīrghatamas’s oeuvre, see I.154.1. It is striking here that *vīryāṇi* ‘heroic/manly’ deeds are attributed to a horse; the establishment of “personhood” for the horse, discussed in the publ. intro., begins here in the very first verse.

I.162.2: It may not be clear in the publ. tr. that it is the horse that is bedecked (*prāṇvṛtasya*), not the goat.

viśvārūpa- modifying the goat in c is taken by most as a bland color term (Ge/WG ‘allfarbig’, Doniger ‘dappled’), but, esp. because in the next vs. (3b) the goat is called *viśvādevya-*, I think the qualifier is meant to convey more meaning: perhaps to indicate that the goat stands for all the other animals (which, as disc. in the publ. intro., are literally tied up for sacrifice in the later versions of the Aśvamedha), hence my “representing all forms.”

I.162.3: It is appropriate that the goat, if it “represents all forms” (see disc. of the previous vs.), should belong to all the gods. That it should also be “Pūṣan’s portion” (*pūṣṇó bhāgāḥ*, 3b and 4c) probably follows from the fact that Pūṣan “has goats for horses” (*ajāśva-*: 5x, always of Pūṣan) and is generally associated with goats.

As for Tvaṣṭar’s involvement, Ge (sim. WG) simply says that Tvaṣṭar is the creator esp. of animals, but I think there is a tighter connection. Tvaṣṭar is a required presence in the Āprī hymns, the litanies that accompany the animal sacrifice. The verse devoted to him in each hymn occurs immediately before the “Lord of the Forest,” namely the stake to which the sacrificial animal is tied, releases the animal for sacrifice. Just before that, Tvaṣṭar both produces life (e.g., II.3.9, III.4.9-VII.2.9) and assists at the sacrifice (V.5.9), escorting the sacrificial animal to the gods (X.70.9) or at least pointing the way (II.3.9). Most strikingly Tvaṣṭar is once called *viśvārūpa-* (I.13.10) and several times enacts that epithet dramatically: I.188.9 *tvāṣṭā rūpāṇi hí prabhúḥ paśūn viśvān samānájé* “Because preeminent *Tvaṣṭar* anointed all the beasts (with) their forms”; X.110.9 *rūpaír āpiṃśad bhúvanāni viśvā* “he adorned all the creatures with their forms.” In our verse Tvaṣṭar stimulates/quicken the goat immediately before its sacrifice and indeed *for* its sacrifice, and that goat has just been characterized as *viśvārūpa-*. Thus Tvaṣṭar’s constant appearance in the Āprī hymns shows that this god has a defined role in the animal sacrifice, and that role, somewhat paradoxically, involves both giving life and setting the stage for taking it away by sacrifice. This is less of a paradox in the conceptual context of the animal sacrifice: as noted in the publ. intro., a good deal of this hymn is devoted to reconstituting the sacrificed horse and endowing it with life-breath. Tvaṣṭar thus has a role in both, and we see it here first in connection with the goat that represents all creatures. Tvaṣṭar recurs in vs. 19 below.

I.162.5: The list of priests contains the hapax *āvayā(h)*, whose derivation and meaning are unclear. For suggestions and disc. see, e.g., Old, Ge, Re. I tentatively favor a connection with *áva* √*yā* ‘propitiate, expiate’, but the form presents grave difficulties for that analysis. For one thing, we should expect a root-noun compd. (*)*avayā-* with short initial

vowel and accent on the root -- and in fact we get just that form in I.173.12. See detailed disc. by Scar (404–7, with our form treated in n. 565). However, it can be pointed out that this lexeme is mutilated elsewhere -- e.g., in nearby I.165.15 (but Agastya, not Dīrghatamas), where *vayām* is better read ‘*vayām* (i.e., *avayām*), which sandhi form its position after *tanvè* would allow. Thus, the connection with *áva* √ *yā* reflected in the publ. tr. is quite insecure, and it may be best to follow Old in accepting the traditional analysis as *ā-vayas-*, rendering it ‘whose life force is (right) here’. This avoids the formal difficulties, but I don’t see what kind of priest this would be.

There is a mild disconnect between the two hemistichs: the first half is a list entirely in the nominative, but the second contains a 2nd pl. impv. *ā prṇadhvam*, whose 2nd ps. subjects should be the nominatives of ab.

I.162.6: The list of personnel involved in the sacrifice here includes some apparently marginal and humble roles, perhaps to implicate the largest possible group in the potential blood-guilt of the sacrifice.

I render the *utó* in d with ‘also’; this is also Klein’s tr., though his disc. of the passage seems to seek a straight conjunctive role (DGRV I.448–49). See the same expression in 12d.

I.162.7: I analyse *prāgāt* as *pra-ágāt*, rather than Pp. *prá agāt* -- in other words with an accented verb, which is in a non overtly marked subordinate clause, with *adhāyi* in the main clause. I then supply the same verb again in b. This may seem over-tricky, but it avoids taking *smát ... mánma* as a parenthesis and ties together the two ritual actions, the procession of the horse and the production of the poem.

I.162.8: The exact referents of these pieces of horse tackle are not clear.

Pāda d contains a nice ex. of a neut. pl. subj. with sg. verb.

I.162.10: As disc. ad III.29.8, suffix-accented *sukṛtā-* has been substantivized to ‘good (ritual) work, good deed’, but it is hard to incorporate that understanding here. I assume that *sukṛtā* √ *kṛ* has an idiomatic sense here.

I.162.12: I do not believe that *bhikṣā-* has yet developed the later ubiquitous sense ‘alms’ and tr. it here with full desiderative sense, contra Ge (/WG) “ein Fleischalmosen.”

Wack (AiG II.1.31) claims that the gen. *ārvataḥ* depends on the 1st member of the cmpd. *māṃsa-bhikṣā-*, as is not uncommon. Although this analysis is likely, I don’t think it’s excluded that *ārvataḥ* depends on the whole cmpd.

I.162.14: The *-ana*-suffix on the nominals in pāda a marks them as transitive / causative in sense; I take these neut. singulars as referring to the tack that produce the various movements of the horse.

I.162.15: On *abhí vikta* see comm. ad X.27.1.

I.162.16: The placement of *ārvantam* amid the pieces of tackle associated with him seems strange at first, but in fact it can be seen as iconic: these various items *hold* him, and so

he's surrounded by them. It's also clever that the various things are in the neuter, and so it is not till the verb appears (*ā yāmayanti* at the very end of the vs.) that it becomes clear that they are the subjects of the verb and therefore nominative, while *ārvantam* is clearly accusative.

The second hemistich is metrically quite disturbed; I will not attempt a fix, but see Old, Arnold, and metrical comm. of HvN, all ad loc.

I.162.17: The first hemistich is one of the few places in the RV that depicts horses being ridden (see also I.155.1, 163.2 -- though for an alternative for the latter see comm. ad loc. -- 163.9): both *sādé* lit. 'in the seat', here tr. 'in riding', and the mention of goading with a heel require a rider physically on a horse.

I follow the general interpr. of *śūkṛta*- as containing a syllable *śū* used to urge on horses, hence my "come on, come on." Although Google tells me that "chirrup" and "tchick" are so used (in English, or whatever we might call it), I judged that such a tr. would simply sow confusion.

The three disfavored ways of goading a horse -- heel, whip, and excessive *śū*-making -- are not parallel, or rather heel and whip go together and *śū* is something else, and they are therefore summed up with useful vagueness by *sārvā tā* "all these" in d. The vagueness is also useful because none of the three is a particular suitable object for *sūdayāmi* 'I make sweet', even in its most attenuated sense (Ge "... mache ich ... wieder gut").

The neut. pl. *tā* in the simile in c is more mysterious. *hāvis*- 'oblation' is a standard obj. of *sūdāya*-, but it is coopted here by the gen. *hāviṣaḥ*. I have nonetheless supplied 'oblations' as the referent of *tā*. Ge supplies "die Fehler" on grounds of contextual sense only. He also cites Mah. as explaining *tā* as "nur Füllwort" -- an explanation I'd like to be able to use more often!

I.162.18: The preverb *sām* 'together' in *sām eti* may seem an odd choice in a verse concerning cutting the horse *apart*. However, it sets up a contrastive pairing with *vī śasta* 'cut apart / carve up' at the end of the 2nd hemistich, and it also anticipates (or promises) the rejoining of the parts of the horse that ends the hymn.

As it turns out, horses have 36 ribs, not 34. Max Müller noted this in 1875 and got a potential explanation from T. H. Huxley -- that it may be that they're cutting the rib cartilage and they don't cut the last two ribs in order to keep the carcass together: [http://en.wikisource.org/wiki/Popular_Science_Monthly/Volume_7/June_1875/A_Curious_Question_of_Horses'_Ribs]

I.162.19: In d I didn't tr. *pīṇḍānām* as a partitive gen. because the English got too fussy. Ge thinks that the *pīṇḍa*- are rice balls, but this seems anachronistically to reflect later ritual use of the word.

I.162.20: The caus. redupl. aor. *ā tiṣṭhipat* is tr. by most as 'cause enduring pain' vel sim., which is far from the lit. meaning of the lexeme. The caus. to *ā √sthā* sometimes means 'make stand still', and I think that sense is in play here. The horse is about to go on a journey (*apiyāntam* 'going along' in pāda a; more fully described in 21b), but various mishaps can keep that journey from happening and make the horse stop.

I.162.21: This vs. contains one of two strengthened forms of the root noun *yúj-*, viz. du. *yúnjā*, on which see comm. ad X.102.9. The corresponding unstrengthened form *yújā* is found in II.24.12. Its position in the vs. favors a heavy root syllable: *hārī te yúnjā*. Acdg. to Arnold (188), the fourth syllable of an opening of 5 is overwhelmingly heavy.

I.163 Praise of a horse (Aśvastuti)

Krick translates and comments extensively on this hymn (307–11), though with a particular point of view.

I.163.1: The tr. of *pūrīṣa-* as ‘fertile ground’ is an adaptation of Krick’s (Feuergründung, 101 n. 253). The basic meaning is ‘fullness, fulfillment’, but it can indicate fruitful, loose rich earth, bottom land, as well as overflowing fullness. ‘Fertile ground’ provides a nice semantic bridge between the abstract sense and the younger meaning ‘dung’.

I follow Re in taking pāda c as containing two de-composed bahuvrīhis at least functionally. Though Re generally overuses this explanation, in this case we have almost documentary proof, in that 9a contains both a real bahuvrīhi and a decomposed expression like this one in parallel: *hīraṇyaśṛṅgō ‘yo asya pādā* “having golden horns, his feet copper.” In our pāda c the expressions are technically nominal sentences with possessive value, with the possessive pronoun *te* to be supplied from pāda d: “(your) wings (those) of a falcon, (your) forelegs (those) of an antelope.” But these are tantamount to bahuvrīhis and go more smoothly into English that way.

I.163.2: I do not pretend to understand the myth or myths here; for an attempt see Krick 307 and nn. 794–95. I would point out, however, that stylistically this vs. is reminiscent of the famous vs. in the wedding hymn about the previous bridegrooms of the bride in question. In both, four separate beings act, each segregated in a single pāda, and it has some of the same vocabulary (note *prathamāḥ*, *gandharvāḥ*, and *tritāḥ* / *trītyaḥ* both ‘third’): X.85.40 *sōmaḥ prathamó vivide, gandharvó vivida úttaraḥ* / *trītyo agniṣ te pátiḥ, turīyas te manuṣyajāḥ* “Soma acquired (you) first; the Gandharva acquired (you) next. / Agni was your third husband. The fourth was human-born.” I do not know what, if anything, to do with these similarities.

Krick supplies a chariot for the horse to be yoked to in pāda a and for Indra to mount in b, but see 9d, where Indra clearly mounts the horse.

Note *āyunak* with an unambiguously lengthened augment. For other possible such cases (and non-cases) with *√yuj*, see my comm. ad X.35.6 and Old’s comm. ad V.17.1.

I.163.3: Again, I do not understand the mythology here. It is worth noting, though, that in vs. 2 the various divinities acted on the horse (or such is the likely object, though unexpressed), whereas here the horse (addressed in the voc.) is identified with the (same) divinities. He is here identified with Yama (a) and Trita (b), while in 2a he was given by Yama and yoked by Trita. The third identification is with Āditya (3a), most likely the sun. Of the three remaining characters in vs. 2 (Indra, Gandharva, and the sun), the last is the most likely, and of course Āditya is a later name for the sun.

On the meaning of *samáyā* see comm. ad I.113.10. The abrupt separation from Soma is another puzzling feature, but I suggest that we have here the generally later

identification of Soma with the Moon, found already in the wedding hymn already cited (X.85.1–5), which would make sense (well, some sense) if the horse is being identified with the Sun. Krick (308 and n. 797) very different: “Du bist mit Soma zur Hälfte durchgemischt,” which depends on her view concerning the relationship between soma and the horse. But, inter alia, her tr. depends on what I consider a wrong interpr. of *samáyā*.

From context alone the “three (kinship) bonds in heaven” could be identified with the trio in ab: Yama, Āditya, and Trita. The Sun of course is associated with heaven, and Yama’s realm of the dead is also placed in heaven (see the funeral hymn X.14.8). What Trita’s connection with heaven might be is less clear -- Trita is a shadowy figure in the RV – but consider I.105.9, where the poet’s umbilical tie is stretched apparently to heaven and Trita Āptya vouches for the kinship relationship.

I.163.5–7: Note the *apaśyam* ‘I saw’ in all three verses (5c, 6c, 7a): the poet bears witness to his sight of various mystical visions of the horse.

I.163.5: As in I.162.14 I take the *-ana*-nominals here (*avamāṛjana-* and *nidhāna-*) as having trans./caus. value.

I.163.6: As indicated in the publ. intro. to both I.162 and I.163, I take *ātman-* in these hymns as referring to the lifebreath of the horse, as opposed to his sacrificed body; see I.162.20–21. Although *ātman-* can mean ‘self’ in the RV and sometimes perhaps even ‘body’, the contrast between the horse’s *ātman-* and his *tanū-* (see I.162.20ab) seems to exclude those meanings here, *pace* Ge’s “dein eigenes Selbst” and WG’s “Rumpf.”

I.163.7: There are multiple conflicting interpretations of the personnel and import of this verse; I will not add another.

Pāda d raises several questions: 1) is *ósadhīḥ* to be construed with *grāsiṣṭhaḥ* (so, e.g., Ge, Doniger, and me) or with *ajīgaḥ*, 2) who is the referent of *grāsiṣṭhaḥ*, and 3) what person is *ajīgaḥ*. I take the plants with the splv. (“foremost devourer of plants”). (For acc. rection with *-iṣṭha-* forms, cf., e.g., VI.37.5 *vṛtrām hāniṣṭhaḥ*.) Within the RVic domain of discourse, the greatest devourer of plants is likely fire/Agni, the answer, therefore, to 2). With that identification in place, I take *ajīgaḥ* as 3rd sg. For an opposite interpr. on all 3 counts, cf. Krick’s “... dann wahrlich hast du, der Gefräßigste, die Pflanzen erweckt (verschlungen?).” Acdg. to her the subject is the horse=sun, addressed in the 2nd ps. She takes the verb as suggesting a 2ndary pun on *√gṛ* ‘swallow’, and considers the larger sense to be that the rising sun (in spring) awakes the plant world to new life, and is at the same time their “Fresser.” This builds a lot of superstructure into the vs. In my opinion, the pāda simply expresses the conceit that the kindling of the ritual fire causes the sun to rise; assuming, with Krick et al, that “you” is the horse=sun, it can be the object of *ajīgaḥ*, with Agni as the subj.

I.163.8: The preverb *ānu* is insistently repeated in this verse: twice each in a and b, once each in c and d. The first hemistich lacks a verb, but this can easily be supplied from *īyuh* (*√i* ‘go’) in c; d then varies this pattern with a different verb *mamire* (*√mā* ‘measure’) to be supplied with *ānu*.

I.163.9: On the syntax of pāda a, see comm. on 1c.

Against the Pp (and all standard tr., as well as Krick) I take the sandhi form *ávāra* as standing for loc. sg. *ávare*, not nom. sg. *ávarah*. Although *ávāra*- is a pronominal adjective, and several instances of *ávare* are nom. pl., there are also several that are undeniably loc. sg. (II.9.3, 24.11). Taking it as a nom. sg. requires attributing lesser powers to Indra, which strikes me as pragmatically unlikely (cf., e.g., Old “geringer (an Schnelle) war Indra”). My interpretation identifies the horse/sun-bird with Indra and situates him in a lower realm (the midspace, presumably).

I.163.10: This difficult vs. has been subject to numerous interpretations. Mine is guided by Thieme’s (Gs Nyberg = Kl Schr (II) 829–30), who sees this as a description of the V-shaped formation of geese in flight (of which Google Images supplies many pictures, including bar-headed geese flying to/from their wintering grounds in India). The “nose” is the lead goose and therefore a particularly crucial figure, the *śūra*- ‘champion, hero’ of the cmpd. *śūranas*- ‘having a hero as a nose’ (an analysis that goes back to Bloomfield, RR 150; Bl’s other analyses there are less compelling). *śīlika-madhayama*- has a hapax as first member; if Th’s interpr. (‘hollow space’) and etymological connection (with *śirā*- ‘vein’) are accepted, the cmpd. means ‘having a hollow space in the middle’, which accurately describes the V-formation. The other problematic bahuvrīhi is *īrmānta*-. Th. takes *īrmā*- as ‘foreleg, thigh’, not *īrmā*- ‘quiet, at rest’. The ‘foreleg’ sense is found in the AV (X.10.21), and Aves. *ar(ə)ma*- ‘arm’ appears to be cognate (so EWA s.v.). The sense of the cmpd., ‘having (fore)legs as its edges’, must reflect the fact that, looked at straight on, the V-formation (roughly an isocles triangle) can look like a stick-figure human from the waist down, with the legs being the two equal sides, meeting at the tip, which is equivalent to the waist.

The verb in d, *ākṣisuḥ*, is generally taken as an isolated -*siṣ*-aor. to *√naś* ‘attain’ (so Gr, Narten 160; Wh Roots puts it under *√akṣ* as -*iṣ*-aor., but takes *√akṣ* as a secondary root form from *√aś*). This is certainly possible, but I prefer to analyze it as an isolated (and nonce) -*siṣ*-aor. to *√aj* ‘drive’, which would then take a cognate acc. *ājmam*, hence ‘have driven their drive’.

I.163.11: I take *caranti* as aux. with *jārbhurāṇā(h)*, but it could be an independent verb: “they wander (while) flickering” (e.g., Ge “... bewegen sie sich auf und ab hüpfend”).

I.163.13: The relative expression *paramām yāt sadhāstham* is an izafe-type construction and therefore can be embedded in the main cl. (see my forthcoming “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian”). However, it is not a well-formed one, since we should expect **sadhāstham yāt paramām*. But the syntactic parameters of this construction obviously loosened with time.

I take *jūṣṭatamo hī* as a parenthetical explanatory clause, which would account for the unusual position of the *hī*.

[I.164–65 JPB]

[I.165 Indra and Maruts (misc. comments by SJ to JPB tr.)

This hymn is full of somewhat “off” forms, some of them unique to the hymn -- *yujmahe* (5c), *ūgrá-* (6c, 10c), *cyavam* (10d) -- a few confined to this hymn and one or a few other passages -- *vadhīm* (8a), *kariṣyā* (9d). It is not clear to me whether these are the result of faulty transmission or of the poet’s manipulation of form, though I incline towards the latter explanation, given Agastya’s characteristic self-conscious artfulness. In either case the clustering of these anomalies in a single hymn makes it unlikely in each individual case that they belong to the systematic grammar of Vedic or reflect deep archaisms or old sound changes, as has been suggested for several of them. For further remarks see the individual discussions below.

The trajectory of the hymn might be seen as the battle of the lexicon: words pass back and forth between the two speaking parties, with twists in their usage and with terms that seem to belong to one of the parties appropriated by, or devalued by, the other. Among the most important words are *éka-* ‘alone, only’ and the multiple forms of $\sqrt{kṛ}$ ‘do’. Note esp. the extraordinary concentration of $\sqrt{kṛ}$ in the middle of the hymn: 7a *cakartha*, 7c *kṛṇāvāmā*, 8d *cakara*, 9c *kariṣyā kṛnuhí*, 10b *kṛṇāvai*, 11b *cakrá*, including two of the rarest pf. forms, 1st sg. *cakara* and 2nd pl. *cakrá*.

I.165.1: I’d be inclined to take *samānyā* not as an adv. (‘altogether’) as in the publ. tr., but as a fem. instr. sg. forming part of the phrase *káyā śubhā*, hence “with what joint/common beauty?” -- with the sense “what’s their joint insignia? how shall I recognize them?” Note that *samāná-* is differently formed from the two preceding phonologically similar adjectives *sāvayasah sánílāh*, which do match each other. Note also following *sám m...* The adj. *samāná-* returns in 7b in a charged context.

JPB’s tr. cleverly reads *étāsaḥ* twice, once as the nom. pl. ‘antelopes’, once as the nom. pl. of the ppl. *ā-ita-* ‘come here’.

In d *śúṣmam* may be adverbial as JPB takes it (‘explosively’), but it may be a real obj. of *ārcanti* (“chant their explosive power”). I’m inclined to follow the latter course, because *śúṣma-* must be a real noun in 4b. But in this case I interpr. it as an Inhaltsakk., further specifying the chant (*“chant their chant” → “chant their explosive force”) not the object of their praise as Ge, for example, does: “preisen den Kampfmüt” (sim. WG).

I.165.2: I’m not certain that the 2nd hemistich is an embedded quotation, *pace* JPB.

I.165.4: The act. forms *iyartí*, etc., are usually transitive, but Old cites a few passages with the intrans. value that must also be present here.

Although various tr. (e.g., WG) take *ukthā* as acc. pl. and supply subjects for the pl. verbs *ā śāsate* and *práti haryanti* (men and gods respectively, WG), taking it as nom. pl. not only avoids the need to cast around for unexpressed subjects but also captures Indra’s extreme egotism: even the hymns long for him, or so he thinks.

I.165.5: *yujmahe* is a famous crux: though it should belong to the well-attested root aor. (seen presumably in part. *yujānāḥ* in pāda a), it has a primary ending and therefore looks like a pres. formation. It has received a plethora of explanations. Ge calls it a non-reduplicated perfect (“Perf. ohne Redupl.”); Whitney (Rts.) simply allows for a root pres. for a few forms, incl. this one, in addition to the standard root aor. Probably the currently prevailing interpr. is Hoffmann’s (MSS 2 [1952/1957]: 130–31 = Aufs. II: 366), that it

shows dissimilatory loss of the first nasal from **yuñjmahe* belonging to the nasal-infix pres. Although this explanation has a plausible foundation (as opposed to Ge's motiveless non-redupl. pf.), the coexistence of *yujmahe* with *yujāná-* in the same verse, and the general trickiness of Agastya's poetry, incline me to a nonce, contextual explanation. The oddly placed *nū* 'now' (though see 9a) immediately following the verb form and ending the pāda seems Agastya's signal that he's twisted and tweaked the aorist to his own ends -- a temporary present. Thanks to JL for assembling the relevant lit. and for illuminating disc.

I.165.5–6: Indra seizes the Maruts' assertion of independent power (*svadhā-* 5d) by taxing them with the absence of (their exercise of) that power (6a) at a crucial moment. Another skirmish in the battle of the lexicon.

I.165.6: I do not understand the length in *ūgrá-* here and 10c. Lubotsky (2000 ["Vedic root vr̥ ...," *Indoarisch, Iranisch und die Indogermanistik*]: 320 n. 16) attributes it to compensatory lengthening from **hí uHgrás*, after laryngeal metathesis from **hi Hgrás*, but I find the proposed metathesis counterintuitive (despite the other exx. he adduces); one would rather expect the laryngeal to remain where it is as a hiatus-filler. Moreover, assuming that this remained as a synchronic rule in the RV is quite hard to accept.

Indra adroitly manipulates the wording here to contrast his own solitary state with the Maruts' collectivity: ... *mām ékam samádhatta* "... me **alone together** you..."

I.165.7: In vs. 5 the Maruts spoke literally of yoking their teams to bring them for the journey, but in this vs. the same root *√yuj* is used metaphorically, in the gerundive *yújya-*, to indicate the Maruts' powers that were *available* to be yoked/deployed by Indra, though he didn't. Note also the adj. *samāná-* 'common, joint' (repeated from 1b) referring to the powers shared by the Maruts, in contrast to Indra's constant lone state.

The interpretational question in this vs. is *whose krātu-* do the Maruts plan to follow. Acdg. to the JPB tr., it is Indra's, but the tr. can't stand exactly as given for syntactic reasons. Because *marutaḥ* is unaccented, either *krátvā* has to belong to the *yád* clause or *marutaḥ* has to belong to the main cl. But the publ. tr. assigns *marutaḥ* to the dependent cl. and *krátvā* to the main cl: "we shall do many things in accordance with your purpose, o most powerful Indra, when we, o fellow Maruts, shall wish it." Following the two syntactically licensed alternatives above, we must rather tr. either "We shall do many things, o most powerful Indra, when, o Maruts, we shall wish it in accordance with our/your will." Or "We shall do many things, o most powerful Indra, in accordance with your/our will, o Maruts, when we shall wish it." *krátvā* is perfectly placed for maximum ambiguity, between Indra and the Maruts. Taking it with the main cl. (the 2nd alternative tr. just given) favors an interpr. of *Indra's* will; taking it with the subord. cl. (the 1st alternative) favors the *Maruts'* will. That, I think, is the correct interpr. The Maruts contrast Indra's actions, which were performed with the Maruts' standing by on the scene, with their own prospective actions, which will depend on their own intention, not Indra's design or timetable.

The dueling vocatives in d, *índra* and *marutaḥ*, are notable, esp. because they encase the word *krátvā* whose crucial ambiguity we have just discussed. Since we must assume that the 1st-ps. speaker is a Marut or Maruts, the pl. vocative to the group is of

course striking -- though well within the limits of poetic self-address we find elsewhere in the text (see disc. in my "Poetic Self-Reference in the *Rig Veda* and the Persona of Zarathustra," Fs. Skjaervø, 2009). In this case I imagine a "spokes-Marut" who takes the lead in addressing Indra but also turns to his own group for a chorus of affirmation (of the type, "right, guys?!").

I.165.8: Injunctive 1st sg. *vádhīm* belongs to the root aor. stem of this set root, whose well-attested 2nd and 3rd sg. are (*á*)*vadhīs*, (*á*)*vadhīt*. The 1st sg. should be **vadham*, which is nowhere attested. The -ī- has simply been imported from the 2nd/3rd sg.; *vádhīm* is attested once elsewhere in the RV, in the late hymn X.28.7.

The juxtaposition of *maruta indriyēṇa* recalls the immediately preceding (7d) *índra ... marutaḥ*.

Pāda-final *viśváścandrāḥ* produces an irregular cadence of four heavy syllables; three of the remaining four occurrences of the stem occur in the same position (though once in dimeter vs.) and have the same effect. As is often remarked, the cmpd. would be metrically regular if the 2nd member were the related *-candra*, hence **viśváścandrāḥ* with the light 2nd syllable appropriate to a Triṣṭubh cadence. The same problem afflicts the other cmpds of *-ścandra-* (*ásva-*, *svá-*, *hári-* and *puru-*, *su-*), which either show up in metrically indifferent positions or positions in which a light 2nd syllable would be favored (besides Triṣṭubh cadence, also right after an opening of 4, where a break ~ - - is distinctly bad). There are no forms where the meter is improved by reading *-ścandra-*. Although the obvious solution is simply to read **-candra-*, I am puzzled as to how the *-ścandra-* forms won out. The duplicate pair *ścandrā-* / *candrā-* are for the most part in complementary distribution, with *candrā-* an independent adj. and 1st cmpd member and *ścandrā-* 2nd cmpd member (after vowel); *ścandrā-* appears 3x uncompounded, but in these cases it is in a sequence that functions like a quasi-cmpd (*purú ścandrám* III.31.15, *prthú ścandrám* IV.2.13, and possibly *ádhi ścandrám* VIII.65.11). So *viśvá-ścandra-* has the expected alternant, though in almost all cases a metrically unfavorable one. Must we reckon with a replacement of the originally correct *-ścandra-* by **-candra-*, yielding a metrically usable form, and then redactional restoration of the *-ścandra-*? This hypothesis seems over-complex, but I don't have a better one. In any case the poet seems to be toying with the form: the next pāda (8d) contains the offending sequence *śc*, though split across a word boundary (*apás cakara*), and in 12c a *candrā-* compd., *candrā-varṇā(ḥ)* occupies the same pāda-final slot. Its initial also participates in the *śc* sequence: *marutaś candrā-*, so that the first member is effectively **ścandrā-*.

I.165.9: The form *kariṣyā* is problematic for several reasons. Despite its sandhi position before *k*, it seems best to assume it represents 2nd sg. *kariṣyās* out of sandhi, even though *kariṣyāḥ* would be the proper sandhi form in this context. (The Pp. simply reads *kariṣyā* like the Saṃhitā text, but the standard tr. and comm [e.g., Old, going back to BR] take it as 2nd sg.) Moreover, this form must be a *subjunctive* to the future stem, an unusual morphological combination at best (but see Whitney, Gr. §938). Reading the transmitted *kariṣyā* won't help: that would simply be a 1st sg. subj. to the future, or perhaps a 2nd sg. imperative to the future, neither of which is any better morphologically. The other long-shot possibility is to assume it's an unusual gerundive formation in *-iṣyá-* in the neut.

nom.-acc. pl., yielding “what things are to be done ...” (so Sāy.). AiG II.2.368 mentions this possibility but prefers the subjunctive interpr.

I.165.10: In most tr. the rel. cl. of pāda b seems loosely construed with the main clause of pāda a, with the *yā* referring to an unexpressed acc. of respect in the main cl.: “Let my force be far-reaching with regard to (those things), which I will do ...” However, the vertical parallelism of 9d, 10b, and 10d suggests a different syntactic arrangement

9d	<i>yāni</i> [<i>kari</i>] <i>ṣyā kṛṇuhí</i> ...
10b	<i>yā nū</i> [<i>dadhr</i>] <i>ṣvān kṛṇāvai</i> ...
10d	<i>yāni</i>

Not only do these pādas match phonologically as in the display above, but 9d and 10d show the same syntactic structure: a preposed rel. cl. introduced by an acc. pl. referring to deeds and a verb governing it referring to the doing of the deeds (*yāni* **kariṣyāḥ*, *yāni cyavam*), followed by a main clause where the doer of the rel. clause is also subject: *kṛṇuhí*, *īśē*. I suggest 10b should be interpr. in the same general pattern. Indra says “Which (deeds) (I am) bold (to do), I will do.” In other words, pāda b contains two clauses, not one, and is independent of the preceding pāda.

The 1st sg. *cyavam* is the only non-causative active form to this root. Hoffmann (Injunk. 247–48) takes it as a subjunctive, an ersatz for the unenlarged 1st sg. subj. ending *-ā*. I agree that the form has been tampered with, but would suggest that what really underlies the form may be medial subjunctive 1st sg. **cyavai*, which should have yielded **cyavā* in this sandhi position. The *-m* serves as a pleonastic hiatus filler (perhaps originally *-m̐*). An alternative that would work better phonologically is to assume a 1st sg. indicative **cyave*, not a subjunctive. This would yield **cyava* in sandhi, to which the *-m* could be added without adjusting the vowel length. Since the verb in the main cl., *īśē*, is likewise present indicative (as opposed to impv. *kṛṇuhí* in 9d and subjunctive *kṛṇāvai* in 10b), an indicative in the subord. cl. would match.

I.165.11: The final pāda of this vs. brings the vocabulary into reciprocal alignment and thus signals that harmony has been restored: *sákhye sákhyas tanvè tanūbhiḥ*.

I.165.12: The med. part. *dádhānāḥ* is generally tr. ‘receiving’, as the middle voice of *√dhā* often is, and interpr. to mean that the Maruts also get fame as part of Indra’s reflected glory (see *prāti* ... *rocamānā(h)* in a). But in this charged context of tributes given and received, I think it likely that it is ambiguous. Indra is both graciously yielding the Maruts some glory, but he is also reminding them that they have just produced praise for him (vs. 11) and will presumably continue to do so. In this second sense it could be tr. “setting out praise (for me)” with the middle voice reflecting the mutually intertwined relationship between Indra and the Maruts.

With most interpr. I take *ánedyaḥ* as a nom. sg. m. implicitly modifying an unexpressed *gaṇāḥ* ‘troop’, a construcio ad sensum with the pl. *dádhānāḥ*. I would like to find some way to ally it with *nédīyas* ‘nearer’, as a neut. sg. modifying *śrávaḥ*, but this seems beyond the realm of possibility.

The *saṃcākṣyā* of the Saṃhitā text is read *saṃcakṣya* by the Pp. and taken as a gerund, an interpr. followed by Old inter alia. The meaning would be “having looked upon (me)” vel sim. Gr (fld. by Ge [WG], etc., incl. the publ. tr.) takes it as a gerundive,

whose pausal form would be *saṃcākṣyāḥ*. Both forms are possible. I do not have a strong feeling either way.

On -ś *candrā*- see disc. ad 8c.

Note the pāda-final *nūnām*, reminiscent of *nú* in 5c and 9a.

I.165.13: The reciprocal lexical harmony of *sákhīn ... sakhāyaḥ* recalls that found in 11d *sákhye sakhāyaḥ*, but there is a small mystery: the voc. pl. *sakhāyaḥ* surely refers to the Maruts, but who are the *plural* expressed by *sákhīn*? We would expect a singular referring to Indra. It seems unlikely to be the priests plus/minus Indra because the speaker is a singular (note *me* in d, the sg. inter. prn. *kāḥ* in the rhetorical question in pāda a, and the sg. poet in vs. 14). I take that speaker to be Agastya (contra the publ. tr., which identifies him as the narrator). Perhaps a pl. maiestatis for Indra?

If *nāvedā(h)* belongs to the *s*-stem *nāvedas-*, it should be nom. m. singular here, in disagreement with the plural subj. of *bhūta*. Gr's solution is to set up a them. stem *nāveda-* for just this passage, which would allow a plural interpr. To avoid this ad hoc multiplication of stems, we can assume the same type of constructio ad sensum invoked for *ānedyah* in the immed. preceding vs. (12b)(so Old), with the sg. referring collectively to the Marut troop. Cf. also the parallel passage IV.23.4 *devó bhuvan nāvedā ma ṛtānām*, with a legitimate singular; the post-caesura portions of the pādas are identical. On the origin of *nāvedas-* from a false segmentation of *-tana védas-* see Schindler, Fs. Knobloch, 1985.

I.165.14: The first hemistich of this vs. is quite problematic; see Old's long disc. The problems lie in the verbs (or apparent verbs). The pf. *cakré* in b only makes sense in this context if it is construed with the preverb *ā* in pāda a: *ā√kr* 'make (to come) here, bring here'. By contrast, the verbal stem *duvasyā-* is never otherwise construed with *ā*, even though it appears to be here. Moreover, the recipient of the friendship offered by the verb *duvasyā-* is always in the accusative, not the apparent dat. *duvāse* here. (Note also that the suffix-accented *duvās-* appears only here and in nearby I.168.3. It seems to show the regular possessive sense of *s*-stem adjectives built to *s*-stem neuters by accent shift: hence *dúvas-* 'friendship' → *duvās-* 'possessing friendship, friend'.) The best solution seems to me Roth's suggested emendation of *duvasyād* to **duvasyā*, instr. of an abstract in *-yā*, an emendation endorsed by Old. Hence I would alter the publ. tr. to "When/Since the wisdom of the son of Māna has brought us here with friendship, like a bard to a friend" vel sim. The emendation only requires de-gemination of the *-d d-* and has no effect on the meter; the addition of a *-d* might have been encouraged by the repetitive phonological pattern in a (which I will represent with false word division): *yādduvas yā(d)duvās(e)*. Note also the dental geminate in *vartta* in c, where the double *-tt-* may have been restored etymologically (since *Rtt* and *Rt* generally fall together). Although there is no nominal stem **duvasyā-*, there is the variant *duvoyā-*, showing external sandhi (see AiG I.343), also appearing as in instr. (V.36.6, perhaps not coincidentally in an Indra hymn in a vs. addressed to the Maruts).

I.165.15: As noted in the publ. intro., the tr. assumes underlying *avayām* ('*vayām* in sandhi) 'propitiation'. This does not require emendation to the Saṃhitā text, since the word appears after vowel-final *tanvé*.]

I.166 Maruts

I.166.1: It may not be sufficiently clear in the publ. tr. that “the beacon of the bull” refers to the Maruts themselves. They are presumably Indra’s “beacon” because they are regularly his comrades and they are of glittering appearance -- a little bit like Rudolph the Red-nosed Reindeer.

The pair “kindling” and “battle” in cd may not seem to form a natural class, but they probably represent two aspects of the Maruts’ naturalistic identity as the thunderstorm: the lightning may be the kindling and the thunder the clash of battle.

Note the phonological echoes in *aidhéva...*, *yudhéva...*; similarly *tuviṣvaṇo...* *taviṣāni*.

I.166.3: The simile *hitā iva* is compared by Ge and Re with a similar expression in IV.57.1, with the meaning “good (friends)” (Ge “wie gute (Freunde)”) or, more technically, “like contracted (allies)” (see the bahuvrīhi *hitā-mitra-*). This doesn’t mean much in the context here. WG are somewhat skeptical, but simply tr. literally “wie die Hingesetzten” without explaining what that might mean here. Both the Ge/Re and the WG tr. assume a ppl. to $\sqrt{dhā}$ ‘set, establish’. I take it rather to \sqrt{hi} ‘impel’ (as does Gr) and assume that the underlying subject is horses and that the image is of horses led out to piss before contests. See esp. I.64.6 (also a Marut hymn) *ātyaṇ ná mihé ví nayanti vājīnam* “They lead (their horse) out to piss like a prize-seeking steed” (also cf. II.34.13, IX.74.4). This image fits well with the sprinkling here.

I.166.5: I previously (1983: 61) took *nadayanta* as intransitive “they roared and made the mountains stir ...”, but I now accept a transitive value.

I.166.6: *āriṣṭagrāmāḥ* is a bahuvrīhi, but the tr. ‘having an invulnerable band’ seemed too heavy.

On *krīvis-* see comm. to I.30.1, where I suggest a relationship with *kravís-* ‘raw, bloody flesh’ as a re-formed *-i*-stem to the underlying root *krū* < **kruH*. A number of other interpr. have been made.

I supply “(a path)” as obj. of *rādati* because words for ‘path, way’ are frequently obj. of this verb (e.g., VII.87.1 *rādat pathāḥ*; also II.30.2, V.10.1, V.80.3, VI.30.3, VII.47.4, VII.60.4, X.75.2).

In my reading the structure of pāda d is quite complex and intricate, unlike the standard view. Both Ge and Re supply ‘waters’ as the obj. of *riṇāti* in the frame (see also Old), since waters are several times elsewhere the obj. of $\sqrt{rī}$. (WG take *paśváḥ* as obj. of both simile and frame.) I prefer to find the object nearer at hand, namely trees, based on *vānaspati(h)* in the previous vs. (5c). In another passage trees liquefy at the Maruts’ assault: V.58.6 ... *riṇaté vānāni*, and a transitive version of this phrase is found with Agni as subj. at V.41.10 *nī riṇāti vānā* (cf. I.127.4).

As for the simile, Ge takes *barhāṇā* as fem. nom. sg. with *súdhītā* (“wie der beharrliche Eifer ...”), but *barhāṇā*, which is fairly well attested, is otherwise only an instr. sg. used adverbially (so rendered by both Re and WG). Like Re and WG I take *didyūt* (fem.) of c as the referent of *súdhītā* ‘well-placed’, but *didyūt-* in a slightly

different sense: not as a thrown missile but as a sharp-pointed object used as a goad. The verb *riṇāti* is held constant between simile and frame, but again it has different senses in the two structures: in the simile it does not mean ‘liquefy, dissolve, i.e., destroy’, but ‘make to flow, i.e., to cause to move’, a more appropriate meaning with *paśvāḥ* ‘livestock’ as object.

I.166.7: The rendering of *alāṭṛṇā-* as ‘restless’ follows the suggestion of Hoffmann’s (‘unruhig’) registered in KEWA III.807 and EWA s.v., derived from *√rā* ‘be at rest’. The word is found elsewhere only in III.30.10, of Vala. In neither passage does ‘unquiet, restless’ fit the context terribly well, but in neither is it excluded. Kuiper (Aryans, 84–85, in part restating his 1955 Fs. Kirfel views) objects to Hoffmann’s explanation and suggests instead the meaning ‘irresistible’ for our passage and ‘not offering resistance’ for III.30.10. (On a side note, these two meanings, reflecting passive ‘not (to be) resisted’ and active ‘not resisting’ senses respectively, do not seem to me derivationally compatible and should not be found in a single word.) He considers it to be a substrate borrowing and thinks it’s not realistic to expect it to have an etymology. Kuiper has some good points: as was just noted, the meaning produced by the Hoffmann etymology is not a perfect fit contextually and the morphology is somewhat dubious. However, I do not see confidently proposing two incompatible meanings for a single word (with the one suggested for this passage not particularly compelling in context) while forswearing any attempt at etymology. Better to leave it untranslated in that case.

Pādas c and d are in reverse logical order. The contents of the chant that the Maruts chant (c) must be the deeds of Indra, which they are said to know (d); the knowledge logically precedes the verbal expression of it.

I.166.8: As pointed out, e.g., by Ge, *śāṃsāt* in d must stand for **aghāt śāṃsāt* “from evil utterance,” borrowing the *aghāt* of pāda a (and cf. the bahuvrīhi *aghāśāṃsa-* ‘of evil speech’, referring to the utterer thereof). It may well be (with Ge, etc.) that *śāṃsāt* should likewise be supplied in a, but “guard from evil,” without the addition of “utterance,” is also perfectly acceptable.

I.166.9: Ge and Re make *taviṣāṇi* part of the frame, not the simile. This actually does not alter the sense very much, since they still read *mithaspr̥dhyā* with *taviṣāṇi* in an “as if” construction. Given the structure of the hemistich and the need for something for *mithaspr̥dhyā* to modify, I prefer to take it with the simile. My only reservation about putting *taviṣāṇi* in the simile is that the Maruts’ *taviṣāṇi* are mentioned in 1d.

More crucial is the grammatical identity and function of *mithaspr̥dhyā* (so Pp.). Old follows BR in taking this not as a gerundive but as a gerund, but, strikingly, neither suggests a tr. for it. Since a simile consisting of a gerund would be highly unusual (unprecedented, I think, though I haven’t checked the entire RV), a neut. pl. gerundive agreeing with *taviṣāṇi* makes more grammatical sense. But what meaning is being conveyed? I think the point is that there are so many good things on the chariot that one can’t single out just one: like opposing forces (*taviṣāṇi*) they contend with each other as rivals to be the best and most desirable. The sentiment is similar to VII.26.4 *mithastúra ūtāyo yāsya pūrvīḥ* “whose many forms of help compete for the lead,” meaning that they are all eager to be the most helpful.

The loc. sg. *prápatheṣu* is taken by all standard tr. as “on (your) journeys” (vel sim.), agreeing with the endpoint of Gr’s def. ‘in die Ferne führender Weg, Reise in die Ferne, Reise’, which seems to me to follow a slippery path indeed. I interpr. the stem *prápatha-* (4x) rather as lit. ‘the path forward’, but figuratively as ‘vanguard’. The *-in-* stem superlative *prapathíntama-*, found nearby at I.173.7, then means ‘most in the vanguard’ (/ ‘most forward on the path’), used of Indra there and VI.31.5 (the 3rd occurrence, at VIII.1.30, is a PN). Although the difference between ‘journey’ and ‘vanguard’ is not crucial in our passage here, the two non-PN occurrences of *prapathíntama-* both refer to Indra, with I.173.7 specifically to Indra as warrior, and ‘most in the vanguard’ works much better than Re’s “toi qui (vas) les grands chemins par excellence” or WG’s “der am meisten auf dem Weg bist.” Ge’s “der am meisten auf der Kriegsfahrt” seems to recognize this. For *prápatheṣu* here I’d be inclined to emend my publ. tr. to “on the paths forward,” because of the plural.

What is going on in d depends on the interpr. of *samáyā*, for which see comm. ad I.113.10. Most take it to mean ‘in the middle’ vel sim.; this certainly produces an acceptable image, since the axle is between the two wheels. But as discussed ad I.113.10, the totality of passages containing *samáyā* suggest a meaning ‘altogether, all at once, at the same time’, and in all these passages it contrasts with a form of *ví* (as here). The image I see here is somewhat more complex than the standard one, namely that through the action of the axle the wheels, though separate, turn at the same time. This is close to the kind of paradox much loved by RVic poets. This interpr. requires medial *vāṇṛte* to be transitive (rather than intransitive-reflexive, *pace* most tr. and also Kü 464), but the self-involved nature of the action (the axle is turning its own wheels, as it were) makes this unproblematic. Potentially more troubling is that by this interpr. *cakrá* should be dual acc., and the stem *cakrá-* is neuter, whose dual should be (and several times is) *cakré*. However, in at least one passage, VIII.5.29, we have a clear masculine dual: *ubhā cakrá hiraṇyáyā* “both your wheels are golden” (note the ‘both’ *ubhā*), which would match the form here. Alternatively, we could take *cakrá* as neut. plural, assuming four wheels -- and though this would technically require two axles, “the axle” as a mechanical marvel could stand for both. (Rather like saying “the internal-combustion engine powers most of the cars on the highway,” even though every car has its own.)

I.166.10: The adj. *rabhasá-* ordinarily characterizes action (‘violent, frenzied’), but here must have a visual aspect. So also III.31.12. Such synaesthesia is not uncommon in the RV.

In d all standard tr. supply ‘they’ [=Maruts] as subject of (*vy ánu*) *dhire*, with *śríyaḥ* as object (e.g., Ge “... haben sie ihre Herrlichkeiten entfaltet”). This amounts to a change of person, for these same tr. identify the many good things of a-c as ‘yours’ [=Maruts], following similar statements in vs. 9 with *vaḥ* (a, cd). Though there are no overt 2nd ps. pronouns in vs. 10, the voc. *marutaḥ* in pāda shows that 2nd ps. reference continues in this verse. Rather than changing person in d, I see another ex. of case disharmony between frame and simile, which is facilitated by the middle voice of *dhire*. The simile *váyo ná pakṣān* “like birds their wings” uses the middle in transitive but self-involved sense, but, in my reading, in the frame *dhire* is intransitive, with *śríyaḥ* as subject. I must admit, however, that the person switches to 3rd in vs. 11, so that a switch here in the last pāda of 10 is not impossible. I prefer my interpr., with constant 2nd ps. in

vs. 10, both because -- all things being equal -- it's best to keep verses self-contained and, more important, because Agastya likes doing tricky things with similes.

I.166.11: I have not rendered the *yé* in b because in this verb-less string of nominal qualifiers it is difficult to decide where the relative clause ends and the main clause begins. (Both Re and WG take d as the main cl.; Ge seems to take it as cd, insofar as I can interpret his punctuation.) Alternatively, the whole vs. could be a relative clause hanging off vs. 10, or more specifically 10d. This structure would support the change of person in 10d seen by most tr., as opposed to my interpr., for which see immed. above.

I.166.12: This vs. has ties to earlier parts of the hymn. The opening *tád vah ... mahítvanám* "this is your greatness" echoes 1ab *tán nú vocāma ... mahítvám*. There it was their previous (*pūrvam*) greatness; this vs. presumably brings this greatness into the present time.

Pāda b seems a paraphrase of 7a *anavabhrārādhasaḥ* 'whose gifts are not withdrawn'.

The connection between the main clause and the relative clause in cd is somewhat loose: as a correlative to the rel. cl. *jānāya yásmai* "for whatever person" we would expect *tám*, not *tád*, which must refer to the gift, not the recipient of it.

I.166.13: I take cd as a concrete example of the statement in ab, that the Maruts' connection with the older generation arises from their favoring its "laud" (*śámsam* -- note that this positively viewed *śámsa-* contrasts with the evil *śámsa-* of 8d). Manu is of course a member of the older generation, and because of his "insight" (*ayā dhiyā*) the Maruts favor him and show themselves to him with all their wondrous qualities.

I.166.14: The relations among the clauses in this vs. might be problematic, primarily because of an apparent gender mismatch: *pārīṇas-* 'abundance', which in the instr. *pārīṇasā* goes with the rel. *yéna* in the rel. clause occupying ab, would be the most likely referent of both *yád* in the parallel rel. clause of c and *tád* in the main clause of d. And in fact that is how I (and the other standard tr.) take it. However, *pārīṇas-* is said to be masculine and *yád/tád* are of course neuter -- an obstacle that Old for his part considers too large to be overcome. However, the noun is most likely neuter. This is what we'd expect of a stem built with suffix *-nas-*, and the only diagnostic form for a masc. is acc. sg. *pārīṇasam* in III.24.5. Otherwise the forms are singular obliques, esp. in the collocation *rāyā pārīṇasā* "with wealth in profusion" (4x), and hence ambiguous as to gender. The masc. acc. sg. is most probably a nonce form created to match its usual formulaic partner, masc. *rayí-*, in the phrase *rayīm vīrávantam pārīṇasam*. See AiG II.2.738 and EWA s.v. Substantially the same argument is made by Lubotsky ("Avestan *x^varənah-*: The Etymology and Concept, 1998, 483).

abhīṣtim in d is analyzed by the Pp. as *abhī ṣtim*, as might be expected. Since (vanishingly rare) root-accented *ṣti-* is derived from *√yaj* and means 'sacrifice', the standard tr. exert a good deal of effort to introduce this sacrifice into their interpretation, somewhat embarrassingly in a pāda that already contains *ebhūr yajñébbhiḥ* "with these sacrifices." Cf. Re's rather overblown "puissé-je l'obtenir grâce aux sacrifices que voici, pour (que vous soyez présents à mon) oblation" (the "l" in "l'obtenir" is the *pārīṇas-*). I

take it rather to *īṣṭī-* ‘desire’, in a phrase *abhī *īṣṭīm* “to my desire, to my liking’. Either the annealed sandhi form **abhīṣṭīm* lost its 2nd accent redactionally, or the accent retraction that was ultimately to affect all *-ti*-stems (see Lundquist, *-ti*-stems) was already spreading to this stem, producing the occasional *īṣṭī-* ‘desire’.

I.166.15: This signature verse of Agastya’s Indra/Marut hymns appears in I.165.15, 166.15, 167.11, and 168.10, but not in all of his Triṣṭubh hymns even to Indra. The tr. of I.165.15 (JPB) differs somewhat from the others (SWJ). JPB interprets *mānyā-* as a patronymic to a PN *māna-*, while I take it as an adj. ‘respectful’ derived from *māna-* ‘respect’. It is possible that both are meant.

Both tr. follow Old in reading ‘*vayām* ‘propitiation’ (SWJ) / ‘reconciliation’ (JPB) for *vayām*. This requires no emendation to the Saṃhitā text, only to the Pp. My tr. should, however, have an asterisk before ‘propitiation’ in all three cases.

I.167 Maruts

I.167.2: What noun to supply with *jyēṣṭhebhīh ... bṛhāddivaiḥ* is an open question. Ge confesses to uncertainty in his n. 2b, but implicitly supplies “help(s)” from pāda a in his tr. However, the disjunctive *vā* ‘or’ would seem to exclude this solution, unless it’s signaling a contrast between the Maruts’ “help(s)” and those stemming from heaven, which seems unlikely. Klein (DGRV II.157) suggest “riches” (a suggestion that goes back to Sāy), in part on the basis of *rayīm ... jyēṣṭham* in VIII.46.19; see also IV.29.5 *bṛhāddivasya rāyah*, adduced by Ge. The fact that “help(s)” and “riches” both appear in vs. 1 (a and c) supports this view.

My tr. of cd differs from the standard ones and follows Jamison 1983: 84. I take *dhanāyanta* as transitive, a straightforward ex. of *-anta* replacement (see Jamison 1979). This involves taking *niyūtaḥ* as accusative, not nominative, pl. and *paramāḥ* as modifying the unexpressed Maruts, subjects of the verb. The standard tr. “when their furthest/highest teams are running ...” is certainly acceptable, however.

I.167.3–7: Hoffmann (Injunk., 194–97) translates and comments on these verses.

I.167.3: For the punning and diametrically opposed, negative and positive, readings of this vs. mediated by *sabhāvatī*, see the publ. intro. Rodasī is depiced both as fit for the sabhā (gaming hall) like a young woman who goes there in secret [=whore], but also fit for the sabhā (assembly) like speech to be publicly uttered there (cf. the *sabhéyo vípraḥ* “the inspired poet appropriate to the sabhā” in II.24.13). For the association between the sabhā and licentious sexual activity, see Falk (Bruderschaft, 90–92).

Ge (/Hoffmann, WG) take *úparā ... ṛṣṭīḥ* as the lower part of the spear and consider the shared characteristic between simile and frame to be *hīraṇyanirṇik* ‘garbed in gold’, presumably referring to the decorated hilt or handle of the spear. But I take *úparā* as meaning ‘nearer, very close’ (so approx. Re) and the point of comparison is how close Rodasī is to the Maruts (“to whom she has been joined, positioned well”: *mimyaḥṣa yéṣu súdhitā*) -- as close as their spear, which is attached to their shoulders: cf. I.64.4 *āmṣeṣv eṣām ní mimṛkṣur ṛṣṭāyah* “On their shoulders spears have rubbed.” (The verbs *mimyaḥṣa* and *mimṛkṣuḥ* belong to different roots, but echo each other phonetically.)

The standard tr. take *mānuṣaḥ* as gen. sg., dependent on *yóṣā*, whereas I see it as acc. pl. Either is of course grammatically possible.

Hoffmann (194–95, fld. by WG) sees *sám vāk* as a new, separate clause (“Dabei ist die Vāc.”). Although I don’t entirely understand the position and function of *sám*, I do not think making these last two words into an abrupt appendage works well.

I.167.4: The polarized positive/negative treatment of Rodasī continues in the first half of this vs., in my interpr. With Hoffmann (/WG) I take pāda a as separate from b and supply a verb of motion with *pārā* ‘away’. In b, in my interpr. only, the fem. instr. *sādhāraṇyā* ‘common’ refers both to the fact that Rodasī is held by them in common and that this type of relationship leaves her open to the charge that she is no better than a whore. (As noted in the publ. intro., even Draupadī in the Mahābhārata sometimes receives this insult because she is the common wife of all the Pāṇḍavas.)

The 2nd hemistich puns on the name Rodasī (once again, this is only my interpr; others see it very differently), providing us with a grammatical problem. The form found in the text, *rodasī*, should by accent be the name of the Maruts’ consort, but as a singular -ī-stem, it should be nominative, a grammatical identity that does not fit the context well. Old takes it as an instr. Ge suggests that the word here is flexionslos, which conveniently allows him to construe it as an acc. with *āpa nudanta* (so also Re, without comment on the morphology). Hoffmann (fld. by WG) suggests it’s an elliptical dual, standing for Rodasī and Vāc. I instead think it is a grammatical compromise that enables a pun -- a compromise between dual **ródasī*, the standard word for the two world halves (so accented) and sg. **rodasīm*, the acc. sg. of the personal name. In other words, the *rodasī* we have in the text is a formal compromise: the right form for the dual worlds but the wrong accent; the right accent for the singular woman but the wrong case form. This is where the pun comes in, depending on a further implied pun on the *ná* that opens the line. On the one hand it is the negative, to be read with the personal name: “did not push Rodasī away” (so most tr.); on the other hand it is the simile marker, to be read with the two worlds: “as they did push apart the two world halves.” This refers to the cosmogonic deed, generally attributed to Indra, of separating the two world halves to create living space between them. The *ná* is of course in the wrong position for the simile marker, but I think Agastya relies on his audience to actualize his plays on words with hints like this. The full version of this very condensed expression would be *ná *ródasī(m) [/ródasī] ná* “not Rodasī like the two world halves.

In the next pāda both Rodasī and the two world halves are then the objects of a (quasi-)infinitival *vṛdham* (again, my interpr. differs from others’). Cf. the similar expression in I.85.1c *ródasī hí marútaś cakrīré vṛdhé* “the Maruts made the two world halves grow strong,” with a clear dative infinitive in periphrastic causative usage. The only other ex. of acc. *vṛdham* in III.16.2 also has infinitival value and even has the Maruts as subj.

I.167.5: This vs. depicts a svayaṃvara (self-choice) marriage likened to the mythological prototype of the svayaṃvara, that of Sūryā. The identification of the two female figures is underlined by the echo between *asur’yā* ‘her ladyship’ (pāda a, referring to Rodasī) and *ā sūr’yā* (opening pāda c, naming Sūryā).

jōṣat is most likely an aor. subjunctive (see comm. ad X.105.8, 158.2). As the first word of the verse, it introduces the “choice” theme. I take *jōṣad yād* as a type of politeness formula “if X will be pleased to ...,” archaic English “an it please ...” Note that dat. *sacādhyai* ‘to accompany’ is complementary to dat. *sakhyāya* ‘for companionship’ in 4d and of course etymologically related. The complementarity extends to the implied subjects: in 4d the Maruts are taking steps to produce companionship; in 5a it is Rodasī who decides to accompany them.

The bahuvrīhi *nṛmāṇas-* usually means ‘manly minded’ and so it is interpr. here by most (Ge [/Hoffmann/WG] ‘mannhaftgesinnt’; Re ‘l’âme virile’). But though she does display a fair amount of gumption, I find this an odd characterization of the very feminine Rodasī. In this context I take it rather as ‘having her mind on (the) men’ (that is, the Maruts, who are regularly called *nṛ-*). See *vṛṣamaṇas-* in 7c.

Pāda c presents the crucial moment in the RV svayaṃvara, the bride’s mounting the chariot of the groom (see Jamison 2001, Fs. Parpola). On a possible preterital tr. of *ā ... gāt* see comm. on the next vs.

I.167.6: The decisive moment of mounting is repeated immediately in this verse, in the causative *āsthāpayanta*. The *-anta* form can be simply an *-anta* replacement of act. *-an* of the usual type (Jamison 1979), but it might also be semantically justified: “They cause(d) her to mount (their own chariot).”

As Hoffmann points out, *āsthāpayanta* need not be read as impf. *ā asthāpayanta* with the Pp., but can be an injunctive *ā sthāpayanta*. The publ. tr. has preterital “caused ... to mount.,” and I still think that is correct, though a general present could provide an easy transition to the here-and-now of the ritual found in cd. My reason for preferring the preterital reading has to do with my view of the structure of the middle section of the hymn: vss. 3-6ab treat the mythological relationship between Rodasī and the Maruts, while 6cd-7 bring Rodasī and the Maruts into the ritual present. I see *vidātheṣu* in 6b as the pivot: on the one hand it echoes *vidathyā* in 3d and provides ring-compositional closure to the mythological section of the hymn; on the other hand it looks forward to the ritual present 6cd. Since the chariot mounting of 6a is part of the mythological past, a preterital (or timeless) tr. fits it better. (It might also be better to tr. the injunc. *ā ... gāt* in 5c in the same preterital fashion.)

In the publ. tr. I take *śubhé* with the preceding pāda: “mount for beauty,” since *śúbh-* is very commonly used in Marut hymns to refer to their journey (cf., e.g., I.88.2 *śubhé kām yānti ...*). However, the juxtaposition of the first two words in III.26.4 *śubhé sāmīślāḥ pṛṣatīr ayukṣata* is suggestive of a connection here between *śubhé* and *nīmiślām* (though in the publ. tr. of III.26.4 *śubhé* is not construed with *sāmīślāḥ* but with *ayukṣata*). Still I remain inclined towards my “mount for beauty,” because I think *nīmiślām* refers to Rodasī’s intimate connection with the Maruts, which was emphasized at the very beginning of the mythological section, 3a *mīmyākṣa yēṣu ...*, hence my “commingling (with them).”

As was just noted, I take 6ab as the end of the little Rodasī myth and 6cd as the beginning of the section treating the current ritual. I therefore (contra the standard tr.) take cd as dependent on 7, not on 6ab.

I.167.7: For my tr. of *vṛṣamaṇas-* see disc. of *nṛmāṇas-* in 5b.

Ge suggests that the greatness of the Maruts (pāda b) is demonstrated by the fact that Rodasī happily brings along their other lovers without jealousy. This seems like an interpretational male fantasy to me (though I realize that our poet is also male and therefore likely prone to the same fantasy). I have a much soberer and less entertaining interpr. based in ritual. In the plural, *jānī-* is regularly used of the wives of the gods, esp. in regard to their attendance at certain rituals. They are ordinarily brought by Tvaṣṭar, but here Rodasī, one of their own, as it were, seems to stand in as their chaperon and cicerone. In the R̥tugraha offerings (the “sequential cups”), in which a fixed order of gods receives oblations, the offering to the Maruts is followed immediately by one to Tvaṣṭar along with the wives of the gods; see I.15.2–3, II.36.2–3 (II.36.3d *tvāṣṭar devébhir jānibhiḥ sumádgaṇaḥ*). Thus, given the temporal proximity of the oblations made to them at this ritual, one might expect to find both the Maruts and the wives of the gods together on the ritual ground.

I do not understand the force of *cid* in d, and in fact I think it’s been automatically imported from the passages containing *sthīrā cid* where the adj. is a neut. pl. and the point is that our hero (whoever it happens to be) has destroyed various items “even though they are firm/hard” (I.127.4, IV.7.10, VIII.20.1). In other words, I do not think it has a function here.

I.167.8: Because the verb in pāda a, *pānti*, is plural, not dual, at least one additional subject is needed in addition to du. *mītrāvāruṇā*. The obvious one to supply is their partner Aryaman, who appears in the next pāda.

In d Old, Ge, Re, and WG identify *dātivāraḥ* ‘wish-granting’ as the mortal sacrificer, although, as they all acknowledge, the other two occurrences of this stem modify the Maruts (III.51.9, V.58.2) and therefore the Maruts should be presumed to be the default referent here as well. I see no reason to contravene this expectation. In V.58.2 the adjective is singular, modifying *gaṇā-* ‘flock’, a regular cover term for the Maruts, and I have supplied *gaṇā-* here as well. I also consider d to be an unsignaled dependent clause “(when),” indicating the circumstances under which the unstirring things stir (c), viz. when the Maruts get strong. The verb would have accent in any case because it is initial in its pāda. I do not, however, understand the *īm* in d, which has no referent, since *vāṇṛdhé* is intransitive (*pace* Gr). Taking the Maruts as the subj. of *vāṇṛdhé* also fits nicely with 9, which treats the “swelling strength” (*śávas-*) of the Maruts.

On the famous cmpd type of *dāti-vāra-* see comm. ad V.58.2.

I.167.10: *ṛbhukṣā* in d may refer to the Maruts collectively, as I’ve taken it, or to Indra, already mentioned in ab. Re suggests both possibilities, though he goes for Indra in his tr. (as do Ge, WG). It is true that singular *ṛbhukṣāḥ* generally refers to Indra, while it is plural *ṛbhukṣānaḥ* that qualifies the Maruts (VIII.7.9, 12, etc.). As in 8d I’m taking interpreting the singular as collective referring to the Marut flock. If the referent is taken as Indra, the tr. should be altered to “the R̥bhu-master of the superior men,” which seems a bit awkward.

I.167.11: See comm. ad I.166.15.

I.168 Maruts

I.168.1: Ge takes b as parenthetical. Although I agree that the 1st sg. subject of cd is also the subj. of pāda a, I think it less awkward to take pāda a as a nominal sentence, given the sheer amount of material that intervenes between it and the verb in d, *vavṛtyām*.

tuturvāṇi- is a hapax, but it can hardly be anything but a pleonastically redupl. form of *turvāṇi-* (8x)(though it should be admitted that this latter stem is used only of gods). The redupl. form is sometimes credited with a desiderative sense ('zu erlangen strebend' versus *turvāṇi-* 'siegreich', etc.: Gr; 'zu gewinnen strebend' versus *turvāṇi-* 'überwältigend': AiG II.2.906, reproduced in EWA s.v. *TŪRV*; 'cherche à l'emporter': Re), but I see no contextual or morphological justification for this. WG's iterative/repetitive "immer wieder überwältigend" is probably closer to the mark, and it would fit with the repetitive ritual actions indicated by the āmreḍita *yajñā-yajñā* and *dhīyam-dhiyam*. I would be inclined to emend the publ. tr. to "(am I) ever victorious" or "continually victorious." I do not understand Ge's 'zuvorkommend'.

The position of *u* in b is somewhat surprising. Klein (DGRV II.10 n. 16) groups it with a set of passages in which *u* appears as the penultimate word (or "word") in its pāda after *-ā* and classifies it here as "expletive," whatever that is meant to convey. Closest in configuration is VII.68.4 ... *devayā u ādriḥ*##.

The standard (and I think correct) interpr. of *devayā(h)* here is that it is fem. pl., agreeing with the implicit plurality of the (sg.) āmreḍita *dhīyam-dhiyam* -- an interesting syntactic constructio ad sensum.

I.168.2: For the image in pāda a see the publ. intro.

The point of the simile in the final pāda is somewhat obscure. The frame -- "to be extolled by the mouth" (*āsā ... vāndyāsah*) -- is unimpeachable, referring to the poet's oral praise, but why would gods be compared to cows and/or oxen for this quality? Surely the Maruts are inherently more praiseworthy than cows! Ge suggests that it's like the praise of bovines at work (like the horses in I.27.1, though this passage does not seem similar); WG tr. "(sie sind) die Kühe mit dem Mund, wie die zu lobenden Jungstiere" and suggest that such cows are esp. sichtbar. This interpr. loses the connection with the poet's praise "by mouth" and, at least to me, doesn't make much sense as a way to refer to particularly visible cows. I suggest that there's an imperfect pun here on *vāndya-*, which is phonologically close to *bāndhya-* 'to be bound' (not found in the RV or, acdg. to Wh Rts, till epic, but easy enough to generate, and the stem occurs in the name of the *anūbandhyā* cow, a fixture in śrauta ritual, already in the BYV Saṃhitās). The simile would then pivot on the verbal pun, not on the visual image, with "by mouth" used in two different senses with *vāndya-* and **bandhya-*. In the latter case, it evokes a halter, the assemblage of straps that go behind the animal's ears, across the jaws, and around the muzzle, to enable it to be led. The "bound" image adds another layer of meaning to the verse, suggesting under the surface that we can exert control over the Maruts, bind them to us, by praising them.

One small issue is whether *gāvah ... ukṣānah* is a single compound NP or two different entities. Ge suggests the possibility of the former in his n. 2d, though his tr. does not reflect it. The position of the simile particle would be slightly better if this were the case, though my tr. doesn't reflect it either, mostly because "bovine oxen" doesn't work well in English -- or probably in Sanskrit.

I.168.3: The first hemistich has a nice chaining of similes, as Ge persuasively shows. The Maruts are compared to soma drinks -- not, probably, for any quality proper to physical soma, but because, like friends, soma drinks are thought to “sit in the heart” (cf., e.g., I.179.5 ... *sómam* ... *hṛtsú pītām* ... and other passages adduced by Ge in n. 3ab). So the Maruts are “like soma drinks” only because soma drinks are themselves “like friends”; the first simile is mediated by the second. Within the first simile is embedded another metaphor describing the soma drinks “whose stalks are satiated” (*ṭṛptāṃśavaḥ*), referring to the originally dry stalks which swell when soaked in water (preparatory to pressing them). The result is a very dense set of nested imagery.

In c Kü (418) takes the *rambhínī* as a person with a crutch and WG as an old man with a cane or staff. Although VIII.45.20 ... *tvā rambhām ná jívrayo, rarabhmā* ... “Like elderly ones a staff, we have grasped onto you” shows that *rambhām* can have such a meaning, the feminine *rambhínī* requires a feminine referent in the simile, and I.167.3 in the preceding hymn, with Rodasī cozying up to the Maruts like their spear (*úparā ná ṛṣṭīḥ*), supplies the thematic parallel. That the spear is found in the two following vss. (4d, 5a) in this hymn also supports supplying it here.

kṛtī- is a hapax, but it is generally agreed that it means ‘dagger, knife’, derived from $\sqrt{kṛt}$ ‘cut’.

I.168.4: I supply ‘horses’ as subj. of a and obj. of b. Ge (/WG) take *codata* in b as intransitive/absolute/reflexive [it is somewhat difficult to tell from the tr.] ‘treibt selbst ... an’, but this verb otherwise takes an obj., and if it were reflexive we might expect middle voice. Re supplies the same obj. as I do.

I interpr. *tmánā* in its full lexical sense ‘with breath’, as sometimes elsewhere (see also 5b). The “breath” of the Maruts would of course be the storm winds. However, it is certainly possible that it simply means ‘by yourselves’, as in the standard interpr. I then take *kásayā* as an implied simile matching *tmánā*, since the whip is not usually associated with the Maruts, but with the Ásvins. However, in I.37.3 *ihéva śṛṇva eṣām, kásā hásteṣu* ..., the Maruts do have a whip, so an alternative tr. could be “spur them on with your own breath as whip” or “spur them on by yourselves with a whip.” The use of *tmánā* with a clearly marked simile in 5b may lend support to my interpr. of *kásayā* as an unmarked simile here.

The qualifier “dustless” (*arēṇavaḥ*), in combination with *codata* ‘spur on’ (b) and *acucyavuh* ‘have made stir’ (c), evokes the common notion that dust gets stirred up by violent activity (see, e.g., I.56.4=IV.17.13, IV.42.5). It is thus a paradox: although the Maruts set many things in motion, they themselves remain unaffected by this movement and therefore dustless.

I.168.5: Another vs. displaying Agastya’s tricky manipulation of double readings.

The standard tr. (but cf. Scar. 127) take *vaḥ* as the obj. of *réjati* (“who sets you atremble?”), but this seems semantically unlikely to me. The Maruts are always the initiators and causers of violent motion, as is esp. emphasized in these vss. (4–6); no one external to them is likely to have the power to make them tremble. (This seems to be implicitly recognized in Re’s supplied modal: “qui (donc pourrait) vous faire trembler au dedans ...?”) I instead construe *vaḥ* with *antár* (“among you”). The question “who among

you?” is a variant on the occasional rhetorical attempt to differentiate among the Maruts. Ge (/WG) and Re take the *antár* as the locus of the Maruts’ trembling (“within”; see Re’s tr. cited above). Rather than taking *vah* as the obj. of the verb, I supply *ḍṛḥāni* ‘fixed places’ from 4d as obj. of *réjati*; *dhánva*, extracted from the cmpd. *dhanvacýútaḥ* in c would be equally possible. Scar’s (127) tr. is similar to mine, but he takes *réjati* as absolute (“Wer aus eurer Mitte ... bewirkt ... das Beben ...”). This is also possible. Scar also takes *tmānā* as “durch seinen Hauch” as I do, contra the standard reflexive interpr.

The simile shows (or implies) a different syntactic configuration from the frame, as Ge also points out (n. 5b), reflected also in Re’s tr. Although the frame has a transitive verb *réjati* (possibly, with Scar, in absolute usage), the simile assumes an intransitive form of the same verb stem; cf., e.g., III.31.3 *agnír jajñe juhvā réjamānaḥ* “Agni was born quivering with his tongue,” with the tongue as here. I read *antár* also with the simile (so also Ge), governing *hánvā*, interpreted as dual (du. also Old, Ge, Re; WG take as instr. sg., which is morphologically more satisfying but produces an image that makes no sense to me).

The third pāda continues Agastya’s crafty syntactic slippage between simile and frame. I take the gen. pl. *iṣām* as parallel to the 1st cmpd member *dhanva-* in *dhanva-cyút-* ‘stirring the wastelands, stirrer of the wastelands’. The simile would then be an analytic (i.e., de-compounded) **iṣām cyút-* ‘stirrer of refreshments’ parallel to the synthetic rt. noun cmpd. *dhanva-cyút-*. ‘Refreshments’ here probably refer to rain. For the root \sqrt{cyu} in this sense, see V.53.6 *diváh kósam ácucyavuh* “The [=Maruts] have stirred the bucket of heaven,” and for *ís-* as rain, e.g., V.68.5 *vrṣṭidyāvā rītyāpā, iśás páti* ... (of Mitra and Varuṇa as lords of rain). This analysis allows the loc. *yāmani* (like more common *yāman*) to refer as usual to the Maruts’ journey. Ge (/WG) and Scar take *yāmani* as part of the simile, resulting in a very unlikely image: Ge “wie bei der Ankunft der Speisen,” with the shaking produced by the Maruts compared to that produced by a herd of cattle or by the wagons bringing in the harvest! (Re’s rendering is close to mine.)

The point of the last pāda is probably that the Maruts set many in motion, just as the Sun (or in this case, his stand-in, the Sun’s horse) sends people to their tasks on his daily appearance. The common property between simile and frame is *purupraīṣa-*. Although in I.145.3 *praīṣa-* in this cmpd seems to have the technical sense ‘ritual command’ common in later Vedic, I do not see that sense here, since neither the Maruts nor Etaśa issues such commands. Re unaccountably takes the second member as passive: “vous qui êtes multiplement incités.”

I.168.6: Ge (/WG) take c with ab, with d independent, while Re configures the vs. as I do. There are no implications either way.

The publ. tr. doesn’t render the *ā* ‘here’ with the verb in the rel. cl. *āyayā*. The point is that they have arrived here despite the vastness of the space in which they were driving, but “in which you have driven here” doesn’t work in English.

The frame and the simile in c do not agree in number: sg. *sámhitam*, pl. *vithurā-iva*. The number difference has a semantic function; the entity that the Maruts are stirring is solid and a unity, hence hard to move, but they make it shake as if it were comprised of a number of small unconnected pieces that are easily set in motion. Although *vithurā-* is a deriv. of \sqrt{vyath} and does not contain the preverb *ví*, its initial syllable plays off the *sám*

in *sámhitam*, in the common contrastive pairing *sám* ‘together’: *ví* ‘apart’. The real preverb *ví* opens the next pāda.

Ge (n. 6d) makes heavier weather of pāda d than seems necessary to me. I think the “turbulent flood” (*tveṣám arṇavám*) is simply the dusky realm (*rājas-*) of pāda a, i.e., the midspace in which the Maruts often find themselves. It is a turbulent flood because of the storms the Maruts are producing. The stone (*ádri-*) need not be a feature of the landscape (Fels, with Ge/WG), but a weapon of some kind, as often.

I.168.7: Ge’s n. 7 summarizes the gist of this verse, that what the Maruts bring is both disruptive and welcome. Their gift is rain (*vṛṣṭí-*, which never surfaces but accounts for the fem. adjectives throughout the verse), but it is accompanied by the violence of the storm. The positive/negative pairings are found in the first hemistich; the second one is only positive and ends by indirectly comparing the gift to the Maruts’ own consort Rodasī.

The curiously formed hapax fem. *pípīṣvatī* is best explained, with Old, as based on the perfect part. to *√pi* ‘swell’, *pīpivāms-*, fem. *pīpyúṣī-*, crossed with a *-vant*-stem to match *āmavati svārvati* in pāda a. Despite the tricky morphological manipulation required, I prefer this to the easier derivation from *√piṣ* ‘crush’, assumed by Ge’s ‘zerschmetternd’ (with ?), fld. by WG., and Re’s ‘pulvérisant’. Gr (flg. BR) takes it as built to a desiderative to *√pi*, but there are no desiderative forms to this root, whereas the pf. part. is quite well attested, esp. in the fem.

The last pāda has formulaic echoes that identify the female referent in the simile as Rodasī. There are only two other occurrences of fem. *asuryā-*, one in VII.96.1 referring to Sarasvatī (wrongly classified by Gr with the neut. noun), one in the hymn immediately preceding this one, I.167.5, where it refers to Rodasī. Similarly the bahuvrīhi *prthujrāyī* ‘possessing broad expanse’ brings to mind another passage adduced by Ge, I.101.7 *rudrébhir yóṣā tanute prthú jrāyaḥ* “Along with the Rudras [=Marut], the maiden [=Rodasī] stretches her broad expanse.” Although it might seem somewhat unflattering to attribute “broad expanse” to a lovely young maiden (esp. to us moderns; the ancients obviously had different canons of beauty), I think this is a buried pun. The two world halves (*ródasī*) do have this quality, and it has simply been transferred from that dual common noun to the fem. sg. *rodasī*.

jánjati has only one relative, *jánjanābhavant-* in VIII.43.8, where it modifies Agni and must mean something like ‘flickering’. On its formation see Hoffmann (IF 60, 1952 = Aufs. p. 40). Here ‘scintillating’ captures the feminine quality better.

I.168.8: The identity of the subj. of *udīráyanti* in b is left undefined. Re takes it as the rivers of pāda a, WG as the Maruts, and Ge leaves it undefined (“diese”). Although my publ. tr. likewise uses a noncommittal pronoun, I am inclined to think it is the rivers, because of the *úd* ‘up’, contrasting with the *áva* ‘down’ qualifying the action of the lightning in c. The noise the rivers make would be the roaring resulting from streams swollen by rainfall, hence the qualifier *abhṛíyam* ‘coming from clouds’ for their speech.

In d I take *yádī* as standing for *yád ī*, with acc. *ī* referring to the earth.

I.168.9: This is the final vs. of the hymn, since vs. 10 is repeated from I.165.15, etc. The *svadhā-* in d forms a slight ring with 2a *svajāḥ svátavaśaḥ*.

I.168.10: As just noted, this vs. is identical to I.165.15, tr. by JPB. See comm. ad I.166.15.

I.169 Indra

I.169.1: A difficult vs. to construe, esp. the first hemistich. In general I follow Old's somewhat bold interpr. He points out that pādas a and b are quite parallel, with pāda a *#mahás cid ... yatáh* matched by b *#mahás cid ... tyájasah*. He then suggests that the parallelism would be furthered if pāda-final *-tár*-stem agent noun *varūtā* (b) were matched by a similar formation at the end of a, which is possible if we read **etā* (agent noun to \sqrt{i} 'go') rather than *etān*. The final *n* of the transmitted form would have been acquired from the pāda-initial nasal *maháh* that immediately follows. Hence my "the one who goes," which should properly be asterisked in the publ. tr. I have supplied "(before)," to allow it to be construed with the abl. phrase beginning *maháh*. Old sim.: "Selbst eines grossen Gehenden Gänger (d.h. Ueberholer oder dgl.) bist du." As for the abl. phrase, I assume the referent is the Marut *gaṇā*- (flock). I also note the bad cadence and tentatively emend *yatáh* 'going' to **yātáh* 'driving', although keeping the transmitted form would not appreciably alter my interpr. semantically. Although Old's (and my) interpr. requires changing the text, the standard interpr. need to supply extra material and/or juggle the supposed pronoun *etān*, which lacks an obvious referent, and since Old's way builds on the parallel structures in the verse, I think the textual alteration is worth it.

What to do with *marútām* in c is the next question. Ge (see n. 1c) construes it with both *vedhah* and *cikitān* ("Du Meister der Marut, der (sie) kennt"), Re and WG with the latter. However, neither *vedhás*- nor *cikivāms*- ordinarily shows up with a complement -- though the passage adduced by Ge, I.156.4 *mārutasya vedhásah* with *vṛddhi* adj., gives me pause, and in the publ. intro. to I.156 I entertain the possibility of a syntagm *vedho marútām* here. Since all three tr. then construe this gen. pl. also with *sumnā*, the only reason to attach it to either or both of the other two words would be its position in the same pāda, which doesn't seem to me sufficient.

None of the standard tr. renders *nah* in c (though see Tichy [-tar-, p. 192], who does), but the sense of the first clause in cd must be "win the Maruts' favors *for us*." This makes the second clause, "for they [=favors] are dearest *to you*," a bit puzzling. Why would Indra, who has been quite disdainful of the Maruts in this hymn cycle, find their favors esp. dear? And if he does, why would he be willing to win them for others? I do not know how to resolve these questions on the basis of the transmitted text, which has verse-final *préṣṭhā*, which must therefore be a neut. pl. (or fem. nom. sg.). I would point out, however, that two hymns before (I.167.10a) we find the phrase *vayám adyéndrasya préṣṭhā*, with *préṣṭhā* pāda-final, but standing for masc. pl. *préṣṭhāḥ* before a voiced sound. It is therefore possible that *préṣṭhā* has been adapted from there, without adjusting the sandhi and that it could therefore mean "for they [=Maruts] are dearest to you." Unfortunately, though this makes *better* sense, it doesn't make complete sense, since Indra and the Maruts are depicted as still at loggerheads in this hymn. Perhaps *préṣṭhā*- here reflects one of the senses of *priyá*-, viz. 'one's own'. The Maruts would be "most your own" because they have been, and will be again, Indra's posse. If *te* in 2a should be

rendered as I take it, “your (Maruts),” this provides support for the “most your own” interpr. here.

I.169.2: Just as the standard tr. do not notice *naḥ* in 1c, they are also silent on *te* in 2a. I tr. “your (Maruts)”; it could also be a dat. with *āyujran* “they have hitched themselves up for you.” But the point is that Indra is a party to the action one way or the other.

The simplest way to construe cd is to take *hāsamānā* as a predicated pres. part. (so Ge), but it is possible with Re to supply a verb (“va,” in his case) or with WG to take it as a nominal clause of possession (“Den Marut gehört Kampfaktion ...”).

I.169.3: Both Ge and Re in different ways separate *ṛṣṭī-* from the well-attested ‘spear’ word and simply invent an otherwise non-existent stem (Ge ‘Hoheit’, Re ‘exploit’). Ge justifies this by saying that ‘spear’ doesn’t make sense in context (never a strong argument in RV interpretation, since so many contexts don’t) and that Indra never otherwise has a spear. (Re’s EVP XVII, where the tr. is found, has no notes, so his reasons are lost to us.) Ge then interprets *ṛṣṭī-* as a *v*-less form of *vṛṣṭī-* in I.52.5, 14 of the same meaning (in his opinion, though not others’). Even if Ge’s derivation were more solidly grounded, the presence of ‘spear’ in the preceding two hymns (I.167.3, I.168.4, 5), once with the same verb as here (I.167.3ab *mimyakṣa ... ṛṣṭīḥ*, 169.3a *āmyak ... ṛṣṭīḥ*), makes a separation from ‘spear’ extremely unlikely (as WG recognize). As to what Indra’s spear might be here, I suggest that “fixing a spear” is like planting a flag: it means staking a claim with a physical symbol of power or authority, and Indra has in this way asserted his claim to the sacrifice, despite the Maruts’ counter-claims, symbolized by the (cloud) mass they are sending this way. Another possibility: although I sternly resist nature-mythology explanations in general (and Indra’s “thunderbolt” in particular), in this context, with the storm-producing Maruts, it may be that a little conceptual flexibility is called for. In I.168.4 the Maruts are credited with lightning as their spears (*ṛṣṭividyaṭaḥ*), and in our vs. it is possible that, while the Maruts speed the clouds in b, Indra wields a spear of lightning.

The precise application of cd to ab is unclear. It seems to present two real-world analogues -- one involving fire, the other (in a simile dependent on the first) water -- to the mythological situation in ab, but what do these analogues contribute to interpreting what precedes? Before tackling that question, we must first decide what cd actually means. Ge and Old both take *dādhati* as a 3rd pl. indic., which requires finding a plural subj. Ge supplies priests and relegates the fire to a simile, presumably marked by *cīd* (which Ge takes as a simile marker on a number of occasions, though I do not think it can function that way). Old tries other strategies. But taking *dādhati* as a short-vowel 3rd sg. subjunctive allows *agnīḥ* to be subject without problem (so also WG). The point of both the fire and the water examples seems to be that these uncontrollable natural substances can produce unexpectedly positive results and that, though both substances ordinarily destroy matter, sometimes they create it. The “waters make an island” image is perhaps the easier one: when waters wash away large amounts of soil and other material upstream, this material often silts up downstream, forming islands in the river’s delta (as in the Bay of Bengal -- not that the RVic geographic horizon extends that far). It is almost a magical process -- dry land created from flowing liquid -- and provides an appealingly striking paradox. As for the fire image, fire burning in brushwood must be implicitly

contrasted here with the normal ritual fire, and the former is potentially destructive. I'm not sure how it makes pleasurable offerings (usually associated with the ritual), perhaps by roasting foodstuffs that happen to be in its path. It's worth noting that in II.4.7 fire "scorching the brushwood" also "sweetens the ground," another positive outcome: *agnīḥ śociṣmāñ atasāni uṣṇān ... asvadayan ná bhūma*.

What does this have to do with Indra and the Maruts? Perhaps in this verse addressed to Indra (note *te* in a), the poet is suggesting to him that despite their unruly natures the Maruts might turn out to have something to contribute to Indra.

I.169.4: The instr. *dākṣiṇayā* seems to be what we might call an instr. of material or specification; it expresses what the abstract 'present' (*rāṭī-*) consists of. Despite the position of the simile marker *iva*, I (and all the standard tr.) take *ōjīṣṭhayā* as belonging in the simile. Such configurations are found elsewhere, in addition to the far more common 2nd position of the simile marker.

As Ge also saw, the frame and the simile pivoting on *pīpayanta* have different syntactic constructions. In the frame *stútaḥ* is the subj. of an intrans. (or possibly reflexive) verb ("the praises swell / swell themselves"), whereas, since *stānam* is masc., it must be the obj. of a trans. use of *pīpayanta* ("[they] make the breast swell"). This clash is an example of the larger phenomenon of case disharmony in similes, treated at length in Jamison 1982 (IIJ 24); this particular passage is discussed pp. 263–64, where the syntactic properties of the verbal stem *pīpaya-* are also noted. I did not identify there the likely subj. of the transitive use in the frame, but flg. a suggestion of Dieter Gunkel's, in the publ. tr. I supply gift-cows, adapted from the sg. *dākṣiṇayā* in b. There is another case disharmony in this same simile, with instr. *vājaiḥ* corresponding roughly to gen. *mādhvaḥ* in the simile.

I.169.5: This vs. expresses the poet's willingness to let Indra supersede the Maruts if he provides sufficient wealth. The Maruts used to be the leaders, but now leadership passes to Indra, by indirection: the poet ascribes the leadership to his riches. (The cynical might think this ascription is not merely metaphorical.) As Ge points out, the poet is essentially apologizing to the Maruts and hoping (pāda c) that they will excuse his defection.

The *iva* in d is unusual in occurring after the verb *gātuyānti*. Ge tr. it more or less as I do. Re seems to ignore it, as do WG (unless this is what their "just" in "die ... just den Weg wiesen," though "just" [precisely] would seem to convey a sense opposite to the approximative *iva*). It might be possible to consider *iva* displaced to the left as sometimes, to be read with *devāḥ* ("like gods"), but this seems unlikely, given that the Maruts *are* gods.

I.169.6: The question in the first hemistich is what to do with *mahāḥ*. Ge must take it as an acc. construed with *yatasva*: "vergleiche dich mit [come to terms with] den Grossen ..." But this pushes the sense and syntax of medial *√yat*, which generally refers to physical placement (an interpr. encouraged by the seat [*sādane*] here) and never otherwise takes an acc. Re takes it as adverbial, while WG maintain Ge's acc. pl. but read it with *nṛṇ* in the previous pāda ("den ... grossen Männern"), starting a new clause with *pārthive*. I take it as gen. sg., referring to the Marut flock, as in 1a. Alternatively it could refer to Agni and the earthly seat could be the ritual ground.

On *pr̥thubudhná-*, lit. ‘broad based’, see Thieme’s brief remarks (Fremdling, p. 63 with n. 1). As he points out, it should not refer to the antelopes’ broad Untergestell (with Ge), since antelopes are not particularly bulky, but rather to the large amount of ground they cover. I take ‘base’ as equivalent to ‘stride’, somewhat like English ‘wheelbase’.

I.169.7: The various gen. pl. adjectives in ab can modify either the antelopes or the Maruts; with Ge I take them all with the Maruts. Despite the placement of *ghorāñām* and *ayāsām* flanking *étānām*, both those adjectives are used of the Maruts in nearby I.167.4 belonging to this same hymn complex.

I do not know what the debtor (*ṛṇāvān-*) is doing here.

I.169.8: The instr. phrase *stāvānebhiḥ ... devaiḥ* can express both agent (as in the publ. tr.) and accompaniment; that is, Indra is praised both *by* the Maruts and *along with* them.

[I.170–71 JPB]

I.172 Maruts

One of the shortest hymns in the RV.

I.172.3: Tṛṇaskanda appears only here in all of Sanskrit, as far as I can tell. The English gloss is a direct calque on the two parts of the name, *tṛṇa-* ‘grass’ and *√skand* ‘spring, leap’.

I.173 Indra

The beginning of the hymn is characterized by pāda-initial injunctives in -*at* (1a *gāyat*, 2a *ārcat*, 3a *nākṣat*, 3b *bhārat*, 3c *krāndat*; note also non-initial *ruvād* 3c and *carat* 3d). It is not surprising that this assemblage attracted the attention of Hoffmann, who tr. the first three vss. (Injunc., 143–44). The function of these forms is of course underdefined; I render them as simple general presents, more or less with Hoffmann (“die generelle Beschreibung eines Opfers”), sim. Ge. By contrast, Re takes them all as modal (“qu’il chante ...,” etc.).

Another verbal pattern is the repetition of forms of the root *√bhr̥*: 2c *bhārate*, 3b *bhārat*, 4b *bharante*, 6d *bhārti*. In this case the poet seems to want to display how many different idiomatic meanings he can find in this root.

I.173.1: IH suggests tr. *gāyat* and *ārcāma* as Engl. progressives: “he is singing .. we are chanting.” He points out that the (implied) presential nature of the nominal cl. of c and the future-referring final clause that depends on it in d support this interpr.

The standard tr. take *véḥ* as a nom. sg. In Ge’s tr., however, the bird seems to be compared to the sāman, not the singer: “Er stimme den Gesang an, der hervorschießt wie ein Vogel.” So also Re, it seems. Hoffmann (/WG) make the more natural (and grammatically acceptable) comparison with the singer, with *véḥ* as a nom. sg. However, although it requires some extra machinery, I prefer to take *véḥ* as gen. sg. I think Ge is on the right track, that the comparison is not the rather banal one between singer and bird, but the quality of “bursting forth” (*nabhanyām*) characteristic of bird song, a natural effusion. If this is the comparison meant, then only a gen. will work, dependent either on

sāma read a second time or on a different word for (bird) song to be supplied. Although there are undeniable exx. of *vés* as nom. sg. (VI.3.5, IX.72.5, X.33.2, possibly III.54.6), in addition to the expected gen. sg. of an ordinary *i*-stem – nom. sg. *vés* being a cornerstone of Schindler’s reconstruction of the IE ablaut pattern of this word and so beloved of Indo-Europeans – not all the *vés* forms listed as nom. sg. by Gr should be so analyzed. Besides the form in this vs., the one in III.54.6 (q.v.) is also possibly gen.

The obj. of *ārcāma* must be neut., which unfortunately excludes the cognate *arká-* (m.). Any neut. word for verbal product will do (*vācas-*, *brāhman-*, etc.).

The pf. part. *vāvṛdhānām* would be better tr. “that has grown strong.” I would thus now tr. ab as “He is singing the *sāman* that is bursting out like (the song of) a bird; we are chanting this (chant) that has grown strong ...”

The syntax of cd is ambiguous; c can be an independent nominal cl., with d dependent on it (so Ge, Re, and me) or the two can be read together as a single subordinate cl. (so Hoffmann [WG]), with the subordinating conjunction *yád* postponed until pāda d. This is not impossible, since pāda c is a single NP, but it seems a bit awkward. I prefer the two-clause solution.

I.173.2: An intricate verse, in which Indra both officiates as a singer at the sacrifice and receives the sacrifice as his due. In pāda a Indra as bull is, by the standard accounts, the subject, chanting along with the hard-laboring human priests (for *svédu-havya-*, see Jamison 2015, BAI 25) and, in his fervor, eager to out-sing (*āti ... juguryāt*) them. This is the only occurrence of *āti* with this root, but it can hardly mean anything else.

The Hotar in pāda c is most likely not Indra, but Agni, as in the next verse. This identification makes it easier to interpret the last pāda, where Indra, here called a “young blood” (*māryah*), supports “the pair,” who are likely (Ge’s parallels are apposite here) the two priests Udgātar (the likely subj. of *gāyat* in 1a) and Hotar (2c).

I.173.3–4: The *-at* injunctive pattern noted above comes to a climax in vs. 3, with 5 such verbs. The next *-at* form, *jújoṣat*, pāda-initial in 4c, is a subjunctive. The change in mood, while keeping the formal expression *-at* the same, is surely deliberate.

I.173.3: As Ge hints (n. 3a), the first pāda depicts the paryagnikarāṇa, a ritual episode that involves carrying a firebrand around various objects. In the animal sacrifice the objects include the animals to be sacrificed. On the basis of passages like IX.97.1cd (... *pāry eti ... mitéva sādma paśumānti hótā* “as the Hotar goes around the fixed seats provided with [sacrificial] animals”), the fixed seats are the places where the sacrificial animals are tied. The fixed seats here (*sādma mitā*) must be the same things, and the circling around is conveyed by *pāri ... yān*, which rather nicely encircles the seats in the word order.

The problematic pāda is the second one. All the standard tr. take *śarād-* as a gen. sg. in the sense of ‘autumn’, not ‘year’, with *gārbha-* metaphorical for ‘fruit, product’; cf., e.g., Ge’s “die herbstliche Frucht der Erde” or Hoffmann’s grammatically more punctilious “die Frucht des Herbstes der Erde.” This echo of a harvest-home festival strikes me as extremely incongruous. Although śrauta ritual does have a “first-fruits” ritual (Āgrayaṇa Iṣṭi, on which see, e.g., Keith, Relig. and Philos., 323–24; Hillebrandt, Rituellit., 119–20), it is a minor, grhya-like rite and quite marginal, and I am not aware of any mention of it in the RV, which tends to confine itself to the far grander Soma

sacrifice. I take *śarādaḥ* as an acc. pl. in the ‘year’ sense, expressing extent of time (“for years”), as it almost always does elsewhere. What then does the pāda refer to? In ritual context *gārbha-* almost always refers to Agni, either when just about to be kindled (and thus still in the womb of the wood) or just kindled -- though occasionally to Soma. The referent here is most likely Agni. The phrase *bhārad gārbham* probably has two senses. On the one hand, it is an idiom meaning ‘be pregnant’, and the acc. extent of time *śarādaḥ* is appropriate to this sense: “(s/he) carried/carries the embryo for years.” Cf. V.2.2 *pūrvīr hī gārbhaḥ śarādo vavārdha* “For the embryo grew for many years,” in a clear pregnancy context. The question then is who is the subject; I suggest the Earth, whose embryo it probably is (see below). On the other, this can refer to a particular ritual moment, when the Āhavanīya fire is taken out of the Gārhapatya and carried to the east to be set down (*purōhita-*) as the offering fire. In this reading the *śarādaḥ* may refer to the regular repetition of the ritual year after year, and the subject would be the priest, perhaps the human Hotar.

What I don’t understand in this pāda are the preverb/adposition/adverb *ā* and the relevance of the earth (gen./abl. *prthivyāḥ*). The most likely explanation of *ā* is that it is simply a preverb with *bhārat*, displaced to a position after the VP because the pattern of -*at* injunctives in this hymn imposes pāda-initial position on *bhārat*. In that case the publ. tr. should be slightly emended to “He bears the embryo ... here ...” This seems to be the solution of Ge and Hoffmann [WG], the latter two with clear “herbei,” though no one comments on it. However it is possible that *ā* should be construed with *śarādaḥ* or even *prthivyāḥ*, though I do not see a way to make that work. As for *prthivyāḥ*, I take it as a gen. with *gārbham* “embryo of the earth,” though Agni is usually called the embryo of the plants or of the waters. Perhaps Agni is the embryo of the earth because the plants in which he is immanent are themselves products of the earth. As noted above, in the pregnancy reading of *bhārad gārbham* I take the unexpressed subj. to be the Earth herself. In the ritual reading “embryo of the earth” may signal the fact that the new Āhavanīya fire is being transported in a clay pot.

In c Ge and Re identify the horse neighing while being led as Agni; this would fit nicely with my hypothesis that b depicts the carrying of the Āhavanīya fire to the east, though neither of them takes b that way. Ge also identifies the bellowing cow of c as the Speech (*vāk*) of d, which seems reasonable.

I.173.4: Old begins his n. on this verse with the cheerful comment “Wohl hoffnungslos,” and it is well to bear this in mind. The difficulties are located in the first pāda, which is seriously deficient in syllables (at best 9, probably 8), has a bad cadence, and contains a hapax *ā/āṣatarā* at which all tr. and comm. throw up their hands. The line is probably corrupt, and my attempts to fix it should be read with skepticism. The meter can be ameliorated by assuming a haplology of acc. pl. *kārma* adjacent to the identical verb, 1st pl. *karma*: *tā <kārma> karma* (or *tā karma <kārma>*). [I now see that a similar haplology is proposed by WG in the n. to this passage.] (For a less dramatic proposed haplology in Agastya’s oeuvre, see comm. ad I.180.3.) If we detach *ā/āṣatarā* from sandhi with the preceding word (contra HvN’s *karmāṣatarā*), the line would have eleven syllables, though it still would have an irreparably bad cadence.

As for *ā/āṣatarā*, the only (more or less) clear thing about it is that it is a comparative in -*tara-*, probably agreeing with *tā*. Ge [WG] refuses to tr. it -- though in

their n. WG render the passage tentatively as “Diese (Opfer)werke haben wir für ihn (gerade) zu den gesprenkelteren (bunter) gemacht.” I do not understand what they are doing with *āṣatarā*, though the rest of the tr. reflects the haplology proposal above. Re tr. “plus forts,” but without a note his reasons for this are lost; in his introduction to AiG I (p. 59) he comments that the word is “sans doute corrompu.” AiG I.239 tr. ‘annehmbarer’ without further explanation and floats the possibility of “nicht rein ai. Ursprungs,” a suggestion that Kuiper takes as fact (Aryans, 25). Mayrhofer refuses to speculate. I suggest, very tentatively, that it may be a dissimilated form of **āṣṭa-tara-* ‘more obtainable’, built to the ppl. *aṣṭa-* to $\sqrt{(n)aś} + \tilde{a}$. The initial long vowel in my reconstruction is contra the Pp., but the preverb *ā* is necessary to account for the initial accent and it is also the case that the ppl. to $\sqrt{(n)aś}$ does not seem to appear uncompounded in Vedic.

If this gossamer suggestion is correct, then the first two pādas outline a two-step strategy: we have first performed the easier ritual requirements in a, but more concentrated attention is needed, and in b those fixated on the gods advance the ritual activities. The second half-verse predicts that Indra will look favorably on these efforts and will come to our ritual.

I.173.5: In its contexts *sátvan-* clearly refers to a successful warrior, but it is of course a possessive *-van-*stem to the neut. pres. part. to \sqrt{as} ‘be’, whose participle, lit. ‘being’, often has the extended sense ‘actually being’ → ‘real’. I take the semantic dev. of *sátvan-* to be a slangy ‘having the real stuff’, ‘the real thing’. Cf. the similar Engl. expression “the right stuff,” the title of a novel by Tom Wolfe (and the movie based on it) about the astronauts in the space program. For another conjunction of *sūra-* and *sánt-* see 7a below.

Where to put *maghāvā* is a minor question, since word order could support grouping it with *sūrah* (Ge, WG), separating it from both *sūrah* and *ratheṣṭhāḥ* (Re), or grouping it with *ratheṣṭhāḥ* (me). What I am now certain of is that making *maghāvā* the primary focus of the rel. cl., with *ratheṣṭhāḥ* an adjunct, as I do in the publ. tr. (“who is a benefactor, standing upon his chariot”), is wrong, since the parallel relative clauses name Indra in various combat roles. I would now change my tr. to “who is a bounteous chariot-fighter” or “who is a chariot-fighter, a benefactor.”

The acc. pl. pf. part. *vavavrúṣaḥ* simply shows perseveration of the redupl. syllable (so also Kü p. 456) for expected **va-vr-uṣ-*. The additional reduplicating syllable may have been added because the root syllable is swallowed up in the weak stem of the participle.

I.173.6: Pāda-final *bhūmā* with long *-ā* must nonetheless be sg., as Old points out.

The athem. root pres. *bhárti* is found only here and in VI.13.3; see disc. there.

I.173.7: For *-ín-*stem superlative *prapathíntama-*, found also in VI.31.5, and *prápatha-* (4x, incl. nearby I.166.9), to which it is built, see comm. ad I.166.9.

Pāda c is problematic. The standard tr. take *kṣonīḥ* as subject, but this is grammatically problematic: *kṣonīḥ* is fem., but the subj. of c is the most likely referent of masc. *yé* in d. The gender disagreement disturbs both Ge and Old; the best solution they can come up with is a constructio ad sensum. I therefore take *kṣonīḥ* as acc. pl. The problem then is the absence of a verb -- a problem also for those who take *kṣonīḥ* as nom.

Ge uses the infinitive *paritaṃsayādhyai* from b, but I am reluctant to assume that kind of enjambement. Both Re and WG seem to do without a verb, allowing pāda c to dribble off unfulfilled into the rel. cl. of d. I supply a verb like ‘direct, send’, with no confidence in its correctness. As for the subj., I take it to be the warriors referred to by *samātsu ...*

satām in pāda a, although Old considers this gekünstelt. If, on the other hand, *kṣonīḥ* is the subj., I would tr. “the battle cries [=opposing sides] (call out) to Indra ...”

Ge takes *sūrīm cid* as a simile, with *cid* as the simile marker. As I’ve said elsewhere, I don’t believe that *cid* ever has that function, a view in which I am joined by Old, I’m happy to say. (See his remarks on this passage.) The point here is rather that the people call upon Indra as a fighter in battle, but also call him a patron when he distributes the prizes won in battle: he fills both roles.

I.173.8: Ge’s assessment that the vs. refers to the mixing of soma with water (a) and milk (b) seems correct. As often in soma contexts, the rhetoric is high-flown and the real-world references indirect.

The *āsú* of b must anticipate the cow(s) of c; it is presumably accented because its referent has not yet appeared in the discourse.

Both Ge and Re endow the gerundive *jóṣyā* with caus. pass. value ‘to be satisfied’ (“Jede zu befriedigende Kuh,” “Toute vache propre à être satisfaite”), but even the “causative” *joṣáyate* doesn’t have this value, but simply means ‘enjoys’. The cows are surely there for Indra to enjoy them, not for him to labor to give them enjoyment.

Note that the idiom *ānu √mad* ‘applaud’ found in *anumádanti* in 7d is broken down into its components, with *mádanti* in our pāda b and *ānu* in c.

My tr. of *dhiṣā* follows that of Pinault given orally at the Vedic Workshop at Univ. Texas, 2007.

I.173.9: The *yáthā* purpose clauses of this vs. are to be roughly construed with the initial *evā* of 8a.

Inspired by Ge, I read instr. *ena* in two different ways, as accompaniment in pāda a and as indirect agent in b.

Note also the decomposed *narām ná śámsaiḥ* (also 10a) recalling *nārā-śámsa-*. For further disc. of these expressions see comm. ad II.34.6 and VI.24.2.

The curious hapax *vandane-ṣṭhā-* ‘standing on praise’ must be a play on the phonologically similar, likewise hapax *vandhure-ṣṭhā-* ‘standing on the chariot box’ (III.43.1), which is modeled on the venerable *rathe-ṣṭhā-* ‘standing on the chariot’, two forms of which appear earlier in this hymn (4d, 5b).

The part. *náyamāna(h)* is identical to the form in 3c, but there the part. is clearly passive, and here such a reading is well-nigh impossible to impose. WG’s tr. has a self-beneficial meaning, “indem er (seine) Preissprüche mit sich führt,” but even that seems contextually difficult -- although I guess any praises Indra “leads” are ultimately for him. For leading song, see *gāthā-nī-* (I.190.1 [also Agastya], VIII.92.2), the latter also of Indra.

I.173.10: The vs. describes the competition between rival sides (either in battle or in ritual or both) to secure Indra for their side. I take it as depicting much the same situation as in vs. 7 (esp. 7b), where Indra is the object of a tug-of-war (*paritaṃsayādhyai*). I

therefore interpr. Indra also as the target. of *madhyāyuvah* ‘seeking (one) in the middle’ in 10d, contra Ge (/WG) for whom Agastya is the middle-man, the mediator.

As elsewhere (see III.52.6, X.42.2, 95.17), *úpa* triggers an acc. complement to *śikṣa-*, whose simplex forms only take the dative. The sense of the lexeme is ‘seek to entice / attract here’.

My interpr. of the vs. requires some rearrangement of the elements, most particularly the phrase *narām ná sámśaiḥ*, which I construe with the simile in c -- parallel to *yajñaiḥ* in the frame in d. Although this displacement may seem radical, neither Ge’s “Im Wetteifer geratend wie durch das Lob der Herren ...” (sim. WG) nor Re’s “(Soyons) en rivalité comme par l’effet des paroles-qualifiantes des seigneurs ...” makes any sense to me.

This passage is one of the comparatively few where a real modal value of the subjunctive might be preferable to the expectant future: “let/may Indra be ours,” rather than the publ. tr. “Indra will be ours.” Perhaps adjusting the English to “shall be ours” will do the trick. The subjunctive may express the speakers’ certainty that their sacrifices will be successful and exercise control over Indra’s actions. This seems to be the point of the next vs.

I.173.11: As indicated in the publ. intr., the syntax of this vs. mimics the meandering attributed to the finally successful sacrifice and the long road that brings a man home. One of the striking features of the word order (at least in my interpr. and Ge’s) is that *índram* behaves almost like a Wackernagel’s Law clitic, in taking modified 2nd position in pāda a, though it is to be construed with *ókah* ... *ā kṛṇoti* in cd. One factor that might impede that interpr. is that, as Old points out, the finite verb *kṛṇoti* in d is not accented, despite the *hí* in pāda a. Old feels that the end of the verse is no longer governed by *hí*. I would suggest rather that the rambling road the vs. has traveled from its beginning, including two complex similes, led the poet to forget or dismiss the *hí* with which he began.

I take *juhurāṇá-* to $\sqrt{hṛ}$ / *hru* ‘go crookedly, go astray’ (with Ge and Re, as well as Gr), rather than with $\sqrt{hṛ}$ ‘be angry’ with Insler (JAOS 88, 1968), apparently followed by WG: “wenn es (das Opfer) auch erzürnt im Denken Umwege macht.” The parallel participle *pariyán* ‘going around, meandering’ supports this identification, and it is somewhat difficult to imagine why/how a sacrifice would be (or make) angry. Agastya uses the same participle in the same sense in I.189.1.

I.173.12: The first pāda, beginning with a *mā* prohibitive, lacks a verb, but something like “(get) us (involved) / (drag) us (into)” is likely. Perhaps Agastya delicately omitted it to avoid insulting Indra too explicitly.

On *avayāḥ* and the verse in general see also Scar’s extensive disc. (404–6, esp. 406).

I.173.13: Pāda b could also be “find the way for us” (so Ge [/WG]). On the multivalence of *vidaḥ* see comm. ad I.42.7–9 and IX.20.3.

I.174 Indra

Agastya indulges in a certain amount of skewed ring composition and verbal echoes in this hymn. See, e.g., 1d / 10c *sahodāḥ*; 1c *nṛ̥n pāhī* (though this syntagm is only apparent; see comm. ad loc.) / 10b *narāṁ nṛ̥pātā*; 1b *asmān* / 10a *asmākam*; 2c / 9b *ṛ̥nór apāḥ*, 2a *mṛ̥dhrāvācaḥ* / 7d *kúyavācam mṛ̥dhī*; 2b *púrah* ... *dart* / 8c *bhinát púrah*; 4a *śéṣan* ... *yónau* / 7d *duryoné śret*, as well as the triple figure with *śūra*-disc. ad vs. 6.

I.174.1: All the standard tr. (also, e.g., Schlerath, *Königtum* 143, Hale *Asura*-70, Oberlies *ReligRV* II.177) construe the rel. cl. *yé ca devā(h)* loosely (very loosely) with *rājā* (e.g., Ge “Du, Indra, bist der König über alle Götter,” which entails not only assuming that *rājā* can govern such a clause, but also ignoring the *ca*). Within the same general interpr. framework WG do try to account for the *ca*: “... der König über (alle), auch die die Götter sind.” This can all be avoided by interpr. the rel. cl. as part of the familiar syntagm “X and which Y,” but in an inverse version with the conjoined rel. cl. first (rather like the inverse Vāyav Indraś ca construction with the *ca* constituent first): *yé ca devāḥ*, ... *nṛ̥n*. Re, fld by Klein (DGRV I.127), does interpret it as an “X and which Y construction,” but supplies a gen. “of mortals” with *rājā*: “... le roi (des hommes) et de (ceux) qui (sont) les dieux.” This is unnec. because *rākṣā* can govern the conjoined NP. It is accented because it opens the pāda. Another intricate “X and which Y” construction is found in vs. 3 (by my interpr.).

WG unaccountably take *rākṣā* absolutely and construe *nṛ̥n* with *pāhī*, which is ungrammatical because *pāhī* is accented; its object (*asmān*) follows. But note that the surface syntagm *nṛ̥n pāhī* is echoed in 10b *narāṁ nṛ̥pātā*.

Acdg. to Hale (70), Indra is referred to as an *āsura*-only 4x in the RV; it is possible that the occurrence here is connected to the elaborate play on *śūra*-, on which see comm. ad vs. 6.

Notice the openings of cd, #*tvām sāt(patir)* ..., #*tvām sat(yó)* ...

I.174.2: The derivation of the 2nd sg. verb *dánaḥ* is unclear. Most (see EWA s.v. *DAM*^f) associate it one way or another with √*dam* ‘tame, subdue’ -- beginning with Sāy.’s gloss *adamayaḥ*. Old and Ge suggest that there is a by-root *dan* beside *dam*; Re (GLV 81) concurs that it belongs to a “fausse racine,” probably generated from athematic forms where the root-final would have been followed by an ending beginning with a dental (type 2nd-3rd sg. *ágan* to √*gam*). Bloomfield (153) suggests it’s a nonce blending of √*dam* and √*han*. I wonder if it is not the detritus of the expected 9th cl. pres. **damnāti*, which would be cognate with nasal presents elsewhere in Indo-European and is the stem underlying attested *damāyá*- (< **d(a)m-n-H-yé/ó*-) and *damanya*-. In our 2nd sg. injunc., expected **damnās*, the interior nasal cluster could have been simplified and the whole remodeled as a thematic form (unfortunately requiring also accent retraction). Better, in fact: **damnāti* might not be the expected form; a reconstructed **dm-ne-H-ti* without restoration of a full-grade root syllable should yield **danāti*, which would have lost its obvious root connection with √*dam* and could without too much difficulty be remodeled to the thematic stem we appear to have. The 9th class *ramṇāti* would have pursued a different remodeling path.

In their n. WG suggest an unlikely deriv. from √*dā* ‘divide’, with an *-*éno*-nominal suffix, hence “Der ist Abtrenner des nachlässig redenden Stammes,” taking the nominals as gen. sg. rather than acc. pl. (as is grammatically possible). The only

advantage I see to this is that it works better with the ostensible 3rd sg. *dārt* in b, but there are other ways to handle that form.

As was just noted, the verb of b, pāda-final *dart* ($\sqrt{dṛ}$), appears to be a 3rd sg., in an otherwise 2nd sg. vs. It also ends in a (more or less) illicit cluster (*-rt*, with non-radical *-t*). With Old I assume that the original form was **daḥ* (< **dar* < **dar-s*). A final *-t* was falsely restored, possibly redactionally, on the basis of the identical pāda in VI.20.10c, where the 3rd sg. is appropriate and the sandhi situation favors the retention of the *-t*. See comm. there.

Note the double phonetic figure in *śárma śáradīr dart*, with *śárma śára-* and *-dīr dart* responding to each other.

Note the phonetic play in *#ṛṇór ... árṇā(h)#*.

Purukutsa is chronologically out of place here. Elsewhere he is a semi-historical figure, the father of Trasadasyu and a contemporary of Sudās, so Vṛtra should be out of his league and his time period. But he does figure in VI.20.10, immediately after the pāda identical to our b: VI.20.10d *hán dāsīḥ purukútsāya śikṣan* “He [=Indra] smote the Dāsa (clans), doing his best for Purukutsa,” where the action described can be contemporary (or in the immediate past) and therefore chronologically possible. I think it likely that Purukutsa has been imported from VI.20.10 to anticipate the more properly mythological Kutsa in vs. 5. These two agreements with VI.20.10 support each other and are good evidence for the dependence of our vs. on that vs.

I.174.3: Ge suggests that the *sūra-* in *sūrapatnīḥ* ‘whose lord is a champion’ is Indra himself, which seems correct. Note that Indra is addressed as *sūra* in vs. 9; see also comm. on *sūrtā-* in vs. 6.

Ge (/WG) takes *vṛtaḥ ... dyām ca* as the conjoined obj. of *ájā* ‘drive’; the two objects are then picked up by *yébhiḥ* (Ge: “Führe die Heere ... und den Himmel, mit denen ...”). The problem (besides the question of whether it’s possible or desirable to drive heaven anywhere) is that *vṛtaḥ* is fem. pl. and *dyām* is masc. sg., and *yébhiḥ* is neither one. I follow Old’s interpr., also adopted by Re, that sees an “X and which Y” constr. -- with the twist that the *ca* does not follow the rel. prn. (as in *yé ca devāḥ* in 1a), but precedes it, with another part of the rel. cl. fronted around it (*dyām ca yébhiḥ*).

By either interpr. the rel. cl. lacks a verb. Old, Re, and I supply ‘gain, conquer’ with heaven as obj. (And in keeping with the constant theme of these Agastya hymns, I assume the referent of *yébhiḥ* is the Maruts; Old simply “die Leute”; Re doesn’t specify.) Ge [/WG] “verbündet bist,” which seems kind of weak.

Initial *rākṣo* in c is Pragṛhya in the Pp., presumably 2nd sg. impv. *rākṣa + u*.

The standard tr. take *aśúṣaṃ tūrvayānam* as two PNs, but I see no reason to. As noted in the comm. ad I.101.2, *aśúṣa-* is otherwise only used of the demon Śuṣṇa, but this strong association surely results from their phonetic similarity. Semantically it fits Agni quite well. As for *tūrvayāna-* it is sometimes a PN (e.g., I.53.10), but its first member must be based on the verb stem *tūrvati* ‘go in triumph’ vel sim., and the literal sense of the compound is appropriate for Agni. See the very similar analytic phrase VI.15.5 *tūrvan ná yāman* “like the one going in triumph on his course,” where Agni is the referent.

There is difference of opinion on how the simile works in d. Flg. Old, Re, and the line of least resistance, I resupply the verb *rākṣa* from c, maintaining Indra as subj., compared to a lion. Ge (/WG) take the subj. as Agni and then must supply another verb,

not available in the context. This seems like too much machinery to me, since the pāda is readily interpretable on the syntactic pattern in c.

I.174.4: Ge takes ab as a direct quote (uttered by unidentified speakers). He presumably does this because of the difference in tense/mood (subjunctive vs. injunctive) and person (2nd vs. 3rd) between ab and cd. But since such switches are common in the RV, the direct speech does not seem necessary or contextually supported.

I.174.5: One of the few “future imperatives” in the RV: *vr̥hatāt* in c, following *vāha* in pāda a. Ge and Re also supply an impv. in b (“lenke,” “attele”), but this pāda makes a fine nominal clause (so also Hoffmann, Inj., 190).

I.174.6: This vs. joins Indra’s overwhelming aggressive power with the moral force of the three principal Ādityas. Those who offend against the strictures of the Ādityas get utterly destroyed by Indra, in a partnership that one might expect to be more prominent in the RV; X.89.9, adduced by Old, shows the same cooperative enterprise in clearer form.

I take the pf. part. *jaghanvān* here as the equivalent of a pluperfect (in the English grammatical sense), a past anterior, since there are no finite forms with that function.

The standard tr. take both *mitréru-* and *codá-* as PNs. This is certainly the easy, and tempting, way out. But both can be (and in my opinion should be) given lexical weight. The easier one is *codá-*, a transparent derivative of \sqrt{cud} ‘bestir, incite’. Gr’s interpr. of the compound (< Roth), that *codá-* ‘inciting, goading’ is used of soma, makes good sense in context, since Indra performs his feats of strength under the influence of soma.

As for *mitréru-*, my interpr. is based on, but modifies, Old’s suggested *mitrā-īru-* “die Mitra (zur Rache ihrer Treulosigkeit) in Bewegung setzen.” He seems to envision the god Mitra being sent to punish the disloyal, but those who send Mitra to effect this punishment should be on the side of good, not subject to Indra’s smiting as here. I take *mitra-* here as the common noun ‘ally’ and the *-īr(u)-* as expressing a hostile dispatching of their erstwhile allies. Both those who dishonor their alliances in this way and those who lack piety (*ádāsūn*, b) violate the norms of Ārya society that are overseen by the Ādityas.

Although of the trio of principal Ādityas only Aryaman is named in this vs., Mitra lurks in the compound just discussed. Varuṇa, unnamed, is present along with Mitra in the dual pronoun *ayóḥ* (in *sácāyóḥ*; see the same sequence in III.54.2). Although the Pp reads *āyóḥ* and Ge accepts this reading (though see his n. 6c), I follow Old’s alternative analysis (so also Re, WG) as gen. du. demon. *ayóḥ* and his identification of the two as Mitra and Varuṇa. I assume that “saw before them Aryaman with those two” implies that the evil-doers have a vision of the three Ādityas sitting in judgment (vel sim.) before Indra destroys them.

śūrtá- is generally taken with *śṛṇāti* ‘crushes’, etc. ($\sqrt{śṛ}$), but the vocalism is surprising; we would expect **śūrtá-*, like AV *śṛṇá-*. Alternatively JC (as yet unpubl. paper on rounding of syllabic liquids in Iir.) suggests (modifying an old idea of Hopkins) that *śūrtá-* is a nonce creation to a pseudo-root $\sqrt{śūr}$, extracted from *śūra-* ‘hero’. The apparent ppl. *śūrtá-* is positioned in this hymn approx. halfway between *śūra-patnīḥ* in 3 and the voc. *śūra* in 9c, another ex. of Agastya’s somewhat skewed ring composition in

this hymn. One can almost see Indra earning his champion-hood: in vs. 3 he is indirectly called a *sūra*-; in our vs. he exercises the *sūr* that (playfully) underlies the designation *sūra*-; in 9 he can therefore be so addressed. Note that this *sūr* phonological figure may be supported by phonetically similar *asura* addressed to Indra in 1b and *sūrah* ‘of the sun’ in 5c. I am persuaded by Clayton’s disc., esp. since this is exactly the sort of thing that Agastya would do. How to render *sūrtá*- in English as a passive is difficult: “they were be-be-championed / overrun by a champion” doesn’t work. JC tentatively tr. ‘were conquered’; I might stick with the publ. tr., though it is misleading about root affiliation.

I.174.7: As often in a mythological context, *kaví*- by itself seems to refer to Uśanā Kāvya. The previous mention (vs. 5) of Kutsa, often associated with UK, supports this assumption.

arkāsātau probably has a double sense. In the ritual context the *arká*- are the chants (see nearby I.176.5), but in the mythological context supplied by vs. 5 (esp. c), it can be the rays of the sun. So VI.26.3, which contains both UK and Kutsa.

“Making earth a pillow” is surely a euphemism for sending him to “his eternal rest,” “putting him to sleep” among other such sayings. The “woeful womb” of d is a similar expression. Both remind us of 4a “they will now lie in the same womb,” clearly also referring to the grave.

Ge tentatively takes the referent of fem. “three” (*tisráḥ*) as rivers, and he is followed by Re and WG. Although this identification handles the gender and the fact that the adj. *dānucitra*- (3x) is once used of waters (V.31.6), it runs into the problem that the canonical number of rivers is seven, not three. It is rather the divisions of the world/earth that are regularly triadic; cf. fem. *tisráḥ pṛthivīḥ* (I.34.8), *tisró bhūmīḥ* (II.27.8). Although “bright with drops” may not be the most natural way of referring to the three worlds, I think the numerology trumps the adjective -- which could, in fact, mean ‘bright with gifts’, not ‘drops’.

Ge takes the loc. *mṛdhí* as parallel to loc. *duryoné* (“in ein böses Nest, in Missachtung”), and as so often he is followed by Re and WG; all of them also take *kúyavācam* as a PN. But given *mṛdhṛāvācaḥ* ‘of scornful speech’ in 2a, it seems better to give *kúyavāc*- lexical value and construe it with *mṛdhí*.

I.174.8: There is much disagreement about the first hemistich because of the uncertain grammatical identity of several forms as well as a sandhi problem in pāda a and a hapax in b. Let us begin with the sandhi problem. The clear neut. pl. *sānā tã* “those old (things [=deeds?])” that opens the verse seems rhetorically paired with *návyā* ‘new’ towards the end of the pāda, but in its sandhi situation, before vowel-initial *āguḥ*, *návyā* should underlyingly end in *-āḥ*, a masc. nom. pl. or fem. nom./acc. pl. (so Pp). Most standard tr. try to reflect this sandhi one way or another: Ge takes the ref. to be *nábhaḥ* in b, which he takes as a fem. pl. root noun *nábh*-. But “These are your old (deeds). New (clouds) have come” is, with all due respect to Ge, absurd. Old takes both *sāhaḥ* and *nábhaḥ* of b (with better semantics than ‘clouds’ -- viz., “neue Siege und Berstungen”) as the referent of *návyā(h)*, though he does show some sympathy with Gr’s suggestion that *návyā* is the neut. pl. we want, in hiatus. Re supplies “hymns” with *návyā(h)* ... *nábhaḥ*, which has no contextual support. Only WG, at least by implication, allow the neut. pl. interpr.: “Alt sind diese deine (Heldentaten), o Indra. Neue sind (gerade) (hinzu)gekommen.” I think

this is the only sensible way to interpret the passage: rhetorical patterning outweighs sandhi. The same hiatus of *návyā* before a vowel is found in V.29.15 *yā ... návyā ákarma*, where two vss. before (V.29.13) *yā ... návyā kṛṇávaḥ* essentially guarantees the neut. pl. interpr.

The fem. pl. interpr. of *návyā(h)* is even less likely if *sáhaḥ* and/or *nábhaḥ* are not taken as fem. pl. root nouns. As already noted, Old does so take them, and Ge has the same analysis of *nábhaḥ*, but not *sáhaḥ*, which he appears to take as a 2nd sg. verb in imperational usage. Re takes *nábhaḥ* as a fem. pl. adj. and *sáhaḥ* as the neut. sg. of the *s*-stem; for WG *sáhaḥ* is a nom. pl. fem. to a root noun and *nábhaḥ* a gen. sg., also to a root noun, dependent on *áviraṇāya*. The lack of agreement on basic grammatical identity almost reminds us of the interpretive chaos created by the Old Avestan Gāthas. For my part I take both *sáhaḥ* and *nábhaḥ* as 2nd sg. injunctives -- *sáhas* as the only act. finite form of the thematic stem *sáha-* (though cf. part. *sáhant-*), which is fairly well attested in the middle; *nábhaḥ* as the act. transitive corresponding to med. intransitive 3rd pl. impv. *nábhantām* “let them burst,” found esp. in the famous Nābhāka refrain (VIII.39-42). The fact that the next two pādas (8c, 8d) open with 2nd sg. injunctives (*bhinát* and *nanámah* respectively) and that I.173 is characterized by pāda-initial 3rd sg. injunctives (see comm. above) supports the verbal interpr.

As for the rest of pāda b, I supply ‘strongholds’ (*púraḥ*) from pāda c with *pūrvīḥ*, as in, e.g., I.63.2, II.14.6. The hapax *áviraṇa-* I take as containing *rāṇa-* ‘joy’ / ‘battle’, with both meanings in play in the cmpd. The form contains both the privative *a-* and what I consider a pleonastic *vī*, both meaning ‘without’. Although these elements might be expected to cancel each other out (“not without joy/battle”), I think the *vī* is included to allow a buried pun on *avīra-*, suggesting “for their unmanning” in addition to “for lack of joy / for non-battle [=end of battle].” The godless are supplied from the 2nd hemistich.

After the travails of ab, the rest of the verse is fairly straightforward. I supply *vísah* ‘clans’ with *ádevīḥ* on the basis of the occurrence of this expression elsewhere (e.g., VI.49.15) and take *bhídaḥ* (which, unlike the two *-ah* forms in b, I do interpr as the acc. pl. of a root noun) as a kind of proleptic cognate acc. with *bhinát*: “split ... into smithereens.” I would in fact now substitute this more colorful expression for the publ. tr. “split into pieces.”

I.174.9: This vs. is identical to VI.20.12. This connection, in addition to the identical pāda I.174.2b=VI.20.10c establishes a relationship between the two hymns that makes the dependence of *dart* in our 2b on the one in VI.20.10c more likely.

The apparent *-sí* impv. betrays its origins as an *s*-aor. subjunctive by appearing here in a subordinate clause, where impvs. are not licit.

I.175 Indra

I.175.1: The simile and frame in 1ab seem on the surface somewhat flat-footed, and the standard tr. try to fix it one way or another. Both Ge and Re take the simile to be *máhaḥ*, *pātrasyeva* (e.g., Re: “telle la grandeur de la coupe-à-boire”), with *mádaḥ* the frame (“A été-juste bu ... le breuvage-d’ivresse ...”). But this requires the simile to straddle the pāda boundary, with the simile marker *iva* in the wrong place. I think it is instead a sort of reverse simile, with the actual object (*mádaḥ* ‘exhilarating drink’) put into the simile and

the element in the frame what one would expect it to be compared to (*māhaḥ* ‘might’) “might has been drunk like an exhilarating drink.” Such a poetic trick should not be utilized too often, but the reversal of expectations is a bracing way to begin the hymn.

I.175.4: As noted in the publ. intro., the poet (*kave*) addressed here is surely Uśanā Kāvya.

I.176 Indra

I.176.1: Pāda b contains a pleasing if elementary figure *īndram indo vṛṣā viśa*.

śātrum opening d is neatly positioned so that it can serve as obj. both to *invasi* and to *vindasi*; note that these verbs rhyme and their root syllables are almost mirror images of each other.

I.176.2: The syntax of the simile in cd is surprisingly intricate. First, though *ānu svadhām* [/svadhām ānu] is a common syntagm (“following / in accord with (one’s) independent will,” e.g., I.33.11, 88.6, 165.5), the two words are not to be construed together here (sim. V.34.1). However, their common association probably accounts for the displacement of the rel. *yām* to the right of *svadhā* even though *ānu* governs *yām*. Further, though *yāvam* ‘grain’ in the simile logically matches *svadhā* in the frame (at least in my interpr.), they are in different cases: nom. and acc. respectively (*yāva-* is masc. and must be acc.). The acc. is due to the fact that *yāva-* is several times obj. of √*kṛṣ* ‘plough’ (I.23.15, VIII.22.6). Thus, though, given the way Sanskrit similes work (with the verb held constant and the nominal elements matched), *yāva-* should be nominative, the presence of the part. *cārṣat* ‘ploughing’ has attracted it into the acc. appropriate to the obj. of that verb. The various tr. treat this difficult construction in various ways, but mostly bleach or manipulate the meaning of the pass. *upyāte* in ways that seem illegitimate to me -- starting with Gr, who glosses *ānu ... upyāte* first as ‘sich jemandem nachwerfen’ but then waters this down to ‘nachgehen, nacheilen’. Ge’s “dem die Svadhā nachzieht” essentially follows Gr’s lead, an interpr. that makes nonsense of the simile (“wie der pflügende Stier der Gerste”), since the animal ploughing does not *follow* the sown grain but necessarily precedes it. (Without a ploughed furrow, there’s no place to sow.) WG give *upyāte* its due lexical value, but this again twists the simile into semantic knots: as with Ge’s interpr. the nom. bull (*vṛṣā*) is made parallel to nom. *svadhā* in syntactically satisfactory fashion, but this means that the bull is being sown, which is not at all *semantically* satisfactory: “dem hinterher die Svadhā gesät wird, wie der Stier der die Gerste pflügt.” Only Re seems to manage both syntax and sense, though his tr. introduces considerable machinery: “lui derrière qui (sa propre) autonomie est semée comme (on fait en) labourant (le champ d’) orge, (lui que est) le dieu mâle.”

What the hemistich is conveying is another issue. I do not understand how *svadhā-* can be strewn. The picture evoked by the simile is of a powerful bull (not the usual plough-animal -- ideally they are more docile) pulling a plough, with lavish amounts of grain being scattered in the resulting furrow. It could be that the *svadhā-* refers to the autonomous power of others, which gives way to (/is strewn down after) the progress of Indra the bull. Or his own *svadhā-* is metaphorically sown to bear fruit in due course. But neither of these explanations do I find convincing.

I.176.3: On the specific nuance of *spāśáyasva*, with the root variant *spāś* (versus *paś*, so common in *pásyati*) and middle voice (again, versus *pásyati*), see Jamison (-áya-, 167).

I.176.4: I take *sūrís cid ohate* as logically concessive, with this value signaled by *cid*, although I would prefer an accented verb.

I.176.5: This vs. has elicited an extraordinary amount of discussion and disagreement, which cannot be fully rehearsed here. I will only sketch my own interpr., which is closest to Old's. I take the *āvaḥ* that opens the verse as the verb of the main clause and the only surface word of that clause. The obj. 'him' (**tám*), referent of the following rel. prn., has been gapped, exactly as in 3c. The cmpd. *sānuśák* in b I analyze as *sānu-śác-* (rather than *sa-ānuśák-* with Gr and others); it is a reference to soma, which famously grows in the mountains. For detailed disc. of the cmpd and the passage see Scar (594), though I cannot follow his suggestion that the 2nd member belongs to *√sañj* 'hang' and refers to a quiver 'hanging on the back'.

In d the publ. tr. "helped him to prizes" goes a little too fluently into English. The loc. *vāḥjeṣu* might better be taken as the usual truncated loc. absol. "when prizes (were at stake)."

Most other tr. take c with ab, with d separate, whereas I attach c to d. There is no way to tell, but I think the contrast set up here is between the ritual (signalled by the loc. *arkéṣu* "at the chants"), where Indra will receive what he wants (soma), and the contest (*ājaú*), where Indra's client will do so.

I.177 Indra

I.177.1, 3, 4: The appearance of two instances of the gerund *yuktvā* and one of *niśádyā* may be a sign of the hymn's lateness since the gerund is quite marginal in the RV.

I.177.3: The hemistich-internal enjambment in ab -- ... *vīṣā te, sutáḥ sómaḥ* ... -- is noteworthy, esp. because b is a repeated pāda (VII.24.2b), and in its other occurrence the pāda is syntactically self-contained. In fact, WG tr. the two pādas separately here, with *vīṣā* in pāda a referring to Indra and *te* a gen. with *rátham*: "Auf deinen stierhaften Streitwagen steige als Stierhafter." This isn't impossible, but the other interpr. (fld. by Ge and Re) seems more natural.

I.177.5: Ge takes *vástoḥ* as dependent on *vidyāma* ("Wir Lobsänger möchten ... den neuen Tag erleben"), but *vástoḥ* is almost always a temporal marker elsewhere (e.g., in nearby I.179.1). I think rather that *vidyāma* simply anticipates the identical verb that opens the refrain pāda. For further disc., see comm. ad VI.24.9, whose pāda c is identical to our c (also X.89.17).

I.178 Indra

I.178.1: The crucial word *śruṣṭi-* is ambiguous: it may refer to the attentive hearing Indra gives to our praises and desires or to the obedience (based on *our* "attentive hearing") that

we have shown towards Indra. The publ. tr. reflects the first possibility, but I think both may be meant, though Indra's role as a hearer in 3b may support the first interpr. The other exx. of *śruṣṭī-* are not clearly diagnostic.

Ge takes "us" (*naḥ*) as the implicit obj. of *mahāyantam* ("der uns gross macht"), but *mahāya-* ordinarily takes a god (indeed ordinarily Indra) as obj., and most tr. so render it.

For the difficult phrase *pāry āpa āyóḥ*, see publ. intro. It is variously rendered in the standard tr.

I.178.2: See publ. intro. for the mismatch in b between the dual subj. *svásārā* and the pl. verb *kṛṇávanta*, with the possible semantic explanations given there (multiple days and nights or multiple fingers on the two hands). It's also worth noting that the verb we expect, the middle 3rd dual athematic subjunctive, may not have been thoroughly anchored in the poets' Sprachgefühl, since relatively few such forms are attested to any stem type. We should expect **kṛṇávaite* (or *-ete*), which is not found, though we once get *kṛṇvaite* (VI.25.4) with the wrong grade of the subjunctive suffix. In the absence of a firmly established form in this slot in the paradigm, the poet may have opted to fall back on a more familiar and easily generated one, the 3rd pl.

Gr assigns *aveṣan* to a separate root $\sqrt{viṣ}$ 'sich ergiessen', not to the well-attested $\sqrt{viṣ}$ 'labor'. This division is tentatively accepted by Mayrhofer (EWA s.v. *VEṢ*), argued for by Narten (s-aor., 245), and accepted by Gotō (1st class, 299). The tr. of both Ge and WG reflect this analysis, though Re's does not. Since 'labor, toil' works fine for the three forms that Gr assigns to this other root (nearby I.181.6 and VIII.75.11 in addition to this one) and for the one added by Narten (X.114.1), I see no reason to make the separation.

Ge unaccountably tr. *sakhyā váyaś ca* as instr. The reasons he gives (n. 2d) seem insufficient, esp. as a conjoined acc. phrase makes perfect sense.

I.178.3: For the odd position of *ca* see Klein DGRV I.75.

I.179 Agastya and Lopāmudrā

I.179.1: The first hemistich contains a predicated perfect participle *śaśramāṇā*.

I.179.1–2: The final pādas of these two verses depict a neatly contrasting sexual conjunction, with the males serving as subject of the first version and the wives the second. The pādas are almost identical (an effect difficult to convey in English), with only the initial preverb in tmesis and the form of 'bulls' differing, since the form of "wives," though acc. in 1d and nom. in 2d, is the same:

1d *āpy ū nū pátnīr vṛṣaṇo jagamyuḥ*

2d *sám ū nū pátnīr vṛṣabhīr jagamyuḥ*

Both seem to convey a legalistic prescriptive force. See disc. ad X.10.3.

I.179.3: I take the first two of the three 1st du. subjunctives (b *abhy áśnavāva*, c *jáyāva*, d *abhy ájāva*) as hortatory, with the third, in a subordinate clause, as future in value.

Pāda d has been variously interpreted. The major issue is what (if anything) is the object of *abhy ájāva*, a problem made slightly more acute by the fact that *abhí* is not

otherwise found with \sqrt{aj} until the ŚB (see Ge n. 3cd), making it likely that it owes its *abhí* to the parallel verb in 3b, *abhy áśnavāva*. Thieme's solution (Gedichte 76) is the most radical: he makes the duals *samyāñcā mithunaú* the object: "wenn wir die beiden [Heer-]Hälften dem gleichen Ziel entgegenführen," seeing Agastya and Lopāmudrā as leading two different wings of a metaphorical army. This is not impossible, but the fact that the duals are so appropriate to be the dual subject makes assigning them elsewhere seem somewhat perverse. Other tr. suggest other objects: Ge, on the basis of ŚB II.3.3.16, supplies 'ship', Re (and WG) 'chariot' (WG 'Rennwagen'). Re tentatively specifies "le char de la vie?"; I would suggest rather the chariot of the sacrifice, given that that image is extremely common and that Agastya seems to be trying to redirect Lopāmudrā's energy into ritual pursuits. However, I'm not sure that any object needs to be supplied; the publ. tr. reflects an absolute usage 'drive on'. Another small issue is the sense of *mithunaú*. For Insler (Vedic *mith*, 165), it is used contrastively with *samyāñcā*: "if we, who are now opposed, shall race on in harmony." But the standard use of *mithunaú* to refer to the complementary oppositional halves of a pair, esp. a married couple, makes this otherwise appealing reading less likely.

Note the phonetic echo: c *ājím* # / d *ājāva* #.

I.179.4: As noted in the publ. intro., with the Anukramaṇī and Sāyaṇa as well as Thieme, I take Agastya as the speaker of this vs., contra the standard modern assignment to Lopāmudrā (Ge, Re, Doniger, WG). The question is of some importance, because it determines the identity of the "me" whom desire has overcome. I see the verse as expressing Agastya's sudden surrender to his own latent and then aroused sexual desire; others must see Lopāmudrā as continuing to assert her desire as in vss. 1–2 to the chaste Agastya. But in that case I don't see how the sex would have taken place, since Agastya was unwaveringly against it in vs. 3. Certainly assigning it to Agastya makes for a more psychologically complex portrait.

Crucial to the interpr. that assigns the verse to Lopāmudrā is the syntactic function of the gen. phrase *nādasya ... rudhatāḥ* and the meaning of the part. *rudhánt-*. In the Lopāmudrā-speaker view the genitive is an objective genitive: "lust for the *nāda-rudhánt-* has come to me [=Lopāmudrā]." The participle then belongs to \sqrt{rudh} 'obstruct' and refers either to Agastya's ascetic self-control by withholding his semen (Ge flg. Sāy, Doniger) or to his warding off the importunate advances of his wife (WG). In the Agastya-speaker view the genitive is subjective and the participle belongs to \sqrt{rudh} 'grow, mount'. Although Re claims that 'grow' is "faiblement attesté" for *rudh*, "feebly" isn't "not," and in any case the attestation is more robust than Re seems to recognize. With the 'grow, mount' meaning, *nādasya ... rudhatāḥ* is a pun: the mounting bull (*nadā-*) and the growing reed (likewise *nadā-*), with the latter a metaphor for the penis. For a somewhat indecisive disc. of the possible meanings of the phrase see Old.

I.179.5: As Thieme points out, the last pāda, "for of many desires is mortal man," bears the mark of a popular saying, with the *I*-form *pulu-* in place of standard *puru-* 'many' in *pulu-kāmaḥ*. *pulu-* is found only once elsewhere in the RV, in *pulv-aghā-* in the Vṛṣākapi hymn (X.86.22), which also belongs to a more vernacular register.

I.180 Aśvins

I.180.1: Contra Ge (/WG) I supply ‘honey’ as the obj. of *pruṣāyan* on the basis of IV.43.5 ... *mádhu vām pruṣāyan*, etc.; it can be recovered contextually from pāda d.

I.180.2: This is a difficult verse to construe, primarily because of the anomalous *yád* that ends pāda a. It cannot (or should not) mark that pāda as a subordinate clause because the verb *nakṣathaḥ* is unaccented. But if it is taken as marking what immediately follows as a subordinate clause, this is awkward at best, because the gen. phrase of b should simply specify the gen. *átyasya* in a. The Ge (/WG) solution is to supply an acc. goal for *nakṣathaḥ* (“Schnelligkeit”), which is picked up by the *yád* and the following genitive phrase: “reach (the speed) of the steed, which (speed) (is) of the ...” Old suggests that the *yád* that should subordinate pāda d has simply been stuck in early at the end of pāda a for metrical reasons -- an unlikely tyro’s error for a skilled poet like Agastya and an interpretational hypothesis that essentially tells us that all bets are off in Rigvedic syntax. This is not a worthy representative of Old’s usual acumen. Re suggests either the Ge solution or an anticipation of the *yád* of c.

There is a much simpler solution, which avoids these syntactic contortions and also avoids the need to supply an acc. goal with *nakṣathaḥ* or to allow *áva* √*nakṣ* to take a goal in the genitive. The solution is to take *yád* (/yát) as the substantivized neuter NA sg. of the present participle to √*i* ‘go’ (‘going’ → ‘movement’); for a similar interpr. see *āyát* in III.55.8 and also vs. 3c below. It is the goal of the verb, and the genitives of ab are dependent on it; there is then no syntactic break between the pādas. Hence my tr. “You descend to the movement of the steed ...”

Contra Ge, I do not think that the first member of *vípatman-* is *ví-* ‘bird’, but, with Gr, etc., the preverb *ví-*. The lexeme *ví√pat* is found elsewhere, incl. in an Agastya hymn I.168.6.

Ge (sim. Gr, WG) suggests that the referent of the genitives is the Sonnenrosse or Dadhikrāvan. This does not fit spatially with the *áva* ‘down’ of *áva nakṣathaḥ*. I think rather of the ritual fire: Agni is often compared to an *átya-*; ‘of wide flight’ would well describe the movements of the newly kindled fire; although I could not identify an unambiguous example of *nárya-* referring to Agni, ‘belong to men, manly’ is a reasonable description of his role; as is *práyajyu-* ‘foremost at the sacrifice’, which is applied to Agni at III.6.2. Reference to the ritual fire also makes sense in the context of the second hemistich where Dawn escorts the Aśvins to the sacrifice and a ritual officiant (to be supplied) solemnly invokes (*īṭte*) them. The root √*īḍ* is essentially restricted to such ritual situations.

I.180.3: The construction of this vs. is, if anything, even more challenging than the previous one, at least in its second half. As noted in the publ. intro., the first half concerns the favorite paradox of the “cooked” milk coming from the raw cow. My only deviation from the standard tr. is to take account of the odd position of *áva* in b, which I take to signal a transition from a general statement about the paradoxical nature of milk to a particular statement about the ritual situation. I re-supply *adhattam* with *áva*, but here it refers to the deposit of the ritual milk *down* on the ritual ground.

The problems lie in the 2nd hemistich, and the knottiest one is posed by the apparent mismatch between the case of the simile and its supposed correspondent in the

frame. To allow Ge's tr. to represent the standard, he takes *yád* in c as a neut. acc. referring to the milk of the previous hemistich and functioning as obj. to *yájāte* in d (roughly, "which (milk) the oblation-offerer sacrifices to you"). But the milk is also compared to the undoubted nominative phrase *hvāró ná súciḥ* -- a discrepancy he attributes to "Der Nom. statt Akk. im Vergleich," a false explanation that I hope I dispatched for good in my 1982 IJ article on case disharmony in RVic similes (and that Thieme [KISch 79–80 n. 4 = 1951: 8–9] also excoriates him for, though without an adequate alternative solution in my view). Another problem posed by this interpr. (even for those who deal with the simile in another way) is that it requires 'milk' to be the obj. of *yájate* with *vām* then an oblique case, but \sqrt{yaj} (without preverb) almost always takes an acc. of the divinity and an oblique case (generally instr.) of the offering substance. (Gr gives templates with acc. of the offering, but the passages supposedly conforming to them are few and far between.)

Again, a more radical approach to the text can eliminate the problems without compromising the grammar. I suggest that *yájate* in d is not the verb of the rel. clause introduced by *yád* in c, but starts a new cl., consisting only of *yájate havíṣmān* -- a simple statement ending a complex verse. The verb is accented because it opens its clause. What precedes in cd is a nominal clause, with 'milk' as *subject*. It is possible to assume that there is no verb at all but a gapped copula, but I actually think that there is a haplologized present participle **yát* following the rel. prn. *yád* (hence *yád *yád*), again, as in vs. 2a, the neut. N/A pres. participle of \sqrt{i} 'go'. Assuming a haplologized monosyllable here fixes the meter, making a 10-syllable line into a proper Triṣṭubh, with an opening of 5 and a fine break and cadence. Hence, the milk "which (*yád*) is going (**yát*) within (*antár*) the wooden cups (*vanínah*)." With milk as a nominative subject, the nominative simile is grammatically impeccable, without (in the mode of Thieme [/WG]) having to apply it to the *havíṣmān*, which does not work well. I believe that the "blazing twisting" entity is an image of a snake, but refers to the snaking flames of fire, going into the woods. Thus *vanínah* is read with both frame and simile. In the publ. tr. "is (now) going" should be marked with an asterisk.

I.180.4: This vs. also presents a number of difficulties. The easiest to deal with is *avṛṇītam*, the 2nd du. active imperfect, to the 9th class pres. to \sqrt{vr} 'choose', which is otherwise only middle. We should hypothetically expect middle **avṛṇāthām*, but in fact, acdg. to Macdonell, *no* athematic present in Vedic attests such a form, whatever the present class. The 2nd / 3rd ps. middle dual forms seem to have been avoided, and this active nonce form is probably modeled on 3rd *singular medial* impf. *avṛṇīta*, which is fairly common and occurs a number of times in just this metrical position, after an opening of 5 in trimeter verse. Ge (p. 258 n. 3) attributes the active voice to the fact that the Aśvins are choosing on behalf of someone else; this is an ingenious suggestion and merits consideration, but I think the formal problems tipped the balance.

The real crux in this vs. is *eṣé*, which has received almost as many analyses as there are RVic interpreters. For some of the various suggestions see Old ad loc., Ge's n. 4ab, Re ÉVP XVI ad loc., Scar (60–61), Keydana (Inf. 236 n. 135); there is no space (and I have no patience) to discuss them all here. I take it as a dat. inf. to \sqrt{is} 'send' + *ā*, built directly to the root. This root identification may be supported by vs. 6 of the next hymn,

I.181.6b *pūrvīr īśaḥ ... mādḥva iṣṇān* “sending many refreshing drinks of honey,” with similar sense.

I take the simile *apó ná kṣódaḥ* as obj. of this inf., parallel to the gharma drink that the Aśvins are sending here. With Gr, I take *apáḥ* as one of the rare sg. forms of *áp-* ‘water’, preserved here in what is almost a deconstructed compound. For the gen. with *kṣódaḥ* cf. I.112.12 *kṣódasā-udnáḥ* “with a gush of water.”

As for the 2nd hemistich, against the standard interpr. (incl. Old), I take *cd* as a single clause. I supply “refreshing drinks” (*īśaḥ*) as subj. of *prāti yanti* with *mādḥvaḥ* dependent on it (not a nom. pl., per Gr), on the basis of the phrase cited above from I.181.6 with *īśaḥ ... mādḥvaḥ*. The goal of *prāti yanti* is *vām* in pāda c. I take *pásvaiṣṭī* with the simile, despite the pāda break and position of the simile particle: *ráthyeva cakrā* is a fixed phrase with the *iva* firmly planted within (cf. X.10.7–8, 89.2, 117.5). As for the form, the Pp reads nom. sg. *-iṣṭīḥ* (apparently fld by Ge, WG, Scar); Gr suggests rather du. *-iṣṭī*. I also read *-iṣṭī*, but interpr. it as an instr. sg. or even as one of the rare loc. sg. *-ī* to *-i*-stems (see AiG III.155). The parallel stem *gáviṣṭi-* is primarily attested in the loc., though its sg. is the more orthodox *gáviṣṭau* (pl. *gáviṣṭīṣu*).

I.180.5: Yet another near impossible verse.

The standard tr. take *gór óheṇa* as a phrase (e.g., Ge “durch Anpreisung der Kuh(milch)”). This interpr. is favored by the adjacency of the two words and even more by the retroflexion in *óheṇa*, which must be triggered by the final *-r* or *gór* and speaks for a close syntactic bond. Nonetheless, in the publ. tr. I construe *góḥ* with *dānāya* (“for the giving of a cow”), in part because pāda d (in my interpr.) identifies the poet as lacking cattle and in part because “by praise of the cow” doesn’t make much sense as a way to attract the Aśvins. However, the close sandhi of *gór óheṇa* gives me pause, and I might change the publ. tr. to “With a laud of the cow might I turn you here for giving.”

Thieme gives a complex, sensitive, and in many ways appealing treatment of this vs. in KZ 92 (1978): 40–42. In the first hemistich he takes *dānāya* as ambiguous, between “for (our) giving (to you)” and “for (your) giving (to us).” The ambiguity is also reflected in his double reading of *góróheṇa*: with a division *gó róheṇa* (already suggested by Pischel), this can mean “by the rising of the milk” and refer to the boiling up of the milk offered to the Aśvins in the Pravargya ritual. With a division *gór óheṇa* it simply means “mit dem Ruf eines Rinde” and refers to the loud cry with which Bhujyu summoned the Aśvins. Given Agastya’s seemingly limitless verbal trickery, Thieme’s suggested double readings are certainly possible, though I wonder if *gór óheṇa* needs to be confined to the simile, rather than referring to the cry with which we attract the Aśvins.

The second hemistich is more contested. Most tr. take *kṣoṇī* as dual acc, which it of course can be, with the fem. adj. *māhinā* the subject and wanting a referent: e.g., Ge (/WG) ‘help’ (*ūtīḥ*). I instead follow Thieme (and in fact Gr) in taking *kṣoṇī* here as nom. sg., and I read *māhinā* in two ways, as nom. sg. with *kṣoṇī* and dual acc. with *vām* (Thieme only the latter). Thieme also takes all of the 2nd hemistich as referring to the story of Bhujyu, the Aśvins’ client whom they saved from the sea. This allows him to take *apáḥ* as ablative sg.: “a cry from the water,” where Bhujyu was languishing. I believe the Bhujyu reference is confined to pāda b, though Agastya’s extensive treatment of the story in nearby I.182.5–7 gives me pause and might lead me to reconsider. Meanwhile I take *apáḥ* in c as gen. sg., as in 4b. Note the similarity between 4b *apó ná*

kṣódaḥ and 5c *apáh kṣonī*. In my interpr., pāda c is parenthetical, describing the noise that attends the Ásvins' journey, produced both by their quick progress in the chariot and by the cries of us ritualists seeking to bring them to us. I then take d as a return to the 1st sg. speaker of a(b) and supply the verb from pāda a, *ā ... vavṛtīya* "might I turn you here." My interpr. depends crucially on Thieme's ingenious (and to me convincing) analysis of *ákṣu-* as 'without cattle', formed in opposition to *kṣumánt-* 'having cattle', and containing an underlying **p(a)śu-*. (See EWA s.v. *ákṣu-*²; Mayrhofer accepts this analysis.) The standard tr. are founded on *ákṣu-* 'net', found several times in the AV; Thieme allows the possibility of a second reading with the 'net' word, which seems a bit stretched.

I.180.6: As noted in the publ. intro., I take the 2nd hemistich as a punning depiction of the poet's patron, anchored by two adjacent and rhyming verbs that have double readings, *préṣad véṣad*. The former is generally taken as the *s*-aor. subj. to $\sqrt{prī}$ 'please' (Wh Rts, Gr, Narten [176], as well as the standard tr.), but it could also be assigned to *prá √iṣ* 'send forth' (*pace* Re, who explicitly rejects this analysis) and refer to the *praiṣa-* 'ritual prompt', a technical term in the later ritual but already reflected in the RV, at least in my view (cf. *purupraiṣa-* I.145.3 and comm. ad loc.). I think that both readings are present. Those who assign the form to $\sqrt{prī}$ interpret it as an unusual intransitive / reflexive ("becomes pleased, pleases himself"), in contrast to the standard transitive use of the active forms of this root. But this is unnecessary. The subject is the ritual patron (*sūrí-*), whose function is to distribute largesse to the poet and priests. It is used without object here to enable both the $\sqrt{prī}$ and the *prá √iṣ* senses to be actualized. The same goes for the next verb *véṣat*. This latter verb is generally taken also as an *s*-aor. subjunctive, to $\sqrt{vī}$ 'pursue' (e.g., Gr, Narten [246], as well as the standard tr.), and I agree that this is one of its readings. But I would also take it as an injunc. to $\sqrt{viṣ}$ 'toil', two forms of which are found nearby (I.178.2, 181.6). The two injunctive forms "gives the prompt and toils" express activities strictly limited to ritual performance; the two subjunctives "will please and will pursue" remain tied to the ritual but express its larger goals: "will please (the poet and priests) and will pursue (the gods)."

Pāda d expresses the redistribution of goods that characterizes the Vedic ritual system. The patron acquires goods, hence the *ā ... dade* 'has taken'; in this case the *vāja-* 'prize' must be the 'abundance' (*púraṃdhi-*) sent by the Ásvins in b. The gods give these goods in response to the praises produced by the poets. The patron then distributes these acquisitions to his clients, here the ritual functionaries who prompted the gods' gifts in the first place. There are several possible grammatical analyses of *mahé*, but the dominant *mahé* is the dat. sg. to the athematic stem *máh-*. Given the patronage situation depicted, I take it as short for *mahé *rádhase* "for great (generosity)," as in I.139.6, II.41.6=VI.45.27, VIII.2.29, 24.10, 45.24, 64.12, 93.16.

I.180.7: The nonce verbal form *vipanyāmahe* has attracted a remarkable amount of discussion; for a detailed and clear summary see Kulikov (-*ya*-presents, 143–46), though his passive/reciprocal interpr. I cannot follow. Insofar as there has been a standard analysis of it, it has been as a passive to \sqrt{pan} 'admire' (Wh Rts, reflected in Ge's tr.), but other root associations and morphological analyses abound, which I will not discuss further. It belongs with a group of other, better-attested formations: fem. noun *vipanyā-* and adj. *vipanyú-*, which I take as 'admiration' and 'seeking/expressing admiration'

respectively. (This point was made forcefully by Thieme in Fs. Risch [1986: 165–66], though I do not follow his ultimately etymology.) (For a similar system, cf. *vasūyā-(ti)*, *vasūyā-*, *vasūyū-*.) I take *vīpanyāmahe* as a denominative *-yā*-verb associated with these nominal forms, derived from the root $\sqrt{\text{pan}}$ (in my view); it is transitive in value and takes *vām* as object.

With Thieme (an analysis fld. by subsequent interpr. Kulikov WG), I take the last part of pāda b, *vī pañír hitāṁvān*, as a separate nominal clause, but unlike these interpr. I take it as the main clause attached to the causal clause beginning in pāda a. The phonological play of *vīpan(yāmahe) vī pañ(ír)* clearly contributed to the word choice here, as Kulikov also notes. As for the sense of this hemistich, it simply rephrases the purport of vs. 6: because we singers are doing our job in the ritual economy by praising the gods, our patron is being generous to us and cannot be labeled a ‘niggard’.

I.180.7–8: The poet then turns to the Aśvins’ part in this system and in 7cd presents another causal clause, parallel to the one in ab. Note the parallel openings 7a *vayāṁ cid dhí* and 7c *ádhā cid dhí*. This subordinated causal expression continues into vs. 8, with another parallel causal clause occupying 8ab and introduced in a similar way: 8a *yuvāṁ cid dhí*. In my, admittedly complex, interpr. of these verses, the 1st plural singers of 7ab modulate into the single (3rd ps.) singer Agastya in 8cd; this modulation is eased by not naming him until we reach the triumphant main clause of 8cd, where he boasts of the great wealth he has acquired from his poetry -- just like the singers of 7ab. And the transition from 1st ps. singers to 3rd ps. singer is enabled by omitting both subj. and verb in 8ab, where a human ritualist or ritualists should be the agents (see below) but where the ps. and no. of any verb would be problematically telltale.

The series of causal clauses begins by highlighting the Aśvins’ benevolent participation in the ritual system (7cd) and then the complementary activity of the priest in summoning them to the sacrifice and offering to them first (8ab) -- before coming to the logical conclusion in 8cd: that Agastya has achieved his just reward and is himself acclaimed among men.

With the standard tr. I take *anindyā* in 7c as a predicted voc., with c and d separate clauses, as the double *hí* suggests.

I.180.8: Based on my interpr. of the structure of vss. 7–8, I supply Agastya as the subject of 8ab, which not only lacks an overt subject but also an overt verb, for the reasons sketched above. Ge supplies “(opferte er),” WG “(ruft man an)”; I favor something like the latter (my ‘summons’), on the somewhat fragile basis that *yuvāṁ* is fairly frequently the obj. of $\sqrt{\text{hū}}$ ‘call, summon’ (cf., e.g., I.47.4=VIII.5.17 *yuvāṁ havante aśvinā*).

Curiously enough *prá* does not appear with verbal forms of $\sqrt{\text{sru}}$ ‘flow’, but the preverb probably indexes the ritual fact that Aśvins receive their offering at the Morning Pressing, the ritual event that leads off the soma offerings of the day.

vīrudra- is a hapax and difficult (but what is not in this hymn?), but with Ge, etc., I take it as a bahuvrīhi ‘having Rudra (or rather the Rudras=Maruts) away’, referring to soma. As Ge hints (n. 8b), this probably is a reference to the Agastya – Indra – Marut cycle that forms such a dramatic part of Agastya’s oeuvre. It would refer in part simply to the fact that this is the Morning Pressing, and the Maruts receive their soma at the Midday Pressing. But also more specifically to the fact that whether the Maruts should

have any part in the soma sacrifice and whether in particular they should have a share in Indra's part were fraudtly disputed in those hymns. Agastya is in effect pointing out that there was never any question of the Aśvins having to share with the Maruts. (That by some accounts the Aśvins only got included in the soma sacrifice belatedly might make this a question that would exercise them.) The actual form, *vīrudra-*, is reminiscent of the nominal clause *vī pañīḥ* ... "the niggard is away" in 7b.

Pāda c is fairly straightforward, and it is worth noting that *prá √ śams* here is used of a human (though not a king, unfortunately), reflecting what I think is its original domain. There is some debate about the value of *citayat*, which belongs to the functionally malleable stem *citāya-*. But in the absence of anything that could serve as an object, I take it as the intransitive it regularly is, 'appear, be conspicuous'. As for *sahásraiḥ*, everywhere else where it's clear, this instr. pl. refers to cows or other countable forms of wealth (so also WG in n.), and I take it as indicating the reason for Agastya's perceived prominence.

Yet another hapax troubles us: *kāṛādhunī*. Both Ge and WG refuse to tr. it. But given the other intractable problems in this hymn, it seems one of the lesser issues. The 2nd member *-dhuni-* is surely *dhúni-* 'noisy' or probably, substantivized 'noise, tumult'. It also seems reasonably possible to connect *kāṛā-* to *kāṛú-* 'bard' and assign it a tentative meaning 'praise-song' (so also EWA s.v. *kāṛú-*, citing also AiG II.2, etc.). The form in the text (with probable but not certain *-ī* final, so Pp.) can be an instr. sg. The remaining problem is the accent, which should make the cmpd a bahuvrīhi, a grammatical identity at odds with my tr. "with a tumult of praise-songs." AiG II.1.221 simply says it has abnormal accent, and with nothing better to offer, I will simply allow Wackernagel the last word on that subject. I take this simile with what precedes ("proclaimed as if with ...") rather than what follows ("is conspicuous by thousands as if by ..."). Its position would allow either, despite the pāda break.

I.180.9: The phrase *sūrībhya utá vā* is elliptical. Klein (DGRV II.171) suggests supplying 'singers', while I prefer 'us'. Either is possible. Passages like *sūrībhya grṇaté* (II.4.9, VI.4.8) favor Klein, while those like V.16.5 *yé vayāṃ yé ca sūráyaḥ* favor my solution. The explicit 1st pl. in the next pāda (*syāma*) tips the balance in my opinion.

I.180.10: On the thematic and punning ring composition of this vs. with vs. 1, see the publ. intro.

In the finale of b, *suvitāya návyam, návyam* is at least superficially adverbial and works well in that guise. However it's worth noting that *suvitāya návyase* with two datives is found in Jagatī cadence in III.2.13, V.11.1, VI.71.3, IX.82.5, and I imagine that ours is simply adjusted to the demands of Triṣṭubh (though we should of course expect *návyāḥ* if this involved simple truncation).

I.181 Aśvins

I.181.1: The 2nd du (*un*)*ninīthāḥ*, with primary ending, is formally problematic. It is tentatively assigned to a redupl. pres. by Whitney, but there is otherwise no evidence for such a pres., while the pf. is well established. Macdonell (oddly) calls it a pf. subjunctive, but the mood sign of the subjunctive is absent. It can't be an example of simple

avoidance of a paradigmatically shaky form, as in the case of **avṛṇāthām* in the preceding hymn (I.180.4), because the expected pf. indic. *ninyathuḥ* is actually attested, with the same preverb (*úd*) and the Ásvins also as subject (I.116.8, 24). Kü suggests (280–81) that the form is aiming to be an injunctive (that is, I assume, an unaugmented pluperfect) meant to be distinguished from a putative imperative **ninītam* with 2ndary ending, and therefore it takes a primary ending (a solution endorsed by WG). This seems needlessly complex and, *pace* Hoffmann (Injunc., 111), I find the notion that an injunctive would adopt primary endings for this purpose somewhat bizarre, since secondary endings are what *define* the injunctive. A simpler solution is to assume the form is a nonce present generated to ambiguous perfect forms like opt. *ninīyāt* (2x).

How to construe the genitives *iṣām rayīṇām* and *apām* is another problem. I take them as parallel partitive genitives, roughly flg. Old, rather than taking the former pair as dependent on *préṣṭhau* and the latter as a pseudo-ablative as Ge does.

I.181.3: The adjectival descriptor of the chariot *ahampūrvāḥ* is transparently derived from a nominal clause “I am in front / I’m ahead,” however unlikely this may be as the utterance of a chariot.

The second hemistich consists entirely of a nominal relative clause referring to the chariot, with two vocatives, the phrasal *vīṣṇa sthātārā* “you mounters of the bull” in initial position and *dhiṣṇīyā* near the end. The latter is commonly used of the Ásvins (see, e.g., I.182.1c, 2a, in the next hymn). Here the voc. is followed by the rel. pronoun *yāḥ*, which ends the clause. This is a remarkably odd position for a rel. pronoun, and since this supposed rel. cl. consists of nominative qualifiers of the subject of the main clause, *rāthah*, it need not have been a relative clause at all: the whole of the vs. could simply be a main clause. I think the *yāḥ* got stuck pleonastically on the end of this pāda to provide a monosyllable to make a Triṣṭubh cadence. (Cf. VI.63.6, a Triṣṭubh that ends *dhiṣṇīyā vām*, likewise with a final monosyllable.) No harm is done by this last-ditch conversion of the string of epithets in cd into a nominal rel. clause, but it is a metrically driven afterthought in my opinion. It should certainly not be taken as a standard ex. of rel. cl. word order.

The phrase *mánaso jávīyān* is an analytic version of *manojū-* in 2c, there applied to the horses, not the chariot.

I.181.4: Yet another troublesome dual verb form: *avāvasītām*. It is generally agreed (Wh Rts, Ge [more or less], Re, WG, Schaeffer [179–82], Kü [486–88]) that it belongs to the root $\sqrt{vās}$ ‘bellow’. (Gr assigns it to both \sqrt{vas} ‘wish’ and $\sqrt{vās}$ without comment; for reff. to further lit. on this form see Schaeffer 181–82, Kü 487–88.) But forms to that redupl. stem are overwhelmingly middle, while this form is active. Whether it is assigned to the intensive (Schaeff.) or the pluperfect (Kü), we should expect a medial 3rd du. with secondary ending. However, as was already noted with regard to *avṛṇītam* in the immediately preceding hymn (I.180.4), athematic 2nd and 3rd medial duals are simply not attested, and in that case the 2nd du. *active* form was substituted. I think the same thing happened here, and there is therefore no reason to construct specifically active semantics for this form, as do WG.

Ge (fld. by Re and WG) supplies *putráḥ* with c as well as d and also takes *súmakha-* as a PN, hence “(the son) of Sumakha.” These two decisions lead to the

interpretation that one of the Aśvins is of human origin, the other divine. So, most clearly, Re: “Dissociation inattendue des Aśvins, l’un d’origine humaine, l’autre divine.” This is a major and unnecessary interpretive leap, and based on dubious though not impossible analyses of two details: there is no syntactic or rhetorical reason to supply *putráh* in c, and *súmakha-* is ordinarily an epithet of gods; acdg. to Mayrhofer (PN 102) this is the only possible passage in which it would be a personal name and would refer to a human, not a god. Although this vs. does, unusually, distinguish between the two Aśvins, I see no reason to ascribe human origin to one of them on the basis of this passage, which is more naturally interpreted in another fashion. It should be noted that Ge expresses some doubt about his interpr. in his n. 4c.

I.181.5: *nícerú-* is a hapax (though cf. *céru-* VIII.61.7). It almost surely belongs to \sqrt{ci} ‘observe, discern’, with Debrunner (AiG II.860), despite Mayrhofer’s doubts (EWA s.v. *céru-*). The Aśvins are themselves called *nícetar-* in nearby I.184.2.

The 2nd member *rūpa-* in *piśāṅga-rūpa-* seems pleonastic, but it perhaps should have been rendered in tr., ‘whose form is tawny’, vel sim.

Pāda c causes several problems, both in grammar and in interpretation. To start with the latter, *anyāsya* is universally taken as referring to one of the two Aśvins, as the paired *anyāh-*s of 4ab do. However, as noted in the publ. intro., I think the referent of this stem has shifted. Both Aśvins together are referred to in the first hemistich of 5, with the dual pronoun *vām*. They are contrasted with a new “the other” in c, who can only be Indra: the presence of the two fallow bays (*hārī*) guarantees his presence, since these horses are uniquely Indra’s.

The grammatical problem is the apparent number disharmony between the dual *hārī*, if taken as the subject, and the pl. verb *pīpáyanta*; the accent of this verb is also potentially problematic. The standard interpr. construe the pāda in this way (cf. Ge “Die beiden Falben ... sind ... geschwellt”; so also Old, WG). The accent on a main cl. verb is attributed to the *anyá-* (... *anyá-*) construction (so Ge, n. 5), though he expresses some concern that in fact there’s only one *anyá-*. While it is true that the first of two clauses in a double *anyá-* construction generally has an accented verb (e.g., I.164.20, II.40.4-5, VI.68.3), this is not universal (cf., e.g., VI.57.2), and it is not the case with single *anyá-*. But the real problem is that a plural verb should not have a dual subject. Both these difficulties can be avoided if we supply a (dual) form of \sqrt{gam} in c, generated from the precativ *gamyāh* ending b, and start a new clause with *pīpáyanta*, which then owes its accent to its clause-initial position. The plural subject of this verb then includes both Indra’s pair of fallow bays (c) and the Aśvins’ tawny lead horse (a). (Ge [n. 5] somewhat similarly suggests that *pīpáyanta* is pl. because the *kakuhá-* of 5a is also thought of [gedacht wird], but my suggestion allows a grammatical solution, not merely a notional one.)

The adjective opening the next pāda would apply to all three horses and serve as a further plural specification of the group. Although the Pp. reads du. *-ā*, in sandhi it can as well be pl. *-āh*. The stem of this adjective is uncertain. Sāy., followed by Müller, reads *mathnā*; Aufrecht, *mathrā*. This is one of the relatively few variant manuscript readings in the RV; see Müller vol. I, p. 62, Aufr. vol. II, p. iv., and Old ad loc. On the basis of *mathrā* in VIII.46.23, Old opts for *mathrā*. This seems reasonable, though in terms of

sense which suffix we choose matters little, since either form would most likely belong to $\sqrt{\text{manth}}$ ‘churn, stir, shake’; used of horses, I take it to mean ‘agitated, excitable, skittish’.

I supply a participle of a verb of motion with *ví*, which governs *rājāmsi*. The two parts of this phrase are separated by the intrusive voc. *aśvinā*. See 7b below.

I.181.6: This vs. is quite parallel to vs. 5: it begins *prá vām*, with a verb of motion in the 2nd pāda to be construed with *prá* (*gamyāh* and *carati* respectively); the 3rd pādas are identical save for their first word, X *anyāsya pīpáyanta vājaiḥ*. I therefore construe the vs. as I did vs. 5 with “lead horse” the subj. of ab, Indra the referent of *anyāsya* in c, and a new clause beginning with *pīpáyanta*. That the subj. of d is plural gives support to my suggestion that 5d also contains a plural not a dual.

śarādvant- ‘having autumns/years’ in pāda a is a hapax, but presumably means ‘having (many) years’ -- thus ‘experienced’, of the lead horse.

As was noted ad I.178.2, I do not believe that we need a separate root $\sqrt{\text{viṣ}}$ ‘sich ergiessen’ for three passages, including this one; ‘toil, labor’ works for all the passages. My ‘roil’ here, besides conveniently rhyming with ‘toil’, is meant to express the physical motion of the waters at work.

I.181.7: I do not understand why the song would be flowing ‘in three parts’ (/’threefold’; *tredhā*), nor is the meaning and referent of loc. *bālḥé* clear. But comparison with *tribarhīṣi sādasi* “on the seat with three (layers) of barhis” in the next vs., 8b, may help. Assuming *bālḥá*- belongs to $\sqrt{\text{bamh}}$ ‘be/make thick, firm’, we can assign *bālḥá*- the sense ‘thickened, plumped up’ and suggest that *bālḥé* refers to the barhis, which has been plumped up invitingly, like a sofa cushion, for the gods to sit on, with its three layers ensuring a soft seat. As for *tredhā* I now think it qualifies not the song, as in the publ. tr., but the seat, and would now tr. “... flowing to the (ritual grass) plumped up threefold/in three parts.” As in 5d the two parts of this phrase *bālḥé tredhā* are separated by the intrusive voc. *aśvinā*.

I.181.8: The gen. phrase *rúśato vápsasaḥ* is standardly taken as the PN (Ruśant Vapsas) of the singer. As often when a PN explanation is offered, this is a convenient way of evading an unclear word or phrase. But *rúśant*- is a very well-attested adj. with a clear sense ‘gleaming, bright’ and does not otherwise form part of a PN. This leaves *vápsas*-, which I take as ‘wasp’ both here and in VIII.45.5 (*girāvápsa*, which I divide as *girā vápsa*, contra Pp.; see disc. in EWA s.v. *vápsas*-). The resultant “gleaming wasp” is, in my opinion, a description of fire; *rúśant*- is not infrequently a descriptor of fire, and ‘wasp’ would refer to the random movements of flames and/or the “sting” produced by flying sparks hitting skin. At least acdg. to the internet, one of the most common species of wasp in South Asia is *Ropalidia marginata* (often called the Indian wasp), a type of paper wasp that is remarkably flame-red in color, and, in YouTube videos, a cluster of such wasps on top of their nest looks rather like a flickering fire. Its sting is quite painful. Its “song” in this passage would either be the sound of the crackling fire compared to the buzzing of the wasps or else simply the hymn recited at the ritual fire.

The publ. tr. takes *nṛ̥ṇ* as gen. pl., flg. the standard interpr. Since I resist this interpr. in general (see comm. ad I.146.4, X.29.4), I would now take this as parallel to the *mānuṣaḥ* ‘sons of Manu’ favored in pāda d, with loose construction “swells (towards)

men” and emend the tr. accordingly. Although this is not particularly satisfactory syntactically, a multivalent *nīn* seems even worse to me.

The publ. tr. careless omits the *vām*; I would emend the tr. to “this very song ... swells for you ...”

The second hemistich concerns the soma, in my view, though Ge and Re both take the bullish cloud as an image of generosity and WG as morning mist. I take this phrase as referring to the soma swollen with water after its soaking; this image is then given both a real-world and a ritual sense, playing on two senses of *gór ná séke*. In the real-world image the bull is depicted as sexually aroused (swollen) in mating with a cow, lit. “at the insemination of a cow.” The root \sqrt{sic} frequently takes *rétas-* ‘semen’ as obj., and this is a shorthand way of expressing “at the pouring out (of semen) into a cow,” vel sim. But in the ritual image, “at the pouring out of the cow” refers to the pouring of milk and its mixing with the soma, a very common image that is regularly sexualized.

I.181.9: This vs. seems to be trying to aggregate as many divinities into the final summons as possible, and it does so rather awkwardly. On the basis of I.117.19 *áthā yuvām íd ahvayat púramdhiḥ* “P. called upon just you two [=Aśvins],” I take *púramdhiḥ* here as the separate (female) figure, rather than as an qualifier of Pūṣan like Ge. Also on the basis of that passage I supply ‘summoned’ (generatable from *huvé* in c) rather than making this part of the b clause with the verb *jarate* -- though very little depends on one or the other decision.

In c *grṇānāḥ* must be, quite unusually, transitive: it is ordinarily passive. I think the transitive value for this medial participle was induced by its etymological relationship with transitive *jarate* in b, mediated by the medial participle to that pres. stem, which also takes the singer, not the besung, as subj. See the very similar passage VI.62.1 *aśvínā huve járamāṇo arkaḥ* “I call upon the Aśvins, singing with my chants.”

I.182 Aśvins

I.182.1: On $\tilde{a}\sqrt{bhūṣ}$ with *vayúna-* see VIII.66.8

The first hemistich addresses the ritual performers in the plural, as they make final preparations for the sacrifice. Ge (fld. by WG) takes phrase *rátho víṣaṇvān* “the chariot has its bulls” as referring to the Aśvins’ chariot, which is presumably hitched up and on its way. This is certainly possible, but I think the chariot may rather refer to the sacrifice, as so often, and “its bulls” may be the Aśvins, who have arrived and so the sacrifice can be set in motion, or they could be the priests or even the paraphernalia of the prepared sacrifice. However, I have to admit that the next vs. focuses on the Aśvins’ chariot (2cd) and their skill as charioteers (2b), so Ge’s interpr. may be correct.

Ge takes *mádatā* in b as transitive, with the Aśvins, under the guise of the various duals in cd, as obj. But *máda-* is rarely if ever transitive, and it seems best to take cd as containing an annunciatory phrase pointing to the Aśvins’ presence (or soon-to-be presence) at our ritual.

The hapax *viśpālāvasū* is presumably a bahuvrīhi, like *vājínīvasu-* ‘having prize-winning mares as goods’, though Ge tr. as a tatpuruṣa, ‘die Gönner der Viśpalā’. WG’s “mit (der Rennstute) Viśpalā als (ihrem) Gut” reflects the compound type better and may well be correct. However, the cmpd must allude to the story (or wisp of a story), found

mostly in Kakṣivānt's oeuvre, about Viśpalā and the Aśvins: Viśpalā is a mare whose legbone the Aśvins stick back together so she can win a race. The most relevant passage for interpreting this cmpd may be I.112.10 *yābhir viśpālām dhanasām atharvyām sahasramīha ājāv ājinvatam* "with which you revived Viśpalā, to pursue the way, to gain the stakes in the contest with a thousand battle-prizes." (Cf. also I.116.15, 117.11, 188.8; X.39.8.) From these references to Viśpalā it does not appear that she belonged to the Aśvins (was their "Gut"), but rather was benefited -- healed -- by them in order that she could herself *win goods* in the contest. Hence my more convoluted tr. "who provided the goods to (the mare) Viśpalā." The idea in our passage is presumably that they made it possible for her to race and therefore to get the goods, so a lot is concentrated in that single cmpd.

I.182.2–3: The two 2nd dual middles, *vahethe* (2c) and *āsāthe* (3a), would both be better metrically with light 2nd syllables. On this phenomenon, see Arnold 129–30. A number of 2nd and 3rd dual middle forms invite this shortening. I do not understand it historically since Aves. has the *ā* in the athematic forms and the equivalent of *e* in the thematic ones (-*aēte*, -*ōīde*). As disc. at various points above (ad I.104.3, 178.2, 180.4, 181.4), 2nd and 3rd du. middle forms are problematic in general.

I.182.2: Parallel *īndratamā* and *marúttamā*, superlative in form, are generally taken to mean 'most similar to Indra / the Maruts' (Gr, Ge, WG). I suppose that is their ultimate purport, but I think the effect is stronger: the Aśvins are said to possess the qualities of those gods in an even higher degree than those gods themselves do. Idiomatic English would use the comparative: "more Indra than Indra" (or, in a well-known colloquial expression, at least in my childhood, "more Catholic than the Pope").

I.182.3: The sense of pāda a would be better conveyed by "what are you doing *there*?"

The main cl. *kīm āsāthe* lacks an expressed antecedent to *jāno yāh* in the following rel. cl., but it is not difficult to supply.

I.182.4: On *jambhāya*- 'crush', see comm. ad II.23.9 and my *-āya*-Formations, p. 93.

I.182.5: The story of Bhujyu, son of Tugra, is treated in I.116.3–5, also a Kakṣivānt composition. (See also Agastya's mention of it in nearby I.180.5.) Bhujyu was abandoned by his father in the middle of the trackless sea; the Aśvins make a boat for him and bring him home. Just as here, the boat(s) is(/are) described in I.116.3 as *ātmanvānt*- and in I.116.4 as having wings. The former is generally tr. as 'breathing' (atmend, WG) or 'possessing a soul' (beseelt, Gr, Ge). I wonder rather if the 'body, trunk' sense of *ātmán*- is at issue here, and it refers to a boat with a cockpit or hollowed-out well for sitting, rather than a flat raft. The "paunchy" (if that's what it means and if it refers to the boats) in 6c would support this interpr. The wings would then be sails. (The latter is an easy transfer; e.g., in English sailing downwind with the mainsail on one side and the jib on the other is referred to as "wing and wing.") Of course, I am not denying that the Aśvin-made vessel did actually fly (see pāda d), but I do suggest that there's a germ of realia in the description -- and that a boat with a body makes more sense than a boat with a soul.

With most interpr. I take *supaptanī* as an instr. sg. to a fem. nomen act.; see Old's exx. of similar phrases with a verb and *su*-compounded cognate instr. It is perhaps worthy of note that the new-style weak pf. *pet-* coexists here with the old style redupl. *-papt-*.

I.182.6: The construction and meaning of the last two words of pāda c, *jāthalasya jūṣṭā(h)*, are uncertain. Ge (/WG) and Re construe the gen. with *jūṣṭā(h)*, though Re readily admits that *jūṣṭa-* never elsewhere takes a genitive. He does not comment on the meaning or reference of *jāthala-*, but Ge (/WG) takes it as referring to the “bauchig (Wagen)” of the Aśvins; Ge further comments, “Die Schiffe trugen den grossen Wagen der Aśvin oftmals über das Meer.” This conjures up a ridiculous image, of four ships towing a bulbous wagon across the water like a water-skier or a barge -- a wagon that, moreover, we have no evidence for either in this hymn or in the other passages concerning Bhujyu. (In the fullest treatment, I.116.3–5, the Aśvins carry him with their ships [*naubhiḥ*, 3a] after Bhujyu has mounted a ship [*nāvam ātasthivāṃsam*]. There are no wagons, bulbous or otherwise.) And further, not only the case frame with *jūṣṭā* but its sense would be very peculiar; Ge tr. “die des bauchigen (Wagens) gewohnt sind” (not the usual sense of *jūṣṭa-*), WG “die dem bauchigen (Wagen) angenehm sind.” What would it mean for the ships to be “used to” or “agreeable to” a wagon? (Ge tries to get out of this difficulty by setting up a veritable towing service, operating “oftmals.”) This can all be avoided by separating the two words and interpr. *jāthalasya* as a genitive of description, ‘of paunchy (shape)’, applicable to the boats, which, as noted with regard to 5b, would support an interpr. of *ātmanvānt-* there as ‘possessing a body’. The one to whom the ships are *jūṣṭa-* ‘agreeable, welcome’ is then Bhujyu, who had been floundering in the sea and would surely be cheered at the sight of them.

I.182.7: With Gr, etc. (incl. Scar, p. 648) I take *nīṣṭhita-* to $\sqrt{sthā} + nīs$, not *nī*.

Ge seems to take *paryāśasvajat* either as contrary-to-fact in a rhetorical question or as a true anterior pluperfect, but as Kü points out (591–92), the pf. of $\sqrt{sva(ñ)j}$ is presential, so the pluperfect is simply a past tense. The form is anomalous in several respects. First, it has a retroflexed initial, despite following *-a-*, but this is easily accounted for: the verb is always accompanied by the preverb *pāri*, and the retroflexion has simply been carried over into this environment. (This is the only place where the verbal form doesn't immediately follow the preverb.) The root is also otherwise middle in inflection: pres. *pāri śvajate* (5x, beside 1x act. *pāriśvājat* VI.60.10, q.v.), pf. *pāri śasvaje* (4x). But our plupf. is active; it also has apparent thematic inflection (expect **āśasvak*). These two morphological features are highly reminiscent of the *aduhat*-type actives built to old *t*-less middle presents of the type *duhé*, with expected *t*-less imperfect **aduha*, remarked with the act. *-t* ending – so brilliantly analyzed by Wackernagel long ago. It seems that the pf. ending of *śasvaje* was analyzed as (if) a primary ending, with a corresponding secondary *-a*, which then required remarking.

parṇā has a double reading: in the frame ‘leaves’ (of the rescuing tree in ab), in the simile ‘feathers’, as Ge (n. 7c) points out.

The *mṛgá-* seems to be specifically a wild *bird*, like its Avestan cognate *mərəya-*. See comm. ad IX.32.4, X.136.6.

Ge tr. *śrómatāya kām* as “(euch) zum Ruhme”; that is, the Aśvins will accrue fame from their rescue of Bhujyu. This is certainly possible, and the stem *śrómata-* does

mean ‘fame’ once elsewhere (cf. VIII.66.9), though it usually means, by my interpr., ‘attentive hearing’ (VI.19.10, VII.24.5). Here also I take it to mean ‘hearing’: ‘for hearing’, that is, for the story to be heard. WG tr. “zur Gehorsamkeit” and in the n. specify that it is Bhujyu who should be obedient. Since as far as I know Bhujyu hadn’t been disobedient, and certainly not to the Aśvins, I don’t understand the interpr., esp. as *śrómata-* doesn’t elsewhere mean ‘obedience’.

I.183 Aśvins

I.183.2: Given its position, I do not think that *ānu* is a preverb in tmesis with *tīṣṭhathaḥ* (with Gr and apparently Ge [/WG]), since such preverbs usually move to a metrical boundary (or directly after the verb). Re suggests that we should supply *vratāni*, after *ānu vratāni* in 3b, but doesn’t provide a tr. or give any indication of what the whole would mean. However, I think his instinct is correct, that *ānu* implicitly governs an acc. with the meaning “following/according to X.” The X is, in my view, to be found in *krātu-mant-* ‘having resolve’; the construction is a blend of this possessive adj. and an underlying *ānu *krátum* (cf. VIII.63.5, though the phrase is not as common as I’d expected). Pāda-final *prkṣé* is infinitival, like *iṣayādhyai* in 3c.

I.183.4: The first hemistich shows a nice phonological progression (noted also by Re): the zero-grade *vṛk* of the wolf and she-wolf (*vṛko ... vṛkīr*) in pāda a develops into the full-grade *vark* of the etymologically and grammatically unrelated impv. *varktam* in b, which is followed by the rhyming impv. *dhaktam*. In the 2nd hemistich the lexeme *nī √dhā* ‘deposit’ appears both as the verbal adj. ppl. *nīhita(h)* and the noun *nidhī-*.

I.183.5: I agree with Ge that *nā* and *iva* in 5c mark a single simile, not two as WG tr. it.

I.183.6: “We have crossed to the further shore of this darkness” announces the end of the night and the beginning of the early morning ritual, to which the Aśvins come.

Given the well-established idiom *prāti √dhā* ‘aim (a praise-hymn like an arrow)’, I would now slightly change the tr. of b to “a praise-hymn has been aimed at you,” particularly in light of VII.73.1 *prāti stómaṃ devayánto dádhanāḥ* “aiming our praise song as we seek the gods.” The pādas preceding these two expressions, I.183.6a and VII.73.1a, are identical. For further disc. of the ‘aim’ idiom see my 2020 “Vedic *iṣudhyá-* and Old Avestan *išud-*, *išūidiia-*: The Aim of Praise” (Fs. Lamberterie).

I.184 Aśvins

I.184.1: Just as the voc. *aśvinā* breaks up the phrase *rājāṃsi ... ví* in I.181.4 and *bālḥé ... tredhā* in I.181.7, the phrase *dívó nāpātā* referring to the Aśvins breaks up *aryáḥ ... sudāstarāya*, but more radically, since a pāda boundary intervenes.

I.184.2: The form *éṣṭā* is generally taken as the ppl. to *√iṣ* ‘wish, desire’ + *ā* (so Ge [/WG], Re; e.g., Ge ‘herbeigewünscht’). This is not impossible, but it should be noted that *√iṣ* ‘desire’ is not otherwise attested with *ā* in the RV. I prefer the interpr. of Gr, fld.

by Pirart (*Les Nāsatya* I: 385), which assigns it to \sqrt{yaj} ‘sacrifice’. The lexeme \sqrt{yaj} is quite common and means ‘bring here/attract by sacrifice’, which fits the passage well.

I.184.3: As noted in the publ. intro., this vs. is rather puzzling. In the first hemistich the simile involving arrow-makers seems to have little to do with the content of the frame regarding the bridal procession of Sūryā. Nonetheless I think the two activities are related and, rather than supplying a verb ‘came’ to govern *vahatúm sūryāyāḥ*, with Ge (/WG), I follow Old’s interpr. (with Re). Old pulls the verb ‘make’ out of the root-noun compd. *īṣu-kṛtā* ‘arrow-makers’ and supplies a transitive form of the root to govern *vahatúm*: “... wie zwei Pfeilverfertiger (den Pfeil zum Glücksschuss zubereiten, bereitet ihr) o zwei Nāsatyas, als Götter die Brautfahrt der Sūryā.” This interpr. is supported by the fact that forms of \sqrt{kr} regularly govern *vahatúm*: VII.1.17 *ubhā kṛṇvānto vahatū* ...; X.17.1 *tvāṣṭā duhitṛé vahatúm kṛṇoti*; X.85.14 *syonám pátye vahatúm kṛṇusva*; cf. also X.32.3 *pumśá id bhadro vahatúḥ páriṣkṛtaḥ* with a ppl. The connection of these two semantically ill-assorted activities, arrow-making and bridal-procession-making, is facilitated by two features of the passage. On the one hand, *īṣu-kṛt-* is reminiscent of *īṣ* \sqrt{kr} ‘make ready, set right’, with the pseudo-preverb *īṣ-*. On the other, *śriyé* can be read in slightly different senses with simile and frame. As Old points out, Pischel already compared X.95.3 *īṣur ná śriyé* with our *śriyé ... īṣukṛtā*. (Though I should point out that I read gen. *śriyaḥ* contra Pp. in X.95.3, the association remains.) In our passage the Aśvins are compared with those who make arrows “for glory” (in battle vel sim.), whereas they ready the bridal procession “for beauty” -- both senses being within the normal range of the multivalent *śrī-*. I would therefore now add to the publ. tr. “... (make ready) the bridal procession of Sūryā for beauty.”

The second hemistich is more problematic. Ge (/WG) takes c and d as separate clauses and in c Ge reads *apsú* twice, once as the location of the action of the verb (“Es schweben ... auf dem Wasser”) and once with *jātāḥ* (“die Wassergeborenen”). Ge (/WG) then takes d as a nominal clause, “Abgenutzt sind die Joche wie die des reichen Varuṇa.” Such a statement seems not only like an utter non sequitur (what do Varuṇa’s worn-out yokes have to do with the Aśvins or their horses?), but also puzzling on its own (what are Varuṇa’s yokes, worn out or otherwise?). Moreover, as Ge, etc., point out, there is evidence from parallel passages that c and d belong together, since *jūrṇá-* appears in an uncannily similar passage about the Aśvins’ journey: I.46.3 *vacyánte vām kakuhāso, jūrṇāyām ádhi viṣṭápi* “Your lead (animals) twist and turn upon the (sea’s) broken surface.” Thieme (rev. of Lüders, *Varuṇa* I [ZDMG 101 (1951): 411 n. 2 = Kl. Sch. 646 n. 2]) produces a tr. that puts the two pādas together: “in Sprüngen gehn eure ... Spitzentiere, die in den Wassern des vielfachen (reichen?) Varuṇa (d.h. im himmlischen Meere) geborenen, über die gleichsam gealtertem (d.h. von Rissen durchfurchten und deshalb unwegsamen) Joche (=d.h. Wegstrecken von der Länge je eines Vorspannes ...).” Though I do not follow it in all regards (he construes *vāruṇasya* with *apsú*), his interpr. is considerably more convincing than the two-clause solution. He takes *yugā* not as ‘yokes’, but as “Wegstrecken von der Länge je eines Vorspannes” (rather like *yójana-*), hence the surface on which the horses *vacyánte*. The ‘worn’ (*jūrṇá-*) surfaces of Varuṇa are then, with Old, the waves of the sea, here called Varuṇa, after the association of that god with water, which is prominent later but already present in the RV.

I.184.4: Unaccented *mādhvī* is of course a dual voc. addressed to the Aśvins, but given its proximity to fem. nom. sg. *rātīḥ* ‘gift’, it seems possible that it was meant to evoke also an accented *mādhvī* modifying this word. (However, Re points out that the fem. of *mādhv-* is generally identical to the masc. in the RV.)

I.185 Heaven and Earth

I.185.2: As noted in the publ. intro., I consider the embryo here to be the sun, but various other identifications have been proposed.

I.185.3: Ge (n. 3ab; see also JPB Ādityas, p. 212)) plausibly suggests on the basis of parallel passages that the “gift of Aditi” is “das Lebenslicht.” On the basis of my rethinking of the adj. *anehās-* (comm. ad X.61.12), now think this gift is ‘without (physical) defect’, not (morally) ‘without fault’.

The them. adj. *anarvā-* is clearly derived from the well-attested bahuvrīhi *-n*-stem *anarvān-* (cf. also the thematized *anarvāṇa-*). The neut. NA to the *n*-stem should be **anarvā*, which is not found. In two instances in which it should modify a neut. acc. (I.37.1, VI.48.15) we find instead the masc. *anarvāṇam*, an adjustment probably meant to make the form more transparent (see comm. on those two passages). As for the supposed them. stem *anarvā-*, in two of the occurrences listed by Gr. the referents are neut. (*cakrām* I.164.2, *dātrām* here). In both passages the neut. NA *anarvām* comes at the end of an odd pāda before an even pāda beginning with a consonant. I think it is at least arguable that the original reading in both cases was **anarvā*, the expected neut. to the *n*-stem, which was redactionally altered to a thematic acc. The alternation has no metrical consequences. As for the other two forms that Gr lists to the them. stem, both (II.40.6, VII.40.4) qualify Aditi in the nom. sg. and have the form *anarvā*. They both most likely actually belong to a fem. *n*-stem (see JPB, Ādityas 210), whose nom. sg. has exactly that form, and though they are fem., they do not exhibit the fem. derivational suffix *-ī* (expect **anarvāṇī-*?).

I.185.4: The lexeme *ānu* √ *as* is fairly uncommon, but Agastya uses it twice elsewhere (I.167.10, I.182.8); the rather more common *ānu* √ *bhū* can mean ‘be devoted to’ (< ‘follow’), and that seems to be the sense here.

Most interpr. take *ātapyamāne* as ‘free from suffering’, but the more literal meaning of √ *tap* ‘be hot, scorch’ seems appropriate in the solar context I see here.

In “the pair among the gods” (*ubhé devānām*), referring to Heaven and Earth, *ubhé* ‘pair’ is dual, while in “along with the pairs among the days” (*ubhāyebhir āhnām*) ‘pairs’ (*ubhāyebhiḥ*) is plural. This is presumably because Heaven and Earth are a unique pair, whereas the two day-halves, Day and Night, are recurrent and can be thought of as multiple pairs -- though the dual can also be used of them, as in *āhanī* in 1d.

I.185.9: Ge (/WG) take *ūtī* as dual nom. (WG “beide Hilfen”), but Ge allows the possibility of an instr. and Re takes it as instr., as do I. I think it likely that Heaven and Earth have resurfaced here, in anticipation of their appearance in vss. 10–11, and they are the subj. of *sacetām*.

I.186 All Gods

As noted in the publ. intro., the hymn is knit together by a shifting pattern of repeated initial preverbs and particles: 1a / 2a *ā* (with *āpi* 1c), *ūpa* 4a, which morphs into *utá* 5a, 6a, 7a, 8a -- the last 3 with *utá na īm* -- followed by *prá* 9a, 9b, 10a, 10b (which was anticipated by *pṛ* ... 8c. For the *prá*-s note 9a *prá nú*, 9b *prá yu*(...), 10 *prá ū*, 10b *pra pū*(...). Vs. 11 falls outside the picture. The repeated *utá*-s of vss. 5–8 reinforce the frequent additive quality of Viśve Devāḥ hymns.

I.186.1–3: The c-pādas of all three verses consist of a *yáthā* purpose clause with subjunctive.

I.186.1: This vs. signals the dedicands of the hymn obliquely: *viśvānaraḥ* ‘belonging to all men’ in b evokes its opposite number “all gods,” esp. since the sg. *devāḥ* occurs later in the same pāda. ‘All’ appears again in d, but with a different referent, ‘world’ (*viśvaṃ jagat* ‘the whole moving world’). The gods are presumably the addressees of pāda c, but only under the designation ‘youths’ (*yuvānaḥ*).

The initial *āpi* of c is somewhat puzzling. Ge (/WG) render it ‘auch’, which is harmless. Re takes it “au sense de *abhi*” (on what grounds?), as a perfectivizing preverb (again, on what grounds?). I am inclined to take it as a locational ‘nearby’, construed loosely with *naḥ*, despite the distance between the two words.

In d *manīṣā* can be nom. or instr. I follow Ge in taking it as the former, while Re and WG take it as the latter, with Re taking Savitar as implied subject and WG *viśvaṃ jagat*. There is general agreement that a verb ‘come’ should be supplied in d.

I.186.3: On pāda c see Thieme, *Fremdling*, 36–37, and his revised interpr., *Mitra and Aryaman*, 66, which I follow here. Ge’s “dessen Name in Ehren steht” (sim. Thieme [*Fremdling*], Klein [DGRV I.228], WG) for *sukīrti-* cannot be correct, because *sukīrti-* is otherwise a noun.

I.186.4: The standard tr. make rather heavy weather of pāda b, where the simile *sudúgheva dhenúḥ* is nominative, but *uṣāśānāktā*, the most likely comparandum, makes most sense as the acc. goal of *éṣe* in pāda a. (Note in passing that HvN’s accentless *eṣe* is simply wrong.) The simile “like an easily milked cow” should not apply to the 1st ps. subj. of that verb. To deal with the apparent case mismatch (and to avoid the specious explanation “nominative for accusative in simile”), most interpr. take b as a parenthetical nominal sentence (e.g., Ge “-- Nacht und Morgen sind wie eine gutmelke Kuh --”; so also Re, Janert [*Dhāsi*, 29], Narten [*Yasna H.*, 122], WG). But this seems unnecessary: this is a repeated pāda, found also in VII.2.6, where the dual *uṣāśānāktā* is nominative. Since that form is ambiguous, it can be adapted here to an accusative environment, without bothering to adjust the case of the simile. So Bloomfield (ad I.186.4, anticipated by Old).

In cd note the chiasmic pairs of *sám* ... *ví* / *ví* ... *sá(m)*: *samāné* ... *vimímānaḥ* ..., *viśurūpe* ... *sásmin* ...

I.186.5: The standard tr. (Ge, Re, WG) take the root aor. injunc. *kaḥ* as modal (e.g., Ge “soll ... bereiten”); Hoffmann doesn’t treat this passage. Although I do not think that *kaḥ* regularly shows such value, formulaic considerations suggest it does here: the phrase *máyas √kṛ* occurs at the end of a Jagatī pāda as *máyas karat* (subjunctive: I.89.3, V.46.4,

VIII.18.7, X.64.1), once *máyas kṛdhi* (impv.: I.114.2). Truncating it to fit a Triṣṭubh cadence here would yield monosyllabic *kaḥ*, which may maintain modal value because of its association with the true modals in Jagatī cadences.

I.186.6: The end of b, *abhipitvé sajóṣāḥ*, is a sort of mash-up of 1d and 2b, and *ā gantu* echoes *ā ... gamantu* of 2a.

I.186.7: The cmpd. *ásva-yoga-*, bahuvrīhi by accent, is somewhat peculiar; it might be closest to the type *vájra-bāhu-* ‘having an arm that has a mace (in it)’, hence ‘having a yoke that has horses (attached to it)’?

I.186.8: I take *-senā-* here and in 9d as ‘weapon’, not ‘army’ (contra the standard interp.), because I think ‘weapon’ works better in 9d with the simile in 9c. However, ‘army’ (that is, warrior band vel sim.) is certainly not excluded.

Given the sequence *vṛddhásenāḥ ... pṛṣadaśvāso ‘vánayo ná ráthāḥ*, opening with two bahuvrīhis, the last term *avánayo ná ráthāḥ* looks very like a decomposed bahuvrīhi **aváni-ratha-* ‘having chariots (like) streams’. Curiously, though Re is usually quick to suggest such an interpr., he does not mention such a possibility in his notes.

I.186.9: As disc. ad X.33.1 my tr. of *prayújaḥ* as ‘advance teams’ smacks too much of a modern political campaign, and I would now slightly alter that tr. to ‘teams’ or ‘teams in front’.

I.186.10: I take *adveśāḥ* here not as the neut. *s*-stem (as Gr, Lub classify it), but as the nom. sg. masc. of the them. adj. *adveśá-* marginally but clearly attested as du. *adveśé* at IX.68.10=X.45.12. As far as I can see, the them. sg. interpr. is also followed by Ge and Re. On the problematic *s*-stem see disc. ad X.35.9.

I.186.11: The *ḍīdhiti-* ‘visionary hymn’ of this vs. makes a thematic ring with the *manīṣā-* ‘inspired thought’ of 1d.

I.187 Food and Drink

I.187.1: This vs. is classified as Anuṣṭubgarbhā (5 8 / 8 8), the only such vs. in the RV. The first 5 syllables (*pítúm nú stoṣam* “Now I shall praise food”) are almost like a heading or title; without that pāda the vs. would be a straight Gāyatrī like the following one (and also vss. 4, 8–10), though it would lack a verb to govern the acc. in b.

The suffix-accented masc. *dharmán-* is rare and confined to the late RV, as opposed to the common neut. *dhárman-*. Here ‘supporter, upholder’ would be a more accurate tr. than ‘support’.

I take *víparva-* here as proleptic: the result of Trita’s shaking of Vṛtra is that his joints go apart. Gr takes the *ví-* instead as privative (‘gelenklos’), which could make sense for a snake. But the passages adduced by Ge, like VIII.6.13 *ví vṛtrám parvaśó ruján* “breaking V. apart joint by joint,” demonstrate that Vṛtra is conceived of as having joints, which can be parted.

I.187.2: On metrically bad *vavṛmahe*, see Kü (459) and comm. ad VI.4.7.
To reach 8 syllables, *tvā* must be read distracted.

I.187.5: For the interpr. of this vs., see publ. intro.

I.187.7: On the idiom *áram* √ *gam* DAT, see comm. ad X.9.3.

I.187.8: *parimśám* is a hapax, and as Mayr. points out, its proximity to phonologically similar *ārisāmahe* suggests that it's an Augenblicksbildung, perhaps as a blend of *pári* and *ámśa*- 'portion'.

I.187.10: My tr. of the hapax *udārathí*- follows a suggestion registered in EWA s.v. *udārā*- for lack of anything better. Ge refuses to tr.; WG 'erregend' takes Sāy.'s gloss into account.

I.188 Āprī

The beginning of this hymn is preoccupied with "thousands" (1b, 2c, 3c, 4b).

I.188.2: *dádhat* is grammatically ambiguous. With most tr. I take it as a masc. nom. sg. act. part. to the redupl. pres., but it could also be a (short-vowel) subjunctive to the same stem (so Old [SBE]). There are no implications either way.

I.188.6–7, 9: These three vss. all contain *hí* in their first clause, which I render as causal, contra the standard tr.

I.188.9: The double acc. *rūpāṇi ... paśūn víśvān* poses some difficulties. Ge construes *rūpāṇi* with *prabhúḥ* ("der die Formen bemeistert"). But I know of no other passages in which *prabhú-* governs an acc., and *prabhvīḥ* in 5a would discourage such an interpr. in any case. X.110, the Āprī hymn most like this one, has in the corresponding vs. *rūpāir āpimśad bhúvanāni víśvā*, with an instr. of *rūpá-*. In both cases I think the *rūpá-* further specifies the primary object, in this case "all the beasts": it is their *forms* he is anointing.

The logical sequence in this vs. is broken in Ge's tr. because of his use of abstract vocab. for concrete notions: "hat ... fertiggemacht" for *samānájé* 'anointed' and "Gedeihen" for *sphātím* 'fat'. Surely the point is that the addressee of c (probably Agni or the Hotar, with Ge) is urged to win the fat that Tvaṣṭar used to anoint the beasts -- however conceptually transformed such fat may be.

I.188.10: "of the gods" in the publ. tr. would be better rendered "for the gods."

I.188.11: As in vs. 9, symbolic anointing, here by means of a chant or song, is still represented as physical: Agni "shines" because of it, presumably gleaming from the conceptual fat. I take *gāyatrēṇa* as referring specifically to the Gāyatrī meter (in which this hymn is composed), though it may merely be 'song', as Ge (/WG) take it.

I.189 Agni

I.189.1: The dat. *rāyē* with $\sqrt{nī}$ may go too easily into English as a goal, “lead to wealth”; ‘for wealth’ might be more faithful to the case form. However, I do not subscribe to WG’s interpr. of *supāthā* as a neut. pl. goal (“zu den Orten, wo gute Wege sind”), which seems awk. and unnec. when an instr. sg. works well and is paralleled elsewhere.

(*vīśvāni*) *vayúnāni vidvān* is a standard phrase, used esp. of Agni (I.72.7, III.5.6, VI.15.10, X.122.2), referring presumably to his deep knowledge of the ritual as the god most enmeshed in ritual.

I take *juhurāṇā-* to $\sqrt{hṛ}$ / *hru* ‘go crookedly, go astray’ (with Ge and Re, as well as Gr), rather than with $\sqrt{hṛ}$ ‘be angry’ with Insler (JAOS 88, 1968), apparently followed by WG (“den zürnenden Frevel”). The contrast between the easy path in pāda a and the *ēnas-* that goes crookedly/astray in c supports this ascription, as does *abhihrūt-* in 6d. Agastya uses the same participle in I.173.11, where its affinity to $\sqrt{hṛ}$ rather than $\sqrt{hṛ}$ is even clearer.

I.189.2: Pāda c provides a fine parallel to “A mighty fortress is our god.” The word order is somewhat unusual, in that we might expect *naḥ* to take Wackernagel’s position in the pāda as a whole; instead it seems to have taken up a version of that position in the post-caesura phrase *bahulā na urvī*, which simply modifies the nom. sg. *pūḥ* that begins the pāda. There might be several reasons for this. For one thing *ca* occupies that position, but this is not a particularly compelling suggestion because the function and positioning of that *ca* are somewhat puzzling. Klein (DGRV I.220 n. 81) suggests that it connects *pūḥ ... bhāvā* with the clause earlier in the vs. whose verb is *pārayā*. I would suggest rather that it is an inverse *ca* conjoining the two predicate nominatives construed with *bhāvā*, i.e., *pūḥ* and *śām yōḥ*. (This would, among other things, eliminate another ex. of supposed sentential or clausal *ca*, ascribing to it its more usual role as conjoiner of nominals.) It may also be that the alliteration in the phrase *pūḥ ... pṛthvī* would stand out more starkly without *naḥ* in between, but that should apply to *ca* as well.

I.189.3: The verb in b, *abhy āmanta*, is accented; though there is no overt subordinator, I take pāda b as a purpose clause dependent on pāda a. That the obj. of *yuyodhi* in a, *āmīvā(h)* ‘afflictions’, forms an etymological figure with the verb in b supports a close relationship between the pādas. *āmanta* is best taken as a subjunctive, to the set root pres. *amīti* and as an *-anta* replacement for act. **-an* of the usual type in this otherwise act. verbal system (Jamison IJ 21 [1979] 150). This avoids imposing an interpr. as a reciprocal middle, as noted as an alternative by WG with ref. to Hoffmann and Dunkel, although the WG tr. does not reflect it.

The 2nd hemistich lacks a verb. I supply *kaḥ*; the idiom *púnar* $\sqrt{kṛ}$ ‘make new, renew’ is fairly common (see Gr., s.v. *púnar*, 2), and see also Agastya’s I.174.7 *kṣām ... kaḥ*, with the same object as here though with a very different sense. The publ. tr. should signal the lack of verb by a device like “Re(new) ...” or “(Make) new ...”

I.189.4: It is not clear what (if anything) *utá* is conjoining. Klein (DGRV I.371) says there’s an ellipsis of the verb in the 2nd clause, but he doesn’t say what verb. I am reluctant to add semantics to *utá* of the type ‘even’, ‘also’, ‘especially’, as Re and Ge do in their different ways. In the publ. tr. the pf. part. *śúsukvān* is translated (“and when you blaze ...”) as if it contrasted with an unexpressed different activity of Agni’s. I might now

be inclined to take it as an implicitly subordinated circumstantial clause to be construed with the prohibitives of cd: “and when you blaze ..., let not ...” However, the tr. “when you ...” obscures the fact that the verbal notion is expressed by a nom. sg. participle, which should (and does not) modify the subject of the *mā* clause(s) in cd. However, note that Agni *is* the subj. of the *mā* clauses that occupy all of vs. 5.

I.189.7: The *vī* with *vidvān* picks up the *vī* that both opens and closes the preceding verse (*vī ... yaṃsat / viṣpāt*), linking this verse to the apparently different topic that precedes it. This provides a clue for the referent of *tān ... ubhāyān* “those both.” Ge (/WG) take the “” to refer to the two time periods mentioned in this verse, *prapitvé* and *abhipitvé*, but, on the basis of the larger context, with Old (SBE) and Re I think it refers to good and bad men, or more narrowly to sacrificers and non-sacrificers. Agni’s eagerness for the sacrifice is expressed by pāda b, where he pursues (*vēṣi*) the sons of Manu, i.e., the sacrificers, at the earlier mealtime, and his satisfaction as the sacrifice proceeds by the gerundive *śāśyaḥ* ‘to be directed/instructed, tractable’.

In b Ge (/WG) supply ‘nourishment’ (die Nahrung) as object of *vēṣi* with *mānuṣaḥ* as gen. sg., but this seems unnecessary.

There is no consensus about the meaning or etymology of the word *akrā-* (5x), generally a descriptor of Agni; see EWA s.v. Gr glosses ‘Herrzeichen, Banner’, but since it is once called *navajā-* ‘new-born’ (IV.6.3), an animal (or at least a living thing) is more likely. Since several of the contexts refer to the kindling of the fire, it seems likely to be a young animal, an identification that *navajā-* of course favors. And *marmjénya-* ‘to be groomed’ in our passage suggests a horse, since the root \sqrt{mj} generally takes a horse or something so conceived as its object. Hence the tr. ‘foal’.

Despite the position of *ná, uśigbhiḥ* is unlikely to form part of the simile.

I.190 Bṛhaspati

For the hymn as a whole, see H.-P. Schmidt, *Bṛhaspati und Indra* (1968), 72–77 and passim.

I.190.1: The main cl. verb *vardhayā* is entirely ambiguous between 2nd sg. imperative and 1st sg. subjunctive. With Re and Schmidt (B+I) I opt for the 1st sg. subj., while Gr, Ge, and WG take it as 2nd sg. impv. There are no implications either way.

I.190.4: There are a number of syntactic questions and problems in this verse. To begin with, in pāda a the sequence *divīyate* could be resolved as either *divī īyate* (so Gr, Pp.) or *divī īyate*. In the latter case, with accented verb, we could have a subordination without an overt subordinator. I have chosen to interpret it so, contra the standard tr. and interpr. (though with Scar 371 n. 516), because the other likely connections between pādas a and b favor this closer nexus.

The next questions arise because of the opening of pāda b, *átyo ná yaṃsat*. The simile goes semantically most naturally with the preceding pāda, “like a steed, it speeds ...,” but the lack of accent on *yaṃsat* makes that impossible because this verb would then be initial in its clause. The situation is complicated by the fact that *yaṃsat* exactly replicates *yaṃsat* in 3b, where it governs *ślókam* in the accusative, whereas here a nominative *ślókam* is subject of the preceding pāda and in order to get it to be object of

yamsat here, the subject has to change and an unexpressed acc. **ślókam* be supplied. Moreover, the steed in the opening of b is a very likely object of *yamsat*, but is in the wrong case. There are several (ad hoc) ways to handle this problem. The first is simply to interpret the text as given, with the steed compared to the subject of *yamsat*, who is probably Bṛhaspati. This is in fact the interpr. of the standard tr., though each one needs to supply material and adjust interpr. in order to make it work semantically. I do not find these various makeshifts satisfactory. In order to confront the semantic problems noted above, it is possible to assume that the verb in 4b was originally really accented **yámṣat*, which lost its accent redactionally because of *yamsat* in the preceding verse. This would allow the tr. “When his signal-call speeds in heaven and on earth like a steed, he will control it [=signal call/steed],” with the simile taken with pāda a and a new clause beginning with **yámṣat*. This may be the simplest solution, though it is not exactly the one in the publ. tr. Instead there I (more or less) follow the suggestion sketched out by Old and discussed in more detail by Scar (371 and n. 516), whereby *átyo ná* stands for **átyam ná*; Old explains the nom. as attraction to the preceding pāda. Scar seems to endorse Old’s attraction hypothesis, but his tr. is more complex (and essentially identical to mine), in that he reads the simile both as nom. with pāda a and (in brackets) as acc. with pāda b. Although this may seem over-fussy, it addresses both the syntactic and the semantic problems.

The second hemistich presents a more conventional type of double reading, whereby the word *hetáyaḥ* is taken to belong both to the simile and to the frame, which its position in the pāda facilitates. In the frame *hetí-* has its common meaning ‘missile, lance’, a development from the general ‘impel’ meaning of \sqrt{hi} ; there is a further metaphorical development here: the missiles of Bṛhaspati are his words. In the simile, with the gen. *mṛgāṇām*, the *hetí-* are the charges or drives of the wild beasts, using a more abstract or etymological sense of the *-tí-*stem. This double interpr. is found in Old, Re, and Scar; it seems significantly more satisfying that Ge’s notion (fld by WG) that takes *mṛgāṇām* as a dative gen. -- the missiles/weapons for the wild beasts -- which requires that the two genitives *mṛgāṇām* and *bṛhaspáteḥ* be non-parallel.

With Scar I take the *ca* in c as coordinating cd with a.

I do not understand exactly what *yakṣa-bhīt-* in b refers to, nor do I understand why the heavens are *āhimāya-*. For the latter, one can recall that in V.40.6, 8 the *māyāḥ* of Svarbhānu hide the sun and that in my extensive treatment of the Svarbhānu myth (Ravenous Hyenas, 1991) I interpret those *māyāḥ* as the swirling clouds of smoke issuing from Agni. So here the “serpentine wiles” that the heavens possess might be the clouds of smoke from the ritual fire produced at the same time as Bṛhaspati’s ritual signal call (though *āhimāya-* when applied to the gods would have to have a different sense). This further suggests that the wondrous apparitions (*yakṣá-*) that Bṛhaspati brings are other marvelous sights associated with the sacrificial performance. But these are just guesses.

I.190.5: The standard tr. take *pajrāḥ* as a PN, as it can be elsewhere, but there seems no reason to drag in Kakṣīvant’s kin for vilification, and I prefer taking it as a simple descriptor.

The hapax *usriká-* is a nice example of a *-ka-* suffixed form in slangy and deprecatory context. See my article on *-ka-* (IJ 52, 2009).

There is disharmony in number between the two hemistichs: the relative cl. in the plural describing the evil rivals is picked up by dat. singular *dūḍhyè*.

The accent on *cáyase* is probably due to the following *íd*, which does condition verbal accent -- though in fewer passages than listed by Gr (s.v. *íd* 5), since in many of his exx. the verb is pāda-initial. It can also be noted here that the verb immediately follows a pāda-initial voc. and is contrastive with *ānu dadāsi* in c, either of which would also favor verbal accent.

I.190.6: In b the point is presumably that an ally who is constantly solicited by everyone around is likely to change sides without warning.

With Old, Re, and Schmidt (B+I) I supply ‘cows’ with *āpīvṛtā(h)*, while Ge (/WG) opt for ‘doors’. Since they all take the Aṅgirasas as the implied subject, both interpr. refer to the Vala myth.

I.190.7: The bahuvrīhi *ródha-cakra-*, lit. ‘having their banks as wheels’, may seem slightly jarring, and Ge (/WG) attenuate the sense to “die die Ufer entlang rollen.” But *cakrá-* is definitely the noun ‘wheel’ (all the way back into PIE), not a transparent derivative of a verbal root meaning ‘roll’, and I think the cmpd must be taken in its literal sense. (So also Re: “ayant pour roues les hautes-rives.”) The point of comparison must be not the speed or movement of the chariot but its physical configuration, with the wheels defining the outer limits of the vehicle as seen from above or behind and rising above the bottom of its body, just as river banks do the river.

A different watery image is found in the 2nd hemistich. With Ge I take *tārah* here as a ford (like the etymologically related *tīrthá-*, both to *√tṛ* ‘cross, pass,’ etc.) or perhaps more generally a means of crossing (water). Bṛhaspati, likened to a bird of prey, keeps his eye on both the ford and the (deeper) waters -- presumably watching for fish to swim into the shallow water of the ford, so they can be snatched close to the surface. This image is highly reminiscent of the feeding behavior of water birds like cranes, egrets, and herons, whose preternatural stillness and single-minded vigilance as they stand in shallow water waiting for prey, followed by a swift but graceful lunge with their beaks, can only impress the observer and could well provide a model for the “knowing Bṛhaspati” and his sharp eyes depicted here. (For those who haven’t had the pleasure of seeing this in the wild, there are numerous YouTube videos.) Such birds are found in the appropriate geographical areas of NW India/Pakistan, and since *gṛdhra-* lit. means ‘greedy’, it need not specifically designate a vulture, *pace* Ge (/WG), Schmidt (‘Geier’), and Re (‘vautour’).

āpaḥ here must be acc. pl., one of the handful of examples of the spread of the nom. pl. to acc. function in this stem.

I.190.8: The standard tr. take *devāḥ* as a predicate nominative (vel sim.) with *dhāyī* (e.g., Re “... a été installé (comme) dieu”). This may be correct, but it does assume that Bṛhaspati only secondarily came to be considered as, or was made into, a deva (so, e.g., Ge n. 2d). Following H.-P. Schmidt’s hypothesis that *bṛhaspāti-* was originally an epithet of, and aspect of, Indra, it would be possible to interpret this passage as referring to the moment when Bṛhaspati emerged as a deva in his own right; on the other hand, since Indra is most definitely a deva from the beginning, a particular aspect of him should not

require promotion to deva-status. It should be noted that Schmidt explicitly disputes the standard interp. (B+I, 75–77) and tr. *devāḥ* as a simple descriptor: “So wird der grosse, machtgeborene, mächtige B., der Stier, der Gott eingesetzt.” I follow Schmidt.

I.191 Against poisonous animals

Because of the popular character of this hymn and the idiomatic specificity of the entities mentioned, much of the vocabulary is obscure. I will not discuss the supposed real-world identifications or etymological speculations for each lexical item. Reasonably up-to-date treatments of the sec. lit. are available in EWA, s.vv.

I.191.1: I do not understand the double *īti* of pāda c. But I assume that the “two” in this pāda refers to the two differently identified *kāṅkata-* in ab, the one that is not (really) a *kāṅkata* and the one that is a true (*satīna-*) *kāṅkata-*. These are then re-identified as *plūṣi-*.

For the accent of *adṛṣta-* see AiG II.1.226 and Nachtr. p. 66.

I.191.2: The feminine nemesis is not identified. As Ge notes (n. 2), Sāy. suggests it’s the healing plant, Henry both the plant and dawn.

I.191.3: I take *kúśara-* as containing the pejorative *ku-*prefix (as in *kú-yava-* ‘(bringing) bad harvest’) and a play on the preceding word *śarā-*.

The three vṛddhi derivatives, *sairyá-*, *mauñjá-*, and *vairiṇá-*, I interpret flg. Sāy.’s suggestion for the last two, namely that they refer to the *adṛṣta-* bugs found on those particular grasses. Many of the most annoying biting insects lurk in tall grass waiting for their victims to present unshielded ankles and calves -- in the US chiggers, fleas, and ticks come to mind.

I.191.4: This vs. seems an attempt at sympathetic magic: animals, both domestic and wild, and humans (symbolized by their lights, presumably their fires) are all settling down for the night (though the time period is not explicit), and so should the bugs. As anyone who’s ever been outside in a buggy place after dark knows, this magic is not necessarily going to work -- though it’s true that some types of bugs are active at dusk and then stop.

I.191.5: This vs. does seem to refer to such insects, those that become active at twilight when the wind drops. For example, although there are numerous types of mosquitoes and different species have different feeding patterns, it seems (from a quick Google search) that most species feed at dawn and dusk and a few hours into the dark.

I.191.6: It is unclear to me why the bugs are being credited with such a grand pedigree. Perhaps to indicate that they are ubiquitous in the space between earth and heaven?

Sāy. suggests this vs. and the next are addressed to snakes, but there seems no reason why *adṛṣta-* would change its referent. As I noted in the publ. intro., the impulse to demand that a troublesome unswatatable bug settle down long enough to be squashed is likely to be universal.

I.191.8–9: The rising of the sun may reflect the fact, mentioned above, that many bugs feed at twilight (dawn and dusk), and sunrise portends the end of the (pre-)dawn feeding frenzy.

I.191.8: On *jambhāya*- ‘crush’, see comm. ad II.23.9 and my *-āya*-Formations, p. 93.

I.191.10–13: For the irregular meter of these vss. see HvN metrical comm. ad locc. and Arnold (VedMet. p. 163).

I.191.10: As noted in the publ. intro., the second part of the hymn begins here, but it clearly pivots on the sun, which figured in the two preceding vss.

My interpr. of this much discussed vs. is presented in the publ. intro., but in compressed fashion. As noted there, I think this has to do with the separation of noxious liquid from beneficial liquid, a feat ascribed in natural terms to the sun and in mythological terms to Indra. When “I fasten the poison on the sun” (pāda a), I am counting on the purificatory power of the sun to neutralize or banish the poison. This ritualistic action is matched in pāda b by fastening the skin onto the house of the *surā*-possessor. *Surā* is an alcoholic beverage of some sort (generally tr. ‘Branntwein’, ‘brandy’, et sim., though, acdg. to James McHugh [p.c.], it is unlikely that the technology of distilling was known to Vedic India, so probably some sort of beer; see now McHugh’s 2021 “The Ancient Indian Alcoholic Drink Called *Surā*: Vedic Evidence” [JAOS 141.1]) and a universally condemned evil twin to soma, though it gets used in some śrauta rituals, particularly the Sautrāmaṇī. The appearance of the *surā*-possessor (*sūrāvant-*) in b is owing to two factors: on the one hand, as just noted, *surā* is a taboo drink and is therefore equivalent to the poison (*viṣā-*) in pāda a. On the other, the word *sūrā-* is phonologically reminiscent of ‘sun’ *sūrya-* in pāda a.

The natural/ritual action depicted in the first pāda is, in my interpr., matched by the mythological action of the second pāda. I therefore do not take pāda b as a simile (as Ge does), but as a parallel action -- the attachment of a skin (*dṛti-*) full of poison/*surā* on the house of the *surā*-possessor, who, in my view, is Indra, who appears by epithet in pāda e. (Though Ge and others tentatively identify *hariṣṭhā-* as the sun god, the ‘moulder of the fallow bays’ can only be Indra.) Later Vedic has a compd. *surā-dṛti-* ‘*surā*-skin’, found in PB XIV.11.26 and JB III.229. Both passages concern the *vipānam* of a liquid; *vī* √*pā*, lit. ‘drink apart’, is used for the separation of two kinds of liquids that have been mixed together (or separation of a liquid from something containing it); see comm. ad VII.22.4. In the late RV and later, this lexeme is specialized for the Sautrāmaṇī ritual, whose mythological foundation is the healing of Indra by the Aśvins and Sarasvatī, after he had drunk too much soma. They make him drink *surā*, which was mixed with soma (perhaps the soma he had already drunk), and he performs the feat of separating the two liquids. This myth is already present in X.131.4–5 with precisely this detail. When in pāda b here we fasten the skin of poison onto Indra the *surā*-drinker’s house, we are implicitly asking him to perform the same feat for us. The refrain (found in vss. 10–13, pādas c-f) makes it clear that he has succeeded. At least in my interpr., it is said that Indra has put the poison far in the distance (e) and the honeyed (plant?) has made honey (quite possibly soma, as often)(f): the two liquids have been separated and are separate, with the

good one available to us. The result is that the mythological model, Indra, will not die (c) -- nor will we (d) -- and the poison with which we began has been rendered ineffective.

I.191.11: The extraordinary density of *-ka*-suffixed forms begins here and lasts till the end of the hymn. That little birds eat the poison and destroy it may reflect the fact that many birds eat noxious insects without harm to them and with benefit to us. But the insects may no longer be the subject of this part of the hymn.

I.191.12: Sāy. suggests that the “little sparks” (*viṣpulingakā-*) are little sparrows. This makes sense not only because of the birds in vss. 11 and 14, but because of the visual effect of flocks of small birds feeding: esp. when they are in bushes or underbrush they can burst up, out, and around at random almost like sparks. The *viṣ-* of course also recalls *viṣá-* ‘poison’. I do not understand why there are 21 of them, save for the fact that thrice seven is a satisfying number. Similar numbers are found in the next two vss.

I.191.13: The “tormentors” (/harmers, destroyers) of poison, the hapax gen. pl. *rōpuṣṭīṇām*, are feminine. The referent is entirely unclear, but the removers of poison in the next vs. are all feminine as well.

I.191.15–16: The *-ka-* suffix is particularly prominent in these vss, appearing not only on the designation of the bug (*kuṣumbhakāḥ*, 2x), but also on the pronominal adj. *iyattakāḥ* (‘such a one’), the pronoun *takām*, and the participle *pravartamānakāḥ*. The word for ‘scorpion’, *vīścika-* only appears in that form, but appears to contain the *-ka-* suffix as well, very common in words for noxious insects (see my “*-ka*-suffix,” IJ 52 [2009]: 318).

Maṇḍala II

The commentary on II now includes SJ's comments on all the hymns, including those translated by JPB in the publ. tr.

II.1 Agni

For the rhetorical structure of the hymn, see the publ. intro.

II.1.1: The only attestation of the desiderative of √*śuc* is this hapax adj. *āśuśukṣāṇi*- 'eager to blaze here'.

II.1.2: The accent on *āsi* in d presumably results from its contrastive function in the *ca ... ca* construction. Curiously Old does not comment.

Note the two different words for house in *grhāpatiḥ ... dāme*, with the former replacing old *dāmpati*-. On these various terms for house-lord, see my 2019 "The Term *grhastha* and the (Pre)history of the Householder," in *Grhastha: The Householder in Ancient Indian Religious Culture*, ed. Patrick Olivelle, and "The Double Life of *gahapati*" (to appear in a forthcoming Fs.).

II.1.3: HvN suggest the distracted reading *namas'yaḥ* here and in 10a, which produces 12 syllables for the Jagatī line but a very bad cadence (4 light syllables), while reading an undistracted form produces a good Triṣṭubh line. They argue 1) that *namas'ya*- is always otherwise distracted in the RV (though it doesn't otherwise appear in a cadence) and 2) that there are several other similar bad cadences in this hymn (*avidhat* 7d, 9c). These are good arguments, but I would still favor an undistracted *namasyaḥ* in a Triṣṭubh line.

Ge suggests that *vidhartāḥ* in d is a predicate voc. I think rather that it signals the absent middle term, the divinity with which Agni is here identified, namely Bhaga. So Old (SBE). Bhaga is identified as *vidhartār*- in VII.41.2 and is regularly associated with Puramdhi.

II.1.4: On this vs. see Thieme, Mitra and Aryaman, 83–85.

sambhújam in c is analysed by Gr as a 1st sg. subj. or injunc. (his "Co.") to a thematic aorist and is so rendered by Ge ("von dem ich Nutzen haben möchte"), though he expresses doubts in his n. However, this aor. stem does not otherwise exist: the multiple *bhujema* forms, apparent optatives in *mā* prohibitives, are convincingly explained by Hoffmann (Injunk. 95–97) as reanalysed from an expression with the infinitive *bhujé* followed by enclitic 1st ps. pronoun. Moreover, act. forms to this root should mean 'give pleasure', not 'derive pleasure' (cf. *bhuñjati* I.48.5). Old (Noten) already disputed the verbal interpr. of *sambhújam*, and it is now generally taken as a nominal (so Thieme, Mitra and Aryaman, although in Fremdling [16 n. 2, 105] he takes it as a verb; Hoffmann, Injunk. 96 n. 197; Re; Scar 358), though WG tr. it as a verb, allowing for the nominal possibility in their n. Assuming that *sambhújam* is nominal, the problem is how to fill out the defective rel. cl. *yásya sambhújam*. Most supply a verb like "we eat" or "we expect," e.g., Scar "von dem ich Genuss (erwarte, o. ä)." The publ. tr. takes GEN *sambhújam* as a possessive expression: "whose common meal (it is)" → "who has a common meal," further extended to "who offers a common meal." I find this more

satisfying syntactically than the invention of a verb, but it runs into morphological difficulty: by my tr. the meal should be nominative, and if *sambhújam* belongs to a root noun paradigm, it can only be a masc. acc. sg. This forces me into the unhappy position of assuming a root-accented neut. thematic stem *-bhúja-*, which may be unlikely enough morphologically to persuade me to supply a verb to govern the acc.

II.1.5: Pāda a has the acc. and dat. appropriate to an expression of giving, but no verb; pāda c has the verb (*rariṣe*) but no dative of recipient. The accusatives of gift in the two pādas are formed in parallel: *suṽṛīyam* (a), *s^uvásṽyam* (c). The two pādas thus complete each other rhetorically.

In b *gnāvaḥ* is morphologically incoherent. By its ending it should be vocative, but since it occupies non-initial position, its accent should preclude that. Nonetheless, with all the standard interpr. I take it as a voc. An ad hoc explanation could be concocted for its accent -- that the following voc. *mitramahaḥ* induced accent on the preceding one to support the voc. phrase -- but I think too many counter-examples could be adduced. Ge suggests a word haplology, *gnā<h> gnāvaḥ*, but this seems unnecessary and also requires a tr. “you are (the Wives).” It is likely instead that the third term in this pāda is Tvaṣṭar from pāda a, since he is regularly associated with the Wives of the Gods, and in fact the other attestation of this voc. *gnāvaḥ* (I.15.3), correctly accented in pāda-initial position, refers to Tvaṣṭar.

As pointed out by Old (SBE) and Ge, the third term in pāda c is presumably Apām Napāt, who is elsewhere called *āśuhéman-*, including 2x in II. The *āśu-* in that compound echoes the beginning of *āśuśukṣāṇiḥ* in 1a, though that form is most probably formed to the desid. stem of *√śuc* with preverb *ā-*, since the *-ani-* suffix is rather commonly built to desiderative stems and there would be no obvious source of the *-s-* before the suffix otherwise.

II.1.6: I do not understand the cmpd *śaṃgayá-*. Wackernagel (AIG II.1.309) classifies it with cmpds with governing first-member prepositions, but *śám*, though uninflected, does not function like even the improper prepositions/preverbs of the *áram* type. He does recognize its singularity (314–15), but keeps it in this category, in which it seems out of place.

II.1.7: Pāda d has another bad cadence: *te (á)vidhat*, with 4 light syllables, assuming the normal shortening of *-e* before vowel. The same cadence is found in 9c. I would be inclined to follow HvN in seeing this irregular cadence as characteristic of this particular hymn (see also 3b, 10a), save for the fact that *ávidhat* shows a remarkable tendency to position itself in bad cadences: see II.26.4, VIII.23.21, 27.15, 61.9. As IH points out to me, Arnold (p.129, §169.vi) suggests reading *ávidhat* with long augment. Though in all cases the Saṃhitā text transmits either short *á* or deleted abhinihita (*ā*) and the Pp analyzes it as *a* in all cases, this seems a reasonable explanation – despite Old’s dismissive “recht zweifelhaft.” There is a tendency to lengthen vowels before elements beginning with *v*, not only the augment, but preverbs, and 1st cmpd. members, presumably spreading from forms that originally began **Hv*. In most of the other occurrences of *ávidhat* (I.136.5, VI.54.4, IX.114.1) the augment has coalesced with a preceding *a*-vowel and its weight is therefore unrecoverable. Only in X.83.1 do we find

an *ávidhat* that is not improved by a heavy reading: it occurs in the break after an early caesura. But even here *ávidhat* is a possible reading: though ~ ~ – is the most preferred break, – ~ – is the next most common.

II.1.8: Here and in 15a I take *práti* (+/- copula) + ACC. as an expression similar to *pratimāna*- + GEN, meaning ‘be a counterpart to’.

For *ṛñjate* here, see the fuller expression with instr. in the next hymn, II.2.5.

II.1.9: It is tempting to take *iṣṭibhiḥ* as ‘with sacrifices’, parallel to *śámyā* ‘with ritual labor’ in the next pāda. So Old (SBE), though he gave it up reluctantly in the Noten. Unfortunately ‘sacrifice’ is accented *íṣṭi*-, against *iṣṭi*- ‘desire’, and so perhaps the best one can do is suggest a secondary pun (so Scar 455). On the other hand, on the assumption that all *-ti*-stems began with suffixal accent and that the root accent found in some Vedic *-ti*-stems is secondary (see Lundquist 2015, *-ti*-stems), this may be a relic of suffix-accented **iṣṭi*- ‘sacrifice’, which has not yet undergone accent retraction. It is worth noting that root-accented *íṣṭi*- is found only in I and X. I would therefore entertain an alt. tr. “... (do) men (approach) with their sacrifices.”

On the cadence in 9 see remarks on 7b.

II.1.10: On the cadence in pāda a, see comm. ad 3b.

As Old (SBE) already pointed out, the first three pādas refer to the three Ṛbhus and pun on their names: *ṛbhú*- ‘craftsman / Ṛbhu’ in a, *vāja*- ‘prize / Vāja’ in b, and *vī bhāsi* ‘you radiate / Vibhvan’ in c.

In c *dakṣi* is surely a *-si* impv. to *√dah* ‘burn’ and should be separated from the identical form in I.141.8, for which see the comm. ad loc. Ge, however, takes *dakṣi* here to *√dakṣ*.

The form *viśikṣu*- in d is taken by Gr as belonging to the desid. of *√śak* and meaning ‘gerne Gut austheilend’, which seems unacceptably distant from both the root meaning of *√śak* and the function of the desiderative. Moreover, *√śak* is not otherwise attested with *vī* except, supposedly, in the similar form *vī śikṣa* IV.35.3 (for which see below). Ge tr. “du bist der Prüfer,” Re “tu es celui que si met à l’oeuvre diversement”; neither discusses the form or its root affiliation, and one can only assume they follow the assignment to *√śak*, though exactly how is unclear. Old (SBE) suggested an appealing alternative, interpreting it as built to the desid. of the root *√śas* ‘cut’, which is primarily found with *vī*-- an idea I find eminently worthy of revival. This may also be the view of WG, who tr. “Du bist williger Verteiler,” again without disc., so they may in fact simply reproduce Gr’s understanding of the semantics. Old does not sketch out the morphology, but it presumably rests on **śi-śs-su-*, with zero-grade root and simplification of the medial sibilant cluster *śss* arising from the two radical sibilants and the desiderative suffix. The finite verb *vī śikṣa* in IV.35.3 (also a Ṛbhus context) belongs here as well. Heenen (Desid., 232-33) mentions this possibility though without great enthusiasm (“La possibilité ... n’est pas exclue”).

The publ. tr. “seek to carve up and to stretch out the sacrifice” implies that *ātániḥ* is desiderative. This was not meant, and the tr. should perhaps be emended to “seek to carve up the sacrifice, as the one who stretches it out” or “... as you stretch it out.”

II.1.13: The relevant construction in d is probably *tvé ... āhutam* “poured into you,” as it is in the even further distracted identical phrase in 14ab. The tr. of 13d should be corrected to “the gods eat the oblation poured into you.”

II.1.14: The first half-verse is simply a rather crudely exploded version of 13d (also found in I.94.3), with *tvé* moved to front of first pāda and the second pāda otherwise intact. See Bloomfield’s withering scorn.

II.1.15: On *prāti ... asī*, see comm. ad 8d. As far as I can determine, this is the only occurrence of *sām* √ *as* in the RV and, rather than meaning something like ‘be together’, it seems to have an idiomatic meaning like *prati* + ACC, ‘be equal to’ (as if to *samā-* vel sim.).

On the word order in pāda c, see comm. ad VI.15.14.

II.1.16: I do not understand the function or position of *hī*, though the latter question is more tractable.

II.2 Agni

One curious feature of this hymn is that it is the home to the densest cluster of *uṣās-* occurrences in II (vss. 2, 7, 8); the word is otherwise pretty rare in this maṇḍala, and there are no Dawn hymns in it. The focus on Agni’s likeness to the sun probably accounts for this. This likeness is hinted at first in the adj. *svārṇara-* ‘possessing solar glory’ in 1c. This adj. is echoed by three occurrences of the simile *svār ṇā* “like the sun” (7d, 8b, 10d), where the simile particle *ṇā* (with close sandhi retroflexion as always after *svār*), though having nothing to do with the *-ṇa-* in the adjective, reproduces it phonologically.

Another notable feature of the hymn is the fact that the stem *citāya-*, which occurs three times (4c, 5d, 10b), in all three cases must be read doubly, as ‘appear’ in one construction in the passage and as ‘perceive’ in another construction in the same passage.

II.2.2: Ge (/WG) take *nāktīr uṣāsaḥ* as acc. of extent of time, supplying as subj. either prayers or priests. With Old (SBE and Noten) and Re, I take the phrase as subject in the publ. tr. This means that *uṣāsaḥ* must be taken as a nom. (for *uṣāsaḥ*), rather than the acc. it was historically -- but this is common in the RV. Nonetheless, on reflection I wonder if Ge is right: the 2nd hemistich contains two examples of acc. of extent of time (*mānuṣā yugā* and *kṣāpaḥ*), and there is also one in 8a, *uṣāso rāmyāḥ*, that is very similar to the phrasing here. If the phrase is interpr. as acc., the subject to be supplied would presumably be the same as the 2nd pl. addressees of 1ab, namely the priestly officiants. So I suggest an alt. tr. “Through the dawns and the nights they [=priests] bellow towards you ...”

In addition the pf. *vavāśire* might better be rendered as a habitual pres. ‘(constantly) bellow’.

II.2.3: The gerundive *védyā-* in c is universally assigned to √ *vid* ‘know’ (e.g., Ge ‘allbekannt’, Re ‘(re)connaissable’), but surely the Vedic Indians would be more anxious

to acquire a chariot (\sqrt{vid} ‘find, acquire’) than simply to recognize it! Agni is found with the same simile in VIII.84.1.

II.2.4: A difficult vs. with multiple interpretations, which I will not treat in detail. The difficulties of the vs. arise in part from the fact that it can apply to both the ritual fire and the sun. Note that in contrast to the first three vss. the word *agní-* does not appear in this vs., which absence licenses the double reference. This double reference begins, and is least obscure, in the first pāda, where the entity in question (*tām*) grows “in the airy realm (as/and) in his own house”: “his own house” is clearly a reference to Agni as the fire in every house (see also 11c), but “in the airy realm” can refer both to the strengthening of the sun’s light after it rises and to the smoke and flames of fire rising in the air. Note that there is no simile marker here: the fire is not compared to the sun or vice versa; they are identified.

The second pāda uses the technical ritual term $\sqrt{dhā}$ ‘establish’ (used of the ceremonial establishment of the ritual fire), but it is also used less technically here for the placement of both fire and sun on their respective paths. Loc. *hvāré* ‘on a meandering (course)’ can refer to the unpredictable motion of fire and its products (smoke/flames). How this word can apply to the sun is less clear, since the sun’s course is certainly not unpredictable. However, derivatives of the root \sqrt{hvr} can refer to curves, and the sun’s trajectory up, across, and down the sky can be seen as a curving path. (This second sense should have been registered in the publ. tr.) I should say that I explicitly do not think that it refers to a snake here (*pace* Old [SBE], WG), although the interpr. is tempting due to the similarity of the lexicon and imagery in this vs. to I.141.7, where *hvārā-* refers to Agni as a twisting snake. Such an identification here would require emendation to acc. **hvārām*, which Old was willing to accept in SBE and still defends in the Noten, but which does not conform to our current restrained attitude towards RVic emendation (in part due to Old). I also do not think that *candrām* in the simile refers to the moon (as Thieme [KISch 78] and WG do).

In c ‘son’ is universally supplied with *patarām* ‘flying, winged’ (e.g., Ge “den geflügelten (Sohn?) der Pr̥śni”). But Pr̥śni’s son(s) are the Maruts; Agni never seems to be so identified. The closest any interpreter can come is X.189.1, where a *gauḥ pr̥śniḥ* ‘dappled cow’ may, or may not, refer to the fire, but there is no parental engagement there. The gen. *pr̥śnyāḥ* (as here; on the ending see comm. ad 7b) is elsewhere construed only with ‘udder’ (*ūdhar-*, II.34.2, 10; cf. also IV.3.10) or ‘milk’ (*pāyaḥ*, VI.48.22); though it is true that the alternative gen. *pr̥śneḥ* is found with ‘sons’ (*pr̥śneḥ putrā(h)*, V.58.5); these are the Maruts, as expected. Since the only other attestations of *pr̥śnyāḥ* in II limit ‘udder’, I supply that word here. Although “the flying (udder) of Pr̥śni” sounds comical, I take it to refer to a rain cloud, as also apparently in II.34. The fire and the sun are thus implicitly compared to this third entity. I read *citāyantam* in two senses, ‘appearing’ and ‘perceiving, observing’ (cf. *citayat* in the immediately following vs.), with the former sense here.

The other sense of *citāyantam* governs the rest of the vs.; the instr. *akṣābhiḥ* ‘with eyes’ signals the ‘perceive’ value, as is reflected in all the standard tr. (although WG take the participle as a double tr. ‘make perceive’, which is not supported by the zero-grade root syllable [expect **cetāyantam*]). We are not home free, however, for the simile, *pāthó ná payúm*, gives trouble. The problem is *pāthāḥ*. If we try to take it to as acc. to neut.

pāthas- ‘pen, fold’, which would work semantically (“observing ... as a protector (does) a fold”), the accent is wrong; if we try to take it as gen. of *pānth-* ‘path’, which also works semantically (“like the protector of a path”), the length of the first vowel is wrong. Lub tries to avoid this Scylla and Charybdis situation by identifying it as a 2nd du. pres. to $\sqrt{pā}$ ‘protect’, but this makes more difficulties: who are the two subjects? (perhaps he means the two races, but they are in 3rd ps. ref.), and the placement of the *ná* is badly wrong. In the end I follow the ad hoc solution set out by Old (Noten): a gen. of the ‘path’ word makes most sense, and it may owe its anomalous long vowel to phonological attraction to *pāyúm* in the same syntagm along with some conflation with *pāthas-*.

II.2.5: The apparent fem. loc. pl. *ṛdhasānāsu* to the irregular participial stem *ṛdhasāná-* ‘growing, having grown’ is generally taken as referring to the plants among which the fire is blazing, on the basis of X.92.1 ... *śuṣkāsu hāriṇīṣu jārbbhurat*, with *jārbbhurat* ‘flickering, quivering’ as here. However, plants do not ‘grow’ when they are burned -- quite the contrary -- and I’m not at all sure that $\sqrt{ṛdh}$ ‘grow, increase, strengthen’ is used of plant growth: we may be misled by translation language. Instead on the basis of IV.3.6 *dhīṣnyāsu ṛdhasānó agne* “growing in the holy places [=hearths], o Agni,” I interpret *ṛdhasānāsu* as representing *ṛdhasāná(h) āsu*, with masc. nom. sg. + fem. pronominal loc. and irregular sandhi of *-aḥ ā-*. (See another such ex. in nearby II.6.7.) There are only three occurrences of the stem *ṛdhasāná-*; in addition to IV.3.6 and our example here, the other one, at VI.12.3, is also nom. sg. referring to Agni. One potential problem with this suggestion is that, since the hearths have not been previously mentioned, we might expect accented *āsú*. However, a number of occurrences of unaccented *āsu* lack clear referents in the preceding discourse (e.g., I.95.5, III.55.9, VIII.41.7).

Like *citáyantam* in 4cd, *citayat* in d has two different readings: with the preceding phrase *dyaúr ná stṛbhiḥ* it means ‘appear’, while with the following *ródasī ānu* (echoing *jānasī ubhé ānu* in 4d) it means ‘perceive’. The functional split is clearer in this vs. than in 4cd and could be considered a species of poetic repair, or at least “poetic reinforcement.” See also vs. 10 below.

II.2.6: Note the phonological and morphological parallelism of the infinitival datives, *s(u)vastáye*, *suvitāya*, *vītāye*.

II.2.6–7: 6c and 7c are paraphrases of each other. Each contains a dual referring to the two worlds, an impv. of $\sqrt{kṛ}$, and an indication of directionality.

II.2.7: *sahasrín-* (sg. or pl.) regularly modifies *rayí-* and *vāja-*; *bṛhánt-* has a wider range of referents, but both *rayí-* and *vāja-* are found. Since (sg.) *rayím* occurs in the immediately preceding vs. (6b) and (sg.) *vāja-* in the immediately following pāda (7b), either is available to supply as the referent for the pl. adjectives in pāda a. I opt for *vāja-*, because of the nearer proximity.

If *śrútyā* in the Saṃhitā text represents dat. *śrútyai* (so Pp.) and belongs to a *-ti-* stem, it shows the younger ending (borrowed from the *-ī-* stems) *-yai*, confined to 7 stems mostly limited to Maṇḍala X (Macdonell VG p. 282), rather than the extraordinarily common *-aye*. This younger ending may correlate with the younger accent in this *-ti-* stem: as Lundquist has shown (“On the Accentuation of Vedic *-ti-* Abstracts,” *Indo-*

European Linguistics 3 [2015]), *-ti*-stems undergo accent retraction in the course of Vedic, and root-accented forms are innovations in the late RV. Vs. 4 contains another fem. short *-i*-stem with a younger ending borrowed from long *-ī*-stems, namely gen. *pr̥śnyāḥ*. However, I wonder how secure *śrútyai* is. The use of this dative (quasi-)infinitive here is somewhat unusual, and I take its supposed double (also *śrútyā* in sandhi) in X.111.3 as an ablative. Old (Not.) points out that the gerundive *śrútya-* appears several times modifying *vāja-* (VII.5.9 *vājam śrútyam*, I.36.12 *vājasya śrútyasya*). I am tempted to take our *śrútyā* here as somehow reflecting the gerundive, in a situation where the expected masc. acc. sg. **śrútyam* would produce a bad cadence. But I cannot construct a plausible scenario; Old says that an acc. pl. is not entirely excluded, but that would have to be an acc. pl. neuter or fem., and *vāja-* is masc.

Kü (251) takes *vī didyutaḥ* as intrans., not trans.-caus. (in his terms, “inattentive” not “faktiv”), interpreting *uśasaḥ* as temporal. I am doubtful.

The simile in d *svār nā* “like the sun” is perfectly ambiguous. It can be nominative, compared to Agni, the subject of *vī didyutaḥ*, as an entity that makes the dawns shine. (Given the temporal proximity of dawn and sunrise, this causal connection is perfectly in order.) Or Agni can make the dawns shine forth like the sun, with the simile in the acc. In 8b and 10d the same simile is in the nominative, but I do not think this is a sufficient reason to impose the same analysis here.

II.2.8: Note #*sá idhāná(h)* echoing 1c #*samidhānām* and 6a #*sá ... samidhānāḥ*.

With Old (SBE), Ge, Re, I take *uśaso rāmyā* as parallel in a temporal expression (“dawns and nights”). Hoffmann (Injunk., 121; fld. by WG) rather cleverly separates them, construing only *rāmyā* with *ānu*: “Entflammt alle Morgen, nach den Nächten leuchtet er.” However, because night(s) and dawn(s) are regularly used in parallel (e.g., 2a in this hymn), I am somewhat reluctant to adopt this interpr.

The standard tr. (Old [SBE], Ge, Re, WG) take *dīdet* as a modal, but it is simply an injunctive and I see no reason to attribute modal value to it. So also Hoffmann (see his tr. just cited) and Kü (228).

In the second hemistich *agnīḥ* was omitted in the publ. tr., which should read “With the libations of Manu Agni conducts ...”

II.2.9: As Old and Ge point out, *mānuṣā* should not be a fem. nom. sg. with *dhīḥ*, since the fem. stem is well-attested *mānuṣī*. Nonetheless, the standard tr., including Ge though excluding Re, interpret it with *dhīḥ* -- Ge by taking it as shortened from *mānuṣāṇām* at pāda end (some shortening!) and tr. “die menschliche Dichtung” as if it were a simple modifying adjective. I instead take it as neut. pl. and supply ‘lifespans’ (*yugā(ni)*), which is commonly found with this adj., including in our 2c. By my interpr. it expresses extent of time, indicating that poetic inspiration is a constant that will always ensure rewards for men generation after generation. For a similar thought see III.39.2 *sanajā pītryā dhīḥ* the “ancient-born, ancestral hymnic vision.”

Most interpr. take *iṣāni* as a loc. infinitive with the preceding acc. as obj. (For the most recent disc., see Keydana, *Infinitive im Rgveda*, 195–96.) This may well be possible, but given its isolation and the unclarity of its morphological shape (see esp. the disc. by Old, Noten), I take it as a simple locative, construing the accusatives in d as

Inhaltsakk. with *dúhānā* in c. In any case it produces a bad cadence (4 light syllables); I do not see an easy repair strategy.

II.2.10: As in vss. 4 and 5, a form of *citāya-* (here *citayema*) has two different senses in two different constructions, by my interpr. In pāda a it shows a development of the ‘perceive’ sense, here rendered “get in sight of,” that is, “by our efforts get close enough to see.” The means by which we do so is *árvatā* “by steed,” namely warfare or contest. In pāda b *citayema* has a developed sense of ‘be perceived, appear’, namely ‘be distinguished / distinguish ourselves’. Here the means is *bráhmanā* ‘by a sacred formulation’, that is, by ritual or poetic competition. The standard tr. simply supply a verb in pāda a (‘acquire’, vel sim.), but the double usage of the other two forms of *citāya-* in this hymn suggests that this one, too, can be used for both pādas, and it is always preferable to avoid supplying verbs. Both WG and Proferes (68) in different ways take *citayema* with both pādas; Proferes interpr. it as a trans.-caus. in both pādas (“manifest”), WG only for the first (“erscheinen machen,” but “schauen können” in b). As noted above (ad vs. 4), the zero-grade root syllable tells against the trans.-caus. interpr.

II.2.11: With most, I interpr. *iṣáyanta* as ‘derive nourishment’, though Lub lists it with $\sqrt{iṣ}$ ‘send’ and WG tr. “streben,” presumably assigning it to $\sqrt{iṣ}$ ‘seek, desire’.

The acc. singulars *yám ... yajñám* probably do not belong together, although an interpr. “whom they approach as the sacrifice,” with Agni identified with the sacrifice, is not impossible. Ge considers it attraction from **yásya ... yajñám*, but a loose purpose/goal accusative, almost a pseudo-infinitive “to sacrifice,” seems syntactically acceptable to me.

II.3 Āprī

II.3.2 Pāda a is supposed to contain a lexeme *prāti* $\sqrt{aṇj}$ governing *dhāmāni*, but this would be the only ex. of the verbal idiom in the RV. I therefore take *prāti* as governing *dhāmāni* ‘foundations’, in a parallel expression to *tisró dívaḥ prāti* in b. I supply “of the earth” with *dhāmāni* on the basis of I.22.16 *dhāmabhiḥ pṛthivyāḥ*. The participle *añján* would be used absolutely and anticipate *sám anaktu* in d. The early part of the hymn has a tendency to station present participles at pāda ends, and not always with obj. (1d *árhan*, our 2a, 2c *undán*, 3a *árhan*).

II.3.4: The apparent loc. *védī* (so Pp.) should probably be read *védi* for metrical reasons (see Old: “nur angeblich Pragṛhya” [Noten]; Proleg. 456). AiG III.154–55 is skeptical about a loc. *-ī* to *-i*-stems and suggests that this, the clearest example, is actually to be explained by haplology from **védy[ām] asyām*, which seems highly unlikely, esp. since it would make the cadence metrically irreparable. I think we have to take this form as given and as a locative (not instr.), with a metrically short final vowel, which may result from shortening in hiatus. For a similar ex. see *bhūmī* (/ -i) in IX.61.10 and comm. thereon.

The last pāda contains a mixture of voc. (*devā ādityāḥ*) and nom. (*yajñíyāsaḥ*), with pāda-initial *vísve* ambiguous, since the accent may derive from its position. The tr.

does not reflect this case mixture, since a meticulous separation would be fussy and serve no purpose.

II.3.5: As Old points out, *suprāyaṇā-* is metrically bad here and worse in several other occurrences; it should be read **suprayāṇā-*, which presumably belongs to $\sqrt{yā}$, not \sqrt{i} .

I take the adjectives in d (*yaśásam suvīram*) as proleptic, the result of the purification, though this interpr. isn't strictly necessary.

II.3.6: In b *vayyēva* belongs to a *vṛkī-* type stem *vayī-* 'weaver', here in the dual. Old suggests that it doesn't really matter if we analyze it as *vayīyā iva*, with masc. du., or *vayīye (i)va* with fem. du., but given that the other adjectives in the hemistich, *ukṣité ... raṇvité*, are feminine in form and that *uśāsanāktā* is regularly fem., the latter seems more likely.

The vs. lacks a finite verb and there is no verbal form, finite or participial, to govern *āpāmsī* 'labors' in a. Most tr. supply 'work' vel sim., but I think it's possible that *sādhū* is an adverbial predicate, "on target" in the publ. tr., and that it loosely governs *āpāmsī*.

II.3.7: Re and WG supply 'sacrifice' as the obj. of *sām añjataḥ*, but since acc. *devān* is already available and was the obj. of exactly the same verb in 2d (*sām anaktu devān*), this is unnecessary.

II.3.8: *sādhāya(nti)* in pāda a and *svadhāyā* in c occupy the same metrical position and echo each other.

II.3.9: *subhāra-* here is used in a different sense (or senses) from the same word in 4b, where it referred to the good burden, that is, the seated gods, that the barhis was bearing. Here I think there is a pun: the hero is 'easy to bear', that is, his birth, depicted in pāda b, was easy. But the hero so born provides good support to those who depend on him.

With Re, I tr. *vīsyatu* in two slightly different senses with two different objects: 'unbind' with 'navel' (*nābhim*), referring to the technicalities of the birth process, and 'release' with 'offspring' (*prajāṁ*), referring to the results of birth.

The Tvaṣṭar verse in Āprī hymns generally directly concerns only his participation in the birth process (see I.142.10, III.4.9=VII.2.9, X.110.9, X.142.10; our pādas abc). Releasing the sacrificial animal and escorting it to (the fold/pen of) the gods is properly the province of the post ("Lord of the Forest," *vānaspātiḥ*, 10a), and that expression ("go to [the fold of] the gods") is a euphemism for the animal's death. However, note X.70.9–10, where both Tvaṣṭar and the Lord of the Forest convey the animal to the fold of the gods (*devānām pāthaḥ*). Like X.70.9 our pāda d implies that the journey of the sacrificial animal (that is, its death) occurs under the auspices of Tvaṣṭar, and in fact, given the apparent temporal/logical connector *āthā* beginning pāda d, the implication is that the offspring born in abc is to undertake this journey. This seems rather muddled: our new (human) offspring is not the sacrificial animal. I think the roles of Tvaṣṭar and the Lord of the Forest were quite distinct, but conflation like this could occur because the Tvaṣṭar and Vanaspati vss. are always adjacent in Āprī hymns and because the vocabulary is similar: Tvaṣṭar's *vī√sā* 'unbind/release' and Vanaspati's *āva*

√*srj* ‘release/discharge’. The fact that the victim is usually not overly expressed (presumably a euphemistic avoidance) makes confusion all the more likely.

II.3.11: The *-si* form *vakṣi* would be better tr. as an impv. “convey,” rather than a subj. “you will convey” as in the publ. tr.

II.4 Agni

II.4.1: The stem *suvr̥ktī-* generally refers to a hymn and has in fact virtually been substantivized to mean hymn. However, it must be a bahuvr̥hi in origin; I generally tr. ‘having a good twist’, referring to the clever adornments, the turns of phrase, of a skillfully crafted hymn. Here I think it has two senses: first, characterizing Agni himself as ‘having a good twist’, perhaps referring to his swirling smoke and flames, but then, as a sort of secondary or double bahuvr̥hi, ‘having [/receiving] (hymns) with good twists’. In this meaning it is parallel to *suprayásam* ‘having [/receiving] pleasurable offerings’. Note that the two are both final in their pādas. I do not think Ge’s “euren Preis” or Re’s “hymne (incarné)” is either necessary or illuminating.

On the desiderative gerundive *didhiṣāyya-* see comm. ad I.73.2. Although the tr. “desirable to install” is somewhat heavy, the complexity of the formation seems to require a weighty tr.

The last pāda indulges in play with the name Jātavedas: *devá ādeve jáne jātávedāḥ*. The first and last elements, *devá ... vedāḥ*, are virtual mirror images, with the 2nd word *ādeve* reinforcing the first, and *jáne* making an etymological figure with *jātá*.

II.4.2: The combination of honoring Agni “in the seat of the waters” (a) and the Bhṛguṣ “once again” installing him among the clans (b) suggests that this vs. concerns the well-known myth of Agni’s flight and concealment in the waters and the Bhṛguṣ’ discovery, recovery, and reinstallation of Agni as the ritual fire. X.46.2 begins with a pāda identical to our pāda a and then relates the Bhṛguṣ’ finding of the fire *gúhā cátantam* “hiding in secret”: *imám vidhánto apām sadhásthe, ... padaír ánu gman / gúhā cátantam usíjo námobhir, ichánto dhîrā bhígavo ‘vindan* “This one here -- doing honor to him in the seat of the waters, they followed him along his tracks ... / With reverences seeking him who was hiding in secret, the fire-priests, the insightful Bhṛguṣ found him.” (I would now alter the tr. ‘having done honor’ to ‘doing honor’, also in X.46.2; for further disc. see comm. ad X.46.2.) The same myth may be alluded to, in ring compositional fashion, in vs. 9 of our hymn. Note also that the poet to whom this hymn is ascribed is Somāhuti Bhārgava.

II.4.2–3: As IH pointed out to me, *dvitādadhur* in 2b can be read, contra Pp. *adadhur*, as *dvitā dadhur*, with perfect indic. or pres. injunc.; I now favor the unaugmented reading for reasons given below.

The contrast between the verbs in 2ab *imám ... (a)dadhur bhígavaḥ* and 3ab *agnīm devāsaḥ ... dhuḥ* seems to encode the primal installation of Agni by the gods (3) and the recent installation, by men (2). Why the primal installation is expressed by a root aor. injunc. is not clear to me, but I would now alter the publ. tr. to “Agni did the gods install ...,” from “Agni have the gods installed ...,” to reflect the remote past. Note also that the opening of 3b is metrically aberrant, with an opening of 3. HvN suggest a rest in

4th position. It would be possible to restore **dadhuḥ*, which would match the same verb in the same position in 2b, but I think it's more likely that the omission of a syllable is meant to call attention to the difference in verb stems. A rest in 3rd position, producing a syncopated *dhuḥ* might be better. If the two verbs are being directly contrasted, an unaugmented *dadhur* in 2 is more likely than augmented *adadhur* (in order to highlight the difference in stems). Discussion with IH has helped me clarify my interpr.

II.4.3: I tr. *dīdayat ... ūrmyā ā* “shine towards the nights,” rather than “illuminate the nights” with the standard tr., because I could not otherwise account for the *ā*. Narten's tr. (KISch 370 n. 5) is similarly intransitive though with a temporal, rather than goal, acc.: “Er soll die Nächte hindurch leuchten.”

Note *mitrām* √ *dhā* in b reprising the same lexeme in 1c.

On *dakṣāyyaḥ*, whose morphology resembles *didhiṣāyyaḥ* in 1c, see comm. ad I.91.3. As noted there, in this passage it could also or alternatively mean “to be skillfully tended.”

II.4.4: The predicate adj. *raṇvā* qualifies both *puṣṭiḥ* and *sāmdrṣṭiḥ*; for the latter see X.64.11 *raṇvāḥ sāmdrṣṭau*.

I take *dākṣu-* as a pseudo-desid. *u*-participle; also *dhākṣu-* in X.115.4.

Because *dodhavīti* in d is unaccented, it cannot be the verb of the relative clause beginning with *yāḥ* in c, despite the standard tr. Instead the intensive part. *bhāribhṛat* must be predicated in the rel. cl. and *dodhavīti* interpreted as the verb of the main clause.

Because of the equine simile and imagery, the primary reading of *dodhavīti vārān* must be “twitches his tail(-hairs),” but a second reading “shakes out choice things” is also invited.

II.4.5: This vs. describes the changes in color and form of the kindled fire as a sight to be wondered at. My tr. follows Ge's in outline and many details. The first sight is of the shapeless dark cloud of smoke (a), but that transforms into color and bright light (bc). On *ābhva-* see my forthcoming “The Blob in Ancient India” (UCLA CMRS 2015 dragon conf. vol.), and for a parallel passage (also adduced by Ge) VI.4.3 ... *yāsya panāyanty ābhvam, bhāṣāmsi vaste sūryo nā śukrāḥ* “He whose formless mass [=smoke] they [=mortals] marvel at ..., he (then) clothes himself in lights, like the brilliant sun,” which seems to show parallel progress from dark to light and also contains a form of *bhāṣ-* as here.

vanād- ‘wood-eater’ assumes a root noun 1st member *vān-*, preserved in a few forms such as loc. pl. *vāmsu* (see Schindler, Rt. Noun), against the overwhelming number of forms to thematic *vāna-*.

I do not understand the simile in b, *uśigbhyo nā* “as if for the fire-priests.” Perhaps the point is that the fire-tending performed by Uśij-priests would cause the smoke to dissipate and the flames to appear, but that in their absence this change comes about anyway. Note that in X.46.2, quoted above ad vs. 2, the Bhṛguṣ seem to be identified as *uśij*-priests, so the simile here may be referring to ritual behavior in ancestral time. WG tr. “wie den (danach) Verlangenden,” but *uśij-* is elsewhere the designation of a priest (and cf. Old Aves. *usij-*) and is so tr. by them elsewhere (e.g., I.60.4).

For *rāmsu* as adverbial loc. pl. to the root noun *rān-* see Schindler Rt. Noun and EWA, both s.v. *raṇ*. And note *raṇvā-* in the preceding and following vss. (4a, 6c).

The last pāda describes the graying of the ash (“having grown old”) and then the rejuvenation of the flames presumably by the addition of more firewood.

II.4.6: The standard tr. take *bhāti* as the operator of the simile (e.g., Ge “Der nach den Hölzern ausschaut(?) wie der Durstige (nach Wasser)”), but this doesn’t make much sense. From *vanād-* ‘wood-eater’ in the immediately preceding vs. I extract ‘eat’ to govern *vānā* and to be compared to *tāṭṛṣāṇāḥ* ‘thirsting’ in the same semantic realm, hence my “(eating) wood like one athirst.” This leaves *bhāti* free of complements.

My ‘red-hot’ for *tāpuḥ* contrasts nicely with *kṛṣṇādhvā* ‘having a black road’, but is unfortunately not entirely legitimate: it is more literally just ‘hot’; there is no color component.

Act. pf. *ciketa* in c might be expected to mean ‘perceives’, as generally, but it must mean instead ‘appears’; so all the standard tr., and see also Kü (175) on the unusual sense. It is all the more surprising given med. *cikite* in the same meaning in the immediately preceding vs. (5c). But in this case the two forms may have been seen as metrical variants with identical sense, since *ciketa* is always pāda-final, *cikite* always post-caesura, as here.

The unexpressed concept in the simile “like heaven smiling with its clouds” must be lightning, which smiles (I.168.8) or laughs (V.52.6). Lightning is white, like (some) clouds.

II.4.7: The root \sqrt{svad} is generally a ritual technical term: the ritual fire “sweetens,” that is, “ritually prepares” the oblations. Here the forest fire performs the same action on the non-ritual ground. Although this might depict some version of slash-and-burn agriculture (so WG), I think it more likely that the point is merely to give a ritual dimension to the wild and unpredictable actions of the forest fire, in the hope of exerting some control over it. The same ritual overlay is found in I.169.3 *agnís cid dhí śmātasé śusukvān, ... dādhati prāyāmsi* “For even a fire blazing in the brushwood can produce pleasurable offerings.” The position of *ná* after the verb *asvadayat* in our passage suggests that the simile is targeting the verb, an extremely unusual situation in Vedic poetics. Since, as discussed elsewhere (see comm. ad VIII.76.1 and nearby II.11.3), simile-marking *ná* cannot take final position but flips with its target, it would be possible to take the simile to be **bhūma ná*. However, I do not think “ground” is the simile target, but the actual obj. of *asvadayat*, which has no other possible obj. in context.

II.4.8: The phrase *ṭṛtīye vidáthe* “third rite of distribution” probably refers to the Third Pressing (though the two other occurrences of “three *vidáthas*”, at VI.51.2 and VII.66.10, do not seem to). Agni is of course present at all the pressings, but is not especially associated with the Third Pressing; however, *ṭṛtīye sāvane* at III.28.5 is in an Agni context.

II.4.9: In the publ. tr. I supply with *gúhā* a form like *hitám* (cf. I.23.14, II.11.5, IV.5.8, etc.), *cárantam* (III.1.9), or *cátantam* (I.65.1, X.46.2) referring to Agni when he was hiding in the waters, a myth I also think is referred to obliquely in vs. 2 of this hymn (see

above). Our vs. 2 is especially close to X.46.2, which relates this story, and X.46.2c begins *gúhā cátantam* (and continues with a ref. to the *usíj-*; see our 5b). I therefore think my suggestion is justified, though I am usually reluctant to supply extraneous material. The point is -- if the Gr̥tsamadas (re)gain the hidden Agni, just as their ancestors the Bhṛgus did, they will get the upper hand against their enemies. The standard tr. must construe *gúhā* with *vanvántaḥ* ‘gaining in secret’ (e.g., Ge “heimlich überbieten und uüberwinden”). Although this is the obvious way to construe the text as given, the notion that our side would win by stealth and secret means seems antithetic to the Rigvedic ideal of combat, whether on the battlefield or the ritual ground. The adverb *gúhā* is extremely common in the flight-of-Agni myth and in an Agni hymn would likely call to mind the whole story. I would now be inclined to emend the publ. tr. to “(the one hiding) in secret,” not “(... deposited) in secret,” because of its apparent dependence on X.46.2 or a passage like it.

II.5 Agni

The first seven of the eight vss. (the 8th being a summary vs.) name and describe the various priestly roles that Agni assumes in the ritual. In all but vs. 3 the priestly title is given; in 3 the title must be inferred from the description, which unfortunately is somewhat muddled. See extensive disc. below.

II.5.1: On *jénya-* see comm. ad I.128.7.

II.5.2: The priestly subject of this vs. is the Potar, found in the final pāda, but there is a teaser in pāda b, in the form of an agent noun *netár-* ‘leader’ in the expression *yajñāsya netári* “to/in the leader of the sacrifice.” But *netár-* is not a technical priestly role; the real priestly title derived from the root $\sqrt{n\bar{r}}$ is Neṣtar, found in vs. 5 (*neṣtuḥ*).

II.5.3: It is not clear what the disjunctive *vā* is disjoining. Klein (DGRV II.187–88) considers vs. 3 a reformulation of vs. 2, tr. “Or (more precisely) ...” But since vs. 3 most likely concerns a different priestly office than vs. 2 (*brahmán-* by implication, not *pótar-*), this doesn’t work. No other tr. attempts to account for *vā*. Since Agni is the implicit subject of these vss. and the referent of the various priestly offices, I think that “or” is simply introducing a different role that the same Agni performs. If, as I suggest below, the first part of vs. 3 (*dadhanvé ... yád īm ānu* “when he has run after it”) picks up the last part of vs. 2 (*vísvaṃ tád invati* “he sets all this in motion”), the “or” might emphasize the fact that the same Agni who set the sacrifice in motion is now switching roles to run after what he started. The “or” indicates that an alternative Agni-figure is now in question.

The three verbs in ab, *dadhanvé*, *vócat*, and *véḥ*, have been configured in every possible way. Ge takes the first two as parallel in the dependent cl. marked by *yád*, with *véḥ* the main cl. verb (accented because it’s in the initial position of its clause). Acdg. to Re, *dadhanvé* is a main verb, with *vócat* the verb of its associated *yád* cl., while *véḥ* is the verb of an independent main cl. Old (SBE) takes all three as parallel verbs in the *yád* cl., with c as the main cl. Like me, Klein makes *vócat* and *véḥ* parallel main cl. verbs, with *dadhanvé* in the *yád* cl. (In his *Particle u* ... [p. 81] Klein specifically takes *u* not only as indicating that *vócat* and *véḥ* are coordinate but suggests it was syncopated from *utá* in the context ... *u tát*.) And, finally, WG take *dadhanvé* in the dependent cl., *vócat* in the

main cl., and *véḥ* as 2nd sg. direct speech specifying *vócat*. This chaotic diversity shows that we interpreters are uncertain not only about the syntax of the verse but the sense. In what follows I will pursue this sense, with no certainty that what I present is correct.

Ge (/WG) take the subject of *dadhanvé* to be the priest and *īm* as referring to Agni whom the priest pursues, but, as in II.1, Agni is *identified* with the various priestly functions, and I think he must be the subj. of all the verbs here. I don't really understand the function of *dadhanvé*, but it might simply express Agni's pursuit of the priestly role or of the formulations that he then speaks (in which case *īm* is better tr. 'them', as is quite possible). But I would now suggest that there is continuity with the previous vs., and that Agni in his new role is running after "all this" (*visvam tād*, probably the sacrifice or some part of it) that as Potar he set in motion. See above.

The reason that WG interpret *véḥ* as direct speech is to render it as a 2nd sg.; they clearly reject the standard 3rd sg. interpr. But I do not think that a 3rd sg. can be avoided here or in I.77.2 or IV.7.7 (WG render the former as 3rd sg. but the latter as 2nd sg.), although Gr's assignment of the forms to an *s*-aor. to $\sqrt{v\bar{i}}$ is most likely incorrect. (Curiously Narten does not discuss *véḥ* in her entry on $\sqrt{v\bar{i}}$, even to reject the *s*-aor. analysis.) Instead I would take *véḥ* (underlying *ves*) as the injunctive to the root pres. of $\sqrt{v\bar{i}}$, but with the substitution of *-s* for *-t* in the 3rd sg. as if it belonged to an *s*-aor. or a root aor. of the type (*ā*)*var* (2nd/3rd sg.) -- keeping in mind that before voiced sounds *véḥ* appears as *vér* and so an analogy to phonologically similar (*ā*)*var* would not be surprising. There are no 3rd sg. *-t* forms to this stem, unless augmented *ávet* (V.34.8) belongs here. One of the idiomatic uses of the root $\sqrt{v\bar{i}}$ is with an acc. of an office or function (see esp. I.76.4 *véṣi hotrám utá potrám* "You pursue the Hotarship and the Potarship," adduced by Ge), which is the apparent sense here, and so assigning *véḥ* to a different root, such as $\sqrt{viṣ}$, should be avoided.

As noted in the intro. remark above, this vs. is the only one of the seven "priestly role" vss. in which the priestly title is missing. Instead we must infer it from the description of Agni's activity. It is probably no accident that this is the only vs. in the hymn in which the priestly title has to be inferred and supplied, since the priestly role depicted in the vs. involves the clever manipulation of language and the capture, via *bráhmāṇi*, of hidden truths. The poet is in essence making his audience act the role of the *brahmán-* by figuring out what the vs. is getting at. In my opinion the most crucial piece is pāda b, where Agni "speaks sacred formulations" (*vócad bráhmāṇi*). The speaker of formulations (*bráhma-*) is of course the *brahmán*, and this is the title we must derive from this context. That *véḥ* is used of the pursuit of priestly roles (see above) but here appears without overt object also invites us to fill in the blank in this way. Our inference is reinforced by cd *pári visvāni kāvya ... abhavat*, where Agni encompasses "all poetic skills," that is, the ones necessary to produce effective formulations.

This brings us to the problem of *abhavat*. As IH points out to me, the recent past sense I attribute to this verb here ("has encompassed") would be highly unusual for an augmented imperfect, and given the perplexing variety of verbs in the earlier parts of the vs. (pf. *dadhanvé*, injunc. aor. *vócat*, injunc. pres. *véḥ*) and the uncertainty of their syntactic distribution, not to mention the sense of the vs. as a whole, adding to the confusion by attributing an unusual sense to *abhavat* should be avoided if at all possible. It might be possible to read the injunctives *vócat* and *véḥ* not as present/future as in the publ. tr., but as pasts: "... he spoke formulations and pursued ...," which would be

friendly to a simple past interpr. of *abhavat* “he encompassed ...” However, two things speak against this. First, the rest of the hymn presents Agni’s occupation of the various offices in the present/recent past. And second, injunctive forms of *vóca-* almost always have a performative pres.-future sense, as in the famous and stereotyped opening of I.32.1 *índrasya nú vīryāṇi prá vocam* “I (will) proclaim the manly deeds of Indra.” Imposing a past interpr. here would contravene the normal usage of this form, esp. since it fits well with the presential focus of the rest of the hymn and nothing else presses a past interpr. My not entirely satisfactory response to this conundrum is to suggest that cd describes Agni’s acquisition of poetic skills in the past – he is elsewhere often called a *kaví-* -- which allows him to assume the role of Formulator now. So I would alter the tr. to “he encompassed all poetic skills ...” Many thanks to IH for extensive discussion of this problematic passage.

II.5.4: The standard tr. construe *śúcīnā* with *krátunā* (e.g., Ge “mit lauterem Sinne”). This is certainly possible -- though *śúci- krātu-* is not a standard collocation -- but not necessary.

The standard tr. also assume a change of subject in cd from Agni (ab) to a priest “who knows (Agni’s) *vratas*” (*vidvāṁ asya vratā dhruvā*). I find this unlikely; *vidvān* modifies Agni in vs. 8 (in my view), as well as twice in the next, closely related, hymn (II.6.7, 8). Moreover, *vidvān* is regularly used absolutely, taking an object much less often. I construe *vratā dhruvā* instead with *ānu*: “according to his *vratās*.” The collocation *ānu vratā-* is quite common; here the *vratā-* would be the rules that govern the natural world (plants and fires). The *asya* refers to Agni, the subj. of the sentence, and is therefore de facto reflexive, but this is not unusual.

II.5.5: On the interpretational difficulties of this vs., see publ. intro.

II.5.6: I take *yádī* as *yád ī*, with pronominal enclitic *ī* standing for ‘him’ = Agni/Adhvaryu. See my “RVic *sīm* and *īm*” (Fs. Cardona, 2002).

Ge’s identifications, flg. Sāy., of the mother as the cow and the sister as the offering ladle or, less likely in my opinion, the ghee offering itself, seem reasonable. He suggests that the pl. *tāsām* of c picks up a collective in the previous clause, presumably ghee. This seems less likely to me; I suggest “the arrival of these (fem.)” refers back to the sisters who came here (*svāsāro yā idām yayúḥ*) in 5d.

II.5.7: The convoluted but rhetorically balanced expression *sváh svāya dhāyase kṛṇutām ṛtvīg ṛtvījam* (“Let him, as Ṛtvij, make himself Ṛtvij, to suckle himself”) makes explicit Agni’s double role in this hymn: he is both a divine version of each priest in turn and represents the corresponding human priest. Here as divine Ṛtvij he makes himself into the human Ṛtvij, whose function is to give nourishment to the ritual fire, that is, to himself -- a kind of closed and reflexive circle. Once the mechanism of the identifications that have run through the hymn has been laid bare, the poet briskly finishes up the hymn, beginning with the summary 2nd hemistich here.

Most tr. struggle to construe *stómaṃ yajñám ca* with the closest verb, *vanéma*. Somewhat against my principles, I instead take *ād áram*, *vanéma* as parenthetical and construe the first NP with *rarimā*. (I have displaced the tr. of the *ād* clause to the right,

because the parenthetical tr. was difficult to parse.) In favor of this interpr. is the fact that the standard tr. require *ād* to be in a highly unusual position, in the middle of its supposed clause. As it happens, WG interpr. the syntax as I do.

II.5.8: Ge (/WG) and Re take the subj. of ab to be the sacrificer, flg. Sāy., but Agni as the priestly mediator makes more sense. As noted above, ad 4c, *vidvān* must modify Agni in the last two vss. of the next hymn, II.6.7–8.

II.6 Agni

II.6.1: The most likely referent to supply with fem. *ayā* is *girā*, given *gīrah* closing the preceding vs. and the 2 forms of this stem in the first pāda of the next vs. (3a; see also 6b). Cf. also II.24.1 *ayā vidhema ... girā*.

II.6.5: The vs. lacks a verb, though one can easily be supplied. The standard tr. supply an imperative: I extract ‘give’ out of *vāsu-dāvan* ‘giving goods’ in 4b, but ‘bring’ (so Ge, Re) works as well. What is clever about the syntax of this vs. is that the only signal of the absent imperative is the presumed 2nd ps. reference of the repeated *sā*, which of course is ordinarily a 3rd ps. pronoun, but is very frequent with 2nd ps. imperatives (see my “sa figé” article, *HS* 1992).

II.6.6: With Ge (/WG) *girā* could be construed with *īlānāya* “reverently invoking with song.”

II.6.7: With Sāy., Ge, Old (SBE), etc., I take *jānyeva* as representing *janya(h) iva*, with double application of sandhi (as in nearby II.2.5), against the Pp. *jānyā*. There are various different interpr. of the sociological situation represented by *jānyeva mītryah*; mine is closest to Old (SBE). See disc. in my 2001 Fs. Parpola article. Although similar phraseology is used of the public solemnization of marriage, I do not think that is the point here (*pace* Ge, etc.). See comm. ad II.39.1.

II.6.8: The undoubted subjunctive (*ā*) *piprayah* seems to anchor the following *yakṣi* and (*ā*) *satsi* as the haplogitized *s*-aor. subjunctives they originally were, rather than in their later imperative function, esp. given the coordination of the first and last terms by *ca ... ca*. However, the two *ca*’s could be more or less independent, with the second one conjoining *yakṣi* and *satsi* more closely.

II.7 Agni

II.7.1: Note ... *bhārata* # (a) / ... *ā bhara* # (b).

II.7.2: On *īśata* in the *mā* prohibitive see comm. ad I.23.9.

II.7.3: The simile marker *iva* is wrongly placed, in that it follows both parts of the simile “watery streams” (*dhārā udanyā*).

The verse contains several tricks involving word order. First, the first word of the vs., *vísṽā(h)*, and the last, *dviṣaḥ*, belong together: “all hatreds.” Their extreme distraction may be iconic of the distance that we must cross to pass beyond them. Notice that they are also near rhyme forms. Further, there is a clever grammatical switch between vss. 2 and 3: 2c ends with (*utā*) *dviṣāḥ* (abl. sg.) / 3c with *dviṣaḥ* (acc.pl.), and 3a begins with *vísṽā(h)* (*utā*). As just noted, this opening *vísṽā(h)* is to be construed with the distant 3c *dviṣaḥ*, not with the *dviṣāḥ* immediately before it -- even though they seem bracketed together, sandwiched in by *utā*’s, with phonologically similar *tásyā* immed. before and *tváyā* immed. after: *tásyā utā dviṣāḥ // vísṽā utā tváyā*.

II.7.5: On the *vaśā* cow, see my Hyenas (258–60), building on H. Falk, “Zur Tiersucht im alten Indien” (IIJ 24: 169–80). Although often tr. “barren cow,” a *vaśā* is one that has been mated but has not yet calved -- so possibly barren, possibly not. My tr. here, “mated cows,” is not fully accurate but far less awkward than accuracy would require.

WG supply “verses” with *aṣṭāpadībhiḥ*, though they allow the possibility of a cow in their n. Although this pun is probably lurking here -- eight-footed verses would of course be pādas with eight syllables -- the primary reading must be some sort of bovine, given the words with which it is parallel. See Old’s comment on this vs. (SBE).

II.7.6: The final word of the vs. (and the hymn) *ādbhutaḥ* echoes the finals of the last two vss., 4c and 5c *āhutaḥ*.

II.8 Agni

II.8.1–4: The *#ya(śástamasya)* that opens 1c anticipates the forms of the relative pronoun *yá-* in the next 3 vss. (2a *#yáḥ*, 3a *#yá(h)*, 3c *#yásya*, with the last, 4a *#ā yáḥ*, no longer in initial position), though of course it is entirely unrelated to the relative. The referent of all those rel. pronouns is Agni, who is also the referent of *yaśástamasya*. Phonology and syntax are thus wedded.

II.8.4–6: As the just-mentioned structural device expires in 4a, another takes its place. An unbroken alliterative string runs from the end of 4b through the beginning of 5: ... *arcíṣa / añjānó ajárait abhí // átrim ánu ...*, and the first words of the most of the remaining pādas also start with *a-* (5b *agním*, 6a *agnér*, 6c *áriṣyantaḥ*, 6d *abhí*). Since *ādhi* is the 2nd word in 5c, only 6b is not part of the chain.

II.8.4–5: On the disguised Svarbhānu myth in these two vss., see publ. intro. Most tr./comm. are puzzled by the appearance of Atri here, and Ge and Old in particular speculate on possible emendations. But the presence of the Svarbhānu formula guarantees that the text is genuine, in my opinion.

II.9-10 Agni

These two six-verse trimeter hymns follow the two six-verse dimeter hymns (II.7–8), though by the normal rules of hymn ordering they should precede them. In his opening n. on II.9 in SBE, Old tentatively suggests that II.9 and 10 should each be

divided into two *tr̥cas*, but in the *Noten* he essentially withdraws this suggestion because he sees signs of unity within the two hymns as transmitted.

II.9 Agni

II.9.1: *vidāna-* is ambiguous: it can belong either to $\sqrt{\text{vid}}$ ‘know’ (Ge [WG], Re, though he registers the ambiguity in n.) or $\sqrt{\text{vid}}$ ‘find’ (Old [SBE]). I assign it to the latter and think it refers to the myth of the discovery and recovery of the fugitive Agni. The word forms a weak ring with *suvidātra-* in the final vs., 6a, assuming the latter word is a derivative of $\sqrt{\text{vid}}$; see comm. ad vs. 6.

ādabdhavratapramati- is an unusual *cmpd* for the RV in having three members, and with its initial accent (on which see AiG II.1.293) the accent falls about as far from word-end as it is possible to be.

II.9.4: There is some difference of opinion about the meaning of *manótar-*. Most take it as some version of ‘deviser, inventor’ (so Gr, Ge, HO [SBE], Re, WG), but Tichy (*Nomen Agentis*, 40 and passim) argues for the sense ‘remind-er, rememberer’. I opt for something in the middle, ‘minder’. That is, I don’t think the term means that Agni creates ritual speech (the standard view), nor that he remembers or reminds the officiants of this speech (the Tichy view), but that he takes account of it, pays attention to it. The English term ‘minder’ (as in childminder) also has the connotation of taking care of someone or something, tending or ministering to it or them, and that sense would fit here as well. See also comm. ad IV.5.10 citing several passages containing the verb stem *manu-* that underlies this unusually formed agent noun with the sense ‘ponder, bring to mind’.

II.9.5: Various suggestions have been made about the two types of goods in *pāda a* (see the nn. of Old [SBE], Ge, Re, and WG), but Re’s suggestion that it’s livestock and offspring seems the most satisfying contextually, given the wishes expressed in *cd*. For disc. of similar phrases see comm. ad VI.19.10.

II.9.6: As noted above, I suggest that *suvidātra-* makes a ring with *vidāna-* in 1a, a suggestion that rests on assigning both words to the root $\sqrt{\text{vid}}$ ‘find’ and on assuming that this root meaning is still apparent in *suvidātra-*. Neither of these assumptions is unchallenged. Gr assigns *-vidatra-* to *dā*¹ ‘give’+ *ví* and glosses it ‘vertheilend’. (That $\sqrt{\text{dā}}$ is not otherwise found with *ví* speaks against this derivation.) In his brief treatment of the word Debrunner (AiG II.2.170) gives its root etymology as $\sqrt{\text{vid}}$ with a question mark, glossing it ‘wohlwollend’. Though no doubt other etymological suggestions have been made, I have not to my knowledge encountered them. The standard interpr. of the semantics, however, are like Debrunner’s -- ‘wohlwollend, gnädig, d’accueil favorable’, etc. Whatever the root derivation assumed, this rather vague meaning is far from ‘find’ (or ‘know’ or ‘distribute’) and the semantic pathway to it is unclear. Moreover, a passage like X.15.3 *āhām pitṛṇ suvidātrām avitsi* “I have found the *suvidātra-* forefathers (/forefathers that are easy/good to find)” testifies to at least a secondary connection between the form and the root $\sqrt{\text{vid}}$ ‘find’, as well as enough semantic connection remaining to allow the phrase to function as a linguistic figure. The word is found twice in the Agni hymns of II, once here, once in II.1.8. Both vss. also contain the word *ānīka-*

‘visage, face’ (though in II.1.8 admittedly not in the same clause). Especially in our passage I think the point is that because of Agni’s shining face he is easy to find -- he is the brightest thing around. See also the disc. of *durvidátra-* ad X.35.4, which provides further evidence for a derivation from $\sqrt{\text{vid}}$ ‘find’.

That the next hymn (II.10), which is at least metrically paired with this one (see comm. ad II.9-10), is also characterized by a ring linking the first and last vss. and that the first word of the ring is also formed with a *-tra*-suffix (*johútra-*) lend some support to my speculations about *suvidátra-* here.

II.10 Agni

II.10.1: As noted in the publ. intro., the first word of the hymn, *johútra-*, forms a ring with *johavīmi*, the last word. The connection between them is emphasized by the intensive redupl. in *johútra-*; no other *-tra-* stems show redupl., much less intensive reduplication. Gr (and, it seems, WG, here though not in I.118.9; II.20.3 isn’t clear) take the stem as act. (‘laut rufend’), but a passive value makes better sense in all 3 occurrences (so Old [SBE], Ge, Re). The *-tra-* form in the next vs., *vībhṛtra-* (2d), is likewise passive. My tr. “invoked ... on every side” is based on the possibility that the *-tra-* suffix evokes the *-tra* adverbial locatives (such as *átra* ‘here’), although this may be pushing the limits (likewise my ‘dispersed in many places’ for *vībhṛtra-* in 2d). It does, however, work with the thematics of the first few vss.: vs. 2 urgently begs to hear *my* call (*hávam me*, with the possessive prn. emphatically placed pāda-final), and the two occurrences of *vīcetāḥ* ‘discriminating’ (1c, 2b) suggest that Agni is choosing among the various sacrifices he might attend on the journey described in 2cd.

II.10.2: The urgency of the poet’s desire is conveyed by the isolated precativ *śrūyā(h)*, the only precativ to this root, hence my “may he please hear.” It also provides a phonological template for *śyāvā* opening the next hemistich (2c) and, more distantly, *uttānāyām* and *śirīṇāyām* opening 3a and c respectively.

II.10.3: The fem. sg. loc. *uttānāyām* is generally simply tr. ‘outstretched’ or sim. I think the image is more precise: the two kindling sticks, athwart each other, are likened to a woman in birthing position with her legs stretched out and open (my “agape”).

The rhyming form *śirīṇāyām* opening the 2nd half-vs. is much more difficult. It is a hapax with no clear root affiliation, and the suggested tr. range widely -- ‘night’, ‘chamber’, ‘hiding place’, etc. (See the standard tr., plus KEWA and EWA s.v.) My own very tentative suggestion links it to *sirā* ‘stream’ (I.121.11) and *sirī-* (if that means ‘stream’, as JPB takes it, X.71.9), as well as to later *sirā-* ‘vein’ (also found in MIA). By extension I take it to refer metaphorically to the birth canal, in which Agni remains, unborn, during the night -- though he cannot be kept confined for very long. This would again be a reference to the kindling sticks, in whose attenuated interior he is fancied to be hidden. The variation in sibilant would not be surprising, particularly in a body-part word that could be mediated by Middle Indic. All this is very speculative, however, and it might be wiser to leave the word untranslated.

II.10.4: This vs. describes what happens to the fire after the peaceful creature depicted in pāda b is sprinkled with melted butter (pāda a): he takes on an appearance (*dfśānam*) that is larger and more powerful. Contra Ge, Re, WG (but with Old [SBE]) I construe *ānnaiḥ* with *vyāciṣṭham*, on the basis of III.50.1 *uruvyācāḥ ... ebhír ānnaiḥ*.

II.10.5: The first hemistich of this vs., which repeats the verb of the preceding vs., *jigharmi* ‘I sprinkle’, expresses the hope that this sprinkling, which rendered Agni ‘overpowering, violent’ (*rabhasām*) at the end of the last vs., will not make him hostile and dangerous: he should enjoy the ghee “with an undemonic spirit” (*arakṣāsā mānasā*).

The second hemistich states that no matter how lovely his appearance is, he is not to be touched; the unexpressed reason for this of course is that he will burn whoever or whatever does touch him. The hapax bahuvr. *spṛhayādvarṇa-* is variously interpreted. I think it means not ‘having desirable color’ (so, approx. Re.) nor ‘desiring color’ (so approx. Ge and WG), but rather ‘having questing color’ -- that is, his color (=flames) flickering here and there (*jārbhurāṇaḥ*) look in their random motion as if they are seeking something. In other words, despite their apparent formal match I take *spṛhayādvarṇa-* as a bahuvrīhi based on a karmadhāraya, rather than as a verbal governing cmpd. of the type *dhārayāt-kavi-* ‘upholding poets’.

II.10.6: The first pāda of this vs. continues the theme of trying to set limits on the unpredictably powerful Agni. (In my view; it is not so interpr. by others.) Here he is urged (again with a precative, *jñeyāḥ*) to know or recognize his share. I take this to mean that he should take his share and no more, though his power would allow him to take whatever he wants (*sahasānó vāreṇa*). Agni thus controlled will then help the singer to achieve his goals (pādas bcd).

Note that Manu returns from the 1st vs. — another little ring. The adj. *madhupīcam* ‘mixing with honey’ reminds us of the later Madhuparka drink offered to distinguished visitors, but I doubt that such a reference is found here. Though it would be generally appropriate for Agni the *ātithi-* (‘guest’), this hospitality theme, though common in the RV, is not found in this hymn.

For the pun in the 2nd half vs., see publ. intro. Notice also that *juh^uvā* mimics the phonology of the verb *johavīmi*, thus emphasizing the ring of the latter with the first word of the hymn *johūtra*.

[II.11–24 JPB – comments by SWJ]

II.11 Indra (comments SJ; for a complete translation with my modifications, see end)

The hymn has a remarkable number of predicated tense-stem participles. There are also an unusual number of past anteriors of various sorts.

Another notable feature is the large number of occurrences of the particle *nú*, all in the first pāda of the vs., in short runs of adjacent vss.: 3a, 4a; 6a, 7a; 15a, 16a, 17a. The last vs. of the hymn (21) then begins *nūnām*, as if in summary.

Other signature words recur through the hymn: forms of $\sqrt{vṛdh}$ (esp. *vardhāya-*): 1c, 2d, 4a, 4c, 8c, 11c, 13b, 15d, 20b; \sqrt{mand} (esp. *mandasānā-*): 3c, 11b (2x), 14c, 15a, 17a, 20a.

There is also a certain amount of chaining, though it is not applied systematically: 3d/4a *śubhrā-*, 6d/7a *hārī-*, 7d/8a *pārvata-*, 9d/10a *vīṣṇo asya vājra-*, 10d/11a *√pā-*, 12d/13a *syāma*, 13d/14a *rāsi-*, 15d/16a *bṛhāt-*, 19d/20a *tritā-*.

On the unusual meter of this hymn see Old Prol. 87–90, who also remarks on its unusual vocab., which, taken together, gives the hymn a “Sonderstellung” among the surrounding hymns (87 n. 1). See also Ge’s intro. for remarks on its stylistic features.

II.11.2: The pf. part. *vāvṛdhānāḥ* would better be rendered as an anterior: “when you had become strong ...”

II.11.3 There are several syntactic problems in this verse. The easiest to deal with is the apparently misplaced *ca* in b. All the standard tr. as well as the publ. tr. take *rudrīyeṣu* as a modifier of *stómeṣu*, with the whole loc. phrase *#ukthēṣu ..., stómeṣu ... rudrīyeṣu ca* then interpreted as “in the hymns and in the Rudriyan praises,” with the *ca* following the 2nd word of a bipartite NP and at a considerable distance from the 1st. (We would expect **stómeṣu ca (...)* *rudrīyeṣu*.) Klein (DGRV I.54) calls this “the most anomalous position of *ca* within adjective plus noun syntagms.” This difficulty disappears if we take *rudrīyeṣu* not as an adjective with *stómeṣu*, but as a third term in the conjoined phrase: “in the hymns, in the praises, and in the Rudriyans.” The *ca* is then correctly positioned in an X Y Z *ca* construction (on which see Klein DGRV I.86–91). The Rudriyans in question are the Maruts. It is important to note that the adj. *rudrīya-* is almost never used of anyone or anything but the Maruts, and in the plural never of anything but the Maruts. It is also never used of hymns or praises. It is true that my interpr. produces disharmony in semantic class: two types of verbal products and a group of gods, but Indra does indeed get pleasure and strengthening both from human praises and from the Maruts, who stood by him at the Vṛtra battle (and who also praise him: see, e.g., comm. ad V.52 and my 2006 “Poetic Repair”). My interpr. both solves the *ca* placement problem and also allows *rudrīya-* to refer to its accustomed referent.

A more intractable problem is how to interpr. the loc. relative pronouns in pādas a and c. The standard tr. (Ge, Re, WG) seem to take them (it’s a little hard to tell) as embedded relatives with the loc. nouns (*ukthēṣu*, etc.) belonging to the main clause whose predicate takes shape in pāda d. The publ. tr. (JPB) takes ab as a separate sentence, supplying an impv. “delight!” as the main cl. verb, governing *ukthēṣu ... rudrīyeṣu ca* and generated from the injunctive pf. *cākān* of the rel. cl. This still leaves the *yāsu* cl. embedded, since the main clause in cd must include *túbhyéd* that begins c, parallel to *vāyāve* in d. Another wrinkle is the fact that the verbal predicate of this 2nd rel. clause is not finite, but a predicated middle participle (whatever its exact derivational path) *mandasānāḥ* (on which see comm. ad IV.3.6). In favor of the JPB solution is the fact that the *yāsu* rel. prn. has a clear antecedent in the main clause of cd: nom. pl. *etā(h)*, but it is not clear whether masc. *yēṣu* does. If we take the nominal loc. pls. *ukthēṣu*, etc., as belonging to the main clause, then it does. This seems to be the solution of the standard tr. (e.g., Re’s tentative “parmi (?) les hymnes en lesquels tu te complais et parmi (?) les corps-de-louange rudriens ...”).

The rel. cl. problem is compounded by several other factors: 1) that the referent of the fem. nom. pl. *etāḥ* in c is disputed. Ge (n. 3c) suggests either waters or, with Sāy., praise songs. Old also goes for waters, as does the publ. tr. and, apparently, WG. By

contrast, Re: soma drinks; 2) the simile marker *ná* in d is not positioned to mark a simile, and so its contribution to the whole is unclear.

The 2nd issue is, again, easy to deal with. As disc. elsewhere (see comm. ad VIII.76.1) and noted already by Ge, simile-marking *ná* cannot be pāda final. If it would be, it flips with its target. Therefore in this case we can assume an underlying **śubhrā ná* and a conventional simile. As for the 1st, the fem. referent should be something Indra takes pleasure in. Although waters, being feminine and already present in the discourse (2ab), are perhaps the obvious choice, in this type of ritual context waters are not something Indra craves. Re's soma drinks fit this criterion much better: Old points to three other examples of *mandasānā-* in this hymn (14c, 15a, 17a); in the latter two Indra is subject and it is soma drinks that he enjoys. But no standard word, or synonym, for soma is fem.

Having given this more thought than it perhaps deserves, I think I've found a solution to all these various syntactic and referential problems. An imperfect one, but better (in my opinion) than any of the rest. I take the first hemistich as a self-contained rel. cl. – no parts of it belong to the main cl. and there is no embedding. The main cl. is cd; the referent of rel. cl. *yéṣu* in the main clause is *etāḥ*, with gender switch – but with semantically the same referent as the *ukthéṣu ... stómeṣu* of ab, namely hymns / praise songs, a word for which should be supplied with *etāḥ*. This is the Sāy. solution alluded to above: Sāy. supplies fem. *stutīḥ*; I prefer *gírah*, which is much more common in the RV. For the phrase *etāḥ ... gírah* see I.25.18. In order to indicate that *yéṣu* and *etāḥ* are coreferential despite the gender switch, the poet inserts after the fem. *etāḥ* a relative clause *yāsu mandasānāḥ* “in which you are finding exhilaration” that has the same structure as *yéṣu cākān* “in which you delight” in pāda a. The *yāsu* clause is embedded in the main cl. unfortunately, but the fact that the predicate is a participle, not a finite verb makes the violation less serious. (See my 2022 “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian: Proto-proto Izafe.”) Why switch the gender, however? I think it is to accommodate the simile at the end of the vs. There I do think that *śubhrāḥ* refers to waters or rivers – the free-flowing hymns are compared to them, but a masc. in the frame would put the simile off balance. The stem *śubhrá-* is elsewhere used of rivers and waters, and waters serve as subj. to *prá ... sísrata* in nearby II.17.3, as Old points out. Unlike all the standard tr., I do not think *vāyáve* belongs in the simile; rather he is parallel (if a bit of an afterthought) to *túbhya*.

Putting all this together, I suggest a much-emended translation of the whole vs. (leaving out the vocc. for clarity of structure): “In which hymns, praises, and Rudryan (Maruts) you delight – those (songs), in which you are finding exhilaration, flow forth esp. to you, and to Vāyu, like resplendent (waters/rivers).”

II.11.4: *śubhrá-*, the last word of vs. 3, becomes the signature word of this vs., found initial in each of the first 3 pādas.

The first two pādas contain two exx. of predicated pres. participles, *vardháyantah* and *dádhanāḥ*, but unfortunately it's not clear what they are predicated of. Ge, Re, and the publ. tr. supply “we,” which is a reasonable default, WG “diese Lobreden” (their tr. of *ukthá-*) from 3a, which would entail another gender switch. Since *ukthá-* is neut., the masc. participles would have to refer to masc. *stóma-* in 3b, skipping the fem. in 3c.

“We” seems a better choice. In any case, the referents of these participles are not directly reflected in the rest of the verse (save perhaps for *asmé* ‘for us / among us’ in c).

JPB takes c as an independent nominal clause, with ab implicitly subordinated to it. By contrast, all the standard tr. take c with d, with the pf. part. *vāṛdhānāḥ* expressing anteriority and notional dependence: “... having become strengthened, you should overwhelm ...” Although this alt. is certainly possible, rhetorically c is tightly connected to ab. In ab the unidentified subjects confer *śubhrá-* features on Indra and strengthen him; in c Indra has become *śubhrá-* himself, having become strengthened, with the same root $\sqrt{vṛdh}$. And if the first hemistich has implicit 1st pl. subjects, *asmé* in c refers back to them. So I favor some version of the publ. tr.

II.11.5: Pāda c is oddly conceived. The problem is the double object of the pf. part. *tastabhvāṁsam*, namely *apó dyām* “the waters (and) heaven.” The first, in a putative VP *apāḥ* \sqrt{stambh} , is perfectly fine, and indeed perfectly fine as a description of Vṛtra. Although \sqrt{stambh} ordinarily means ‘prop up, make fast’, in the latter sense it can come to mean ‘stay, block’, with rivers (bzw. waters) as obj. Cf. III.53.9 *ástabhnāt síndhum arṇavām* “he stayed the river in flood,” depicting Viśvāmitra’s feat in stopping the rivers to allow Sudās’s forces to cross, presented at length in the famous hymn III.33. Also, with \sqrt{stambh} in the passive, in VIII.96.18 *tvām síndhūṁ asṛjas tastabhānān* “you released the rivers, which had been blocked/stayed,” exactly of Indra’s freeing the waters after smiting Vṛtra, as here. But \sqrt{stambh} is far more common with *dyām* as object; this VP means “prop up heaven” and is regularly used of one of Indra’s signature cosmogonic deeds – including in this sequence of Indra hymns. Cf. in the next (very famous) hymn, II.12.2 *yó dyām ástabhnāt sá janāsa índraḥ* “who propped up heaven, that, o peoples, is Indra”; II.15.2 *dyām astabhāyad bṛhántam* “he propped up lofty heaven”; II.17.5 *ástabhnān māyāyā dyām avasrásah* “with his craft he propped up heaven (to keep it) from falling.” It is very strange to assign Indra’s deed and its formulaic expression to Vṛtra. To rescue the phrase, Ge suggests that “heaven” stands for “heaven’s light”; neither Old nor Re (whose tr. in EVP XVII of course lacks notes) comments, nor Klein (DGRV 335), who tr. “the one blocking the waters (and) heaven.” WG tr. “der dazu Wasser und Himmel befestigt hat,” with further glosses in the n.: “mehrdeutig: der Wasser und Himmel gespreizt / zur Festung gemacht / festgebunden / paralysiert hat” – none of which helps with the anomaly of *dyām* \sqrt{stambh} in this context. I find it difficult to imagine that the audience (more alert than us Western commentators), hearing *dyām tastabhvāṁsam*, esp. in an Indra hymn, would not immediately associate it with the standard Indra formula and find the attribution of such a deed to Vṛtra (whom Indra will smash in the next pāda) disturbing—twisting the perfectly acceptable *apāḥ* \sqrt{stambh} phrase in a disconcerting direction. But I don’t quite know what to do with this. I would certainly not suggest that they then interpreted this participial phrase to refer to Indra – more that they were forced to rescue it by a semantic reconfiguration, perhaps like the one Ge suggests – though nowhere else that I’m aware of is Vṛtra credited with blocking the light of heaven.

In any case, against the publ. tr., I would take the pf. part. as expressing anteriority – “having blocked / who had blocked the waters and heaven.”

II.11.6: It seems strange to begin pādas a, c, and d with 1st sg. *stāvā*, but b with the 1st plural *stāvāma*, which is also not initial. There is some phonetic play between a and b: *stāvā (n)ú ta v. utá stavā(ma)*, with *nūtanā* figuring later in b. The mirror-image openings of the two pādas might at least account for the position of *stavāma*.

II.11.7: The three augmented aorists in this vs. are striking, esp. because two of them are extremely marginal in the grammar: the *s*-aor. seen in *asvārṣtām* (√*svar*) is found otherwise in the RV only as 3rd sg. *ásvār* in late X.148.5; *áramsta* is the only form of this *s*-aor. in the RV. Both have well-attested 1st cl. present stems with the same meaning, and it is, at first, surprising in this narrative context that we don't find imperfects. But as IH suggested to me, if we follow the interpr. of the hymn in the publ. intro. and in Brereton 1985, whereby the apparent events of the mythic past—the spreading out of the earth, the coming to rest of the mountain—actually refer to the ritual here-and-now, esp. the establishment of the fire, then the augmented aorists will force an immediate past interpr. and therefore reveal the poet's intent behind the apparent recital of mythic events.

What it means for a cry to be dripping with ghee and why it's the horses' cry are unclear to me.

I would be inclined to take *cíd* with *sariṣyān*, rather than with *párvataḥ*, hence “the mountain, though about to run, came to rest,” rather than “even the mountain ...” Note the use of the future participle to express past prospective value in subordination to a preterital main verb and see comm. ad 10b below.

II.11.8: After the three augmented aorists in the previous vs. and with *akrān* in pāda b, the injunctive *sādi* in pāda a is a little surprising, esp. since this pāda seems to describe the same action as 7d. I wonder whether the poet is playing a trick: the negated participle *áprayuchan* almost seems to have the augment we expect in **asādi* but transposed to the next word (and of course etymologically and functionally quite distinct). Note that *áprayuchan* occupies the same metrical position as the aor. *áprathiṣṭa* in 7c (the immediately preceding hemistich) and shares the same first two syllables.

The *s*-aor. *akrān* in b should be tr. “has roared” to match the other augmented aorists in the immediate context.

The lexeme *ní√prath* occurs only here in the RV and, at least according to Mon.-Wms., in all of Sanskrit. This isolation makes it all the more difficult to figure out what is going on in pāda d, since the reference of the almost equally isolated *dhamāni*- is unclear. (But see below.) Note the placement of the preverb *ní* after the verb *paprathan* at the end of the verse, an almost mirror image of the opening of the vs. *ní párvataḥ*. This vs.-final *paprathan ní* is also echoed by the end of the 1st hemistich in the next vs. *asphuran níḥ*. Both verbs precede their preverbs, but despite having apparently identical endings, *-an*, the first is a real 3rd pl. *-an*, where *asphuran* represents 3rd sg. *asphurat* in sandhi.

The 2nd hemistich is quite baffling. It bears a superficial resemblance to X.49.6cd and is adduced with regard to that passage by Old ad X.49.6. However, the two passages do not illuminate each other; see comm. ad X.49.6. More helpful is III.30.10, adduced by Ge. That passage has to do with the opening of the Vala cave; its last pāda reads *prāvan vāṇīḥ puruhūtám dhāmantiḥ* “The choir (of Aṅgirases) aided the much-invoked one [=Indra], blowing (on their instruments),” containing both *vāṇī-* and a form of √*dham* ‘blow’, like *vāṇī-* and the mysterious noun *dhamāni*- here. This poorly attested noun (RV

1x; more common in AV; in general see EWA s.v. *DHAM*) seems to mean ‘tube, (blood) vessel’ in the AV, but this is most likely a semantic extension based on physical shape. The noun, derived from \sqrt{dham} ‘blow’, was, in the first instance, a nom. act., as *-áni-* nouns generally are (e.g., *vártani-* ‘turning’ → ‘track/course’; AiG II.2.207), with the sense ‘blowing’, but then could have been concretized to a (musical) pipe or primitive flute into which the performer blows, to whose shape a vein or tube could be likened. The abstract sense is still found in our passage; as in III.30.10, it’s used in reference to the (musical) noise the Aṅgirasas made to open the Vala cave. I would now render cd “Amplifying their voice to the furthest distance [i.e., making themselves heard that far], they [=Aṅgirasas] spread the blast that was impelled by Indra.” I substitute ‘blast’ for ‘blowing’ because the latter makes no sense in that English sentence, though unfortunately ‘blast’ is not all that much better – it’s meant to evoke noise. I also fail to tr. *ní*, since it also makes for semantic complications. As I said above, I think vs.-final *ní* may be here to match vs.-init. *ní* in a phonetic figure with *par-/pra-*. If it does have semantic content, it may mean that the Aṅgirasas directed their noise down into the cave. Since the cows are always elsewhere depicted as being driven up out of the cave (see, e.g., nearby II.14.3 *yó gā udājad āpa hí valām váh*), presumably the cave is below ground. Because the hemistich seems to concern the Vala myth, I supply the Aṅgirasas as subj. – against the Maruts, favored by most of the standard tr. Although most of the mythological material in this hymn is concerned with the Vṛtra battle (though for Vala see 20d), it is very difficult to fit this vs. into that paradigm; the Vala myth works much better.

II.11.9–10: The final pāda of 9 is almost identical to the first one in 10: the case of *vájra-* is different, and there are two different intensive forms, to different roots, with different morphological identities (gen. part. *kánikradataḥ*, impf. *ároravīt*), and different subjects (bull / mace) – but the intensives are essentially synonymous and the effect is the same. This is an extreme example of the chaining found off and on in the hymn (see above).

II.11.10: It is unusual to find a subjunctive *nijūrvāt* in a subord. clause whose main cl. has an imperfect intensive (*ároravīt*). The publ. tr. renders it as “was about to grind down” -- this seems pretty close to target, though I’d probably substitute rather “was going to” -- a past prospective. Sāy. simply glosses with a desiderative *jighāṃsatīty arthaḥ*. Of course, the *-āt* isn’t metrically guaranteed and could have been introduced from *vájrat* at the end of 9d, so it is possible that the form was simply injunc. **nijūrvat*. Nonetheless, though the usage of the subjunctive here is unusual, I think it can be reconciled with the function of the subjunctive more generally. Note that its function is very much parallel to that of the future participle *sariṣyán* in 7d.

Both *nijūrvāt* and *papivān* are means of indicating anteriority here.

II.11.11: On *kukṣí-* as ‘cheek’, not ‘belly’, see comm. ad X.28.2, etc.

In d JPB takes *paurá* as *pauré* out of sandhi, as a PN – contra the Pp and the standard tr. In VIII.61.6 I take it as ‘multiplier’ (of Indra) in a pun with *purukṣt-*. In VIII.50.5 a clear loc. shows the sense that JPB wants. In V.74.4 there are three exx., one apparently a PN, the other also apparently a pun on *puru-* (JPB tr. ‘muchness’). I’d be inclined here to take it in non-PN fashion, either as loc. “in its muchness” or modifying soma: “soma, multiplied” (to *puru*) or perhaps more likely, given *prṇántaḥ* in c, ‘filling’

or ‘in its fullness’. In our passage Ge tr. “Füller,” Re “fait pour beaucoup (d’exploits),” WG as “Paura” (with several different interpr. possibilities registered in the notes) – all as nom.

II.11.12: I would tr. “have abided in you,” not “by.”

I would tr. *dhīmahī* in c as ‘acquire’ -- the idea being that we want to get a *prāsasti-* from our actions performed with Indra’s help. Against the standard interpr. as root aor. opt. to $\sqrt{dhā}$, WG seem to assign the verb to $\sqrt{dhī}$ (“... erblicken wir unsere Preislieder”), but there is no such root formation to $\sqrt{dhī}$, whereas *dhīmahī* to $\sqrt{dhā}$ is remarkably well attested.

Pāda d is a variant of 1d, as pointed out by Ge.

II.11.13: Pāda a is syntactically very fussy: *syāma té ta indra yé ta ūtī*, with two nominal clauses each with its own enclitic *te*, a predicative instr. in the rel. cl., and the “may we be those who ...” construction that defies fluent Engl. tr. If the Engl. seems awk, blame it on the Skt!

Pāda b contains another predicated pres. participle, *vardháyantaḥ*.

The splv. *śuṣmīntamam* responds to *śúṣma-* in 4a, while *yām cākānāma* echoes *yéṣu cākān* in 3a. Although the publ. tr. treats cd as if *yām cākānāma* were embedded, it’s a perfectly standard preposed rel. cl., though awk. to render: “in which most explosive (thing) we will take delight – (that) wealth consisting of heroic men grant to us.”

II.11.14: The *rāsi* of 13d is not only chained with *rāsi* in 14a, but repeated twice more in the hemistich, always clause initial.

The affiliation and reference of the nominal rel. cl. in c are disputed. Let us begin with the fact that this pāda contains yet another predicated pres. part., *mandasānāḥ*. It cannot belong with the main cl. verb in d, *pānti*, because it modifies a rel. prn. *yé*, and *pānti* is unaccented. The question is whether c is a preposed definitional cl. of the type “(Those) who (c) ..., they (d) ...” The *ca* would then be a clausal conjunction, loosely connecting c with the first hemistich. This is how the publ. tr. takes it, as do Re and JSK (DGRV I.224). However, c could also be more strongly connected to pāda b and participate in an “X [acc.] and which Y ...” construction, where the referents of *yé* would be a conjoined obj. with *śārdhaḥ ... mārutam* of *rāsi*: “Grant us the Marutian warrior band and (those) who are jointly finding exhilaration” – whatever the referents of *yé*. This is Ge’s interpr. As for the referent of *yé*, he sneaks in an “alle” (“und alle, die einträchtig (mit dir) sich berauschen”) and in n. 14c says that *yé* includes the Vāyus (but is not limited to them?). I confess I prefer this syntactic analysis, among other things because it keeps *ca* as a subclausal conjunction. Ge’s “all” is illegitimate, but his suggestion that the *yé* clause refers to the Vāyus is certainly worth considering (see below). (The WG tr. seems more or less of the first type, but takes *ca* as conjoining the adj. *śajōṣasaḥ* and *mandasānāḥ* and also seems to take the antecedent of *yé* as the Maruts [number disagreement, though that wouldn’t be fatal], but *yé* as the subj. of *pānti*, which is fatal, syntactically. In other words, their tr. is a mess.)

The pl. of *vāyú-* is puzzling. The functional distribution of the two words for ‘wind’, *vāyú-* and *vāta-*, is generally pretty clearcut: Vāyu is the god, *vāta-* usually the natural phenomenon. There are over 100 singular forms of *vāyú-*, but only six plurals. (I

explain the supposed acc. pl. *vāyūn* in IX.97.14 differently from Gr/Lub [see comm. ad loc.]; Gr's nom. pl. interpr. of *vāyáva* in sandhi in VII.92.4 is really the dat. *vāyáve*.) Besides the form here, there is one other nom. pl. (X.46.7, a difficult passage; see comm. ad loc.) and four instr. pl. *vāyúbhiḥ* (IX.84.4 and three times in the same hymn, VIII.7.3, 4, 17). All these pl. forms in context refer to the natural phenomenon, lower-case 'wind'. Our passage is different, though, and conceptually problematic. Pāda d depicts a very familiar ritual situation: the god Vāyu receives the first drink of soma at the morning pressing; this is unequivocally signaled here by *pānti ágraṇītim* (whatever the problems with *pānti*; see below). But in a ritual setting, there should be only singular Vāyu – there is elsewhere no corporate group of Vāyus (like Ādityas or Vasus); the ritual scenario in d is quite anomalous. I don't have a full solution to this conundrum, but I can point the way towards one. The hymn containing the three instr. pl. (that is, half of the occurrences of pl. *vāyú-*) is a Marut hymn. In it the Maruts perform various actions "along with the winds." In our passage I think the referent of *yé* in c is the winds, the natural phenomena, who act along with – and presumably take pleasure along with – the Maruts, who are the object of pāda b and with whom the *yé* in c is conjoined. But the vs. segues into the ritual in the final pāda and the poet allows the paradoxical plural to stand, an uneasy compromise between the natural winds and the ritual Wind. (Recall that sg. *vāyáve* was a ritual recipient in 3d.)

The primary ending on *pānti* is disturbing: the context requires a connection with $\sqrt{pā}$ 'drink', but that root forms a root *aorist*. For another such form see I.134.5 and comm. ad loc. As noted there, these anomalous forms could be root aor. subjunctives; this could then mean "will drink."

I would now emend the tr. of bcd to "Grant us the Marutian warrior band, o Indra, and (those [=Winds]) who are jointly finding exhilaration (with them=Maruts). The Winds (will) drink the first offering."

II.11.15–17: These three vss. all begin X *ín nú*, strongly emphasizing the X.

II.11.15: And another -- or rather the same *mandasānāḥ* -- in the nominal rel. clause introduced by *yéṣu*. See 3c and 14c, as well as 17a. Given this insistent repetition, all these forms should have the same tr., and I would change "becoming exhilarated" here to "finding exhilaration." I would also change "among whom" to "in which."

Though there is no overt chaining between 14d and 15a, the phrase *yé ca mandasānāḥ* in 14c is almost exactly repeated in 15a *yéṣu mandasānāḥ*. I also wonder if *vyántu* (unfortunately probably not distracted, though Gr marks it so) doesn't slightly echo *vāyávaḥ* in 14d.

There are several missing, and therefore, disputed referents in this pāda, namely the subj. and goal of *vyántu*. I think JPB, flg. Ge, is correct that the subj. is soma drinks (so also Re) and the goal is you (=Indra). Sāy. and WG differ.

On the hapax *drahyát* see EWA s.v. *DARH*.

Pāda c lacks a verb. JPB supplies "be" and Re "come"; I'm inclined to follow Old, Ge (WG) in supplying a form of $\sqrt{vṛdh}$ 'strengthen', generated from *āvardhayaḥ* beginning d. Ge suggests the impv. *vardhaya* (as opposed to the pret. of Old and WG). I prefer the impv. because it seems more likely that we're asking for Indra's strengthening than describing past occurrence of it. But it would be possible simply to read *āvardhayaḥ*

with both pādas: “you strengthened us in battles (and) strengthened heaven ...” I would in any case change “have strengthened” to “strengthened,” since the impf. doesn’t usually have that sense and the strengthening of heaven should have happened quite awhile ago.

The emended tr. of cd: “(Strengthen) us in battles, surpassing one – you strengthened heaven ...”

II.11.16: In order to avoid a lengthy embedded rel. cl., starting with *yé* in pāda a and lasting through c as the publ. tr. has it, I would reconfigure the publ. tr.: either by taking *brhanta in nú* as a predicated nom. cl. on which the *yé* clause is dependent, or by taking all of abc as the rel. cl. signaled by *yé*. The two alt. would be “Just they are lofty who ...” and “Which lofty ones ...” I prefer the former because of the emphatic *íd*, and it is tr. this way by Ge, Re, WG, and JSK (DGRV II.166). The d pāda is then a separate clause.

Pādas bc also have an “inverse” *vā*, i.e., a construction X *vā* ... Y – but with the added twist that X and Y are not syntactically parallel: X is a bare instr. (*ukthébhiḥ* “by hymns”), while Y is a complex participle phrase that occupies the whole of pāda c: *strṇānāso barhīḥ pastyāvat*. Ge simply fails to render the *vā* (or rather vaguely renders it as “etwa”), but the other tr. capture the *vā* one way or another.

Emended tr. “Just they are lofty who seek to win your favor either through hymns or (by) strewing the ritual grass that provides (you) a dwelling place. Aided by you, they have come to the prize, Indra.”

II.11.17: The fourth and final occurrence of *mandasānā-*. Again I would change the tr. to “finding exhilaration in ...”

II.11.18: The subtle differences in accent: although both *avābhīnat* (init. in b) and *āpāvṛnoḥ* (init. in c) are 2nd sg. aug. impfs. with Indra as subj., only the first belongs in the rel. cl. introduced by *yéna*, because it is accented on the verb; the second begins a new main cl., because it is accented on the preverb. All the standard tr. correctly represent this.

I would slightly alter the tr. of *ní ... sādī* from the “aoristic” “has been set down” to “was set down / sank down,” since the action seems to be in the same chronological and conceptual realm as the other deeds of Indra presented in the imperfect in b and c. Note esp. the standard polarization between *ārya-* (c) and *dāsyu-* (d), which is found again in the next vs. (19b). See *ní ... sādī* in 8a, though – where the action is both mythical and (possibly, per JPB) ritual and might be properly rendered, with JPB, as “has been set down” (though I’m somewhat dubious)

II.11.19: As Old also notes, the first pāda is a reworking and fleshing out of 13a *syāma (té ta indra) yé te ūtī* – here *sānema yé ta ūtībhis (tārantah)*, with both the main cl. and the rel. cl. provided with more content. Note yet another predicated pres. part. (*tārantah*) – unless we accept Ge’s configuration of the vs., whereby all of ab is a rel. cl. and *sānema* is within its domain, the main cl. being cd: “(We) who might win, overcoming with your help ..., to us ...” (I think WG also follow this route, but with some twists.) Because of the rhetorical echo of 13a, I prefer the syntactic analysis of the publ. tr. (also Re).

The publ. tr. “overcoming all rivals, (all) Dasyus along with the Ārya” is misleading, since it sounds like the Ārya is included in the group we are overcoming.

Instead we are doing this with the help of the Ārya: rephrase as “we who by your help, along with the Ārya, (are) overcoming ...”

In c “it was for us that you ...” rather than “that was for us: that you ...” sounds more idiomatic.

The vṛddhi deriv. *sākhya-* is found only here in the RV, and it is also isolated syntactically in its clause – a gen. with nothing obvious to govern it. JPB’s ‘one of your circle of companions’ is more or less a direct tr. of Re’s “(qui appartient à) notre cercle d’amis.” Ge by contrast supplies a genitive of Tvaṣṭar, dependent on *viśvarūpam*, who is then qualified as being friendly with Indra (or so I understand Ge; see his bottom-of-the-page n. 1) – so, transformed into dubious English: “... Tvāṣṭarian Viśvarūpa, (son) of companionable (Tvaṣṭar).” This seems over-complex, and the companionship of Indra and Tvaṣṭar is not standard fare. Although the Re interpr. seems to me to fudge the case relation between Trita and this gen., it may be the best we can do, though “circle of friends/companions” is misleadingly specific. Perhaps better “Trita of (our) comradely (band).”

II.11.20: On the gen. with √*vṛdh*, see Old. In our passage gen. complements of verbs of consumption (“drink,” etc.) may have played a part. The first three genitives in pāda a refer to the soma, the last (*tritāsya*) to Trita as the presser of soma; see Old on this as well. The long gen. phrase in the publ. tr. is somewhat hard to parse; I might substitute “having grown strong on this exhilarating pressing of Trita’s.”

What’s going on in pāda c is unclear; see Ge’s n. 20c. JPB takes it as referring to a different episode in Indra’s heroic biography: making Namuci’s head roll like a wheel, found in passages like V.30.7 ... *nāmuceḥ śīraḥ ... āvartayaḥ*, with the same verb. Although it’s certainly possible that this pāda is a glancing allusion to that myth – and since the next pāda is about a different myth entirely, skipping from Arbuda to Namuci wouldn’t be surprising – it still lacks both Namuci and his head. Given the presence of the sun and the wheel, this could also be an allusion to the episode when Indra tears off the wheel of the Sun’s chariot, as in I.130.9 *sūras cakram prā vṛhat*, but the verb is different and *sūryaḥ* in our passage is stubbornly nom. On the whole I think it’s best to supply as little as possible here and would tr. (with Ge, Re) “he made (it) roll like the Sun its wheel” or, possibly, with WG, “he made the wheel roll like the sun.” I would further point out that the hymn has numerous occurrences of *vardhāya-*, starting in vs. 1, along with other forms of √*vṛdh*, including in pāda b, and *vartāya-* may be a bit of phonological play and ring composition.

II.11.21: On remarked medial opt. *duhīya+t*, see comm. ad IV.41.5.

II.11 complete (incorporating my modifications)

1. Hear our summons, Indra! Intend us no harm! We would be those to be given good things by you.

For these nourishments, like flowing rivers, strengthen you in their quest for good things.

2. You let loose the great (waters), Indra, which you swelled—the many (waters) surrounded by the serpent [=Vṛtra], o warrior.

You cut down the Dāsa [=Vṛtra], even though he thought he was deathless, when you had become strong through the hymns.

3. In which hymns, praises, and Rudryan (Maruts) you delight, o warrior Indra – those (songs), in which you are finding exhilaration, flow forth especially to you, and to Vāyu, like resplendent (waters/rivers).

4. Now (that we) are strengthening your resplendent explosiveness, are placing in your arms your resplendent mace,
resplendent are you, Indra, as you have become strong among us. Along with the sun, you should overcome the Dāsa clans.

5. The one placed in hiding, the hidden one hiding amid the waters, the crafty one dwelling under cover,
and the one who had blocked the waters and heaven—(that) serpent you smashed, o warrior, through your heroism.

6. Now I shall praise your ancient, great deeds, Indra, and we shall praise your present deeds.

I shall praise the eager mace in your arms. I shall praise your fallow bays, twin beacons of the sun.

7. Now your two fallow bays, competing for the prize, Indra, have cried out their cry, dripping with ghee.

The land has spread out equally in all directions. The mountain, though about to run, has come to rest.

8. The mountain, never faltering, has been set down. Bellowing with its mothers, it has roared.

Amplifying their voice to the furthest distance [i.e., making themselves heard that far], they [=Aṅgirasas] spread the blast that was impelled by Indra.

9. Indra kicked away crafty Vṛtra, who was lying upon the great river.

The two worlds trembled in fear before the mace of him, the bull roaring and roaring again.

10. The mace of him, the bull, bellowed again and again when (Indra), the ally of Manu, was going to grind down (Vṛtra), the enemy of Manu.

He brought low the crafts of the crafty son of Dānu, when he had drunk of the pressed soma.

11. Drink and drink the soma, o warrior Indra! May the exhilarating soma-pressings exhilarate you.

As they fill your cheeks, let them strengthen you. When properly pressed in its fullness, (the soma) has helped Indra.

12. We inspired poets have abided in you, Indra. Serving according to the truth, we would gain insight.

Seeking your help, we would acquire a proclamation of your praise. On this very day, we would be those to be given wealth by you.

13. Indra, we would belong to you as those who are with your help, since, seeking your help, we are making your nourishment strong.

That most explosive (thing) in which we will take delight, o god—that wealth consisting of heroic men grant to us.

14. Grant us peaceful dwelling. Grant us alliance. Grant us the Marutian warrior band, o Indra,

and (those [=Winds]) who are jointly finding exhilaration (with them=Maruts). The Winds (will) drink the first offering.

15. Now let just those (soma juices) pursue (you)—those in which (you) are finding exhilaration. Steadfastly drink soma to your satisfaction, Indra.

(Strengthen) us in battles, surpassing one. You strengthened heaven through lofty chants.

16. Just they are lofty who seek to win your favor either through hymns or (by) strewing the ritual grass that provides (you) a dwelling place. Aided by you, they have come to the prize, Indra.

17. Now, finding exhilaration in just these powerful (soma drops), o warrior, drink the soma among the Trikadrakas, Indra,

again and again shaking out (the soma) in your beard, becoming pleased. Travel to the soma drinking with your two fallow bays.

18. Take to yourself the vast power, o warrior, by which you cut down Vṛtra, the son of Dānu, that son of a spider!

You uncovered the light for the Ārya; the Dasyu sank down to the left, Indra.

19. We would win! — we who by your help, along with the Ārya, (are) overcoming all rivals, (all) Dasyus..

It was for us that you made Viśvarūpa, son of Tvaṣṭar, submit to Trita, one of (our) comrades (band).

20. Having grown strong on this exhilarating pressing of Trita's, he laid low Arbuda. He made (it) roll like the Sun its wheel. Together with the Aṅgirasas, Indra split the Vala-cave.

21. Now should the generous priestly gift yield your boon for the singer as its milk, Indra.

Exert yourself for the praise singers. Let fortune not pass us by. -- May we speak loftily at the ritual distribution, in possession of good heroes.

II.12–15 Indra [SJ on JPB]

The first three of these hymns can be usefully read together as different ways to handle a templatic structure. II.12 is the most tightly structured, with a brief, repeated refrain preceded by definitional relative clauses. II.13 explores ways of varying a fairly fixed refrain, while II.14 uses the definitional rel. clauses of II.12 in conjunction with widely different ways of realizing a semantically fixed, but lexically and syntactically fluid, refrain. The hymns are stylistically richer when read together, and one cannot help thinking that the poet(s) saw these as interrelated experiments in structure. II.15 also has a refrain: it is fixed and occupies the entire last pāda and shows none of the intricate connections to the rest of the vs. nor the variations found in II.12–14.

II.12 Indra [SJ on JPB]

As noted in the publ. intro., this hymn is one of the most famous and most translated hymns of the RV, esp. outside of the “philosophical” hymns. Even more notable than its collection of Indra's great deeds and powers is the tight structure in which they are corralled. Each vs. but the last (15) ends with the post-caesura nominal-clause refrain *sá janāsa índrah* “he, o peoples, is Indra” (or, as I'm always tempted to render it, in Looney Tunes style, “that, folks, is Indra”). Preceding the refrain in each vs.

is a series of definitional relative clauses, in which the relative pronoun, in whatever case (usually nom., occasionally gen., acc., instr., or abl.) always refers to Indra and the clause reads like an (easily solved) riddle. Although not particularly notable syntactically, this structure – defining rel. cl, identifying main cl. – seems to be a stylistic feature of archaic Indo-European literature; see my disc. in “Draupadī on the Walls of Troy” (1994, Classical Antiquity 13), also *RV between Two Worlds*, 68–69; RV Guide, 146–49. On the breaking up of this pattern towards the end of the hymn, see comm. ad vs. 15 below.

Esp. at the beginning of the hymn, the deeds are narrated with augmented imperfects, alternating with perfects. See esp. the string of imperfects *paryābhūṣat* (1b), *abhyasetām* (1c), *ādṛmhat* (2a), *āraṇṇāt* (2b), *āstabhnāt* (2d), *āriṇāt* (3a), *udājat* (3b), all but one 3rd sg. act., near-rhymes *-at* and *āt*.

II.12.1: Interestingly, this is the only occurrence of *mānasvant-* in the RV. The tr. ‘thinker’ for me conjures up a more intellectual and contemplative figure than quite suits Indra, but I’m not sure what to substitute. I think the idea is that even when just born he had a functioning mind.

On the hapax verb *ābhyasetām*, see EWA II.246 and Gotō (1st class, 224–25). Gotō plausibly suggests that because the dual impf. to the standard 1st class pres. to \sqrt{bh} , **ābhayetām*, would not fit the cadence, this nonce form was created, based on the archaic *s*-stem *bh(i)yās-* -- though the derivational pathway from *s*-stem noun to simple thematic present built to a pseudo-root \sqrt{bhyas} isn’t straightforward.

II.12.2: Notice the ever-levitating sequence of objects: earth, mountains, midspace, heaven, from lowest to highest.

On *dyām āstabhnāt* see comm. ad II.11.5.

II.12.3: The hapax *apadhā* is probably, flg. Old (and accepted by most; see Scar 250), an instr. of a root noun. As Old also points out, *āpa* $\sqrt{dhā}$ must here be a formulaic variant of *āpa* \sqrt{vr} ‘uncover’, a signature verb of the Vala myth. Old tellingly adduces nearby II.14.3 *yó gā udājad āpa hí valām váh.*, whose pre-caesura clause is identical to ours here. The alternative lexeme may have been used here because a root noun to \sqrt{vr} , *vr̥t-* with empty *-t* as always with roots ending in short resonants, risks being mistaken for a root noun to \sqrt{vrt} . Note that the phrase *apadhā valāsya* illustrates the constraint on root-noun compounding that I have discussed in the forthcoming article “Limits on Root-noun Compounding in Indo-Iranian,” whereby a root noun can be compounded with a preverb or a nominal but not both, and so the nominal must form a syntagm with the PREV- $\sqrt{\text{NOUN}}$, as here.

Because starting fires with stones is not the standard method in the RV -- it usually involves fire *sticks* -- I think the “between the two stones” (*ásmanor antár*) probably refers to the two world halves between which fire would appear, perhaps in addition to stones struck against each other to produce sparks. If I am correct that this is a reference to the world-halves, it would provide some support to the claim that the meaning ‘heaven’ for this etymon, attested in both branches of Old Iranian (*asman-* in both YAvs and OP), was pan-Indo-Iranian, a contested claim (see EWA s.v. *ásman-*, esp. p. 138).

On *sam* √ *vṛj* see comm. ad VIII.75.12, X.61.17 and Scar 504, as well as Th, *Gedichte* 24 n. 5.

Note *sam* √ *vṛk* *samātsu sa* ...

II.12.4: After the dominance of augmented imperfects in vss. 1–3 (see hymn intro. above), with a sprinkling of perfects (*vimamé* 2c, *jajāna* 3c), this vs. switches to augmented aorists: *ākah* in b and the re-marked medial root aorist *āda-t* in c, as well as a predicated past part. *kṛtāni* in pāda a. In my view pāda a summarizes the cosmogonic and mythological deeds depicted in the first three vss. before turning to activities closer to home, and I would render *kṛtāni* as “were done.” JPB takes pāda a as prefiguring what follows in the vs. (hence the colon, flg. Th *Gedicht*.) and tr. *kṛtāni* as “have been done.” (Either interpr. of *kṛtā-* is possible in principle.) As I see it, after the summary of pāda a, the next two pādas move to deeds Indra performed in the human sphere and therefore in more recent times, making the switch to the aorist appropriate. This shift to the recent past in turn provides the transition to the treatment of Indra’s current help in the next vss.

cyāvana- is ordinarily agentive, ‘rousing, rouser’, but there is no escaping the sense ‘exploit, deed’ here (like its fellow derivative *cyautná-*). Perhaps the semantic development is by way of “stirring (deed)” or sim.

I find the tr. “has put ... below and hidden away” somewhat awk, and would rephrase as the slightly less awk. “who has made the Dāsa color/tribe hidden below.”

As is well known, the apparent thematic active *ādat* is a pseudo-activization of the medial idiom *ā√dā* ‘take, acquire’. On two possible pathways of formation, see comm. ad V.32.8. Once the 3rd sg. *ādat* was established (4x, incl. X.68.6 not registered by Gr, but so identified in Lub), other paradigmatic forms could be built: 1st sg. *ādam* (1x), 2nd sg. *ādas* (1x), 1st pl. *ādāma* (1x).

II.12.4–5: The phrases *aryāḥ puṣṭāni* (4d) and *aryāḥ puṣṭīḥ* (5c) with, respectively, ppl. and fem. abstract to √ *puṣ*, both in the plural, do not seem to differ from each other semantically or functionally. The only possible (but weak) motivations I can see for the use of different stems are 1) metrical (neut. pl. *puṣṭāni* would not fit in 5c; however, the shorter neut. pl. form *puṣṭā* would), and 2) gender matching between simile and frame. We don’t know the gender of the root noun pl. *vījah* ‘stakes’, but it is clearly not neut. If it is underlyingly fem., *puṣṭīḥ* would be a better match. For *aryāḥ puṣṭā-*, see loc. pl. *aryāḥ puṣṭēsu* in the Vṛṣākapi hymn, X.86.1. That the ppl. is used in this phrase elsewhere suggests that the ppl. is the more idiomatic form in this phrase.

II.12.5: This vs. breaks the strict patterning of the hymn in several ways. Although it begins as expected with a rel. clause, with the rel. referring to Indra, the rest of the vs. exits the rel. construction, first with pāda b uneasily paralleling pāda a (see immed. below) and more radically with a declarative main-cl. statement about Indra in c and, even worse, a kind of breaking of the fourth wall in d, with an impv. addressed to the audience (*śrād asmai dhatta* “put your trust in him”). Besides the voc. *janāsaḥ* in the refrain, this is the only intrusion of the 2nd ps. until the final vs. 15. See also 13ab for another evasion of the rel.

Pādas a and b are structured identically (save for one significant feature: see below). They both have an embedded *īti*-marked quotation:

kúha sá íti / naísó asti íti

in a clause beginning and ending with a discontinuous acc. phrase:

yám ... ghorám / īm ... enam

governed by a 3rd pl. verb with unspecified subj.:

prchánti / āhuḥ

However the two pādas are syntactically non-parallel in a crucial way: the first is a relative clause with accented verb, the second is non-relative with an unaccented verb. However, they are conjoined by *utá*, which is ordinarily a co-ordinating conjunction. Klein (DGRV I.372–73) says *utá* here shows uncharacteristically “weak nexus” in transition from rel. clause to main cl – a statement that describes, but does not explain. I think the strict formal parallelism of a and b is meant to be in tension with their syntactic mismatch and also prepares the way for the more serious breaches in cd. (PS also suggests that this kind of loose reversion to a main clause might be characteristic of oral style, which the embedded quotes also mark.)

Although in answer to the question in pāda a *kúha sá* “where is he?” we might expect *naísó asti* to mean “he is not (here),” I prefer the existential “he does not exist” of the publ. tr. (as do all the standard tr.) for two reasons. In main clauses the pres. copula *asti* is almost always existential, and, furthermore, doubts about Indra’s existence are expressed elsewhere in the RV. See the answer to this in vs. 15 below. The *śrād ... dhatta* of d implicitly answers this existential doubt. This makes pāda c something of an intrusion, and it also essentially repeats/rephrases 4cd.

Pāda c meter: the transmitted text has a 12-syl. line with a Triṣṭubh cadence. Arnold and Oldenberg read *só ’ryáḥ*, with a triple-light break *víja i(vā)*. HvN instead apherisize *iva* to *’va* as is common in MIA and sometimes found in the RV. Either of these produces an acceptable Triṣṭubh line. There is another possibility, which is sort of a version of Arnold/Old.: to read *sáryáḥ*, with coalescence of *sá* with following *a-*, rather like *séti* in pāda a < *sá + í-*. Transmitted *só aryáḥ* would be a redactional restoration. I favor this third way.

II.12.6: This vs. firmly reestablishes the rel. pattern, with four occurrences of nom. sg. *yáḥ*, though the one in pāda c is (playfully?) syncopated, occurring immediately after the caesura rather than initial in the pāda.

It is uncertain whether there are two figures being invigorated in b, the formulator and the weak one needing help, or whether the fomulator is himself in need. JPB seems to favor the two-figure interpr.; most standard tr. the single figure. I am more or less indifferent, though weakly favor the single figure. In any case, b transitions from pāda a, which depicts unfortunate figures (“the enfeebled,” “the starving,” matching “the weak one needing help”), to cd with its ritual performers: the one with the yoked pressing stone and pressed soma, who pick up the formulator of b.

On the sense of *kīrī-* see comm. ad V.52.12.

Because *yuktá-grāṇṇaḥ* (c) and *sutá-somasya* (d) are identically formed, I would prefer a parallel rendering: “of the one who has yoked the pressing stone, who has pressed the soma.”

II.12.7: This vs. is even more insistent on the rel. structure than 6, containing seven rel. prns., two each in a, b, c, and an additional one in d (see vs. 14 for identical distrib.). The

first hemistich lacks a verb or verb substitute; it is governed by the loc. construction *yásya ... pradísī* “under whose direction.”

Since c reverts to cosmogonic deeds, I would tr. *jajāna* as “gave birth.”

II.12.8: For *krándas-* as ‘war-cry’ and du. *krándasī* referring to the opposing sides in battle producing war-cries, see Th, KZ 92 (1978).

Note *saṃyatī vihvayete*, picked up, at least conceptually, but *samānām ... nānā*.

For *nānā* see my disc. in the Hock Fs. “RV *sá hināyām* (VI.48.2) with a Return Visit to *nāyām* and *nānā*,” in *Grammatica et Verba, Glamor and Verve: Studies in South Asian, Historical, and Indo-European Linguistics in Honor of Hans Henrich Hock*, ed. Shu-Fen Chen and Benjamin Slade, 2013. I follow Th’s 1949 explanation of the form as an āmreḍita involving the expected nom. sg. of *nī-* ‘man’, otherwise unattested in Vedic. For reasons given in my article I prefer this account to Klein’s (2004) derivation from a pronominal āmreḍita **anā-anā* → **anānā* “in this way (here), in that way (there)” (Jared S. Klein, “Nominal and adverbial āmreḍitas and the etymology of R̥gvedic *nānā*,” in *The Vedas: Text, Language & Ritual. Proceedings of the Third International Vedic Workshop, Leiden 2002*, ed. Arlo Griffiths and Jan E. M. Houben, 251-60). A sense “every man for himself” would be quite appropriate here.

II.12.9: Note the repetitive phonological figure in *acyut-acyút-*, which contravenes the morphological boundaries (*a-cyuta-cyút-*).

II.12.9–11: Note the phonological sequence, with several different interlocking repetitions:

9c *yó víśvasya*

10a *yáh śaśvato ... śar^uvā*

10c *yáh śardhate ... śrdhyām*

11a *yáh śambaram ... śarādī*

II.12.10: I would suggest an alt. tr. for ab, mostly relexicalized: “who has struck with his missile the heedless ones, each and every one, who commit great offense.”

The hapax *śrdhyām* is generally taken as the acc. sg. of a stem *śrdhya-*, and this is perfectly plausible both morphologically and contextually. However, it might rather be taken as the loc. sg. of a *devī*-type *-ī*-stem *śrdhī-* “does not yield to the vaunter in his vaunting.” This makes somewhat more sense.

II.12.11: After the focus on present-day and recent-past events in the center of the hymn, we return to the mythological and distant past. Note that *jaghāna* in c must have distant past value, but the same form in 10b seems to refer to contemporary / recent past.

The part. *śāyānam* has two (indeed three) possible interpr., both simultaneously operative and supported by the formulaics of the Vṛtra myth elsewhere. On the one hand, with the publ. tr., it can mean “lying (dead),” proleptically depicting the result of the action of the main verb *jaghāna*. See the multiple occurrences of the root *śī* in the great Indra-Vṛtra hymn I.32, expressing just that (I.32.5, 7, 8, 9). On the other, it can refer to Vṛtra lying on or around the waters, as in V.30.6. As a possible third, it can simply refer to the snake as lying (on the ground) as snakes do, as Th suggests.

II.12.12: In order to reflect the structure, I would tr. the beginning of the vs. as “Who — the mighty seven-reined bull — let loose ...” Both Ge and Th point out that the “seven reins” correspond to the seven rivers.

Pāda b is strongly alliterative: (*avā*)*sr̥jat sártave saptá síndhūn*.

II.12.13: This is the first ab hemistich that entirely lacks a relative prn. However, as R. Kluender pointed out, vs.-initial (*d*)*yāvā* phonologically mimics a rel. Instead of the rel. prn. referring to Indra, we have the enclitic demonstratives *asmai* (a) and *asya* (b), while the rel. prn. returns in cd. For a somewhat similar breaking of the pattern, see vs. 5 above.

We seem to be wrapping up this hymn with a bit of tricky ring composition. In 1c we have *yásya śúṣmād ródasī ábhyasetān*; in our pāda a the *ródasī* return as *dyāvā ... pṛthivī* with a different verb, while in b we have *śúṣmāt* and *√bhī*, but a different subject.

Pāda b provides a good example of *cid* taking Wackernagel’s position even though the word it should limit occurs later in the vs. line. In the first pāda *cid* correctly follows the word it limits, or rather the first part of the dual dvandva *dyāvā cid ... pṛthivī* “even Heaven and Earth bow to him.” But in b *cid* follows the abl. *śúṣmāt*, while the geographical feature corresponding to H+E in a, namely *párvata(h)* ‘mountains’, is postponed. But surely the clause means “even the mountains fear his explosiveness” (as in the publ. tr.), not “the mountains fear even his explosiveness.”

In order to reflect the structure and, esp., to show that the rel. structure has been reestablished, I would rearrange the tr. of cd to “who is renowned as the soma-drinker having the mace in his arm, who (is renowned) as having the mace in his hand.”

II.12.14: As in vss. 6–7, after the breach in the rel. structure in 13ab this vs. insists upon it, with seven rel. pronouns, two each in a, b, c, and a seventh one in d. Given this, the second hemistich might be slightly altered to “whose is the strengthening formulation, whose is the soma, whose is this gift.”

II.12.15: As often, a pattern well established through most of a hymn gets broken, or shaken up, at the end (see also 13ab). Here the 3rd sg. reference to Indra in the first fourteen vss. changes to 2nd sg. address, but this change isn’t immediately signaled: the vs. begins with a rel. pronoun *yáh* that apparently matches the monotonously regular occurrence of the rel. with 3rd ps. ref. in the rest of the hymn. Only the verb *dárdarṣi* in b, the last word in its clause, shows that the pattern has been broken. The repetition of the participles *sunvánt-* and *pácant-* from 14a provides continuity in the midst of the referential shake-up.

The sandhi form *dudhrá* is ambiguous: it can reflect either a nom. sg. *dudhráh* with the Pp. or a loc. sg. *dudhré*. The publ. tr. opts for the latter, a possibility floated by both Ge (n. 15a) and Old, who does not decide; Re chooses the loc. The loc. interpr. has the advantage of accommodating the oddly placed *ā cid*, which would represent *ā* as “Praep. mit vorhergehendem Loc.” (Gr. 169) plus ‘even’ emphasizing that loc. Ge’s tr. follows the nom. of the Pp, and there are arguments in favor of this interpr. -- *dudhrá* elsewhere modifies Indra (I.56.3, VI.22.4 [2 out of 5 total occurrences]), and introducing a new personage in this vs. seems unnecessary. Like Old I can’t decide, though would probably favor a nom. sg. and tr. “You who, headstrong, rip free ...”

The main clause *sá kīlāsi satyāḥ* “you are certainly real” is an implicit answer to the doubt expressed in 5b *utém āhur naīṣó astīti enam* “And they say about him, ‘he does not exist.’”

The 2nd ps. reference of *sá* in the just quoted expression is contrary to my rules (“Vedic ‘sá figé’: An inherited sentence connective?” *HS* 105 [1992]) of such reference with this pronoun -- that 2nd ps. *sá* (etc.) is only found with imperatives and verbs so used. But the whole structure of this hymn, with the refrain *sá janāsa índraḥ* in the same metrical slot as this declaration, imposes the need for a *sá* here as well. Note that this phrase is an exact metrical match for the refrain.

Though *viśváha* is rendered in the publ. tr. as “throughout all the days,” the *-ha* is not, of course, the ‘day’ word, but the adverbial *-ha* of *ihá*; the tr. should be corrected to “everywhere/always.”

The final pāda, *suvīrāso vidátham á vadema*, is a variant of the standard Gr̥tsamāda Triṣṭubh refrain *bṛhád vadema vidáthe suvīrāḥ*. The refrain pāda here is found twice elsewhere (I.117.25, VIII.48.14), neither of them in Maṇḍala II or in a Gr̥tsamāda hymn. The reason for this variation isn’t clear, since the standard refrain would fit here unproblematically. Perhaps to mark the specialness of this particular hymn?

II.13 Indra [SJ on JPB]

This hymn is extremely challenging, with a discouraging number of puzzles and no clear overall theme -- though Indra’s cosmogonic activities and his help to particular clients dominate the latter part of the hymn. The first four vss. are devoted to the ritual preparation of soma, with Indra a side issue.

Like the immediately preceding hymn, this one is structured by a refrain, but a somewhat shifting one. The first vs. ends *prathamám tád ukth’yam*; this is more or less matched by vss. 2–4 *prathamám sās’y ukth’yah*, but the substitution of *sāsi* for *tád* has repositioned the refrain: after an opening of four, not (as in vs. 1) five. This shift backwards is somewhat disconcerting. The gender has also shifted, and in all three vss. the main cl. *sās’y ukth’yah* is preceded by the rel. cl. *yás tákrṇoḥ prathamám* matching the rel./main cl. structure that dominated II.12. In the next vss. (5–8) the refrain is reduced to *sās’y ukth’yah*, preceded by a variety of forms. *sās’y ukth’yah* is also found in vss. 9–10, preceded in both instances by *abhavaḥ*. Vs. 11 breaks the pattern by expanding the refrain but with a phonologically close match: *sá ... (vī)śvās’y ukth’yah*. *sās’y ukth’yah* makes a final appearance in vs. 12, and vs. 13 is in a different meter and contains the Gr̥tsamāda refrain rather than the one proper to his hymn.

The 2nd ps. reference of *sá* in *sāsi* is, of course, contrary to my rules (see disc. just above ad II.12.15), but our hymn seems to take off from the structure of II.12.15.

A complete retranslation of the hymn is given at the end.

II.13.1: This vs. concerns soma and its preparation, though soma is not overtly mentioned. The first word, *ṛtúḥ* ‘season, proper time’, is, I think, to be read in two ways. On the one hand, it can refer to season of the year when the soma plant grows – here, presumably the rains and their aftermath: the growing season, which is the begetter (*jānitṛī*) of the soma *plant*. But in the RV *ṛtú-* more frequently refers to the proper *ritual* time—esp. in the set of sequential offerings known (later) as the *ṛtugrahas* ‘sequential cups’, treated in this maṇḍala in the two hymns II.36–37 (q.v.). In this sense the ritual

sequence is the begetter of the soma *drink*, and the rest of the vs. (starting in the middle of pāda a) concerns the preparation of the drink: esp. the swelling of the soma plant with water.

The standard tr. (incl. JPB; see also Gr col. 785, IV.3 s.v. *pári*) seem to assume that *pári* serves as a postposition with *tásyā(h)*, but the interposition of *apáh* and, esp., the close sandhi of *apás pári* pose problems – though not insuperable ones (see below). JL suggested that *apáh* might have a double reading, both as a rare singular form of *áp-* ‘water’, an ablative to be read with *tásyā(h)*, and as the more usual acc. pl., with which the pl. rel. *yāsu* agrees. Thus “just born from this water he has entered the waters in which he grows strong.” But although this is clever and appealing, the most likely referent of *tásyā(h)* is the immediately preceding *jānitṛī*, which refers to the season (see above), so an abl. of water is unlikely. That *pári* might form a lexeme with *āviśat* could be suggested by 8c *āpariviśtam*, but I now find this unlikely: that form most likely belongs to $\sqrt{viś}$, not $\sqrt{viś}$, and the *pári* here is not in a standard position for a preverb in tmesis.

On the other hand, it is possible to rescue the postpositional account of *tásyāh ... pári*. Given that forms of the *sá/ tám* pronoun regularly take first position in their clause, it would not be surprising if the pronoun had been moved to clause-init. position from an underlying **(apás) tásyās pári*, with close sandhi between abl. *tásyās* and the postposition. The problem then is the close sandhi of the rearranged *apás pári*. This should indicate a close syntagmatic connection between the two – which we have in any case just rejected. In general, as shown by Hale (1990, “... Sandhi and Syntax,” 81–86), when the caesura doesn’t intervene, *pári* shows close sandhi effects with a preceding ablative that it governs (e.g., I.47.6 [etc. etc.] *divás pári* “from heaven”). There are numerous such examples. If it is the syntactic relation that produces this effect, we should expect that a word ending in underlying *-s* that has no syntactic relationship to a following *pári* would surface as visarga, even without intervening caesura. Such sequences are rarer, but there are a sufficient number to show that the syntactic distribution holds. See, e.g., for post-caesura position I.162.1 [cf. VII.93.8] (*mā ...*) ... *marútaḥ pári khyan* “(let not) the Maruts disregard us” (also III.3.9, 15.6; IV.43.6; V.15.3, 81.4, VII.103.8, IX.69.5, 85.1, 86.32, 107.2). For pre-caesura position V.53.9 *mā vah pári śthāt* “let (the Sarayu river) not hem you around” (also VII.36.7; IX.71.9, 93.1). And for dimeter vs. (with no caesura) VIII.41.3 *sá kṣāpāḥ pári sasvaje* “he holds the nights in his embrace” (also V.65.6; VI.51.16; IX.12.5, 62.23; X.85.13). (There are a few functionally ambiguous cases and a very few counterexx.) In almost all cases with *-h* outcome, the *pári* serves as a preverb, usually with the verb immediately following, as in the exx. just given. Its primary syntactic connection is then with the verb not an adjacent noun. In this passage, given that there is no clear relationship between *pári* and the main verb *āviśat* in the middle of the next pāda and given that the underlying syntagm is ABL *pári* “from her,” though the abl. has been displaced, I suggest that the *-s* of the syntagm has been, as it were, transferred to the *apás* that has taken the place of abl. *tásyās*. This is essentially Old’s solution, expressed much more succinctly. I would therefore slightly alter the tr. of the first hemistich to “From her, as soon as he was born, he [=soma] entered the waters,” eliminating the “throughout” that vaguely represented *pári*.

Note the alliteration in cd: *pipyúṣī páyo ... pīyūṣam prathamām*, with the first terms of each pair echoing each other.

JL suggests that *ámśóḥ pīyūṣam prathamám* is in apposition to the *páyah* phrase, rather than being, with most tr. incl. JPB's, a nominative expressing the subject of *ukthyám*, anticipating *tád*. This would allow the refrain to be a separate clause, as it overwhelmingly is in the rest of the hymn.

II.13.2–4: It is notable that these vss., whose refrain pāda contains the rel. cl. *yás tákṛnoḥ prathamám* “you [=Indra] who did these things first,” makes no mention of Indra's deeds, which only start being catalogued in vs. 5, which has dropped the rel. cl.

II.13.2: The ritual preparation and offering of soma remain the focus of this vs., but Indra is obliquely introduced.

Pāda a contains another occurrence of *pári* that is hard to construe. Although Old, Re, and WG take it with the pres. part. *bíbhratīḥ* immed. flg. (e.g., Old “Milch herumführend”), this is highly unlikely. There is no reason why a preverb+participle adjacent to each other, in the right order, and not even divided by a caesura would not univervate to **paribíbhratīḥ* (see *prabhávantam* in the same position in 4b). It is also worth noting that this extremely well-attested redupl. stem is never attested with preverbs and that the close parallel to our passage adduced by Ge, X.30.13 *páyāṃsi bíbhratīḥ*, lacks *pári*. Instead I take *pári* with *ā yanti* – preverbs in tmesis often immediately follow their verbs – with *sādhṛīm ā* contrasting with *pári*: as often in Maṇḍala IX the liquids circle around (the filter, the cups, etc.) but ultimately reach their goal.

The Pp. reads *sadhṛī īm*, accepted by Old and (implicitly) by WG. (Ge and Re are unclear.) This is possible, but not, in my opinion, necessary – and in any case would hardly affect the tr. I would now change the tr. of pāda a to “They [=the waters] go circling towards the same goal, carrying the milk” – again eliminating functionless “throughout.”

The pres. part. to the redupl. pres. *bíbhratīḥ* in pāda a seems to contrast functionally with the finite injunc. (*prá*) *bharanta* in b, with the former expressing the regular, repetitive action of the waters bringing milk, while the latter expresses a one-time or at least notably separate action.

The publ. tr. “bring forth” for *prá bharanta* is somewhat misleading, since it sounds as if they are giving birth. I would prefer ‘present’, but it loses the connection with *bíbhratīḥ* -- perhaps ‘bring forward’.

On *viśvāpsnya*- see comm. ad VIII.97.15. That the waters bring milk to Indra who is himself “the distillate of mother's milk” for us is a nice conceit. Assuming the referent is Indra, this is the first allusion to him in the hymn (unless we follow the Pp. analysis of *sadhṛīm* and take *īm* as referring to Indra).

After this rather low-key introduction of Indra, he reappears in the rather abrupt refrain of d – even though no deeds have actually been attributed to him as yet – nor will they be in vs. 3, which contains the same refrain.

II.13.3: The soma preparation continues. The identification of Hotar (pāda a) and Adhvaryu (b) are Sāy.'s and seem plausible.

Pāda a is syntactically disturbing, in that it seems to have a clear embedded rel. cl.: *ánv éko vadati yád dádati tád*, with *tád* the referent in the main cl. corresponding to *yád* in the dependent cl. (“... that which he gives” -- so the standard tr. incl. JPB's). Since

such constructions seem strongly disallowed in RV, such a bald example would be striking and in fact begs for a different interpr. The interpr. of this pāda is made more difficult by the fact that the lexeme *ānu* √ *vad* is found only here in the RV and it is not entirely clear what action is being performed. If Sāy/Ge (et al.) are correct in identifying the first *ékaḥ* as the Hotar and the second as the Adhvaryu, a possible solution emerges. The Hotar should not in fact be “giving” anything; his job is to recite in accompaniment (an activity well conveyed by *ānu* √ *vad*) to the ritual actions. It is the Adhvaryu who gives, that is, who actually makes the physical offering. Assuming that this division of labor already obtains in the RV, it seems likely to me that *yád dādāti* begins a new sentence and is a *preposed* dependent cl with the main cl. being ... *éka īyate*. I would tr. the hemistich “One follows along with this speech; the (other) one hastens when he gives that [=soma/oblation], changing its forms, having that as his work.” If *yád* is rather taken as the neut. rel. pron., the tr. can be modified to “What he gives, he hastens to that, having that as his work ...” My working assumption is that the independent *tád* is coreferential with the *tád* in the cmpd *tád-apas-*.

On *titikṣate* see comm. ad III.30.1. With Ge I take c as primarily depicting the soma plant being beaten by the pressing stone(s), but the graphic description of this ritual action (“endures the blows ...”) begins the transition to the deeds of Indra. I would not, with Re, take Indra as the subj. here, however – Indra doesn’t withstand blows; he gives them!

II.13.4: Contra the standard tr. (incl. JPB’s) I wonder if *vibhājanta āsate* has √ *ās* ‘sit’ in auxiliary function as later: “keep Xing” (in this case “keep distributing”) rather than having the literal sense “they sit, distributing.”

The sense of this first hemistich, esp. pāda b, is baffling and has given rise to much, not very helpful, disc., which I will not treat and to which I will contribute little. One of the technical questions on which the various interpr. turn is whether the accusatives (*puṣṭīm ... rayīm ... prṣṭhām prabhāvantam*) are coreferential, parallel, or to be construed separately, and in particular what ‘wealth’ (*rayīm* ‘va’) is being compared to. My own very tentative interpr. separates the accusatives of pādas a and b, taking the former (*puṣṭīm*) as obj. of *vibhājantaḥ* and the latter (*prṣṭhām* & Co.) as the goal of the dat. part. *āyaté*, which is itself parallel to *prajābhyaḥ* opening the hemistich. I further take *prṣṭhām* as referring to the back of heaven (*divās prṣṭhá-*) as often. To paraphrase my interpr.: the priests are distributing “prosperity” to their offspring, the fires – that is, they are offering ghee to them. The pl. “fires” of pāda a are then summed up by the sg. *āyaté* ‘(the fire) coming here’ (that is, growing from the butter oblations). The goal of this fire is to reach the back of heaven (a common trope for the ritual fire reaching upwards). This “back” is prominent / projecting (*prabhāvantam*) and compared in its prominence to wealth. My tentative tr. of ab is then “They [=priests] keep distributing prosperity to their offspring [fires], to the one (fire) coming toward the back (of heaven), (which is) prominent like weath.” Among the many shaky parts of this rendering the one that concerns me most is that *āyaté* has the preverb *ā* and should mean ‘coming here’, not going yonder to heaven.

In any case, it is generally agreed that a single fire is the subject of c.

The tr. of *bhójanam* should be changed from ‘food’ to ‘sustenance’, to match the same word in 2b and 6a.

II.13.5: The transition from the ritually focused vss. 1–4 to Indra and his deeds is effected by an echo: the opening of 5a *ádihākṛṇoḥ* picks up *yás tákṛṇoḥ* of the refrain of 2d, 3d, 4d. In those vss. there was no mention of actual deeds of Indra's; this is about to change. The first unambiguous identification of Indra in the hymn is the voc. *ahihan* 'smasher of the serpent' in b.

In the periphrastic causative infinitival phrase *akṛṇoḥ pṛthivīm samdṛśe divé*, Re and WG take dat. heaven as subj. and acc. earth as obj. of the dat. infinitive, in contrast to the publ. tr. and Ge. Since the usual obj. of the infinitive *dṛśe* is the sun, the Ge/JPB interpr. seems more likely, in that it also involves looking heavenward. (This would also somewhat match my interpr. of 4b, where fire is going to heaven.) Note also that in 8ab the datives *pṛkṣāya* and *dāsāveśāya* are objects of the dative infin. *nīhantave*, with the same syntactic pattern as is suggested here. There is also an occurrence of the same stem *samdṛś-* in the acc. pl. in 10c, but this seems to have no clear relationship to the dative here and is, in any case, quite opaque.

The use of *√ric* 'leave (behind)' → 'clear' vel sim. is somewhat puzzling, but there is a little clutch of such passages in the Indra hymns of II: besides this one, see II.15.8 and II.19.5. Perhaps by way of "give leave to / give free rein to."

Ge (n. 5cd) finds *ajanan* "they begot" jarring and suggests emendation to *ajunan* "they sped," for which there is no need. Surely the transmitted text reflects the standard trope of, as it were, creating a god by ritual performance. The odd thing here is that the action is credited to the gods, not mortals – perhaps as the primal institution of the sacrifice. The other puzzling part is the simile, "like a horse with waters." Although this may just mean something like "revive" a weary horse by sprinkling it with waters, I have a nagging sense that there is a belief (expressed somewhere in Vedic prose?) that horses are born from/in water, but I haven't tracked this down. Or it could be a somewhat perverse reference to the horse sacrifice – with the priests sprinkling the sacrificial horse with lustral waters and creating, as it were, a better (=dead) horse.

II.13.6: With Klein (DGRV I.135, etc.), I take the double *ca* as conjoining morphologically parallel *bhójanam* and *várdhanam*, despite the preposed position of the 2nd *ca*. This preposing would be supported by 7a where a correctly positioned second *ca* in a double *ca* construction is found in the same metrical position and before an almost rhyming final word, *dhármanā*.

Because of the accent on *dudóhitha*, pāda b must continue the relative cl. of pāda a, rather than serving as its main cl. as in the publ. tr., which should be corrected to "You who distribute ... and who have milked ..., / you have hidden ..." I would probably also substitute "you milked" and "you deposited" as tr. for the pfs. in b and c, though their functions are not entirely clear.

If the identifications of the acc. and abl. in 6b are correct, this is a sort of rephrasing of 1a.

The rule-breaking use of *sá* with non-impvs. continues here, with *sá ... ní dadhiṣe*.

I'm inclined to take the loc. *vívásvatī* here as "bei/chez Vivasvant" rather than "in Vivasvant" as in the publ. tr. That is, Indra set down a treasure in the vicinity of Vivasvant, presumably as a reward for V's sacrifice, rather than within his body.

JL points out the complex mirror-image figure that straddles the pāda break in cd: #*sá ... dadhiṣe vivásvati, víśvasyaíka íśiṣe sá ...* The two interior elements, *vivásvati* and *víśvasyaíka(h)*, are phonologically similar and isosyllabic; they are flanked by 2nd sg. mid. perfects with rhyming ending *-iṣe*, and the pronoun *sá* with 2nd sg. reference provides an outer ring.

II.13.7: This vs. consists only of rel. clauses, until the refrain (unlike 6, with rel. cl. in ab, but main cl. in c.). The refrain therefore could function as the main cl.

dāna- in b is almost universally taken as ‘pasture’ (Weide) or ‘earth’ (Re ‘sur terre’), a meaning attributed to *dāna-* only in this passage. The interpr. goes back, one way or the other, to Sāy: *upalūyante sasyāny atreti dānaṃ kṣetram*. His remark “grain is cut there” implies a connection with $\sqrt{dā}$ ‘reap, mow’ (EWA’s $D\bar{A}^2$). His gloss ‘field’ (*dānaṃ kṣetram*) is repeated thereafter, most influentially in BR, though they seem to derive the word from $\sqrt{dā}$ ‘divide’ (EWA’s $D\bar{A}^4$); subsequent adoptors of the gloss do not bother to comment on the etymology. Sāy’s implied derivation from $\sqrt{dā}$ ‘reap’ is appealing. There are several clear exx. of the root pres. of this root in the RV (grouped under Gr’s 2. *dā*), as well as nominal derivatives (see EWA s.v. $D\bar{A}^2$). The reference in this vs. to the establishment of flowering and fruitful plants would have helped preserve a lexical item specific to agriculture, even though it is homonymous with the more common *dāna-* ‘gift’ (and see differently accented *dānāya* ‘to give, for giving’ in 13a).

I wonder, however, about the concrete locational sense that Sāy gives it; it might make more sense as an abstract ‘in their reaping’. The vs. seems to depict Indra as the orderer of the cosmos, with the solemn etymological figure *dhármaṇā ... ádhārayaḥ* “you established by your establishment” (or without English cognate expression, “you established by your ordinance”). (I would not follow JPB’s attribution of the *dhárman-* to the plants: “according to the foundation (of each).”) Most of the hemistich would then show Indra creating the various plants in their crucial function, to be harvested. (The presence of *ádhi* might be counter-evidence to my interpr., in that it generally has a locational sense, but I’m not certain that this is enough to derail it.)

I further think that the last bit of the hemistich, *vy àvánīr ádhārayaḥ*, is a somewhat separate expression. That is, I read *ádhārayaḥ* without preverb with the “plants” segment in pāda a / first part of b (thus not flg. JPB’s “established separately the flowering and fruitful (plants)”), and restrict *ví ... ádhārayaḥ* to the streams of the end of b; its position after the caesura in b favors this syntactic separation. Note also the use of the agent noun *vidhartár-* only with rivers in II.28.4. If this interpr. is correct, the problematic *dāne* may require further analysis, for in addition to ‘in their reaping’ for the first part of the hemistich (to $\sqrt{dā}$ ‘reap’) it could also be taken as a derivative of $\sqrt{dā}$ ‘divide’, as JPB does: ‘in their division’. It is ideally positioned to be read with both.

I would thus tr. the hemistich “You who established by your ordinance the flowering and fruitful (plants) in their reaping (and) established the (various) streams separately in their division.” Indra’s division of undifferentiated water into separate streams would be part of his fructifying project -- bringing life-giving water to the various terrestrial regions.

Having created the relevant features of the earth -- plants and streams -- in ab, Indra then turns to a particular heavenly feature, the *didyút*-s. What exactly is meant here isn’t clear. The stem *didyút-*, like its near-twin *didyú-*, generally means ‘missile, dart’,

but often a missile sent flying from heaven by a god (cf., e.g., VII.46.3 [Rudra] *yā te didyúd āvasṛṣṭā divās pári* “which missile of yours shot downward from heaven ...”). As Mayrhofer points out (EWA s.v. *didyú-*), *didyút-* has probably been remodeled after \sqrt{dyot} or *vidyút-* ‘lightning’ (I’d favor the latter). And often it seems to have a naturalistic aspect, as lightning (or the dreaded ‘thunderbolt’ of old-fashioned Vedic exegesis). Here the naturalistic reading seems esp. prominent, and I suggest that *ásama-* ‘unequalled’ may also have the sense ‘unequal’ -- that is, jagged and asymmetrical, zigzagging like lightning.

The last difficulty of this challenging verse is the first part of d, *urúr ūrvāṁ abhítaḥ*. Ge (WG) and the publ. tr. take this as an independent nominal clause (e.g., JPB: “you, the wide one surrounding the containers”). Given the cosmogonic cast of the rest of the vs., I would follow Re, who takes *ūrvāṁ* as a 2nd object of *ájanaḥ* in c: “(qui,) vaste (toi-même, as engendré) les mers tout autours.” Although *ūrvá-*, lit. ‘container’, generally refers to cow-pens and the like in the RV, Re’s ‘seas’ (as particularly large containers) seems correct here; cf. the same usage, also in Maṇḍala II, in II.35.3, where the rivers all fill “the same *ūrvá-*” (*samānām ūrvām nadyàḥ prṇanti*). I would thus tr. cd “and who begot the unequal(led) flashing missiles of heaven (and) the ‘containers’ [=seas] all about, (you) the wide one.” The juxtaposition *urúr ūrvāṁ* is a play on words; the two are not etymologically related, at least by most lights.

What is striking about this vs. is that, unlike the usual cosmogonic vss., which refer to large generic parts of creation (heaven, earth, etc.), this one highlights particular idiosyncratic aspects of the grand cosmic divisions.

II.13.8: The PN *dāsáveśa-* presumably means ‘having Dāsas (/a Dāsa) as neighbor(s)’; on *veśá-* see comm. ad X.49.5.

To avoid the need to supply additional unsupported material (JPB’s “would do likewise”) to the brief beginning of pāda d *utaívādyá purukṛt*, I interpr. *purukṛt* as a predicated voc. (“and even today (you are) a much-doer”), with most tr. This brief nominal phrase seems to function like a main cl., though the *utá* should connect it with the preceding rel.

II.13.9: The syntax of the 1st hemistich is intricate and hard to parse. The first rel. cl. (... *yásya* ...) extends through *ékasya śruṣṭaú*, with *yásya* coreferential with *ékasya*. This clause is in turn dependent on the short *yád* clause *yád dha codám āvitha*, with *codám* the referent of *yásya*. The standard tr. take *codá-* as a personal name, but this is not necessary, as Mayrhofer (PN s.v.) points out -- and in fact it would be better not to have another name for Dabhīti (c), who is the ultimate referent of both *yásya* (a) and *codám* (b). After the rel. complications in ab, c presents us with a definite main cl.

Note that *ādiya(h)* at the end of b matches *āsīyam* at end of 8c as well as echoing the (undistracted) (*utaív*)*ādyá* beg. 9d.

In d *suprāvyaḥ* is ascribed to a thematic stem by Gr and taken as a nom. sg (so apparently by JPB), but that stem does not exist. Of the two forms listed under this stem the one here can be a gen. sg. to the root-noun cmpd *suprāvī-* and the supposed thematic loc. in I.34.4 is actually a dat. to the root-noun stem. See comm. ad I.34.4. To make this clear I’d tr. “and (so) you became for the one who pursues his ritual duties well.” Sim. Ge, WG.

II.13.10: Although *viśved ... rodhanā(h)* must belong together semantically, it is difficult to make this work grammatically: *rodhanā* in this sandhi pos. can't be neut. -ā, but must stand for -ā(h) -- so Pp. -- (or, far less likely, -ai). It therefore can't properly be modified by a *viśvā* extracted from *viśvéd*. Old sees the problem, but Gr simply lists the form as neut. -ā, Ge [/WG], Re don't mention and tr. as a phrase. The sandhi of either *viśvéd* or *rodhanā asya* has to be tampered with to harmonize the two words; I have no opinion on how to make this work., but I also don't think it's worth trying to separate the words syntactically. That the hymn shows the irreg. sandhi *sāsi* throughout its refrain suggests that we need not be too punctilious here. The only other RVic occurrence of the noun is differently accented: *ródhanā*, a neut. pl. (I.121.7); AiG II.2.190 considers our form a fem. stem *rodhanā-* beside root-accented neut. *ródhana-*, acdg. to an existing pattern.

The awkward doubling of *asya ... asmai* should be noted in the tr.: "... have conceded his manliness to him," with both pronouns referring to Indra. Perhaps the *asya* is there because most exx. of *ānu √ dā* 'concede' involve the subject conceding some quality of its/his own to a third party, so the fact that the *paúmsya-* is Indra's to begin with needs to be emphasized.

I do not have a clear idea what the second hemistich is about, except that it obviously involves some cosmogonic activity and the *viśtirah* and the *samḍśah* are implicitly contrasted. Ge's idea (n. 10c) that the two refer to the six spaces and the five directions is appealing, even though *samḍś-* does not ordinarily mean 'direction' – incl. in the dat. inf. *samḍśe* in 5a. Contra JPB (and Re), but with Ge (/WG), I'd take the two acc. pls in c as parallel objects of *astabhñāḥ* and construe *pāri paró abhavaḥ* in d separately: "You propped up the six far-flung (spaces) and the five 'sights' [=visible regions], (and) you encompassed (even what is) beyond."

II.13.11: The first pāda, *supravācanām táva vīra vīryām*, is a nominalization of the famous opening of I.32 (found in various forms elsewhere): *indrasya nú vīryāṇi prá vocam*. In that hymn this opening is followed by the account of an undoubted heroic deed, the slaying of Vṛtra. Here the specification in b, introduced by *yád* (as often in such proclamations) followed by a promisingly heroic *ékena krátunā* "by your resolve alone," turns out to be something of an anticlimax: you find goods. This lack of drama is somewhat repaired by d, which sketches a larger world of great deeds. But d poses problems of its own (see below).

The publ. tr. of c is a bit awk; I'd substitute "Of (you), steadfast by nature and mighty, the vigor (is) preeminent."

Unfortunately the syntax of d is disturbed and disturbing, partly as a result of introducing a variation on the refrain (see hymn intro. above). The standard abbreviated refrain *sāś'y ukth'yah* has been distracted, with *sá* separated from *asi ukthyāḥ* by a vocative (*indra*) and the introduction of *viśvā*, which, combining with *asi*, gives (*vi*)śvāś'y *ukthyāḥ*, a near phonological match for the usual *sāś'y ukthyāḥ*, as was noted above. It's also worth noting that the beginning of pāda d, *yā cakārtha* is a variant of the beginning of the full refrain in vss. 2–4, *yás tākṛnoḥ*. In other words, our d, *yā cakārtha séndra viśvāś'y ukthyāḥ*, is a ring-compositional variant of the first instantiation of the refrain (since vs. 1 has something slightly different): *yás tākṛnoḥ prathamām sāś'y ukthyāḥ*. This

manipulation of the refrain may help account for the problematic syntax, but we still need to address that problem.

The rel. cl. of d is universally tr. (incl. by JPB; only Old explicitly recognizes the difficulty) “all the things you have done,” but “all” (*viśvā*) is not part of the rel. cl. (*yā cakārtha*). It has instead been stuck in the main cl. of the refrain, which, only in this verse, has been altered from *sāsy ukthyāḥ* (2-10d, 12d) to *sēndra viśvāsy ukthyāḥ*. Dropping a piece of a rel. cl. into the middle of a main cl. is simply impossible in the RV. It is possible to interpr. *viśvā* as a real part of the main cl., an acc. of respect: “What (deeds) you have done, you are worthy of hymns with regard to all of them.” But somehow I doubt that’s what the poet intended -- though what his intentions were, esp. given the deliberate alteration of the refrain, are opaque to me. I think his focus was on the phonological trick.

Another possible wrinkle in d is that *yā* need not be the neut. pl. of the rel., illegally anticipating the *viśvā* intruding in the refrain. It could be an instr. sg. picking up *vāyah* in the preceding pāda: “... the vigor by which you have done ...” But since *yā cakārtha* seems a rewrite of *yās tākṛnoḥ* in vss. 2–4, this seems unlikely.

II.13.12: *sārapasaḥ* is a hapax. JPB’s interpr. of it as a river name Sarapas, suggested by the rivers Sarayu and Sarasvant, is plausible. He takes it as a gen. dependent on *srutīm* (sim. WG), in contrast to Ge and Re, who take it as an acc. pl., obj. of *āramayaḥ*, which requires them to supply another verb to govern *srutīm*.

The use of the secondarily shortened stem *śravāya-* here instead of inherited *śrāvāya-* may have been favored by the similarly short-root-vowel *āramayaḥ* at the beginning of this vs. (which stem comes by its short root vowel honestly) and by the denom. *śravasyā-* in the next vs. More problematic is what *prā ... śravāyan* is conveying here. One might think that what the blind and the lame want is not fame but healing. Some such consideration must have led Gr to assign this form (and *prāśrāvayam* X.49.8) to a different root *śru* and a different idiom *prā √ śru* ‘vorwärts bringen’. I see no justification for such a separation. It is possible that the causative here means (as it can elsewhere) ‘make hear/heed’ rather than ‘make heard/famed’, though this wouldn’t appreciably improve the situation of the blind and lame. Or that in the idiom *prā √ śru*, the *prā* came to dominate, with a sense ‘further, favor (through fame)’. See Ge’s n. 12d for further disc.

II.13.13: The last puzzle in the hymn is found in pāda c and also involves fame. We have just urged Indra to give us a *rādhah* (‘gift, benefit’) in the first hemistich. In c we find the phrase *yāc citrām śravasyā(h)*. Since *citrā-* very frequently modifies *rādhah*, it seems natural to supply the recently mentioned *rādhah* here. But then what is Indra doing? *yāc citrām* appears to be the obj. of *śravasyā(h)*. But this denom. doesn’t otherwise take an object (IV.42.2 cited by Gr is to be otherwise interpr.), and even if it did, the phrase would have to mean “which bright (gift) you will seek as fame,” which doesn’t seem to make sense. Ge essentially tr. it this way (“... eine ansehnliche (Lohngabe) ... in der du ... deinen Ruhm suchen”), but I don’t see why Indra would be looking for his fame in that direction. JPB avoids the syntactic difficulty by tr. as if *yāc citrām* were an instr.: “the bright gift *through which* you will seek fame” (my italics), but this still requires the gift to be something that would provide Indra with fame. Re’s tendency to supply masses of

material to smoothe over the rough places is on full display here: “ce qui est éclatant, veuille le donner-par-désir de-renom” (so hyphenated). WG seem to have arrived at a novel solution, apparently separating *citrām* from its usual formulaic partner *rādhās* and supplying *śrāvas-* ‘fame’ -- or so I interpret “damit du ... deinen ansehnlichen Ruhm suchen mögest.” However, as far as I can tell, *śrāvas-* is never modified by *citrā-*, and context favors *rādhās-* as referent. I have no good solution. The least unsatisfactory may be to assume that, in our self-serving way, we are telling Indra that giving us a good gift will bring him fame (better than heroic deeds? see 11ab) -- and in some sense it will, since we celebrate his generosity with hymns providing lasting *śrāvas-*. Syntactically I suggest that there is a clause boundary between *citrām* and *śravasyāḥ*, which then owes its accent to being initial in its clause. The phrase *yāc citrām* is then an afterthought nominal izafe specifying *rādhāḥ* in pāda a. I would then tr. the relevant parts “Make your aim to give that gift to us ... / the bright (gift), o Indra. You will (thus) seek fame throughout the days.” If we can render *śravasyāḥ* as “you will find fame,” it would be even better.

Given the numerous large and small changes I’ve suggested for the tr. of this hymn, I insert a full emended one here.

II.13 complete (incorporating my modifications)

1. His mother is the season. From her, as soon as he was born, he [=soma] entered the waters, among which he grows strong.

Then he became a voluptuous woman, swelling with milk, the plant’s first beestings. -- That one is worthy of hymns.

2. They [=the waters] go circling towards the same goal, bearing the milk. They bring forward sustenance for him [=Indra?] who is all mother’s milk (for us).

The downward sloping (watercourses) share the same road to flow along. -- You who did these things first are worthy of hymns.

3. One follows along with this speech; the (other) one hastens when he gives that [=soma/oblation], changing its forms, having that as his work.

He [=soma] withstands all the blows of another [=the pressing stone]. -- You who did these things first are worthy of hymns.

4. They [=priests] keep distributing prosperity to their offspring [=fires], to the one (fire) coming toward the back (of heaven), (which is) prominent like weath.

Insatiable, he [=the fire] eats the sustenance of his father [=the priest] with his teeth. -- You who did these things first are worthy of hymns.

5. Then you made the earth to see heaven, you, o smasher of the serpent, who cleared the paths of the streams.

The gods gave birth to you, the god, with their praise songs, like a winning horse with waters. -- You are worthy of hymns.

6. You who distribute sustenance and increase and milked the dry [=the soma plant] together with its honey [=the soma] out of the wet [=rain],

You hid a treasure nearby Vivasvat. You alone are the master of everything. -- You are worthy of hymns.

7. You who established by your ordinance the flowering and fruitful (plants) in their reaping (and) established the (various) streams separately in their division, who begot the unequal(led) flashing missiles of heaven (and) the “containers:e [=seas] all about, (you) the wide one -- You are worthy of hymns.
8. You who, in order to strike down *Prkṣa* and *Dāsaveśa*, conveyed the son of *Nṛmara* together with his goods to the impregnable mouth of the *Ūrjayantī* (River), and even today you are a doer of many (deeds) -- You are worthy of hymns.
9. Or when you helped him, the hard-driving—at whose obedience (to you), though he was alone, you bound his hundred times ten (enemies) all at once—you tied up the *Dasyus* for *Dabhīti* in that which has no ropes, and (so) you became for the one who pursues his ritual duties well. -- You are worthy of hymns.
10. All things that obstruct have conceded his manliness to him. They have set themselves as the stakes for the successful gambler. You propped up the six far-flung (spaces) and the five “sights” [=visible regions], (and) you encompassed (even what is) beyond. -- You are worthy of hymns.
11. Your heroism, o hero, is good to proclaim: that by your resolve alone you take possession of goods. Of (you), steadfast by nature and mighty the vigor (is) preeminent. -- What (deeds) you have done, with regard to all of them, o *Indra*, you are worthy of hymns.
12. You halted the course of the *Sarapas* (River) for *Turvīti* and *Vayya* to cross. You led him up who was sunk down and shunned, making famed the blind one and the lame. You are worthy of hymns.
13. Make your aim to give that gift to us, o good one—your store of goods is great—the bright (gift), o *Indra*. You will (thus) seek/find fame throughout the days. -- May we speak loftily at the ritual distribution, in possession of good heroes.

II.14 *Indra* [SJ on JPB]

Although the publ. intro. characterizes this hymn as “surprisingly straightforward,” a closer analysis suggests “surprisingly *unstraightforward*” as a more accurate description.

The most obvious structural feature of this hymn is the voc. *ádhvaryavaḥ* “o *Adhvaryus*” that opens each vs. but the last, which begins *asmábyam* “to us.” But there is more to be observed than this superficial exact repetition. The hymn follows the template of II.12, but is not so tightly structured. Like II.12, much of the hymn (vss. 2–7, with a return in 11) presents in the earlier parts of each vs. a series of definitional relative clauses referring to *Indra* and his deeds. The main clause, occupying cd or only d, then urges the priests to offer soma to *Indra*. Unlike II.12 this main clause structure is not a strictly repeated refrain but a series of variants, often involving the dat. *tásmāi* -- but the offering of soma is always part of it. Part of the pleasure of this hymn is seeing how the poet will realize this refrain in verse after verse.

II.14.1: As often, the first vs. doesn’t directly participate in the structure that is established thereafter (in this hymn in vs. 2), but what will be the repetitive message of the main clauses in that structure is announced in the first pāda of the hymn: *bhāraténdrāya sómam* “bring soma to *Indra*.”

On *asya pītīm* see comm. on vs. 2 immed. below.

Note that in d HvN's *eśā* is an error for *eṣā*.

In order to connect 1d with 2c (see below), I would substitute “desires” for “wishes.”

II.14.2: This vs. inaugurates the rel. cl. / main cl. structure noted above, with Indra's signature deed, the smiting of Vṛtra (ab), as the rel. cl.; the main clauses of cd contain variants of vs. 1.

The publ. tr. of ab is somewhat awkwardly arranged. It might be better as “who struck Vṛtra, who had enclosed the waters – (struck him) like a tree with a spear.”

The resumptive pronoun corresponding to *yāḥ* in pāda a is *tásmai* opening c. Most of this clause, *tásmai etám bharata*, is simply a repetition of 1a *bhāratēndrāya sómam*, with pronouns substituting for the nouns. The dat. *tadvaśāya* at the end qualifies *tásmai* while also recapitulating the final cl. of 1d *tád id eṣā vaṣṭi*. To capture the syntactic structure of c and the lexical connection to 1d I might slightly emend the tr. to “to him bring this (soma) – (to him) who has desire for it.”

Pāda d consists of a second main clause, whose final *pītīm asya* simply flips *asya pītīm* of 1c. Given this repetition and the tight connection between vss. 1 and 2, I would render the two phrases the same, with the same referent (soma) for *asya*. (JPB takes *asya* in 1c as referring to Indra, but in 2d to soma.) 1c: “... ever desirous of the drinking of it” / 2d “deserves the drinking of it.”

II.14.3: Drbhīka is not otherwise known, but pāda b of course treats the other signature deed of Indra's, the Vala myth.

As in vs. 2, the second hemistich contains two main clauses, one (c) with a pronoun resuming the relatives of ab, one independent. Both of these clauses exhibit some syntactic/conceptual tension.

The opening of c *tásmai etám* is identical to 2c and strongly invites us to supply *bharata* as in 2c (and see 1a; also II.37.1, which seems closely modeled on our vss. 1–2). But the simile *antárikṣe ná vātam* doesn't work very well in that scenario: “bring (soma) like wind in the midspace”? Various strategies have been tried to deal with this conceptual mismatch. Ge supplies a new verb (a form of \sqrt{srj} ; see his n. 3a) to govern both frame and simile, but this willfully ignores the pattern established in vss. 1–2. Both Re and JPB maintain the pattern of vss. 1 and 2 by supplying *bharata*, but then supply (from nowhere) something to account for the simile. JPB supplies “rushing swiftly”; Re's solution is more egregious; “comme (le dieu a mis) le vent dans l'espace-médian.” WG also supply *bharata* and then cut the clause there, taking the simile with d – but this solves nothing. They must then construe it with the verb *órṇuta* ‘cover’ and they supply “with rains” – but does wind get covered with rain? As for my take: given the pattern, I think we must supply *bharata* here. Since the simile doesn't work well with d either, I think we have to keep it with c – and make the best of it. It's possible that *bharata* would be used in two different senses with frame and simile, but I can't pinpoint what the latter would be. Perhaps “bring the wind” simply means “start up the wind / make the wind rise” (/“bring on the wind!”). But none of this is very satisfactory.

The tension in d is even worse because it's syntactic. Here we have “cover Indra (*índram*) with soma juices (*sómaiḥ*),” a nice variant on “bring Indra the soma” and an

illustration of the poet's elaboration on the underlying refrain. The simile has an instr. *vástraiḥ* "with blankets / clothes," but what should be the equivalent of acc. *índram* is *jūḥ*. This should be a nominative sg., and is so taken by the standard tr. (incl. JPB); see also Schindler (Rt. nouns), EWA s.v. *jūr* ("offenbar Nom.Sg"). Old (fld. by Re, JPB) assumes that the active transitive construction of the frame has been underlyingly passivized with this nom.: "cover Indra ... as a fast horse (is covered)," with the often-claimed reversion of similes to the nominative (explicitly here in Ge's n. 3d), a notion I hope I demolished for good in my long ago simile article. I would rather assume *jūḥ* to be an acc. pl. to a nonce fem. stem, though I realize this is pretty shaky – tr. "cover Indra with soma juices, like fast mares with blankets."

I would now (unsatisfactorily) emend the tr. of cd to "Bring him this (soma), like wind in the midspace; cover Indra with soma juices like fast mares with blankets."

II.14.4: The pf. *jaghāna* should be tr. like the other three occurrences of the same form in 2b, 3a, 5a (also the part. *jaghanvān* in 7b) – so either change 'smashed' to 'struck' here or change the other three to 'smashed' – or change them all to 'smote'.

An Uraṇa is not known from elsewhere; Mayr (PN s.v. *úraṇam*) considers *úraṇam* here to be a "false reinterpretation" of the acc. of *úran-* 'lamb' (though he was considerably more skeptical about their connection in EWA [I.226, s.v. *úran-*]). The reinterpretation would have to be thoroughgoing, since lambs don't have 99 limbs.

On the hapax *cakhvāṃsam* see EWA I.451 (s.v. *khā-*) somewhat unsatisfactorily. Since nothing further is known about Uraṇ(a) and his 99 arms, determining what action he performed on them is difficult – but stretching them out is a reasonable possibility.

The conceptual refrain occupies pāda d, with the first three pādas devoted to the rel. clauses. The refrain is another elaboration on the model – here with the root \sqrt{bhr} represented by the loc. *bhr̥thé*, with *sómasya bhr̥thé* "at the bringing of soma" a nominalization of *sómam bharata*.

II.14.5: The rel. cl. portion of the vs. contains five occurrences of *yáh*.

I would substitute "Devourer" for the PB *Aśna*, as in II.20.5.

The refrain returns to the dat. recipient (*tásmā índrāya*) and a 2nd pl. impv, but relexicalizes the rest, with *ándhas-* for *sóma-* (but see 1b) and *juhota* for *bharata* (but see 1d).

II.14.6: The "warriors" supplied in c is based on VII.99.5 *śatām varcīnaḥ sahásraṃ ca ... vīrān*. I would be inclined to substitute "heroes" here, esp. given *vīrān* in 7c.

The refrain, which occupies only the post-caesura portion of d, reverts to the model: *bháratā sómam asmai*.

II.14.7: This is the last vs. in the series that fits the II.12-type rel. cl. / refrain template, and it exactly repeats the structure of vs. 6, with a verb still belonging to the rel. cl. portion opening d and the refrain, identical to that of 6, occupying the post-caesura position.

I would substitute 'wrenched down' for 'slung down', since the root is \sqrt{vrj} 'twist, wring'.

II.14.8: The transition away from the rel. cl. / refrain model is gradual in this vs. Like all the vss. 2–7 there’s a form of *yá-* immediately after the initial voc. *ádhvaryavaḥ*, but it is *yád*, not *yáh* -- and the corresponding main cl. is found in b. But two versions of the refrain are found in cd. Pāda c contains the signature verb *bharata* with relexicalized acc. and dat. for the soma and Indra respectively; in pāda d we have the originals, *sómam* and *índrāya*, with *juhota* substituting for *bharata* (as in 5d, also 1d).

II.14.9: This vs. scraps the rel. clause structure entirely, but repeats the refrain of 8d almost verbatim.

II.14.10: The structure becomes even looser, but the conceptual refrain remains – here transferred to pāda b: “fill Indra with soma juices” (*sómebhiḥ ... pṛṇatā ... índram*), a structure identical to 3d *índram sómair órṇuta* “cover Indra with soma juices”). Like the phrase in c, this one has an associated simile, here found in pāda a.

In the identical pāda VI.23.9 I tr. *bhójam* as ‘benefactor’.

II.14.11: The last vs. (before the vs. repeated from II.13.13) reestablishes the rel. cl. / main cl. structure, with two *yáh* clauses referring to Indra and a variant on the refrain in c and the first half of d, scrambled from 10b: *tám ... pṛṇatā ..., índram sómebhiḥ*.

II.15 Indra [SJ on JPB]

Another hymn with a refrain, which runs from vs. 2 through vs. 9, occupying the whole d pāda. It does not vary, nor is it linked to the rest of the vs. in any interesting way. The hymn is the epitome of a well-made hymn, a catalogue of Indra’s deeds, with each deed generally occupying a pāda, expressed with Indra in the 3rd sg. (until vs. 9, which switches to 2nd sg.), almost entirely in augmented imperfects and occasional perfects (with some injunctives surfacing towards the end). It’s very regimented and mostly straightforward.

II.15.1: This vs. is a variant on the opening of the great Indra-Vṛtra hymn, I.32 *índrasya nú vīryāṇi prá vocam* --- with *prá ghā nú ... vocam* framing the first hemistich, an expanded gen. phrase (but without explicit mention of Indra: *asya maható ... satyásya*) and *káraṇāni* for *vīryāṇi* – along with two etymological figures: *maható mahāni*, *satyā satyásya*. Pāda c is an exact repetition of I.32.3b. The final pāda encapsulates the myth, and then our hymn is finished with it and moves on to other deeds – in contrast to the obsessive attention to it in I.32.

II.15.2: The last pāda of vs. 1 is converted into the more generic refrain that continues through the rest of the hymn: *sómasya ... máde* substitutes for *asyá máde* and the all-purpose verb *cakāra* for *jaghāna*.

II.15.3: What to supply with *prācaḥ* is a question; see Ge’s n. 3a for a consideration of the possibilities. The publ. tr. follows Sāy. in supplying “rivers”; similar is Ge’s “Bahnen” (for [water] courses), on the basis of *pathíbhiḥ* in c (so also Kü 367–68). Old (fld. by Re) instead “mountains” on the basis of II.17.5 *prācīnān párvatān*. WG “die Welt,” taking *prācaḥ* not as acc. pl. but abl. sg. (with Gr). Since the rest of the vs. concerns the release

of the waters, “rivers” or “(water)courses” is probably the best choice. I prefer the latter, since rivers are not in fact “fixed,” but moving.

mimāya mānaiḥ is a pseudo etymological figure, since *mimāya* belongs to √*mi* ‘fix’, not √*mā* ‘measure’, *pace* Re and WG, who tr. as if an etymological figure. For √*mi* used of cosmogonic deeds, see IV.56.1, III.31.12, and for √*mi* with ‘seats’ see X.18.13. I would substitute “like (ritual) seats he fixed apart the eastward (water courses)”; in other words he established separate beds for the various rivers.

Exactly what action “drill with his mace” depicts isn’t clear to me – the mace used as a sort of battering ram?

In c for JPB’s “at his choice” I would substitute “at (their) will,” like Re’s “à leur gré,” referring to the waters, not Indra. *vīthā* is several times used of entities that move wherever they want (I.140.5, 168.4), and it occurs in just this context in I.139.5 *tvām vīthā nadyā indra sártave ... asṛjaḥ*, which I tr. “You, Indra, released the rivers to flow at will.” It would seem odd to attribute just this action to Indra’s choice/will, since presumably all these deeds are done under that condition.

II.15.4: The relatively rare lexeme *prā* √*vah* generally means ‘carry away’, sometimes benignly (as in the Wedding Hymn, X.85.26), sometimes not, as here. For the publ. tr. “the raiders against Dabhīti,” I would substitute “the abductors of Dabhīti.”

The *s*-aor. *adhāk* is a surprisingly intrusion in this long sequence of augmented imperfects, plus perfects and some pres. injunctives. I do not know why the aor. was used here, esp. since the them. pres. stem *dāha-* is well established and *adahat* would have been available. Evoking metrical reasons is not sufficient, but I do not think *adhāk* has a specifically aoristic nuance here. For another aor. see 7c.

II.15.5: On the story behind this vs., see publ. intro.

II.15.6: Who the “unswift” and the “swift” are is completely unclear; see speculation in Ge’s n. 6c and WG’s n. At least the swift ones (*javínibhiḥ*) have to be fem. I would suggest ‘mares’ (like the swift mares [acc. pl. *jūḥ*]) I see in II.14.3d), except I don’t see how they could be instruments of hewing apart.

II.15.7: The publ. tr. is misleading, in that it indicates, or at least implies, that the subj. of pāda a is the same as that in b, namely Indra. This is surely incorrect; instead the distribution has to be as Old already saw: the subj. of pāda a is Indra, but that in b is the ‘shunned’ one. Pāda b and c recapitulate, in the active voice, nearby II.13.12cd, where the shunned one, the lame, and the blind were the objects of Indra’s attention: *nīcā sántam úd anayaḥ parāvījam, prāndhām śroṇām śravāyan* “You led him up who was sunk down and shunned, making famed the blind one and the lame.” Here the same figures indicated by the same lexical items (save for *anāk* for *andhā-* ‘blind’) are found—but in the nom.; Indra’s helpful intervention is implied but not stated: they perform the actions themselves. As for Indra’s knowledge in pāda a: the “concealment of the maidens” (subjective gen.) surely represents, as Old suggests, unmarried girls concealing infants born out of wedlock (see IV.30.16, also containing *parāvīj-*). Knowing that the shunned one has been hidden away, Indra arranges for him to reappear. I would therefore emend the tr. to “He (Indra) knowing the concealment of the maidens ...: the shunned one,

become visible, stood up; the lame one stood firm, the blind one gazed widely.” I am also quite dubious about the speculation in the publ. intro. that this vs. has to do with Indra’s “bringing forth the soma.” The ritual references in this hymn are muted to non-existent, whereas Indra’s deeds are front and center.

This vs. contains the only syntactic trick in the hymn. Everywhere else the ubiquitous nom. sg. subject is Indra, though he is not named except in the refrain. But here we must switch subjects from Indra in pāda a to the various unfortunates in b and c. This subject switch was prepared for in vs. 5, where in pāda c there was a switch to a 3rd plural subject, but there there was no chance of ambiguity. The trick here is esp. nasty, because pāda a has no finite verb, and this lack invites us to take the subj. of pāda a as subj. of the verb in b.

In c we have another aorist (see also *adhāk* in 4b), this time an injunctive, *prāti ... sthāt*, which immediately follows the imperfect *úd atiṣṭhat* in b. I do not know what, if any, contrast is meant here, esp. since the following parallel verb *acaṣṭa* is again an augmented imperfect.

II.15.8: On the curious use of *√ric* in this group of hymns, see comm. ad II.13.5.

II.15.9: A shift to 2nd ps. address after the unbroken 3rd ps. reference of the rest of the hymn.

I am inclined not to ignore the case frame in pāda a and therefore to tr. “having strewn C and Dh with sleep.”

As is universally agreed, *rambhín-* refers to an elderly person with a cane or staff; this is nicely illustrated (far more clearly than the RV usually offers) by VIII.45.20 *ā tvā rambhám ná jívrayo rarabhmā* “As elderly men grasp a staff, we have grasped hold of you.”

II.15.10 = II.11.21.

II.16 Indra [SJ on JPB]

II.16.1–2: The poet plays with several different senses of *√bhr* in these two vss. In 1ab *prā ... bhare* has slightly different nuances in frame and simile, with the personal dative *jyēṣṭhamāya* and the loc. of substance *agnaú* being essentially parallel. In 2b *sámbhṛtā* means ‘brought together, collected’, while the four loc./acc. pairs in 2cd are all complements of *bhárati* ‘carries, bears’. Note also the phonological echo in *bṛhatáḥ* (2a). The root returns in 4b.

In 2d *bhárati* is accented presumably because it participates in a series of contrastive predicates.

II.16.1: As often *vah* (“for/of you”) refers generally to the ritual participants on whose behalf the 1st ps. speaker is acting.

Note the two paradoxical pairs in cd, one of which is also an etymological figure: *ajuryám jaráyantam* “unaging but causing to age” and *sanád yúvānam* “a youth from of old.”

II.16.3: A new sentence should probably not be started with pāda c, since d is more appropriate to ab, esp. b, than to c.

II.16.4: On *krátum* construed with both *bharanti* and *sásate* see Ge's n. 4b (though neither Re nor WG so construes it).

Ge (n. 4c) successfully defends taking Indra as subj. of *yajasva*, against Sāy.'s priest and Old's Agni. He also takes *yajasva* as "active" in sense ("sacrifice") rather than passive, a possibility floated but rejected by Old but accepted by WG ("sei ... verehrt").

II.16.4–6: The rather tedious identification of all salient entities as bulls – or, as Ge (n. 4–6) characterizes it: "die beliebte Spielerei mit *vṛṣan*." See how this trope gets twisted in vs. 8.

II.16.7: I'd change "travel among the soma pressings" to "drive to the soma pressings" – the point, I think, is that the poet's speech is a conveyance in both pādas: in pāda a it's compared to a boat; in pāda b the formulation is implicitly identified with a chariot. Cf., e.g., VII.75.6 *yāti ... ráthena*.

I'm inclined to slightly change the tr. of *sicāmahe* from 'draw upon' to the more concrete 'dip/scoop out', since esp. in X.101.5–7 it's clear that \sqrt{sic} refers to hauling/dipping water out of a well rather than pouring it out (impossible manoeuvre with a well!).

II.16.8: As pointed out in the publ. intro., Indra is now likened to a cow, indeed a tender mother cow (b), after the focus on bulls in vss. 4–6. But *we* have now become bulls (cd), virile ones, who sexually unite with Indra's favors as if with their wives – in language very reminiscent of Lopāmudrā's exhortation to Agastya in I.179.1–2.

The publ. intro. suggests that Indra's transformation into a cow in this vs. "sets up the final verse (9)," with its mention of the dakṣinā. This may be the case, but it should be remembered that vs. 9 is repeated from II.11.21 and serves as the final vs. for II.15–20.

II.17 Indra [SJ on JPB]

II.17.1: For *ḍṛṇhitāny aīrayat* Gr suggests reading *ḍṛṇhitā vyāīrayat*, a change endorsed by Old.

II.17.2: Although Ge (see esp. n. 2a) and Re take *dhāyase* as belonging to $\sqrt{dhā}$ 'place, establish', all clear instances of *dhāyas-*, esp. in its abundant cmpds., belong to $\sqrt{dhā}$ 'suckle'. See comm. ad III.50.3, etc., as well as *viśvā-dhāyas-* in our vs. 5, which both Ge and Re take as 'all-nourishing'.

I do not understand what *mahimānam ātirat* means, though I rather doubt it means "crossed beyond greatness," as in the publ. tr. The lexeme $\tilde{ā} \sqrt{tī}$ is rather rare, but seems otherwise, when construed with an acc., mostly to mean 'overcome' (III.34.1, VII.82.6, X.54.1), though also maybe 'pass over' (IV.30.3, 7). But neither sense works well here. I can find no passages in which it appears to mean 'pass beyond', and it's hard to know what that would mean here in context, as well as how $\tilde{ā}$ would contribute to that sense. It's also possible that *mahimānam* is a second object to *mīmāṇaḥ* ("showing the measure

of his power and greatness”) and *ātirat* should be differently construed, possibly with the dative *prathamāya dhāyase*. In that case the relevant parts of the hemistich could be tr. “... who, showing the measure of his power and greatness, attained to the foremost sustenance.” I rather prefer this.

The 2nd hemistich is reminiscent of the more explicit I.173.6 *sām vivya índro vṛjānaṃ ná bhūmā, bharti svadhāvām̐ opaśám iva dyām* “Indra has enwrapped himself in the earth, like a circlet. The autonomous one wears heaven like a headdress” and seems to refer to Indra’s “suiting up” in cosmic garb.

II.17.3–5: Note the vs./hemistich openings 3a *ádḥā*, 4a *ádḥā*, 4c *ād*, 5a *ádḥārayat*.

II.17.3: The referent and governing nominal of *asya* are unclear. The publ. tr. (also Old, WG) takes it as dependent on *ágre* with the referent apparently the deed, but this enclitic is in Wackernagel’s position and need not be governed by the immed. flg. noun. Semantically I prefer Sāy.’s suggestion (adopted by Ge and Re), that it refers to the singer and limits *bráhmanā* – so “when at the beginning you roused your explosive power by his [=singer’s] formulation.” However, this runs into the problem that the singer is nowhere in the discourse, and *asya* should have an already existing referent (or, if we were to read **asyá* against the Pp., it should be adjectival). Still I prefer this interpr. to the one in the publ. tr.

II.17.4: Because *abhí* appears in both pāda a and pāda b, I would separate the two pādas and supply the verb “sur(mount)” in the first pāda, on the basis of the parallel IX.110.9 adduced by Ge (n. 4a). The lexeme *abhí√vṛdh* appears in a limited no. of passages (e.g., III.44.2, V.44.5, probl. IX.47.1) with the acc., meaning something like “wax strong over,” and so the publ. tr. is possible, but I’d prefer “Then he who sur(mounted) all the worlds by his greatness, acting as their master, and, projecting his youthful vitality, waxed strong.”

The verb in c could technically be *ā-átanot* with accent on the verb, not the preverb, and still be part of the rel. cl. of ab (as in I.32.4), but since the “light” of c and the “darkness” of d are thematically linked, they may better be interpr., as in the publ. tr., as two main clauses. I would, however, connect them more closely, by deleting the semicolon and joining them by “and”: “just after that, (as a) draught horse, he spanned the two world-halves with light, and sewing up the bilious darknesses, he wrapped them all together.”

II.17.5: I would delete the comma after “power.”

Note the non-etymological play in b: *apām āpaḥ* “the work of the waters.”

II.17.6: This vs. is a little riddle, whose solution – *vájra* – is postponed till the first word of the final pāda.

The interpr. of *védasaḥ* in b is about evenly divided between ‘possessions’ (Ge [though see his n. 6b], JPB) and ‘knowledge’ (Old, Re, WG). The stem *védas-* ordinarily means ‘possessions, property’, but I can see that in this passage ‘knowledge’ is somewhat more appealing.

On the always problematic *krívi-*, see the despairing comm. ad I.30.1 and V.44.5. Since our hemistich almost certainly describes the smiting of Vṛtra (on the basis of *vájreṇa hatvī*, the verb *ní ... ávṛṇak* [see *ní ... āvṛṇak* in the Vṛtra passage V.32.8], and *śayādhyai*, which recalls the numerous exx. of *√śi* ‘lie’ in the great Indra-Vṛtra hymn I.32), it would be nice to rescue JPB’s ‘worm’, against the PN Krivi in the standard tr. This is just barely possible: the ‘worm’ word (AV+) is found both as *kṛmi-* and *krími-* (see AiG I.33 and, esp. Nachtr. 19 [31, 4], on the variation in AV and YV mss. between the two). In MIA intervocalic *m* can become *v* or nasalized *ṽ* (see Pischel, Pkr. Gr. §251, von Hinüber, *Überblick*² §§208–11). Via such manipulations we can get *krívi-* here to be a MIA form of *kṛmi-* ‘worm’ – ‘worm’ being of course a deprecatory way to refer to a snake.

II.17.7: The publ. tr. doesn’t make sufficiently clear the relevance of the simile to the larger context, which turns on two slightly different senses of *bhága-*. The *amājúr-* is an unmarried female (hence ‘maiden’ probably better than ‘woman’) who “grows old at home” with her parents because of her unmarried state; she begs for *bhága-* in the particular sense of good fortune in love (see Ge’s n. 7ab), while in the frame *bhága-* has the more general sense of good fortune / luck. This is well brought out in the perhaps overly specific tr. of Scar (163): “Wie eine, die zu Hause alt wird ... [den Bhaga um Liebesglück anfleht], so flehe ich dich um Glück an.” The phrase beginning pāda b, *samānād ā sādasaḥ*, should be common to both simile and frame, as Ge and Scar take it (not merely with the latter as JPB, Re, and WG do). In the simile it refers to the house the luckless maiden (reluctantly) shares with her parents, in the frame to the ritual “seat” (=ritual ground) shared by the ritual participants. I would therefore tr. ab “As (a maiden) growing old at home, being with her parents, (begs) from their common seat for luck in love, from our common (ritual) seat I beg you for good fortune.” On the connection between *amājúr-* and *bhága-* see X.39.3 (the Ghōṣā hymn), adduced by Ge.

The verb *īye* in b belongs to *√yā* ‘beg, beseech’, not *√yā* ‘drive’, pace WG.

It is difficult to know how to construe pāda d. To begin with, *tanvāḥ* can belong either to the main cl. or the rel. cl., since *yéna* could be taking 2nd position in the rel. cl., as often. Then, it can either be gen. (/abl.) sg. or acc. pl., and it can mean ‘self’ or ‘body’; if ‘self’, it could have either 1st or 2nd ps. reference (myself v. yourself). The standard tr. (Ge, Re, WG, Kü [354], JPB) all situate *tanvāḥ* in the main cl., mostly as an awk. substitute for an indirect obj. “to me” – so JPB “to me myself,” Re “à moi-même.” This seems to me an unlikely use of *tanū-*. WG, by contrast, take it as body (“gib uns den Teil des Leibes”), which is syntactically better, but what would be its sense in context? (In a note they suggest alternatively “deiner selbst” with 2nd ps. ref., which makes more sense than the 1st ps. of the other tr.; this is also the solution of Kü [354].) Scar (163) takes *tanvāḥ* with the rel. cl. and gives it 2nd ps. ref.: “verschaff einen Anteil, durch den du [etwas] von dir selbst gespendet haben wirst,” with an unjustified “future perfect” interpr. of the pf. subj. *māmāhaḥ*, but a reasonably plausible interpr. of *tanvāḥ* as a partitive with 2nd ps. ref.

The interpr. is further complicated by the not-always-certain semantics of the root *√maṇh*, for which see the disc. in my *-āya-Formations* (130–31). I argue there that the root originally meant ‘be ready’, a meaning still found in some passages (like VIII.12.6), but that long association with *dānāya* ‘for giving, to give’ transferred the ‘give’ meaning

to the root: ‘be ready to give, be liberal’. In addition to the pres. stems *māmha-* and *maṁhāya-*, the pf. *māmah-* belongs to this root (and should be dissociated with \sqrt{mah} , with which it is classified by Gr; see correct affiliation in Lub). The form here, *māmāhaḥ*, is the only active form to this pf. and must be a subjunctive. That its root syl. is weak (expected act. subj. stem in principle **māmamha-*) shows that it is a nonce activization of the weak middle pf. stem *māmah-*, which builds a subj. *māmahanta* as well as imperatives based on such an apparent thematic stem, *māmahasva* and *māmahantām* (for which see disc. in my 2018 “The Vedic Perfect Imperative and the Status of Modal Forms to Tense-Aspect Stems” (Fs. Lubotsky).

Putting all this together, I would now take *tanvāḥ* with the main cl. (like most tr., though sympathetic to Scar’s alt. interpr.), but with the 2nd ps. reference suggested by Kü and as an alternative by WG: “Give (us) a share of yourself, by which you will display your liberality.” This tr. is almost identical to Kü’s: “Gib einen Anteil an dir selbst, mit dem du dich grosszügig ziegen wirst.”

II.17.7–8: Note the progression *bhāgam* (7b), *bhāgām* (7d), *bhojām* (8a).

II.17.8: I prefer ‘benefactor’ for *bhojā-*, or, as in nearby II.14.10, ‘provider’.

The accented voc. *vīṣann* in HvN’s ed. is (fortunately) a typographical error.

I would change “make us better” to “make us better off.” Such wishes have to do with material, not moral, improvement.

II.17.9: Once again the repeated final vs.

II.18 Indra [SJ on JPB]

The hymn is filled [/afflicted] with a fair amount of numerology. Although much ingenuity has been devoted to identifying the referents of the various numbered entities, beginning with Sāy., from my point of view identifying the referent is less important than noting the esoteric play with numbers. For speculations on some of the identifications see publ. intro.

II.18.1: Since pāda a has only 10 syllables, it is possible that we might read **ayoji* (so tentatively Old and Arnold), though there are other possibilities (e.g., HvN’s rest at 5). If **ayoji*, it should be tr. ‘has been yoked up’, though ‘is yoked up’ for the injunctive might match the *bhūt* in d.

Because of the *sá* opening d, I would link c to ab, and start a new clause with d (so also Ge, Re, WG). This would also allow the last numerological term (*dāsāritraḥ* in c) to be part of the clause containing the others: “Early in the morning a new, winning chariot has been / is yoked up ..., having 10 oars, sun-winning, belong to the sons of Manu; it is / has become ...”

The simple adj. ‘swift’ misrepresents the gerundive morphology of *raṁhyà-*, and it also fails to give the instr. their proper reading as agents of the gerundive. I’d tr. the VP *raṁhyò bhūt* as “is to be hastened” or more awkwardly “has become one to be hastened,” with the instr. “by our desires and thoughts.”

II.18.2: The opening *sāsmā āram* matches that of II.17.6a in the immediately preceding hymn and should be tr. in the same general way. The ordinal numbers here must be adverbial (“the first time,” etc.), since the masc. referent of *sā* is the Hotar found at the end of the hemistich. Here the temporal adverbs must refer to kindling of the three ritual fires. WG (see the n.) think instead of the three soma pressings, but the rest of the vs. is resolutely Agnaic.

The 2nd hemistich is notable for having three forms of *anyā-*, two initial in their clauses, one in 2nd position. In keeping with my rules, the initial ones should be indefinite but also contrastive with each other; the non-initial one definite. This is more or less how JPB tr. it, but I would refine it to “the embryo of one (fem. [=kindling stick]) -- others [=priests] beget him. He keeps company with the others [=ritual fires] ...”

On *jénya-* see comm. ad I.128.7.

II.18.3: *yojam*, isolated in its averbo, is universally tr. as if it were a subjunctive, though it appears to be a 1st sg. root aor. injunctive (see KH, Injunct. 253). Hoffmann argues that the 1st sg. injunc. and subj. are functionally almost identical, and he cf.s the clear 1st sg. subj. in I.82.1–5 *yóḡā nv indra te hārī* “I shall now yoke your two fallow bays, o Indra” with our scrambled but almost identical *hārī nū kaṃ rátha índrasya yojam*. I wonder, however, if *yojam* here actually stands for the subjunctive **yojā*, with the final *-m* originally a hiatus-filler before *āyaí* opening the next pāda. The two passages would then be morphologically identical. In any case, it’s worth noting that these two 1st sg. forms are almost the only active root-aor. forms to *√yuj* (besides *sám yujyāva* in VIII.62.11).

Given its position, I’d take *anyé* as def. “the other sacrificers.”

II.18.4–6: The next three vss. attribute ever-proliferating horses to Indra, from two (4a) to 100 (6b). Most pādas in this sequence, through 6b (only exception 4d), start with *ā* followed by a number in the instr. Each vs. also contains the impv. *yāhi* in the 1st pāda. The reason for this equine explosion is unclear --- much less if there are any referents meant besides the horses (though see publ. intro. for speculation).

Śunahotra is the name of a priestly family (see Mayr PN).

II.18.7: I would rearrange the tr. to reflect the fronted non-enclitic *māma* (see also 7d and 8b): “To *my* poetic formulation drive here.”

The first pāda of this vs. ends *yāhy áchā*, echoing *yāhy arvān*, which ends 5a and 6a, and *yāhi*, which ends 4a, so there is a transition from the horse-numbering vss. to this one.

In b Indra is urged to attach every pair of fallow bays to the yokepole of his chariot; given vss. 4–6 this would amount to at least fifty pairs.

Flg. IH, I’d take *babhūtha* not as expressing change of state, but rather as a habitual; in IH’s full periphrasis: “you have (typically) been (on various discrete occasions) ...” and so “you are known to be ...” I would emend the tr. to “for you are one to be competitively summoned ...” I would also ital. “In *this* soma pressing ...,” corresponding to the ital. *my* representing *māma*, which opens the vs. Further, I would connect c with d (changing the tr. to “Since you are one ...”) and treat b as an independent cl., as Ge and Re do.

II.18.8: The question in pāda a is whether *sakhyām* is subject (Gr, Ge, Re, WG) or object (JPB) of *víyoṣat*. Despite the heavy favoring of the subject role, there is good evidence that favors the object. The lexeme *ví√yu*, esp. common in the *s*-aorist, is generally transitive, with an acc. + instr.: “separate ACC from INSTR” (with the well-known instr. of separation). Several of these passages contain *sakhyā-*, though in the instr. See, e.g., II.32.2 *mā no víyauḥ sakhyā* “Do not keep us away from partnership (with you)”; sim. IV.16.20. VIII.86.1, X.23.7, all with instr. *sakhyā*, see also V.2.5 with *víyavanta* and a different instr. than *sakhyā-*. The only intransitive exx. are IV.2.9 “stay distant from X” (with instr. *rāyā*) and X.85.42 reciprocal “go apart” with no instr. Both of these have personal animate subjects, not an abstract like *sakhyā-*. The formulaic evidence (*ví√yu* with *sakhyā-*) thus favors a transitive interpr. Though *sakhyā-* in our passage is not in the instr., that seems an allowable variation. The problem then is who or what is the subject? Given the focus on competing sacrificers in this hymn (see 3cd and 7c), I suggest it is an unspecified representative of this threatening group, here tr. as “no one.” The opening of the next pāda again gives contrastive emphasis to *us* with the full pronominal form *asmábhyam*. I would slightly alter the tr. of b to “*To us* should the priestly gift yield its milk,” with fronting and ital. – to match the *māma* in 7a and *asmín ... sāvane* in 7d.

As suggested by IH, I’d render d as “might we emerge victorious in our every advance.”

II.18.9: Repeated vs.

II.19 Indra [SJ on JPB]

The hymn begins by announcing that soma has been drunk, probably referring simultaneously to the ritual situation and to Indra’s drinking of soma in the mythic past – which enabled him to perform the deeds recounted in the narrative portion of the hymn, vss. 2–6. Besides the final vs. (9), which serves as the refrain for II.11, 15–20, the hymn ends with two summary vss. (7–8), each beginning with the summary introducer *evā* ‘so, in just this way’.

II.19.1: The hymn begins strikingly with the passive aor. *āpāyi*, apparently in impersonal usage (so Gr), or rather with an oblique subj. in the gen., corresponding to the pseudo-partitive gen. obj. with transitive forms of *√pā* and other verbs of consumption. JPB tr. “the drinking ... has begun.” Although, acdg. to IH, such an ingressive sense is possible for an aorist, I see no evidence in the rest of the hymn that the drinking continues, but rather that the drinking was an event that gave Indra the power to perform the deeds about to be depicted. So I prefer a less limiting tr. like “it has been drunk – this plant ...,” though this does lose the pseudo-partitive construction. Or, “(a drink) has been drunk of this plant ...”

In b I would render *suvānāśya* as the participle it is, not as JPB’s “soma pressing”; it modifies *āndhasaḥ* in pāda a. Moreover, *prāyas-* is a noun (‘pleasure, pleasurable offering’), not an adj. (‘delightful’). See the neut. pl. in 2d.

Putting this together, I would substitute this tr. of ab: “It has been drunk for exhilaration – (drunk) of this plant that has been pressed as delight, o you (priests) of inspired thought.

In pāda a *asyāṇdhaso* is analyzed by the Pp. as *asyā āndhasaḥ*, while HvN read unaccented *asya*. The standard tr. (incl. this one) follow the Pp. with the accented *asyā* adjectival as is standard; if we read *asya* instead, it would have to be pronominal, referring to Indra, and be a gen. agent. Although Indra has not yet been mentioned in the hymn, he is obviously present in the ritual context, which would allow this pronominal interpr. An alt. tr. based on unaccented *asya* would be “it has been drunk by him – this plant having been pressed ...” But the Pp. *asyā* seems the better reading, esp. given #*asyā* ... *mādhvaḥ* opening the next vs.

In cd I would substitute “on which ...” (construing with *vāṇṛdhānāḥ*) or (preferably) “in which ...” (construing with *óko dadhé*); JPB’s “at which” doesn’t work with either.

II.19.2–6: As noted above, these vss. depict a series of deeds performed by Indra in the exhilaration of the soma introduced in vs. 1. These deeds occurred in the mythic past, but are still repeated – or repeatable – in the present, as is made clear [well, maybe not *clear*] in vs. 4, which is the central (omphalos) vs. of the narrative.

II.19.2: The pf. part. *mandānāḥ* should have its usual anterior sense, “having become exhilarated.”

There is some uncertainty about the morphological identity and therefore the function of (*prá ...*) *cákramanta*. Is it an injunc. with a preterital sense (“such that they launched themselves forth”) or a subjunctive with prospective value (“so that they would launch themselves forth”)? See disc. by Kü (147–48). JPB opts for the latter, with Re, while Ge, WG, and JSK (DGRV I.224) choose the former. Kü offers both without deciding. I am inclined towards the preterital interpr.

This issue is in part intertwined with another: the apparently functionless *ca* in d. This *ca* causes Old a certain amount of distress: see the various explanatory possibilities he offers, without conviction. It is treated variously in the tr. WG simply ignore it, as apparently does JPB. Re supplies another noun with which *práyāmsi* can be conjoined as double subject of *cákramanta*: “en sorte que (les forces) et les réconforts ... pussent marcher” – “les forces” invented out of whole cloth. Instead of supplying a nominal, Ge supplies a verb parallel to *ví vṛscat* on which the *yád* clause can depend; this invented verb would be conjoined by the much displaced *ca* (“an unrechter Stelle” says Ge, n. 2d): “... zerhieb Indra ... und (machte), dass ...” JSK’s (DGRV I.224) “... hewed apart ... and (brought about) that ...” seems directly based on Ge. JSK explains (225) the position of *ca* as “the result of the preposed simile of pāda c), but this seems weak: the simile doesn’t occupy that whole pāda. The Ge/JSK approach seems the least plausible of the solutions offered. I am more sympathetic towards Re’s solution, despite his conjuring the other nominal out of thin air. Two of the fourteen occurrences of *práyāmsi* are followed by a *ca* (III.12.8, IX.107.25) and are conjoined with preceding nouns, so there’s at least some syntactic template our occurrence can fit. But there’s no standard noun with which *práyas-* forms a pair that could easily be supplied here, and the two *práyāmsi ca* passages are pāda-final. The best I can do is suggest that *práyāmsi ca* was adapted from such passages and slotted in here without function – which is, I’m afraid, tantamount to the WG/JPB strategy of ignoring the *ca*. I would tr. “... hewed apart the serpent, such that the rivers’ delightful offerings (of water) charged forth ...”

II.19.3: The first hemistich is a loose paraphrase of vs. 2: *ahihā* encapsulates 2b *ahīm ... ví vṛscat*; *árno apām praírayat* picks up the *arno* in *arṇovṛtam* in 2b and paraphrases *prá ... práyāmsi ... nadīnām cákramanta* of 2cd.

The point of pāda d is presumably that by interposing night between days Indra draws temporal boundaries that produce the alternating patterns of day and night – showing the usual Vedic horror at the prospect of an undifferentiated mass of anything.

II.19.4: As noted above, this is the central vs. of the narrative vss. 2–6, and it contains a shock. Embedded in the midst of the augmented and injunctive forms that carry the narrative, we find an undeniable present-tense form, and it depicts the most iconic of Indra’s deed in the mythic past: *hánti vṛtrám* “he smashes Vṛtra” – ordinarily expressed by a preterital verb, commonly the impf. *áhan* (see I.32.5, 56.5, etc.). What is going on here? I think the interpenetration of past and present alluded to above is brought to the surface in this omphalos vs. Like JPB I think there’s a parenthetical insertion here, but unlike him I think it is not the nominal phrase in pāda a, but rather the opening of pāda b *índro dāśad dāśúṣe* (sim. Re). The phrase in pāda a, *apratīni mánave purūṇi*, is, in my view, one object of *hánti* in b. The adj. *apratīni* ‘unopposable’ almost always modifies *vṛtrā(ṇi)* (e.g., I.53.6, IV.17.19, etc.); given this and given the fact that *vṛtrám* is also found in the same hemistich, pl. *vṛtrā(ṇi)* ‘obstacles’ should surely be supplied here (as indeed JPB does) – and the pres. *hánti* can then be read both backwards with this pl. phrase, indicating Indra’s continuing efforts to remove obstacles for us, and forwards with the sg. referring to the arch-Obstacle that provides the model for the present-day action. In between, the brief clause *índro dāśad dāśúṣe* parenthetically characterizes this action of Indra’s as his “pious work”; see X.138.5 *dāśad vṛtrahā* “the Vṛtra-smasher, doing his pious work ...” Pace Gr, Ge, and WG, the NP in pāda a is almost certainly not the obj. of *dāśat*, which takes the acc. only under special circumstances; see comm. ad IV.31.20, 31. See also Old’s disc.; he aims at the same general interpr. as mine, but does so by emending *dāśat* to accented participle *dāśat*; however, as Ge points out (n. 1 to n. 4ab), the accent on *hánti* complicates Old’s solution. Acdg. to my interpr. the verb *hánti* is accented because it immediately follows the parenthetical interjection. I would now tr. this hemistich “He (smashes) the many unopposable (obstacles) for Manu – Indra does pious work for the pious – he smashes Vṛtra (/the Obstacle).”

On *atasāyyo bhūt* see the almost identical phrase in I.63.6 and the comm. thereon. In I.63.6 the referent is Indra’s help, also in the contest for the sun. In my view the gerundive means literally ‘not to be tugged (back and forth)’, hence ‘unshakeable’. Here the literal meaning fits well, with the dative agent referring to the humans contending with each other. I would tr. the 2nd hemistich, somewhat colloquially, “Who at once came to be one who couldn’t be jerked around by the men contending with each other in the battle for the sun.”

II.19.5: On the curious use of *√ric* in this group of hymns, see comm. ad II.13.5.

On the problematic *stavān* see comm. ad VI.24.8, where I suggest that it was built with the possessive “Hoffmann suffix.”

The mythological situation (or situations) depicted here is/are unclear to me. Also the simile *ámśam ná*, which is equally opaque in III.45.4 (see comm. there).

II.19.6: Despite the identical tr. in vss. 4 and 6 “in a single day” in the publ. tr., these render two different forms: 4c *sadyáh* and 6a *sadívaḥ*; the latter is a hapax. It might be better as ‘on the same day’.

A small change from “the charioteer Kutsa” to “his charioteer K.” might better represent *sāṛathi-*, since Kutsa and Indra go on their expeditions on the same chariot.

vy airat in d recalls *prárayat* in 3b and almost forms a ring that brings the narrative portion to a close.

II.19.7–8: As noted above, the hymn proper ends with these two summary vss., each introduced by *evā*, each announcing (7a, 8ab) the hymn just created and dispatched to Indra and in the rest of the vs. expressing what we hope to gain – with vs. 7 more vivid and 8 more generic. In both vss. I would prefer a more explicit recognition of the function of *evā* – “in just this way” or sim.

II.19.7: Though the standard tr. take b with a, this requires supplying considerable machinery; best, with the publ. tr., to attach b to c.

Ge renders *sāptam* as “Freundschaft,” flg. Sāy.’s condensed interpr., with *sāpta-* standing for ‘having seven steps’, referring to the ritual seven steps that seal a friendship. But Ge’s n. 7c seems to recognize the over-elaboration of this explanation and seems to favor the more plausible interpr. of a heptad of gifts, with seven representing a conventional number – the interpr. found one way or the other in the other standard tr.

II.19.8: The standard tr. take the simile in b as including both preceding nom. and flg. acc. (e.g., Re “comme (les gens) cherchant assistance (façonnent) les règles-rituelles”). Better, with the publ. tr., to limit it to the nom., and take *vayúnāni* as parallel to *mánma* in the frame. The simile is still a bit puzzling, but less so.

brahmanyántaḥ in c forms a ring with the same form in 1d and should have been rendered identically (publ. tr. 1d “creating the poetic formulations” versus 8c “creating the formulations” – either one will do).

II.19.9: Repeated vs.

II.20 Indra [SJ on JPB]

On the metrical issues in this hymn see Old and the publ. intro.

II.20.1–2: Besides several forms of the standard 2nd sg. prn., these vss. play with several derivatives: *tʷvā-vant-* (1d), *tʷvā-yánt-* (2b), and the thematic adj. *tʷvā-* (2a), the only form to this stem in the RV.

II.20.1: Note the phonological play of *vayám te váya(h)*.

The parenthetical *viddhí sú naḥ* would work better in context as “know [=recognize] us!” or “know [=recognize] (this) of ours!” – though ‘recognize’ is usually the province of *√jñā*.

The standard interp. take *nṛṇ* as a gen. sg. (On alt. morphological analyses of this form see comm. ad X.29.4.) Preferable is JPB’s interpr., which takes it as the acc. pl. it

appears to be, as a second obj. of *īyakṣantaḥ*, reading *tvāvataḥ* twice, once as gen. sg. dependent on *sumnām* (“the good favor of one such as you”) and once as acc. pl. modifying *nṛ̥n* (“men such as you”). The acc. pl. reading is reinforced by the parallel acc. pl. *tvāyatāḥ* in 2b.

II.20.2: The analysis of *abhiṣṭipāsi* as a rt-noun cmpd *abhiṣṭi+pa-* with a double sandhi contraction of *-pā(s) + asi*, as set out in the publ. intro., is endorsed by Old (though the cmpd is not treated by Scar). It is hard to see what else it could be: if read as Gr suggests, **abhiṣṭī pāsi*, the accent is problematic – needing to be retracted on the nominal and erased on the verb. However, I do think Gr is right that *abhiṣṭi-* has instr. function in the compd., as JPB properly represents it “protector by dominance.”

Note that the desid. *īyakṣantaḥ* ‘desiring to obtain’ in vs. 1 finds its fulfillment in 2d *nākṣati* ‘obtains’. To reflect this connection, the two forms should be rendered either both with ‘attain(s)’ or with ‘obtain(s)’.

II.20.3: In b *narām astu pātā* seems almost a paraphrase / repair of *abhiṣṭipāsi jānān* in 2b.

II.20.4: The subjects of the two 3rd pl. pfs. *vāṇrdhūḥ* and *śāśadūḥ* are left unspecified. They could be the “men” of 3b. But given the contrast between *purā* ‘previously’ (4b) and *nūtana-* ‘current’ (4d), I think it’s likely the pl. Āyus, contrasting with the Āyu of today in d.

Although in a hymn with so much metrical disturbance, this won’t carry much weight – but if we read subjunctive **pīparāt*, it would improve the cadence.

II.20.5: On *tūtōt* in b, as well as 7d, see the extensive disc. ad X.50.5. To summarize briefly, I take these two forms as well as *tūtōs* (VI.26.4) and *tūtuma* (X.50.5) as belonging to a redupl. aor. (not to the pf. system) with transitive value.

The instr. *sūryeṇa* can be either an actual instrument (“[he did it] by/with the sun”) or an instr. of accompaniment (“along with the sun”). JPB opts for the former, along with WG, but I find this interpr. quite unlikely, since it would seem to make reference to an unknown myth in which Indra uses the sun as a weapon against the dawns. But esp. given the presence of the Aṅgirasas in pāda a, this vs. probably refers to the Vala myth (see Ge’s n. 5c). Indra “robs” the dawns, that is, he robs the Pāṇi of the cows / dawns imprisoned in the cave. For the full expression with both the *paṇi-* and the cows in the acc., see I.93.4, sim. X.67.6. By this interpr. the sun was also a beneficiary of Indra’s action (so Ge, probably also Re, though his “avec” is unclear), having also been stolen / freed. I would therefore change the tr. to “stealing the dawns along with the sun.”

I would also change “has pierced” to “pierced.”

On *stavān* see comm. ad VI.24.8 and the occurrence in the immed. preceding hymn, II.19.5.

II.20.6: On the formation of *arśasānā-* and the indirect connection between the occurrence here and X.99.7 see comm. ad loc. As noted there, the phrase *ūrdhvó bhuvāt* here corresponds to the pseudo-part. *ūrdhvasānā-* in X.99.7. I now would substitute “Harmer” for the PN here.

I would also substitute “having prevailed” for “able.”

On *áva* √ *bhr* see comm. ad VIII.93.23, X.171.2 and the very similar phraseology in the latter passage. Here I would emend “carried away” to “brought down” or “pulled off.”

The whole 2nd hemistich should then read “Having prevailed, the autonomous one pulled off the own dear head of the Dāsa, the Harmer.”

II.20.7: From *puramdarāḥ* can be extracted *púrah*, to be supplied with acc. pl. fem. *kṛṣṇāyonīḥ ... dāsīḥ*.

tūtót in d reprises the same form in 5b, where it is fairly clearly preterital. JPB renders the injunctive as a present here (“he makes ... powerful”), contra the standard tr. I think it could be either (or both), but given the preterital and mythological content of the rest of the vs., I favor the preterital interpr.

II.20.8: Given its etymological connection with *tūtót* ‘made powerful’ (in vss. 5 and 7), I’d render *tavasyām* as ‘power’.

II.20.9: Repeated vs.

II.21 Indra [SJ on JPB]

The first four vss. of this hymn have an excessively nominal style, with a string of descriptors of Indra, barely marshalled into minimalist clauses, which are confined to the final pāda of the vs. (or in vs. 1, the last word of c).

II.21.1: This opening vs. is striking, with its nine straight root-noun cmpds in *-jít-* in the dat. *-jíte*.

II.21.2: The 2nd vs. continues the dative sequence, with ten in a row, though with more varied morphology than the repeated *-jíte* of vs. 1. There are smaller patterns within the sequence: the vs. begins with two *abhi-bh...* forms; pāda b has the etym. contrastive figure *āṣāḥhāya sāhamānāya*, with √ *sah* reappearing in d *satrāsāhe*, which also resonates with *satrājíte* beginning 1b.

HvN’s unaccented *vanvate* (extracted from Saṃhitā *vanvaté* ‘*ṣāḥhāya*’) should of course be read *vanvaté*, with the Pp.

The hapax *i*-stem *tuvi-grí-* is interpr. by Gr. as having a form of √ *gṛ* ‘swallow’ as 2nd member, like (in his interpr.) *tuvi-grá-* (I.140.9); he glosses ‘viel verschlingend’ (also WG; sim. Re “puissant-dévoreur”) This analysis is accepted by Wackernagel (AiG I.94, II.1.174, 224) and Debrunner (AiG II.2.72), but is not universally held, even by Wackernagel in the same AiG vol. Ge tr. ‘lautrufend’, as does Wackernagel (AiG II.1.98), deriving it from the homonymous root √ *gṛ* ‘sing’. Scar (112) considers both possibilities without deciding. Better is the suggestion of Insler’s that both *tuvi-grá-* and *tuvi-grí-* result from haplogy of **tuvi-vigrá-*, a cmpd of *vigrá-* ~ *vígra-* ‘lively, spirited’ (2x, √ *vij* ‘be agitated’). See comm. ad I.140.9.

II.21.2–3: Nominal forms of the root √ *sah* ‘overcome’ dominate these two vss.: *āṣāḥhāya sāhamānāya* (2b), *satrāsāhe* (2d), *satrāsāhāḥ ... janamsahāḥ* (3a), *sāhuriḥ* (3c)

II.21.3: After the string of the descriptive datives of vss. 1–2, this vs. presents a similar string of nominatives characterizing Indra in pādas a–c – though this string is introduced with a little trick. The first item is *satrāsāhāḥ*, at first glance built to the same stem as the dat. *satrāsāhe* opening pāda d of the preceding vs., hence a genitive. But it does not belong to that athematic stem (as the accent shows) but to a thematic one, and it initiates the sequence of nominatives, most of them also thematic stems.

Gr glosses *jana-bhakṣā-* as a bahuvr., ‘Menschen als Antheil oder Besitz habend’, and this interpr. is appealing, because, though the noun *bhakṣā-* ‘portion’ is fairly well established, there is no verbal root $\sqrt{bhakṣ}$ ‘apportion’ at this period. The single verbal form *abhakṣayam* in the very late X.167.3 (the stem also several times in the AV) is an obvious denom.; see my *āya*-formations (p. 73). However, the accent makes a bahuvrīhi interpr. of this cmpd. difficult. The standard tr. properly render it as a tatp., but with an almost random choice of gloss for the 2nd element: Ge “Menschen vertilgend,” Re “mangeur d’hommes” (most likely influenced by his interpr. of *tuvigrī-* in the preceding vs.), WG “über Menschen gebietende,” JPB “consuming the peoples.” AiG doesn’t treat it. I do not have a good solution, but think that the semantics of the 2nd member must come from \sqrt{bhaj} , mediated through its reasonably well-attested *s*-aor. (see Narten, 179–80) and the noun *bhakṣā-*. The *s*-aor. is generally middle in the RV, in the sense ‘share in, take/acquire a share’. I would tentatively tr. ‘taking his share of the people’, which is in fact rather close functionally to Gr’s b.v. interpr.

Ge, Re, and WG obviously take the 2nd member of *vṛtamcayā-* as belonging to \sqrt{ci} ‘pile, assemble’, judging from their tr. “Herrsammler,” “qui rassemble les armées,” and “der das Gewählte sammelt,” respectively. (WG also must take *vṛtam* as derived from $\sqrt{vṛ}$ ‘choose’, not $\sqrt{vṛ}$ ‘obstruct, oppose’.) But *-cayā-* more likely belongs with *ṛmam-cayā-* PN (lit. ‘requiting a debt’), *cetār-* (VII.60.5) ‘avenger’, etc. See EWA s.v. *CAY*³, Gotō (1st cl., 132–33, who does not treat this cmpd there). JPB’s ‘punishing the opposition’ is, in my opinion, correct.

On *āritā-* see comm. ad VIII.16.6.

The nominative string of abc describing Indra is picked up by the gen. *īndrasya* opening d. Ge (n. 3) calls this anacoluthon, which seems a little backwards to me. In fact, pāda d is a minor interruption of the nominatives describing Indra that continue in vs. 4.

II.21.4: JPB must take *anānudā-* as derived from \sqrt{nud} ‘push’, which, however, does not occur with *ā* in the RV. It rather belongs to *ānu* $\sqrt{dā}$ ‘yield, concede’ (so already Gr); on the long *ā* see AiG II.1.71. The tr. should be changed to “Unyielding bull ...”

The publ. tr. seems to take *dódhataḥ* as an acc. pl. part. (“against those raging”), but it must be a gen. sg.; among other things *vadhā-* always takes a gen. Emend the tr. to “the deadly blow for the one who rages.”

The injunc. *janat* can express Indra’s habitual re-creation of the world in the present time or his mythological cosmogonic acts in the past. JPB opted for the former; the standard tr. the latter. I am on the fence.

II.21.5: This vs. represents an abrupt thematic and stylistic break from the ponderous and restrictive nominal style of the first four vss.. Indra is not mentioned until pāda d, and there is activity rather than the stasis of 1–4: verbal forms with objects, a variety of case forms, and a series of actions accomplished. The effect is freeing.

The rendering of the two root-noun instr. in c, *abhisvárā niśádā*, could be sharpened. I think Ge is quite right (n. 1, bottom of the page) that they refer to the sacrifice, specifically to the verbal performance and the installation on the ritual ground – but I’m not sure that the publ. tr. “by their cry and assembly” conveys that. I’d prefer “by their recitation and ritual installation.”

JPB re-supplies *dhíyah* as obj. of *hinvānāḥ* in d, on the basis of the same phrase in b (so also Sāy.; see Ge’s n. 5d). This is possible, of course, but seems compositionally clumsy. It is more likely that the poet meant the 2nd *hinvānā-* to be taken differently. Ge’s “sich anspornend” seems rhetorically better; the med. part. *hinvānā-* has both transitive and passive (or, in this case, better reflexive) uses: see the separate groups in Gr. I would therefore re-tr. d as “spurring themselves on, they obtained goods at Indra(‘s hands),” with loc. *indre* expressing the locus (as it were) of the goods obtained – so essentially both Ge and Re. In order to bring the two occurrences of *hinvānāḥ* into harmony, I would also change the tr. of the form in b to “spurring on their insights.”

II.22 Indra [SJ on JPB]

On the unusual and complex meter see Old, Proleg. 115. It essentially consists of 12-syllable lines (i.e., Jagatī pādas) alternating with 4-syllable lines, with a refrain in the first three vss. consisting of two 8-syllable (Gāyatrī) pādas (*pace* Old, who analyses the refrain as also 12 + 4, though he admits it’s artificial; such a division doesn’t match the syntactic and phonological patterning). The fourth vs. differs from the first three and its structure is somewhat disputed.

The meter seems to encourage alliterative pairs: esp. the refrain (1gh = 2fg = 3fg), which consists of four such pairs (the last two intermingled) *saīnaṃ saścat devó devám, satyám índraṃ satyá índuḥ*. But see also *mamāda máhi kárma kártave* (1e), *vṛddhó vīryaiḥ* (3c), *táva tyán nāryaṃ nṛto* (4a), *prathamám pūrvyám* (4b). The four-syllable pādas also to some extent pattern together, esp. 1d + 2b, 2d + 3b. See further below.

In general, the publ. tr. could have reflected the interaction of rhetoric and meter somewhat better, and I will make suggestions about reconfiguring the tr., even when it accurately reflects content.

II.22.1: The VP of the first four pādas is parcelled out in bits, with the verb (*apibat*) only appearing in c and the object phrase *yāvāśīram ... sómam ... víṣṇunā sutám* sprinkled across pādas a and c. This is not easily represented in tr. However, I think the two four-syllable pādas, b and d, should be marked off from the rest, likewise in the second major clause in e and f. I would substitute

“Among the Trikadrakas, the buffalo -- snorting mightily --
drank to his satisfaction the barley-mixed soma pressed by Viṣṇu -- just as he wished.

It exhilarated him -- the great and broad one -- to do his great deed.”

As for the refrain (1gh = 2fg = 3fg), I’d suggest a slight change: “He attended upon him – the god upon the god -- the real Indu upon the real Indra.”

The verb in the refrain, *saścat*, is injunctive and therefore ambiguous between a present/habitual sense and a preterital one. Given that the rest of the first three vss. are mythological in content I’d favor the latter.

II.22.2: This vs. lacks alliteration, save in the refrain. But the second word, *tvīṣīmān*, phonologically echoes *tuviśúṣmaḥ* in 1b.

On *krívi-* as ‘worm’ see comm. ad II.17.6.

Since the VP in 2ab is identical to 4f, with a different victim substituted (see comm. ad vs. 4), the two passages should be tr. identically. I would change this one to “overcame the worm with his power in battle.”

The four-syllable pāda of b cannot be separated from pāda a in tr.: the preverb *abhí* forms a lexeme with *abhavat*. However, phonologically *yudhābhavat* pairs with 1d *yáthāvaśat*.

I would separate the four-syllable pāda of d, *prá vāvṛdhe*, by deleting the “and”: “By his greatness, he filled the two world-halves. He grew stronger.”

Pāda e has a very cute trick. It contains a single form of *anyá-*, in 2nd position -- so, by my rules, definite. This is universally taken (I think correctly) as representing an *anyá- ... anyá-* (“the one ... the other”) construction, with the overt *anyám* referring to soma (“he took *anyám* [=soma] into his belly”). But the question is – who is “the other”? There are two candidates, both possible, both possibly meant. Given the refrain pointedly contrasting Indra and soma, the gapped *anyá-* could refer to Indra: “(the one) took the other into this belly.” However, the short clause immediately following in the same pāda, *prém aricyata*, suggests a different distribution: the *anyám* in the first clause refers to one portion of soma; the other is subject of the second cl. This is the interpr. of the standard tr. (though JPB’s take on it is not entirely clear); see, e.g., Re’s “il prit en son ventre un(e) portion du soma, (l’autre) reste-en-surplus ...” By omitting one of the *anyá-*s the poet leaves both possibilities not only open but simultaneously operative. I would tr. “(The one [=Indra]) took the other [=soma] into his belly; it/he projected beyond him/it.” “He [=Indra] took the one [=portion of soma] into his belly; (the other) was left over.”

In the case of the second alt., the *īm* would be one of the rare occurrences of this form without acc. reference; in the case of the first it would be construed with *prá ... aricyata*, though we should expect an ablative.

II.22.3: The adv. *sākām* occurs three times in pādas a and c; *ójasā* (a) reaches back to 2a and forward to 4f.

The four-syllable pāda b, *vavakṣitha*, is semantically equivalent to the same in 2d, *prá vāvṛdhe*. (On the absence of accent on *vavakṣitha* see Old [Noten].) Because of its metrical independence and its echoing of 2d, I would not, with the standard tr., construe this pf. with *sākām ójasā* (e.g., WG “... zugleich wuchst du mit Stärke”), but rather, more or less with the publ. tr., independently, and allowing the *sākām* expressions in a and c to be taken together. “Born at once with resolve, at once with power -- you increased—at once grown strong with heroic powers, overpowering the scorners – you, the boundless.”

II.22.4: As noted above, the meter of this vs. diverges from the patterns of the first three. It begins with an eight-syllable (Gāyatrī) pāda, a unit otherwise found only in the refrain. And pāda c seems to contain six syllables, a structure unknown to Vedic metrics; Old, however, suggests zapping the semantically pleonastic *kṛtām*, which would leave a more appropriate four syllables.

The expression *prāṇinā ásum*, immediately followed by *riṇānn apāḥ*, with verbal forms to the same root ($\sqrt{rī}$) + acc. obj., is striking and a bit baffling. Ge (n. 4c) plausibly

suggests that “you let life(-force) flow forth” indicates that “durch die Befreiung der Gewässer gab es neues Leben” – and this appears to be the interpr. of the standard tr. However, Ge also suggests, flg. Sāy., that it could refer to the flowing out of Vṛtra’s life-force. (See, e.g., I.182.3 *paṇér ásum* for the *ásum*- of a demonic individual.) That it is a word play seems likely, and so I would add an alt. to the tr.: “you let (new) life-force flow forth / you let (Vṛtra’s) life-force flow away.”

Note *ápah* ‘work’ in b and *apáh* ‘waters’ in e.

Pāda f, *bhúvad víśvam abhy ādevam ójasā* is a scrambled reprise of 2ab *abhi ójasā krivím ... abhavat*, but with a more generalizing force. Instead of a particular target (*krivím*) we have “every godless one.” The verb in 4f *bhúvat* is of course multiply ambiguous – it can be an injunctive (and thereby have preterital or present/habitual sense) or a subjunctive. That it is followed by two undoubted subjunctives, the repeated *vidāt*, a subjunctive interpr. is appealing (so JPB “he will overcome”), but it could also be a generalizing present: “he overcomes.” The tr. of *ójasā* should match that in 2a (esp.) as well as 3a. Altogether: “He will overcome / overcomes every godless one with his power.”

II.23–24 Bṛhaspati / Brahmanaspati [SJ on JPB]

These two hymns are implicitly contrasted, with II.23 withholding any mythological references until the final vs. (before the summary vs.), 18, where the Vala myth is boiled down to its essence. II.24, by contrast, starts with a discursive treatment of the same myth. For further details, see below.

II.23 Bṛhaspati [SJ on JPB]

The whole hymn is tr. by HPS (B+I 104–9, with comm. –112).

The vocatives *bráhmanas pate* and *bṛhaspate* alternate throughout the hymn, with a single example in each vs.: *brahmanas pate* generally (but not always) pāda final, *bṛhaspate* always pāda initial: *brahmanas pate* (1c, 5d, 9a, 11c, 19a [initial]) / *bṛhaspate* (2b, 3c, 4d, 6c, 7c, 8c, 10b, 12c, 14d, 15a, 16d, 18d). The only vss. lacking such a voc. have instead a nom. sg.: *bṛhaspátih* (13d), *bráhmanas pátih* (17c).

There is considerable lexical concatenation between adjacent vss., as noted below *passim*.

The hymn has a very unusual structure. For the first 17 vss. of its (considerable) length, it strings together fairly generic descriptions of Bṛhaspati’s powers and activities, alternating between the pain and punishment he inflicts or will inflict on evildoers and the aid he provides to his right-acting devotees. There is no mention of any particular acts in the past, any mythology – until the real final vs. of the hymn (18, since 19 is a meta-summary vs.) – where without warning the Vala myth is boiled down and encapsulated in a single vs. In detailing the powers and qualities that made Bṛhaspati the right god for that job, the whole rest of the hymn turns out to be a discursive preamble to this brief explosive burst of mythology. (The only possible foreshadowing is the compd in 3d *gotrabhíd*- ‘cowpen-splitting’, but that modifies Bṛhaspati’s chariot.)

II.23.1–2: These first two vss. contain overlapping definitions of the name of the divine dedicand Brahmanaspati / Bṛhaspati: 1c *jyeṣṭharājāṃ bráhmanām* “the preeminent king of sacred formulations” and 2d *víśveṣām íj janitā bráhmanām asi* “you are the very

begetter of all formulations.” It’s worth noting that *bráhman-* does not appear again in the hymn (save ubiquitously in the god’s name) except in the cmpd *brahma-dvís-* ‘hating the formulation’ (4c).

II.23.1: As Re points out, *bráhmanām* may be construed with preceding *jyeṣṭharājam*, but it formulaically belongs also with following *brahmaṇaspate*, exactly like *gaṇānām ... gaṇāpatim* in pāda a.

II.23.2: On *usrāḥ* as gen. sg., see comm. ad VI.3.6 and AiG III.213. All the standard tr. take it as gen. sg. here.

Give the definitional value of pāda d and its connection with 1c, it would be better to substitute “all sacred formulations.”

II.23.3: As HPS points out (105), *parirāḥ* is semantically opposed to *ṛtasya* and *tāmāṃsi* to *jyōtiṣmantam*.

II.23.4: All the standard tr. (incl. JPB) except WG attach *yás túbhyaṃ dāśāt* to *jānam*. Although this is not syntactically excluded, pāda b conforms to a common pattern with a preposed generalizing rel. cl. describing proper ritual behavior (“who[ever] does / will do X”) and a main cl. stating the reward. For this pattern, often involving subjunctives in both rel. and main. cl., see, e.g., IV.2.6–7 and disc. in my “perfect subjunctive” article (Fs. J. L. García Ramón). In subsequent vss. (6cd, 7abc, also 9cd, 12abc) we find similar preposed rel. cl. with their results expressed in the main cl. (though in those cases both the actions and the result are negative). I would here substitute “You protect the people. Who(ever) will perform ritual service for you, distress will not reach him.”

II.23.5: This vs. contains paraphrase and expansion of 3a (in 5c) and 4b (in 5ab), with the paraphrase signaled by *ví√bādh* (3a *vibādhya*, 4c *ví bādhase*) and *ná tám ámhah* (4b, 5a).

II.23.6: More chaining: *gopāḥ* in pāda a repeating the same word in 5d. In c *hvārah* appears to pick up *dhvarás-* in 5c – though they differ by accent, etymology, and semantics; *hāras(vant)-* in d also echoes *hvārah* in the preceding pāda. On the various senses of *hāras-* see comm. ad X.16.7.

The purport of b would be clearer if rephrased as “we awaken for your commandment with our thoughts.”

II.23.7: Chaining continues with *pathāḥ* (c) extracted from *pathi-kṛt-* (6a)

The meaning of the hapax *sānuká-* is much disputed – or, perhaps better, despaired of. See, e.g., Old’s detailed consideration and rejection of multiple possibilities. Ge (fld. by Th [Fremdling 44] and HPS) refuses to tr. it; Gr takes it to *√san* ‘win, gain’ and glosses ‘beutegierig’; Re follows one of Old’s more favored (/least unfavored) suggestions, that it’s connected with *sanutár* ‘far away’ and tr. “dont on cherche-à-s’eloigner.” The most plausible and appealing suggestion is WG’s “aufgeplustert” (fluffed up / ruffled up). This would be a *-ka-*deriv. of *sānu-* ‘back’, probably of a lower linguistic register because of the *-ka-*suffix (see my 2009 “Sociolinguistic Remarks on the Indo-Iranian *-ka-Suffix: A Marker of Colloquial Register,” IJ 52), and would refer to

the raised hackles of a wolf about to attack or showing dominance (see photos on the internet), with a lit. meaning something like “back-y” (reflecting an exclamation like “look at that back on him!”). I’d tr. “a hostile mortal (or) a wolf with hackles raised” (since “back-y” gets us nowhere), or, if a single-world tr. is desired, “a bristling wolf.”

II.23.8: *trātār-* in pāda a picks up *trāyase* in 4a. To signal the connection I’d tr. “protector of our bodies” (as I suggested “you protect the people” in 4). This hemistich is notable for the occurrence of three *-tār-*stem agent nouns. I would substitute “advocate” for “defender” for *adhivaktār-*, to capture the speech aspect of this lexeme derived from √ *vac* ‘speak’.

On *naśan* functioning as an injunctive aor. after *mā* (rather than the root aor. subjunctive it appears to be), see KH, Injunkt. 240 and ref. there. Here, to capture the *úd* in the verbal lexeme *ún naśan* and in the adj. *úttaram*, I would slightly emend the tr. to “Let those of evil ways not reach up to higher favor.” Re’s “higher favor (than ours)” might even be better.

II.23.9–10: These vss. are paired, at least in their first hemistichs: #*tvayā vayám ... dadīmahi / dhīmahe*, though with verbs to different roots and T/A stems. These paired vss. are in the approx. center of the hymn, though there are no other significant omphalos features.

The pairing of these verbs is somewhat puzzling: the first is a 1st pl. middle opt. to the redupl. pres. of √ *dā* ‘give’, whose middle (usually with *ā*) regularly means ‘take’. The 2nd is an anomalous form: it’s also a 1st pl. middle, but to √ *dhā* ‘put, establish’, whose middle also can mean ‘take, acquire, assume’. It is built to the root aorist stem (as opposed to the redupl. pres. of *dadīmahi*), and it is clearly meant also to be an optative (with opt. suffix *-ī-*), but it has the primary ending *-mahe* though optatives take only secondary endings (expect, and regularly get, *dhīmahi*). (Lub lists it immed. flg. *dhīmahi*, with the parenthetic addition “(nonce)”; Re explains it as “contamination” between *dhāmahe* and *dhīmahi*, at best a description not an explanation.) The easiest way to account for the primary ending is metrically: the Jagatī cadence requires a heavy syllable in that position (... *dhīmahe váyah* #); **dhīmahi* would have given three light syllables in a row (– ~ ~ ~ ×). Although I’m wary of metrical explanations, this seems to be the best solution. But there still remains the fact that the poet seems deliberately to have set up an equivalence between two forms to different T/A stems of different roots – almost forcing them to be taken as synonymous, given the parallelism of the clauses in which they’re found. What is he trying to tell us? As I have disc. elsewhere, I do not think there’s a functional difference between modal forms to different T/A stems, so that is not an issue here (in my view); more interesting is the discrepancy in roots, whose semantic differences seem however to be neutralized in these forms. As for other tr., Ge tr. them differently (“möchten wir ... empfangen / erlangen” respectively); sim. Re (“recevoir / obtenir”), HPS (“erhalten / erlangen”), WG (“erwerben / erlangen”). These all seem to me distinctions with difference, but if I were to follow the same path, I’d probably do “take / acquire.”

II.23.9: Chaining or pseudo-chaining: *spārhā* (b) and *ávaspartar* (8b), though there are two roots \sqrt{spr} , ‘win’ and ‘rescue’, which are at least synchronically distinct. See EWA s.v. *SPAR*.

I’d prefer “take” or “acquire” to “receive” for *dadīmahī*, as reflecting more activity on our part.

The curiously formed *tadīt-* has no clear etymology (see EWA s.v.), but in its two RVic occurrences, here and I.94.7, it is contrasted with *dūrē* and must mean, more or less, ‘nearby’ – though I would prefer a jazzier rendering for this jazzy formation, “hard by” isn’t bad. Although they are not a lexical match, perhaps the slangy “in your face.”

As disc. in my *-āya*-Formations (p. 93), *jambhāya-* belongs to a separate root ‘crush’, distinct from ‘snap at’ found in the aor. *jambhīṣat*, and has an Aves. cognate *zəmbaiia-*. See EWA s.v. *JAMBH*². The tr. should therefore be emended to “crush these” (certainly a more satisfactory fate than ‘snap at’ for the hostile forces!).

The adj. *anapnāsaḥ* is proleptic.

II.23.10: Again, “take” or “acquire” rather than “receive.” The question is whether we should attempt to draw a distinction in tr. between the two verbs (whose differences were laid out above, ad 9–10) or tr. them identically, since they appear in almost identical contexts. As noted there, the standard tr. render them differently, but I’m not at all sure that’s the right call.

Given *uttaram sumnām* “higher favor” in 8d (see comm. there), I would render *uttamām ... vāyaḥ* as “highest vigor.” Note the figure *vayām ... vāyaḥ*, as in II.20.1.

On *pāpri-* see comm. ad I.52.3. The tr. of this instr. phrase would be somewhat less awk. as “with (you,) provider and winner, as yokemate.”

In the 2nd hemistich *duḥśāmsaḥ* (c) and *suśāmsāḥ* (d) are obviously contrasted.

II.23.10–11: The chaining between these two vss. is morphological, not lexical, with two redupl. *i*-stems in each vs., as Re points out: *pāpri-*, *sāsni-* (10b); *jāgmi-* (11a), *sāsaḥi-* (11b) (though note accent discrepancy).

II.23.11: On *anānudā-* see comm. ad II.21.4. Since the stem is derived from *ānu* $\sqrt{dā}$ ‘concede’, not \sqrt{nud} ‘push’, “unable to be pushed aside” should be changed to “unyielding.”

Because the verb *āsī* only opens the 2nd hemistich, I would postpone “you are” to that position (as Ge, Re, HPS do, contra WG and JPB), with the first hemistich a suite of nominals: “Unyielding bull, going towards a challenge, scorcher of the rival, overwhelming in battles – you are the real requiter of debts ...”

The publ. tr. does not make clear that *vīluharṣīṇaḥ* is a gen. modifying “the powerful one” (*ugrāsya*) – perhaps better, “even of the powerful one who exults in his staunchness” (against the publ. tr. “excited to tough resistance,” whose structure I don’t understand).

II.23.12: Chaining with *ugrā-* (11d, 12 b), with repetition also of *manyú-* (d) from 4c and *duréva-* (d) from 8d.

As already pointed out by Old, Gr’s supposed fem. nom. ag. *sāsā-* ‘Tadler, Schmäher’ is unlikely to exist; the other supposed occurrence (besides *sāsām* here),

which Gr gives as acc. pl. *śāsāḥ* out of sandhi (VII.48.3), is better read as instr. sg. *śāsā* there. The form here, *śāsām*, is then gen. pl., to be (loosely) construed with *ugrā*-. I would slightly emend the pub. tr. “powerful in his commands” to “powerful over commands,” as well as eliminating “us” (or at least putting it in parens.), since there is no *naḥ* in this hemistich.

JPB takes injunc. *nī karma* in d as the positive continuation of the negative impv. in c (sim. Re, WG). This is an appealing interpr., but, before accepting it, I would like further evidence that the modal force of neg, *mā* + injunc. can carry over to a following clause with injunctive but no *mā*. It is perfectly possible to take the verb as general / presential (so Ge, HPS, and see esp. KH, Injunc. 255) – hence “we put down / thwart ...”

II.23.13: No chaining from the adjacent vs., but *abhidipsú*- returns from 10c.

On *vī√vṛh* see comm. ad X.10.7.

II.23.14: Again the lexical repetition is distant: *parirāpaḥ* (d and 3a).

The bahuvrīhi *dr̥ṣṭā-vīrya*- ‘of manifest heroism, whose heroism is visible’ in b is further developed in c: *āvis tāt kṛṣva* “make that manifest.” The ref. of *tāt* is then most likely *vīryām*. In order to bring out the conceptual connection, I suggest an alt. tr. of bc: “... who put you, whose heroism is visible (/easy to see), to scorn. Make manifest that (heroism), so that it will be worthy of a hymn for you.” The *yād* with subj. *āsāt* here seems to express purpose (sim. Re). The point is that latent *vīryā*- is not enough to attract praise; it has to be revealed and deployed.

II.23.15: *aryāḥ* in pāda a picks up the same in 13c.

Given that *vibhāti* in b is found in a series of dependent cl., with subjunctives preceding and following (*ārhat* [a], *dīdayat* [c]), it may be subjunctive as well (so in fact Old), though it does not have a distracted reading. The publ. tr. seems to take it so.

II.23.16: No obvious chaining.

The pf. *jāgrdhūḥ* is the only pf. form to this root in early Vedic, and it is quite possible / likely that it’s stative in value: “are greedy” (see Kü 160–61). I would therefore emend JPB’s “have become greedy,” and also substitute “food” for “supplies,” since food is a resonant symbol throughout Vedic texts: “are greedy for our food.”

The 2nd hemistich is difficult. Pāda c contains the hapax *vrāyas*-, built to the rare root *√vlī* (/vrī), on which see EWA s.v. *VLAY*¹. The root probably means ‘crush’, vel sim., with the *s*-stem meaning something like ‘crushing power’ (exactly contra Ge’s “Schwäche”). The pāda is also oddly constructed, with init. preverb *ā* fld. by *vī* later in the vs., and the accented verb *ohate* in between. Though it is possible to take c as a further extension of the rel. cl. of ab, thus accounting for the accent, it is appealing to follow Ge’s structural analysis (n. 16c), fld. by WG and JPB (sort of) and also (sort of) reflected by Old, whereby *ā* and *vī* mark separate contrastive clauses, both with *ohate* to be understood as verb. This would account for the accent on the verb (and remove the necessity of reading it as a continuation of the rel. cl., as JPB does – though Old still thinks the *yé* is operative). WG’s interpr., with *ā√ūh* expressing a positive sense and *vī√ūh* a negative one, is plausible: “Sie erkennen laut die Übermacht der Götter an, missachten sie aber im Herzen.” Based on this interpr., I would substitute “they laud the

crushing power of the gods (in public), but denigrate it in their heart.” There is another related possibility, however. The slippery verb *ohate* (see disc. V.52.10, X.65.10) is sometimes reflexive; it could be that the first reading of the verb, with *ā*, has this reflexive sense, and the second, with *vi*, is transitive, resulting in “they vaunt themselves (and) denigrate the crushing power of the gods.” The position of *devānām* may speak against this, however.

The final pāda is also puzzling. Assuming the subject remains the thieves and cheats of the rest of the vs., it might seem to declare that they know only the inferior ritual utterance type, the *sāman*, not the superior *brāhman*. This was the view of Hilldebrandt (see HPS). But the next vs, esp. 17b, makes that unlikely, at least in its strong form. Old, Re, and HPS by contrast think that “beyond the *sāman*” means they know nothing better, that is, more effective than the *sāman* wielded by Bṛhaspati: they are defenseless. It may be possible to rescue the first interpr., however; it may mean that they know the tunes, the singing, of the *sāman*, but do not know how to combine this with the *brāhman*, whose more effective verbal power is controlled by Bṛhas-/Brahmaṇas-pati.

II.23.17: The crucial word *sāman*- is repeated from 16d as well as *drūh*- from 16a. In addition *ṛṇayā*- reappears from 11c, and *ṛtā*- (here explicitly contrasted with *drūh*-) from 3b, 15c).

I would prefer ‘poet’ or ‘sage-poet’ for ‘sage’, esp. since verbal formulation is at issue.

In light of the disc. of 16d above, the fact that Brahmanaspati is born from every *sāman* (or from *sāman* after *sāman*) might indicate that he is a higher, more perfected, being than his source. On this basis I would slightly rearrange the tr. of pāda c. I think the point is that he is born as Brahmanaspati: “he is Brahmanaspati, the collector of debts, the requiter of debts ...” Like vss. 1–2 at the beginning of the hymn, this vs. at the very end provides a definition of or, better, a historical derivation of the god.

The 2nd hemistich either switches persons (ab: “gave birth to you” / cd: “he is ...”), or *sā* in c has 2nd ps. ref. (there are no verbs that would allow us to distinguish). I prefer the former, since cd does not fit the usual pattern for 2nd sg. *sā*, namely the presence of an impv. I would slightly alter the tr. to “... gave birth to you ... from each *sāman*-chant ..., he ...”

II.23.18: On this vs. as the unexpected mythological climax of a resolutely non-mythological hymn, see disc. in the intro. above. Note that Bṛhaspati is addressed as Aṅgiras, an oblique reference to the Aṅgirasas, who assist in the opening of the Vala cave. And Indra, Bṛhaspati’s alloform, is introduced in pāda c. These are the first two names found in the hymn, besides the monotonous verse-by-verse foregrounding of Bṛhaspati / Brahmanaspati.

I do not understand JPB’s “for (their) glory to be yours” tr. *tāva śriyē*; I would substitute simply “for your glory.”

Though Ge (n. 18cd) thinks that the second hemistich depicts the Vṛtra myth, I am in agreement with HPS that Bṛhaspati elsewhere has nothing to do with the latter and the Vala myth is still the subject. As often, the two myths are conflated, with waters standing in for cows and dawns.

Note *gávāṃ gotrām*, echoing the only previous allusion to the myth, *gotra-bhíd-* in 3d.

II.23.19: Like many final vss., this one makes meta-reference to the hymn just produced (*asyá ... sūktāsya*, ab).

II.24 Br̥haspati [SJ on JPB]

In sharp contrast to the immediately preceding hymn (see intro. to II.23 above), this hymn is stuffed with mythological references and an extended treatment of the Vala myth (vss. 2–7, returning in 14). Another clear distinction is in the use of vocatives. As noted, all but two vss. in II.23 contain a voc. *bṛhaspate* or *brahmaṇas pate*; The first vs. of II.24 has pāda-initial *bṛhaspate*, like most of the vss. of II.23; the last two vss. (15, 16) begin with the voc. *bráhmaṇas pate*. But the interior of the hymn has neither one, save for the dual dvandva *indrābrahmaṇapatī* in 12c – but a number of non-voc. case forms of each.

The hymn is tr. by HPS (B+I, 230–35, with comm. –237).

II.24.1: This vs. has an intricately interwoven structure. Pāda a consists of a main cl. followed by a rel. cl. The main cl. is conjoined with another main cl. in d by the conjunction *utá* (in a somewhat unusual position – see JSK, DGRV I.381–82). The main cl. in d is preceded by an associated purpose cl. occupying c (pace WG, who attach c to b). And there is an independent, parenthetical cl. in b. The main clause skeleton is clearly signaled by the repeated *sá* with 2nd ps. ref. in pādas a and d: *#sá ... avidḍhi ... sīṣadhaḥ sótá ...*, despite the three intervening clauses.

As I long ago established (1992 “Vedic ‘sá figé’: An inherited sentence connective?” *HS* 105), 2nd ps. ref. for the *sá / tám* pronoun is found only with imperatives or forms so used. With the *sá* pair here, the first appears with an undoubted impv. *avidḍhi*, while the formal injunc. *sīṣadhaḥ* must have impv. function, as is implicitly recognized by all standard tr.

I would be inclined to render the *yá-* clause in pāda a as a real rel., not a causal.

I think the *prābhṛti-* here refers to the song (*gīr-*) explicitly mentioned in b, both modified by forms of the near-deictic *ayám*.

Although I am convinced, flg. Th and KH, that the root *√vidh* has been secondarily extracted from the lexeme *ví √dhā* ‘distribute’ (for details and reff. see my *dheyām* article [Ged. Schindler 1999: 168–70]), in many of its occurrences it has lost the “distribution” feature and means simply ‘honor’ – as is, I think, the case here.

Putting this all together, I would slightly retranslate ab as “Help this (ritual) presentation, you who are its master – with this great new song we would do honor.”

A tr. truer to the clause order can be contrived for cd by pulling out *utá* from d: “And – so that your comrade who grants us rewards [=Indra] will be praised – bring our thought to success, o Br̥haspati.”

II.24.2: The entry into the mythological realm, which will dominate most of the rest of the hymn, is signaled by the augmented imperfects in each pāda: *ánamat*, *ádardar* (impf. to intens.), *prācyāvayat*, *áviśat*.

The neut. pl. *śámbarāṇi* to the otherwise masc. *śámbara-*, the name of a demon, is striking, though easily interpr. Old plausibly attributes it to the influence of *vṛtrāṇi*. We might otherwise have expected a vrddhi deriv.

The tr. of c might be more elegant as “Brahmaṇaspati set the immovable in motion” than “he moved the immovable forward.”

The accented verb *áviśat* in d is problematic, esp. if we follow the Pp. and analyze *prācyāvayat* in c as *prá + acyāvayat* with unaccented verb, as the standard tr. do. This makes c a main cl. (to the two rel. clauses in ab), and the *ca* in d would seem to conjoin *ā ... áviśat* to this main cl. – but with accented verb. Various solutions to this conundrum have been suggested. Old takes all four verbs as accented, thus contravening the Pp. in c. This would make the whole vs. loosely dependent on either the preceding or the following vs. This is perhaps the simplest solution. Ge tr. *ca* as a (very low key) subordinator, but when *ca* has this function, it ordinarily means ‘if’, which is contextually excluded here. He alternatively suggests (n. 2d) that *áviśat* should be read twice in the pāda, separately with the two preverbs *ā* and *ví* – like the construction of *óhate* in the immed. preceding hymn II.23.16. This is explicitly accepted by JSK (DGRV I.123) and is essentially reflected in the publ. tr. “he entered into and throughout the mountain ...” Although this interpr. is in principle appealing and would account for the verbal accent, the awkwardness of the resulting translation speaks for itself, and furthermore *ví* is otherwise not found with *√vis*. Ge’s final suggestion (n. 1 [bottom of pg.] to n. 2d) is that a different root should be supplied with *ví*, and again contrastive accent could be invoked. This proposal (scornfully rejected by HPS) has the merit of better accounting for the *ví* by supplying a verb with which it is regularly associated, like *ví√bhid* ‘split apart’, *ví√vṛ* ‘pry apart’ – as in the phrases I.85.10 ... *bibhidur ví párvatam*# (ending exactly like our pāda) or V.32.1 ... *párvatam ví yád váḥ*. I am somewhat reluctant to supply verbs out of nowhere. However, *ví√dr* ‘split apart’, found in b, might be a candidate, and it is the case that *√bhid* occurs in the next vs. (3c *ābhinat*). I will suggest yet another possible explanation for the accent: misunderstanding. Because the preverb *ā* is in tmesis in this pāda, the sequence *cāviśat* must be analyzed as *ca + áviśat*. However, unaccented *aviśat* combined with *ā* into *āviśat* is found several times (I.141.5 and incl. nearby II.13.1), and it might be that **cāviśat* was analyzed as *ca + āviśat* (i.e., *ā-aviśat*) and redactionally accented. Nonetheless, after considering all these competing explanations, I find the one that supplies a 2nd verb with *ví*, taken from context, the least problematic, and I would substitute “and he entered the mountain full of goods (and split) it apart.” If this seems too radical, an acceptable alt. is Old’s interpr. of the vs. as entirely subordinated, containing four accented verbs.

II.24.3: Continuing in the mythic past, this vs. contains six augmented imperfects: b: *áśrathnan ... ávradata* [pulled out of sandhi, but metrically guaranteed], c: *úd ... ājad ābhinat*, d: *ágūhat ... vy ācakṣayati*, all in brief asyndetic clauses.

II.24.4: I would prefer ‘well’ to ‘cistern’ for *avatá-*.

II.24.5: This is a very difficult vs., with a variety of clashing interpr. See, inter alia, Old’s detailed disc., as well as the treatments in the standard tr. Its interpr. is all the more problematic because the logical connection between the two hemistichs is not at all clear.

To begin with ab, the first thing to notice is that the poet uses the *-t^uva-* gerundive that he deployed in vss. 2 and 3 (*nánt^uva-* 2c, *kárt^uva-* 3a), here *bhávīt^uva-* ‘to be come to be / to come into being’. Old plausibly suggests that “the beings of long ago” (*sánā.. bhúvanā*) are those imprisoned in the Vala cave. “Coming into being” would refer to their emerging from the cave into light and freedom. Most tr. take *bhávīt^uvā* as the predicate: “these beings of long ago are to come into being (again)” (so in slightly different ways Old, Re, HPS, WG, and JPB; Ge’s “Diese Geschöpfe müssen teilweise alt sein” is a bizarre outlier.)

It is pāda b that presents the real problem: there are (roughly) two entirely opposite interpr. of the pāda, though both center around the opening (or not) of the Vala cave (or its present-day equivalent). To show my hand immediately, I do not think it’s necessary to choose between them; both can be simultaneously operative by virtue of the poet’s ingenuity. The verb in b is *varanta*, which can be a subjunctive or an injunctive to the aorist of the root *√vr̥* ‘cover, close, obstruct’. (Although originally a root-aor. subjunctive, the *vara-* stem is subsequently reinterpr. as a thematic indicative; see, for example, the doubly characterized subj. *varāte* [2x]. *varanta* would then be a injunctive to that stem.) The signature lexeme for the opening of the Vala cave is *vī√vr̥* ‘unclose, open’, with the preverb *vī* reversing the sense of the root. But *vī* is not found in this pāda, and so the clause as it stands means (as in JPB’s tr.) “Through months and years [lit. ‘autumns’] they obstruct(ed) the doors for you” (or “the doors obstruct(ed) you”). This is the standard interpr., championed by Old and found in all the standard tr. (Ge, Re, HPS, WG, JPB). The verb in this interpr. is presumably injunc., with both preterital and present-general senses (hence my rendering “obstruct(ed)”).

However, this pāda lacks a syllable. Gr suggests supplying *vī*, producing a post-caesura sequence **vī dúro varanta vaḥ*. Old roundly rejects this suggestion (and it obviously did not affect the tr. of others), though Arnold (Ved. Met. 298) tentatively accepts it and is fld. by HvN (metrical comm.). I find this suggestion appealing not only because of the metrical gap, but more because of the slightly puzzling emphasis on *vī* earlier in the hymn. (And in fact I came up with this interpr. independently on that basis before I saw Gr’s suggestion.) In addition to *vī acakṣayat* in 3d, vs. 2 ends its first hemistich with pāda-final *vī* (in tmesis with preceding *adardar*), though pāda- and hemistich-final preverbs are relatively rare, and pāda d has the apparently pleonastic *vī* that causes such interpretational difficulty in that pāda: see comm. above; also the problematic *vī* in 14c. It is almost as if the poet supplies an extra *vī* there and then withholds it here, signaling its ghostly presence by the missing syllable. Supplying *vī* allows an interpr. “After months and years they will open the doors for you / the doors will open for you,” with *varanta* as subjunctive. This refers to the ultimate “coming into being” predicted in pāda a.

As I said, I think both interpr. are simultaneously operative – depicting both the long darkness and confinement the beings endured and their ultimate return to the light, and making the connection between mythic past and ritual present that is so common in RVic discourse. An emended transl. should therefore read

Through months and years the doors obstruct(ed) you. /

After months and years the doors will *open for you.

We now turn to cd. The second hemistich and the duals therein set up an intractable grammatical clash: the negated pres. part. *áyatantā* (or apparent part.; see

below) can only be dual nom./acc. masculine and is likely the subj. of *carataḥ*, but the āmreḍita *anyád-anyad* with dual reference is neuter. The gender clash makes a straightforward identification of the two duos difficult. Further, the rel. cl. in d, which should have a referent in c, has what appears to be a neut. plural obj. *yā ... vayúnā*, although there are no plurals in c for pl. *yā* to be dependent on.

Old identifies the duals as the sun and the moon, which he takes as implicated in the obstruction depicted in pāda b but now, thanks to Bṛhaspati's actions, behaving in a better regulated fashion. Old's sun and moon are the majority opinion (Re, HPS, WG, JPB), though Ge favors the gods and the Pitars (see n. 5cd) and Sāy. Heaven and Earth. Since the standard dual dvandvas for Sun and Moon (*sūryā-candramās-*, *sūryā-mās-*) are masc., they can be modified by *āyatantā*. But then *anyád-anyad* should have another referent and not double the subject. The general solution has been to take *anyád-anyad* as the goal of *carataḥ*, with the referent being *vayúna-* (neut.); see, e.g., WG "... wandeln die beiden, jeder in einer anderen (Bahn), welche Bahnen (*vayúna-*) Brahmanaspati geschaffen hat." This does the job, but it seems contrived – and I find "Bahn" for *vayúna-* unsatisfactory. (Re's similar interpr. indirectly conveys the contrived nature of the solution with an efflorescence of parenthetical additions.)

My own interpr. may also seem contrived, but it has more textual support. Since *āyatantā* requires a dual masculine, I accept the widespread sun+moon interpr., but I think *anyád-anyad* doubles that subject with a conceptually similar neuter pair, night and day, or the day-halves (du. *áhanī*), in other words the time periods marked by the sun and moon. Important here is I.123.7 *ápānyád éty abhy anyád eti, víśūrūpe áhanī sám carete* "The one goes away; the other approaches: having distinct forms, the two day-halves proceed in tandem," with the day-halves represented by *anyád ... anyád* and subject of the dual verb *carete*, which recalls *carataḥ* in our passage. I would tr. c as "(Sun and moon), without aligning themselves, proceed (as the day-halves) one after the other." *āyatantā* indicates that the two do not line up next to each other, but follow in order.

As for the form, Lowe argues persuasively (Participles in RV, 277–78) that the form is not synchronically simply a negated participle to *yátati*, *-te*, because act. forms of that stem are otherwise transitive.

Now, as for d. I do not take *yā ... vayúnā* as a neut. pl. syntagm, but suggest rather that *yā* is masc. du., whose antecedent is the masc. du. Sun and Moon. (It is also possible that *yā* is neut. pl., by attraction to *vayúnā* in an equational syntagm (as often). IH also suggests that it evokes the *tā* of pāda a, the beings that are to come to be again. Then neut. pl. *vayúnā* is the second acc. in a "make X (into) Y" construction with *cakāra*: "which (two) Brahmanaspati has made into the *vayúnā*" (sim. HPS). As I have disc. elsewhere (see esp. II.34.4), I think *vayúna-* refers to repetitive patterns, often visual, incl. the patterns made by light and shade – and, by extension here, by the alternation of the dark and light halves of the day. This is expressed in a nearby passage II.19.3 *aktúnāhnām vayúnāni sādhat* "He perfected the patterns of the days through the night." As I comment there, by interposing night between days Indra draws temporal boundaries that produce the alternating patterns of day and night. Our passage seems to depict the same thing.

What then does the 2nd hemistich have to do with the first? In my opinion, the ultimate freeing of the dawns from the Vala cave reestablishes the vital alternation between light and dark that defines Vedic life.

To put the vs. all together, I'd tr.

All those beings of long ago, whoever they be, are to come to be (again).
Through months and years the doors obstruct(ed) you. /
After months and years the doors (will) *open for you.

(Sun and moon), without aligning themselves, proceed (as the day-halves)
one after the other, which (two day-halves) Brahmanaspati has made into the
(daily) patterns.

For my interpr. of *mādbhís* (to *mās-*) see my 1991 “A Cart, an Ox, and the Perfect Participle” (MSS 52: 80–81), though this has recently been disputed by Zachary Rothstein-Dowden.

II.24.6–7: These vss. are twinned, esp. 6cd and 7ab, with *praticákṣyāñṛtā púnaḥ* repeated in the post-caesura portion of 6c and 7a, preceded by nom. pl.s of similar meaning. The flg. pāda in both instances opens with an ablative phrase (6d *yātaḥ* “from which” / 7b *āta ā* “from there”) fld. by a 3rd pl. verb. The paired vss. do not seem to define an omphalos, however.

II.24.6: The first pāda contains a duplication of the verbal lexeme *abhí√naś / nakṣ*, since *√nakṣ* is, by most accounts (see EWA s.v. *NAŚ*^d), an *s*-enlarged form of the former. Although there is normally no obviously semantic difference between forms of *naś* and *nakṣ*, here the part. *abhi náḁsantaḥ* seems to have some desid. (vel sim.) nuance; otherwise its duplication by *abhí ... ānaśuḥ* is kind of flatfooted, as in the publ. tr. “upon reaching (there), they reached ...” Better “approaching (/aiming to reach), they reached.”

Ge (n. 6c) asks whether *púnar* in both this hemistich and 7ab belongs with the first pāda (as the pāda boundary indicates) or the second, where it fits better semantically. I am inclined to entertain the second poss. at least as an alt. “... having observed the untruths, they went up again ...,” though the other is by no means excluded – esp. since we don’t exactly know what’s going on in these vss.

Whether or not we read *púnar* with d, the purport of this pāda is puzzling: it implies that the subjects are going to enter a place they have already come from. Some have suggested that this refers to an earlier, failed expedition to the Vala cave (see, e.g., HPS B+I, 232 and 236), but this is not an episode in the standard myth. However, 7d lends some support to this idea. It might be possible to interpr. *yāta u āyan* as “because of which they had come,” but this seems quite artificial. HPS suggests (236) that it has to do with the reenactment of the myth in the current ritual, but although the boundary between the mythic past and the ritual present is permeable in this hymn, I don’t think “they went up to enter that from which they had come” is how this would be expressed

Syntactically it should be noted that the 2nd hemistich has a short dependent cl. embedded within the main cl.: *yāta u āyan*, which opens d – the subj. of the main cl. occupying pāda c and the main verb *úd īyuh* following the *yātaḥ* cl. This embedding is contrary to the standard practice overwhelmingly observed in the RV, but it seems to be a quirk of this hymn: see 8b and 8c and disc. below.

II.24.7: Note the clear contrast between *ṛtāvanaḥ* and *āñṛtā*.

For how to interpr. *púnar* see comm. immed. above.

The doubling of *ā* is worthy of note: *āta ā* (i.e., *ā-ātaḥ / ā*). The first *ā* must be the preverb with *tasthuḥ*, while the second one is the particle that often follows ablatives (or

ablative elements, like this adv.). Although *átah* generally stands alone, in some passages it seems to be followed by the *ā* ablative-marking particle; see esp. IV.50.3 *áta ā ta ṛtasprśo ní seduḥ*, where, because of its position, *ā* is unlikely to belong with *ní√sad* (though that's not excluded).

The NP *maháh patháh* could technically be an abl. sg., construed with *áta ā*, rather than an acc. pl. But the latter is the universal interpr., no doubt correctly.

In c JPB supplies “mounted” (on the basis of *ā ... tasthuḥ* in b), but this makes no sense [it would be a very bad idea to ‘mount’ a fire!] and has no parallel in the myth. Better, with Ge, to supply “found.”

As noted in the comm. above ad 6b, the last pāda of d supports the suggestion that this expedition is a repeat of an earlier, unsuccessful one. See HPS p. 236.

II.24.8: The account of the Vala myth ends in vs. 7, and the rest of the hymn treats the god's powers more generally, esp. as displayed in battle and contests.

As noted above (ad 6d), this vs. has two short embedded dependent clauses: b: *yātra vāṣṭi*, enfolded within the instr. NP *#ṛtájyena kṣipréṇa ... dhánvanā #*; c: *yābhir ásyati*, enfolded within the nom. NP *sādhvîr íṣavaḥ ... kárṇayonayaḥ*. Although highly unusual for the RV, these examples cannot be explained away, and the fact that we find several exx. of the same type – brief two-word clauses immediately adjoining their referent – densely packed here suggests a self-conscious poetic choice to transgress syntactic norms.

The adj. *nṛcákṣasaḥ* can be gen. sg., modifying *tásya* (so Gr, Re) or nom. pl., modifying the arrows (the other standard tr.). Given its proximity to the dat. inf. *dṛśaye*, the latter seems more likely, with the publ. tr.

For the bow, the bowstring, the arrows, and the ear see VI.75.3 (the weapon hymn), already adduced by Ge.

II.24.9: The four occurrences of *sá* punctuating the nominal descriptors of Brahmanaspati should, in my view, be represented in tr. So, “He, set in front, is the one who leads together, he the one who leads apart; he is well-praised; in battle he is the Lord of the Formulation.”

The first word of c, *cākṣmáh*, is a hapax. Ge refuses to tr. it, and it receives a variety of interpr. in the other tr. (I do not know what the publ. tr.'s ‘penetrating’ is based on.) In addition to the various tr., see HPS (B+I, p. 33, where he also disc. Wüst's treatment of the word). The word seems to be a vṛddhi deriv. of a posited **cakṣ-man-*, which has cognates in Old Iranian: OA, YA, and OP *cašman-* ‘eye’ (see EWA s.v. *cákṣus-*). Wüst suggests a meaning “zum Himmelsauge in Beziehung stehend” (see EWA with further reff), and the logical connection between this pāda and the blazing sun in d supports some such interpr. — though HPS (p. 33) rejects it in its strong form and himself tr. it as “der Schauende.” Since there are dozens of ways of saying “schauend” in Vedic, the use of this hapax with a complex derivation makes it likely that some more specialized sense is intended, and I favor some form of the Wüst interpr., also connecting it to the restoration of light achieved by opening the Vala cave (see esp. my interpr. of 5cd).

What somewhat impedes a Vala interpr. is the predicate “... bears away the prize and the stakes” (*vājaṃ bharate matī dhánā*), since battles and contests are not a normal

feature of the Vala myth. But the means he deploys to bear away the prize is his (formulated) thought (*matī*), that is, a verbal tool that is associated with this god, and it is by verbal means that the Vala cave was opened. That our passage deals with a verbal contest is strongly suggested by the near-identical phrase in 13b *sabhéyo vípro bharate matī dhánā*, where Brahmaṇaspati is identified with a poet in an assembly prevailing with his thought. The phrasal expansion in 13 can be considered poetic repair of the phrase here. (Another variant of this phrase is found in nearby II.26.3 *vājaṃ bharate dhánā*; in this case the subject is a mortal who ritually serves the god, not the god himself, but still in a ritual setting.) I would tentatively tr. the hemistich “When he, with his relation to the (heavenly) “eye,” bears away the prize and the stake with his (formulated) thought, just after that the sun – the blazing one – blazes at will.”

II.24.10: In I.9.5 the pair *vibhú prabhú* modifies *rādhah* ‘benefit, bounty’; I tr. the phrase “farmost and foremost,” which I prefer to JPB’s “far-going and fore-going” because I don’t think there is motion involved. We both are aiming to capture the PREV-*bhú*-contrast in a somewhat artificial way. I would tr. that pāda “farmost and foremost is the preeminent (bounty) of the one who streams abundance.”

Note the interlocking phonetic/etymological figures *vibhú prabhú prathamám*

On *suvidātra*- see comm. ad II.9.6. The adj. occurs twice elsewhere in Maṇḍala II (II.1.8, 9.6), both times of Agni, and in context it means ‘easy to find’, on account of Agni’s brightness. This sense is also found in the publ. tr., but I would otherwise not follow the distribution of subj. and pred. there. Rather, with Ge and Re, I would take the neut. pl. adjs. in b as modifiers of *imā sātāni* in c.

The gerundive *rādhya-* also requires some comment: although I have supplied *rādhah* in pāda a on the basis of I.9.5, this *s*-stem noun and the root, and esp. the gerundive, to which it’s related, have gone in somewhat different directions semantically. The *s*-stem means ‘bounty, benefit’ and the like, often modified by *citrá-* ‘bright’. The gerundive usually modifies a verbal product (like *ukthá-* IV.11.3) or the thought that produced it (*mānas-* VIII.92.28) and means ‘to be realized, brought to light’; the finite forms of the root generally have a similar usage. (It is possible that in the common NP *citrām rādhah* “bright benefit” [I.44.1, etc.], the *citrá-* has absorbed the ‘bring to light’ sense of the root.) The sense I attribute to the root works well with the parallel adj. *suvidātra-*. I would tr. bc as “good to acquire, to be brought to light are these winnings of Bṛhaspati, of the prize-winner worth tracking.” On *venyá-* see comm. ad VI.44.8.

In d I consider *visāḥ*, a further specification of *jānā ubháye* (with Ge and Re), not a separate entity (with JPB and WG); I’d emend to “both races [=gods and humans], (all) their clans ...” Pace HPS, *visāḥ* cannot be obj. to *bhuñjaté* because medial forms of this root are always intrans.

II.24.11: An alliterative vs., at least in its odd pādas: a: ... (*á*)vare *vṛjāne vísvathā vibhūḥ*; c: ... *devó devān prāti paprathe prthú*.

The masc. *vibhū-* picks up *vibhú* in 10a, though here I’d give it a less idiomatically driven tr., “extending everywhere ...”

The first word of b, *mahām*, is morphologically problematic; see Old’s extensive discussion. Although generally rendered as a nom. sg. masc. to *mahānt-* modifying Bṛhaspati (Ge, Re, JPB), in this sandhi context we should expect *mahām̐*. That the form is

coreferential with *raṇvā-* is indirectly supported by VI.29.1 with the (apparent) acc. sg. phrase *mahām u raṇvām*, but *mahām* is problematic there too, as an acc. It could also be a grammatically impeccable gen. pl. to *māh-*. This is suggested as an alt. by Old as well as Ge (n. 11b) and adopted by Lub and WG. In this case it would presumably anticipate the pl. “gods” in c. The problem then would be how to construe it; Ge casually suggests that it goes either with *raṇvā-* or with *śávasā*, but the former doesn’t take the gen. and surely the point of *śávasā* in this context is that it’s Bṛhaspati’s, not the property of other gods. WG construe it loosely and independently: “unter den Mächtigen,” and this may be the best way.

The publ. tr. renders *vaváḁsitha* as a main cl. verb, but since it’s accented, it must belong in the *yáh* clause starting in pāda a. The main cl. of cd switches from 2nd ps. ref. to 3rd (*paprathe*), but this mild anacoluthon is very common in the RV.

Putting this all together, I’d retranslate ab as “You who, extending everywhere within the lower settlement, joy-bringing, among the great ones have increased by your vast power ...”

II.24.12: This vs. is couched in the 2nd dual and introduces a second divine figure besides Brahmanaspati, namely Indra, in the dual dvandva voc. *indrā-brahmanaspatī*(c), found only here (though *indrā-bṛhaspatī* occurs six times in IV.49). As disc. extensively elsewhere, Bṛhaspati/Brahmanaspati began as an epithet of Indra in his role in the Vala myth and was only gradually distinguished as a separate figure. This vs. seems a stab in that direction, but the remaining vss. in the hymn revert to the singular.

I would change the tr. of pāda a to “everything of yours comes true, o you two bounteous ones.”

maghāvan- is of course a standing epithet of Indra; it is found in the dual (as here) only a few times, several times of the Aśvins, once of Indra and Soma (IV.28.5). The singular is never, as far as I know, applied to Bṛhaspati by himself, so the introduction of Indra here has brought his epithet in its train.

Pāda b appears to be one of the only passages in which *caná* has negative force by itself, not borrowed from a larger negative context. See the various disc. listed in the Lexical Index, esp. X.49.5. The negative sense here cannot be denied – the formula *ná (prá) mināti / minānti* is quite common – and there are no other negatives in this vs. or adjacent vss. It is not surprising, given the overwhelming use of *caná* in contexts with other negatives and the apparent negative in its 2nd syllable, that *caná* could ultimately carry a negative sense on its own.

II.24.13: The *utá* opening this vs. seems functionless. JSK (DGRV I.393) classifies it in a large group that act “as a mere facilitator of transition from one stanza to another,” which vague usage seems esp. odd when the previous vs. is the only one in the hymn with a dual subject, while vs. 13 returns to the sg.

With all other tr. (but JPB), I would supply “him” with *ánu śṛṇvanti*: “obey (him).” Otherwise the pāda is even less well integrated into the vs. than it appears.

In b the identification between the god and the poet should be made explicit; “(As) an inspired poet in the assembly, he ...” On the predicate here, see the nearly identical phrase in 9c and comm. thereon; also II.26.3.

Contra Gr, Re, HPS, and JPB, who take *vīlu-dvēṣas-* as a tatp. ‘hating the hard’, I think it more likely a bahuvr. ‘whose hatred is staunch/firm’, despite the accent. So also Ge, WG. Bahuvrīhis with *vīlu-* as first member show variable accent: 2nd-member accent in *vīlu-pavī-* ‘with firm wheel-rims’, *vīlu-pāñi-* ‘with hard hooves’ (1x, I.38.11, versus *vīlū-pāñi* 2x) versus 1st-member accent in *vīlū-jambha-* ‘with firm jaws’ (1x), *vīlv-āṅga-* ‘firm-limbed’ (3x). I attribute the forms with 2nd-member accent to the influence of *puru-* and *bahu-* bahuvrīhis with 2nd-member accent, even though, unlike them, *vīlu-* has a heavy init. syllable. Unfortunately Wackernagel doesn’t disc. *vīlū-* cmpds in AiG II.1.

On *ānu vāsarṇām* see Old. He would resolve it as *vāsā* and considers it a neut. pl., with crossover to the neut. flg. *ānu vratā*.

I would alter the 2nd hemistich to “He whose hatred is staunch, collecting the debt according to his will, he is the prizewinner in the clash: Brahmanaspati.”

II.24.14: As in 12a I would render *abhavat ... satyāḥ* as “came true,” or in this instance “came to realization.” I also think that the temporal value of the future part. *kariṣyatāḥ* is governed by the tense of the main verb *abhavat*, so “was going to do,” rather than “will do.” For a syntactic parallel see II.11.7. I’d emend the tr. of the 1st hemistich to “The battle fury of the lord of the formulation came to realization according to his will, as he was going to do the great deed.”

The final long vowel of *kārmā* must be, as Gr suggests, metrical; it is read short by the Pp. But the lengthening must have been facilitated by the fact that *n*-stem neut. plurals can have long or short vowels (type *nāmā*), and so the short vowel proper to the singular can be secondarily lengthened.

Pāda c is syntactically anomalous. Although at first glance it seems to contain a simple rel. cl. / main cl. structure (*yāḥ ... sā*), this structure is undercut by the *ca* seeming to connect the two clauses. One solution is to enjamb the *yāḥ* clause across the hemistich boundary, and start a new structure with pāda-medial *sā*. So Ge and JSK (DGRV I.261) (type “... of him about to do the great deed – (him) who drove up the cows. He ...”). This is, however, an awkward solution. Nonetheless I reject a simple “who ..., he ...” interpr. like that of the publ. tr., even though it has Old’s imprimatur. In ZDMG 1906: 737 (cited again in Noten), he adduces this passage as an example of the poets’ tendency to concatenate subordinate and main clauses, but I know of no such tendency. I think we *can* find a relative-correlative structure in pāda c, but it requires noticing and dealing with several anomalies in the *sā* clause: 1) there’s nothing for *divé* to do; *pace* JPB this dat. should not be rendered “in heaven”; 2) both the preverb *vī* and the *ca* are wrongly placed to conjoin this clause with the preceding *yā-* clause (even if we were willing to do so). In fact ... *vī cābhajat* looks like it should be conjoining this cl. with a clause consisting of *sā divé*. Here I adopt a solution suggested by Ge (n. 14c), though not reflected in his tr. – that we resupply *ūd ājat* from the rel. cl. and construe it with *divé*, here in the sense ‘day’ or ‘daylight’ usually found only in the āmreḍita *divé-dive* ‘every day, day by day’. The point is the one made also earlier in the hymn, that the cows are sent out of the Vala cave into the light. I’d tr. “Who drove up the cows, he (drove them up) for daylight and distributed them.” Although this may seem artificial, it deals with the various syntactic problems in the pāda. Note also that we have yet another problematic *vī*, as in 2d, where it also interacted with a problematic *ca* and a verb with the wrong accent.

Note that the rel. cl. replicates the (non-rel.) phrase beginning 3c.

II.24.15: Since Brahmanaspati is, literally, the lord of the *brāhman-*, it should be *his* formulation, not mine, at issue (though, since *kṛtābrahman-* ‘having created formulations’ is used of a mortal ritualist in the 1st vs. of the next hymn [II.25.1] the interpr. of the publ. tr. is not excluded). I would substitute “being master through your formulation.” Note that *yád īśānaḥ* ring-compositionally responds to *yá īśiṣe* in the first pāda of the hymn.

II.24.16 = II.23.19

II.25 Brahmanaspati

II.25.1: In c I take the phrase *jāténa jātām* as expressing an essentially hostile relationship between adversaries: he extends beyond the offspring (of his competitor) with his own offspring. This interpr. would match the similar configuration of etymological figures in 2a *vīrēbhir vīrān vanavad vanuṣyatāḥ* “With his heroes he will win against the heroes who seek to win,” which in turn expands the etymological figure in *vanavad vanuṣyatāḥ* in 1a. The standard tr. take both elements in *jāténa jātām* as referring to the offspring of the subject: “he will extend beyond his offspring with (more) offspring” or “offspring after offspring.” However, the strong parallel in 2a makes this less likely in my opinion.

II.25.2: Ge, Re, HPS (B+I 113) take pres. act. part. *vanuṣyatāḥ* here as gen. sg. dependent on acc. pl. *vīrān* (e.g., Schmidt “... die Mannen des Angreifenden”). I find this extremely unlikely, given that the same word in the same etymological figure in 1a and in the following hymn, II.26.1a, must be acc. pl. The acc. pl. *ṛghāyatāḥ* at the end of 3a with the same morphological structure also supports this analysis.

As Re points out, “la séquence *tmán : toká : tánaya* forme un tout cohérent.”

II.25.5: Since it is difficult to see how the rivers would provide “unbroken shelters,” I would now take *dadhire* as passive, with Re (and Sāy.; see Ge n. 5b), contra the standard: “(for him) many unbroken shelters have been established.” Alternatively, with WG, supply “the gods” vel sim., as subj., though this requires more machinery, and there are other passive usages of the med. pf. to *√dhā*; see Re’s n. and Kü 273–74.

II.26 Brahmanaspati

II.26.1: With Ge, Re, and WG, I take *ṛjúr íc chámsaḥ* as a decomposed bahuvrīhi, like *nārā ca śámsam* (IX.96.42, cf. X.64.3), with accent and case ending adjusted. For a similar formation, still compounded, see V.44.5 *ṛjugātha* ‘o you whose song is straight on target’. It would be possible, however, to take the text as given and make a “straight laud” the subject, as a sort of metonymy; so Schmidt (B+I 115).

For *ví√bhaj* see also nearby II.24.14.

II.26.2: The impv. *vihi*, with short root vowel (also III.21.5, IV.48.1, and possibly VI.48.17), must belong to the root pres. of *√vī* ‘pursue’, whose properly formed 2nd sg.

impv. is *vīhi* (7x). The easiest way to explain its short vowel is by analogy to *ihī* belonging to the root pres. to \sqrt{i} ‘go’, with pres. indic. *émi*, *éši*, *éti*, and impv. *étu*, all strikingly well attested, which match *vémi*, *véši*, *véti*, and *vétu*. And ‘pursue!’ and ‘go!’ are in the same semantic domain. The presence of a form of \sqrt{v} here, flg. *suprāvīh* in 1c, supports the current etym. of *prāvī-* as derived from \sqrt{v} . See comm. ad I.34.4.

The object of *vīhi*, *manāyatāh*, is semantically ambiguous and for that reason its referent is not clear. Its base *manā-* means something like ‘zeal’, a meaning found also in other derivatives to it, but zeal can be positively or negatively viewed; for a negative occurrence see nearby II.33.5. In our passage Gr, Re, and Ge [WG] take it positively, referring to gods (Gr, Re) or priests (Ge), while HPS (B+I 115), flg. Ludwig, negatively, referring to enemies. My tr. is meant to be neutral, since I think both are simultaneously possible.

I would now tr. b somewhat more literally, as “make your mind favorable to the smahing of obstacles.”

II.26.3: The phrase *vājam bharate dhānā* is quite similar to wording in nearby II.24.9, 13, where, however, the subj. is Brahmanaspati himself, not his worshiper.

On *śraddhā-* as trust specifically in ritual and hospitality, see comm. ad VI.26.6.

II.26.4: On the apparent bad cadence produced by *avidhat* see comm. ad II.1.7.

The curious long final of *rākṣatī* is not remarked on by the standard tr./comm.; the Pp simply reads it short. In my view it represents *rākṣati + ī*, the latter the enclitic acc. pronoun related to *īm*, which latter follows the first, parallel verb in the pāda, *uruṣyāti + īm*. They would show a phonologically motivated distribution here, with *īm* before vowel and *ī* before consonant, and would be positioned identically, immediately after a clause-initial verb and before an ablative.

Wh (Gr. §1316) considers *aṃhóh ... uru-cákri-* “creating a wide place from narrow straits” (also V.67.4, VIII.18.5) an example of a case form (abl. *aṃhóh*) dependent on the first member of a compound. This seems reasonable, though the fact that the phrase is a paraphrase of *uruṣyāti ... aṃhasaḥ* in the preceding pāda no doubt contributed to the creation of the phrase. Cf. also I.107.1 *aṃhóh ... varivo-vittarā* “better finder of wide space from narrow straits.” For further on this phenomenon see my “Limits on Indo-Iranian Compounding” (in prep.).

II.27 Ādityas [SJ on JPB]

This hymn is very name-heavy, esp. in the first half. The stem *ādityá-* appears in each of the first six vss., generally along with the names of several of the principal members of this group; in vs. 7 we find instead of *ādityá-* the mother *āditi-* (also 14), with *ādityá-* returning in 8 (11, 13). Only vss. 9 and 12 lack *ādityá-* or individual names of Ādityas. And only in vs. 10 is the focus on a single Āditya, Varuṇa. With all those names occupying space, there is relatively little left for content, which is, as Re puts it, banal. There is a fair amount of lexical recycling.

II.27.1–2: The first two vss. begin with the near-deictic, *imā gírah* “these hymns here” / *imám stómam* “this praise-song here,” anchoring the hymn in the ritual here-and-now. To

make this clear, I would front the phrase in vs. 2: “This praise-song of mine do they enjoy.”

II.27.1: Since *juhū-* is both ‘tongue’ and ‘offering ladle’, *juhva-* here refers to both and represents the common trope of verbal praise as oblation (“pouring prayers”), a conflation also found in “ghee-backed (*ghṛtāsnūḥ*) hymns” in pāda a.

II.27.2: I would tr. *juṣanta* as “enjoy,” not “will enjoy,” since it is not subjunctive.

dhāra-pūta- has the standard structure of the common cmpd type *devā-kṛta-* ‘made by gods’, *sōma-śīta-* ‘sharpened by soma’, with a ppl. as 2nd member and an agentive/instrumental first member. However, the cmpd. is not usually interpr. as ‘purified by a stream (of soma)’, but rather as a kind of equational simile: Gr “wie Ströme hell,” JPB “pure as a stream (of soma).” I think that this interpretational instinct is more or less correct, but the interpretation should be mediated through the use of the instr. *dhārayā* in free syntagms. It is extraordinarily common with the middle impv. *pāvasva* ‘purify yourself’, addressed to Soma, starting with the first vs. of the Soma maṇḍala, IX.1.1 (etc. etc.) *pāvasva soma dhārayā*. The instr. expresses the physical form that the purified soma will take, generally rendered in Engl. as “in a stream,” perhaps better “as a stream.” I think this cmpd. represents this syntagm (rather roughly). The standard tr. (incl. the publ. tr.) of *dhāra-pūta-* reflect this sense correctly. As is usual in such cmpds, the first member has instr. value – but the independent instr. *dhārayā* has an idiomatic sense that is (somewhat loosely) incorporated into this cmpd. The first member, *dhāra-*, is an apparent short *a*-stem here, though the well-attested independent noun is only a long *ā*-stem, *dhārā-*. Though I am leery of metrical justifications for morphological facts, I’d point out that **dhārāpūtāḥ* would not fit this Triṣṭubh cadence.

Re (ÉVP VII.89) suggests that pāda d reflects the Three Functions, which is clever – though the first two (“free of crookedness (and) disgrace” *āvṛjinā anavadyāḥ*) both seem like First Function to me.

II.27.3: Note the polarized pair beginning and ending cd: #*antāḥ* ... *ānti* #.

II.27.6: I would attach the first hemistich to 5d, rather than to the second hemistich in this vs. Despite the *tēna* beginning c, there is no logical connection (at least that I can see) between the easy path of ab and the Ādityas’ speech in c, whereas the easy path fits well with the metaphorical avoidance of earth-clefts in 5d.

The key to pāda c is to be found in VIII.67.6, another Āditya hymn, adduced by Re. There the c pāda is almost identical to ours, *tēnā no ādhi vocata*, but it is preceded by *yād vaḥ ... vārūtham āsti yāc chardīḥ*, with the whole meaning “What is your shield, your shelter, with that intercede for us.” In our passage the flg. pāda asks the Ādityas to extend *śārma*, a word almost synonymous with *chardīs-*. I think the *tēna* in c anticipates the *śārma* of d, and I would emend the tr. to “With that (shelter) intercede for us – extend (that) shelter to us that is hard to smash on every side.” I would also end vs. 5 with a dash (... earth —) and end 6b with a period (... straight.)

On the meaning and etym. of *anṛkṣarā-* see I.22.15.

II.27.7: This vs. reprises both the easy path of 6a and the *śárma* of 6d, as well as *árisṭāḥ* from 2d.

II.27.8–9: Act. 3rd pl. *dhārayan* 8a reprises med. *dhārayante* in 4a, which is based on an -*anta* replacement of my type, and the difference in voice is merely formal. The -*anta* form itself is found in 9a, which is a close paraphrase of 8a.

II.27.8: As an alt. I would tr. cd as “... is your greatness great, is it dear,” with most tr.

II.27.9: In b *śúcayo dhārapūtāḥ* is repeated from 2c.

The bahuvr. *uruśáṃsa-*, lit. ‘having broad pronouncement’, has several distinct usages, partly because of the functional flexibility of bahuvrīhis, which can mean either strictly ‘having XY’ or more expansively ‘providing XY’ (via ‘having XY [to give]’), and partly because *śáṃsa-* can mean ‘pronouncement, proclamation’ or more narrowly ‘laud’ (proclamation of praise). In some passages modifying gods (e.g., IV.16.18 of Indra) it seems to mean ‘widely proclaimed’, that is, ‘having/receiving wide proclamations of praise’. But in several passages it modifies a singer (I.31.14 *vāghát-*; II.38.11 *jaritár-*), where the most natural interpr. is ‘providing wide proclamation / praise’, ‘whose recitations extend widely’. Although the former sense might be in order here, since the adj. modifies the Ādityas (hence JPB’s “widely proclaimed”), I think in this case it may refer to the fact that the Ādityas’ pronouncements are widely authoritative (so, it seems, also Ge and WG) and hold esp. for the morally steadfast mortal. I would suggest an alt. “(they) whose pronouncements hold broadly for the mortal who aims straight.” Sim. in the next hymn, II.28.3, where Ge’s “dessen Worte weithin reichen” is even clearer than here.

II.27.10: As noted above, this is the only vs. in the hymn devoted to a single Āditya – Varuṇa, not surprisingly. For the mirror image, see comm. ad II.28.3.

Note in b the juxtaposition *devā asura*, also remarked on by Re.

II.27.11: The med. pf. *ví cikite* is interpr. by all standard tr. as 1st sg. with “act.” sense (“I see”), though the middle pf. to this root is ordinarily passive / intransitive ‘is seen, appears’ (see Kü [176], who doesn’t treat this passage). Nonetheless, I do not see any alt. to the standard understanding of this form.

Note that *ví cikite* essentially paraphrases the datival inf. *vicákṣe* in 10b.

I don’t understand the force of the double *cīd*. If it’s taken in its common meaning ‘even’, it could define the extremes of human mental states – “*even* in naiveté ... *even* in wisdom (not to mention the vast territory in between).” Or in its common usage ‘also’, a double *cīd* could be the equivalent of “both ... and” or “now X, now Y.” This is the sense it seems to have in IV.10.5 *idā cīd āhna idā cīd aktóḥ* “now by day, now by night.”

Pāda d is essentially 14c. Since they contain identical verbs (*aśyām*) the tr. should be harmonized: substitute ‘reach’ for ‘attain’ here, and keep ‘reach’ in 14c and for the subjunctive *naśat* in 14d.

II.27.12: On the short vowel in the dat. pl. *ṛta-nībhyaḥ* of the root-noun cmpd *ṛta-nī* see Scar 287. He explains it as taken over from the *i*-stems, though this doesn’t make a lot of

sense, since *i*-stems don't have *-ī-* anywhere in their paradigm that could give rise to such an alternation. AiG III.187 (see also Ge n. 12a) cites a few further exx. in later Vedic of *X-nibhyaḥ*, without venturing an explanation. It's worth pointing out that the syllable is metrically heavy in any case.

I would give *dadāśa* the presential meaning 'serves', which also fits better with parallel *vardháyanti* in b. On the value of this pf. see Kü (242–43), acdg. to whom it is presential but with the implication of action in the past. In some passages (e.g., I.86.6, VI.3.2) it does have past reference in context, but here and in I.36.4 a presential interpr. is better. The fluctuation in usage may be the result of association with the apparently truncated pf. part., lexicalized *dāśváms-*, which has the presential stative value "pious" < "doing ritual service."

The position of *ca* makes for difficulties in interpr. pāda b. There are three basic possibilities: 1) the *ca* conjoins the two relative clauses in a and b despite its delayed position (so Re, JSK, DGRV I.256), and it should be tr. (per JSK) "who has worshipped the kings ... and whom the lasting prosperities strengthen ..."; 2) the *ca* signals a third rel. cl., whose subject is the nom. *puṣṭáyaḥ ... nityāḥ* (so Ge, WG, somewhat differently Scar 287 [but see n. 404]), and should be tr. (more or less) as "... whom they [=kings] strengthen and (whom) prosperities (accrue to, vel sim.)"; 3) the *ca* conjoins a 2nd subject phrase with the unexpressed subj. [=kings of pāda a] of *vardháyanti* (JPB) ("whom they and the prosperities strengthen"). Of the three I prefer the third, found in the publ. tr., as best accounting for the position and usual subclausal function of *ca* and requiring the least extra machinery.

II.27.14: As noted above pāda c is essentially 11d.

II.27.15: It is not clear to me what *sādhū* is meant to express, and tr. vary. But "both sides are straightforward for him" in the publ. tr. is opaque to me. I think it more likely that it means "both sides have him as their goal" – that is, they are focused on him.

II.27.16: For the isolated prec. 1st sg. *yeṣam* (to $\sqrt{yā}$) see my 1999 "Vedic type *dheyām*" p. 171 and n. 24, with the lit. cited there – esp. KH, "Der vedische Prekativetyp *yeṣam*, *jeṣma*," MSS 20 (1967) = Aufs. 465–74.

II.28 Varuṇa [SJ on JPB]

II.28.1: The stem *yajátha-* in its ten occurrences is only found as the dat. *yajáthāya*, and it always has (quasi-)infinitival value, "to sacrifice / to be sacrificed (to)." The other occurrences are construed with Agni as subj. and thus have the active sense; here a passive value is more appropriate. I would substitute "the god exceedingly delightful to sacrifice to."

II.28.2: The pl. *subhágāsaḥ* looks back to *subhágah* in II.27.15.

The structure of the publ. tr of this vs. is a bit fuzzy, and in particular the affiliation of pāda c is unclear. Since it refers to the advent of dawn, the time when the action of pāda d should take place, I'd slightly alter the tr. to "Might we be possessed of good fortune under your commandment -- we who have praised you very attentively, o

Varuṇa -- / at the approach of the cattle-rich dawns awakening [/singing] like fires throughout the days.”

The med. thematic pres. *járate* belongs to two different roots \sqrt{gr} / $\sqrt{gṛ}$ ‘awake’ / ‘sing’ (see, inter alia, Gotō, 1st cl. 150–51, 153–56). Though the standard tr. (incl. JPB and in fact WG) take it only to ‘awake’ here, both meanings are applicable: fires “awaken” when they are kindled at the dawn sacrifice, but they “sing” by virtue of their crackling and hissing. For a clear ex. of *járate* ‘sings’ used of Agni at dawn, see I.127.10 cited by Gr.

II.28.2–3: The initial pādas of these two vss. have parallel structure, beginning with *táva*, containing the opt. *syāma*, as well as a loc. on which *táva* depends. The order of the two latter elements is scrambled, however.

II.28.3: In addition to its relationship to 2a, pāda a rephrases II.28.7cd from the last hymn: ... *śárma, úpa syāma puruvîrāḥ* ..., but there *puruvîrāḥ* modified the subject of *syāma* (“we”), while here it modifies Varuṇa. This interchange illustrates the productive ambiguity of *bahuvrīhi*s, which can mean both “have (to give)” (of gods) and “have (received)” of mortals (see disc. ad II.27.9 above about *urusāṃsa*-). And as was established there, *urusāṃsa*- in this context seems to mean ‘whose pronouncements hold broadly’, and I would substitute that meaning here. The double sense of *urusāṃsa*- is recognized by Re in his n., but not reflected in his tr.

Just as in II.27 a single vs. (II.27.10) addressed to Varuṇa interrupted the otherwise unbroken focus on the Ādityas, so here a hemistich (cd) addressed to the Ādityas interrupts the sole focus on Varuṇa.

The lexeme *abhí√kṣam* ‘be indulgent’ occurs only in this limited group of hymns: II.29.2, II.33.1, 7, as well as here. Since it otherwise doesn’t take a verbal complement, I would slightly rephrase the publ. tr. “indulge us to be yoked (with you)” to “be indulgent to us, for yoke-fellowship.”

II.28.4: On *ví√dhr* with rivers, see II.13.7 and comm. thereon.

On the usage of *paptúḥ* here see Kü 293 and n. 474. To bring out the particular nuance of this form, “have been flying” (as suggested by IH) might be better.

II.28.5–7: These middle vss. contain the poet’s direct appeal to Varuṇa, mostly to avert bad consequences of his own actions or of Varuṇa’s caprice.

II.28.6: As in IX.19.6, the transmitted *bhiyásam* should be read *bhyásam*. Further, the HvN display, with *mát* opening pāda b, should be corrected: *mát* ends pāda a (which conforms much better with the syntax as well as the meter), and b begins with *sámrañ*.

The publ. tr. of pāda d, “I cannot be away from you even for the blink of an eye,” conforms to that of Ge, Re, WG, and comes easily into English, with “blink of an eye” a measure of time. However, it does not represent the Sanskrit. As Re points out in his n. (despite his tr.), it would be the only ex. of $\sqrt{īś}$ meaning “pourvoir (demeurer physiquement).” The root $\sqrt{īś}$ generally takes a gen. and means ‘be master of, be capable of’, so gen. *nimíṣaḥ* should be construed with *īśe*. More faithful to the text, flg. Thieme (M+A 69; so also Scar 386), “for at a distance from you I am not capable even of

blinking.” Presumably meaning that I am not able to perform even the smallest and most automatic action – though there is interference from the notion that gods themselves don’t blink and see all, as in the immed. preceding hymn II.27.9 *animiṣāḥ* ‘unwinking’.

II.28.7: The first prohibitive cl. (pāda a) lacks a verb, though *vadhīḥ* is easily supplied on the basis of the etymologically related *vadhaiḥ* and passages like I.104.8 *mā no vadhīḥ* -- although for drama’s sake the incomplete “Don’t with deadly weapons” might be enough (see KH 48 and 102).

All the standard tr. (incl. JPB) construe *iṣṭaú* not only with gen. *te*, but also with the acc. phrase *énaḥ kṛṇvántam*, which is then only secondarily the obj. of *bhrīṇánti*; see, e.g., Ge “die bei deiner Suche nach dem Sündigen ... (diesen) versehren.” But no other occurrences of loc. *iṣṭaú* take an acc.; it is only the infinitival dat. *iṣṭāye* that governs objects. Since there is a transitive verb available to govern the acc. here, I would tr. *te iṣṭaú* simply as “at your instigation” (if the multivalent *iṣṭi-* belongs to $\sqrt{iṣ}$ ‘send’) or “in your quest” (if to $\sqrt{iṣ}$ ‘seek’).

The transmitted form *bhrīṇánti* is the only form attested to this IXth Cl. pres. belonging to the root $\sqrt{bhrī}$. As already noted by Old (Proleg. 477–78) and so represented in HvN, it must be read **bhrīṇánti*, the historical justification for which had to wait until the development of the laryngeal theory and its account of the IXth Cl. presents. See EWA s.v. *BHRĪ*. The only other verb form attested to this root in Sanskrit is the *s*-aor. subj. *bhreṣate* in VII.20.6 (q.v.), though it is well represented in Iranian (see Cheung, *Etym. Dict. Iranian Verb*, s.v. *braiH).

II.28.9: The standard tr. take *sāvīḥ* as imperatival, I think correctly. Although KH (Injunk. 264) ascribes this usage simply to the lack of 2nd sg. impvs. to *iṣ*-aorists, I think in this case the fact that it is the positive counterpart to a *mā* prohibitive in pāda b also favors the use of the injunctive aor.

Contra the standard tr., JPB takes *mátḥkṛtāni* as parallel to but independent of *ṛṇā* “my debts ... and (other) things done by me,” clearly because of the unusual mid-pāda position of *ádha*. Although I am sympathetic to this arg., because of the contrastive *anyákṛta-* in b it might be better to follow the consensus: “the debts made [=contracted] by me.”

On *mā ... bhojam* see KH, Injunk. 96.

Although *no jīvān* is the direct object of *ā ... śādhi*, the lit. tr. is awk. I would substitute with the impersonal “so direct it for us to be alive at them [=dawns].”

II.29 All Gods

Although the Anukramaṇī assigns this hymn to the All Gods, thematically it continues the Āditya sequence of II.27–28, as is clear from the 1st vs., with addresses to the Ādityas and to Varuṇa and Mitra – though both generic gods (1c, etc.) and specific ones outside the Ādityan orbit (Indra and the Maruts, 3d) also figure. Nonetheless, the stress on offenses committed by the speaker (1, 5) and the mercy and forgiveness sought are of a piece with the preceding hymns, esp. II.28.

II.29.2: The sequence in pāda c, *abhikṣattāro abhí ca kṣámadhvam*, invites interpr. as an etymological figure, but the agent noun, as it stands, must belong to $\sqrt{kṣad}$ ‘mete out,

apportion.’ Old tentatively suggests an emendation to *abhikṣantār-* ($\sqrt{kṣam}$), though he also allows that the transmitted reading may be correct and the poet is playing with Gleichklang. This seems the better course, esp. given that the stem is found once elsewhere (VII.21.8), though *abhí* is not otherwise attested with this root. It’s worth noting that *abhí* $\sqrt{kṣam}$ is found only in this little group of hymns (II.28.3, II.33.1, 7, in addition to this).

The three *ca*’s in cd signal two different types of conjunction. The first, in the preverb + verb sequence *abhí ca kṣámadhvam*, conjoins this impv. with *mṛṣáyata* in d, in an inverse *ca* construction (X *ca* ... Y); the 2nd two, in d, conjoin the temporal expressions *adyā ca* ... *aparām ca*. This is Klein’s view as well (DGRV I.188, 190, 155; cf. II.39).

The reason for the accent on the main verbs (*abhí* ...) *kṣámadhvam* ... *mṛṣáyata* is not entirely clear, since neither begins its clause or pāda and they are not subordinated. They must be implicitly contrasted in some way, but, impressionistically, other such sequences are not accented. Klein (*Verbal Accentuation in the RV* [1992] 43–44) attributes the accentuation to the inverse *ca* construction.

II.29.3: As Ge and Re point out, the unexpressed conditional clause with the first hemistich should be something like “if you’re not going to help us *now*, what’s the use of friendship in the past or in the future.”

II.29.4: Pāda c presents interpretational difficulties, particularly if *ṛté* is taken as the loc. sg. of *ṛtá-* ‘truth’ with most interpr. The problem in that case is not merely *ṛté* but also how it relates to *madhyamaváh-*. None of the suggested tr. seems satisfactory to me, and though Old discusses the passage at some length, he ultimately suggests with some despair that *madhyama-váh-* is an unknown technical term in Fahrkunst. Given the unconvincing solutions suggested by others, I am inclined towards Re’s quite different interpr.: he takes *ṛté* as the postposition/adv. ‘without’ and construes it with *vah*. Old had already argued against the “without” interpr., on the grounds that there is no ablative and that *ṛté bhūt* occurs also at pāda end in VI.67.8 (where, however, I interpr. it as I do here). And, though *vah* is not technically an ablative enclitic [since no such form exists], it is fairly all-purpose in terms of case. Its distance from *ṛté* can be attributed to its taking Wackernagel’s position. With a “without” interpr. the rest of the pāda falls out: we do not wish for our chariot to be without you; *madhyama-váh-* then specifies where the chariot is traveling, possibly “in the middle of its journey” or “in the middle of a battle.” (Though I enthusiastically adopt Re’s analysis of *ṛté*, I am not at all convinced by his interpr. of this compound: he thinks *madhyama-* refers to a middling number of draft animals.) If the *vah* ... *ṛté* interpr. is rejected, the negative concept that prompts the *mā* prohibitive must rest in the cmpd. *madhyama-váh-* and specifically in the 1st member *madhyama-*. Old lays out some possibilities, crisply summarized by Scar (475). (Notably KH does not treat this pāda, though he does treat the immediately flg. 4d.) I would assume in this case that ‘middle’ refers to a middling or less than full effort or a position in the middle, rather than at the forefront. So I would consider an alternative (and in my view less preferable) translation “let your chariot not be traveling in a middling way / in the middle (of the pack) with regard to truth.” Although most X-*váh-* cmpds mean ‘drawing/conveying X’

(e.g., the lexicalized *anaḍvāh*- ‘ox’ < ‘pulling a wagon’; *indra-vāh*- ‘conveying Indra’), I don’t see how to get a direct obj. interpr. out of *madhyama*-.

II.29.5: In b we expect the simile “like a father his son”; instead we get the father, but a gambler in the place of the son. We must infer the filial relationship. (The distress of his family, including his father, over the fall of their gambler kin is depicted in X.34.4. Nonetheless the pairing here is peculiar.)

The expected son then appears in d. The purport of this pāda is clear -- the speaker asks that only he be punished for his offenses, not his son -- until we get to the simile. Why does the poet liken himself to a bird, and what can be supplied in the simile to match *putrē*? The standard tr. conclude, reasonably enough, that the comparison involves baby birds (or maybe eggs?) (e.g., Re “Ne me saisissez pas en (la personne de mon) fils, comme (on saisisit) un oiseau (en s’emparant de ses petits).”). But is this meant to imply that bird parents get more upset by the loss of their offspring than other animal parents do? or that robbing birds’ nests was a particularly prominent behavior? I am baffled. (MLW suggests that raiding birds’ nests for eggs might have been a common practice, which would have provoked strong reactions in the bird parents.) It is possible that the simile only has domain over the acc. *mā*, with no involvement of the loc. *putrē*: “do not seize me like a bird” -- expressing the trapping/snaring techniques of bird-catching. But this doesn’t make much sense either.

II.29.6: Technically speaking, pāda d has two ablatives: “rescue us from falling, from the pit.”

On the hapax *nijūr*- see Scar (165).

II.30 Indra and other divinities

This hymn has at least three, possibly four modern ling. features: conditional (*ābhariṣyat* vs. 2), future impv. (*kr̥nutāt* vs. 5 [though the fut. impv. appears to be inherited, it is fairly rare in the RV and generally seems to belong to a more colloquial speech level]), gerund (*abhikhyāya*, *hatvī* vss. 9, 10), and mid. subj. in *-ai* (*naśāmahai* vs. 11).

II.30.1: The ceaseless movement of the waters is clearly expressed in the first hemistich, and the question posed in the last pāda is a leading one, at least in my view. It asks at what (temporal) distance, i.e., how long ago, did the waters first start this movement. The implicit answer is “when they were released from Vṛtra’s hold,” which prepares for the account of the Indra-Vṛtra battle in the next vss. (On the unexpected long vowel in *kīyāti*, see comm. ad I.143.3.)

The problematic pāda is c, and this is in great part because of the uncertain interpr. of *aktūh*. Ordinarily this word means ‘night’, but since “the night of the waters” is a curious expression, most comm. instead implicitly derive it from $\sqrt{añj}$ and tr. ‘color’ vel sim. (e.g., Ge “das Farbenspiel der Gewässer”). With Old I take the word in its usual meaning ‘night’, contrasted with the āmreḍita *āhar-ahar* “day after day.” However, I think the expression “night of the waters” is used metaphorically and perhaps has oppositional semantics. The waters are often, esp. in treatments of the Vala myth, identified with the dawns. Here, perhaps, “night” is meant to evoke its opposite, “dawn” (a poetic device

we've seen elsewhere, e.g., I.103.7; see publ. intro. to I.103 and comm. ad loc.) and the whole expresses the fact that just as the waters keep flowing, so also do the dawns keep dawning. This interpr. may be too radical, however, and the point of the image may simply be how dark waters can look compared to the sky at dawn (or dusk) -- the "night of the waters" would capture this dark appearance under certain lighting conditions. This perception may be reflected in a passage in the Maitrāyaṇī Saṃhitā: MS IV.5.1 *apó vai rátrir dívā bhūtē prāviśati tasmād āpo dívā kṛṣṇā apó 'har náktam tasmād āpo náktam śuklāḥ* "Truly night enters the waters when it becomes day; therefore waters by day are black. Day (enters) the waters by night; therefore waters at night are bright." (MLW comments that the Germanic cognates of the *u*-stem do mean 'dawn' [Go. *uhtwo*, etc.])

II.30.2: The first hemistich of this vs. is desperately obscure. It is unclear what is being done to or for Vṛtra in pāda a, much less who is doing it, and the identity of the feminine subject in b is likewise left open. The function of *ābharīsyat*, the only conditional in the RV, is uncertain, and also, though this is the least of our problems, whether the verb is *ā* + *ābharīsyat* or is simply an augmented form without preverb (latter Pp.). The unclear meaning of the rare word *sīna*- simply adds to the difficulties.

Let us start with the last one first: the stem *sīna*- occurs twice in the RV (here and III.62.1, also as object of *√bhr* with dat. complement), as well as in the compd. *tāt-sīna*- (I.61.4) and the deriv. *sīnavant*- (X.102.11). As indicated in EWA s.v., its root affiliation depends on what we think it means, and what we think it means depends to some extent on what root we ascribe it to. I will not rehearse the various suggestions; suffice it to say that I think it belongs with *√sā* 'bind, tie' and refers to material tied down on a wagon vel sim., a load -- equipment and the like -- hence my 'gear'. (For a similar semantic development of a derivative of a different root meaning 'tie', see my "Sanskrit pāriṇāhya 'household goods': Semantic evolution in cultural context," Fs. E. Hamp [ed. D.Q. Adams], 1997, pp. 139-145.) In this I follow Old.

I also follow Old in my interp. of the rest of the pāda. Someone *was going to bring* equipment for Vṛtra (hence the conditional, as a contrary-to-fact), but was impeded by the action of the main clause in b: a female, identified as a genetrix (*jānitrī*) foils the plot by announcing it to a wise or knowing one (*vidūṣe*). That *ābharīsyat* is the only conditional form attested before the Brāhmaṇas (so Whitney) must mean that it carries a very particular force, one that could not be easily expressed by more standard parts of the verbal system.

The potential identities of these actors take us yet another step into the speculative wilderness. I *very tentatively* suggest that the potential accomplice of Vṛtra is Sūrya. There are two, rather shaky reasons for this suggestion: There is some evidence in the Rig Veda for enmity between Indra and Sūrya, particularly in the (alas fragmentary) myth where Indra in conjunction with Kutsa steals the wheel of the sun. This hostility is also found, more developed, in the Mahābhārata, as is well known. And within the vs. itself there is a possible reference to Sūrya in pāda c, in the phrase *pathó rādantīḥ ... asmai* "excavating the paths for him." Elsewhere in the RV Sūrya is the beneficiary of similar actions: VII.60.4 [*sūryaḥ* ...] *yásmā ādityā ádhvano rādanti*, VII.87.1 *rādat pathó váruṇaḥ sūryāya*. Although I know of no other evidence for Sūrya attempting an intervention on Vṛtra's behalf, I nonetheless tentatively supply him as subject of pāda a. The mother figure described as *jānitrī* in b could be the Earth, as sometimes (I.185.6, III.31.2), or

Indra's own mother (as in III.48.2, X.134.1). I have more confidence in Indra as the referent of *vidúṣe* 'knowing'.

As just noted, I think Sūrya may be the referent of *asmai* in pāda c -- or rather one referent, for I think the pāda is deliberately ambiguous. If I am right that Sūrya is the covert subject of pāda a, then the phraseological parallels to the "excavating paths" expression that have Sūrya as beneficiary would suggest him as referent of *asmai*. The feminine pl. agents could be the dawns, who make the path for the rising sun. But in the context of the Vṛtra battle that forms the subject of the first vss. of this hymn, this pāda may refer to the paths dug out by the waters when they were released from Vṛtra, with *asmai* referring to Indra. Both dawns and waters are potential subjects: the phraseology of pāda d would fit either (or both). Both waters and dawns go to their goal (cf. I.158.6 for waters, III.61.3 for dawns). Although *dhūni-* 'boisterous' seems more suitable for waters than dawns (cf. *dhūnimant-* 2x of waters, *dhunayanta* once with rivers as subj.), the emphasis on dailiness (*divé-dive*) might point rather to the dawns. In short, at least the second half-vs. seems deliberately ambiguous, with potentially double referents both for the female subject and the masc. beneficiary.

I have no confidence that my interpr. of this vs. is correct, but I find the other published attempts even less convincing. However, IH has suggested an alternative interpr. to me (p.c.) that is definitely worth considering. In this scenario the *sīnam* 'equipment' is Indra's mace, his '(fighting) gear' (so IH), brought to him (=Indra) *against* Vṛtra. Dat. *vṛtrāya* here would be a dative of malefit, as it were, exactly as it is in the next vs., 3b. The bringer of the *sīnam* could be Tvaṣṭar or even Uśanā Kāvya, two regular suppliers of the mace to Indra. In b the *jānitṛī* could be Vṛtra's mother, whom we memorably meet in I.32.9, and the knowing one (*vidúṣe*) Vṛtra himself, with the participle possibly proleptic.

The potential drawback to this interpr. is that we know that Indra *did* get the mace and smash Vṛtra, so the hypothetical value of the conditional isn't accommodated. But since we don't actually know what the value of the conditional was in the RV, this should not deter us. Alternatively there may have been a previous episode in the myth in which Indra's first attempt was thwarted when Vṛtra was tipped off. A revised tr. of the hemistich acdg. to this scenario would be "The one [=Tvaṣṭar? / UK?] who was going to carry the gear here for [=against] Vṛtra -- the mother [Vṛtra's mother] announced him to the knowing one [=Vṛtra?]." I would not substitute this tr. for mine, but simply offer it as an alternative.

On *divé-dive* see comm. ad 11 below.

II.30.3: This vs. is a fairly straightforward account of the Indra-Vṛtra battle, though Indra's name doesn't appear until the last word.

I don't quite understand the function of *hī* in pāda a. If it is causal (a value I always try to impose on *hī*), it may take up 2b: we know (at least in one interpr. of vs. 2) that Indra already knew (2b *vidúṣe*) about the trickery before the mother's announcement, because he had already taken his position in the midspace. But this may be over-thinking *hī*. The *hī* in c is even harder to account for, and I wonder if it isn't there to provide a mirror-image figure: *mīham ... hīm á(dudrot)* and to serve as hiatus breaker between *úpa* and *īm*. IH offers an alternative explanation for the two *hī*'s. In IH's account of RVic verbal function, aorists in subordinate clauses express anteriority. Here the *hī* would be a

fine expression of post hoc, ergo propter hoc, with sequential events acquiring a causal cast: “because he had taken his stand, he bore down his weapon” and “because he had run up to him, he conquered ...”

In b *vṛtrāya* ACC *prá √ bhr̥* echoes 2a *vṛtrāya* ACC *√ bhr̥*. In my interpr. these expressions are contrastive and have different subjects and different intents (though see IH’s interpr. above): in 2a the dat. *vṛtrāya* is a dative of benefit, in 3b a dative of, as it were, malefit. The same *vajrāya* WEAPON *prá √ bhr̥* as 3b is found in I.61.12. The *prá √ bhr̥* expression may be slyly alluded to even in our vs. 2, where *prá* opens pāda b and is therefore adjacent to *ābhariṣyat* pāda-final in a, even though it is construed with *uvāca* at the end of b.

In c *Vṛtra* must be the subj., even though it breaks the pattern: Indra is the unexpressed subj. of a and b and postposed subj. of d. However, *Vṛtra* has a penchant for mist (e.g., I.32.13, V.32.4), and in this context it would uniquely identify him.

II.30.4: The vs. is nicely framed with vocc., *#bṛhaspate ... indra#*, thus inviting their identification.

Ge (/WG) take *vṛkadvaras-* as a PN, but Wackernagel’s explan. (KISchr. 325–26), adducing Aves. *duuar*, a daevic way of moving, is quite convincing.

ardhām √ kr̥ ‘go halves’ (also VI.44.18) strikes me as an idiomatic or slangy expression, which may fit with the rare (and also possibly lower-register) future impv. *kr̥nutāt*.

II.30.6: WG tr. *radhrāsyā ... yājāmānasya* as “des ermatteten Opferers” and further explain that sacrificing under the hot South Asian sun is exhausting. But surely the point is rather that even a resolute enemy gets slammed down by Indra and Soma (pāda a), while even a weakling gets pepped up if he performs sacrifice to them.

II.30.7: *tandran* is, of course, a curious form. The Pp., not surprisingly, reads *tandrat* (with *-t → -n* before *nā*). Gr emends this to **tandat*; Whitney (Rts) list the form thus, though with ?; and Old allows it as a possibility, without exactly endorsing it. IH suggests following the Saṃhitā reading and interpreting it as a 3rd pl. med. root aor., with ending *-ran*. The only other verbal form to this root, *tandate*, is medial. If this is correct, there would seem to be a change of no. in the subj. from the impersonal 3rd sgs. of the standard tr. to an unspecified 3rd pl.: “It will not tire nor weary me, and they will not flag.” Who the plural subject might be is unclear -- perhaps the 1st plural that is found in the next pāda. And in fact all three verbs could be 3rd pl.: the Pp. 3rd sgs. *tamat* and *śramat* also appear immediately before *n-*, with Saṃhitā *-an*. Under this interpretation the forms would not be impersonal but have unspecified plural subj.: “they will/do not tire or weary me nor do they flag.” If we prefer to accept the emendation to **tandat*, the *-r-* can be explained, with Gr., as adopted from the nominal derivatives (*á-*)*tandra-* and *tandra(yú-)* (cf. also AV *tandr̥-*).

II.30.8: Note that pāda a is modeled exactly on 6c.

II.30.9: Ge (/WG) supply a verb as the 1st member of the disjunctive *utá vā* constr., contrasting with *jighatnúḥ* (“Wenn uns ein Unbekannter (nachstellt), oder töten will ...”),

invoking VI.5.4 with *yó naḥ sánutyā abhidāsat* ... But more salient in VI.5.4 is the contrastive pair *yāḥ ... sánutyāḥ ... yó ántaraḥ* ... Therefore, flg. Schmidt (B+I 81; also Klein DGRV II.171), I supply *yó ántaraḥ* as the 2nd part of the disjunctive phrase. Re actually proposes a clever variation on the “distant ... near” contrast, pairing *abhikhāya*, which he renders “(regandant) en face,” with *sánutyāḥ*. This avoids the need to supply additional material, but employing the rare gerund simply as a polar term with ‘distant’ seems unlikely.

As Gr points out, the idiomatic sense ‘hand over, deliver’ is characteristic of *pári √ dā*, not *pári √ dhā*, which generally means ‘clothe, surround’. He suggests that this sense of *pári √ dhā* is attributable to “Verwechslung mit dā.” In a quick scan of the Gr’s conspectus of *dhā* forms, I found only one example of *pári √ dhā* ‘deliver’, namely our *pári dhehi*. I wonder if *dhehi* for **dehi* is a nonce hypercorrection, for a form that might have appeared to have undergone Grassmann’s Law because of the *-hi* ending.

II.30.10: The literal meaning of *ánudhūpita-* is fairly clear, ‘besmoked’, but there is disagreement about its sense. Gr suggests that it means ‘puffed up, arrogant’, while Ge (/WG) think it refers to besieging enemy strongholds with fire and smoke. (If this were the case, one would think “a long time” was the wrong qualifier: smoke and fire should do the trick fairly quickly or not at all, I would think.) I am more in favor of Re’s equivalence with *mohita-* ‘bewildered’, a negative mental state. In my view, ‘besmoked’ means either that their minds have been darkened and led astray to evil ways *or* that they have become confused / befuddled by our constant threats and attacks and it is time for us to administer the coup de grâce.

II.30.11: On the ring between 1c #*áhar-ahar* and 11d *divé-dive*#, see publ. intro. What I failed to note there (as IH pointed out to me) is that the *áhar-ahar* of vs. 1 was “repaired” by *divé-dive* in 2d, and the *divé-dive* here is responsive to both of them.

II.31 All Gods

Ge (/WG) follows Windisch (Fs. Roth) in seeing this hymn as an allegory, with *rátha-* ‘chariot’ = *stóma-* ‘praise’ and the solution provided only in the last vs. I find this interpr. overblown. The equation of the hymn / sacrifice with a chariot is a trite trope in the RV; I don’t see that this hymn treats the theme in a special way, but perhaps I’m missing something.

II.31.1: As pointed out in the publ. intro., the last word of the vs., *vanarśád-* ‘sitting in/on the wood(s)’, applies both to the simile -- the birds sitting in the trees -- and the frame -- the charioteers sitting on the wooden chariot. The same qualifier could also characterize other aspects of the sacrifice -- the ritual fires sitting on the firewood, the soma drinks in the wooden cups (for both of which see X.46.7). It is more difficult to apply it to the priests, who are presumably the underlying referents of the plural subject here.

II.31.5: The root noun cmpd *apījū-* is somewhat puzzling, in that the 1st member *api-* (*apī-* with lengthening at cmpd seam; for possible explan. see Scar 169 nn. 223, 224) seems to contribute nothing. In fact, the standard tr. simply ignore it. Scar is on the right track, I

think, in taking it as only loosely compounded and meaning something like “also speeders,” perhaps, in order to preserve some compd sense, “speeders in addition.”

On *nāvyaśā vácaḥ* see comm. ad VIII.39.2.

Pāda d in itself and in its syntactic relation to c is also problematic. Perhaps the first, and possibly the easiest, issue is the apparently untethered *ca*. Klein (DGRV I.226–27) takes it as conjoining the two pādas c and d, but this requires supplying a verb (*kr̥nve*, flg. Ge) that has no support. I think rather that it signals a standard syntagm that has been split across the vs.: “the still and the moving” (gen. *sthātúr jágataś ca* VII.60.2, X.63.8, plus other examples with *ca*-less phrases and lexical substitutions) is a common merism for “everything earthly.” In this verse pl. *jāgatām* is found in b, where Night and Dawn are the speeders of moving things; here its formulaic partner, the still (in the sg.), is about to receive an underlayer of vigor. The *ca* simply reminds us that b and d are implicitly contrasted: moving things are impelled to even more movement, whereas still things are about to acquire a solid base. To draw attention to the pairing it might be worthwhile to begin the tr. of d with “and as for the still (world) ...”

Another of the questions is the grammatical identity of *trīvayāḥ*: is this bahuvrīhi *s*-stem a nom. sg. masc., as it appears to be, or a nom./acc. neut., modifying *vāyaḥ*? Although the latter interpr. might seem ungrammatical, Wackernagel (AiG III.288) tentatively allows neut. *-s*-stem nom./acc. in *-āḥ*, though the number of exx. he cites is small (see Lanman, Noun Infl. 560, for a longer but less reliable list) and it is possible that they could all be explained in other ways. Nonetheless, in VII.24.2 (see comm. ad loc.) I do take *dvibárhā(h)* as a neut.; in IV.11.3 and X.80.4 *vīrápeśā(h)* must have a neut. sg. reading, sim. *devávyacā(h)* in III.4.4; and a neut. interpr. is the standard one for *trīvayāḥ* here (e.g., Re “la vigueur tri-vigorante”). By contrast I take it in the publ. tr. as a nom. sg. masc., modifying the 1st sg. subject of *stuśé*, hence “I possessing triple vigor ...” I still think this is quite possible, but I do not consider the alternative (“... to strew triple vigorous vigor as the underlayer ...”) out of the question.

The last question is who is doing the strewing. In my publ. tr. it is “I,” and again I still consider this possible. But I think it’s also possible that I praise Heaven and Earth so that *they* will provide the underlayer. This is esp. likely if *trīvayāḥ* is taken as neut.: “I praise you two ... (for you) to strew triple-vigorous vigor ...” The pair, or at least Earth, makes sense as the cosmic entity that would provide a base for the still, whereas Night and Dawn, in constant motion, make sense as the speeders of the moving things.

II.31.6: The first hemistich begins and ends with *utá*. The pāda-final *utá* of 6b puts a cap on the series of verse-initial *utá*’s that began in 3a (3a, 4a, 5a, 6a). This is perhaps fitting because vs. 6 ends the capacious list of gods of every sort (from mighty Indra to shadowy Aja Ekapad) who have been strung together additively.

The vs., or rather pādas a and d, plays on *ś*: *śáṃsam uśijām ... śmasi / āśuhémā ... śámi*. This may be in part to showcase the unusual truncated verb *śmasi* ending pāda a; note that verse-final *śámi* is a virtual anagram of this verb. This *śámi* is also echoed by hemistich-final *sám* in 7b (in an unusual position). There are also echoes from earlier in the hymn: *āśu*-picks up *āśávaḥ* (2a) as *ékapād* does *pádyābhiḥ* (likewise 2a). IH cleverly points out that the position of *śmasi* after (*i*)*va* ([*ī*] *va śmasi*) hints at the root $\sqrt{vaś}$. See *vaśmi* in the next vs.

The Uśij-priests are credited with the production of a particular *śáṃsa*- elsewhere, the *āyóḥ śáṃsa*- (IV.6.11, V.3.4). For further see comm. ad II.32.2.

For echoes of this vs. in X.92.12, see comm. ad loc.

II.31.7: The 1st sg. *vaśmi* may be seen as a type of poetic repair, anchoring the truncated *(u)śmasi* of 6a.

II.32 Various Gods

II.32.1: The first hemistich here, with the skeleton *asyá me dyāvāprthivī ... bhūtám avitrī vácasaḥ* ... “become helpers of this speech of mine, o Heaven and Earth” is somewhat reminiscent of the famous refrain in I.105 *vittám me asyá rodasī* “take heed of this (speech) of mine, you two world halves,” though with aid rather than mere attention asked of Heaven and Earth. The different ordering of the two genitives *asyá* and *me* in the two passages conforms to our expectations of the positioning of enclitics.

The syntax of the second hemistich is rather stiff and clotted, with an oblique nominal relative clause (“of which two there is extensive lifetime”) picked up by a long main clause beginning in the middle of pāda c with the 3rd ps. du. prn. *té*. It is only after some time that we discover that *té* is an accusative, the object of verse-final *dadhe*, and that it is doubled by du. enclitic *vām*, which switches the reference to 2nd ps. The enclitic *vām* is very oddly placed, smack in the middle of pāda d, not leaning on any of its adjacent elements semantically, as far as I can see. Moreover, *puráh ... dadhe* seems to be a phrasal verb, but with the two parts of the phrase distant from each other and separated by extraneous material.

II.32.2: The first pāda of this vs. is esp. puzzling. As usual in the RV, Āyu sows confusion, and here, since it is not clear who/what Āyu represents, it is also unclear with what to construe the gen. *āyóḥ*. The standard interpr. take it with *rípaḥ* ‘swindles, tricks’, while I attach it to *áhan* ‘day’ (with no confidence in its correctness; Old explicitly rejects it). The problem is that Āyu is generally viewed positively, including in Maṇḍala II, as in II.2.8 where the ritual fire is “the guest dear to Āyu” and II.4.2 where the Bhṛgu deposit the ritual fire “among the clans of Āyu.” If Āyu is positive in value, then the “swindles of Āyu” must be those directed against him, as Old points out. But as he also points out, the more natural reading of this gen. would be subjective (“swindles perpetrated by Āyu”), not objective. It must be admitted that once in this maṇḍala (II.14.7), Āyu *is* viewed negatively: Indra strikes down the heroes of Āyu along with those of Kutsa and Atithigva, a trio that is subject to Indra’s violence elsewhere, though also individually named as Indra’s comrades in still other passages. More to the point, in my opinion, is the apparent formula VERB *uśíjaḥ śáṃsam āyóḥ* “The Uśij-priests X-ED the Laud of Āyu” (IV.6.11, V.3.4). In the immediately preceding hymn, II.31, we find in 6a the expression *śáṃsam uśíjām* “the Laud of the Uśij-priests,” and in the next vs., 7b, the Āyu-s (pl.) figure as fashioners of ritual speech. This suggestive juxtaposition and echo of the fuller expression “Laud of Āyu” found in the preceding closely related hymn suggest that Āyu here is viewed positively and is related to the ritual; I therefore think that “the day of Āyu” is a way of referring to the day of the sacrifice.

Most forms belonging to the thematic stem *dābha-* must be root aor. subjunctives, but here the *mā* requires an injunctive. Formally the root aor. injunctive should have a zero-grade root, **dbhan*, but obviously such a form is not viable. With full-grade restored, the injunctive is identical to the subjunctive. On these forms see Hoffman (Injunk. 242–43), who suggests that a new injunc. *dabhur* was created to avoid this functional coincidence.

sakhyā occurs several times with *vívyu* ‘keep away’. Narten (Sig. Aor. 214) states that the *s*-aor. to this root is intrans., and Ge (/WG) render it thus here: “Nicht soll sich unserer Freundschaft lösen,” presumably with neut. pl. *sakhyā* as subj. of the sg. verb. However, VIII.86.1 *mā no ví yausṭam sakhyā*, with dual verb seems to me decisive for a transitive interpr. of this idiom. In the publ. tr. (“Do not keep us far away from your companionship”) I take *sakhyā* as an instr. (sg.) of separation. However, it is also possible that it is an acc. pl., with the tr. “Do not keep your companionship(s) far away from us.” See IV.16.20.

The phrase *viddhí tāsya naḥ* (“know this (speech?) of ours” in the publ. tr) resonates with I.105 *vittám me asyá* “take heed of this (speech?) of mine, which I adduced above in regard to *asyá me* ... opening our 1a. It might better have been tr. with “take heed.”

II.32.3: The priests’ *sumnāyatā mānasā* “with a mind seeking favor” is, hopefully, matched by the god’s *āheḥatā mānasā* “with a mind without anger.”

As in the previous hymn, II.31.2, *pádyābhiḥ* is directly adjacent to a form of *āśú-* ‘swift’. Ge (/WG) take *pádyā-* as ‘heels’: “(Wie) en siegesstarkes Rennpferd mit den Fersen.” The image assumed must be from horseback riding, with the rider spurring the horse on by putting pressure on the horse’s flank with his heels. But the evidence for horseback riding in the RV is scant, and, as I understand it, the racing that is done involves chariots. (On the other hand, there may be mention of “a hero on horseback” [*vīró árvati*] in the next hymn, II.33.1, though it probably refers to Rudra.) Not only does this heel-spurring not fit the realia, as far as we know it, but it makes trouble for the verbal structure, because “with the heels” would at best only be appropriate to the simile (“(like) a swift prize-winner”) not the frame (“you”: we are hardly likely to be poking the god in the side with our heels). And finally, although the heel is of course a part of the foot and so *pádyā-/pádyā-* could in theory refer to it, no other occurrences of either of these stems seems so specialized, and we do have a perfectly good inherited word for ‘heel’, *pārṣṇi-*. I therefore think *pádyā-* means ‘pace, footstep’. In the simile, “with paces” would refer either to the training the horse is put through or to the pace of another horse running in front or at its side meant to keep the *vājín-* up to speed. Its use in the frame is more complex. On the one hand, the steps can refer to the movements of the Adhvaryu around the ritual ground; his physical activity is implicitly contrasted with the verbal activity (*vācasā*) of the Hotar (and Udgātar). I also think that *pádyā-* can refer to verses measured in feet, metrical measures. Although Re thinks this unlikely (“tentant, mais trop hardi”), I see nothing against it.

II.32.4: The adj. *śatādāya-* has a more precise meaning than the standard tr. (e.g., Ge “vollwertigen”) and one different from that in the publ. tr. (“having a hundred shares,” flg. Gr). It was long ago established by Roth (ZDMG 41: 672–76) that this has to do with

Wergeld or the worth of a man as measured in cows, hence here ‘(for whom) a hundred (cows) are to be given’; cf. Ge’s n. 4d, Macdonell-Keith Vedic Index s.v. *vaira*, and V.61.8 with comm. ad loc. I would therefore emend the tr. to “a hero worth a hundred (cows) ...”

II.32.8: The divine females named here, including Sinīvālī and Rākā, are all found elsewhere, except for Guṅgū (*guṅgū*). She is presumably connected in some way to the people called Guṅgu (*guṅgú-*) found in X.48.7, to whom Indra restores one Atithigva.

II.33 Rudra

This is a much-anthologized hymn, fully translated by Macdonell in VRS, Doniger, and Maurer. Its popularity is not surprising: it’s lively and varied, but does not pose major difficulties, though it has its share of small knots.

Re EVP XV.157–60.

II.33.1: The only difficult pāda is c, which has received a variety of interpr. The first question is whether *vīró árvati* should be construed together or *árvati* taken with some other part of the clause. With Ge (/WG) I take the two words together in the publ. tr.; most other tr. (Macdonell, Re, Doniger, Maurer) take it with *naḥ* or directly with the verb *abhí ... kṣameta*. Ge (/WG) take the hero to be one of us, a human; this leads Ge to interpr. the verb as passive (“Es möge unser Kriegermann zu Ross verschont blieben”), although all forms of this idiom, med. *abhí√kṣam*, all of which appear in this little group of hymns (II.28.3, 29.2, 33.1, 33.7), have the same meaning, “be indulgent/patient towards” (see esp. vs. 7). With most tr. I instead understand *vīrá-* to be Rudra; it is appropriate to ask for his indulgence or patience. This leads us to the question of whether Rudra is likely to be on horseback. I know of no evidence for or against, but given that Rudra is the Maruts’ father and they are often associated with horses, it is certainly possible. However, the only other occurrence of *árvati* in the RV (VIII.71.12) appears to be an unmarked loc. absolute: we ask Agni for help “when a charger (is at stake).” It is therefore possible that the same usage is found here, and the pāda should mean “The hero should be indulgent to us when a charger (is at stake).” I leave the question open.

II.33.3: This is the only occurrence of sg. *vájra-bāhu-* that doesn’t qualify Indra. (The only non-sg. form is dual *vájra-bāhū* addressed to Indra and Agni in I.109.7.) I do not know why Rudra is thus identified here.

II.33.4: The *sáhūti-*, a joint invocation (with another god or gods), may be a sore subject for Rudra. As pointed out in the publ. intro., he receives only three hymns dedicated to him alone in the RV; otherwise two hymns joint with Soma and incidental mentions in hymns to other gods. He may feel slighted. See also disc. ad VI.49.10.

II.33.5: I am in agreement with most tr. (though not Macd.) that pāda b is the thought of the subject of the rel. cl. in pāda a, namely the over-zealous sacrificer. The verb *áva ... diśīya* belongs not with *√dā* ‘give’ (with Gr), but *√dā* ‘cut, divide’ (so already Wh Roots); see esp. Narten (Sig Aor. 138–40). The idiom *áva√dā* is generally taken, including by Narten, to mean ‘abfinden’ (propitiate, compensate), but I think it has a

more literal meaning here, ‘cut off’. The too-little ritual service of vs. 4 -- poor praise (*dúṣṭuti-*) and shared invocation (*sáhūti-*) -- meets the contrasting fault in vs. 5: the over-eager worshiper who wants Rudra as his own exclusively. This is a dramatic opposite of the *sáhūti-*; not only an invocation directed only to this god, but one not jointly produced by the group of priests and worshippers. Such a private one-on-one human-divine relationship would be quite anomalous in the RVic religious world, where divine service requires cooperation among various ritual personnel. The personal appeals in the Vasiṣṭha-Varuṇa hymns of VII have such a strong impact in part because they deviate so far from ordinary religious practice.

The standard interpr. of the second hemistich makes the main clause rather loosely attached to the rel. cl. of pāda a. The “us” (*naḥ*) of c is supposed to pick up the *yáḥ* of a and the *manā-* of d is supposed to refer rather vaguely to the sentiment expressed in ab: in other words, we don’t want to be the sort of person who might think such a thing or be suspected of thinking such a thing. I think the connection is much simpler. *manā-* is generally ‘zeal’ or ‘enthusiasm’; it is not inherently a negative notion, but becomes negative in the wrong hands (or mind). In my interpr., the “whoever” of the rel. cl. in a is our sacrificial rival, who is trying to cut us out of the deal, as it were, by getting Rudra to himself. We beg Rudra not to make us subject to, subordinate to, his over-zealous action.

The epithet *rdūdára-* ‘tender-hearted’ is a charming phonetic play on Rudra’s name, which is almost always read trisyllabically (*r^udara*) in this hymn.

Another adj. (see 3b above) otherwise used (almost) exclusively of Indra: *suśípra-* ‘well-lipped’ (of Agni V.22.4; in pl. of Ṛbhukṣans VII.37.1).

II.33.6: On *ghīṇī* see Old.

I take ‘favor’ (*sumnám*) as the gapped goal of the verb in c, *aśīya* ‘might I reach’.

II.33.7: In b the *yó ástī ...* clause might appear to be embedded in the main clause, if c resumes the question posed in a. However, c could simply be part of the rel. cl. Even if b is embedded, it is unproblematic, since nominal rel. clauses are an exception to the no-embedding rule, functioning rather like izafe-s. See my “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian: Proto-proto Izafe” forthcoming in a Fs.

In d *abhī ... cakṣamīthāḥ* reprises 1c *abhī ... kṣameta*. Given that final lengthening in the preverb *abhī* is extremely rare (Lub: 739 *abhī*, 14 *abhī̃*), I am inclined to interpr. the form as *abhī ī*, with the enclitic acc. anticipating the obj. *mā*, esp. given that in vs. 1 in this same idiom *abhī* appears without length. For another ex. of *ī* coalescing with a final short *i*, see *rākṣatī* < *rākṣati* + *ī* in II.26.4.

II.33.8: The verb in c, *namasyā*, can be either 2nd sg. impv. or 1st sg. subj., and translations differ. Because of the surrounding 1st ps. verbs (b: 1st sg. *īrayāmi*, d: 1st pl. *grṇīmāsī*) I opt for the 1st sg. subjunctive, though there are no implications either way.

kalmalīkīn- is obviously a possessive *-īn*-stem built to a *-ka*-suffixed form of *kalmalī-*, found once in the AV (XV.2.1–4) in unclear meaning, as descriptor of a jewel. The *ī*s and the reduplicative rhyming formation (*kal-ma-*) mark it as non-standard and suggest that it is affective in some fashion. My tr. “sparkling one” is similar to those of others, but given the uncertainty of the word and its base, it should have been marked with a question mark.

II.33.9: The tr. should be slight adjusted to “this ... world,” to reflect the adjectival demonst. *asyá*.

II.33.10: Given that the two words for ‘bow’, *dhānus-* and *dhānvan-*, are suppletive in the RV with the former supplying the nom./acc. sg. and the latter the rest of the paradigm (see disc. ad VI.75.2), my tr. of *dhānvā* (and indeed the various tr. of Re, Macd, Doniger, and Maurer; Ge’s “trägst du Pfeile und Bogen” is ambiguous, because Bogen is both sg. and pl.) as singular must be wrong, and Gr’s identification of the form as pl. is correct. In fact, though the Pp reads *dhānva* with short final, in the Saṃhitā text the word spans the pāda boundary and coalesces with the following word as *dhānvārhann* and so could be underlyingly *dhānvā*, with an unambig. pl. ending. In any case I would alter the publ. tr. to “arrows and bows.”

The VP in c, *idām dayase víśvam ābhvam*, is variously rendered: Ge “verfügst du über all diese Gewalt,” Macd “wieldest all this force” (sim. Doniger, Maurer) versus Re “tu détruis tout mal-informe,” WG “... zerstörst du all dieses Unwesen.” I do not think either of these approaches is correct. On the one hand, *ābhva-* does not mean ‘power’, but rather ‘formless(ness)’, often conceived as monstrous (Re’s ‘mal-informe’ [badly shapeless], though odd, seems close). Nor does *dayate*, if belonging to $\sqrt{dā}$ ‘cut, divide, distribute’ as Ge et al. seem to take it, mean ‘wield, have control’. As for the other view, Re simply states that *dāyate* can mean ‘destroy’, while WG explicitly adopt Gotō’s view (1st class pres., 172–74) that there are two distinct roots $\sqrt{dā}$ that have *dāyate* as pres., one ‘divide, distribute’, the other ‘destroy’. None of the passages adduced by Gotō for ‘destroy’ requires segregation in a separate root that has little else to support its existence; they can all be seen as metaphorical extensions of ‘divide, cut apart’ (3 of the 5 passages occur with *vī*), an extension well within the bounds of RVic poetic imagination (though perhaps not of all its commentators). My own view is that the action attributed to Rudra here is a cosmogonic one, regularly performed by other Rigvedic gods, namely the division of the formless chaos of the pre-creation universe into what will later be referred to by the expression “name-and-form” (*nāma-rūpa-*) As I have discussed in numerous other places (see, e.g., my someday (?) forthcoming “The Blob in Ancient India”), the Vedic conception of creation involves division into separate entities, with clear boundaries and names, of an originally fuzzy boundary-less mass, which strikes horror in the hearts of Vedic people. In my view, the verb *dayate* here has its standard root meaning, ‘cut, divide, apportion’, and Rudra is engaged in cosmogonic division. In this sense the verb often occurs with the preverb *vī*, which sometimes occurs directly after the verb occupying post-caesura position (e.g. ... *dāyase vī* ... VI.37.4, VII.23.4). Although the preverb is not found here, *víśvam* immediately follows the verb and evokes the preverb. Note a different use of the same root in vs. 5; also note that *nāma* is found in 8d and *-rūpa-* in 9a, evoking the notion “name and form.”

In my publ tr. I did not fully render the *idām*, however. I would substitute “this whole formless void” or perhaps “the whole formless void here.”

II.33.12: Although most tr. (Ge, Re, Doniger, Maurer, but not Macd) take *nānāma* as 1st sg., with nom. *kumārāḥ* relegated to a simile, I follow Kü (278) (and Macd., see also Gr) in taking *nānāma* as 3rd sg. For one thing, *cid* isn’t a simile particle (*pace* Ge), and so this

would have to be an unmarked simile (not, of course, impossible), and for another we might expect (or at least hope for) **nānama* with short root vowel as a 1st sg. pf. The point of the half-vs. must be that even a little boy knows to honor someone more powerful and distinguished than he is, and so I surely know to do the same.

II.33.13: The *śām(tama)*- here makes a ring with *śāmtama*- in 2a.

Note that in HvN the voc. *vr̥ṣaṇo* is wrongly given as accented (*vr̥ṣaṇo*).

II.33.14: As IH pointed out to me, *gāt* in b should have a modal reading, either as an injunc. matching the precative value of the preceding verb *vr̥jyāḥ* or expressing the imperatival value often found in root aor. injunctives; hence either “should go around us” or “let it go around us.”

The mid. impv. (*áva ...*) *tanuṣva* suggests that it is Rudra’s own bows that should be un-strung. Recall that he bore the bow in 10a (*bibharṣi ... dhánva*).

II.33.15: In the publ. tr., the *yáthā* cl. is rendered as a purpose cl. (“... that you do not become angry ...”), but *yáthā* purpose cls. always take the subjunctive, as Macd. already pointed out. It should rather be construed with the vs.-initial *evā*, in the usual “just as ..., so ...” relationship, though with the usual order reversed. Macd. also recognized this, but suggested that *evā* is “to be taken with c, since in the normal syntactical order it should follow *yáthā* in the sense which it has here.” This is a trickier piece of syntax than I think can be justified — hopscotching the *evā* over the whole *yáthā* clause — and the contents of c do not conform to the standard usage of summary *evā*. Instead I think *evā* sums up the successful achievement of the wishes expressed in the preceding vs. (and perhaps in the whole preceding hymn): “even as you are not angry and do not smite, so (it is): the missile has avoided us, the bows are unstrung, etc.” This is somewhat hard to render in Engl., but I would change the publ. tr. to “Just as you are not angry and do not smite, so (it has come to pass).”

II.34 Maruts

A very difficult hymn, whose problems were perhaps not sufficiently signalled in the publ. intro.

II.34.1: Old rejects the cmpd interpr of *dhārāvarā-* and takes *-varā-* as a suffix meaning ‘reich an’; Ge (/WG, the latter explicitly) follow his interpr. But as Re pts. out there is no such secondary suffix in the RV -- *pace* Debrunner (AiG II.2.908), who lists this as the earliest example of the *-vara-* / *-vala-* suffix in the sense of *-vant-*. It is also Deb’s only *r*-form; the remaining examples listed have *-vala-*. (Curiously, early in II.2 [p. 98] he glosses *dhārā-varā-* as ‘Regengüsse liebend’, with the cmpd interpr., so he doesn’t seem to have paid full attention to this hapax.) One of Old’s objections to the cmpd interpr. is that the accent rules out a bahuvr̥hi, but I see no reason why it can’t be a tatpuruṣa with *varā-* ‘wooer’ as 2nd member.

It is notable that “unclosing the cows” (*ápa gā avṛṇata*), the standard culmination of the Vala myth, is here attributed to the Maruts, who ordinarily do not participate in that myth. Of course here “cows” could stand for rain clouds; see the flaming cows in vs. 5.

II.34.2–5: Note the concentration of *pr̥SIB* forms: 2d *pr̥śnīyāḥ*, 3d *pr̥kṣām* ... *pr̥ṣatībhiḥ*, 4a *pr̥kṣé*, 4c *pr̥ṣadaśva* (and scrambled *-śiprā* in 3c, *rapsā-* in 5a).

II.34.2: In pāda a the *-in*-stem *khādīn-* in the frame corresponds functionally to the instr. *stībhiḥ* in the simile. See 4d below.

The 2nd hemistich presents a severe mismatch between semantic/contextual expectations and morphosyntax. As we know, Rudra is the father of the Maruts. This vs. contains a nom. sg. *rudrāḥ* and enclitic 2nd pl. *vaḥ* referring to the Maruts, which can be acc., dat., or gen., and a form of the verb $\sqrt{\text{jan}}$ ‘beget’. All the standard tr. render the expression “Rudra begot you, o Maruts” (vel sim.). The problem is that the verb is *ājani*, a form of the so-called passive aor. Re breezily remarks “seul cas de valeur transitive.” But not only are the other occurrences of this form intrans./pass., but it belongs to a formation (the “passive aorist”) that is strongly typed for this function. Moreover, the medial *-iṣ*-aor. forms loosely associated with this form (*ājaniṣṭa*, etc.) are overwhelmingly intrans./pass. It is inconceivable to me that a Vedic audience would attribute or accept transitive value for *ājani* here, given the robust grammatical support for intrans./passive value.

I therefore think we must interpr. it acdg. to its formal shape, rather than imposing a transitive sense to make the passage easier (or easier by our lights). My way of doing so also requires us to read the sandhi form *śukrā* as nom. sg. *śukrāḥ*, rather than the Pp.’s loc. *śukré*. In this interpr. nom. sg. *vṛṣā* ... *śukrāḥ* is a secondary predicate of *rudrāḥ*: “R. was born *as bullish semen* in the udder of Pṛṣni.” It is this semen that combines with Pṛṣni to produce the Maruts; it can also, in naturalistic terms, be the rain in the thunderclouds that are Pṛṣni’s udder. This gender mingling and loss of distinction between the Maruts’ bull-father (=Rudra) and their mother Pṛṣni in the udder are also found, in somewhat different fashion, in IV.3.10d *vṛṣā śukrām duduhe pṛṣnir ūdhaḥ* “the bull as Pṛṣni milked gleaming (milk/semen) from his (/her) udder” and in VI.66.1d *sakīc chukrām duduhe pṛṣnir ūdhaḥ* “only once did Pṛṣni milk the gleaming (milk/semen) from the udder.” See also VI.48.22 and comm. ad loc., which may also refer to the birth of Rudra/his semen as occurring before the birth(s) of the Maruts.

It is somewhat remarkable that both Griffith and Max Müller (SBE) also take *ājani* seriously (“Rudra ... sprang into life for you in P’s radiant lap” and “as soon as R. ... was born for you ... in the bright lap of P.” respectively; see also von Bradke, Fs. Roth, p. 118). Perhaps the commentators who came later wished to distance themselves from these not-always-reliable role models even when they appear to be right.

II.34.3: My rendering of *nadāsya kārṇaiḥ* “with the ‘ears’ of the reed(-whip)” follows Pischel’s sugg. (Ved. Stud. I.191; see Ge’s n. 3bc and Old) that *nadā-* is here ‘reed’ (cf. I.32.8) (beside *nadā-* ‘id.’) rather than ‘roarer’ and that it refers to a whip or riding crop of some sort. I suggest that the “ears” would be some part of the whip, perhaps knots on the whiplashes or the like. Pischel’s idea has been generally rejected (though Oberlies [Relig. II.247] seems to accept it); see esp. Old’s negative remarks. But the alternative notion, that the Maruts are directing their horses by the ears of a(nother? side?) horse makes no sense to me: how would such direction work? And although Old explicitly states that the number is not an issue, referring to plural (not dual) ears of a single horse (or even

several horses, since pairs of body parts generally are referred to in the dual even when several individuals are in question) seems problematic to me.

In my interpr. the two instr. pls. *kārnaiḥ* and *āśúbhiḥ* are separate. So also Old, Re, though they otherwise accept the lead-ear theory. But Ge (/WG) construe them together (“with swift ears”), which in my view makes a puzzling interpr. even more so.

The next question is how to interpr. the intensive part. *dāvidhvataḥ*. Though the stem is usually transitive, Ge (/WG) take it absolutely (“schüttelnd”), while Re supplies an obj. seemingly at random (“qui secouez-puissamment (le monde)”). I extract ‘lips’ (*śípra-*) from the cmpd. *hīraṇyāśípra-*, since du. *śípre* serves as object to just this participle in X.96.9.

The *prkṣám* of d should not be severed from *prkṣé* beginning 4a, though at least in Ge’s (/WG’s) tr. the connection is not signalled (Re’s rendering does connect them). In general thematic *prkṣá-* refers to a strengthening substance, esp. nourishment. The corresponding root noun *prkṣ-* has the same basic sense (see Schindler, Rt Noun, s.v.), but here in the dat. is used infinitively (so also Schindler, as well as the standard tr.). The phrase *prkṣám yātha* may well be a syntagm, judging from the PN *prkṣá-yāma* in I.122.7 (adduced by Old), and the acc. appears to be a goal, contra Ge’s (/WG) rendering of *prkṣám* as an adverb (“kräftig”).

II.34.4: The two alternatives marked by *vā* ‘or’ (“to fortify all creatures or for alliance”) seem to have little to do with each other. Perhaps we are meant to assume “for alliance with all creatures” for the second alternative, hence my “(with them).”

As in 2a an element found in a free syntagm in the simile has its correspondent in a compound: loc. *vayúneṣu* matches *dhūr-* and both are governed by the cmpd 2nd member *-śád-*, at least in my interpr. (guided by Th., Unters., 23); the other standard tr. do not take *vayúneṣu* with the simile.

The meaning and etym. of the word *vayúna-* are much disputed; see EWA s.v., which lemma consists only of a list of secondary lit. I follow Th’s interpr. (Unters.) to some degree, but consider it more likely a derivative of the (secondary) root $\sqrt{vā}$ ‘weave’ than of $\sqrt{vyā}$ ‘envelop’ and the more likely meaning ‘pattern, tracery’ than ‘Umhüllung’. This literal meaning (arising from the repetitive patterns found in woven material) can then be applied, on the one hand, to similar visual effects (e.g., light and shadow produced by sunlight filtering through trees and bushes) or metaphorically to phenomena that show similarly repetitive patterns, such as ritual procedures. In this particular passage both senses may be at play. In the simile (in my view) the birds are sitting on “the tracteries (of the branches)”: the pattern of light and shade I just alluded to is turned on its head, to refer to the branches that produce those light patterns. But it is also possible to construe it with the frame, where the Maruts sitting at the chariot pole (often a metaphor evoking the chariot of sacrifice; see, e.g., the same cmpd *dhūrśád-* applied to Agni at the sacrifice in the 2nd hymn in this maṇḍala [II.2.1]) could also be sitting among the ritual patterns of the ongoing ceremony. I continue to maintain, however, that *vayúneṣu* here belongs primarily to the simile. I also suggest that *vayúneṣu* subtly evokes the word(s) we might expect in this simile. Birds usually sit in trees, and *vāneṣu* \sqrt{sad} is fairly common; compare esp. *vanarśád-* (with a bird simile) in nearby II.31.1 (and X.132.7 *dhūrśádam vanarśádam* with the same pole-sitting as here). There is also the word *vayā-* ‘twig’, which might be another place birds would be expected to sit (though it does not occur in

the loc., unfortunately). A form of this rarer word is found in the next hymn (II.35.8). I therefore wonder if *vayúna*- here is felt as a nonce blend of *vána*- and *vayā*-, in addition to having its own regular sense.

II.34.5: Despite the almost comic image of the flaming cows, the reference in this half-verse is fairly clear. The cows with their teeming udders must be the thunderclouds; their ‘enflaming’ quality is presumably the lightning. Although the formation of the hapax *índhanvan*- is morphologically peculiar, it can hardly belong with anything but the nasal-infix present to *√idh* ‘kindle’, unless it is corrupt (as Old suggests).

The simile “like geese to good pastures” may initially seem unusual -- we expect *cows* to come to good pastures (see 8c below), not geese. But anyone familiar with Canada geese frequently sees flocks of them in pastures and post-harvest grain fields, and a Google search of “Canada geese in pastures” turns up numerous complaints about their regular mess-producing presence therein, as well as numerous pictures; similar pictures of (Indian) bar headed geese feeding in fields also turn up in a Google search. The image is appropriate to the Maruts, who would fly down in a flock to settle on the ritual ground just as flocks of geese do in fields.

Note the alliterative pāda d: *mádhora mādāya marutaḥ samanyavaḥ*.

II.34.6: The free syntagm *narām (ná) śámsa*- with gen. pl. *narām* is found also in I.173.9–10 and, in reversed order, in VI.24.2 *śámsa narām*. It is obviously a variant of the doubly accented cmpd *nārā-śámsa*-, which also occurs in tmesis without conversion of the 1st member to gen. pl. in *nārā (ca/vā) śámsa*- (IV.86.42 and X.64.3 respectively). It is possible that the final *-m* of *narām* was generated by the initial nasal of *ná* and the accent adjusted to produce a case form from an underlying **nārā ná śámsa*- in the three occurrences of this syntagm that have this order; the meter would be unaffected. However, the example with the opposite order makes this less likely. In any case, this scarcely matters; the problem is to figure out the referent of the phrase here, whose head is nom. sg. and therefore must be compared to the subj. of the impv. *gantana*, namely the Maruts. *Narāśamsa* is a shadowy divine figure or divine epithet (cf. Re, EVP X.76 n. 7: “la Récitation personifiée?”), who has a regular role in Āprī hymns (generally in the 3rd vs.) and is sometimes identified with Agni and less frequently with other gods (see, e.g., Macdonell, Ved. Myth., p. 100). So our vs. may be comparing the Maruts to a divine figure who should be at the sacrifice -- quite possibly Agni. (This interpr. is explicitly rejected by Re. in favor of a common noun “la récitation faite par les officiants,” EVP X.76 n. 7.) Or, in keeping with Re’s view, it may refer to a ritual element, the laud, that should be present at the sacrifice. Alternatively, and in keeping with my interpr. of the expression in VI.24.2 (see comm. there) and the phrase *śámsam āyóḥ* (IV.6.11, V.3.4), it may refer to the gods as being like the embodiment of the praise they receive, in an idiom like English “the toast of the town.” Under this interpr. I would alter the tr. to “like the Laud of Men.” In any case, by most interpr. of the cmpd (and associated syntagms) the ‘men’ (*narām*) are in subject-relation to *śámsa*:- that is, they are producing the laud, not receiving it.

The 2nd pl. act. impv. *pipyata* belongs to the perfect stem, but shows pseudo-thematic inflection (expect **pipita*). On such forms see my 2018 “The Vedic Perfect Imperative and the Status of Modal Forms to Tense-Aspect Stems” (Fs. Lubotsky);

briefly, the act. pseudo-thematic impvs. begin, I think, in the dual act. imperatives (here 2nd du. *pipyatam* 4x, 3rd du. *pipyatām* 1x), which owe their disyllabic desinence to the indic. dual endings *-athus*, *-atus*. Subsequently the *-a*-liaison had a limited spread, here to the phonologically similar 2nd pl.

The phrase *dhíyam ... vājapeśasam* “visionary thought that has prizes as its ornament” is a shorthand way to refer to the standard ritual tit-for-tat, with the gods giving material goods in exchange for praise. But it also probably incorporates another element of that exchange, that the gods themselves inspire or create in the poet the poetic vision that he then shapes into praise of them.

II.34.8: The function of the presumed loc. *bhāge* (*bhāga* in sandhi) is unclear. Ge (/WG) construe it with *sudānavah* (“die im Glück freigegeben”), but this common epithet never elsewhere participates in a syntagm. Re takes it as an expression of purpose, and my tr. also reflects such a function, though the loc. doesn’t ordinarily express purpose. I wonder if this is not a (deliberately) mangled dative. Our supposed loc. (the only loc. to this stem in the RV) is immediately followed by *ā* (*bhāga ā*), which resembles the dat. *bhāgāya* with quantity flip. If this seems too radical, we can simply take it as loc. + *ā* and interpr. it as “in (a state of) good fortune” vel sim.

The simile in c can be viewed as poetic repair for the one in 5c discussed above: “like geese to good pastures” there seemed a bit off (though in fact perfectly compatible with observed realia); here the milk-cow in good pastures provides the expected pairing of cow and fodder.

However, the simile here is off in a different way; it is an example of case disharmony (see my 1982, IJ 24 article), with the cow (nom. *dhénuḥ*) in the simile the subj. of an intrans./reflexive sense of *pínvate*, while in the frame the verb is transitive, with *īṣam* as obj. (The dat. of benefit stays constant in simile and frame.) This is possible because of the complex semantics of ‘swell’ words in the RV, also discussed in the just-cited article. It would be possible to avoid the case-disharmony explanation, by supplying ‘udder’ as obj. in the simile (“as a milk-cow swells her udder...”). Udders figure prominently in this hymn (see esp. 6c *āśvām iva pipyata dhenúm ūdhani* “make the mare, the milk-cow swell in her udder”). However, since this simile is not only intelligible without supplying an object but conforms to case disharmony patterns elsewhere, I see no reason to do so.

Not only is *pínvate* an ambiguous pivot in terms of syntactic valence, but its very morphology is exploited for ambiguity as well, at least in my view. The thematic Class I pres. *pínvati* is of course well established in the RV, but it is of course also historically a thematicization of a Class V *nó/nu* pres. **pinóti / *pinuté*, of which a few relic forms are found (e.g., med. part. *pínvāná-*). The 3rd pl. mid. to this pres. would be *pínvaté* (*pínvate* without accent), exactly the form we have here. So in the simile *pínvate* matches its singular subj. *dhénuḥ* in number, but in the frame it can also match its underlying plural subject, the Maruts, if it’s assigned to an athematic stem.

Note that the caesura splits the bahuvrīhi *rātāhaviṣe*. Though such a split is fairly common with dual dvandvas, it is considerably rarer with more tightly constructed cmpds. (I can’t offhand come up with any other exx., though I haven’t systematically looked.)

II.34.9: The cheating mortal of the rel. cl. has no surface representation in the (first) main clause, the two-word finale of pāda b, but the full clause of c contains *tām* (in unusual final position), which picks up the *yāḥ* of the rel. cl. The publ. tr. supplies a reference in the b-clause in the phrase “from *his* harm,” and this is certainly possible. It might be better, however, to treat “protect us from harm” as parenthetical as Ge does (see his n. 9b), with the real main cl. found only in c.

Re is insistent on taking *tāpus-* only as a noun, not as an adjective with the standard interpr. (incl. Gr), but though he is technically correct that the root accent should mark it as a noun (‘scorching heat’), it seems to have been reinterpr. as an adj., possibly on the basis of its regular participation in *tāpus-X* cmpds (*tāpur-jambha-*, etc.). Though these originally would have meant ‘whose X is searing heat’, it would be easy to slip into ‘having scorching X’. Alternatively MLW suggests that *cakrīyā* is adjectival here: “with the heat of/belonging to the wheel.” However, the fact that the same form *cakrīyā* in vs. 14 seems clearly to mean ‘wheel’ makes this less likely; in fact the other 5 forms of the stem *cakrī-* outside this hymn mean ‘wheel’ not ‘wheel(ed) / associated with the wheel’.

II.34.10: The sense of this vs., or rather its second half, is very uncertain. See esp. Old’s comments. In the first half, the course of the Maruts shows brightly. The intens. 3rd sg. middle with *-t-less* ending, *cékite*, is taken by Schaeffer (Intens., 44, 112) as having the (/an) old stative ending, which she takes in passive sense (“wird immer wieder erkannt”) in all occurrences of this form. The passive interpr. seems unnecessary: numerous formations to \sqrt{cit} mean simply ‘appear (bright)’. In the intens. it can mean ‘appear continuously bright’ or ‘appear ever brighter’, and this sense works well for all 5 occurrences of *cékite*. As for the form, I doubt that we need to reach into deep prehistory for a stative ending; rather it seems likely to me that it is what we might call a “perfecto-intensive,” built alongside med. pf. *cikité* with adjustment of the redupl. vowel.

A different manipulation of the perfect is probably to be seen in the verb of b, *duhúḥ* (also twice elsewhere without accent), which appears to have been generated to the *-t-less* middle root pres. 3rd pl. *duhré* (3rd sg. *duhé*) and has acquired the act. 3rd pl. ending *-úḥ* because those middle forms look like unredupl. pf. forms.

It is not entirely clear who the “friends” are who milk Pṛṣṇi’s udder. The udder itself is presumably, as elsewhere (e.g., 5a above), the rain cloud; milking it causes rain to fall. In nearby II.29.4 the friends (*āpāyaḥ* as here) are the gods, in V.53.2 more narrowly the Maruts. Either would work here, though the 2nd ps. address to the Maruts in pāda a and the 3rd ps. ref. of *āpāyaḥ* in b requires person shift if the referent is the Maruts; nonetheless, Ge and Re opt for the Maruts. It is worth noting that the word participates in a word play with the verb: (*ā*)*pāyo duhúḥ* “milk milk,” with the neut. *s-stem* *pāyas-* ‘milk’ lurking there (cf. VI.48.22 *pṛṣṇyā dugdhām sakṛt pāyaḥ*, with *pāyaḥ* \sqrt{duh} as well as Pṛṣṇi). This pun may have invited the use of the stem *āpí-*. I do not understand the purport of the immediately preceding particle *āpi*, unless it is meant to resonate with *āpāyo*. *āpi* does not otherwise appear with \sqrt{duh} , though Ge unearths an ex. in MS (where it appears to be contextually driven).

The rest of the verse is close to hopeless because, on the one hand, the role of Trita (or “the third one”) cannot be pinned down and, on the other, the syntax is slippery and there is no main verb. The standard tr. think Trita is assuming the role of scapegoat and taking on scorn and old age, to spare us (or others), on the basis of passages like

VIII.47.13. But Trita has other functions in Vedic, including in vs. 14 of this very hymn, where he is responsible for delivering multiple Hotars, and a more positive role for Trita than scapegoat therefore seems likely. He is also associated with the Maruts in V.54.2 as one who bellows when the Maruts come together with lightning (*sám vidyútā dádhati vāśati tritáh*); the presence of a roarer here (*návamānasya*) is reminiscent of that passage. My tr. is provisional; for the main verb I supply a form of $\sqrt{dhā}$ on the basis of nearby II.23.14 *yé tvā nidé dadhiré* with *nidé* as here. Although I supplied a 3rd pl. form, continuing the 3rd pl. of b, it could easily be 2nd pl. (so the standard tr.) with Maruts as subject; the voc. phrase *rudriyāḥ ... adābhyāḥ* may support the 2nd pl. Otherwise I frankly admit that my tr. is not based on a firm sense of what the passage is meant to convey. Note that scorn returns in 15b.

II.34.12: The relationship between the Daśagvas and the Maruts is not clear. Re suggests that they are identical, but I find this unlikely. The Daśagvas are a rarely mentioned collectivity, generally grouped together with their slightly more prominent kin the Navagvas and associated with Indra in the opening of the Vala cave. The Maruts, though also in Indra's entourage, are not standard participants in the Vala myth. Here they seem to be implicitly compared to the Daśagvas but not identical to them. The point presumably is to associate the Maruts' thunderstorm activity, including both the fecundity of the rain, here symbolized by cows, and the return of the light after the storm, with the powerful mythic image of the opening of Vala. The move to configure the Maruts' activity as on a par with the opening of Vala was already made in the first vs., with the VP in d *āpa gā avṛṇvata* "They unclosed the cows" (see also *śusūcānāḥ* in 1c, comparable to *śucatā* here). Describing their light as *góarṇas-* 'flooding with cows, whose flood is cows' is esp. telling, since it connects their floods of rain with the cows of the Vala myth. I supply cows as the obj. of *āporṇute* in the frame on the basis of 1d, but it might be better to take *rāmīḥ*, here tr. 'nights', as 'dark (things)', referring to nights in the simile but clouds in the frame. Hence a slightly revised tr. "As Dawn ... uncloses the dark (nights), so did they unclose the dark (clouds) ..."

II.34.13: On this vs. see Thieme KZ 92: 43–44, though his etym. of *rudrá-* (n. 34) as 'tree-breaking' (< *dru-dra-*) is best passed over in near silence. His explanation of *kṣoṇṭ-* as 'cry', here standing for thunder, is convincing. With that interpr., we can see the vs. proceed through thunder, lightning (the ornaments), rain (horse's piss), and post-storm sunshine (or even rainbow).

From the comment just above, it can be seen that I take *méghamāna-* as belonging with \sqrt{mih} 'urinate', with a misanalysis of the final *-h* as a velar, not a palatal, influenced by *meghá-* 'cloud'. For an alternative see Gotō (1st Class), 245–46.

II.34.14: The syntax of this vs. is quite broken: a nom. sg. participle (*iyānāḥ*) in pāda a is followed by a 1st pl. verb (*grṇīmasi*), but cd has a 3rd sg. verb (*āvavártat*) that may (or may not) pick up the sg. subj. of a. The vs. is also notable for the return of Trita (see 10cd above), whose function is no clearer here than there.

With regard to the number/person mismatch of ab, Ge's notion that both the 3rd sg. and the 1st pl. refer to ritual personnel seems convincing. If we take a and b as separate clauses, note that the first one has a predicated pres. participle. Since in the

dependent cl. of cd the rel. prn. (*yān*) has *tān* in a as its antecedent (both referring to the Maruts), it seems reasonable to assume that the same subject is working on both: the poet (supplied) who implores them in pāda a will cause them to turn here in cd, presumably by means of his imploring words.

It is the simile that is puzzling, though its syntax is impeccable: Trita corresponds to the unnamed subj. of *āvavārtat*, the five Hotars to the Maruts expressed by the rel. prn. *yān*. But under what circumstances and for what reason did Trita make the Hotars turn to him, and who were these Hotars? Priests are not usually imported from elsewhere, esp. not from above/heaven (as is implied). I have no solution.

II.35 Apām Napāt

The hymn is much translated; in addition to the standard ones, see Macdonell (VRS), Doniger, Maurer.

II.35.1–4: The first words of each hemistich in this series of vss. echo each other: 1a *ūpem*, 1c *apām*, 2a *imām*, 2c *apām*, 3a *sām*, 3c *tām*, 4a *tām*. Since similar openings are found only in scattered vss. later in the hymn (9a *apām*, 11c *yām*, 12c *sām*) I consider the effect deliberate.

II.35.1: It is somewhat curious that the hymn *begins* with the expression “I have set loose my eloquence,” with the augmented aor. *asṛkṣi*. Such phrases are more usual in the final vss. of hymns, summing up the hymn that has just been produced. Perhaps here the poet means that he has set his eloquence in motion, in preparation for hymn composition. IH suggests it’s a performative “I (have) (hearby) set loose ...”

kuvíd ordinarily appears with accented verb. Gr allows an unaccented verb only when the particle and the verb are in different pāda -- but in other passages where *kuvíd* and the verb are not in the same pāda the verb can nonetheless be accented, e.g., VIII.91.4cd, VIII.103.9, IX.19.5. (In VII.91.1 the verb is accented though it is in a different pāda, but it may also be in a relative clause -- though see comm. ad loc.) It would be possible to take *kuvíd* here as construed only with *āśuhémā* “surely the Child of the Waters is one impelling swift (horses); he will make (the hymns) well-ornamented.” But this seems rather artificial. Perhaps *karati* lost the expected accent because the *hí*-induced accent of *jóṣīsat* was more syntactically prominent. In any case the unaccented verb *vanate* in V.3.10 (cited by Gr) is also difficult not to construe with the *kuvíd* in the previous pāda. Gr’s rule seems to be variable: in addition to the accented verbs in different clauses cited above, there is at least one example of an unaccented verb in the same clause -- V.36.3 *kuvín nú stoṣat* ... (pace Gr’s accented *stóṣan* s.v. *kuvíd*, he gives correct *stoṣat* s.v. *stu*). For further on verbal accentuation with *kuvíd* see Hettrich, Hypotaxe 151–52.

As Ge (and Re) point out, ‘well-ornamented’ (*supéśas-*) of hymns means not only poetically skillful but also receiving adequate recompense from the gods; cf. *vājapeśas-* ‘having prizes as its ornament’ in the preceding hymn (II.34.6), esp. in conjunction with *vājayúh* ‘seeking prizes’ in our pāda a.

II.35.2: *aryáḥ* is morphologically multivalent; I take it as nom. sg. to *aryá-*, with most (Gr, Ge [WG], Macdonell, Thieme [Fremdling], Lubotsky, Maurer). Re instead interpr.

as acc. pl. to *arí-* (“les êtres-privilégiés”), in apposition to *vísṽāni ... bhúvanā*, and it must be admitted that its position between those two words invites it to be construed with them. Doniger seems to follow Re (“all noble creatures”), but I do not understand how she interpr. *aryáḥ* grammatically. It could also be gen. sg. of *arí-* (or nom. pl., though this would not fit syntactically).

II.35.3–4: These two vss. are closely knit together verbally. Both contain an etymological figure, with nom. pl. fem. and acc. sg. masc. derived from the same root: 3c *śúcim śucayo*, 4a *yuvatáyo yúvānam*. The $\sqrt{\text{śuc}}$ of 3c recurs in 4c as *śukrēbhīḥ*, which forms a phonetic figure with adjacent *śīkvabhiḥ*. The repeated PREVERB *yānti ...* PREVERB *yanti* of 3a is echoed by PREVERB *yanti* of 4b, while 3d and 4b both end with a formulaic expression in which only the verb varies: 4b ... *pāri tasthur āpaḥ*, 4d ... *pāri yanti āpaḥ*. And finally 3d, 4b, 4d (and 5c) all end with forms of *āp-* ‘water’ (nom. pl., loc. pl.), contrasting with the pāda-initial gen. pl. *apām* when the god is mentioned (1c, 2c, 3d).

II.35.4: The descriptor *ásmera-*, generally taken as a derivative of $\sqrt{\text{smi}}$ ‘smile’, is somewhat curious. It may be simply, as Macd. suggests, that the waters approach their task seriously, not like light-hearted lovers (sim. Doniger). Or (with Maurer) that they are shy. But I somehow think that this hapax is expressing something more particular, though I cannot define it more closely. It may be naturalistic: the circling waters perhaps whirl around without foam, which might be thought of as smiles. Or it may be meant to distinguish these attentive females from other natural phenomena: lightning, especially, is characterized by smiling (see I.168.8) and laughing, and Uṣas also smiles. Though the waters do gleam (see 3c), they are different from those bright celestial females, and the point may be to emphasize the two very different environments in which Apām Napāt finds himself -- the watery and the fiery. Note that in 9b Apām Napāt “clothes himself in the lightning flash” in 9b, but by then his assimilation to Agni/Fire is almost complete.

II.35.5: The identity of the three female goddesses is unclear. They could be, with Sāy., the three who show up in the Āprī hymns (e.g., II.3.8), Iḍā, Sarasvatī, and Bhārati -- though even if so, this does not help much, since the role of those goddesses is not well defined. A (possibly) different set of three females associated with Agni is found in II.5.5, but that passage is too obscure to aid interpretation here. Macd (fld. by Doniger and Maurer) suggests that they are the waters of the three worlds, but I am not aware of a “waters of the three worlds” trope.

A more acute problem in this vs. is *kṛtā* (in sandhi before vowel; Pp *kṛtāḥ*) in c. There is no agreement as to what stem it belongs to or what grammatical form it represents. Some simply refuse (or fail) to tr. it (Ge, Doniger, Schaeffer 198–99); others give it a contextual meaning (Macd ‘breasts’, Re ‘plantes’, Maurer ‘nurses’), without attempting etymological justification. WG suggest ‘Spinnerinnen’ (female spinners, spinsters in fact) with a derivation from $\sqrt{\text{kṛt}}$. What makes the word so difficult is the root accent; it would otherwise be easily interpreted as a past participle to $\sqrt{\text{kṛ}}$. The most sensible disc. of the word is Old’s. He sees it a sexual slang, as in the expression *kanyām* $\sqrt{\text{kṛ}}$, glossing “die Engjungferte” (deflowered girl). Certainly in English “to make” or “to do” a girl/woman is a perennial slangy verb for “have sex with,” and one can also adduce the expression “to make (s.o.) a woman,” for “deflower, have sex with a virgin.” He

justifies the accent retraction from the ppl. *kṛtá-* (or rather fem. *kṛtā-*) on the basis of AiG II.1.19–20, where substantivized adjectives retract their accent. This seems the best hypothesis of a generally bad lot, and it would fit the context, in that pāda d describes Apām Napāt sucking the first milk of females who’ve given birth for the first time (if that’s what *pūrvasū-* means; see Scar 620–21) -- which makes sense if the females just lost their virginity in the preceding pāda. I therefore take the word as an acc. pl. fem. to a substantivized *kṛtā-* from the ppl. to √*kṛ*.

II.35.6: In pāda a the grammatical problem is *svār* (to be read as a monosyllable, [almost] uniquely in the RV). Gr identifies it as an acc., Macd (followed implicitly by Doniger and Maurer) as an endingless loc., sim. Re. However, the phraseology, esp. the accented *asyá* (which identifies *asyá* as an adjectival demon., not a pronoun) and the placement of *ca* (*ásvasyātra jānimāsyá ca svāḥ*, invite, indeed almost impose, a genitive interpr. Ge achieves this by pronouncing *svār* indeclinable (n. 6a). However, it is possible to see it as an archaic genitive with zero-grade ending **-s*, as in Aves. *xuuōng* < **sh₂uēn-s*, but with the *-r* of the nom./acc. leveled into the oblique. See Klein DGRV I.96, WG.

The identity of the two entities born must also be sorted out. It is possible that the horse is just a horse, since origin in the water is an equine characteristic (see, e.g., I.163.1 adduced by Ge). But it seems likely that the carefully balanced *ásvasya ... asyá ca svāḥ* refers to two contrasted entities, quite likely the fire (Agni) and the sun (Sūrya). The obvious way to get that is for the horse to represent fire/Agni and “this sun” the sun, but I wonder if there isn’t a clever reversal: the “horse” is the sun and “this sun here” is Agni.

In b the addressee of the impv. *pāhi* is not identified, though the default assumption would be Apām Napāt. It is striking that this is the only instance of the 2nd ps. in this entire hymn.

The “raw” (*āmā-*) fortifications are convincingly explained by Ge as built from unfired brick. They need not (and in my opinion should not) be further interpreted as cloud citadels (so Macd, fld. by Maurer and, in part, Doniger). Specifying that the fortifications be unfired is a cute reversal if Agni is supposed to be in residence there. It is also possible, if Apām Napāt is at issue, that the reference is to his residence in the waters, would would most definitely be uncooked/unfired. It is also of course difficult in this post-Lévi-Strauss age not to put his conceptual spin on the term “raw,” though exactly how this concept would pertain to this passage is unclear: perhaps it refers to a place and a society so far away (*parāḥ*) from Ārya civilization that it counts as “raw” to Ārya “cooked.”

II.35.7: Note the slight phonological play -- a: #*svá ā dām(e)*, b: #*svadhām*.

II.35.8: Pāda c is a variant on an idea expressed several times elsewhere. that the other fires are mere twigs of Agni, the god Fire. Cf., e.g., I.59.1 *vayā́ id agne agnáyas te anyé*. It seems significant that “the others” are not identified here as fires but as entities, beings (*bhúvanāni*) -- in my view, because the identification of Apām Napāt with Agni that brings the hymn to its climax is only partially complete here, and the poet is being canny about not directly referring to fire, though at the same time using diagnostic vocabulary and phraseology.

Note the etymological figure #*prá jāyante ... prajābhiḥ*##.

II.35.9: This is a transition vs. from the watery to the fiery. “Those sloping/aslant” in b can be the waters flowing downward, but they can also be firewood piled to be kindled (cf. I.95.5, where the same phrase seems to refer to firewood, as I interpret it), and the golden-hued maidens who circle around him can be either waters or flames.

II.35.10: This vs. strenuously develops the “golden” theme that appeared in 9d -- a color more descriptive of the fiery than the watery. An even stronger indication of the transition to Agni proper is the gerund *niśādyā* ‘having sat down’: the lexeme *ní√sad* is closely associated with Agni’s installation on the ritual ground (see, e.g., the next hymn, II.36.4).

II.35.11: See disc. in the publ. intro. on this as the climactic vs. of the hymn -- both introducing unambiguous fire references and identifying Apām Napāt as the secret name of Agni.

II.35.10–11: The ends of the d pādas in these vss. are very similar: 10d ... *ānnam asmai*, 11d ... *ānnam asya*. In 10d “The givers of gold give food to him” implies that his food is gold; 11d further makes clear that the gold(en) food is really gold-colored ghee.

II.35.12: The verb *māṛjmi* is accented because of its juxtaposition with clause-initial *dīdhiṣāmi*.

II.35.13: As Old noted (see also Hoffmann, Injunkt., 121 n. 29), the need for a caesura suggests a reading *vīṣā janayat*, rather than the augmented *ajanayat* of the Pp. (In fact, this suggestion is already found in Gr.) That two pres. indicatives, *dhayati* and *rihanti*, follow this proposed injunctive in the same thematic sequence supports interpreting the form contra the Pp, as Hoffmann points out.

The simile *anyāsyeva ... tanvā* “as if with the body of another” is, in my view, another reference to the distinction between but ultimate identification of Apām Napāt and Agni.

II.35.14: The acc. participial phrases of ab must be construed with *pāri dīyanti* “they fly around (him)” in d, even though the same referent is found in the dat. in *nāptre* in c. The latter participates in a clever word play -- *āpo nāptre* -- which of course evokes *apām nāpāt* even though *āpah* is nom. pl. fem. ‘waters’ and not part of a syntagm with *nāptre*. The elision of the first part of his name may be meant: now that he is identified with Agni, he is no longer the child (only) of the waters. But as noted in the publ. intro., that the waters bring him ghee brings the watery and the fiery into harmony. Note that the waters as his cloak here (if I am correct in this interpr., see below) answers to the ghee-cloak in 4d. In the watery vs. 4 the presence of ghee was somewhat anomalous; similarly here in a mostly fiery environment the cloak of the waters stands out.

The phrase *svayām ātkaiḥ* is also unclear, and indeed whether it is actually a phrase. Ge takes it as referring to Apām Napāt: “und sich selbst mit Gewändern (bekleidet).” He adduces IV.18.5 with *svayām ātkam vāsāna(h)*, but in fact the difference in case between the acc. there and the instr. here speaks against his interpr. The simplex

root pres. always takes the acc. of the garment, while the causative *vāsāya-* takes the instr. Moreover, as Lü points out (*Varuṇa*, 146–47 n. 8), the position of this phrase (far from the masc. acc. sg. in ab, adjacent to the fem. nom. pl. in d) and the “harsh ellipsis” required makes this interpr. unlikely. Lü himself in his tr. (146) implies the waters are bringing the ghee with their cloaks, though in the n. he sees them as “in Schmelzbutter gekleidet.” Acdg. to Re the waters fly around him “avec des vêtements (qu’elles se sont données) elles-mêmes,” an expression I don’t entirely understand. WG appear to separate *svayām* and *ātkaiḥ* but, with Lü, Re, and me, also take the garments as belonging to the waters: “um ihn fliegen die jugendfrischen Wasser von sich selbst mit (ihren) Reisemänteln herum.” The further (and perhaps unjustified) step I take in my tr. is in interpreting *svayām* so closely with *ātkaiḥ*, with the waters themselves becoming cloaks for him.

In b ‘paths’ is to be supplied with *adhvasmābhiḥ* ‘unbesmirched’ on the basis of II.34.5 *adhvasmābhiḥ pathībhiḥ* in the adjacent hymn, at least by my interpr. The standard tr. (Ge [WG, Re, also Lü, 146) supply ‘flames’ instead (though Re in his n. suggests that “chemins” could be supplied). Where exactly he is located (“highest footprint” generally implies high heaven) and which pathways are meant are unclear to me.

II.36 Ṛtugrahas

II.36.1: The first pāda lacks a syllable, which can be restored by reading augmented *avasiṣṭa*. In the position after the final -o of *hinvānó*, the Saṃhitā text could have applied abhinihita sandhi to initial *a* redactionally, but the transmitted text never acquired an avagraha. This solution was already noted by Gr and endorsed by Old; Hoffmann discusses it extensively (Injunk. 147).

II.36.2: The standard tr. construe *añjīṣu* with *priyā utá* (“and dear in your ornaments”), but the position of *utá* is somewhat against this: *utá* is less out of place if *priyāḥ* is all that it’s conjoining. And *añjīṣu* goes better semantically with “resplendent” than “dear”; cf., for a connection with *śubh*, X.78.7 *śubhamyávo nāñjibhir vy āśvitan*, also of the Maruts.

II.36.3: As sometimes elsewhere, *hí* with the first of two imperatives signals that the second action depends on the first.

Despite the masc. gender of *devébhiḥ*, I do not think it identifies a different group from the wives (*jānibhiḥ*), but that the latter further specifies the neutral *devébhiḥ*. In this I follow Re ad VI.50.13, which contains the same phrase (also X.64.10). Tvaṣṭar is strongly associated with the wives of the gods and in all clear cases only with them. It is worth noting that the RV contains no examples of fem. instr. pl. *devībhiḥ* or indeed of any fem. oblique plural.

My tr. of *jujuṣānāḥ* “having delighted (in the call),” with “call” supplied, followed a claim in John Lowe’s Oxford Univ. dissertation (p. 162) that this pf. part. only occurs with “call,” as a prior action to the event time of the matrix verb. But in the book based on his diss. (*Participles in Rigvedic Sanskrit*, 2015) he has revised this view, at least for this passage and allows *jujuṣānāḥ* to be construed with *āndhasaḥ*, with the main verb

mandasva ‘become exhilarated!’ logically following the action of enjoyment (pp. 210–11, 214–15; passage tr. on 215). I would tentatively revise the publ. tr. to “having delighted, become exhilarated on the stalk!” Because of the VP *māndasva ... āndhasaḥ* in the first vs. of the next, closely related hymn (II.36.1) I do not take *āndhasaḥ* with *jujuṣāṇāḥ* here, or at least not primarily.

II.36.4: The lexeme *prāti* √ *vī* expresses a reciprocal notion to √ *vī* ‘pursue’, hence ‘receive’; cf. the nominal form *pratīvī-* ‘(gift-)reception’.

II.36.5: This vs. is generally taken as Indra’s, but as I say in the publ. intro., I think it must be Indra as Bṛhaspati. The Brahman’s cup from which he drinks supports this identification.

II.37 Ṛtugraha

II.37.1: As noted above ad II.36.3 the VP *māndasva ... āndhasaḥ* repeats the same phrase there; our *ānu jóṣam* echoes the part. *jujuṣāṇāḥ* there.

Pāda b and c are similar in phraseology to the Indra hymn II.14.1–2 – most particularly the init. voc. *ādhvaryavaḥ*, the etymological connection between the verb *vaṣṭi* and the cmpd. *tadvaśá-*, and the phrase *tásmāi etám bharata*. See comm. ad loc.

II.37.1–3: The d pādas of the first three vss. have a rigid structure: PRIEST’S CUP *sómaṃ draviṇodaḥ pībartúbhiḥ*. Noteworthy is only that *pība* is accented in all three vss., though there is no obvious reason for this, and the last three vss. (4–6), which also contain imperatives to √ *pā*, though of different form (4d *pībatu*, 5d *pībatam*, 6d *pāyayā*), in syntactically variant constructions, lack such accent. I have no explanation (and it seems not to have attracted any attention) beyond the suggestion that *pībartúbhiḥ* is treated as a detachable refrain, even though what precedes it in the pāda must be construed with it. See now also remarks ad III.32.1.

II.37.2: The nom. *dadīḥ* must be part of the rel. cl., specifying acc. *nāma*. *dadīḥ* is nominative because it is a quotation of the name.

II.37.3: Although the default referent of the voc. *vanaspate* in a ritual context might be assumed to be the sacrificial post (cf. III.8.1, 3, 6, 11), the contents of ab -- both the draught animals of a and *vīḍayasvā* in b -- point rather to the chariot. See VI.47.26 cited by both Ge and Re. Why the chariot is addressed and identified with the wealth-giver is not clear to me, save for the fact that in the later ritual the Ṛtugraha libations take place in the cart shed (see, e.g., Eggeling, SBE 26.319–20). Note that the havirdhāna carts are the subject of the last ṛca of nearby II.41 (vss. 19–21).

II.37.5: For *yayyām* as acc. sg. masculine (beside *yayīm*) see AiG III.131.

Another ex. of *hí* with the first of two imperatives, providing the grounds for the second action. See II.36.3. Note also that although *hí* is found deep in its pāda, it is actually in 2nd position, since a new clause begins with *ā* (... *mádhunā=ā* ...). For the curious behavior of *hí kam* see comm. ad VI.51.14.

II.38 Savitar

The word *vratá-* ‘commandment’ is prominent in this hymn (vss. 2, 3, 6, 7, 9). The point is repeatedly made that all creatures, incl. the gods, follow the *vratá-*s of Savitar. Another persistent verbal theme is the contrast between *sám* and *ví* (4a, 4c, 6a), which can be discerned even when only *ví* is present (1c, 3a, 5b, 6c, 7b, 8d). The hymn also has a pronounced tendency towards augmented 3rd sg. root aorists (+/- preverb) at the ends of pādas, esp. at the ends of hemistichs: 1b *asthāt*, 3d *āgāt*, 4d *āgāt*, 5c *ādhāt*, 6b *abhūt*, 6c *āgāt*, 8c (*ā ...*) *gāt*, 8d *ākāḥ*, 11b *ā gāt* (cf. also opt. *avyāḥ* 10b).

II.38.1: The verb of c, *dhāti* with primary ending, is likely to be a root aorist subjunctive like the other two such forms, though neither Ge nor Re so tr. it -- nor do I. However, WG’s “... soll er ... verteilen” does represent the mood (so also Hettrich, Hyp. 177). I would alter the tr. to “will distribute ...” Unfortunately it does not require trisyllabic scansion, which would have supported the subj. interpr. Moreover, the pāda-final *dhāti rātnam* is reminiscent of the formulaic *dāti vāṛyam / dātivāram* (on which see V.58.2) and may owe its existence to that puzzling set of forms. See my forthcoming article on the *dāti-vāra-* type. Curiously the flg. pāda contains a cmpd generally associated with that type: *vītīhotra-*. Note also that *ví hí* in this pāda is echoed by *vītī-* in that cmpd.

The question then arises how to analyze *ābhajat* in d. The Pp. takes it as *ā bhajat*, with unaccented augment. Under this analysis the verb would not be in the domain of the *hí* in c; otherwise the augment should be accented and the preverb unaccented and univerted. The WG tr. reflects the Pp. by separating the clauses, but Ge, Re, and I (implicitly also Klein DGRV II.74) tr. cd as if they contain conjoined parallel clauses. It would also be possible to analyze *ābhajat* as *ā bhajat*, that is, without augment. An injunctive might fit the syntactic context better, in that it could just continue the modal reading of *dhāti* (“will distribute ... and [will] give a share ...”), but paradoxically this would require the two clauses to be more independent because the verb would be unaccented and therefore could not be conjoined to c with accent-inducing *hí*. In larger interpretational terms the differences among the several possibilities just outlined are fairly minor -- having just given or being about to give actually turn out to be almost identical acts in Rigvedic ritual depiction -- but it is worth noting the multiple ambiguities inherent in an innocent looking form. For two parallel clauses containing first a subjunctive and then an augmented indicative, see 3ab below (*mucāti ... ārīramat*).

The cmpd *vītī-hotra-* (RV 5x) is much discussed, since it has been considered as belonging to the supposed *dāti-vāra-* verbal governing cmpds, assembled and discussed by Wack. in AiG II.1.320–21 and forming a part of Indo-Europeanist discourse ever since. I have demonstrated in my forthcoming article on this type that, except for *dāti-vāra-* (on which see comm. ad V.58.2), none of the forms adduced has the sense attributed to it and therefore such a “type” does not exist. I take *vītī-hotra-* as a bahuvrīhi meaning ‘having oblations worth pursuing’, with *vītī-* serving for the common infinitive *vītāye* ‘to pursue’, which often takes *hāvya-* (synonymous with *hótrā-*) as object. For further, see my as-yet-unpublished article.

II.38.2: The hapax *nīmrga-* must clearly be a derivative of *ní√mrj*, lit. ‘wipe down’, but generally either ‘clasp to oneself’ or idiomatically ‘drag down’ (for the latter see I.140.2,

V.52.17). The context here requires something like ‘submissive’, as all tr. take it. See comm. ad VII.26.3, which suggests that forceful dragging down implies coercion by the agent and, conversely, submission (voluntary or not) of the object. Note also that it has an unetymological velar *g*, presumably extracted from forms where the final palatal *j*, followed by *s*-, yields *-kṣ*-.

The submission of the waters and, especially, the quieting of the wind probably reflect the natural fact that the wind tends to drop at dusk, and this brings about the calming of waves that had been raised by the wind.

II.38.3: The poet seems to get a certain pleasure out of using semi-exotic verb forms that masquerade as something else: in pāda a *yān*, the nom. sg. pres. part. of $\sqrt{yā}$ ‘drive’, not the acc. pl. m. of the rel. prn.; in c rhyming *ayān* (< *ayān* < **ayān*st), 3rd sg. s-aor. to \sqrt{yam} . There is also the abl. inf. *étoḥ* in b.

The creatures that the hapax *ahyārṣu*- (‘snakes-stickers’, Ge (/WG), Falk ‘Schlangenspiesser’, Re ‘qui picquent les serpents’) refers to cannot be determined for certain. The consensus is that it is some kind of bird of prey; Ge suggests (n. 3c) the Schlangenadler. Indeed, the short-toed snake eagle (*Circaetus gallicus*) is wide-spread in India and feeds mainly on snakes (so Wikipedia). The internet (including You Tube) has some remarkable photos and videos of this bird fighting with, swallowing, and feeding its young with snakes, including cobras. The photos with sizable lengths of snake dribbling out of their mouths and esp. the video of one wolfing down a still wriggling spectacled cobra certainly testify to the greed or avidity of these birds. Whether they stop hunting at evening I have no idea.

II.38.4: Though Sāy., Old, and Re identify the weaver as Night, this seems unlikely, if the hymn really depicts the evening. More likely a real human weaver, finishing her daily work.

Note the unetym. phonetic echoes in *avyat* ... *váyantī*.

On the semantic and functional nuance of the intensive *adardhar*, see Schaeffer (Intens., 140–41). The form should be an impf. (see pres. *dárdharsī*), and Schaeffer notes that the iterative value generally expressed by intensives is not appropriate to an aorist, despite rather insistent aoristic context here. She suggests that *ádardhar* in contrast to the surrounding verbs “bezieht sich nicht auf die unmittelbar vorangegangene Handlung des Gottes, sondern nennt eine Tätigkeit, die er von alters vollbracht hat; die Funktion des Intensivums dürfte eine kontinuierliche sein: ‘sich aufraffend ist er aufgestanden; (fortwährend) hielt er die Jahreszeiten auseinander; bereiten Sinnes ist der Gott Savitr gekommen.’” My ‘always’ is an attempt at reconciling this.

Pāda-initial *arāmatih* ‘Proper Thinking’ echoes pāda-initial *ārīramat* (3b) (see also *ramate* 2d), though they are of course etymologically unrelated. I now think a pun is meant here, with *arāmatī*- analyzed as a privative *a-rāmatī*- and I would emend the tr. to “As Proper Thinking (/unresting) ...”

II.38.5: *vī tiṣṭhate* should be evaluated in conjunction with *vīṣṭhitah* in 6a and *vī tasthuh* in 7b.

Ge (/WG) take a and b as separate clauses (sim. Falk). My rendering is closer to Re’s. I think the idea is that Agni/Fire, though in some ways a single entity, is parcelled

out into separate domestic fires, one per household, and this holds for a man's whole lifetime after he has set up his household fire. The coming of night brings the (re-)kindling of these fires and so they come into visual prominence then.

The blazing up of the home fire is accompanied by the evening meal, rather charmingly depicted here: the mother reserving the best of it for her son; the son with his appetite stimulated by the coming of evening.

II.38.6: The first pāda of this vs. takes up the idiom *ví√sthā* 'disperse' found in 5b and applies it somewhat differently. Here it refers to all those who were dispersed in various directions pursuing their livelihoods -- who all want to come home in the evening. On *jigīṣú-* see Narten (Yasna H., 122); as she makes clear, the desid. of *√ji* in both Vedic and Avestan lacks martial or battle context and is simply about gaining food and so on. See also Heenen (Desid. 120–25).

The verb *samāṇavarti* is taken by Kü (465–66) as a (pseudo-)passive aor. to *√vrt*, with ref. to Hoffmann (Aufs. II.589–92), a form that is attested also after the RV (see Kü n. 884). The lexeme *sām-ā√vrt* is used in the causative of Dawn's cows rolling up the darkness (VII.79.2), so here I think the nuance is the gathering or rolling up together of everything that was dispersed during the day, playing on the common opposition between *ví* and *sām* that is prominent in this hymn.

Although we might expect *vīkṛtam* to mean 'badly/wrongly done', I think the dominant *sām / ví* play in this hymn trumps that, and if *sāmskṛta-* is 'perfected, brought to completion', *vīkṛta-* can mean 'incomplete, not done'.

II.38.7–8: These two vss. have been variously interpr. My interpr. is most influenced by Old (whose views also seems to have been adopted by WG). As noted in the publ. intro., the vss. enumerate the separate spheres assigned to the various categories of creatures by Savitar, as an extension of his ability to bring every creature to its proper resting place at night.

II.38.7: In my view, this vs. divides the world into habitats for fish (etc.), wild beasts, and birds. Not surprisingly the watery creatures are placed in water (pāda a). As head noun with *ápyam* I supply *jánma* from the summary pāda of this two-vs. sequence, 8d.

The problem in 7a is *bhāgám*: it is tempting to tr. "the watery (race) has been placed by you among the waters as their share," but *bhāgám* belongs to a masc. stem and must be acc., which does not accord with the nominal clause in which it would purportedly be found. I therefore construe this last word of pāda a with b, as an appositive to acc. pl. *dhánva* 'wastelands'. Although I would prefer to avoid such enjambment, I see no better choice, and note that a new clause also begins in the middle of pāda c (with *nákiḥ*) and continues to the end of d. Sim. also 9c. Ge's interpr., which keeps *bhāgám* within its pāda by making the whole pāda acc., seems to me to come at too high a cost: he must supply a set of fishermen and a verb 'seek' to govern the acc. ("[Fisherman seek] their watery share.."); these imaginary fishermen are parallel to the "hunters" that he takes *mṛgayásah* to be, dispersed across the dry land (and presumably hunting wild beasts). I see several conceptual problems with this interpr. For one thing this makes the first two pādas non-parallel with c, for there are no bird-catchers there (Vedic Papagenos?), whereas in my interpr. the three pādas describe the habitats of three types of

creatures. Moreover, the hunting has no obvious connection with Savitar, whereas by my interpr. the distribution of habitats is his doing – and is summed up by 8d “Savitar has distributed the races according to their stations.” Nor is the hunting likely to be an activity of night, the other thematic connection it might have to the rest of the hymn: everyone else has gone home, but hunters are out on the plains trying to shoot deer in the dark? For penetrating arguments against the Ge interpr. see Old’s n. 3 ad loc.

Pāda b has its own problem, the anomalous form *mṛgayāsaḥ*. Ge (n. 7ab) declares that *mṛgayās-* can *only* mean ‘hunter’, but gives no evidence for his certainty. Old’s disc. is more to the point (and rather tart about the ‘hunter’ interpr.), though his morphological analysis of it as an *-as-*derivative of the denom. *mṛgay-* seems a little shaky (likewise his alternative explan. as a cmpd. of loc. *mṛgé* + *√as* ‘shoot’, like *hṛtsv-ās-* [see Scar 41], with older sandhi and a meaning ‘auf das Wild schiessend’, which unfortunately smuggles in Ge’s hunters in another guise). On the other hand, I don’t have anything better to offer. It reminds us of a suffix-accented masc. deriv. like *rakṣās-* ‘demon’ next to neut. *rākṣas-* ‘demonic force’, which itself gets personified. But the assumed base **mṛgayas-* (or **mṛgāyas-*) ‘wild-beast-iness’ doesn’t exist and it’s hard to see to what it would be generated. AiG II.2.223 dismisses the word with a ? and a ref. to Old’s disc. In any case, Old’s structural arguments that it must refer to the beasts, not the hunters are sound. A third occurrence of *vī√sthā* is found in this pāda.

The *asya* in pāda c anticipates *devāsya savitūḥ* in d – perhaps better to tr. as Ge does: “... diese seine Gebote, des Gottes Savitar.” This doubling may have arisen because the clause begins in the middle of a pāda and continues over the pāda break.

II.38.8: The general purport of this vs. is clear: it both summarizes Savitar’s distribution of the creatures (esp. in pāda d) and hints (esp. in pāda c) at their return to their own special places at night. But the first half-verse is quite challenging and my interp. is not fully worked out.

On *yādrādhyām* see Old’s disc. My publ. tr. “As far as (Savitar’s) benefit extends” is, I’m afraid, opaque. What it means to convey is that Varuṇa’s presence in his watery womb is at the favor of Savitar, whose distribution of the creatures in their proper places extends even to the gods, or at least one of them. A modern equivalent might be the phrase “to serve at the pleasure of (e.g.) the president.” The dependence of Varuṇa (and other gods) on Savitar’s orders and ordering is stated plainly in the next vs., 9ab. It is esp. striking that Varuṇa follows Savitar’s *vratá-*, since the *vratá-* is primarily Varuṇa’s domain. That Varuṇa is the only god named here is probably meant to emphasize what might almost be seen as Savitar’s usurpation of the power and role of Varuṇa. Savitar’s *rādhās-* recurs in 11b.

This passage shows one of the early examples of what becomes Varuṇa’s principal association, that with water. Again, it may be that Savitar is deliberately relegating him to this restricted role. Varuṇa’s hypervigilance, familiar from other, more standard treatments of Varuṇa in the RV, is undeterred by his watery environment, as pāda b indicates.

Note the phonological play in *āniṣitaṃ nimíṣi*.

The sense of *nimíṣi* is unclear. My tr. “at (every) blink of the eye” takes it as an implicit āmreḍita with the frequenative *járbhurāṇaḥ*; it could also be an indication of the great speed of Varuṇa’s movements, like English “in the blink of an eye.” However it

shouldn't be forgotten that the idiom *ní√miṣ* is associated with the gods and esp. the Āditya—generally in its negation: the gods (or their spies) “never blink” (cf., e.g., IX.73.4, X.10.8, 63.4). For Mitra and Varuṇa or the Ādityas see VII.60.7, 61.3, VII.25.9, and esp. nearby II.27.8 *ásvapnajo animiṣā ádabdhāḥ* “unsleeping, unblinking, undeceivable” (of the Ādityas). Is the blinking here (as opposed to the usual non-blinking) another of Savitar's subtle put-downs of Varuṇa, implying that he does blink after all?

In c *mārtāṇḍá-* is taken by the standard tr. (also Lüders, Varuṇa I.50) as ‘bird’, and this could work well, corresponding to 7c, where the birds are assigned to the forests. However, note that in vs. 7 the other member of the trio of creatures, besides the watery, is the wild beast (7b), whereas here instead of a wild beast we have precisely a domesticated one, the *paśú-*. Its formulaic partner is *mārtāṇḍá-*, lit. ‘stemming from a dead egg’, found otherwise in the RV in the creation hymn X.72.8–9 in the myth of Aditi and the birth of her sons. The last son born (or rather the egg miscarried), *mārtāṇḍá-*, is the ancestor of mortals; for disc. of the word and the myth see Hoffmann 1976 (=1992: 723). That half of this vs. is devoted to Varuṇa and the next vs. has the great trio of Aditi's sons, Mitra, Varuṇa, and Aryaman, provides further evidence that the Mārtāṇḍa of the Aditi birth story is meant. Under this interpr., the domestic herd animal (*paśú-*) is paired with the likewise domesticated human, each in its own pen.

II.38.9: The first hemistich restates 7cd in almost the same words, but instead of the indefinite *nákiḥ* ‘no one’ specified as the non-violator of Savitar's *vratá-*, a selection of the greatest gods serve as subject.

II.38.10: As Ge points out (n. 10a), the three divinized principles in pāda a—Good Fortune, Insight, and Plenitude—are what the poet needs for success.

As the layout of the publ. tr. shows, I take pāda b as a parenthetical insertion in the sentence that includes a, cd. It would be possible to take *vājáyantaḥ* as a predicated pres. part. and a separate cl., though this seems less likely to me.

Although *gnāspāti-* presumably contains the old gen. sg. of *gnā-* (e.g., AiG III.119, 129), I tr. it as a pl., since we usually hear of “*wives* (of the gods)” – though, since I don't exactly know what Narāśaṃsa (=Agni?) is doing here, perhaps there's only one wife. It is also not clear if there are two figures here or if *gnāspātiḥ* characterizes Narāśaṃsa as I have taken it (so also Ge, WG). Re does so in tr., but suggests in his n. that it might identify a separate individual, perhaps Tvaṣṭar, whose association with divine females is well established. I now am inclined in that direction and would provide an alternate tr. “Narāśaṃsa (and) the Husband of the (divine) Wives should help us.” That the verb is singular is not an impediment, since a series of sg. subjects can take a sg. verb.

This verb, *avyāḥ*, is a bit of a problem. It is isolated in the averbo of the root *√av* ‘help’, which is *seṭ* and has a well-attested *iṣ-*aor. (on which see Narten 86–89) beside the even better attested them. pres. Although Narten (86) identifies our *avyāḥ* (also X.139.5) as belonging to an old root aor. (with maintenance of the full grade despite being opt.), there are no other unambig. root aor. forms attested (though forms like *āvīt* could of course belong to a *seṭ* root aor. paradigm and have given rise to the *iṣ-*aor.). I think it's more likely an artificial form, makeshift replacement for the non-existent *iṣ-*aor. opt. (see

my 2009 “Where Are All the Optatives?” pp. 31–32 on the absence of act. sigmatic optatives, flg. Narten), as well as the relative dearth even of 3rd sg. thematic optatives to present stems (like *ávatí*), on which see the same art., pp. 32–34.

As for the point of the pāda: it is possible that the arousing of the three principles in pāda a reminds the poet that he needs the help of the ritual fire (if *Narāśaṃsa* is identified with *Agni* here). Perhaps *gnāspātiḥ* is invoked because two of the three principles are female. But this seems like groping in the dark.

II.38.11: The verb *āgāt* is interpr. by the Pp as injunc *gāt* and so treated in most editions and tr., but it could just as well be augmented *agāt*, a typical aorist in a summary vs.

II.39 Aśvins [SJ on JPB]

This hymn bears some resemblance to the difficult-to-impossible Aśvin hymn X.106, which descends into unintelligibility but whose outer verses can be mostly understood. That hymn is also dominated by similes comparing the Aśvins to various pairs of entities, which are often semantically distant. (See comm. ad loc.) Ge calls our hymn “geistlos” and considers the similes “gesucht” (in this case, presumably in the meaning ‘studied, strained, stilted’)—I’m afraid this says more about Ge’s somewhat pedestrian approach to the literary qualities of the text than about the poet’s supposed limitations. WG reproduce Ge’s judgment verbatim, which also seems telling. Note that the Aśvins aren’t named until the last two vss. (7c, 8a), in the metasummary of the creation of the hymn after the simile portion, so that for most of its length the hymn is an extended riddle.

Besides Re’s limited notes (EVP XVI.31–33) it is tr. and comm. by Pirart (*Les Nāsatya*, vol. II), as usual quite idiosyncratically.

II.39.1: The opening of this vs. (and hymn), ... *tād íd ártham jarethe* “you two awaken to just this aim,” is reminiscent of the opening of X.106.1 ... *tād íd arthayete* “you two have just this as your aim,” with the denom. *arthaya-* substituting for the acc. *ártham* in our vs. The notion ‘awaken’ embodied in the finite verb *jarethe* in our vs. is postponed to X.106.1c: *sadhrīcīnā yāṭave prēm ajīgaḥ* “It has awakened you two to drive towards a common goal,” with transitive *ajīgaḥ* corresponding to intrans. *jarethe* here. Although ‘sing’ is also a possible rendering of *jarethe* (see, e.g., comm. ad II.28.2), and it is championed here by Pirart, the parallel in X.106.1 favors ‘awaken’ as at least the primary meaning. The shared theme of awakening between this vs. and X.106.1 also provides evidence against Ge’s (n. 1a) suggested emendation of *jarethe* to **carethe* on the basis of IX.1.5.

Contra the publ. tr. (and Ge), I do not think that pāda b necessarily expresses the “aim” (*ártham*) in pāda a. Rather, b begins the hymn-length suite of semi-independent pāda-length similes. I would replace the colon with a period and delete the parenthetical “(you awaken to go),” replacing the tr. of b with “(You two going) toward the depository (of honey) like vultures to a tree.” On *nidhí-* and its association with honey, see comm. ad X.59.2.

Despite Ge (“Brautwerber”) and Pirart (“paranymphe”), I do not think *jánya-* has the sense ‘suitor, best man’ here (or in II.6.7 adduced by Ge). The only likely attestation of that meaning is in IV.38.6 (*Dadhikrā*); otherwise it appears first in the AV. See Re’s

n., which argues strongly against that meaning here. On the other hand, I do think there is a marriage trope in 2d, unrecognized by them.

The phrase *dūtēva ... jānyā* is matched in X.106.2 by *dūtēva ... jāneṣu*.

II.39.2: On *prātaryāvan-* and *prātarītvān-*, both ‘early-coming’, see the extensive disc. in my *Sacrificed Wife*, 184–89 and passim. It is typically used of the Aśvins (e.g., V.77.1) or their chariot (e.g. X.40.1) because they are among the earliest arrivals at the dawn sacrifice.

Like most tr. but unlike JPB, I’d take *yamā* as part of the simile: “like twin goats” and I’d render *vāram ā sacethe* as “you accompany each other at pleasure” – the pāda depicts the playful companionship of young goats. For more of this see 3ab.

The publ. tr. of the 2nd hemistich seems to me over-heavily repetitive. I would rephrase c as “Beautifying your bodies like women for exchange”; although *śumbhamāne* is fem. and technically modifies *mēne* – and therefore the publ. tr. is technically accurate – the repetition violates the spirit of the simile structure.

On *mēnā*- see comm. ad I.62.7.

With JPB (and no one else), I agree that pāda d treats the marriage ceremony. The passages it most resembles are X.68.2 *jāne mitrō nā dāmpatī anakti* “As the ally among the people [=Agni] anoints the household pair ...,” depicting the public (*jāne*) ceremonial anointing of a couple in marriage, and V.3.2 *añjānti mitrām súdhitam nā góbhīr, yád dāmpatī sámanasā kṛṇósi* “They anoint you [=Agni] with cows [=milk] like a well-placed ally, when you make the household pair of one mind,” where the same ceremony is depicted, but with Agni, the ally, the recipient of anointment. (See disc. of these passages in my Fs. Parpola, p. 312.) The adj. *sámanas-* ‘of one mind’ modifies *dāmpatī* three times (here, VIII.31.5, and X.95.12). I would suggest that *kratuvídā* in our passage is the equivalent, rendered (correctly in my opinion) by JPB as “find[ing] (a common) resolve.” I further suggest that the first member of this root noun cmpd, *kratu-*, stands for *sákratu-* ‘of like resolve’ with the abbreviation common to such cmpds (see my forthcoming “Limits on Root-noun Compounds in Indo-Iranian” (though it doesn’t treat cmpds of exactly this structure), and it refers to the creation of the mental union of the newly married couple.

Again, in the tr. I would delete the parenthetical “(in the presence of the people)” to avoid heaviness.

II.39.3: The first hemistich contains two similes comparing the Aśvins to animal body parts.

Since *śṛṅga-* is neut., we expect du. *śṛṅge*, which is in fact found elsewhere. The Pp. reads *śṛṅgā*, which should be pl.; Old suggests **śṛṅge iva* with *pragr̥hya* of the dual and aphoresis of the particle to *va* as sometimes elsewhere in RV. This explan. is also nec. for other neut. or fem. exx. below. See Old for details.

The horns here are described as *prathamā-* ‘first, in front’. This description would only be accurate for animals in a butting posture, with head down and horns forward (otherwise it’s obviously the nose that’s in front). Since head-butting is esp. characteristic of goats among domestic animals (see numerous internet images and YouTube videos), this simile seems implicitly to take up 2b.

As for pāda b, I think this is part of the same goat head-butting scenario. In the moment before they actually butt heads, goats rear up on their hind legs and twist their bodies slightly to the side, with their forelegs dangling in space. This could be described as “hooves quivering” (watch the YouTubes), and I would substitute “quivering like two hooves ...”

Note polarized # *cakra-* ... *śakrā* #. This is one of only two applications of *śakrā-* to the Aśvins (the other being X.4.4), an epithet otherwise almost exclusively of Indra.

This is the first mention of the cakravāka bird (ruddy shelduck) in Sanskrit literature, and already here it seems to refer to the most common topos concerning these birds: the reunion of the devoted conjugal pair every morning after their nightly separation.

Du. *usrā* modifies the Aśvins elsewhere (IV.45.5, etc.), but the pāda-final sequence here, *vāstor usrā*, is also reminiscent of the likewise pāda-final phrase *vāsta usrāḥ* / *usrāḥ* “at the break of dawn”; see comm. ad V.49.3, as well as Old’s lengthy discussion of our passage.

Since *arvāk*, *arvāñc-* occurs three times in this hymn (3a, 3d, 5b), it should have a consistent tr. throughout, rather than “toward us” (3a), “this way” (3d), “here this way” (5b). Best, perhaps, “here this way” in all three cases.

II.39.4: The first hemistich is devoted to modes of transport – first boats (assuming the correctness of Old’s emendation of *nāvēva* to **nāveva*), then more and more specialized parts of a chariot, the last three having to do with wheel construction.

Although the simile in c, “allowing no injury to our bodies like two dogs,” is initially puzzling, both Pirart and WG plausibly suggest that this refers to the two dogs of Yama, who act as guardian psychopomps to the next world in the funeral hymn X.14.10–12.

The comparandum *khīgalā* is isolated in the RV; however, its scanty occurrences in the AV (Ś III.9.3=P III.7.4, and fem. *khīgalā*- P I.58.1) strongly favor the sense ‘amulet’. See the useful discussions of Spiers (diss.) ad P III.7.4 and Zehnder, Hellwig, and Leach (2020; online ed. of AVP I) ad P I.58.1. Pirart connects the word with *khargalā*- ‘(female) owl’ — or other night bird: I suggest ‘nightjar’; see comm. ad VII.104.17 – and adduces a YAvestan passage (Yt. 14.34–36) in which a feather of a bird of prey serves as protection against malediction. Ge tr. as ‘armor’. Scar’s tr. of this hemistich (673 and n. 962) seems uncharacteristically off the mark; among other things he overlooks the fact that (on the basis of the whole rest of the hymn) each pāda is an independent simile, and tr. *khīgalā* as an adj. modifying ‘dogs’ (“wie zwei knurrende (?) Wachhunde”), despite the *iva* following each. He connects *khīgala-* with √*kharij*, accepting Gotō’s (1st Cl, 86, 324) assertion that the root is a phonological variant of √*sarj* (both meaning ‘creak’ vel sim.). WG in turn cite Scar, though their tr. does divide the pādas, resulting for d in “wie die beiden knurrenden (?)” Although it’s not clear to me why amulets would be invoked just here, the preponderance of the evidence favors this interpr.

II.39.5: Ge (n. 5a) takes *nadyèva rītīḥ* as “loses Kompos.” (“wie die Flossströmung”; sim. Re), but the two-into-one of JPB’s tr. (also more or less WG) reflects the Skt. better.

Pāda b inaugurates a series of comparisons to body parts, which extends through the first pāda of 7. All of the body parts here naturally occur in pairs (on 6c see below). This set is marked off by a rough sort of ring composition, with ‘hands’ (*hástau* in 5c and 7a).

The publ. tr. “*becoming* the best blessing” for *śámbhaviṣṭha-* is unnec., since the forms of $\sqrt{bhū}$ as 2nd cmpd member with *śám* serve merely to allow the indeclinable *śám* ‘luck, weal’ to be used as modifier. I would substitute “The best luck for the body like two hands.”

II.39.6: Given that all the other body parts in this sequence are natural pairs, *nāsā* is better ‘nostrils’ than ‘noses’. The question is why they are “the guardians of the body.” Ge (n. 6c, repeated by WG) says “Durch den Geruch,” which is no explanation at all. I think rather that it has to do with the vital role of the breaths, which enter and leave the body via the nostrils, which are therefore the de facto gatekeepers of life. Although the full doctrine of the breaths has not yet developed in the RV (though it is in fairly full swing by the AV, judging by the number of occurrences of the dual dvandva *prāṇāpānā-*), the role of breath in life was obviously well recognized.

II.39.7: I take *śakti-* here as a pun, meaning ‘spear’ in the simile and ‘power’ in the frame, and I would therefore erase the parens and alter the tr. to “Clasping power for us, like two hands a spear ...” Although the ‘spear’ sense of this stem is generally found later (cf. EWA s.v. *śakti-*, though he is skeptical about RVic occurrences; however, see comm. ad X.134.6), this is the kind of context in which lower register / common parlance items are likely to appear – and the simile doesn’t make sense without a physical object for the hands to clasp. Lü (238 n. 5) suggests rather “wie zwei Hände, die sich zur Hilfeleitung für uns vereinigen,” which has the merit of taking account of *abhí* (which I confess I have not tried to do, though I think it probably simply adds a further sense of contact: “clasp *onto*”), but ignores the importance of the simile.

As disc. ad I.139.1 and IX.99.7, *saṃdadí-* must belong to $\sqrt{dā}$ ‘bind’.

There is no agreement about the sense of pāda b; my interpr. is closest to Ge’s though differing little from JPB’s. I think that the simile is bipartite: *kṣāmeva ... rájāmsi* “like H+E the airy realms [i.e., the midspace].” Unlike JPB and like Ge, I would supply a different obj. in the frame. The lexeme *sám* \sqrt{aj} can take as obj. ‘cows’ (*gās* I.33.3) or their equivalent (V.34.7; see comm. ad loc.): ‘drive together’, hence ‘corral, confine’. H+E, as the spatial limits, confine the midspace – such is the sense of the simile, but the frame is slightly different: we ask the Áśvins to drive together (assemble+confine) some variety of good stuff: Ge “Reichtümer” / me “cows” vel sim. I would slightly alter the tr. to “Like Heaven and Earth the airy realms, corral (good things) for us.”

With the near-deictic *imā* opening the second hemistich, the hymn turns towards the ritual here-and-now and the poet’s summary of the Gṛtsamadas’ efforts. For this reason I would flip the tr. to “These songs here that are seeking you – sharpen them ...”

II.39.8: Again, because of the fronting of *etāni ... vārdhanāni* I would flip the tr. to “these strengthening formulations, (this) praise song, have the Gs made for you.” Most tr. (though not Pirart) keep *vārdhanāni* and *bráhma* as separate items, but VI.23.6 *bráhmāni ... vārdhanāni*, adduced by Ge, favors a syntagm. It scarcely matters, however.

The impv. *yātām* occurs 3x in this hymn: 3d, 5b, and 8c; in the first two instances the publ. tr. has “journey,” but here “drive.” Though I personally prefer “drive,” I’d slightly change the tr. here to “journey,” to match the previous exx.

II.40 Soma and Pūṣan

II.40.1: The publ. tr. does not capture the etymological play between the transitive nominal *jānana-* (3x in ab) and the first word of the 2nd hemistich, intrans.-passive *jātá-*, which could have been tr. ‘begotten’ to reflect this etym. figure. However, this tr. seems a little stiff and would not work with *jāyamānau* in 2a.

It is only in d that it becomes clear that the dual nominal phrases in the first 3 pādas are in the acc. and are the obj. of *akṛṇvan*.

II.40.2: The etym. figure involving \sqrt{jan} noted ad vs. 1 continues here with intrans.-pass. *jāyamānau* (a) and transitive *janat* (d). Another figure involves $\sqrt{juṣ}$ ‘enjoy’, likewise with trans. versus pass. manifestations: *juṣanta* (a), *ájūṣtā* (b), both pāda-final.

This vs. contains three injunctives: *juṣanta* (a), *gūhatām* (b), *janat* (d), the middle one of which could also be an impv. Ge takes all three as preterital, a course I also follow, but Re takes *gūhatām* as impv. (flg. Gr); WG take the first two as presential and the last as preterital. There seems no decisive evidence for or against any of these choices (or the others that could be made). On the one hand *imaú* (2x, ab) and *ābhyām* (c) ‘these two (here)’ would support a here-and-now presential and/or imperatival reading, as perhaps also the pres. part. *jāyamānau* in a. On the other, it seems unlikely that the gods would be *currently* celebrating the birth of Pūṣan (Soma might be another story), and, as for b, inserting an imperative into the mix seems odd to me.

Another ambiguity is posed by *ābhyām ... somāpūṣabhyām* in cd, which can be instr., dat., or abl. dual. Ge takes it as instr.: Indra performed this feat along with the two gods; Re and WG (see also Hoffmann, Injunkt. 124, 193–94) as a dat.: Indra did it for them. I also interpr. the phrase as a dat. -- though not with any strong conviction. On the one hand this deed (putting “raw” milk into “cooked” cows) is almost always attributed to Indra alone, so having Soma and Pūṣan as his accomplices seems somewhat unlikely. But on one occasion (VI.72.4) it’s attributed to Indra and Soma in a dual dvandva *īndrāsomā*. However, that hymn basically lays out Indra’s great deeds and attributes them to Indra and Soma jointly, so there’s no independent evidence of Soma’s involvement in this action. As for how they could benefit from the exploit and thus be in the dative -- Soma would benefit from the creation of milk because he (or the ritual substance bearing his name) is mixed with milk in the Soma Sacrifice (a point also made by WG). But what Pūṣan would gain from it isn’t clear -- unless he likes milk with his habitual food, porridge (*karambhā-*). (We should probably be wary of reading Anglo-American breakfast habits back into Vedic India.)

II.40.3: The referent of this marvellous chariot is disputed. Sāy suggested the year, Lüders (Varuṇa, 690) the sun, Ge the praise-song, the sacrifice, or the wish that the gods bring. As Re points out, a choice does not have to be made; the interpretation is

“volontairement polyvalente.” However, I assume that the primary reading is the sacrifice and its associated verbal expression, as so often.

The surprising descriptor of this chariot is *āviśvaminva-* ‘not speeding/moving everyone’. This word has to be evaluated alongside its positive counterpart, *viśvaminvá-*, used of Pūṣan in 6a. In both that verse and this one Pūṣan (in this vs. along with Soma) is the subj. of *√jinv* ‘quicken’. This oppositional phraseology favors Old’s suggestion that the chariot lacks something required to “move everyone” until Pūṣan (and Soma) provide the enlivening push. However, Ge’s quite different suggestion, that the chariot only carries gods and qualified priests, gets support from the only other occurrence of *āviśvaminva-*, in the riddle hymn, I.164.10, where the gods (probably) speak speech that knows everything but does not move everyone (*viśvavidam vācam āviśvaminvām*), a formulation that probably refers to profound speech that only affects initiates or those with already prepared minds. As with the identity of the chariot itself, probably both interpr. can be simultaneously applied.

In context the root noun cmpd. *viśūvīt-* must contain *√vrt* ‘turn’ (see Scar 511–12), but a homonymous stem based on *√vr* ‘obstruct, ward off’ is found in X.43.3.

In the publ. tr. *vīṣaṇā* appears to be tr. as a voc.; it is not, and the tr. might be clearer as “that do you two bulls quicken.”

II.40.4: The standard assumption (Ge [/WG], Re) is that pāda a refers to Pūṣan and b to Soma, but the opposition between celestial and terrestrial/atmospheric dwelling places doesn’t seem to me to divide so neatly. Pūṣan seems often to be an earthly god, accompanying us on the ragged roads, finding our lost cattle, and Soma certainly has a celestial presence throughout the IXth Maṇḍala. I imagine that this contrastive pairing is meant to be a genuine riddle, which would require its audience to try out different solutions by bringing to mind everything they know about both gods and trying to match those characteristics with the description in this vs.

The two different acc. phrases in cd can both be construed with the verb that lies between them, *vīṣyatām*. There seems no reason to supply a diff. verb to govern the first acc. phrase as Ge and Re do. The slightly diff. renderings “unleash” and “unloose” in the pub. tr. were simply adapted to better fit their objects.

II.40.5: The contrastive *anyāḥ ... anyāḥ* is generally taken to refer to Soma (a) and Pūṣan (b) respectively (Ge [/WG], Re). But the differential characterizations in this vs. seem even less easily assigned than in the preceding vs. “Begetting all creatures” isn’t a standard action attributed to Soma; in fact the same deed is said to be Apām Napāt’s in nearby II.35.2. And Ge can attribute “watching over everything” to Pūṣan only by identifying him with the sun god, while Soma regularly gazes on things, even with the same participle: cf. the very similar IX.57.2 *viśvā cākṣāṇo arṣati* “he [=Soma] rushes gazing on all (things/beings).” Again I think this differentiation is meant to be genuinely puzzling and provoke thought in the audience.

II.40.6: Fem. *anarvā* here (and VII.40.4) is assigned to the thematic stem *anarvā-* by Gr. It is more likely simply the nom. sg. to the well-attested *-n*-stem *anarván-*, serving for the fem. as well as the masc., without the fem. derivational suffix *-ī*. See JPB (Ādityas 218) and abundant discussions noted in the lexical commentary.

II.41 Various gods

II.41.1–3: This *ṛca* is characterized by lexical chaining. The first *pāda* of vs. 2 reprises *niyútvān* from 1c, *vāyo* from (accented) *vāyo* (1a), and *ā gahi* (1b). Vs. 3 is less closely tied to what precedes, but *śukrá-* ‘clear’, which characterizes the first drink of soma, offered to Vāyu, is repeated in 3a from 2b, and *niyútvant-* also recurs from 1c and 2a. The impv. *pībatam* (3c) picks up (*sóma-*)*pītaye* from 1c. More subtly, *ā yātam* repeats the preverb of *ā gahi* (1b, 2a) and also echoes the unrelated verb *ayāmi* of 2b.

II.41.3: The stem *niyútvant-* (3b) is repeated from 1c and 2a, as noted above, but here as an apparent gen. sg. modifying the soma drink (or rather one of them), not a god or gods. Ge (n. 3b) suggests that it is a metrically conditioned “hypallage” for dual *niyútvantā*, which would qualify Indra and Vāyu. This is a clever idea and would restore parallelism to the phraseology of the *ṛca*, though I’m not sure that’s necessary: Rigvedic poets enjoy tweaking parallelism in the syntactic equivalent of a slant rhyme. Old floats a truly oddball idea, unworthy of his usual acuity: that *niyútvant-* should modify an unexpressed *rāthena* but in the absence of a head noun in the proper case it gets sucked [not Old’s term] into the gen. by the “benachbarte” gen. Even if this were a reasonable explanation in principle -- that an untethered adj. could be captured by an adjacent or nearby word in another case -- *niyútvataḥ* is actually in a different *pāda* from the other genitives and is adjacent only to the dual dvandva *índrāvāyū*.

II.41.5: Note the phonological echo across the *pāda* boundary: ... *druhā, dhruvé* ...

II.41.11: The *ca* here is a subordinator (‘if’) and conditions accent on *mṛṣáyāti*. See II.42.1.

There are several nice phonetic sequences: ab: ... *no, ná naḥ*, where the 1st and last words are the same, with *naśat* at the end. And c: *bhadrām bhavāti*.

II.41.12: I am tempted to take *jētā* as a periphr. future, parallel as it is to the subjunctive *karat*. But this is not nec.

II.41.15: On the morphological and semantic structure of *pūṣarātayaḥ*, as well as other aspects of this vs., see the disc. of the identical vs. I.23.8.

II.41.16: Like 15ab, the first two *pādas* of this vs. consist entirely of accented vocatives.

II.42 Omen-bird

II.42.1: Subordinating *ca* as in II.41.11, also with a subjunctive.

The root noun cmpd. *abhibhā-* occurs only here in the RV, but 5x in the AV, which seems only to make it more obscure. Twice in the phrase “let not *abhibhā* or *aśasti* find you” (i.e., parallel to this phrase), but also in conjunction with dogs and jackals once, once *abhibhā*-s can speak, and once in conjunction with diseases. Wh. transl. ‘portent’.

Though not a lit. tr., Engl. “evil-eye” seems to correspond well to the contextual sense of the word; I have adopted it from Klein (DGRV II.240).

Pāda d should be read as a Jagatī, though neither Old nor HvN comment. The cadence is a Jagatī cadence and the proper number of syllables is achieved by reading *vīśv'yā* as a trisyllable (so already Gr, also AiG III.78). The word is otherwise not found in the RV, but such a cluster begs to be distracted, and by Wackernagel’s analysis of it as modeled on *urviyā* (AiG III.78, flg. Brugmann), it would have *-iyā* by nature.

II.42.2: Similarly, pāda c should also be read as a Jagatī, with trisyllabic *pītr'ya-*, as always in the RV

II.42.3: Although the publ. tr. follows Ge (/WG) in rendering *dakṣiṇatāḥ* as ‘to the right’, it is also possible, given 2c *pītryam ānu pradīśam* “in the direction of the fathers [that is, forefathers/ancestors],” that *dakṣiṇatāḥ* should rather be ‘to the south’, since the south is ordinarily the quarter of the Pitars.

On *īśata* see comm. ad I.23.9.

II.43 Omen-bird

This hymn seems late enough to allow terms like *sāma(n)√gā*, *gāyatrā-*, and *traiṣṭubha-* to have their full technical ritual meanings, and I have so rendered them.

II.43.1: Again as in II.42.3, *pradakṣiṇīt* might refer to ‘south’, rather than ‘right’, though the idiom *prā + dakṣiṇā-* seems more limited to the traditional circumambulation of the fire with the right side facing inward.

Pāda c is somewhat oddly phrased. The vocalizer is identified as a *sāman-singer*, but is said to *speak* (both) *speech(es)*. This raises several questions: does a singer speak? and what are “both speeches”? It is tempting to equate the two speeches with the two entities in pāda d, *gāyatrām* and *traiṣṭubham*, but I am not certain that is correct. I think it’s possible that “both speeches” refers to the words and the melody. As for the question of singing versus speech, I wonder if the simile *sāmagā iva* should go rather with d than with c: “It speaks both speeches. Like a *sāman*-singer it regulates both *Gāyatrī* and *Trīṣṭubh* meters.” Unfortunately this hymn is so isolated in the RV that we have no points of comparison.

II.43.2: As HvN remark in their metrical comm., although the *Anukramaṇī* identifies the meter of this vs. as *Atīśakvarī* or *Aṣṭi*, it appears simply to consist of 5 Jagatī pādas. That the fifth pāda is a simple variant of the fourth makes it likely that the vs. is just a version of Jagatī.

The “son of the formulation” (*brahmaputrā-*) is presumably the formulator (*brahmān-*) himself, as the standard tr. take it.

II.43.3: The provision of sitting silently reminds us of the actions and role of the *Brāhmaṇa* priest in later śrauta ritual: associated (secondarily) with the AV, he silently observes the proceedings for errors and omissions. But that development may be too late for even a late RVic hymn.

Commentary III

The commentary on III now includes SJ's comments on all the hymns, including those translated by JPB in the publ. tr.

[III.1-7 JPB – comments by SWJ]

III.1 Agni [SJ on JPB]

The account(s) of Agni's birth (vss. 3–14) are very difficult to sort out and are riddled with paradoxes and unclear referents.

III.1.1: The JPB tr. of the 1st hemistich is quite different from any of the standard tr., but seems to me more satisfactory than the others, although it is quite tricky. It assumes that Agni is the speaker of the hemistich – all others assume that it is the ritual officiant – but that Agni's speech includes an embedded quotation addressed to Agni (hence the voc. *agne*) by the officiant. It also takes *vákṣi* as the -*si* impv. to *√ vah* (with Gr and Re, but contra Old, Ge, and WG), rather than the 2nd sg. root pres. to *√ vaś*.

By this interpr., Agni says to the priest “you have made me your draught-horse [=oblation-conveyor]” (... *mā ... váhniṃ cakārtha*). This is regularly Agni's role; see, e.g., nearby III.11.4 *agním ... váhniṃ devā akṛṇvata*. The standard tr. require the priest to say the same thing to Agni, with *váhni-* then identifying the priest, but this is far less likely (though for *váhni-* referring to a priest, see III.20.1). The standard tr. also require *tavásam* either to modify the priest (Old, Re, WG) or a different substantive to be supplied (so Ge). But, as Ge points out (n. 1a), *tavás-* only otherwise modifies gods, and further, as Ge does not point out, it is used of Agni twice more in this hymn, including the immediately flg. vs. (2d, 13d). All of this reinforces JPB's interpr. of *sómasya mā tavásam ... váhniṃ* as referring to Agni, not a priest or poet.

The standard tr. also encounter the problem of the accented *vákṣi* (whichever morphological analysis they impose on it), generally explaining it as expressing unsigned subordination. But by JPB's interpr., the parenthetical impv. clause consists only of *vákṣy agne*, and the accent falls out from its clause-init. position. Taking *vákṣi* as an impv. to *√ vah* also connects it both etymologically and thematically with *váhni-*. For a similar connection see nearby III.5.1, 9–10 and comm. ad 9–10.

As for the 2nd hemistich, it constitutes the priest-poet's reply to Agni's speech in ab. All the standard tr. also take the priest-poet to be the speaker here, but then another interpr. difficulty arises: the participial phrase that begins c, *devāṃ áchā dīdyat*, most naturally modifies Agni (see almost identical III.15.5 with the middle part. and Agni as subj.), but the first ps. verbs *yuñjé* and *śamāyé* must have the poet as subj. Old struggles mightily with this, and Re simply reassigns the phrase to the poet. But then, once again, the accentuation of the verb makes trouble – why *yuñjé*? Ge proposes (this was also one of Old's thoughts) that the middle part of the hemistich – *yuñjé ádrim, śamāyé agne* – is parenthetical, and the opening participial phrase is to be construed with *tanvāṃ juṣasva* at the end of the next pāda. This works quite well and accounts for the accented *yuñjé*. And this solution actually reinforces JPB's embedded imperative clause in the first hemistich – both occupy the last four syllables of the odd pāda (and in the case of cd, the beginning of the even) and end with voc. *agne*. The structures are parallel.

Thus, by this interpr. the first vs. matches two individuals: Agni and the poet, each of whom appears both in 1st and 2nd ps.: Agni as 1st ps., addressing the poet in 2nd ps., in ab – but also quoting the poet as addressing Agni in the 2nd ps. The 2nd hemistich is simpler: the poet in 1st ps. addressing Agni in 2nd ps.

III.1.2: The next vs. introduces new sets of actors, now in the plural. The first pāda contains 1st pl. *caṣṛma* (recalling *caṣartha* in 1); this 1st pl. most likely has as subj. the ritual officiants as a group. Pādas b, c, and d all contain 3rd plural verbs: b: *duvasyan*, c: *śaśāsuḥ*, d: *īṣuḥ*. The question is – who are the subjects of these verbs, and are they all the same? Because of the ritual content of b, human priests seem the most likely, and JPB’s interpr. of the 1st pl. of pāda a as a quotation of these priests (hence his quotation marks) allows a way of reconciling the clashing grammatical persons and also fits the tricky interplay of quotations in vs. 1. Re, however, considers the subj. of *duvasyan* to be “les premiers sacrificateurs,” continuing as subjects of the 2nd hemistich – hence distinct from the 1st pl. of pāda a; in a similar way WG (flg. KH Inj. 128) take it as a timeless general statement. And a further wrinkle is introduced by the fact that *duvasyan* reappears at the end of vs. 13, there clearly with the gods as subject. Of these choices I would favor the JPB solution, though it is far from certain.

Who we supply as subjects in cd depends in part on what we do with *divāḥ*. If, with the standard tr., we take it as an abl. loosely construed with the verb (“from heaven they directed ...”) (or, with Ge and Th [Unters. 44], as a gen. with the unnamed subjects of *śaśāsuḥ* “they of heaven”), then the subjects cannot be the humans of pāda a (and maybe b); if, with Old (SBE), we take it as dependent on *kavīṇām*, no such inference has to be drawn. I do not have strong feelings about this, but given the prominent initial position of *divāḥ*, I think it is more likely connected to the verb or its subj. than to the gen. that ends the pāda, and that therefore the subjects are gods vel sim. The fact that the gods are prominent in the next two vss. about Agni’s birth gives some support to this interpr. However, the interpr. is made more difficult because the construction of the verb is somewhat anomalous: $\sqrt{sās}$ without preverb generally takes a personal obj.: “instruct someone,” but here *vidāthā* is the available acc. If the verb can be construed like some occurrences of $\tilde{a}\sqrt{sās}$ (see comm. ad IX.99.5) in the sense ‘direct’ (as is implicitly accepted by the standard tr. of our passage), the pāda may mean that the gods (or similarly heaven-based entities) direct how the goodies should be parceled out to the various human kavis. Pl. *vidātha-* reappears in 18b, though without clear thematic ties to our passage – although it’s worth pointing out that it’s immediately preceded by pf. *sasāda*, which is something of a phonological match to *śaśāsuḥ*, which precedes it here.

In short, the vs. is a bit of an interpretational mess, though the grammar isn’t particularly challenging.

III.1.3: For reasons given ad vs. 5, *pūtādakṣa-* here should be tr. “of purified skill.”

Despite its accent, the loc. *apāsi* in the phrase *apāsi svāsīṇām* (also 11d) must mean ‘labor’ and belong with the other anomalously accented forms of a neut. *apās-* ‘labor’; see comm. ad I.64.1. Here it flirts with its sometime twin *āp-* ‘water(s)’, which appears in the loc. pl. in the parallel phrase in pāda c. Since, as disc. in the publ. intro., the “sisters” may be not only the fingers that operate the kindling apparatus, but also the

rivers or waters that also give birth to Agni mythologically, a secondary sense of “in the water of the sisters” is not excluded here.

III.1.4: I would prefer to take *ásvāḥ* as part of the simile, despite its position: “They came to him newly born like mares to a new-born colt.”

III.1.5: Note the etymological figure between the words opening the two hemistichs: *#śukrēbhiḥ* (a) / *#śocīḥ* (c).

The phrase *krátum punānāḥ* “purifying his resolve” echoes the cmpd *pūtá-dakṣaḥ* in 3b, esp. since *krātu-* and *dákṣa-* are frequently found together (as in the next hymn III.2.3 *krátvā dákṣasya* ...). To register the repetition of the root $\sqrt{pū}$, the tr. in 3b of *pūtá-dakṣaḥ* as “of refined skill” should be changed to “of purified skill.” (Or the participial phrase here should be changed to “refining his resolve.”)

Rather than taking *āyur apām* as a nom. appositive to Agni (with JPB and, apparently, Old SBE), I would follow the other standard tr. (Ge, Re, WG) in taking it as an acc. parallel to *śocīḥ* and another obj. to *vásānāḥ*: “clothing himself all around in flame (and) in the life of the waters.”

III.1.6: The tr. of *ánadatīḥ* as “not speaking falsely” rests on an old article of mine, “A Vedic-Avestan Correspondence: RV *ánadant-*: Gathic *nadənt-*” (JAOS 101 [1981] 351–54), in which I argue that this vs. is structured by paired oppositional phrases: *ávasānā ánagnāḥ* “not clothed (yet) not naked”; *sánāḥ ... yuvatáyaḥ* “old (yet) young”; *sáyonīḥ ... saptá vānīḥ* “having one womb (yet constituting) seven voices.” Only the first pair, *ánadatīr ádabdhāḥ*, at least as it is ordinarily interpreted, does not fit this pattern: “not eating (yet) undeceivable” cannot conceivably form an oppositional unity. I further point out that “not eating” is not an appropriate description of rivers, who in fact are sometimes explicitly characterized as eating. I therefore suggest a different segmentation of the negated participle, as *á-nadant-*, not *án-adant-*, and connected *nad* with Old Aves. *nadənt-* in Y. 33.4, which on contextual grounds I interpr. as ‘speaking falsely’. This interpr. yields a more satisfactory oppositional pair “not speaking falsely (yet) undeceivable,” which fits the pattern of the vs. much better.

III.1.7: The hapax stem *saṃhát-* is problematic, in that it looks like an anomalously formed root noun cmpd to \sqrt{han} , with the empty *-t* characteristic of roots ending in short resonants, save for nasals. It is variously interpr.; besides the standard tr., see also Scar’s detailed (but inconclusive) disc. (696). I find JPB’s interpr. persuasive: that it is an oppositional partner to *stūrṇāḥ*, referring to Agni’s flames, which both spread out and bunch together. It would also be possible to take *saṃhátāḥ* as a gen. with *asya*, contrasting the compacted Agni with his spread-out flames, with an alt. tr. “Of him, the compact mass, (the flames) of all colors are spread (out).”

The publ. tr. of d is a bit anticlimactic. I also think that the dual entities indicated there are, with the standard tr., Heaven and Earth, rather than (or rather than only) the two fire-churning sticks, as identified in the publ. tr. Both *mahī* and *samīcī* are regularly used of H+E – the latter, for ex., in III.30.11 – and the statement “the two mothers [/parents] of the wondrous one are the two great, conjoined (H+E)” would pick up and further specify

3b *diváh subándhur janúṣā prthivyāḥ* “who through his birth is the close kin of heaven and of earth.”

III.1.8: This vs. and 10a have the only forms of the pf. (*babhar-* /) *babhr-* in the RV (versus *jabhar-* / *-bhr-*), both medial. See Kü 342. Note also the nominal *babhrí-* in 12a.

The ghee and honey of 7b recur here in c.

III.1.9: “The udder of his father” is a paradox of the type beloved by Vedic poets, esp. in the context of Agni’s birth. As to what it refers to, various suggestions have been advanced – see the publ. intro. and the standard tr. I prefer to stay out of it.

The instr. phrases in c and d, *sákhībhiḥ śivébhiḥ ... yahvībhiḥ*, are instrs. of separation, as Old suggests.

III.1.9–10: The abrupt anacoluthon between 9c and d, with Agni represented by the acc. in c (*cárantam*) but as the nom. subj. of *babhūva* in d, is best accounted for by JPB’s interpr., whereby Agni is also the acc. referent of *gárbham* in 10a, as well as the nom. subj. of *babhre*, which governs *gárbham*. This allows 9d to be a parenthetical remark, as it is represented in the publ. tr. Other interpr. leave 9c hanging.

III.1.10: However it is interpr., pāda a presents another paradox on the subject of Agni’s birth. That Agni is the embryo in question is supported by his suckling in pāda b.

See comm. ad vs. 8 on the *babhr-* forms, also ad 12.

With Ge, Re, and WG, but contra JPB, I would take c as an independent clause, with *ní pāhi* confined to d. The term *sapātnī* ‘cowives’ is used nearby (III.6.4) clearly of Heaven and Earth. Note also that Agni was *sabándhuḥ* of H+E in 3b; the term is a reciprocal one, and so they now receive this same designation. The cosmic pair H+E are then contrasted with the *manuṣyè* pair in d – the two “belonging to / stemming from men,” which here are likely the kindling sticks, as identified in the publ. tr. If pāda c refers to H+E, it might seem presumptuous to command someone (whoever is the subj. of *ní pāhi*) to protect these cosmic entities, whereas the kindling sticks belong to the human realm and are more vulnerable. I would substitute the tr. “The two close kin (of his) [=Heaven and Earth] are cowives for the blazing bull; protect the two belonging to men [= fire-churning sticks].” By identifying H+E both as kin of Agni by birth and his cowives, a new factor – incest – is introduced in this ever-shifting series of paradoxical relationships.

III.1.11: On JPB’s colloquial rendering of *yaśásaḥ sām hí pūrvīḥ* “for glory gets the girls,” see comm. ad X.46.10, where I use his tr. for the same phrase there. A more literal rendering would be “for many (females) (assemble) for one who has glory.” Re takes *yaśásaḥ* as nom. pl., modifying the fem. subj. “waters,” but the repetition in X.46.10 makes this unlikely.

The re-marked impf. *aśayat* (for expected *t*-less medial **aśaya*, next to pres. *śáye*) appears directly before an initial *d-*: *aśayad dāmūnāḥ*, as Re points out. But the ending *-d* is metrically guaranteed.

On *apási svásṛṇām* see comm. ad vs. 3.

III.1.12: On the unclear word *ákra*- see comm. ad I.189.7. If ‘foal’ is the correct interpr. of this word, note that it responds to 4c *śísuṃ ná jātám abhí ārur áśvāḥ* “They came to him newly born like mares to a new-born colt.”

The redupl. nominal *babhrí*- has the same *b*-redupl. as the isolated pf. forms *babhrāṇāḥ* (8a) and *babhre* (10a); unlike the pf., the nominal is found once elsewhere, however (VI.23.4), where it takes an acc. obj. I think it likely that it participates here in the dominant paradox of this part of the hymn, that Agni is both an embryo / new-born and the father / begetter of the same – as is (fairly) clearly expressed in the second hemistich. Since in IV.6.3 *ákra*- is described as “new-born” (*navajāḥ*), with Agni as referent, and since in our 4c we have a new-born colt (*śísuṃ ... jātám*, see immed. above), I think we can fill in this expression as “like a (new-born) foal, bearing (himself as embryo),” with reference esp. to 10a *gárbham ... babhre* “he carried (himself as) embryo.”

The missing contrastive “father” in this hemistich is, I think, implied by pāda b, where the dat. *sūnāve* invites us to supply *pitéva* (as in I.1.9, 26.3; VIII.48.4; X.25.3; see also *mātā sūnāve* II.38.5). I would emend the tr. to “desirable for a son to see (like a father).”

As just indicated, the 2nd hemistich expresses, somewhat more clearly, Agni’s role as both begetter and begotten, with the former role heavily emphasized in c (*jānitā yó jajāna*), though he begets the dawns there, not himself, and the latter in d (*apām gárbhaḥ ... yāhvāḥ*). The vs. ends with *agníḥ*, tying all his roles together.

The fem. pl. *yāhvīḥ* has figured prominently in this set of vss. (4a, 6b, 9d); this is the only time in the hymn that the corresponding masc. *yāhvāḥ* is used.

III.1.13: This vs., which is the penultimate one of the birth sequence, reassembles a number of the terms used earlier in the hymn: *apām gárbham* picks up the same phrase in the nom. from 12d, as well as *gárbham* in 6d, 10a; *darśatām* = the same in 3c; *jajāna* = *jajāna* 12c, as well as the numerous other forms of *√jan*; *subhágā* recalls *subhágam* 4a; *vīrūpam* resembles *viśvarūpāḥ* 7a; *devāsaḥ* also in 3d; *jātám* also 4c; *tavásam* also 1a, 2d; *duvasyan* also 2b. The effect is almost claustrophobic.

Given these repetitions, the tr. of *tavásam* should be corrected to ‘mighty’ to match vss. 1 and 2.

The subj. of *jajāna* is *vānā ... subhágā*. This is universally taken to be a nonce feminization of neut. *vāna*- ‘wood’, on the tacit assumption that a female is the appropriate gender to give birth (though note the immediately preceding masc. *yó jajāna* 12c) and/or that it is a stick of wood assimilated in gender to the *arāṇī*- ‘kindling stick’ (so Re explicitly) (cf. V.9.3 *jāniṣṭārāṇī*). However, MLW suggested to me the appealing alternative that the phrase can be a neut. pl., construed with a singular verb – a fairly rare but nonetheless attested syntactic possibility in the RV, and particularly appropriate for a substance that even in Sanskrit shifts between a mass noun and a count noun. I would slightly change the tr. to “(the pieces of) wood, possessed of good fortune, gave birth ...”

In c I would change “even” to “also.”

III.1.14: The standard tr. (save for Old SBE, but incl. JSK, DGRV I.185) separate the two hemistichs into two distinct sentences, having therefore to supply a verb in cd (mostly *sacanta* from b; see Ge n. 14). I prefer the publ. tr., in which the radiant beams themselves

produce radiant Agni as milk, a process that conforms to the closed loop of birth, whereby the son is the father who gives birth to himself, depicted earlier in this section. The beams are both produced by Agni and produce him in their turn.

The “unbounded container” (*apārā ūrvē*) echoes the “broad and unrestricted (place)” (*uraú ... anibādhē*) in which Agni grew (*vavardha*) in 11a; here the same verb is used (*vṛddhām*).

III.1.15–23: As Ge indicates (in his intro. and by inserting a line space after 14), the hymn takes a decisive turn in vs. 15, reintroducing the poet and focusing on the ritual and Agni’s relation to the ritualists — though the theme of Agni’s birth does not disappear (see vss. 20–21). The text also gets considerably easier to interpr., and there are more repeated pādas (and portions thereof) – see Bl. RR and passim below.

III.1.15: The ritualistic turn is signaled by the very first word, *īle* (repeated at the beginning of b). Rather than introducing the vs. with ‘and’, from the *ca* in pāda a, as the standard tr. do, better to take the *ca* as conjoining the two occurrences of *īle* in an X *ca* Y constr., as JPB does (see JSK DGRV I.185–86).

On the repetition of ... *no dāmyebhir ānīkaiḥ* in III.54.1, see comm. ad loc.

III.1.17–18: The even pādas of these two vss. match each other almost too exactly: 17d and 18b end with *sāadhan*, and 17b and 18d are almost identical: x x *vīśvāni kāvīyāni vidvān*. In addition, *vy ādyaut* returns from 8a. It almost seems that the poet exhausted his ingenuity in the birth section of the hymn and hasn’t much energy left for the ritualistic finale.

III.1.19: The post-caesura portion of pāda a, *sakṭīyébhiḥ śivébhiḥ*, is a variant on 9c *sākhibhiḥ śivébhiḥ*, which fills the same slot (though after an opening of 5, not 4), with the abstract *sakṭīyā*- substituted for the personal *sākhi*-. The whole first hemistich is identical to III.31.18cd.

Note polarized *#asmé ... naḥ#* in the 2nd hemistich.

III.1.20: All the standard tr. (but JPB’s) render *jānmañ-janman* as “in every generation, in generation after generation.” But though this is a possible sense of *jānman*-, in a hymn so fixated on Agni’s births and on the root *√jan*, and in a vs. containing the parallel alternative stem *jāniman*- ‘birth’, a minor morphological variant of *jānman*-, it seems tone-deaf to isolate this āmreḍita semantically. After proclaiming Agni’s older and current births in ab, the poet reprises the pl. *jānimā* with the āmreḍita, which is equivalent to a serial plural. (Note that an āmreḍita to the first stem would be metrically unwieldy: **jānimañ-janiman*, with 6 syllables that would not fit in the opening and whose metrical shape would not work in the cadence.) The point is that every time the ritual fire is kindled (“born”), it is then installed on the ritual ground. I would slightly alter the tr. to reflect that point more clearly: “at his every birth Jātavedas is installed.”

Most of pāda c, ... *vīṣṇe śāvanā kṛtémā*, is also found in III.30.2, an Indra hymn. I therefore think that the referent of *vīṣṇe* here is also Indra (with Ge, n. 20c; contra Re), esp. since soma-pressings are not offered to Agni. I would slightly alter the tr. to “these great soma-pressings have been made for the bull [=Indra].”

III.1.21: Pāda a repeats 20d; see comm. above.

The second hemistich is found verbatim in a number of places, incl. III.59.4. See Bl. ad loc. To match the other occurrences of *bhadré saumanasé* the tr. should be altered to “in his propitious benevolence.”

III.1.22: Pāda d is also found in X.80.7.

III.1.23: This vs. is something of a Viśvāmitra refrain vs. for (most of the) Triṣṭubh Agni hymns in III (III.5.11, etc. – see Bl. for full listing).

Gr, fld. by Re, takes *śaśvattamām* as modifying *sanīm*. However, III.62.2 *śaśvattamām āvase johavīti* (see also X.70.3) supports construing it with *hāvamānāya*, with JPB (Ge, WG).

III.2 Agni Vaiśvānara [SJ on JPB]

III.2.1: Each of the hemistichs in this vs. contains a semantically challenging simile among other problems. In ab, assuming that *dhiśāṇā*- here refers to the ritual ground as Holy Place (see comm. ad I.160.1), that we “give birth” to it (*janāmasi*) and that it’s compared to ghee are both surprising – and no doubt responsible for the various alternative translations of *dhiśāṇām* in this vs.: Ge “Werk” (which he then specifies as Loblied), Re “une offrande-poétique,” WG “ein Fest.” But the usual sense can be maintained here: we generate / give birth to the ritual ground by demarcating it at each ritual. As is well known, Vedic ritual does not have permanent or stable places of worship, but requires a new one to be measured out and sanctified for each performance. The *dvitā* ‘once more, yet again’ opening c may reinforce this begetting anew of the ritual ground, in addition to its application to the 2nd hemistich.

As for the ghee comparison, *ghṛtām ná pūtām* is a fixed simile (also IV.10.6, V.86.6, VIII.12.4) to which very unghee-like entities are compared (the body of Agni, IV.10.6; the praise hymn, VIII.12.4). The point of comparison in all cases is “purified,” not “ghee”: here we purify [/sanctify] the ritual ground in the course of creating it, just as we do the melted-butter oblation. I would therefore slightly alter the tr. to “For Vaiśvānara strong through truth, for Agni, we give birth to the Holy Place [=ritual ground], which is purified like ghee.”

The second hemistich presents a number of problems – among them, what, if anything, is the *ca* conjoining, and how should we construe *mānuṣaḥ ... vāghātāḥ*? how can one “bring together” a chariot with an axe? how is the axe/chariot simile related to the Hotar?

I will tackle the last two questions together. Although both parts – the simile and the frame – translate easily into the foreign languages in question (German, French, English), this ease is deceptive: neither part really makes sense, though the lack of sense has elicited no real comment. First of all, the simile: although axes are of course part of the equipment of a carpenter who would construct a chariot, the axe is not used to “put together” (*sām √ṛ*) the chariot, but to hew the wood that will then be used for this construction. Rather than the preverb *sām*, we might expect its opposite, *ví*, which is in fact found with the only other occurrence of *kúlīśa*- in the RV, I.32.5 *skāndhāṃsīva*

kúliśenā vīvrkṇā “like branches hewn **apart** by an axe.” At best we can see the simile here as telescoping two distinct steps in the making of a chariot: the obtaining and shaping of the separate pieces of wood (which involves a *kúliśa*-) and their putting together, which in the course of things would not. Interpreting the simile takes some mental effort on the part of the audience.

Then, what does it mean to “put together / assemble” the Hotar? A priest should not be subject to assembly from separate parts like a chariot. The expression here, *hótāram ... dhiyā ... sám ṛṇvati*, plays off a more easily interpretable one in the same Agni cycle, III.11.2 *agnīr dhiyā sám ṛṇvati* “Agni through insight assembles (the sacrifice),” though it has to be admitted that the obj. is supplied there. And, as with the simile just disc., I think the poet is challenging us both to recognize that the expression here doesn’t make sense and to dig deeper to find a way to make it do so. As with the simile, this is possible. The referent of *hótāram* is of course Agni, and as the ritual fire, he/it is indeed put together / assembled out of separate pieces of (fire)wood, just as the chariot is. So the simile and the frame have a close conceptual connection, but both have to be interrogated in order to find it.

The whole thing is put even further off balance by the case disharmony between simile and frame: *kúliśa*- should really be in the instr., parallel to *dhiyā*, it is not the axe that does the actual construction, but a carpenter using an axe.

This leaves us with the problematic *ca* in c. The standard tr. (incl. JPB) assume that *mānuṣaḥ* is a gen. sg., dependent on *hótāram* and that *mānuṣaś ca* implicitly conjoins the current Hotar [=ritual fire] with the Hotar/ritual fire of the primal sacrifice; this is most explicit in the publ. tr. “the chanters (bring together) with their insight the Hotar [=Agni], (who was) also (the Hotar) of Manu.” This interpr. is supported by the *dvitā*, which (as was just noted) indicates that the current ritual action is a repetition of one or more in the past. By this interpr. the phrase is quite condensed, from something like **hótāram asmākaṃ (I no) mānuṣaś ca* (or **hótāram nūtanam mānuṣaś ca*). By this interpr. *vāghātaḥ* is a nom. pl. and the subj. of *sám ṛṇvati*; this verb is sg. because it agrees with the simile subj. *kúliśaḥ*, which immed. precedes it. This is likely the correct, or at least the most probable, interpr. However, there are several alternatives, given in order of decreasing likelihood. As Old points out, *mānuṣaḥ* could also be nom. pl. (as in, e.g., I.36.7 and II.2.5); in this case it could be conjoined with *vāghātaḥ* in an X *ca* Y construction: “the sons of Manu and the chanters assemble the Hotar ...” Moreover, *vāghātaḥ* could be gen. sg. and conjoined with *mānuṣaḥ*, again in an X *ca* Y construction (“the Hotar of Manu and of the chanter”). There is also the fact that *mānuṣaś ca* occurs twice elsewhere in III, once in the next hymn III.3.6 *devébhir mānuṣaś ca jantúbhiḥ*, once in III.60.6 *vratā devānām mānuṣaś ca dhārmabhiḥ*. In both instances it is a subpart of a (properly) conjoined phrase involving gods as the other member of the pair. It is possible that our *ca* was improperly borrowed from these phrases (esp. III.3.6, a hymn that has many ties to this one) and has no function here, or that we should supply “gods,” in a phrase “the Hotar (of gods) and of Manu.” (Note also that in that same hymn [III.3.4b] *ca* precedes a form of *vāghāt*- in this same metrical position.) Or, if we make *mānuṣaḥ* a gen. dependent on nom. pl. *vāghātaḥ* and supply nom. ‘gods’, “(the gods) and the chanters of Manu assembled” (see the involvement of the gods in 3b). But I consider these interpr. less likely.

III.2.2–4: These vss. show some lexical chaining: 2a *rocayat* / 3c *rirucānām* // 3d *vājam sanīṣyān* / 4ab *sanīṣyāntaḥ ... vājam*.

III.2.2: With Ge and Re, JPB takes *mātróḥ* as the agent of *īḍyaḥ* “to be invoked by his two parents.” I would prefer not to have a gen.-loc. agent (otherwise the agent is instr. with this stem), and I also wonder about the action: would Heaven and Earth “invoke” Agni? Better, with Old (SBE) and WG, to construe this du. as a gen. with *putrāḥ*: “the son of the two mothers [=kindling sticks and/or H+E], or perhaps as a loc.: “to be praised in the two parents [=H+E].” The loc. of place/occasion is often used with *īḍya-*, though usually with reference to a ritual. So I would emend the tr. to “He, the son of the two mothers, is to be invoked” or “He, the son, is to be invoked in the two mothers [=H+E].” The gdv. *īḍya-* is frequently used without agent.

Here, in vs. 7, and in III.11.2, JPB tr. *cānohita-* as ‘placed for delight’, with a full lexical sense of *-hita-* (sim. but more elaborately Re “mis (en place) pour la satisfaction (des hommes)”). But it is surely simply the passivization (or pseudo-passivization; see below) of the phrasal verb *cānas* √ *dhā* ‘take delight, enjoy’. All 12 of the occurrences of *cānas-* in the RV form a VP with a finite form of √ *dhā*. In 10 of these occurrences *cānas* immed. precedes √ *dhā* and takes an acc.; in the other two *cānas* follows √ *dhā* and takes a loc. For the predominant construction, see, e.g., VIII.19.11 *stómaṃ cāno dadhīta* “he [=Agni] should take delight in the praise song.” Given this construction type, we should expect the entity modified by the past participle cmpd *cānohita-* to be the source of delight (praise song vel sim.)(so, it seems, Ge: “beliebt”). However, in its five occurrences (the three in III and two in IX.75.1, 4), it seems rather to target the one who takes delight, i.e., the subject of the finite phrasal verb: Agni in III, Soma in IX. See esp. IX.75.4 *matībhiś cānohitaḥ* “delighted by our thoughts.” For Agni as subj. of *cānas* √ *dhā*, see VIII.19.11 just quoted, also VI.4.2, 10.6. Although I am puzzled by how the passivization works (or doesn’t), I would therefore emend the tr. to “delighted.” (So, more or less, WG “(uns) geneigt gemacht”).

III.2.3: Different tr. distribute the nominals in pāda a differently from the publ. tr., with *dākṣasya* dependent on *krátvā*. Although *krātu-* and *dākṣa-* are standard formulaic partners, usually appearing in the same case (e.g., IV.37.2 *krátve dākṣāya*), and although the sequence *krátvā dākṣasya* is found also in V.10.2 and IX.16.2, it is not nec. for *dākṣasya* to depend on *krátvā*. See comm. ad IX.16.2, where I keep them separate.

In order to keep 3b *cíttibhiḥ* separate from 1d *dhiyā* in translation, “insights” should here be changed to “thoughts,” as in III.3.3.

The fut. stem *sanīṣyān-* has a strongly desiderative cast, as is recognized by most tr. and Gr.

III.2.4: I would alter the tr. of *āhrayam* from ‘audacious’ to ‘immoderate’; the adj. modifies *rādhas-* ‘bounty, largesse’ 5x, also once *dhāna-* ‘stakes’, and must express not a personal quality of daring or immodesty, but rather an excessive amount – a sense more appropriate for a prize than audacity. See comm. ad X.93.9.

On *uśíjam kavíkratum* see comm. ad III.3.7. I would here slightly change the tr. to “with a poet’s purpose.”

As noted in the publ. intro., *rājantam* can mean both ‘ruling’ and ‘shining’ and both should be registered here: I’d change to “who rules/shines with his heavenly flame.”

III.2.5: This vs. reprises some of the words that participated in the lexical chaining of vss. 2–4 (see above): *vāja-* (b) and *surúcam*.

Note the phonetic fig. (*yatá*)*srucah surúcam*.

The cmpd. *sādhad-īṣṭi-* is problematic. The dominant interpr. is what is found in Gr: a verbal governing cmpd with the 2nd member *īṣṭi-* ‘sacrifice’ (√*yaj*), hence ‘making the sacrifice succeed’ – identical in sense to *yajña-sādh(ana)-*. This analysis is fld. by Old (SBE) – though decisively rejected by him in the Noten – Ge, JPB, and Lowe (Part. 273). One of the issues is the identity of the 2nd member: Old (Noten) suggests it is instead the much better attested *īṣṭi-* ‘desire, quest’, and Re’s interpr. chooses this alternative, while keeping the same cmpd structure (“menant-droit-au-but la quête ...”; sim. Bl RR p. 182). But Old raises a more serious issue than the root affiliation of the 2nd member, namely the accent. Governing cmpds with this shape accent the *-āt-*, no matter where the accent would have fallen in the presumably associated verb stem: type *bharād-vāja-* v. *bhārati*, but this one is accented on the root syllable (a problem also disc. by Lowe). Old, flg. Wh., suggests that it is instead a possessive cmpd. (of a more standard bahuvr. type) – though cannily neither of them translates it. The WG rendering, “dessen Labung ... erfolgreich wird,” rests on this analysis (see their n.). (Unfortunately AiG doesn’t treat it.) Although I find the accent disturbing, with Lowe (173) I am inclined to accept it as “an anomalous alternative strategy” and keep the transitive governing sense found in the publ. tr. (and generally elsewhere). However, I would recognize an alt. interpr., “whose sacrifice succeeds (i.e., having a successful sacrifice) for the (ritual) workers.”

III.2.6: Chaining of *ṛktābarhiṣaḥ* in b with the same in 5b.

The standard tr. (incl. Old SBE), save for JPB and WG, take the whole of the vs., up to *dráviṇam* in d, as a single clause, with *úpāsate* as the main verb. However, Old in the Noten raises the question whether the verb should be accented (**upāsate*, i.e., *upa-āsate*) because of the *hí* in pāda a. He decides not, on the dubious grounds that by the time we get to the verb, the sentence has gone off the rails (“aus dem ursprünglichen Geleise geraten ist”). Better with JPB (and WG) to supply another verb with *kṣáyam pári* in ab and take *úpāsate* (i.e., *upa+āsate*) as a main clause verb. On the basis of the expression in the very next hymn, III.3.2 *kṣáyam ... pári bhūṣati*, I would suggest supplying **bhūṣanti* and tr. “the men ... (attend) upon your dwelling” (rather than the publ. tr. “are all around your dwelling” or WG’s “(sitzen)”).

I would substitute the more ritually focused “they reverently approach him” for “they are drawing near,” for the semi-technical lexeme *úpa* √ *ās*.

Rather than “company” for *dúvaḥ*, I would substitute “friendly service.” On *dúvas-* see comm. ad IX.65.3, where I suggest that *dúvas-* is offered by men to gods. Here it seems that the men both wish to do service to Agni and to receive his friendship. See already Old’s tr. in SBE: “seeking (how to do) honour (to thee) and (desiring) thy friendship.” The use of the word in this vs. should be harmonized with the denom. *duvasyá-* in 8b.

III.2.7: There are two ways to interpr. pāda a, both somewhat problematic. Ge and JPB take “the great sun” (*svār mahāt*) as a ref. to Agni and the nom. subj. of *ā pṛṇat*. In favor of this interpr. is the fact that the standard formula is only “fill the two world-halves” (see the passages cited by Ge in n. 7a), that Agni is often identified with the sun, and that it is hard to see what “fill the great sun (with light)” would mean, given that the sun is already full of light. Against this interpr. is the repetition of the preverb *ā*, which strongly invites an interpr. with *svār* a parallel obj. to *ródasī*. So Old (SBE), Re, and WG. I find this interpr. not only possible, but, given the rhetorical structure, preferable, and suggest the alt. “He filled the two world-halves, filled the great sun (with light).” What this somewhat puzzling expression might mean is that, in keeping with the Vedic view of the ritual as generative of natural phenomena, the kindling of the ritual fire provides the rising sun with light.

As Ge (n. 7c) points out, pāda c seems to refer to the Paryagnikaraṇa, the carrying of a firebrand around an object on the ritual ground.

Note that the caesura falls within the compd. *vāja-l-sātaye*.

On *cānohita*- see comm. ad vs. 2 above; the tr. should be emended to “delighted.”

III.2.8: In 16 of its 17 occurrences *havyā-dāti*- conforms to its grammatical expectations, as an abstract noun meaning ‘the giving of oblations’, but here it seems to be agentive: ‘giving the oblations’ by all standard renderings. Better to consider it an unsignaled bahuvrīhi (since the accent was already on the 1st member) meaning ‘having/controlling the giving of oblations’. On the compd see Scar 219.

“Who makes the rite good” for *svadhvarā*- might impose somewhat too much structure; better perhaps “of good ceremony.”

In b *duvasyāta* harks back to *dúvaḥ* in 6c. I would alter the tr. here to “do friendly service to.”

I would alter the tr. of the final pāda in two ways: “has become” → “became,” since the impf. doesn’t ordinarily have this sense; “placed in front of the gods” → “for the gods.” The publ. tr. makes it sound as if the gods are located behind Agni physically, whereas it must mean that Agni became the ritual fire that is placed in front / to the east, which serves as the fire that receives the offerings made to the gods (what is later [AV+] called the Āhavanīya).

III.2.9: The priestly term *uśīj-* returns from 4c, but here not of Agni but in the pl. of immortal priests of some sort.

Since *mártye* is loc. (the only loc. sg. to this well-attested stem), not dat., I’d tr. “in the mortal (realm),” not “for the mortal”; this tr. fits better with the locational expression in the next pāda.

The two non-earthly kindling sticks are supposed to be the sun and lightning; see Old’s n. in SBE, etc.

I would also tr. *ádadhuh* as “placed,” not “have placed.” As recognized in all the standard tr., the accent on this verb marks the clause as implicitly subordinated to the next.

III.2.10: Again I’d render the impf. *akṛṇvan* as “perfected,” not “have perfected.”

I wonder if, despite the word order, *viśāṃ kavīm viśpátim* contains (or at least evokes) the pleonastic formula *viśāṃ viśpáti-* (so WG “den Seher, den Lagerherrn der Lagerstätten”); cf. III.13.5, VII.7.4, IX.108.10, X.92.1; also *viśāṃ ... páti-* I.127.8, VI.15.1, VIII.95.3 -- although it has to be admitted that the phrase *viśāṃ kavīm viśpátim* is found also in V.4.3, VI.1.8.

Given the travel to distant parts in pāda c, I would tr. *eṣú bhúvaneṣu* “in these worlds” (with Old SBE), not “in these creatures” (with the other tr.) – although 11a might be a counterindication.

III.2.11: The med. 3rd sg. *jinvate* is the only middle form to this well-attested stem (on *jinvé* see comm. ad IV.21.8). Act. forms of *jínva-* are transitive (‘quicken X’); JPB’s “enlivens himself” correctly reflects the medial form, but sounds awk. to me. I’d prefer intrans. ‘quickens’; the modern English use of this verb for the first perceptible movements of a fetus in the uterus matches the usage here almost uncannily. For this reason I’d also delete “his” with “bellies.”

The pf. part. *prajajñivān* is taken by Old (SBE), Ge, Re, Lub as belonging to *prá √jan* ‘propagate’. However, Gr, WG, and JPB assign it to *prá √jñā*, an analysis strenuously argued for by Kü (203). He rightly points out that all weak forms of the perfects of *√jan* and *√jñā* fall together, *except for* the strong stem of the active part., where properly speaking *√jan* should have **jajāvāms-* or **jajanvāms-*. Our form, again properly speaking, can therefore only belong to *√jñā*. His point is well taken but overly rigid. The primary reading of this form may well be to *√jñā*, but it’s hard to deny the possibility that in this birth context *√jan* may also be meant, a conflation encouraged by the homophony of all other weak forms of their perfects. That both roots can occur with *prá* further ties them together. I would allow both senses here.

Putting this all together, I’d tr. the first hemistich “He quickens in the bright bellies, forethoughtful / proliferating further, the bull roaring like a lion.

III.2.12: Chaining of *vaiśvānarāḥ*, 11c, 12a.

I would tr. the aor. *āruhat* in conjunction with the adv. *pratnáthā* as “as of old he has mounted ...”

The post-caesura phrase *bhāndamānaḥ sumānmabhiḥ* is a phonological figure of sorts.

Verbal forms of the root *√bhand* are almost confined to this little clutch of hymns at the beg. of III: III.2.12, 3.4, 4.6; the only form outside this group is dual part. *bhāndamāne* in an Āprī hymn I.142.7 (see comm. there), clearly based on III.4.6, also an Āprī hymn. Nominal forms are more widely distributed.

JPB takes *sumānmabhiḥ* as a noun “with our good thoughts,” contra Gr and all the standard tr. (also Gotō, 1st cl., 223), who take it as a bahuvrīhi “possessing good thoughts.” This latter interpr. must be correct: it is found as a nom. sg. masculine in VII.68.9, and *mānman-* is of course neut. See comm. ad VIII.101.9. The tr. should be changed to “being delighted by those possessing good thoughts.”

It would be nice to capture the etymological figure *janāyan jantāve*, but I can’t think of a non-awk. way. In any case we should interpr. *jantú-* here in light of *mānuṣaḥ ... jantúbhiḥ* “the kin(smen) of Manu” in the next hymn (III.3.6), represented here by JPB’s “for the (human) race.”

III.2.13: Much fuss has been made over *diví kṣáyam*. I think some version of Old's explan. in SBE (which he more or less disavows in the Noten), that it is actually to be read **divi-kṣayám* 'dwelling in heaven' (a form found in V.46.5) or of Ge's (n. 13b) "unfertiges" bahuvrīhi ('having a dwelling in heaven') must be correct. The introduction of a word boundary might have been encouraged by 6a ... *hí kṣáyam*. See also *kṣáyam brhántam* in the next hymn (III.3.2), which must refer to the same heavenly place as the phrase here. Although I admire JPB's principled interpr. that takes the text as transmitted and equates Agni with "the dwelling in heaven," the text alteration required to get a more satisfactory sense is slight enough that I'm willing to make it.

The verb in that rel. cl., *ā ... dadhé*, is variously rendered: e.g., JPB "placed," Ge "an sich nahm," WG "verschafft hat," all of which are possible. But I wonder if some version of the later ritual idiom *ā √ dhā* "establish (the ritual) fire" is meant here: Mātariśvan not only stole fire from heaven but brought it to earth for the purpose of ritual. I would tr. this pāda as "... the one dwelling in heaven whom M. established here."

III.2.14: The opening of the vs., *súciṃ ná yāman* seems like a paraphrase of 13c *citrá-yāmam*, though of course it is not, morphologically or syntactically.

īmahe in d repeats from 13c.

Ge (n. 14d) suggests that *brhát* stands for (/is truncated from) **brhātā* characterizing *námasā*, but there's no reason why it can't be an adverb, as most take it.

III.2.15: This final vs. reunites lexical items from various parts of the hymn: *mandrá-* 4a), *hótar-* (1c, 6b), *súci-* (14a), *ukthyà-* (13a), *citrá-* (11b, 13c), *īmahe* (13c, 14d). Other words are variants of ones found earlier: *dāmūnas-* recalls *dāmya-* (8b), *viśvácarṣaṇi-* recalls *vīcarṣaṇi-* (8c), *rátha-* *rathī-* (8c), *darśatá-* *-dṛś-* (14b), *mánurhita-* the phrase *ā ... dadhe mātariśvā* (13b). Perhaps most strikingly, *ādvayāvinam* is etymologically akin to *dvitā* (1c), forming a sketchy ring.

III.3 Agni Vaiśvānara [SJ on JPB]

This hymn has many resonances with the immediately preceding one, III.2. Re in fact remarks "Suite de préc." Some of the echoes will be noted below.

III.3.1: Echoes of III.2: the opening *vaiśvānarāya prthupājase* is found in the nom. in III.2.11, which vs. also contains *rātnā*, *duvasyā-* is found also in III.2.8, with the noun *dúvas-* in III.2.6.

The form *vīpaḥ* is multiply ambig.: it can be nom. or acc. pl. or perhaps gen. (/abl.) sg.; though we might expect ending accent esp. in the gen. sg. and perhaps the acc. pl., the accentuation of root nouns of unstable function can't be entirely counted upon. Alone of the standard tr. (but in agreement with Sāy. [see Ge's n. 1ab] and Gr), JPB takes it as nom. pl. and the subj. of *vidhanta*. For Old [SBE], Ge, and Re it is an acc. pl., either parallel to *rātnā* or (acd. to Ge) forming an "unfertiges" compound with it. WG take it as a gen. sg. dependent on *rātnā* ("die Schätze der begeisterten (Rede)"). I would favor either the acc. pl. or the gen. sg. (though I am somewhat concerned about the accent of the gen. sg.) and tr. "they [=poets/priests] dedicate inspired words (and/as) treasures (//

dedicate treasures of inspiration).” Note that forms of this word return in vss. 3 (*vīprāsaḥ*), 4 (*vīpaścītām*), and 7 (*vīpām*).

I think Ge is quite correct (n. 1b; see passages cited there) that the point here is that ritual poetry provides the underlying surface (the “Teppich” – carpet) for those moving through the ritual.

On *dúvas-* / *duvasyá-* see comm. ad IX.65.3 and their appearances in the preceding hymn, III.2.6, 8. I would here alter the tr. to “Agni does friendly service to the gods.”

III.3.2: For *kṣáyam ... pári bhūṣati* see III.2.6.

III.3.3: *ketú-* also in III.2.14.

The “tasks and songs” (*ápāṃsi ... gíraḥ*) refer to the physical and verbal portions of the ritual.

The mid. part. *yájamāna-* seems to be used in its developed technical sense of ‘sacrificer’.

Here and in vs. 10 for *ā cake* I’d prefer “delights in” to “desires (to find).” JPB so tr. *cakānāḥ* in nearby III.5.2.

III.3.4: An alliterative first hemistich: ... *vīpāścītām, vimānam ... vayúnam ... vāghátām*.

In c the two worlds (*ródasī*) return from 2a.

√ *bhand* + INSTR. is also found in the preceding hymn, III.2.12, but the instr. there refers to persons, and so the two passages are not fully parallel. Here the interpr. is complicated by the semantic multiplicity of *dhāman-* and the fact that it is not specified whose *dhāman-* are at issue. It is tempting to assume that it picks up the *bhūrivarpaśā* of the preceding pāda and refers to the *dhāman-* of H+E – in this case I would tr. “he is delighted by their domains (i.e., the ones he just entered)” The standard tr. (incl. JPB) take the *dhāman-* to be Agni’s, hence the publ. tr. “through his manifestations,” Ge “um seiner Eigenschaften,” etc. On the whole, this interpr. -- that the *dhāman-* are Agni’s, not the two worlds – is more likely, esp. because of *táva dhāmāni* in vs. 10. But this does not settle the matter, given *dhāman-*’s semantic slipperiness. I would suggest a few additional tr. “by his foundations/emplacements [=hearths]” or “by his ordinances” (sim. WG “an den Satzungen”). I do not see a principled way to decide: the end of the next vs. (4d *devāsa ihā ... dadhuḥ* “The gods placed him here”) might slightly favor “foundations” but *táva dhāmāni* in vs. 10 suggests something less concrete.

III.3.5: The cmpd. *candrāratham* reminds of the simile *rātham ná citrām* in III.2.15. In fact JPB tr. both *citrá-* and *candrá-* in these expressions as ‘shimmering’. In order to keep them separate, I would change the tr. of *candrá-* to ‘gleaming’. And in fact I don’t particularly like ‘shimmering’ for *citrá-* and prefer the more generic ‘bright, brilliant’ for this very common stem.

su^u var-vīdam recalls *s^u var-dīśam* in III.2.14, though they are of course semantically distant. The former is repeated in this hymn in vs. 10.

The hapax *vīgāha-* ‘plunging’ (JPB’s ‘sinking deep’) must pick up the implication of *apsuśād-* ‘sitting in the waters’ in the previous pāda.

I would now render *tūrṇim* as ‘advancing’ rather than “as he moves swiftly”; see comm. ad nearby III.11.5.

Note the rhyme forms *tūrṇim* (c), *bhūrṇim* (d); a singsong effect is avoided by placing them in different metrical positions.

III.3.6: Ge (n. 6a, fld. by WG) wants to supply the ppl. *iṣitāḥ* from 2d to construe with the instr.s, but this seems unnec.: an instr. of accomp. suffices.

Agni’s journey between the two worlds returns here from 2a, with the same idiom *antār īyate*.

Several echoes of III.2: *jantú-* (III.2.12 q.v.), *rathīḥ* (III.2.8), *dāmūnas-* (III.2.15), and most notably *sādhad-iṣṭi-*. On this difficult compd, see comm. ad III.2.5.

III.3.7: The syntagm *jarasva* + LOC here receives a variety of rather awk. tr., incl. the publ. “be awake to a lifetime ...,” which goes easily into Engl. (more easily as “awaken to ...”), but misleadingly. I think it should be interpr. in light of constructions of the pf. impv. *jāgrhi* (etc.) with loc., which I render “be watchful over,” as in IX.61.24 *sóma vratēṣu jāgrhi* “O Soma, be watchful over the commandments” (sim. IX.82.4, I.21.6). I would therefore emend the tr. to “be watchful over our lifetime of good descendents.”

Act. trans. *jīnva* here contrasts with med. *jīnvate* in III.2.1; see comm. there.

The apparent syntagm *váyāṃsi ... brhātás ca* is difficult to interpr. Its structure must be X Y *ca* (Y’), with the head noun of the 2nd constituent gapped. See JSK (DGRV I.127). But the question is what is the identity of Y? Ge (n. 7c) suggests a notional repetition of X, namely *váyāṃsi* (a possibility also floated secondarily by Old, Noten and fld. by WG), simply dismissing the gender mismatch (not to mention the unlikelihood of conjoining identical nouns with each other). His tr., “Errege Kräfte und zwar grosse,” is not compelling. Old suggests *vājān*, which is accepted by JSK; JPB ‘gods’; Re supplies “pouvoirs,” without specifying the Skt. word. All of these are possible, but none has strong support. The best that can be mustered is a passage in this Agni cycle where *vājān* is the obj. of *jīnva* (III.15.6). But *√jinv* does not have a standard masc. object; *brhánt-* does not have a standard masc. pl. noun that it modifies; and *váyas-* is not regularly conjoined with a masc. pl. noun. We must also reckon with the possibility that *brhātāḥ* is not masc. acc. pl. but, as often, gen. sg. (though Old considers this “schwerlich”), and the second constituent is “the Y(s) of the lofty one.” On the whole it seems safer and more honest to leave the possibilities open, as in Old’s (SBE) tr. “Stir up vigour and the great ones” – so, in modern terms, “quicken our vital powers and the lofty ones.”

The priestly term *uśīj-* here and in the flg. vs. (8b) is also found in III.2.4 and (in pl.) III.2.9. In fact, our pāda *uśíg devānām ási sukrátur vipām* seems a partial scrambling of III.2.4c *uśíjam kavíkratum*, with *sukrátur vipām* an analytic version with partial relexification of *kavíkratu-*. I would slightly change the tr. to “you have the good purpose of inspired words.”

All the standard tr. (but JPB) tr. the last pāda as a unity, but then why is *ási* accented? This problem has attracted no comment. JPB’s tr. solves the problem by starting a new cl. with *ási*, which is probably correct, although the association between *uśīj-* and *krátu-* just noted makes it less appealing. It might be possible to argue that the phrases before and after the *ási* are contrastive and therefore condition accent on the verb, but this seems artificial.

III.3.8: Note that this vs. is framed as a Praśasti (*prā śamsanti*).

A number of terms from the preceding hymn are repeated here: *vīspati-* III.2.10, *yahvā-* III.2.9, *ātithi-* III.2.2, *uśīj-* III.2.4, 9, as well as vs. 7 here; *vāghāt-* III.2.1, as well as vs. 4 here.

The standard tr. supply *yajñām* as obj. to the infinitival *vṛdhé*, on the basis of parallels, esp. nearby III.6.6 *yajñām-yajñam ... vṛdhé*, so an alt. tr. might be “(for him) to strengthen (the sacrifice).” In the publ. intro. JPB suggests rather that the obj. is intentionally left ambig.

The abstract *jūti-* ordinarily means ‘speed’ or ‘alacrity’, but in several passages (here, nearby III.12.3, III.34.2, and I.116.2) it has a transitive sense ‘spur’, presumably based on the numerous transitive forms of *junāti*.

III.3.9: Since *surāṇa-* is ordinarily an adj., the tr. “the great delight” should be changed to “very delightful” or “bringing delight.” It is once used as a noun (III.53.6), but is a neuter there.

In c *bhūripośīṇaḥ* is universally taken (starting with Gr) as a gen. sg. modifying *tāsya*, but it could also be nom. pl. modifying *vayām*, to which it is in fact adjacent. I favor reading it with both: “We, prospering abundantly, would attend to the commandments of him, who prospers abundantly.” Obviously our prosperity derives from Agni’s.

III.3.10: The verb *ā cake* from vs. 3 and pl. *dhāman-* from vs. 4 come together here. As in vs. 3 I’d prefer “delight in” rather than “desire” for *ā cake*. As in vs. 4 the exact referents of *dhāmāni* are unclear, but here they enable him to “find the sun.” JPB’s “manifestations” may make the most sense in this context.

svarvíd- returns from vs. 5.

III.3.11: The publ. tr. takes *daṃsánābhyaḥ* and *svapasyáyā* as parallel and implicitly instr.: “By the wondrous powers of Vaiśvānara and by his good work ...,” but the first form is dative or ablative and should not be syntactically assimilated to the latter. I take the former as ablative: the wondrous powers are what enables the “good work.” I would tr. “Because of /from the wondrous powers of V., by his good work ...”

JPB follows Ge (n. 11ab) in what seems to me a very shaky and implausible interpr. of the first hemistich, suppling *rétas-* ‘semen’ as the obj. of *árināt*, and somehow connecting this semen with Agni’s birth. The grounds for such a daring image do not seem to me to have been prepared earlier in the hymn, and there is no formulaic support: *rétas-* is not elsewhere construed with *√ri* ‘flow’ (despite their likely etymological connection) or modified by *bṛhánt-*. Moreover, the two other occurrences of *bhūri-retasā* (VI.70.1, X.92.11) also both modify H+E as here, but have nothing to do with Agni or his birth. Better, with Old (Noten; fld. it seems by Re, and as an alt. by WG), to supply as the object *bhās-* ‘light’, which is regularly modified by *bṛhánt-*; *bhās-* is usually used of Agni’s light, which he “spreads” or “lets loose” (which could be poetically rephrased as “let flow”) and is sometimes compared to the light of the sun. I would also render *ékaḥ ... kavīḥ* as “the poet alone.” Putting this all together: “Because of /from the wondrous powers of V., the poet [=Agni] alone, by his good work, lets flow (his light) aloft.”

By this interpr., what happens in cd is that Agni, once born [=kindled], spreads his light through the two worlds, thus magnifying/exalting them.

The verb *maháya*- returns from vs. 3.

III.4 Āprī [SJ on JPB]

On the allusion to key words by indirection in some vss., see publ. intro.

III.4.1: The stem *sumánas*- is found in pādas a and d, with related *sumatí*- in b.

The dat. *yajáthāya*, the only case form to the stem, is always used in (quasi-)infinitival usage; see comm. ad II.28.1. I would substitute “to sacrifice (to them).”

III.4.2: The publ. tr. renders *yám devāṣah ... āyájante* as “to whom [=Agni] the gods offer sacrifice ...” But *āyaj* means not ‘sacrifice to’, but ‘attract/win by sacrifice’; see comm. ad X.63.7. Ordinarily the obj. is a desirable *thing*; see, e.g., nearby III.1.22 *ágne máhi dráviṇam ā yajasva* “O Agni, win great wealth by sacrifice.” The situation is more complex here, since the object is an animate being, Tanūnapāt – indeed one usually identified as an aspect of Agni, who also figures as part of the subject of the verb. And so the action depicted is an internal loop, a closed circle: the gods bringing one of their own (/one who is a multiform of one of them) by sacrifice to the sacrifice, which he in turn will make successful. The tr. should be changed to “(You) whom the gods – Varuṇa, Mitra, (and) Agni – attract here by sacrifice, three times a day, day after day.” It’s a surprisingly complex and convoluted thought for an Āprī hymn.

III.4.3: The publ. tr. takes *yájadhyai* as absolute, with Agni the Hotar implied as subj.; the other tr. take *hótāram* as obj. of *yájadhyai*, as *vṛṣabhám* is of *vandádhyai* in c. I think this latter interpr. is better, as it continues the closed circle of the previous vs., with Agni both sacrificer and sacrificed to. I would change to “goes forth to sacrifice first to the Hotar ...”

III.4.4: The identity of the two indicated by *vām* is uncertain. Sāy. (fld. by Re and in part by Ge and WG) suggests Agni and the barhis, but this seems a remarkably ill-assorted pair, and the notion that the barhis, meant to be spread on the ground, would have a way created “high above” is somewhat absurd. See Old (Noten) for other possible pairs, none of which he endorses. I am somewhat attracted by Max Müller’s suggestion, rejected by Old, that *vām* stands for *vā*.

On *vā* as a sort of semantic reframing (not his term) of what went before, see JSK, DGRV II.184–85.

For apparent nom. sg. masc. *devávyacā(h)* modifying a neut. sg., see comm. ad II.31.5.

III.4.5: Although not explicitly mentioned in the vs., the subject of ab and also, most likely, cd is the gods, who come to the sacrifice through the “divine doors” (also not mentioned here explicitly; see publ. intro.). Although Old (SBE) takes the doors as subj. in cd, the movement they would be making is out of character for doors (even divine ones). Instead the gods come “through” (*vñ*) them “to” (*abhñ*) the sacrifice. I would slightly change the publ. tr. from “wander” to simply “come” or “proceed”; though *√car*

does often mean ‘wander, roam’, it has a number of nuances, esp. with preverbs, and “wander” is a less purposeful, more unceremonious kind of movement than I would expect of gods arriving at the sacrifice.

In b “return” (*prāti yan*) refers to the gods’ regular attendance (punctuated by departure from) the sacrifice.

I do not know what “having men as their adornment(s)” means. It surely doesn’t refer to figurative art.

The two-word sequence *prá jātā* is surprising; we would expect unverbated *prājātā* when the preverb is adjacent to the participle. Old considers it an archaism, from a time when the connection between preverb and participle “noch loser war”; he explicitly doesn’t think that there’s a functional difference (much less that *prá* is to be construed elsewhere in the clause). I reluctantly concur.

III.4.6: On *bhāndate* see comm. ad III.2.12. As noted there, the only form of this stem outside this group of hymns in III is *bhāndamāne* in I.142.7, in an Āprī hymn and a verse dependent on this one; see comm. ad loc.

I would prefer “close together” rather than “close by”: the point is the close proximity of Dawn and Night to each other, not to us / the ritual ground. I also don’t think it’s the predicate of the clause (publ. tr. “are close by”). Rather, we should supply *sīdete* vel sim. (cf. I.142.7, 188.6; VII.2.6; X.70.6, 110.6). So I would substitute “... Dawn and Night (sit) close together.”

I do not understand why there’s a purpose cl. in cd (*yáthā ... jujoṣat* “so that X will rejoice ...”); it should have as its grounds the presence of Dawn and Night announced in the first hemistich, but I don’t see the logical connection.

The position of *utá vā* in d is quite anomalous; it should really precede *índrah*, or, if it is taking a post-positive position, just after *índrah*. See JSK, DGRV II.153, who merely calls attention to the anomaly.

III.4.7: For the possible identity of the seven in b, see Ge’s long n.

III.4.8–11: As noted in the publ. intro., these vss. are identical to their counterparts in the Āprī hymn VII.2.8–11.

III.4.10: On *satyátara-* see comm. ad I.76.5. I would substitute the tr. “more truly present” for “more real,” though the intention is almost the same. Re’s “plus réel (que l’oblatureur humain),” based on Ge’s view (fld also by WG) about paired divine and human Hotars, is, I think, somewhat off-base: the point is rather that the god embodied in the physically present fire is more real / more present than the notional gods who have been brought to the ritual ground.

Another postposed *yáthā* clause whose connection to what precedes is murky (see vs. 6), though this one is not a purpose clause, since its verb is the pf. indic. *véda*.

III.5 Agni [SJ on JPB]

This hymn has an omphalos structure, with vss. 5–6 paired, containing repeated phraseology and enigmas at the center; they are surrounded with framing ring in 3c / 7a // 2ab / 8ab+9 // and possibly 1d / 9d+10d. Since the final vs., 11, is a repeated vs.

(=III.1.23, 6.11, 7.11, 23.5, all in this Agni cycle), vss. 5–6 are in the exact center of the hymn.

III.5.1–3: A notable run of augmented aorists: 1b *ābodhi*, 1d *āvah*, 2d *adyaut*, 3a *ādhāyi*, 3c *asthāt*, 3d *ābhūt*, interrupted only by the pf. *vāvṛdhe* in 2a.

III.5.1: Note the presence of both *viprá-* and *kaví-* in pāda b.

III.5.2: It is difficult to know how to distribute the various instr. pl.s between *vāvṛdhe* and *namasyāḥ*, but it might be worth noting that *namasyā-* doesn't seem otherwise to be construed with an instr. whereas the med. pf. of *√vṛdh* regularly is. So perhaps all the instr. go with *vāvṛdhe*: “through the praises, songs, and recitations ...”

III.5.5–6: On these vss. as the omphalos see intro. above.

III.5.5: Note that *padām véḥ* echoes 1b *padavīḥ*, though they are completely different morphologically and syntactically, only sharing *padá-* ‘track’.

On the mysterious expression *ripó ágram* see the similar expression in IV.5.7 *ágre rupáh*, a passage that has other connections with ours, *rupó ágram* in the flg. vs. IV.5.8, in a pāda otherwise identical to ours, and X.79.3 *ripá upásthe*, along with the comm. on these passages. For reasons given there I tentatively take *rip-/rúp-* to mean ‘mount’ (sim. JPB’s ‘summit’) and tr. the phrase in IV.5.7 as “on the tip of the mount,” suggesting that this refers to the ritual ground. Perhaps here it reprises 3c *sānv asthāt* “he has mounted the back (of the altar).” Beyond that I can’t go.

JPB’s ‘summit’ might better be changed to my ‘mount’, since he also uses ‘summit’ for *várṣman-* in 9b. Although I think it quite possible that the phrase in 9b is meant to “repair” the enigmatic one here, they do not use the same words.

Given *nābhā prthivyāḥ* in 9b, perhaps better “in the navel (of the earth)” rather than “(of the sacrifice).”

III.5.6: This vs. forms a pair with vs. 5, signaled by the repetition of *padām véḥ* (5a, 6c) and the presence of the verb *rakṣati* ‘guards’ in the final pāda of 6, which is a near-synonym of the insistent *pāti* ‘protects’, which opens every pāda in 5. Moreover, like vs. 5 this vs. also has connections with IV.5.7: in particular, the phrase *sasāsyā cárma* is found in IV.5.7c, where I follow Gr in taking it as a reference to the ritual grass strew (see comm. ad loc.).

I would be inclined to take pāda b with cd, rather than what precedes, in that knowledge of the ritual patterns would seem more needed for the esoteric phraseology of c than the fairly straightforward name in a. Thus, “The Ṛbhu ... to be invoked. As the god knowing all the ritual patterns -- the ghee-covered hide of the grain and the track of the bird – just that does Agni guard ...”

The publ. tr. takes *ghṛtávat* as modifying both *cárma* and *padām*, which is not only possible, but perhaps favored by its position between the two NPs. However, since “the track of the bird” appears without that qualifier in the previous vs. and elsewhere (I.164.7, III.7.7, X.5.1), it is perhaps safer to limit it to *cárma*: “the ghee-covered hide of the grain (and) the track of the bird.”

III.5.7: The first pāda, *ā yónim ... asthāt*, reprises 3c *ā ... sānu asthāt*, forming a loose ring around the paired vss. 5–6.

III.5.8: The first hemistich conceptually echoes 2ab, though with the strengthening of the fire effected by physical fuel (plants, ghee), not verbal means (praises, songs, hymns), producing an outer ring around 5–6, in addition to the inner ring in 3+7. Here the two finite verbs, *vavakṣe* and *vārdhanti*, both relate to the single verb in 2ab, pf. *vāvṛdhe*, with *vavakṣe* matching the perfect in form and *vārdhanti* matching the root. I might be inclined to match the tr. of *vavakṣe* to the temporal function of *vāvṛdhe* in 2, though *vavakṣe* can have strictly presential value as the publ. tr. has it. Perhaps rather “Just born, he has grown strong ..., when the fruitful ones strengthen him.”

The opening of b, *yādī*, must be *yād ī* – i.e., ‘when him’ not ‘if’, as not infrequently elsewhere, incl. 10c. (See my “RVic sīm and īm,” Fs. Cardona, 2002.)

III.5.9: This vs. in part participates in the outer ring with 8ab: *adyaut* in pāda a and *dūtāḥ* in d reprise *dūtō adyaut* in 2d. But it also has resonances with other parts of the hymn: *yahvāḥ* in pāda a = 5b; *nābhā* in b = 5c; *mītrāḥ* in c recalls the numerous occurrences earlier (3b, 4bcd); *īdya-* in c = 6a.

It is also possible that *vārṣman divāḥ* “upon the summit of heaven” is meant as a repair or explanatory gloss of *ripō āgram* in 5a (q.v.). This may be suggested by the presence of *nābhā prthivyāḥ* in this pāda, echoing *nābhā* in 5c.

On *yajāthāya* as always infinitival, see comm. ad III.4.1. Here also I would substitute “to sacrifice (to them).”

III.5.9–10: It’s possible to identify one last outer ring: *vāhniḥ* ‘draught-horse (referring to Agni) in 1d may find its counterparts in the more explicit *vakṣat* ‘he will convey’ (9d) and *havya-vāham* ‘oblation-conveyor’ (10d).

III.5.10: I’d replace “has propped up” with “propped up”: this is surely an event in the distant mythological past, given the Mātariśvan clause in c.

As in 8b, *yādī* should be read *yād ī* ‘when him’.

Best to tr., with the standard tr., “as oblation-conveyor.”

There is a difference of opinion on how to interpr. and construe *bhīgubhyaḥ pári*. Ge, fld. by the publ. tr. and WG, take *bhīgubhyaḥ* as an abl., with *pári* the postposition ‘from’, and the whole phrase construed with *gúhā sántam* (“hiding from the Bs”). Others (Old [SBE], Re, HPS [B+I 69–70]) take *bhīgubhyaḥ* as a dative construed with *samidhé* and *pári* as an adv. (“tout autour”): “kindled him, being in hiding, as the oblation-conveyor for the Bh’s.” On the issues, see Ge’s detailed n. 10c. Re argues that Ge’s interpr. cannot be correct, because otherwise we would expect close sandhi *bhīgubhyas pári*, but this is a false arg. As Mark Hale has shown, close sandhi is blocked by the caesura, which in this case falls between these two words. I am of two minds about the interpr. On the one hand, Ge’s interpr. best accounts for the position and use of *pári*. As he says, otherwise *pári* is left “in der Luft hängen.” On the other, Ge himself points to I.60.1 *bharad bhīgave mātariśvā* “M. brought [Agni] to Bhṛgu,” which would favor a dative interpr. here. In the end the *pári* argument sways me to the Ge side – esp. since

√*idh* is not construed with that preverb – but I still think the datival interpr. given above is worth considering.

III.6 Agni [SJ on JPB]

III.6.1: As is convincingly argued in the publ. intro., the unidentified fem. referent in this vs. is probably an unsigned pun on *juhū-*, which can mean both sacrificial ladle and tongue, the latter standing in for the poet’s power of eloquent speech. The final pāda esp. favors the former identification as ladle: she bears the oblation and is covered with ghee. But the opening of the vs. invites the verbal reading. The other two occurrences of the part. *vacyámāna-* (√*vañc*, on whose sense see the various reff. in the lexical list) have such referents: *matīḥ* in III.39.1 (in this same maṇḍala) and *stómāḥ* in X.47.7. In both instances the part. depicts an intimate movement of the thought/praise hymn curling itself out of the poet’s heart (III.39.1) or intertwining with his mind (X.47.7). (See comm. ad locc.) Note esp. X.47.7 *mānasā vacyámānāḥ*, which is very similar to our *mananā vacyámānāḥ*. (*mananā* is a hapax.) And of course, though it belongs to a very different root, the root syl. *vac-* evokes √*vac* ‘speak’, an association supported by the voc. *kāravah* “o praise-poets.” The transfer of the action of the participle from the praise-song (in its other two occurrences) to the praise-poet is bold; I think it refers to an almost physical sense of mental spinning or twirling as one tries out different wordings in search of the best formulation (as I’ve just been doing). The physical counterpart of this mental motion is expressed in the next vs., 2d, which helps pin down the sense here.

On *dakṣiṇāvāt* see Scar (474–75).

III.6.2: Pāda b is notable for a pile-up of items that might be in competition for first position and without such competition would have claimed it: the conjunction *utá* (the winner), the preverb *prá*, and the adverbial conjunction *ádha*, which adjoins the caesura and is immediately followed by *nú*, which normally claims 2nd position. With all these little words vying for first place, there’s hardly any space left for content in the pāda, which enjambs with the following pāda c.

Given that Heaven and Earth reappear as agents in the next vs., and are therefore capitalized as animates, I would be inclined to cap them here as well. I assume that JPB left them lower case here because their role here is to be spaces, but I think the distinction is not clear cut in the Vedic worldview.

The draught horses with their tongues are clearly Agni’s flames, and the movement depicted by this form of √*vañc* is surely the twisting, curling motion of flames – which helps define the sense of the verb in 1a.

III.6.3: Once again (see the preceding hymn III.5.8, 10), *yádī* should be read *yád ī* “when it,” with the acc. enclitic *ī* anticipating the NP *śukráṁ arcīḥ*.

Some reminiscences of vs. 1: *devayántīḥ* (cf. 1b) and *práyasvatīḥ* ‘bearing/having pleasing oblations’, which is functionally similar to *havír bhárantī* (1d).

I would substitute “reverently invoke” for “summon” (which sounds peremptory rather than worshipful) to tr. *īlate*.

III.6.4: I prefer ‘seat’ for *sadhástha-* to JPB’s ‘abode, dwelling’; on the connection with \sqrt{sad} (despite the aspirated *dh*) see EWA s.v.

The Pp. reads nom. *dhruvāḥ*, which is so tr. by Ge (/WG). However, Gr lists it as *dhruvé*, and the loc. interpr. is favored by Old, Re, and JPB. Either is possible, and both have support. See Ge’s n. 4a and comm. ad VI.9.4. An alt. would be “... is set down steadfast here in his abode [/seat] ...,” which I weakly favor.

III.6.6: The *vā* in pāda a seems essentially functionless. JSK (DGRV II.189) calls it “a loose interstanzaic concatenator”; Re “explétif (hortatif?)” – though hortatory “or” is not a standard function of this particle. There could be an implicit contrast between 5d and 6ab: you either lead the people *or* you hitch up your horses and bring the gods here. But the contrast is very faint.

The gen. *ṛtāsya* is variously construed: JPB (and Old SBE) take it as dependent on *keśínā*; Re and Lü (454) on *yogyābhiḥ*; Ge and WG on *dhurī*. (Scar [662] tr. the hemistich but fails to render *ṛtāsya*.) Since only Ge cites passages in support of his configuration (n. 6a), I am inclined to follow his interpr. and substitute “place your two long-maned (horses) ... on the yoke-pole of truth.” Acdg. to Ge, this expression refers to the Opfer. The other interpr. are not excluded, however; for *ṛtāsya* dependent on horses, see, e.g., IV.2.3 *róhitā ghṛtāsnū*, *ṛtāsya*, a passage very like ours.

ghṛtasnūvā is problematic. See esp. the disc. by Scar (662–63). Although generally listed as *ghṛtasnū-*, the two forms with this accent more likely belong to a stem in *-snū-*, as Scar points out. This *ghṛta-snū-* exists beside *ghṛtā-snu-* (10x) with first-member accent (save for a single unaccented voc. *ghṛtasno*), generally considered to be a bahuvrīhi with the 2nd member a weak form of *sānu-* ‘back’, hence ‘having a back with ghee, having ghee on its back’ (a *vāja-hasta-* type compound). However, the 2nd-member accented *ghṛta-snū-* is also parallel with *ghṛta-snā-* ‘bathed/bathing in ghee’ (2x), and *ghṛta-snū-* is generally rendered (incl. in the publ. tr. of our passage) like the *-snā-* cmpd: ‘bathing/bathed in ghee’. Scar suggests that *ghṛta-snū-* represents a contamination of *ghṛtā-snu-* and *ghṛta-snā-*, which seems reasonable. There cannot have been a strict semantic separation between *ghṛtā-snu-* and *ghṛta-snū-* because the same referent, du. *keśínā* is modified by *ghṛta-snū-* here and *ghṛtā-snu-* in III.41.9 (see also another dual referring to horses, *átyā* in IV.2.3, modified by *ghṛtā-snu-*). I think both meanings are likely in play here, and would substitute “bathed in ghee [/ghee-backed].”

III.6.7: The *ā* in pāda a must be a postposition, not a preverb in tmesis: \sqrt{ruc} does not appear with *ā*, and the *ā* here does not adjoin a metrical boundary, as preverbs in tmesis generally do. Rather it is to be construed with preceding abl. *divāḥ*, with emphatic *cīd* ‘even’ intervening. It also must have the meaning “(all the way) to” (so Ge, WG, Scar [197], JPB; contra Old [SBE], Re), even though *ā* with preceding abl. generally means ‘from ... to’ (Gr “von ... her”), and it is *ā* with following abl. that means ‘to’ (Gr 169). However, see Gr’s 8) “zu ... hin,” as well as comm. ad I.92.17. Since I think the *ā* is a postposition, I would delete JPB’s “here” in “shine here” and substitute “shine all the way even to heaven.”

The publ. tr. rendering of pāda b, “you become radiant along with the many far-radiant dawns,” misrepresents both the case of “dawns” (acc., not instr.) and the function

of *ānu*. It should be emended to “you become radiant following the ... dawns,” indicating that the ritual fire is kindled just after first light.

The cmpd *usādhak* is quite problematic, although on first glance it looks straightforward enough. It occurs three times, here, III.34.3, and VII.7.2, always in conjunction with *vāna*- wood: *usādhag vāneṣu* (here and III.34.3), *usādhag vānāni* (VII.7.2), always at pāda end. It looks as if it should be a root-noun cmpd. consisting of a zero-grade form derived from \sqrt{vas} ‘desire, want’ and \sqrt{dah} ‘burn’. However, the accent is wrong for a regular root-noun cmpd. Moreover, in this passage the form must be an acc., in the object phrase with *panāyanta*. This brings us to the problem of *apāḥ*, which must also be part of the object phrase. By accent, this form should be the adjectival ‘industrious’, but the standard interpr. (Old [SBE], Ge, Re, WG) simply take it as if it were the neut. noun *āpas*- ‘work’ and finesse the accent somehow. (That *apāsī* in III.1.3 seems to be the noun, not the adj. [see comm. ad loc.], lends some support to this tack.) They then do one of two things with *usādhak*: either take it as a neut. adj. modifying *apāḥ* ‘work’ (Ge: “deiner gierig in den Holzern brennenden (?) Tätigkeit”) or as a modifier of Agni (Old [SBE], Re, WG), despite the fact that it is neither a vocative (note 2nd syl. accent) nor a gen. (Old [SBE n.] cavalierly says it stands for a gen. metri causa – though he alternatively suggests the first solution, as an adj. modifying *apāḥ*. He gives the same two solutions in the Noten, but in opposite order.) The solution found in the publ. tr., as well as in Scar., flips the values of *apāḥ ... usādhak*, taking the latter as a neut. noun and *apās*- in its usual adjectival value: “industrious burning-at-will in the wood.” The substantivization of an old root-noun (adj.) cmpd. **usā-dāh*- ‘burning in the wood’ can account for its accent shift, while the accent of *apāḥ* is correct for its function. Although this interpr. is complex and cumbersome, it seems the best way to account for the various anomalies in this phrase. One consequence, however, is that in the other two occurrences a standard adjectival interpr. of the cmpd., as nom. sg. masc. modifying Agni, which is possible in both, has to be set aside if the form is to be harmonized with its usage here. See comm. ad locc.

III.6.8: The first three pādas begin X *vā yé*; these relative clauses are picked up by *ebhiḥ* at the beginning of the next vs. The question is what to do with pāda d, which lacks the structural signature of the first 3 pādas. JPB takes d as a parenthetical independent clause, but this is impossible because *āyemiré* has an accented verb (flg. a preverb, so it can’t owe its accent to pāda-initial position) and therefore must be subordinated. Is it a fourth, unsigaled rel. clause (“(which) horses ...” or “(whose) horses”) – so Old (SBE and Noten) Ge, JSK (DGRV II.164). Or does the rel. clause beginning in c extend through d? Re takes it so, but by making *rathyāḥ ... āśvāḥ* a bahuvrīhi “defait” with the subject another set of divinities; I would follow WG, flg. Kü (397), in taking the horses themselves as subject: “or the helpers, easy to call, deserving the sacrifice, the chariot horses who were guided here.” My only reservation is that *ūma*- ‘helper’ is ordinarily a descriptor of gods – even though ‘helper’ seems a reasonable role for their horses.

III.6.9: Although the presence of the gods just delivered to the sacrifice invites a transitive interpr. of *mādāyasva*, as in the publ. tr. “make then [*sic*: them] rejoice,” the other occurrences of *mādāya* are reflexive: “invigorate yourself! rejoice!”

III.6.10: On pāda c, see Ge's n. 6c. I think he is correct that dual *adhvarā* is by attraction in the simile; see *prāñcam ... adhvarām* in I.18.8.

Note the presence of both *ṛtā*- and *satyā*- in the final pāda. I might substitute for the somewhat awk. publ. tr. "the truth-possessing (parents) of truth-begotten (Agni), who are really present."

III.7 Agni [SJ on JPB]

On the difficulties of the hymn, see publ. intro. I will mostly stay away from deeper interpr. of the contents.

III.7.1: Given the obscurity of the content of this vs., there is some question as to how to deploy the fem. pl. *saptā vāñīḥ* "seven voices." Old (SBE n., Noten) is tempted to make this phrase the subj. of both a and b, but is (rightly) deterred by the masc. rel. prn. *yé* (*yá* in sandhi). Therefore, the standard tr., incl. JPB, take it as acc., parallel to *mātārā*, as obj. / goal of *vivīśuḥ*. Kü (101), fld. by WG, instead take it as nom., but as an appositive to the (masc.) subject: "als die sieben Stimme." Since I have no strong views on the sense of the vs. or the referent of the fem. pl. phrase, I will take no stand, beyond suggesting that the alt. tr. "have entered ..., as the seven voices" could be considered.

The parallel in X.65.8 *parikṣītā pitārā ... dyāvāprthivī* most likely identifies the dual *pitārā* here as Heaven and Earth; the du. *mātārā* in the preceding pāda may also have the same referents, though as JPB points out in the publ. intro. they could also/instead be the fire churning sticks. On *parikṣīt-* see comm. ad X.65.8.

Ge and WG take the intens. *prā sarsrāte* as trans., with *dīrghām āyuh* as obj. ("extend their lifetime long"), but medial forms of *√sṛ* are intrans./reflex. "stretch (oneself) out." See Narten ("Ai. *sṛ*," MSS 26 [1969] = KISch 125–43) and, for the intens., Schaef. (198–99); on this passage specifically, Narten 88–89 = 134–35; Schaef. 199.

On *prayākṣe* see comm. ad III.31.3.

III.7.2: On the derivation and morphology of *divākṣasaḥ* see comm. ad X.65.7, III.30.21 and detailed disc. by Scar (92–93). It is here most likely a gen. sg. modifying *vṛṣṇaḥ*, as most take it, though Sāy. (see Ge n. 2), Gr, and Old (SBE) instead interpr. it as nom. pl. (as it is in X.65.7).

The pl. *āśvā(h)* is universally interpr. as to the fem. stem *āśvā-* 'mare', presumably on the basis of its identification with *dhenāvaḥ* and association with *devīḥ*, and this is probably correct. But the form could also be masculine pl., and the gender bending characteristic of passages like this could be in play. On the other hand, see the females "playing the bull" in 9a. In any case, the pāda is surely a nominal sentence, as in almost all interpr.; Re and WG, however, apparently take pāda a as an acc. phrase and construe it with *ā tasthau*. This interpr. seems excluded by *dhenāvaḥ*; we would expect *dhenūḥ*.

On the basis of the similar phraseology in X.65.6, Ge takes the single cow in d as the offering ladle. I find this plausible, though it must be said that X.65.6 isn't all that clear.

III.7.3: The first hemistich seems to paraphrase 2b: in that pāda an unidentified single being took (his) stand (*ā tasthau*) on a set of plural females; here the same happens, but

the being is discursively identified in b as a male, and the verb *ā ... arohat* substitutes for *ā √ sthā*.

The tr. “lord” might be expanded to “lord / husband,” given that he “mounts” females here, and also given the simile in 4d.

The 2nd hemistich takes up 1a, with compd. COLOR-*pr̥ṣṭhā-* and *dhāseḥ*. Here Agni is presumably destroying the firewood that (notionally) held the flames; the sense would be clearer if “made them depart from the wellspring of the brushwood” were substituted for “made them dwell apart.” The lexeme *prā √ vas* means ‘go / dwell abroad / away from home’.

III.7.4: The subj. of the first hemistich is universally (save for JPB) understood to be “rivers, streams,” but this relies entirely (as far as I can see) on Sāy.’s gloss of *vahātaḥ* as *nadyaḥ*. But *vahāt-* (on which see AiG II.2.159) is a hapax, and the point here surely is that it participates in an etymological figure with the flg. verb *vahanti*. And the larger point then is the paradox created by the conveyors conveying (*vahāto vahanti*) a stationary (*stabhūyāmānam*) entity. I do think that “conveyors ... convey” would be better than “carriers ... carry,” but otherwise think this etymological rendering is much superior to the introduction of ill-supported rivers.

On Agni as the son of Tvaṣṭar, see I.95.2 adduced by Ge.

As noted ad III.6.4, I’d prefer ‘seat’ for ‘abode’.

Strictly speaking, “woman” in d should be in parens.

III.7.6: Ge (n. 6) remarks “Besonders dunkel,” which is saying something in a hymn of such general obscurity. The nub of the problem is how to construe *ānu*. Ge asks whether it goes with *ghóṣam* or *anayanta*. If the latter, it would allow *ghóṣam* to form a phrase with *sūṣām* at the end of the next pāda. Unfortunately, acdg. to our current understanding of tmesis, it cannot be in tmesis with *anayanta*, because it doesn’t appear in any of the standard landing sites for a preverb in tmesis. I was tempted to construe *ānu* with *pravídā*, as Old (Noten, contra his interpr. in SBE) almost breezily suggests: “Warum nicht *pravídā ānu* verstehen ...?” (fld. by Scar, though see his n. 682). Unfortunately the answer is “because *ānu* is never construed with an instr. and is also almost always a preposition, not a postposition.” Which means that we’re stuck with *ānu ghóṣam* and two different noises in a single clause. The publ. tr. does what it can under the circumstances.

Note that *ānu svām dhāma* in d recalls the adverb *anuṣvadhām* in the previous hymn (III.6.9). Also, *dhāma* echoes *dhānam* in the previous pāda, and both resonate with (*praví*)*dānu* in pāda a.

III.7.7: Pāda b recalls III.5.5–6.

III.7.8 = III.4.7, in an Āprī hymn.

III.7.9: The interplay of females and bulls is found also in 2a, while *suyāmāḥ* qualifies females in 3a. However, the immediate referents can’t be the same, because *raśmí-* here is masc.

The opening of c, *déva hotar*, echoes the dual *daívyā hótārā* that begins the borrowed vs. 8; for this reason I’d tr. “o god Hotar,” or even “o divine Hotar.”

Strictly speaking, *mandrá taraḥ* should be “more delighting” or “very delighting”; *cikītvān* recurs from 3b.

III.7.10: In d “the fault ... we have committed” is somewhat misleading, in that the poet admits neither individual not collective guilt: it should simply be “even the fault that has been committed.”

III.7.11 = III.1.23, etc.

III.8 Sacrificial Posts

On the structure of this hymn, see the publ. intro. As was also noted there, though the hymn is an intrusion in the Agni cycle, it is found (/was inserted) at a seam in the cycle: at the end of the 11-verse (III.3–7) trimeter Agni hymns. The next set of hymns have 9 verses and are in varying meters, with mostly 8-syllable pādas (III.9 Bṛhatī, III.10 Uṣṇih, III.11–12 Gāyatrī).

III.8.1: Note the future impv. *dhattāt*, which has the standard (later) function of enjoining an action that will follow another one.

III.8.4: Kane (HDS II.1.269) suggests that the image in this vs. is that of a young boy, well dressed and encircled with his sacred thread (*yúvā suvāsāḥ párivītaḥ*), at his Upanayana, whom they “lead up” (*ún nayanti*), in an idiom close to the *úpa √ nī* of the Upanayana. Acdg. to Kane, several gṛhya sūtras employ this mantra in the Upanayana.

III.8.6: There is number disharmony between the 2nd plural enclitic *vaḥ* (a) and the voc. singular *vānaspate* (b). The simplest way to account for this is to assume that the voc. has simply been repeated from the 1st vs. of the hymn (1b) in this 1st vs. of the 2nd (half of the) hymn, which switches its subject from a singular post to plural posts. Or Lord of the Forest may refer to the forest itself or a single tree that produces multiple posts.

III.8.8: The rarer dual dvandva *dyāvā-kṣāmā* substitutes for the more common *dyāvā-pṛthivī*, with *pṛthivī*, perhaps in its lit. meaning ‘broad one’, pleonastically following the dvandva.

III.8.10: Contrary to the standard tr., I think there is a change of subject in the 2nd half-verse. Rather than calling on the posts to help us, we turn again to the gods, who are the likely subject of *avantu*, just as they were in 8c. The types of help we ask them for are distinct but complementary: help for our sacrifice in 8c, help in battle and competition in 10d, a theme introduced by the *viḥavā-* ‘competing invocation’ in 10c. The *vā* of 10c signals this disjunction and the return of the gods as subject. Although Klein (DGRV II.203) suggests reading *vā* here as if for *vaí*, given that the hymn contains several loosely construed *vā*-s (1d, 6b), this does not seem like a good idea.

[III.9-29 JPB – comm. by SJ]

III.9 Agni [SJ on JPB]

III.9.1: Every pāda in this vs. has close parallels elsewhere. Most of pāda a, X X X *tvā vavṛmahe*, is found also in I.187.2 and VIII.19.3. (On metrically bad *vavṛmahe* and the likely restoration **vuvṛmahe*, see Kü [459] and comm. ad VI.4.7.) Pāda b = V.22.3, VIII.11.6, and, extended to a Jagatī, I.144.5. Pāda c = VIII.19.4, with substitution of *ūrjō* for *apām*. Pāda d = I.40.4.

Since Agni's entry into "his mothers, the waters" is depicted in 2b, calling him Apām Napāt here is esp. apt.z

On the basis of my reeval. of the usage of *anehās-* (see comm. ad X.61.12), I would substitute "flawless" for "faultless." The tr. of *subhāgaṃ sudīditim* in pāda c might be harmonized with that of VIII.19.4 "providing good fortune and good light," though this is not strictly necessary – the renditions are close enough.

III.9.2: The first pāda presents interpretational difficulties that have mostly been glossed over. The form *vanā* is generally taken to be a neut. pl. of *vāna-* 'wood', but it is wrongly accented (expect *vānā*), and given the near ubiquity of this stem, and indeed this very morphological form, this anomaly should not be dismissed so easily as it usually is (see a particularly strong statement by Kulikov [*ya*-presents, 329 n. 820]). Old (SBE and, more explicitly, Noten) and Schindler (Root nouns p. 43) instead take it as an instr. to the root noun *vān-*, which better reflects its accent, but appears to cause syntactic difficulty, since the verb with which it's construed supposedly only takes accusatives. However, that verb, the mid. part. *kāyamāna-*, is a hapax; the stem is found nowhere else in Sanskrit. I therefore think that comparing the case frame of stems that are ultimately related to it but superficially quite distinct, esp. the pf. (*ā*) *cake* (see esp. Kulikov 319–20), is of limited utility, and that an instr. is possible with this very distinct stem: "finding pleasure with the wood"; it is even possible that *kāyamāna-* is a pseudo-passive and the phrase should be tr. "(Fire) being enjoyed by the wood," which might provide a reason for Agni's entry into the waters in pāda b – a means of escape.

There are several different ways to interpr. pāda c, depending on who we take as the implicit agent of the infinitive *pramīṣe*. The publ. tr. (also Old SBE) seems to assume that agent to be the ritualists, who should pay sufficient attention to the return of Agni. But most tr. assume instead that Agni is the agent, and he should not forget (with a slightly different, but quite possible sense of *prā* √ *mṛṣ*) to return – with pāda d reminding him that he had made the same cycle before (with "earlier" generally supplied: e.g., Kü 158 "dass du (früher), obwohl du in der Ferne warst, hier erscheinen bist"). I think each interpr. is possible and would allow both alternatives; I would, however, delete the JPB's "therefore," which seems too emphatic for a *tād* not even in 1st position, and substitute "you came to be here" for "you have come to be here," since the latter is not usually the sense of the impf.

III.9.3: I would be inclined to add a "just" (reflecting *evā*) in pāda b: "and now you are just benevolent" – the point being that before he escaped the smoke, there were both positive and negatives aspects of Agni, but now it is only positive.

The standard view of the referents of *anyé ... anyé* is that they are the various priests, and this is supported by *sakhyé* in c, which responds to *sākhāyaḥ* referring to us

ritualists in 1a. But I agree with JPB that another possible referent is the flames, some of which dart out and others stay close to the point of ignition.

The accent on *yánti* presumably results from the contrast of the two short clauses.

III.9.4: The stem *saścát-* (here, I.42.7, and VII.97.4) is generally given an abstract sense (e.g., Old [SBE] hindrance, Ge Mangel, Re déficience), even though both Ge and Re accept a connection with \sqrt{sac} ‘dry up’ (Ge n. 4b, Re n.), contra Gr, who takes it to the other \sqrt{sac} ‘follow, accompany’. The connection with *asaścát-* ‘never drying up, inexhaustible’ provides strong evidence both for the root etymology and for the literal sense. Given the Vedic horror of aridity (as exemplified, e.g., by the Vṛtra myth and the release of the waters), “parched places” seems a reasonable interpr. Moreover, “parched places” provides a nice contrast with the waters in which Agni hides himself (pāda d and 2b). WG take *saścátah* instead as an adj. (“folgende”) modifying *srídhaḥ*, which doesn’t have much to recommend it and doesn’t work for the other passages. In fact WG tr. the same form in I.42.7 as “die trockenstehenden (Orte)” and Gotō (in Dōyama/Gotō) as “die Versiegungen,” so the rejection of ‘dry up’ seems to have been temporary.

The simile in d is somewhat jarring: “resting in the waters like a lion,” since lions don’t generally lie around in water. A different loc. needs to be supplied or assumed (so Ge, Re, WG): “(in his lair / hiding place)” vel sim.

III.9.5: As JPB indicates in the publ. intro. *mathitá-* here can mean either (or rather both) ‘stolen’ and ‘churned’ (used of fire produced by friction). Most tr. choose one or the other (though often with a nod to the other): ‘churned’ (et sim.) Old SBE, Ge; ‘stolen’ Re, WG, Narten (Ved *math*, 133 = KISch. 23), Elizarenkova (Lg. and Style 193). If we allow the ‘churn’ alternative, better to separate *devébhyaḥ* from *mathitám* – rather than “churned from among the gods” as in the publ. intro., “brought him, churned, from the gods.”

WG and Elizarenkova (both flg. Kuiper) take *devébhyaḥ* as dat.: “stolen for the gods”: This is appealing in that it was the gods who pursued him and wanted him back. But this makes *pári* somewhat harder to construe, since *pári* is found with \sqrt{math} only when an abl. is in play (I.93.6, IX.97.2). To save both the abl. and the narrative, we can assume that *mathitám* refers to the original disappearance of Agni: “who (had been) stolen from the gods” and was subsequently recovered by Mātariśvan.

III.9.6: I do not think that *tām tvā* is esp. emphatic; the *tām* merely provides a prop for the enclitic. This pāda opening is quite common, found 69x in the RV; see disc. in my 1992 “sa figé,” esp. pp. 228–30. I’d therefore rephrase “You are he whom ...” to simply “the mortals seized you.”

On the basis of persuasive parallels cited by Old and Ge, *devébhyaḥ* belongs with the immed. flg. voc. *havyavāhana*, rather than with the preceding cl.

Most tr. take cd as a purpose clause, “so that you will guard,” against JPB’s “since you guard ...” Either is possible, esp. since the verb in c, *abhipāsi*, can be either pres. indicative or subjunctive. The purpose cl. interpr. is a viable alternative.

III.9.7: With most interpr., I'd take *tád bhadráṃ* and *daṃsánā* as parallel subjects of *chadayati*, rather than, with the publ. tr., taking *táva ... chadayati* as a parenthetical insertion.

I would also prefer “livestock” or “cattle” to “herd” for *paśávaḥ* in c.

III.9.8: On *śīrā-* see comm. ad VIII.43.31.

Contrary to all the standard interpr., incl. the publ. tr., I'd be inclined to take c with ab, as a continuation of the long acc. phrase begun in pāda a, with d a snappy summary: “serve the god with obedience.” The instr. *śruṣṭī* that begins d seems to me to signal a new beginning.

III.9.9: This vs. is identical to X.52.6, the final vs. of one of the three hymns there (X.51–53) concerning the flight and recovery of Agni, which is also largely treated in our hymn.

III.10 Agni [SJ on JPB]

A hymn made up almost entirely of clichés; in this it is reminiscent of the elementary I.1. The first seven vss. each contain a form of *agní-*, mostly voc. (1a, 2b, 3c, 7a), a feature also reminiscent of I.1.

III.10.3: The publ. tr. mistakenly tr. dat. *jātāvedase* as a voc. It should be corrected to “who will do ritual service for you, the Jātavedas ...”

III.10.5: The part. *bībhrate* appears to belong in the simile, since it immediately precedes the simile marker *ná*. It is so tr. by Old (SBE), Ge, and JPB. However, the sense would be somewhat better if the part. modified Agni, with the simile confined to *vedhāse*: “bringing the lights of inspirations like a ritual master”; it is so tr. by Re and WG. This is in fact syntactically possible, since, as disc. ad VIII.76.1 (etc.), simile-marking *ná* is blocked from pāda-final position and flips with its target when it would end up there. I would therefore favor the alt. tr. just given.

Note that pāda-final *vedhāse* matches likewise positioned *jātāvedase* in 3b; that one ends a dimeter pāda and one a Jagatī line may mitigate the potential sing-song rhyme effect.

III.10.6: The ablative subordinator *yātaḥ* is tr. as if it were a plural with fem. *gírah* as antecedent (“the songs ... those from which he was born”). But *yātaḥ* √*jan* is a rare idiom meaning “as soon as” (see Gr *yātas* def. 6), presumably from a temporal ablative sense “from (the time) when.” See the passages assembled by Ge (n. 6b): I.128.4 *yātaḥ ... ājāyata*, I.141.1 *yāto jāni*, VII.4.2 *yātaḥ ... ājaniṣṭa*, VII.7.3 *yātaḥ ... jajñiṣé*, and semantically sim. I.25.17 *yātaḥ ... ābhṛtam*. So substitute “... strengthen Agni, as soon as he is born, worthy to be hymned.”

III.10.7: The verb *vī rājasi* recalls the noun *samrājāṃ* in 1b, but it is also presumably a pun: not only “you rule” but “you shine,” as pointed out in the publ. intro.

The phrase *āti śrídhaḥ* is found also in the previous hymn, III.9.4.

III.10.8: Note the pronominal doubling, with *naḥ* (a) anticipating *asmé* (b).

Echoes from earlier in the hymn: *dīdihī* (3a), *suvīryam* (3c).

III.10.9: The verb *sám indhate* forms a trivial ring with 1c *indhate sám*, but this seems less the deployment of a poetic device and more the result of poverty of imagination.

III.11 Agni [SJ on JPB]

This is scarcely less banal than the immediately preceding hymn, save for a complex figure in vss. 3 and 5.

III.11.2: On *cánohita*- see comm. ad III.2.2. The tr. should be corrected here to “delighted.”

“Sacrifice” is almost universally supplied as the obj. of *sám ṛṇvati* (save for Old [SBE], who takes it as intrans. “sets himself in motion”). Supplying ‘sacrifice’ seems reasonable, though there are no clear parallels, and the other occurrence of *sám ṛṇvati*, in nearby III.2.1, is troublesome (see comm. ad loc.).

III.11.3: The vs. begins like 2c, *agnír dhiyā*, and then seems to make a new start with *sá cetatī*. This is generally not registered in the standard tr., though it is, properly, in the publ. tr.

Ge (/WG) takes *cetatī* as transitive (“understands” vel sim.) with pāda c as its obj.: approx. “knows how to reach his goal.” But *cetatī*, even when in the (semi-)transitive value ‘perceives’, does not, I think, have the “know how” construction, and, even more important, the *hī* in c marks this pāda as an independent clause. For detailed disc. of this passage and the problems associated with the object interpr. of c, see Keydana (Inf. 193–94). Far better to take *cetatī* in its common sense ‘appears’, reinforced by the cognate *ketú*- ‘visible beacon’ in b, and keep pāda c as a syntactically separate nominal cl., as done by Re (also see his n.), Keydana, and JPB.

The phrase *ártham hy āsya tarāṇi* is difficult, esp. if we accept that it must be an independent cl. on the grounds given just above. Interpr. it requires us to assess the meaning and function of *tarāṇi*- and to re-assess the same for *tūrṇi*-, found in 5c. I should first justify why I think the latter has any bearing on the former. First, I find it striking that these two fairly rare *-ni*- forms (22x [incl. deriv.] and 8x [incl. compd.] respectively), built to very similar bases, are found within two vss. of each other. This seems to call out for their comparison. Further, *tarāṇi*- here must be construed with *ártham*, one way or the other, and *tūrṇi*- appears in the compd *tūrṇy-ārtha*- (2x). The poet seems to be swapping out related adjectival forms with *ártha*-. However, *tūrṇi*- is usually given a different meaning (‘swift’) from *tarāṇi*-, with a different etymology (\sqrt{tvar} , not $\sqrt{tṛ}$). I will reexamine *tūrṇi*- ad vs. 5, but will here concentrate on *tarāṇi*-. This adj. is generally, and I think quite correctly, derived from $\sqrt{tṛ}$ ‘cross over’, etc. etc. (see, e.g., EWA I.630). It occurs 20 times in the RV (in addition to 2 occurrences of *tarāṇitva*-). In what I consider to be its original, literal sense, it means ‘transiting, crossing’, of the sun (I.50.4, VII.63.4, X.88.16). In these passages the referent has a definite trajectory (across the sky) and a definite goal (the other side of the sky), a fact to which we will return. The form then can be used of forward motion without a necessary trajectory or goal: ‘advancing’, used of fire and its flames (e.g., I.128.6, IV.4.12) or Soma (I.121.6), priests (IV.45.5, 7), etc. And ultimately the sense of forward *movement*, which may involve ‘overtaking’ smtg. else

(maybe III.49.4), can be attenuated simply to its conceptual equivalent, ‘surpassing’ (e.g., Indra VIII.45.28, a successful man VII.32.9, 20, etc.). The influence of comparable forms of the multivalent verb could always have been felt. The occurrence here is the only neut. form; the question is -- what is its relationship to *ártham*? Here a return to the ‘transiting’ passages will help. In VII.63.4 the sun is described as *dūrēarthas tarāṇiḥ* “whose goal is in the far distance as he crosses over (to it),” where a cmpd. with *artha-* is associated with *tarāṇi-*. This suggests that *ártham* here is conceptually the obj./goal of *tarāṇi-*, rather than being directly modified by it. In other words, a rendering like the publ. tr., which represents simple modification, “for his goal is surpassing,” is probably wrong. However, this complicates the syntax: what neut. could *tarāṇi* modify if not *ártham*? And is it just a simple adjective? Here I follow Keydana (194), with the same reluctance he seems to show, in taking *tarāṇi* here as a predicated infinitive (or its functional equivalent): “for his goal is (to be) advanced towards” or, perhaps better “for it is for him to advance to his goal.” In the following vs. Agni is made the conveyor of oblations, and in the verse after that he is a chariot: the purposeful forward motion of Agni is well established.

III.11.5: To return to the relationship between *tarāṇi-* and *tūrṇi-* discussed ad vs. 3, here concentrating on *tūrṇi-*. As I said there, this stem is usually glossed as ‘swift’ (e.g., Gr ‘*rasch, eilend, rasch im Werke*’) and derived from \sqrt{tvar} ‘hasten’ (e.g., EWA I.689, though an alternative connection with $\sqrt{tṛ}$ is admitted there). But none of its occurrences requires, or even encourages, a meaning ‘swift’, while several instead favor ‘crossing, advancing’. Two of the six non-compounded forms occur alongside the root-noun cmpd *ap-tūr-* ‘crossing the waters’ (I.3.8, III.51.2); this association seems significant, and they share the same *u*-root vocalism. In X.88.6 *tūrṇi-* is used of the sun transiting (like *tarāṇi-*; see ad vs. 3 above). A sense ‘advancing’ works for the other non-cmpd forms, in all cases better than ‘swift’ (see comm. ad locc.). Then there are the two occurrences of the cmpd *tūrṇy-artha-* (III.52.5, V.43.2). In the publ. tr. I rendered this cmpd as ‘swift to his/their task’, flg. Gr “*schnell zum Ziele dringend, zum Ziele eilend*,” but how a bahuvrīhi would allow such a sense is now not clear to me. (AiG does not treat the cmpd.) Taking into account the fact that *tarāṇi-* is construed with *ártha-* in our vs. 3c, as an obj./goal (see above), I think we can take *tūrṇy-artha-* in a similar sense, with a pseudo-infinitival 1st member: ‘having a goal to advance to’. In short, *tūrṇi-* is essentially a synonym of *tarāṇi-*, and both are derived from $\sqrt{tṛ}$ and meaning ‘transiting, advancing’ (etc.). It should be noted that this analysis seems to be reflected in both Ge’s and Re’s tr. of the two forms in this Agni cycle (III.3.5, 11.5), “*zielerreichenden*” and “*franchissant (les obstacles)*,” though without comment, as opposed to WG “*schnell, rasch*” in both places.

As for the root vocalism, and esp. the contrast between ppl. *tūrṇá-* and our stem *tūrṇi-*, it’s striking that *tūrṇá-* is actually not found in the RV, save in a single occurrence of negated *átūrṇa-*. In any case, the *tṛ* and *tūr* root syllables of $\sqrt{tṛ}$ are thoroughly confused; though I would like to confine the latter originally to \sqrt{tvar} ‘hasten’, synchronically we must reckon with numerous *tūr* forms to $\sqrt{tṛ}$.

I would alter the tr. to “the advancing chariot, ever new.”

III.11.7: The instr. *vāhasā* is variously interpr. and construed; e.g., Ge considers the gen. *pāvakásociṣaḥ* at the end of the last pāda to be dependent on it; Old (SBE) and WG take it

vāhasā as (somehow, loosely) governing *práyāṃsi*. It's important to consider the usual employment of the stem, incl. in its many cmpds. (see disc. ad X.29.3); the *vāhas-* is ordinarily conceptualized as a verbal product (hymn, vel sim.) that serves as the vehicle to bring / attract the gods to the sacrifice. Here the pious mortal by bringing the gods here with such a vehicle attains to desirable things. Although *práyāṃsi* are ordinarily pleasurable offerings *to* the gods, here I think they must be pleasurable things that the mortal himself wishes to attain; this is supported by the formula that seems to be split across this vs. and the next one (see comm. ad 8a). It also seems to be parallel to *kṣáyam* 'dwelling place' in the last pāda, given *sadhásthāni práyāṃsi ca* "abodes and pleasurable offerings" in the immediately flg. hymn, III.12.8, which also supports the syntactic interpr. reflected in the publ. tr.

III.11.8: Various suggestions have been made for what to supply with *súdhitā*, but Re's, *práyāṃsi*, must be correct, since *práyāṃsi* is found in the immed. preceding vs. (7a) and *práyāṃsi súdhitā(ni)* is a fixed phrase: I.135.4, VI.15.15, VIII.60.4, X.53.2. (*práyāṃsi* also regularly serves as obj. of $\sqrt{dhā}$ [I.169.3, III.30.1, X.91.9].) Here the same verb, *ásyāma*, is found as in vs. 7 (*ásnoti*), also with mortal worshipers as subject. The two vss. seem to be making the point that mortals, too, can attain to *práyāṃsi*. I would add a parenthetic "(pleasing offerings)" to replace "things": "all the well-placed (pleasing offerings)."

III.11.9: Strictly speaking, *érire* should not be 'placed' but 'set in motion' and should be altered accordingly.

III.12 Indra and Agni [SJ on JPB]

A fairly elementary hymn. Every vs. except 3 contains the dual dvandva *índrāgnī*, generally in the voc. (1a, 2a, 5c, 6, 7a, 8a, 9a), always pāda initial. Vs. 4c has the acc. *índrāgnī*, and vs. 3a the independent accs. *índram agnīm*.

III.12.3: As just noted, this is the only vs. in which the two gods are not compounded. I don't know why; it can't be because they're in the acc., because *índrāgnī* is acc. in the next vs., 4c. We fall back on the unsatisfactory explanation of metrical necessity (extra syllable needed).

The meaning of the hapax *kavi-chād-* is uncertain, in part because the root affiliation of *-chād-* cannot be determined. See disc. in Scar (130). The standard view is that the root is \sqrt{chand} 'seem, appear, please', giving the cmpd the sense "appearing as poets" (publ. tr. "who appear as sages"), perhaps more idiomatically "in the guise of poets." However, as Scar points out, the root could instead be \sqrt{chad} 'cover, protect', with the cmpd meaning "protecting poets." Perhaps best to go with the former analysis, with all the standard tr., since this root is more common. While accepting this root affiliation, Gr gives it a transitive sense "taking pleasure in poets" (somewhat similar Sāy.), which is not excluded – nor is the analysis with \sqrt{chad} 'cover'.

Although not so analyzed by the Pp., the sequence *jutyā vṛṇe* may conceal the preverb *ā*, see *ā vṛṇe* in 5c.

III.12.4: On *tośā-* and the root \sqrt{tus} in general, see comm. ad VIII.38.2, where I defend the old gloss 'drip' against Gotō's anodyne replacement, 'hasten'.

III.12.5: On *nīthāvid-* see Scar (485). As he points out, in IV.3.16 *nīthāni* are associated with other verbal tricks of skilled poets.

III.12.8: The neut. pl. *taviṣāni* can be taken in two different ways, either as an adj. modifying the neut. pl.s *sadhāsthāni prāyāmsi ca* in the flg. pāda (so Old SBE [modifying only *sadhāsthāni*], Re, publ. tr.) or as substantivized ‘powers’ (as in I.166.1, 9)(so Gr, Ge, WG). I weakly favor the latter, because neither abodes nor pleasurable offerings are naturally “mighty,” and the nominals modified by adjectival *taviṣā-* are quite different from these benign objects. I would therefore propose an alt. “Yours are the powers, and the seats and pleasing offerings.”

As noted ad III.6.4, I prefer “seats” to “abodes.”

III.13 Agni [SJ on JPB]

The content is fairly straightforward, but there are syncopations and disturbances in syntax and word order, esp. in the earlier vss.

III.13.1: The content of the vs. is entirely banal, but the construction of pāda c seems a bit disordered, with the material we expect to begin pāda / clause, *ā sā naḥ*, instead ending the pāda, preceded by the VP *gāmad devébhiḥ*. (I.5.3 is almost identical, with *vājebhiḥ* instead of *devébhiḥ*). The easiest way to account of this is to assume the whole VP was fronted.

III.13.2: The first hemistich of this vs. is troubled both syntactically and conceptually. To begin with the syntactic: in the vs.-opening configuration *ṛtāvā yāsya* the ordinary interpr. would be that, as is incredibly common, despite its second position *yāsya* marks the whole as a rel. clause, which would contain nom. *ṛtāvā* as its subject (i.e., “of whom/whose [X] the truthful one [does something]”). But this doesn’t work; instead nom. *ṛtāvā* is, as it were, a single-word nominal clause, with *yāsya* coreferent with and dependent on it (i.e., “[he is] the truthful one, of whom/whose ...”). This nom. has no further function; when the referent (Agni) returns in cd, he is in the acc. (*tām ... tām*). Given the ubiquity of relatives clauses with *yā-* in 2nd position, the reading forced on the configuration here, with *ṛtāvā* and *yāsya* in separate clauses, counts as a deliberately misleading trick. However, within this Agni cycle there is a similar syntactic construction that escapes the problem we have here, but provides a model for interpr. our almost identical problematic pāda-opening. III.6.10 begins *sā hótā yāsya ródasī* ... “He is the Hotar of whom the two world-halves ...” The difference is the inclusion of *sā*, which marks *sā hótā* as a full nominal clause and also pushes *yāsya* into third position. This pāda is surely the model for ours, with trisyllabic *ṛtāvā* substituting for disyllabic *hótā* and thereby knocking out the clarifying *sā*.

In the rest of the hemistich the standard tr. (incl. the publ. tr.) take *ródasī* and *ūtāyaḥ* as joint subjects of *sācanta*: “whose skill the two world-halves and the helps follow.” Needless to say, this is a wildly ill-assorted pairing. This seems to be what the syntax points to: among other things since *sācanta* is accented, it must be in a dependent clause. But what it means doesn’t bear considering. It’s also important to note that pāda b, *dākṣaṃ sācanta ūtāyaḥ*, is found independently elsewhere, in I.134.2e (a Vāyu hymn),

where it makes reasonable sense (and is subordinated to a *yád* in the preceding pāda). The fact that b is found independently, along with the nonsense that results from cobbling a and b together, is, I think, a good clue that we should de-couple the two pādas.

Bloomfield (RReps, ad I.134.2) finds our hemistich disturbing as it is usually interpr. and devotes considerable space to discussing it. His solution is to take pādas a and b as separate *yásya* clauses (both hanging off *ṛtāvā*): “The righteous (Agni) whose are the two worlds ... (whose) helps attach themselves to solid pious work—him ...” I think this must be the correct way to interpr. the structures and would substitute (with some relexicalization): “(He is) the truthful one, whose are the two world-halves, (whose) skill (his) forms of help accompany.” That it is Agni’s *ūtāyaḥ* is suggested by *devāsya* ... *ūtāyaḥ* in the next hymn (III.14.6).

III.13.3: The vs. contains one suffix-accented *tār*-stem governing the gen. (*yantā ... eṣām ... yajñānām*) and two root-accented ones governing the acc. (*dātā ... vānitā maghām*). It is not clear to me whether the morphological and syntactic difference is meant to signal a functional difference. Although Tichy cites the passage for its use of both stem types (*tar-stems*, 299–300), her attempt to differentiate them functionally (302) seems weak. Of *yantā* + GEN in this passage she says it expresses the god’s “Wirkungen ... zugunsten der Lebewesen,” while *dātā ... vānitā* + ACC describes “bleibende Eigenschaften” of the god. But she does not explain why his role as “controller of sacrifices” is not a permanent characteristic of the god, or, conversely, why his roles as “giver and gainer of bounty” are not actions beneficial to living beings. For her the morphology seems to be the sole driver of interpr., imposing distinctions that don’t seem to be reflected in the actual content of the phrases.

The standard tr. fold *āthā hī sáh* into the rest of pāda b (*sá yajñānām*), despite the apparent new beginning and the doubling of *sá(h)* (e.g., JSK [DGRV II.82] “for he is also (the leader) of the worships,” reproducing Ge). But *āthā hī sáh* has all the hallmarks of a clause-initial sequence, and with the publ. tr. (as well as Tichy [300] and WG) it should be taken as a separate nominal cl. As elsewhere in the hymn, the syntax is syncopated.

As it also is in the next pāda, *agnīm tām vo duvasyata*, where the pāda/clause would ordinarily begin with *tām vaḥ*.

III.13.6: The involvement of the Maruts in strengthening Agni is a bit odd: these gods are not usually associated. But see III.16.2 adduced by Ge: *ímāṃ naro marutaḥ saścata vṛdham* “Follow this one to strengthen him, o superior men, o Maruts,” as well as the Maruts’ presence in the next hymn, along with Mitra and Varuṇa (III.14.4). I almost wonder if the Maruts as winds (as in later Sanskrit) are what’s at issue in the strengthening: fanning the flames.

III.14 Agni [SJ on JPB]

The verbal hero of this hymn seems to be *sáhas*- ‘strength’, with *sáhasas putráḥ* found in 1c, 4c, 6a (latter two as voc.) and voc. *sahasvaḥ* in 2b and 4a.

III.14.1: On *vidáthāni* here, see Th (Unters. 46 n. 1), who tr. “[Stätten der] Verteilungen” and identifies them as the hearths/fireplaces on the ritual ground.

Because of the appearance of the chariot in the final vs., 7c, I'd be inclined to tr. *āsthāt* as "he has mounted," as usual.

I'd be inclined to tr. *satyāḥ* as "really present" and *kavítamaḥ* as "best poet."

The phrase *prthivyām pājo aśret* is found identically in VII.3.4 (except with accented *ásret*), where JPB tr. very differently; see also III.61.5 *diví pājo aśret* and VII.10.1 *prthú pājo aśret*. These passages should be harmonized; I'd here emend the tr. to "has fixed his leading edge on the earth." This refers to the spread of the fire. However, on the basis of *pājasā prthúnā* in the next hymn (III.15.1), perhaps 'countenance' should be retained here.

III.14.3: On *vājāya-* (so accented), see my *-āya-*Formations, pp. 51 and 88. The form here is probably the intrans. "race," but it is possible that it belongs with the transitive "incite" forms, with gapped obj.: "Dawn (and Night) inciting (you)."

On the grammatical form underlying *vandhúreva*, see Old (SBE and Noten) and Re. Since it is likely either du. or pl., the tr. should be altered to "chariot-boxes."

III.14.4: I do not understand the phrase *sumnám arcan* nor the publ. tr. "chant to you your favor"; *sumná-* is ordinarily something attained, or desired to be attained; it is not the object of a verb of speaking. Perhaps what is meant is that the gods chant *their own* favor / benevolent thoughts for Agni, which allows him to rise up in pāda c.

In d I am inclined to go against the clear morphology of *prathāyan* and take *kṣitīḥ* not as obj. of a trans. participle (as in the publ. tr. "spreading out the settlements"), but as goal of *abhi* "spreading to the settlements," depicting the light of the fire spreading across the earth (sim. WG). The phrase *sūryo nṛṇ* is then (in my view) an unmarked simile "(like) the sun (spreading) to men," where *nṛṇ* is the acc. pl. it appears to be (not gen. "the sun of men," as in other tr.), but not a direct object as in the publ. tr. ("spreading out men"). The phrase *sūryo nṛṇ* is also found in I.146.4 (q.v.).

III.14.6: The first syllables of *sahasrīṇam* echo the insistent *sahas-* earlier in the hymn (see comm. in intro. above).

The opening of d, *adroghéna vácasa*, is conceptually reminiscent of the opening of 5d *ásredhatā mánmanā*.

III.14.6–7: Each hemistich begins with a form of the 2nd sg. prn.: *t^uvám* (6c, 7c), *t^uvád* (6a), *túbhyam* (7a).

III.14.7: This vs. is notionally in a weak ring with vs. 1, with *kavikrato* matching *kavítamaḥ* (1b), *adhvaré* corresponding to *vidáthāni* (1a), and *suráthasya* to *vidyúd-ratha-* (1c).

The first hemistich consists of an unresolved rel. cl., or, probably better, one with the rel. prn. and its antecedent flipped. If instead of *yāni imā* at the end of pāda a we had **imā yāni*, an interpr. "these things (are) for you, which we have done" would be possible. This is in fact the way Ge, WG, and JPB take it (also, more or less, Re), and is probably the best way to do it – although I don't know of a rule that flips these pronouns. Otherwise we must read it as a rel. cl. without a main cl.: "which these things we have done ..." (with the further ungrammaticality in Engl. of "which these").

III.15 Agni [SJ on JPB]

III.15.1: Curiously, Re does not try to impose a trifunctional interpr. on b, though it's actually quite easy to construct one.

III.15.2: It would be possible to take *tanvā* with the verb, as the standard tr. do, rather than with the voc.: “take pleasure by yourself / take pleasure with your own body”; I would slightly favor this alt. though it is not nec.

III.15.3: The construction of d is uncertain. Ge, Re, and WG take *naḥ ... uśíjaḥ* as a double acc. with *kṛdhí*, with *rāyé* a dat. of purpose – e.g., WG “mach uns zu Uśij, (dass wir) Reichtum (gewinnen).” JPB, like Old (SBE), takes *uśíjaḥ* as an appositive to *naḥ*: “us, the fire-tending priests.” In his n. 3d Ge describes the Uśij, an inherited priestly title with a cognate in Old Avestan, as ancient singers who recaptured the cows and found Agni, and it is certainly the case that in several passages (e.g., IV.1.15=16.6=X.45.11, VII.90.4) the pl. *uśíjaḥ* are identified as or act parallel to the Aṅgirasas in the Vala myth and also take part in the finding of the fugitive Agni (X.46.2). Although by the appositive reading, “we” could just count as modern-day Uśij, the double acc. reading of Ge et al. makes somewhat better sense and also makes better sense of the syntax (“make ACC. DAT.”). I would therefore alter to “make us Uśij/fire-tending priests, for (us to acquire) wealth.”

III.15.4: The gen. (/abl.) *pāyóḥ* in c is somewhat troublesome, but I think it has troubled interpr. more than it should. In the publ. intro. JPB wants to see the phraseology here as showing an indirect identification of Agni with Indra, which seems to me a hypothesis more elaborate than the evidence merits or requires. Old (SBE, but still tentatively held in Noten) wants to emend *pāyóḥ* to voc. *pāyo* or nom. *pāyúḥ*. since Agni is regularly called *pāyú-* (e.g., I.31.13, II.1.7). In the pl. the word often refers to Agni's flames (e.g., I.95.9, IV.4.12–13) as his helpers in providing protection. A singular form not referring to Agni is somewhat surprising, but it should be noted that this is the only form of the stem in Maṇḍala III, and an innovative use of it is quite conceivable. My inclination is to think that “the/your foremost protector” might be a reference to the first or foremost flame of the ritual fire; alternatively, but less likely in my view, it refers to the sacrifice (so Re). It should also be noted that *br̥hatáḥ* in the next pāda does not have to modify *pāyóḥ* but can be independently construed (so Ge, WG), though it can be part of the *pāyóḥ* phrase (so Old, Re, JPB). My suggestion for the 2nd hemistich is “... as the leader of the sacrifice and of your foremost lofty protector [=flame], (leader) of the lofty one, o Jātavedas of good guidance.”

III.15.5: This vs. is a bit disjointed, leading the various interpr. to supply various verbs and combine various NPs. It seems better to follow the fairly barebones interpr. of JPB's publ. tr. I would make only one very slight adjustment: delete “up” in b.

Note that *dīdyānaḥ* (b) picks up *didīhi* in 4a, despite difference in voice and quantity of the redupl. and root syllables.

III.15.6: In c Ge (/WG) supplies ‘come’, which I’d be inclined to follow, since *devébhiḥ* is otherwise left with nothing to do. So, a period at the end of the first hemistich, with c to be rendered as “being aflame with good flame, o god, (come) with the gods.”

III.15.7 = III.1.23 (etc.).

III.16 Agni [SJ on JPB]

III.16.1: The last term over which Agni exercises control in this vs. is *vṛtraháthānām*, which is surprising both because this term is in Indra’s domain, not Agni’s, and because the plural number of the form seems rather to pertain to the first cmpd member (“of obstacles”) than to the second (“smashing”) – strictly speaking, this should be tr. “the smashings of obstacle(s).”

III.16.2: On the Maruts strengthening Agni, see comm. ad III.13.6. I would prefer “accompany” to “follow,” for *saścata* without preverb.

On *śévṛdha*- see comm. ad V.87.4.

The pl. referent of the *yé* that is the subject of the second hemistich is not certain: it can be either the riches (*rāyāḥ*) of the immed. preceding pāda or the Maruts of pāda a, since both are masc. pl. The Maruts are favored by Sāy., Old (SBE), Re; the riches by Ge and JPB (with WG unclear). I think it quite likely that both are meant, though the contents of cd fit the Maruts better.

The VP *śátrum ādabhúḥ* is also found in VI.46.10, where I tr. the verb as ‘outwit’, which might be better here, since the subjects are positively viewed entities and “swindle” is not ordinarily a positively viewed action.

III.16.3: Exactly how the long gen. phrase beginning with *rāyāḥ* works with *naḥ ... śísīhi* “sharpen us” is not clear to me. With the publ. tr., it may be best to assume a mediating (gapped) dative “share, portion” with *rāyāḥ ... śūṣmīṇaḥ* a partitive gen (“sharpen us for [a share] of wealth ...”). In the publ. tr. “a share” should be in parens. For the dat. in this construction see VII.18.2 *śísīhi rāyé asmān* “sharpen us for wealth.”

III.16.4: As Ge (n. 4a) remarks and as is reflected in the publ. tr., *viśvā bhúvanā* should be construed both with *cákriḥ* and with *abhí sāsaḥíḥ*, between which it is placed.

In b I might prefer “does friendly service to the gods”; on *dúvaḥ* see comm. ad IX.65.3.

III.16.5: The publ. tr. of *ámati*- ‘lack of thought’ fits well with the two following privative cmpds., *avīratā*- and *agótā*-; however, it is not very specific. In general, *ámati*- means ‘inattention, neglect’; see comm. ad X.42.10.

III.17 Agni [SJ on JPB]

As noted in the publ. intro., the hymn is dominated by forms of *√yaj* ‘sacrifice’; the insistent repetition is somewhat offset by the fact that the four finite verb forms, all act. 2nd singulars, *áyajaḥ* (2a), *yakṣi* (2c, 3c), and *prá yaja* (5c), are all used somewhat differently. See below.

III.17.2: Though tightly bound in apparently parallel constructions, the 2nd sg. forms of \sqrt{yaj} , *áyajah* (a) and *yakṣi* (c), each with an acc. complement, are used differently: the acc. with the latter has its standard function with \sqrt{yaj} , marking the gods as target/goal of the sacrifice, but the object of *áyajah*, namely *hotrám* ‘office/role of Hotar’, seems to refer to the manner or capacity in which Agni performed sacrifice. This off-balance construction is made harder to interpr. by the contrastive *pṛthivyāḥ ... divāḥ*. Do they express different types of Hotarship (so JPB, as well as Ge, Re, WG) or are they genitives in dative function (“for the earth ... for heaven”; so Old SBE). I am inclined towards the latter, because I don’t understand what “the Hotarship of the earth / of heaven” could mean, whereas the dative genitive could be an oblique object (functionally parallel to *devān* in c), displaced from the acc. slot by the phrasal verb *hotrám* \sqrt{yaj} . I would therefore alter the tr. to “Just as you performed the sacrificial role of Hotar for the Earth ... and just as you observantly (performed it) for Heaven ...” (Of course they could also be ablatives, but that case would be even harder to construe.)

III.17.3: There is no agreement on the sense of the hapax fem. pl. *ājānīḥ*; in particular if it is agent (‘birth-givers’, e.g., Ge / WG “Mütter”; essentially also Re) or an abstract ‘births’ (so Gr, Old SBE). Determining the sense of *ājānīḥ* is essential for the analysis of *uṣāsaḥ*: if the former is an agent, then *uṣāsaḥ* must be a fem. nom. pl. (with substitution of the weak stem for the strong *uṣāsaḥ*, as frequently elsewhere) in an equational nominal clause: “three dawns are your mothers” (or “the dawns are your three mothers”). If *ājānīḥ* is an abstract, then *uṣāsaḥ* should be a sg. oblique (though JPB mixes the two in the publ. tr.: “three dawns are your births”). Both Old (SBE and Noten) and Gr take *uṣāsaḥ* as ablative. I am inclined to follow this latter interpr. – in part because an abstract reading “three births” makes pāda b more parallel to pāda a with its “three lifetimes.” Moreover, though *ā* \sqrt{jan} is a fairly rare idiom, it generally appears with an ablative or ablatival adverb in the sense “born from X”; see, e.g., IV.43.3 *divā ājātā* “born from heaven”; V.31.3 *sāhasa ājaniṣṭa* “he was born from might” (as well as I.179.4, IV.18.1, X.129.6, maybe I.83.5; cf. also VII.3.9 with the oblique gen./loc. du. *mātróḥ*). I would therefore substitute the tr.: “three are your births from Dawn” (most likely the kindling of the three ritual fires at dawn). The fem. *tābhiḥ* that opens the next hemistich would then refer to the births (+/- the lifetimes in the neut. in pāda a).

The third 2nd sg. act. form to \sqrt{yaj} , *yakṣi* in c, is construed with an acc. in yet another sense. The *s*-stem obj. *ávah* ‘help’, is what we want Agni to acquire for us by sacrifice; the usual idiom is *ā* \sqrt{yaj} ‘(bring) here by sacrifice, win by sacrifice’, but the expected preverb is lacking here.

III.17.5: It is surely shocking to end a hymn to Agni by addressing him in order to state that there was a previous Hotar who was better at sacrificing than he, the god currently being addressed, is. The more predictable sentiment is found in V.3.5a, which is identical to our pāda a, save for having *nā* in place of *yāḥ* (“no previous Hotar was a better sacrificer than you”). On these near twin pādas see Bl RR ad III.17.5: “Evidently the poet of the latter stanza [=III.17.5 sj] builds his strange statement upon familiar ideas, and cannot resist the temptation to go the poet of 5.3.5 ‘one better’ by introducing the fable of a yet more primordial and superior sacrificer than Agni himself.” As Old (SBE) suggests,

the “better sacrificer” is most likely a previous instantiation of the ritual fire, so there is at least a genealogical relationship between them.

The relative prn. *yáh* of pāda a is clearly picked up by *tásya* in pāda c; all the standard tr. (also JSK DGRV I.143–44) take pāda b as part of the relative clause describing the previous Hotar, and, given the *yáh ... tásyā* dyad, this would be the default interpr. However, I think pāda b actually anticipates the main cl. of c and refers to the current Agni. The lack of temporal or person reference in b allows it to lean either way, and *dvitā* ‘once more, yet again’ nudges it towards the current Agni, not the previous one. Although JPB’s tr. essentially follows the standard ones, he clearly recognizes the force of *dvitā* and orients the pāda towards the future, even apparently interpr. the agent noun *sāttā* as a periphrastic future (“once again will take his seat”), which seems a bit incoherent, since it predicts that the previous, better sacrificer will fulfill that same role again, even though the currAgni is ordered in the next pāda to perform the sacrifice. The other tr. take b as purely descriptive or else as having past-time reference.

In keeping with my sense that b belongs with c, I would emend the tr. of abc to “He who as previous Hotar was a better sacrificer than you, o Agni – (you), once again taking (his) seat [/place] and being luck itself by your own power -- carry forward the sacrifice according to *his* foundation(s).” Pāda c is in a ring-compositional relationship with 1a: *prathamānu dhármā* “according to the first foundations.” The depiction in our vs. of a better sacrificer than the current Agni is more pointed, but both the 1st vs. and the last point to an original foundation that provided the template for the current sacrifice and sacrificer.

I would also slightly alter the tr. of d to “Then set the rite in place at our pursuit of the gods.”

Vs. 5 also has close connections with vs. 2: *hótā* (5a) picks up *hotrám* (2a), *cikitvah* (5c) *cikivān* (2b), *prá yajā* (5c) *prá tira* (2d). Note also that (*prá*) *yajā*, the fourth finite form of \sqrt{yaj} , is used absolutely, with no acc. complement, unlike the other three (2a, 2c, 3c).

III.18 Agni [SJ on JPB]

III.18.1: I don’t understand why the so-called future impv. *dahatāt* is used in d. Though the future sense of this formation is less pronounced in the RV than in Vedic prose acdg. to Wh (Gr. §571), it still is a marked form in contrast to the present impv. *daha*, and one expects the *-tāt* impv. to follow logically upon a previously enjoined action. This vs. does contain a preceding impv., *bhāvā* (pāda a), but its action is not closely tied thematically with *dahatāt*. The future impv. is used in conventional fashion in III.8.1 and III.23.2.

III.18.2: The two *tápo* forms (a, c) should be analyzed as *tápā + u*, though JSK (Ptcl. *u*, 176) is uncertain about the second and suggests that the poet or redactor could have changed *-ā* to *-o* to match the flg. two words, which end in *-o*. Given the undoubted occurrence of one form coalescing with *u* in this passage, it seems more economical to use the same explanation for the 2nd.

The standard tr. all interpr. *cikitānāh* as transitive ‘perceive’, with *acittān* as obj. This is of course very tempting because of the etymological relationship. But medial forms of the pf. *cikitē* are intrans. (see Kü 176) in the sense ‘be perceived, appear, be

conspicuous’, as are the med. forms of the closely related intens. *cékite* – so JPB’s intrans. rendering is more faithful to the morphology.

On the surprising root accent of *acítta*- see AiG II.1.226 (which merely notes it without explanation, though listing a handful of similar anomalies).

III.18.3: As Ge (n. 3c) points out, *bráhmanā* can be read either with *īśe* or with *vāndamānaḥ*, between which it is strategically placed; he provides parallels for both. This double reading is reflected in the publ. tr. (though curiously not in Ge’s).

In d the acc. phrase *imāṃ dhíyam ... devīm* requires a verb to govern it; already Old (Noten, contra SBE) suggests *juhómi* in b, and this is endorsed explicitly by Ge (n. 3d) and WG. A putative phrase **juhómi dhíyam* would express the common trope of “pouring prayers” – but neither Ge nor WG seems to have the courage to so tr. it: Ge / WG “(bringe ich).” By contrast, JPB’s tr. does.

III.18.4: Since *śám yóḥ* appears in the immediately preceding hymn (III.17.3) in the same metrical position, it should be rendered in the same way here if possible. I would substitute “as luck and life, (set) rich (vigor) upon the Vs,” to match III.17.3 “become luck and life.”

III.18.4: For *sṛprā karásnā* see the compd. *sṛprā-karasna-* in VIII.32.10. On *karásna*- ‘forearm’ vel sim., see EWA s.v. *kará-*. “Glossy forearms” are a more likely possession of Agni’s – ghee-drenched flames – than of Indra in VIII.32.10.

III.19 Agni [SJ on JPB]

The hymn has a particular interest in the ritual participation (or at least witnessing) of the gods as a whole: see *devátātā* (1c), *devátātim* (2c, 4c), *śárdhaḥ ... divyám* “divine troop” (JPB publ. tr. “multitude of gods”).

III.19.1: In nearby III.17.5 a “better sacrificer” (*yájīyān*) than (the current) Agni was announced, but here he is back in his customary role as *yájīyān*.

III.19.2: On the formation of (*pra*)*dakṣiṇíd* see comm. ad V.36.4.

All the standard tr. take *urāṇāḥ* as trans., with *devátātim* as object – also in the identical pāda IV.6.3b. However, all other occurrences of this participle are passive, and in this hymn a passive “(Agni) being chosen” complements the opening of the hymn *agnīm hótāraṃ prá vṛṇe* “I choose Agni as Hotar,” in the immediately preceding vs. In a ritual context “choosing” is regularly about the choice of Hotar. For further disc. see comm. ad IV.6.3.

Contra the standard tr. (incl. JPB’s), I think *vásubhiḥ* refers to material goods, not to “good” gods, and would emend to “with gifts and goods.” My interpr. is supported by sg. *vásvaḥ* in the next vs., which certainly doesn’t refer to a divinity.

III.19.3: The grammatical subject changes in this vs., from Agni in 2cd (in my view, against Ge’s opinion that it is the human Hotar) to a human ritual officiant. This change of subject should be signaled in some way in the publ. tr., perhaps by “He [=human priest].” Interpreting 3a is made more difficult by the fact that there is no overt verb or

clear way to construe the instr. phrase *téjīyasā mánasā*, and tr. vary widely. I think JPB is correct to supply a verb based on *sám ... aśret* in 2d, which is also construed with instrumentals. Here the “sharper thought/mind” is the human priest’s contribution to the sacrifice, while Agni in 2d provided gifts and goods.

The fungibility of Agni as priest and human as priest is made clear in pāda b, where the impv *śikṣa* is addressed to Agni, while the human priest is referred to as *śikṣú-* (pace BR’s emendation of *śikṣóḥ* to voc. *śikṣo*, accepted by Old but rejected by Ge, Re, WG, JPB). The ritual contributions of the god and the human are essentially equated.

The *utá* introducing pāda b has non-coordinate value, as JSK (DGRV I.453) notes. He renders it by “therefore” (JPB’s “and so”). Perhaps it’s meant to match immediately preceding *-ūta* ‘helped’ (in sandhi) in the cmpd *l’vóta-*.

The standard tr. take *suṣtutāyaḥ* as “good praise-singers,” but as JSK (DGRV I.55) points out, the well-attested stem *suṣtutí-* otherwise only means ‘praise-song’ (a fact acknowledged by Re, but not reflected in his tr.). JSK plausibly suggests that “(we) and our praise-songs” form a zeugma, an interpr. represented in the publ. tr.

The publ. tr. fails to tr. *te:* emend to “our praises of you.”

The gen. *vásvaḥ* is to be construed with *prábhūtau*, along with *rāyó nṛtamasya*. See, e.g., *vásvo rāyāḥ* in II.2.12; I would therefore change “of the good” to “of goods,” since I think this is a material, not moral desire.

III.19.5: As noted in the publ. intro., 5a forms a ring with 1a *agnīm hótāram ... miyédhe* / 5a *yát tvā hótāram ... miyédhe*, with the ring signaled by the fairly rare word *miyédha-* ‘ritual meal’.

Note *yajáthāya devāḥ* as a variant of *yajáthāya devān* in nearby III.17.1, where the acc. served as obj. to the infinitival *yajáthāya*.

III.20 Agni and the All Gods [SJ on JPB]

III.20.1: JPB’s rendering of *vāvasānāḥ* as “bellowing” follows Kü’s reinterpr. (477–80, 486–88) of all forms of this stem as belonging to $\sqrt{vās}$ ‘bellow’, rather than assigning some of them to \sqrt{vas} ‘want, long for’ (so, e.g., Gr). This wholesale reanalysis seems extreme to me. Certainly in this vs., where the gods are asked to “hear us,” noisy bellowing of their own might interfere. I prefer to follow the standard tr.: “the gods, longing for the rite ...” This sense is supported by *devāvāta-* in the next vs., at least if it means ‘sought by the gods’ (my preference) rather than ‘won by the gods’ (JPB).

Note the phonological echoes of the openings of c and d: *sujoyótiṣo ... sajóṣaso*.

III.20.2: The whole vs. concerns the three ritual fires.

The neut. *vājina-* is a vṛddhi deriv. of *vājín-* ‘prizewinner, competitor, racehorse’ (AiG II.2.350). It is found 5x in the RV, with the other four in Maṇḍala X (X.56.3; 71.5, 10; 103.10). In two of the five passages it is closely linked with *vājín-* (X.56.3 *vājy āsi vājinenā*, X.103.10 *vājínāṃ vājínāni*). As a vṛddhi deriv., it can bear various semantic relationships to its base *vājín-*. In X.56.3 and 103.10 I tr. it as “competitive spirit,” but in X.71.5, 10 it seems more concrete, as “competition.” Neither of these meanings particularly suits the form here, which is isolated from the forms clustered in X; nor do I find JPB’s ‘victorious charges’ (or any of other suggested tr.; see Ge’s n. 2a, Re’s n.)

persuasive. I wonder if it refers to a locale, like parallel *sadhásthā*-, namely ‘place of competition, arena’, indicating the hearths. I would change the tr. to “three are your arenas of competition ...”

As noted ad III.6.4, I prefer ‘seats’ to ‘abodes’.

In b the contrast between “three” and “many” is striking, but I think JPB’s tr. is correct: the “tongues” are flames (as often), and these are first numbered as three, associated with the three fires, but of course each fire has numerous flames.

As noted ad vs. 1, I’d change “won by the gods” to “sought by the gods.”

III.20.3: The cmpd. *pr̥ṣṭa-bandhu*- ‘whose kinship is asked about’ has a contrastive match in *bandhu-pr̥ch*-, used of the Aśvins, in this same maṇḍala, III.54.16 (see disc. ad loc.). The theme of names is also found there. Presumably names are the clues to the web of relationships (/kinship) in which the god has his place.

III.21 Agni [SJ on JPB]

On the use of this hymn in the animal sacrifice in śrauta ritual, see publ. intro. In addition to the presence of *médas*- ‘fat’ in every vs. but 3, which was noted in the publ. intro., the word *stoká*- ‘drop’ is found in every vs. and a form of the root $\sqrt{\text{ścut}}$ ‘drip’ in every vs. but 1. The hymn is also notable for using three of the most resonant words for ‘poet, seer’ in short compass: *vípra*- and *īśi*- in vs. 3, both of Agni, and *kaví*- in the cmpd *kaviśastá*- in 4.

III.21.3: On KH’s deriv. of *santya* (always voc., no accent) from **sam-tya*- in the meaning ‘companion’, see EWA s.v.

III.21.4: I would correct “independent” to “never poor” for *adhrigo*. See comm. ad I.61.1, VIII.22.11.

As JPB points out in the publ. intro., *medhira* ‘o wise one’ is a pun on the ubiquitous *médas*- ‘fat’.

III.21.5: On the lexeme *prāti* $\sqrt{\text{vī}}$ see comm. ad VIII.39.5, where I gloss it as “accept,” as the reciprocal action to (*prá*) $\sqrt{\text{vī}}$ ‘pursue’. Here *prāti ... devaśó vihi* plays off *devávītaye* in 2c (and flirts with etymologically unrelated *prāvitā* in 3d).

III.22 Purīṣya Agni [SJ on JPB]

On the later ritual use of this hymn, see the publ. intro.

III.22.1: The syntax of this vs., esp. its 2nd hemistich, is clotted; see Old’s long disc. in Noten, also Ge (n. 1cd).

The first issue is the double loc. *yásmín ... jāthāre* in ab – in particular how to interpr. *yásmín*, which must refer to Agni, a necessity that does not fit easily with the rest of the rel. cl., which depicts the common scene of Indra taking soma into his belly. What is Agni’s role in this? Unlike other oblations, esp. ghee, soma is not poured into the ritual fire – such a liquid would extinguish the fire or at least subdue it – so Agni is not the mediating mouth through which Indra acquires the soma, as he is with ghee and the like. Old (SBE) tr. “with whom,” Ge “durch den,” both more appropriate for an instr. *yéna*;

WG “worin,” JPB “in whom,” which correctly reflect the loc. but leave the purport unexplained. Re’s “chez qui” seems to me the best solution (Ge could have used “bei”): Indra acquires the soma on the ritual ground in the vicinity of the ritual fire. I would slightly emend the tr. to “at which,” which is inelegant but closer to the “chez,” “bei” that English unfortunately lacks.

On *vāvasānāh*, see comm. ad nearby III.20.1. Against all the standard tr., but with Kü’s reanalysis of the stem, JPB renders it as “bellowing,” rather than “longing for.” Although Indra is more likely to bellow than the listening gods of III.20.1, I’m still inclined to tr. “ardently longing for it,” or at least allow this as a second reading.

The problems in the 2nd hemistich start with pāda c, which contains two semantically separate acc. NPs, *sahasrīṇam vājam* “thousandfold prize” and *ātyam ná śāptim* “like a teamed steed,” which beg to be connected – the horse should win the prize – but without syntactic means to make the connection. One or both of these accusative phrases could belong with the only other acc. in the vs. *sómam ... sutám* in ab, but an interpr. “received the pressed soma in his belly as a thousandfold prize / like a teamed steed” is not compelling, esp. the horse simile. Whereas Agni is regularly compared to horses. But Agni in this hemistich (as in the first pāda) is in the nominative, as subj. of the passive *stūyase* “you are praised.” The best alternative of the many disc. by Old and Ge seems to be the one adopted by Ge et al., that the syntax changes horses in midstream as it were – that is, what started out as a construction with an acc. object to a transitive form of *√stu* ‘praise’ (“[we praise Agni] like a steed ...”) switched to the passive (“you [Agni] are praised”) at the last minute.

But this doesn’t solve the problem of the ungoverned “prize,” not account for *sasavān śán* opening d. The nom. part. *sasavān* can modify nom. Agni, of course: “you are praised as one winning, like (one praises) a steed ...,” but what we’d really like to do with this verb form is to make it the link between the acc. steed and the acc. prize in c. A way into a solution is provided by a reexamination of *śán*, whose presence is puzzling (though it has attracted no comment in the standard tr.; only JPB reflects it, presumably in his “since you are”). Nom. forms of the pres. part. to *√as* ‘be’ are almost always concessive, but “*although* winning, you are praised” makes no sense here. My solution is to slightly emend *sasavān śán* to the acc. sg. of the same participle, **sasavāmsam* (see *sasavāmsam* in nearby III.34.8). This requires only converting the *n*’s to anusvāras and erasing the accent on *śán*. It is not difficult to imagine the redactors, confronted with immed. flg. *stūyase*, making a nominative phrase with two participles out of the single acc. part. in an effort to provide the verb with a subject. With my emendation, the steed is now modified by an acc. participle, which then can govern the other acc. phrase, the prize. The mixture of constructions -- acc. in the simile, nom. in the frame – remains, but it is now the only syntactic issue, the troublesome *śán* is gone, and the break between the two constructions is clean. I would now change the tr. to “You are praised (as one praises) a teamed steed *that has won a thousandfold prize.”

III.22.2: As disc. ad III.53.9, *nṛcākas-* can mean either ‘having one’s gaze on men’ or ‘having/drawing the gaze of men’; along with most standard tr. JPB opts for the former, but I think the latter is better in this context, since it modifies “radiance: in a NP that depicts a visual spectacle – how could men fail to look?”

III.22.3: I consider JPB's rendering of *áchā* as "(to) there" somewhat misleading; I think *áchā* is just a directional particle 'to', and I very much doubt that it can be used as a straight locative adverb "there," as the publ. tr. of pāda b "there you have spoken ..." seems to take it.

Pāda b is intrusive, in that the rel. clauses of cd *yāḥ ... yāḥ ... āpah* ("which which waters") must further specify the *árṇam* of pāda a, to which Agni goes.

The pf. *ūciṣe* in b is persuasively taken by Kü (442) as reflexive, belonging to the relatively rare middle of this pf. stem: "hin zu dir hast du die Götter gerufen." This makes better sense than simply depicting Agni as chatting with the gods, and it also allows a directional reading of *áchā* ("to [yourself / the ritual ground]"). I think it also encourages a more specific interpr. of *dhīṣṇyāḥ* in the nominal rel. tag *dhīṣṇyā yé* that is more appropriate to the context. Agni calls to himself the gods "who belong to the holy place," i.e., the ones that should come to the ritual ground. On *dhīṣṇā-* as 'holy place = ritual ground' see comm. ad III.2.1.

As just noted, the rel. clauses of cd are loosely linked with pāda a; most tr. parenthetically resupply *áchā jigāsi*. Given the double rel. prn. *yāḥ ... yāḥ*, the *ca* connecting them, and, especially, the contrastive *parāstāt* (c) / *avāstāt* (d), I think we are dealing with two bodies of waters, only one of which is the sea of heaven (*divó árṇam*) of pāda a. This is not clearly brought out in the publ. tr. (and may in fact not be meant), but most of the standard tr. (also JSK, DGRV I.112) do reflect this view.

Putting this vs. all together, I'd substitute "O Agni, you go to the undulating sea of heaven—you have called to yourself the gods who are associated with the holy place—(you go) to the waters that are in the realm of light beyond the sun and to those that stand nearby beneath (it [=sun])."

III.22.4: On the basis of I.163.1, where I tr. *pūrīṣa-* as 'fertile soil (see comm. ad loc.), contrasting there with *samudrá-* 'sea', I think *pūrīṣyà-* here also has this more specific sense (rather than the abstract 'relating to fullness, overflowing'), esp. because it is contrasted with *prāvaṇá-* 'belonging to *pravaṇá-* 'cascades, torrents'. I would therefore tr. the NP of the first hemistich as "the fires belonging to fertile soil along with those belonging to falling torrents"; what exactly these two sets of fires are escapes me.

With Re, JPB takes *adrúho 'namīvá īṣo mahīḥ* as nom. pl., characterizing the fires, but some or all of these words could in fact be acc. pl., either as further object(s) of *juṣántām* (so Old) or objects of a verb to be supplied (like "grant"; so Ge, WG). Since *adrúh-* generally modifies gods, I'd take it as nom. pl. here, but would make *anamīvá īṣo mahīḥ* an acc. obj. (note that *anamīvá-* several times modifies *īṣ-*, as Ge [n. 4d] points out). Simplest is to make this phrase an obj. of *juṣántām*: "Let (the fires), free of deception, enjoy the sacrifice (and) great refreshments free of disease" – though I recognize that the refreshments might better be things that Agni gives rather than enjoys.

III.22.5 = III.1.23, etc.

III.23 Agni [SJ on JPB]

III.23.1: As noted ad III.6.4, I prefer 'seat' to 'dwelling'.

The first pāda play with aspirated dentals: *nīrmathitaḥ súdhita ā sadhathe*, with the first two words a syncopated rhyme.

For *dadhe*, ‘has acquired’ might be slightly better than ‘has received’.

Old (SBE) suggests (as an alternative) that *amṛtam* might here refer to “the drink of immortality,” namely the ghee offered into the fire, and this suggestion is fld by Ge (/WG). This interpr. cannot be excluded (see Gr’s definition 7: “n., der *Unsterblichkeitstrank* ... häufig auf die ins Feuer gegossene Opferbutter ...”), and Ge’s invocation of nearby III.26.7 is apt, but I think that a double reading (/pun), rather than simply a strict ritual reading, is likely: Agni’s acquisition of “immortality” squares with his “unaging” (*ajāraḥ*) nature in c. So I’d suggest “has acquired immortality / the immortal (ghee-offering).”

III.23.2: The future impv. *abhavatāt* is used in conventional fashion here to enjoin an action that should follow a previous one, as also in III.8.1; see comm. ad III.18.1 for a more puzzling occurrence.

III.23.3: The VP *pūrvyām ... ajījanan* “have begotten the primordial one” is an implicit paradox – one beloved of RVic poets -- that Agni is both ancient and reborn every day, like Dawn.

The phrase *vāra ā pṛthivyāḥ* is found in this maṇḍala at III.53.11, where it also refers to a place of sacrifice.

III.23.4: The verb of pāda a, (*nī*) ... *dadhe*, is multiply ambiguous: it can be the 3rd sg. pf., identical to *dadhe* in 1d (so JPB), or the 1st sg. perfect (so apparently Old SBE, Re), or 1st sg. pres. (so apparently Ge, WG). Any of these interpr. (immed. past “he has /I have installed,” pres. “I install”) is compatible with the impv. in d. I weakly favor a 1st ps., though whether pf. or pres. is indifferent to me.

The sandhi form *mānuṣa* is taken as *mānuṣe* by the Pp., and a loc. interpr. is reflected in the tr. of Ge, Re, and WG. Gr lists the form as *mānuṣas* without registering the Pp. reading, and this nom. interpr. is found in Old SBE and the publ. tr. – though Old in the Noten admits that either form is possible. I weakly favor the Pp. loc. and would substitute “among the descendents of Manu” for “As (the Agni) of Manu.”

III.23.5: Though this vs. is simply the Viśvāmitra Agni refrain (see III.1.23, etc.), in this case it has some connection with what precedes: its first word *īlām* picks up *īlāyās padé* “in the track of the milk-libation” in 4b.

III.24 Agni [SJ on JPB]

As noted in the publ. intro., every vs. begins with the voc. *ágne*, and every vs. has at least one impv. or the equivalent.

III.24.1: The publ. tr. “overwhelm in battles” (see also Old SBE, Re, WG) indirectly reflects the fact that \sqrt{sah} generally occurs with the loc. of the stem, *pṛtanāsu* (I.102.9, VI.68.7, etc.). Only Ge tries to represent the acc. by dint of reinterpr. *pṛtanā-* as “enemy,” not “battle”: “überwaltige die feindlichen Heere” (so also Gr, meaning 2: “feindliches Heer”). On the ubiquity of the loc. *pṛtanāsu* / *pṛtśú* with \sqrt{sah} , see Scar (604–5), who

struggles with the interpr. of the root noun compd *ṛtanā-śāh-*, which he glosses “in den Kämpfen siegreich; die Kämpfe gewinnend (?)” (with both loc. and acc. senses). He suggests that the compd. represents a contamination of two constructions: *ṛtanāsu* (*ṛtsū*) $\sqrt{\text{sah}}$ and *ṛtanās* $\sqrt{\text{jī}}$ (for which see, e.g., II.40.5). Although the latter construction may have played a role, I think the inherent functional ambiguity of 1st compd members in root noun compds was the instigating factor. Although probably the majority of 1st members in such compds serve as direct objects to the root noun final (type *ṛtra-hán-*), a variety of other syntactic relationships are possible. The compd *ṛtanā-śāh-* occurs 9x in the RV, well distributed through the Saṃhitā (see also *ṛtanā-śāhya-* 1x). I think it quite likely that *ṛtanā-* originally had a locative relationship with *śāh-* in this compd, but with the case ending suppressed the direct object reading arose, facilitated by the apparent parallel *ṛtanās* $\sqrt{\text{jī}}$. This root-noun compd *ṛtanā-śāh-* occurs in a nearby Agni hymn (III.29.9), and *ṛtanā-śāhya-* is also found in Maṇḍala III (III.37.1). Our nonce phrase *sāhasva ṛtanāḥ* is, I suggest, based on (a misunderstanding of) the nearby root noun compd. How to render it is a puzzle – perhaps the sleight-of-hand “overwhelm (in) battles.”

III.24.2: Since JPB tr. *īlā-* in the Viśvāmitra Agni refrain (found most recently in III.23.5) and in vs. 4 of the preceding hymn III.23 as “milk-libation,” the rendering here of the instr. to the corresponding root noun *īḍ-* as “ghee-libation” is somewhat jarring – though I realize that it’s easier to kindle a fire by ghee than by milk. It should be changed here to “milk-libation” or to my preference simply ‘refreshment’ or ‘libation’.

The tr. of the notorious compd *vītī-hotra-* should be changed to “whose oblations are worth pursuing.” See comm. ad II.28.1 and my forthcoming art. “Vedic Evidence for the Verbal-Governing *dāti-vāra-* Compound ‘Type’.”

III.24.3: The first two pādas consist entirely of vocatives, save for instr. *dyumnéna*. Old (SBE) and (it seems) Re construe the instr. with pāda c, but Ge, WG, and JPB with the voc. *jāgrve* ‘wakeful’. I would ordinarily be inclined to follow Old and Re, save for two factors: 1) both b and c are repeated elsewhere, which suggests, but doesn’t require, that they are self-contained; 2) although *jāgrvi-* is not found with a loc. elsewhere, cf. III.37.8 (same maṇḍala, in a hymn with ties to this one [see comm. ad vs. 1]) *dyumnínam ... jāgrvim*, with an *-ín-* stem possessive built to our *dyumná-*.

III.24.4: I think that JPB is correct that *visvebhiḥ* should be read both with *agnibhiḥ* and with *devébhiḥ*.

The stem *cāyú-* is a hapax and has received a range of interpr.: Gr “Ehrfurcht bezeugend,” Old (SBE) “who are respectful,” Ge “die sich ... geehrt fühlen (?),” Re “qui ... sont à l’honneur,” WG “die ... Ehrbietung bezeugen,” JPB “who are the respected (priests),” JSK (DGRV II.23) “who show respect.” Besides an affiliation to $\sqrt{\text{ci}}$ ‘perceive’ (etc.; see EWA s.v. *Ci*¹, where MM tr. the stem “Respekt bezeugend”), there is little to narrow down the possible senses – particularly whether it is active (referents are subjects of $\sqrt{\text{ci}}$) or passive (referents are objects of $\sqrt{\text{ci}}$). However, it should be noted that a gerund with the same root syllable, *nicāyyā*, is found two hymns later (III.26.1), with the likely active sense ‘having noticed, paid attention’ (see the other occurrence of the same form in I.105.18). That our hapax appears so close to that gerund gives us leave (in the absence of other evidence) to interpr. it in that general realm. I therefore think it has

“active” sense and means something like “attentive,” which works well in a ritual context. The rel. *yá u* clause would then be best connected with the voc. *ágne*, as further subjects of *mahayā*. I would tr. “and those who are attentive at the sacrifices.”

III.25 Agni [SJ on JPB]

Note the ring compositional elements in vss. 1 and 5, identified by JPB in the publ. intro.

III.25.1: The vs. contains two forms of \sqrt{cit} characterizing Agni: *práčetāḥ* (a) and *cikitvaḥ* (c). It might be good to tr. them so that the root etymology is captured, but I cannot come up with a non-awkward way to do that.

Pace Gr (s.v. *tānā*) and all the standard tr. (except Re), as well as JSK (DGRV I.345, 348), it is highly unlikely that *tānā* is a nom. sg. fem. (‘Spross’, ‘seed’) appositive to Agni, but rather, with JPB (see also alt. interpr. in Ge n. 1b), an instr. to the root noun *tān-* as elsewhere.

On *īdhak* with \sqrt{yaj} see comm. ad X.105.8, also VI.49.10. My interpr. of the adverb is slightly diff. from JPB’s, though his “one by one” may be a development of my “separately.”

III.25.2: The pf. part. *vidvān* in pāda a picks up *cikitvaḥ* in in 1c.

The rendering “wins heroic deeds” (*sanoti vīryāṇi*) is a bit jarring. Though *vīryā-* does ordinarily refer to deeds (as in the famous opening to I.32), here “heroic powers” would fit better.

The phrase *amṛtāya bhūṣan* occurs nearby in III.34.2, an Indra hymn, where I think *amṛtāya* refers specifically to Indra, rather than to the abstract “immortality” as is likely here.

III.25.4: Strictly speaking *sutāvataḥ* should be “who has pressed soma,” rather than an apparent pres. part. “pressing soma.”

I’d prefer “not negligent” for *āmardhant-*, rather than “never disdaining.” The point is that they exert themselves to come to the sacrifice, rather than that they don’t turn it down. I would take *somapéyāya* as a purpose dative with *yātam* (cf. VII.24.3, X.112.2), rather than construing it directly with *āmardhantā*. So: “... drive here to the sacrifice / to drink the soma, you non-negligent ones.”

III.25.5: As disc. in the publ. tr., Ge (n. 5a) suggests that the gen. pl. *apām* should be construed with a supplied *nāpāt* (“[descendant] of the waters”), on the reasonable grounds that *duroṇá-* in an Agni context always refers to a human dwelling. He could also have pointed to the phrase in the immed. preceding vs. *dāsúṣo duroṇé*, which encourages supplying “of the pious man” here. Re and WG follow Ge, while Old (SBE) and JPB follow Sāy. in construing *apām* with *duroṇé*, the most natural way to construe what’s actually in the pāda (rather than supplying two extra words). Though I see the justice of Ge’s arg., I would still go along with the publ. tr., for a reason so far adduced by no one (as far as I know): *sadhásthāni* ‘abodes, seats’ in c. This word is semantically close to *duroṇá-*, and it also is found three times with *apām* (I.149.4, II.4.2, VI.52.15), the former two in clear Agni context. See esp. I.149.4 *hótā yájiṣṭho apām sadhásthe*. I suggest that

we should understand *apām* with *sadhāsthāni* in c as well, with that phrase expanding on *apām ... duroṇé*: “you were kindled in the house of the waters ... magnifying the seats (of the waters) with your help,” whatever may be meant by these locations.

III.26 Agni Vaiśvānara [SJ on JPB]

On the structure of the hymn and the scholarly disagreement about it, see publ. intro. I think it is possible to reconcile the two views. On the one hand, Old’s observation that the placement of the hymn in the collection suggests that it consists of three separate hymns is hard to counter; on the other, it seems possible that the three hymns were associated from the beginning as constituting a primitive Āgnimāruta śāstra and were therefore placed consecutively here.

III.26.1–3: In this *ṛca* to Agni Vaiśvānara, the epithet *vaiśvānarā-* is found in all three vss. (1a, 2b, 3b) and in fact is the first word of the hymn.

III.26.1: *agnīm* was omitted from the publ. tr., which should read “having discerned with our mind Agni Vaiśvānara.”

The cmpd *anuṣatyā-* is found only here and is variously rendered; Re’s “qui se conforme au réel” is the basis for the publ. tr. It can be interpr. in light of *mānasā ... nicāyya* “having discerned with our mind ...” As Ge points out (n. 1a), this probably means that we see Agni in our mind before the new fire is actually visible; *anuṣatyā-* would then assert that our mental image is in conformity with the reality of the physical fire when it appears.

III.26.2: Although in most cases *devātāt(i)-* seems to be a collective meaning ‘divine assemblage’ (as in JPB’s tr. here), in several passages, esp. in the phrase *mānuṣo devātāt(i)-* (V.29.1, VI.4.1, and here), ‘attendance on the gods’ seems more apposite. I’d therefore change the tr. to “who is Bṛhaspati for Manu’s attendance on the gods.”

Agni is Bṛhaspati here insofar as he controls or is associated with the ritual formulations; see (approx.) Ge (n. 2c) and HPS, B+I 70–71, who points out that we can match Bṛhaspati with *vīprā-* in the flg. pāda (and Mātariśvan with *śrótā-* and Vaiśvānara with *ātithi-* in the same pāda).

III.26.4: With Ge, WG, and JPB (and contra Old [SBE, but see his n. 2 on this vs.], Re, and Scar [62]), *táviṣṭbhiḥ* should be construed with *sámmiślāḥ* in b, on the basis of I.64.10 *sámmiślāsas táviṣṭbhiḥ* and a similar expression in VII.56.6, both also of the Maruts.

On *bṛhad-úkṣ-* see Scar (61–62).

III.26.5: Root-noun cmpds with *-śrī-* as 2nd member are difficult to pin down semantically. See the extensive, and ultimately (legitimately) indecisive, disc. of this group by Scar (545–54). The problem is that the extremely well-attested uncompounded root noun *śrī-* has become semantically independent of the verbal root *√śrī* (pres. *śrīṇāti*). The latter means (acdg. to Narten, KZ 100 [1987]) ‘perfect, make complete’, while the latter has come to mean ‘excellence, splendour, glory, beauty’ (and of course goes on to a glorious career in later Skt). The problem with the root-noun cmpds is to determine

whether the 2nd member maintains its original verbal semantics or shows the developed semantics of the uncmpd root noun. In most such cmpds I have opted for the latter interpr. (perhaps wrongly), but here, given the larger context, I'm inclined to see it as having verbal semantics, governing the object *agni-*, hence 'perfecting the fire' vel sim.. If this *ṛca* concerns the Maruts, as gods of the storm/wind, fanning the flames of the ritual fire (see publ. intro.), such a transitive interpr. fits the context better than simply "with Agni's splendour," and I would change the tr. to "bringing Agni / the fire to perfection." (Oddly, in this particular passage there is almost universal agreement among translators that the cmpd is intrans./passive, despite the larger context.) Other *-śrī-*cmpds with ritual items as first members have profitably been reconsidered as well: *adhvara-śrī-*, *ghṛta-śrī-*, and *yajña-śrī-*; see comm. on the relevant passages.

On *heṣā-* see EWA s.v. *HEṢ*¹.

III.26.6: The second hemistich is presented somewhat misleadingly in the publ. tr.: it is not a gen. phrase hanging off *marútām* in b, but a nominal clause in the nominative: "With their dappled horses, with their unreceding generosity, they (habitually) go to the sacrifice, (as ones) wise at the ritual distributions." Pāda c is identical to II.34.4c in a Marut hymn.

III.26.7: Though JPB identifies the *amṛta-* as soma, on practical grounds it is more likely to be ghee, which is regularly offered in the fire, whereas soma would put the fire out or at least damp it down. See III.23.1.

III.26.8: There are two possibilities for construing the first phrase in b, *hṛdā matīm* – either as a second object NP with *ápūpot* or as first object NP with *ānu prajānán*. JPB follows Re in the second alt.; I somewhat prefer the first, in part because the instr. would be parallel to the instr. phrase in pāda a. Old (SBE) clearly so interpr. it, likewise probably Ge and WG. As an alt. I would then suggest "He purified the chant with the three purifying filters, the thought with his heart, discovering the light."

III.26.9: This vs. would be more easily parsed if the long (three-pāda) acc. phrase came first and was resumed by the *tām* beginning d, fld. by the impv. and the voc., rather than fronting the impv. and postponing its voc. subj. to the end. So, "The inexhaustible well-spring ... in the lap of his parents – o you two world-halves, carry him across, as the one who speaks what is real.

I would render pāda c as "the crackling, the one becoming exhilarating in the lap of his parents," with *mādan-* in its full participial value, not just as adj. 'joyful'.

III.27 Agni [SJ on JPB]

Another hymn in *ṛcas*; on the structure of the hymn see publ. intro. The language is simple, straightforward, and stereotyped for the most part, though there are some puzzles.

III.27.1: Various suggestions for the subj. of *jigāti*: the sacrificer (Sāy., Old [SBE]), the sacrifice or the sacrificial ladle (Ge n. 1a), Agni (Re). It scarcely matters, but it is the case that *sumnāyá-* / *-yú-* often has humans as subject, which would favor the first alt.

III.27.2: On *dhitāvan*- see comm. ad III.40.3.

III.27.9: Old (SBE) takes *ā dadhe* as 1st sg. with Agni as the obj., whereas all subsequent tr. (incl. JPB) take it as 3rd sg. with Agni as subj. (in both cases implicitly). Old's interpr. makes more immediate sense, esp. as *nī tvā dadhe* begins the next vs. and the verb must be 1st sg. with Agni = object "you." The reason for the otherwise universal interpr. as 3rd sg. is based on a repeated passage in the AVŚ: V.25.2=VI.17.1 *yátheyám prthivī mahī bhūtānām gárbham ādadhé*, with the Earth as overt subject. But these are pregnancy charms, with a feminine subject, and that is not the context here. Moreover, Agni is himself called *bhúvanasya gárbha*- (X.45.6)(as Ge points out, n. 9b), which is the object here. I am therefore inclined to follow Old and substitute "I have established (him) as the embryo ..." There is then chaining with *nī tvā dadhe* in the flg. vs. The AV passage will have adapted the phrase to a different context.

III.27.11: The morphologically anomalous *yantúram* is (in my view) a textbook case of a form generated solely by context. Its *-túram* playfully anticipates the following word *aptúram*, a reasonably well-attested root-noun cmpd *ap-túr-* ($\sqrt{tṛ}$) 'crossing the waters' — but *yantúr-* is not a cmpd. but rather a byform (/deformation) of the agent noun *yantár-* 'controller, guider' (\sqrt{yam}), possibly influenced by the gen. *yantúr* (though Wack. is skeptical). See Old (SBE and Noten), AiG III.203–4. From this passage it was adapted to VIII.19.2, where it provides a better cadence than the proper acc. sg. *yantāram*. It must be noted, however, that there are alternative interpr. of the form, particularly Th's analysis (*Studien zur idg. Wortkunde und Religionsgeschichte*. 8) as a haplology of **yantu-túr-* "der die Zügelung überholt," which Th further glosses as "so schnell, dass man ihn nicht zügeln kann." I find this semantic interpr. forced in the extreme and know of no other such uses of $\sqrt{tṛ}$; certainly the other cmpds with 2nd-member *-túr-* are quite different in meaning. Moreover, the supposed 1st member *yantu-*, supposedly meaning "Zügelung," is barely attested and not in that sense: once as a dat. inf. *yántave* ('to hold / extend', VIII.15.3), once in the cmpd. *suyántu-* 'easy to control' (V.44.4). Nonetheless, no doubt due to Th's prestige and to a linguistic disinclination towards irregular surface analogy (which, though also a linguist, I do not share), it is the favored explan. in EWA (s.v. *yantúr-*), is weakly favored by Scar (186–87), and has been adopted by WG. (There is also an even less likely analysis owing to Pinault; see EWA, Scar, and WG n. for details.) I firmly hold to the older explan. However, in our passage I would be inclined to tr. "controller," rather than supplying "horses" with "guiding" — though the "yoking" of truth in the next pāda does introduce an equine theme.

vanúṣaḥ is universally taken as a nom. pl. modifying *vīprāḥ* in the next pāda, rather than a gen. with *ṛtásya*. This is no doubt correct: *vanús-* almost always qualifies animate beings. However, I would prefer to tr. it within its own pāda: "eager at (/for) the harnessing of truth." Cf. IV.44.3 *ṛtásya ... vanúṣe* "for (the one?) eager/striving for truth."

III.27.13–15: This *ṛca* is unified by a focus on *vṛṣan-* 'bull', which is the last word of vs. 13, the first of vs. 14, and occurs 3x in the last vs. Note also that 13c and 14a are mere scrambling of each other: the only added element is the particle *u*, assuming that that is the correct analysis of 14a *vṛṣo* is *vṛṣā u* (see JSK [Part. u, 175] for disc.).

III.28 Agni [SJ on JPB]

On the ritual application of the hymn see publ. intro. Also correct a small lapse in that intro.: in “tied to a specific parts of the liturgy,” “a” should be deleted.

The impv. *juṣásva* ‘enjoy!’ is found in four of the six vss. (1a, 2c, 4b, 6c).

III.28.5: The *iṣ*-aor. subj. *kāniṣaḥ* has extended grade in its root syllable, like the indic. *akāniṣam* (IV.24.9), rather than expected full-grade **kaniṣaḥ*. See Narten (Sig.Aor. 94), who explains it as directly founded on the indic.

III.29 Agni [SJ on JPB]

On the ritual technicalities in this hymn, see publ. intro. The language is fairly simple and straightforward.

III.29.2: Despite the pl. *garbhínīṣu* lit. ‘[those (fem.)] having embryos’, I do not think this expression refers to multiple pregnant women (JPB’s “within women with child”). Rather, on the basis of very similar X.27.16 (also adduced by Ge) *gárbham ... súdhitam vakṣánāsu* “the embryo well placed in (her) belly,” I think *garbhínīṣu* modifies a gapped *vakṣánāsu* ‘belly’; the stem *vakṣánā-* is ordinarily a pl. tantum (see comm. ad X.27.16). I would emend the tr. to “well placed within a pregnant (belly).”

III.29.3: In a very similar context in II.10.3 I tr. *uttānāyām* as “in her with (legs) agape,” which I would substitute here. See comm. ad loc.

On *áva √ bhr* see comm. ad VIII.93.23.

Though “on this day” is a reasonable, though not entirely accurate, representation of its etymology (better ‘on one day’; see EWA s.v.), *sadyás* generally means ‘immediately’, and that is, I think, the sense here: the fire catches right away. I’d emend to “impregnated immediately.”

The parenthetical *rúṣad asya pājaḥ* is almost a textbook gloss of a bahuvrīhi **rúṣad-pājas-* (cf. *rúṣad-vatsa-* ‘having a bright calf’, etc.), and a nom. sg. m. bahuvrīhi would work well here. Re calls it a “composé « défait ».” Why we don’t get such a compound here is not entirely clear to me, since *pājas-* also forms bahuvrīhis (e.g., *prthu-pājas-*). The same phrase is found, in the same metrical position, in I.115.5, where, however, the syntagm is justified: *pājas* is the grammatical subject. So perhaps it has simply been adapted from that context.

As often, the interpr. of *vayúna-* is difficult (see comm. ad II.34.5, etc.). Here the loc. *vayúne*, rendered in the publ. tr. as “within the ritual pattern,” means, I think, that the fire was engendered at the appropriate time and place in the sacrifice, that is acdg. to its standard pattern. Or perhaps, since the dawn is associated with *vayúna-* (e.g., I.92.2, 6; IV.51.1), this is a shorthand way of saying “at dawn.”

III.29.6: As often, *yádī* should be read *yád ī*, with the enclitic prn. *ī-* hence “when him ...,” not “if ...” See my 2002 “RVic sīm and īm” (Fs. Cardona).

With the majority of tr. (starting with Sāy.) I think “chariot” should be supplied with *citrāḥ* in the simile *citró ná yāman aśvínor ānivrtaḥ*. Old (SBE) suggests the sun; though I think the sun is the ultimate target of the full simile, it is mediated by the chariot

image. The adj. *citrá-* modifies *rátha-* in I.34.10 and III.2.15, with the former referring specifically to the Aśvins' bright chariot.

III.29.8: Note the paired imperatives opening the first two pādas, simplex *śīda*, caus. *sādāya*.

As indicated by Gr (s.vv.) and endorsed by Wack (AiG II.1.20, etc.), *sūkṛta-* is adjectival 'well-done' with accent on the prefix as with other such cmpds. (*súdhita-* 'well-placed', *súpūta-* 'well-purified', etc.), whereas the suffix-accented *sukṛtá-* has been substantivized to 'good work' (generally referring to the sacrifice). The tr. should therefore be emended to "in the womb of good work" (see the same phrase in X.61.6).

III.29.9: Since *dhūmá-* is a masc. noun, the sense of the NP *dhūmām víṣaṇam* should be flipped to "bullish smoke."

On *pṛtanā-ṣāṭ* see comm. ad III.24.1.

III.29.10: I now find 'seasonal, at its season' a somewhat misleading tr. for *ṛtvíya-* in a ritual context and would substitute 'at its proper time' here; see comm. ad X.28.5.

III.29.11: Note the pun between the epithet *mātaríśvan-* and the loc. *mātári*. The connection between Agni's epithets and his stage of birth is not so clear in the other pādas.

III.29.13: On *√srev* 'miscarry, abort' and our form *asremá-* < *-*srev-mán-* see EWA s.v. *srev*, Narten, SigAor. 282–83, and AiG I Nachtr. to 91, 37.

On *taráni-* see comm. ad III.11.3; I would here change 'overwhelming' to 'advancing'.

III.29.14: I would prefer to tr. all three augmented imperfects, *arocata* (a), *ásocat* (b), and *ájāyata* (d) as straight preterites, "he shone ... he blazed ... he was born" -- not as "has shone," etc., more characteristic of aor. or pf.: This creates some problem with the last pāda, if it is taken in conjunction with pāda c with its pres. *ní mīṣati*, since "he doesn't blink ... when/after he has been born" is more natural than "when/after he was born." I suggest that the *yád* clause in d is entirely parallel to the one in b and that c is parenthetical: "From of old he shone forth, when he blazed in the lap of his mother, in her udder – day after day the delightful one does not blink — when he was born from the belly of the lord."

I would substitute "in her udder" for "upon her udder."

The identity of the *ásura-* from whose belly Agni was born is unclear. Old (SBE) tentatively suggests Heaven; this is also Lüders's opinion (*Varuṇa* 390), which is favored by W. E. Hale (*Ásura-*, 45–46). Ge (n. 14d, fld. by WG) suggests Vṛtra, on the basis of X.124.3–4, where, however, I identify the Asura as Dyaus Pitar, not Vṛtra (see the publ. tr., as well as my treatment of this hymn in my 2016 "The Divine Revolution of Ṛgveda X.124"). Alternatively, if *āsurá-* in vs. 11 refers to the upper churning stick as JPB suggests, the same referent could be found here as well – neatly contrasted with the "mother" in b, the other churning stick.

Note the play of *surāṇaḥ* (c) and *ásura-* (d), though they are etymologically unrelated.

III.29.15: The presence of two root noun cmpds to roots in long *ā*, ending in *-ās* — *prayāḥ* and *prathamajāḥ* -- complicates the interpr. of the first hemistich, because both forms could be either nom. sg. or nom. pl. They are flanked by clear plural forms: nom. pl. *amitrāyúdhaḥ* and 3rd pl. *viduḥ*, but neither of these is as diagnostic as it might be – the first because it’s in a simile that might involve a constructio ad sensum, the latter because it may belong to a new cl. Nonetheless almost all tr. (incl. JPB) take both forms as pl. The exceptions are Scar (413, 440), who allows both possibilities for the former (“der/die”), though taking the latter as pl., and Old (SBE and Noten), who takes the former as pl. but the latter as sg. and belonging to a separate cl. I am agnostic about *prayāḥ*, though a plural is somewhat easier. But I’m in agreement with Old about *prathamajāḥ* on formulaic grounds. By the pl. interpr., the referent has to be the Kuśikas, the priestly family that is named in the next pāda (c). But it is odd to call them “the first-born of the formulation” or, if *bráhmanaḥ* is to be construed with *víśvam*, simply “the first-born.” But Agni is called *prathamajāḥ ṛtásya* “the first-born of truth” in X.57 and probably I.164.37 and X.61.19, an epithet very like *prathamajāḥ bráhmanaḥ*. Old suggests that *prathamajāḥ bráhmanaḥ* is an independent nominal clause, referring to Agni, with a new clause beginning with *víśvam íd*. This not only makes better sense of the hemistich but accounts better for the position of *íd*. This also allows the first pāda to refer to Agni’s advances, not the Kuśikas’ (see *ayāḥ* [if to $\sqrt{yā}$] and *yāhi* with Agni as subj. in 16c and d). And in b *víśvam íd viduḥ* need not involve the grandiose claim “they know everything,” but rather, with Old, “they know every (fire).” The interpr. of this small clause then connects with pāda d where each Kuśika kindles his own fire. I would emend the tr. of ab to “Battling the enemy, the advances / advance troops (of Agni) are like (those) of the Maruts. (He is) the first born of the formulation. (The Kuśikas) know every (fire).”

I would be inclined to tr. the two verbs in cd as “they have raised” and “they have kindled.”

III.29.16: The here-and-now of the ritual situation is emphasized in the first hemistich of this final vs., by *adyá* and *ihá* – and also by *asmín*. I would slightly alter the tr. to “while this sacrifice was proceeding.”

The standard view of *ayā(h)* in c is that it is a 2nd sg. *s*-aor. to \sqrt{yaj} . See already Gr., and all the standard tr. and interpr. (save for JPB), incl. Old (both SBE and Noten), Narten (Sig.Aor. 200), Lub (1123). I am dubious. In favor of this view is the fact that $\sqrt{śam}$ (here represented by *śamiṣṭhāḥ*) is often concatenated with forms of \sqrt{yaj} (e.g., VI.1.9 *īje śāśamé ca*). But, as is regularly acknowledged, *ayās* is not the expected outcome of 2nd sg. **ayāz-s-s* (better **ayāt* like the 3rd sg.) and has to have been wholly remade, to a form that appears to belong to a different root, $\sqrt{yā}$. Moreover, the (inappropriate) *yāhi* in the next pāda suggests that the poet considered *ayā(h)* a form of $\sqrt{yā}$ that licensed *yāhi*; see also *prayāḥ* in 15a.

The final pāda is identical to III.35.4, an Indra hymn, where it is more appropriately addressed to Indra.

III.30 Indra

As noted in the publ. intro., the hymn is characterized by hapaxes and very rare words, often with affective suffixes, and unusual phonology. These words include *dhāyuh* (7a), *gehyà-* (7b), *kúnāru-* (8b), *píyāru-* (8c), *alāṭṛṇá-* (10a), *yāmakosá-* (15a), *salalūka-* (17c).

III.30.1: The desid. *títikṣante* used to be assigned to \sqrt{tij} ‘sharpen’ (e.g., Wh Rts, Gr), but has for quite awhile been taken to \sqrt{tyaj} ‘abandon’ instead. See EWA s.v. *TEJ* and *TYAJ*, Gotō (1st cl., 165–66 n. 268), and in some detail Heenen (Desid. 59–60 and 147–48). Curiously WG render it here as (if) an intensive to \sqrt{tij} : “Sie schärfen (sich) immer wieder (gegen) ...,” despite Gotō’s own published views to the contrary. (In the WG tr., acdg. to the title pg., Maṇḍala III is Witzel’s responsibility, however, which may account for the discrepancy. It is rendered correctly as “.... hält ... aus” in II.13.3) The desiderative stem has the idiomatic sense ‘endure, support’, and the semantic channel from (putatively) ‘desire to abandon’ to this idiom is not entirely clear. I am not convinced by the suggestions of either Gotō or Heenen (59–60). Instead, I think the middle voice is the key: if we assume a reflexive ‘abandon oneself to’, ‘give oneself over to’, it is not difficult to imagine this development.

The sense of the final pāda depends on the meaning of *praketāḥ*, and like many derivatives of \sqrt{cit} this word is slippery. In my view, it means both ‘sign’ and ‘insight’ (that is, it reflects both the ‘appear’ and ‘perceive’ values of \sqrt{cit}). In this particular passage I take it in the former value; the point is that Indra is showing no sign of his presence or imminent arrival, and so we are subject to abuse from our rivals. For a similar usage cf. II.17.7, where the poet beseeches Indra for good fortune, and then demands *kṛdhí praketām* “make a visible sign,” further asking for him to bring the good fortune here. In X.104.6 Indra is himself called the *adhvarásya praketāḥ* “the visible sign of the ceremony.” Ge interpr. the word as “Losung” (‘motto, watchword, password’), which is, I suppose, possible, but I don’t understand what it would mean here; Re as “le signe-pré(monitoire),” which is somewhat opaque to me, but seems closer to my interpr than Ge’s; Old as “Helle” (light, brightness). WG take it as an agent noun: “Wahrnehmer.”

III.30.2–3: The next two vss. develop the theme sounded in pāda d of vs. 1.: Indra’s absence. In vs. 2 we point out that for Indra nothing is very far away, so he could, and should, easily come here, where the sacrifice is invitingly set out for him. In vs. 3 we provide a flattering description of Indra’s great powers and then plaintively ask where these powers are now.

III.30.3: The 2nd member of *tuvikūrmí-*, an epithet of Indra, is generally now derived from the seṭ root \sqrt{car} , a derivation already found in AiG I.24, 141, 152 -- hence my ‘powerfully ranging’. See EWA s.v. *tuvikūrmí-*. The older deriv. from \sqrt{kr} (e.g., Gr., Wh Rts; explicitly rejected by AiG II.2.776) is nonetheless still reflected in the standard tr.: Ge “der Tatenreiche,” Re (with hesitation) “aux actes (?) puissants,” WG “der mächtig Wirkende” -- even though AiG I (1896) predates all of them by a good margin, well over a century in the case of WG!

There is number incongruence between the neut. sg. *yád* of the rel. clause and neut. pl. *tyā ... vīryāni*. The *yád* is, as it were, an anticipatory collective: “what(ever) you did ... where are those deeds?”

III.30.4: As has often been pointed out, the redupl. pres. to \sqrt{han} , *jíghnate*, almost always takes plural objects, and so, at least in this formation, reduplication seems correlated with repetitive action. This semantic nuance is strengthened here by the syntactic construction, with the redupl. pres. in the participle (*jíghnamānaḥ*) construed with a quasi-auxiliary *cārasī*. (Cf. 14b below.) Although *cārasī* does have lexical meaning (‘you range/roam/wander’), the lexical value is weak enough here that the verb can seem to be a marker of the progressive present: “you go about / keep / are (constantly) smashing.” On the other hand, it is possible that \sqrt{car} in its lexical value may be resonating with *tuvikūrmī*- ‘powerfully ranging’ in 3b (see comm. there). However, it is hard to know whether that root connection would still be perceived by the contemporary audience -- it certainly has escaped most of the modern audience -- given the phonological distance between the two words and the fact that *tuvikūrmī*- is simply an epithet of Indra and its own lexical value may have become attenuated.

There is a faint phonological echo between *vṛtrā* in b and *vratā(ya)* in d, which occupy the same metrical position.

III.30.5: I am not certain how to construe *śrávobhiḥ*. The publ. tr. takes it with the voc. *puruhūta*: “much invoked with acclamations.” But I am not entirely happy about construing a full noun with a voc. that ordinarily stands alone (as in, e.g., 7d, 8a). Ge tr. “rühmlich,” which seems designed to be as untethered to the sentence as possible. Re takes it with the speaking of pāda b: “... seul avec tes renoms tu as parlé (un langage) ferme,” but I don’t understand what that means; WG like Re, except tr. “mit Ruhmes(taten),” which again I don’t follow.

I have given the idiom *dr̥hām* \sqrt{vad} a mildly slangy turn (similarly in X.48.6); the collocation of a verb of speaking and an adverb referring to a physical quality seems to invite it. “Speak firmly” would be a more neutral rendering than “talk tough,” but pāda d, which describes heaven and earth as a mere “handful” for Indra, also seems to belong to a vivid and informal register.

The participial phrase *vṛtrahā sán* contains, unusually, a non-concessive nominative of the pres. part. of \sqrt{as} ‘be’. It seems here to be definitional and to pick up and summarize 4b *éko vṛtrā cārasī jíghnamānaḥ* “you alone range about [/keep] smashing obstacles.” As discussed immed. above, the redupl. pres. part. combined with a quasi-auxiliary depicts this as repetitive, indeed habitual, action -- and the *ékaḥ* indicates that only Indra engages in it. Our phrase here, *vṛtrahā sán*, comes to the appropriate conclusion: since you and you alone keep smashing obstacles, you are The Obstacle-Smasher, par excellence.

III.30.6: Sāy. supplies ‘chariot’ as the subj. of pāda a, and in this he is followed by the standard tr. as well as Old. Although this is perfectly harmless and certainly possible, I do not understand why supplying a subject not found in the context is desirable, much less necessary. I admit that it would allow us to use the *etu* of *prā ... etu* in b as the gapped verb with the *prā* of a, but Rigvedic poetic syntax is flexible enough to allow a 2nd ps.

substitution in such a gapped phrase (*prá ... *ihi*, anticipating *prá ... etu*). The fact that 2b has a similar phrase with Indra as the 2nd sg. supplied subject -- *ā tú prá yāhi ... háribhyām* -- also supports my assumption that the default subject is Indra.

Unfortunately the voc. *indra* in 6a was omitted in the publ. tr. The pāda should read “(Come) forth along an easy slope with your two fallow bays, o Indra.”

III.30.7: *dhāyuh* is a hapax. The stem is generally listed as *dhāyu-* (so Gr) and would therefore have to be a masc. nom. sg. here, but the standard tr. render it as obj. of *ādadhāh*. This interpr. requires it to be a neut. *-us*-stem, which is easily possible (see, e.g., Old). Old suggests that it belongs to $\sqrt{dhā}$ and that *dhāyur ādadhāh* is an etymological figure like *ābhaktam ... bhajate* in b. I prefer the analysis suggested in AiG II.2.470 linking it to $\sqrt{dhā(y)}$ ‘suckle, nourish’, thus a neut. *-us*-stem exactly parallel to neut. *dhāyas-* ‘nourishment’. This analysis seems to be reflected in Re’s “tu as accordé la satisfaction-nourricière,” though Re’s (in)famous hyphenated portmanteaus are capacious enough to include many possibilities.

I am not entirely sure what pāda b is about: is this a legal issue, having to do with what is held in common? or with what hasn’t (yet) been divided by inheritance? Or is it simply that nobody has distributed the goods yet? X.112.10d, adduced by Ge, is similar: *ābhakte cid ā bhajā rāyē asmān*, but that pāda follows one in which Indra is urged to do battle and so the most likely interpr. there is that we are asking for a share in the as-yet-undivided spoils of war. Here, however, the goods are specifically identified as *gehyā-* ‘belonging to the household’. This is the only occurrence of this stem in the RV; it is found in AVP (VI.14.8, VII. 11.3; see Arlo Griffiths ed. and tr.) and later, and *gehá-* ‘house’, from which it is derived, first occurs in VS. The etymology of *gehá-* is somewhat unclear (cf. EWA s.v.), as is its relationship to synonymous *grhá-*. The former is quite widespread in MIA, beginning already in Aśoka, but it cannot be simply a Middle Indic form of *grhá-* at least acdg. to the standard sound laws (*pace* older accounts such as AiG I.39). However, it is quite possible that it has *guṇa* in an adj. derived from MIA *gihi(n)* ‘householder’ (<**grhin-*), whose *i*-reflex of the syllabic **r̥* is probably due vowel assimilation to the *-i-* of the suffix *-in-*. In any event it seems likely that the word was imported into Vedic from MIA and that the use of this unusual stem here signals a particular social or legal institution for which we have no other evidence.

III.30.8: This vs. contains two difficult words, *kūṇāru-* (b) and *pīyāru-* (c). It is surely no accident that they appear pāda-final in successive pādas and are rhyme forms. The former is a hapax (though the vs. is repeated in the VS [Mā XVIII.69, Kā XX.5.2]). It has been glossed ‘lame in the arm’ on the basis of a supposed connection with Ep, Cl *kuṇi-* ‘id.’ (cf., e.g., AiG II.2.288, KEWA s.v. *kuṇih*, EWA s.v. *kuṇāru-*). But the chronological and morphological distance between the two words speaks against this connection, as does the fact that *kuṇi-* is likely a Dravidian borrowing (see KEWA). Moreover, since Vṛtra is a snake and is specifically called ‘handless’ here, it is unlikely that he would have an arm to be lame in. Wiser heads generally take it as a PN (so the standard tr., as well as Mayrhofer PN [though with ?]). However, this cautious course is not very satisfactory either. The enemy is most definitely Vṛtra: his name appears in c, his mother’s (Dānu) in a. Why would he be called by a different name, esp. one that never appears elsewhere? Unfortunately I do not have a strong alternative. However, I would point to *kūṇapa-*,

which means something like ‘carrion, corpse’ (AVŚ XI.9.10, 10.10.4, 8; MS IV.9.19; ≅ *kuṇapá*- TS XI.2.10.2, where human and equine *kuṇapá*-s are distinguished) on which various nasty critters are invited to feed, and to various later forms of (-*t*)*kuṇa*- referring to various bugs (cf. Kuiper [Aryans passim], Turner [CDIAL s.vv. *kúṇapa*-, *kuṇa*-], and Pāli *mankuna*-). On the basis of these shaky parallels I suggest that *kúṇāru*- means something like ‘vermin’ or perhaps even ‘corpse’. It owes its pejorative -*āru*-suffix to *píyāru*-; cf. also *śarāru*- in X.86.9, which I tr. ‘noxious creature’. Of course, *ku*- is a common pejorative prefix as well. Perhaps the word is simply constructed of pejorative affixes with a hiatus-breaking *ṇ*! Or -- a better possibility -- it may represent **ku-nara-āru*- ‘ill-manly’, with haplology and MIA retroflexion of the nasal. My point here is not to claim any of these suggestions as definitive, but to show that this completely opaque word resonates with other words in several different directions and therefore assuming a lexical meaning rather than taking it as a PN is the better course. However, in the publ. tr. ‘vermin’ should be followed by a question mark.

The 2nd difficult word, *píyāru*-, is by comparison much simpler. It must be derived from √*pī* ‘sneer, taunt’, whose pres. *píyati* is attested 3x already in the RV. It contains the same pejorative -*āru*-suffix as *kúṇāru*-, *śarāru*- -- though it should be noted that not all -*āru*-suffixed words are pejorative: *vandāru*- is quite positive, and the mysterious hapax *jábāru*- (IV.5.7) is at worst neutral but probably positive.

III.30.9: The pf. of √*sad* is generally intrans.(/reflex.) ‘sat (oneself) down’, but in several instances must be trans. ‘set down’, as it is here. See Kü 542–43.

There is no agreement on the meaning of the adj. *sāmanā*-, found in the RV only here and in the wedding hymn (X.85.11). Gr ‘gemeinschaftlich’ (fld. by WG), Ge ‘gütige (?)’, Re ‘abondante’ (but in EVP XVI, ad X.85.11, he suggests that in our passage it means ‘attelée-avec’ with which ‘heaven’ should be supplied), AiG II.2.136 ‘reich’. I suggest that it’s a vṛddhi deriv. of *sāmana*- ‘gathering’, meaning ‘related to the gathering/aggregate’, hence ‘whole’. This does not work so well in X.85.11, but there there is a pun on -*sāman*- ‘tune’, and the word seems simply to mean ‘together’ vel sim.

III.30.10: On *alātrṇā*- see comm. ad I.166.7. In this passage though ‘unquiet’ does not seem a normal feature of Vala, it can be applied proleptically, characterizing its opening up in fear of Indra’s blow.

Note the phonetic figure in ab: *alā. vala ... vrajo ... vy āra*, with -*trṇ*- ... -*ndr*- nestled in the 1st pāda; the d pāda also has phonetic rep.: *prāvan vāṇīh*.

The standard tr. all supply the Maruts with *vāṇīh* ‘choir’. But as Schmidt (B+I 141) points out, the Maruts do not ordinarily participate in the Vala myth; it is the Aṅgirasas who are Indra’s back-up band. See III.31.4ff.

III.30.11: Pāda a begins with an elementary numerical figure: *éko dvé* ‘the one the two,’ subject and object of *ā paprau* respectively, both of which are identified in the 2nd pāda. The juxtaposition of the two numbers is responsible for my tr. *éka*- as ‘the one’, rather than ‘alone’ as elsewhere in the hymn (vss. 4, 5).

Because of the voc. *sūra*, at least pāda d (and probably also c) shows a switch to 2nd ps. from the 3rd ps. of ab. Since there are no verbs in cd, at least one needs to be supplied. Most tr. (Ge [/WG], Klein [DGRV I.442], Scar [431]) take c and d as separate

clauses, supplying impvs. “come” and “bring” respectively. This is possible, but I follow Re in taking *cd* as a single clause -- though do not follow his interpr. of *īśāḥ* as a verb (‘envoie’, presumably to $\sqrt{īś}$ ‘send’).

All tr., incl. Re, take *samīké* as “in battle” (or, closer to the root sense in my opinion, Scar “Treffen”). Although this noun generally has the meaning ‘encounter’, it is a straightforward derivative of *samyác-* ‘united, conjoined’, and here I take it to refer to the “join” of Heaven and Earth, which would define the midspace. Note that pāda-final *samīké* matches pāda-final du. *samīcī* in a, referring to Heaven and Earth.

I supply ‘bring’ as the verb of *cd*, with *sayújah ... vājān* as obj. There are several possible interpr of *īśāḥ*. As just noted, Re takes it as a verb. Assuming (with everyone else) that it belongs to the root noun *īś-*, there are two possible analyses, as gen. (/abl.) sg. or nom./acc. pl., although in the latter case we would prefer it to be accented *īśaḥ* (cf. the acc. pl. *īśaḥ* in 18b). Both Klein and Scar take it as acc. pl.; I agree with Ge (/WG) in construing it as gen. sg. with *rathīḥ*.

III.30.12: The grammar of *ab* is so straightforward that it is easy to overlook how odd the statement is. It is not surprising that the sun does not confound the quarters or directions (*dīśaḥ*); after all, the layout of the cosmos is not likely to be altered by the sun as it passes through. But what does it mean that these same *dīśaḥ* are *prasūtāḥ* every day by Indra? The ppl. can only belong either to $\sqrt{sū}$ ‘propel’ or $\sqrt{sū}$ ‘give birth’, far more likely the former (pace WG, who seem to take it to the latter): only the former is found with *prā* and in fact 9d contains an exactly parallel expression, *tváyā ... prasūtāḥ* “propelled by you.” Ge tr. “vom Falbenlenker bestimmten,” but ‘determined, fixed, set’ seems the exactly opposite of what *prā* $\sqrt{sū}$ ordinarily means, including in nearby 9d. Such a meaning makes more sense of this vs. but at the expense of arbitrarily assigning a unique meaning to this rather common lexeme. If we take the idiom seriously, the hemistich seems to be saying that while the sun respects the placement of the parts of the cosmos, Indra pushes them around in some fashion, remaking or reconfiguring the cosmos daily. I simply do not understand this; I must be missing something. Perhaps Indra arranges the *dīśaḥ* every day in a slightly new way for the sun’s road?

The sun is presumably the subj. of *ānaḥ*, so the standard tr.

The cmpd *hāryaśvaprasūta-* technically has three members -- that is a 2nd member ppl. (*prasūta-*) whose 1st member is itself a cmpd. This would be somewhat unusual for the RV, where cmpd size is quite limited. But the bv. *hāry-aśva-* is so frozen as an epithet of Indra that it was probably not fully perceived as a cmpd. Cf. the exactly equivalent *indra-prasūta-* (1x).

Ge (/WG) seems to interpr. *ādhvanaḥ* as acc. pl. (“Wenn sie ihre Wege vollendet hat”). Because I am not at all certain that $\sqrt{naś}$ can be used that way with an acc., I take *ādhvanaḥ* as gen. sg., with a supplied ‘end’; cf. V.54.10 *ādhvanaḥ pāram aśnutha* with the same root. So apparently also Re.

āśvaiḥ is an instr. of separation with *vimócanam*.

III.30.14: On *vakṣāṇā-* ‘belly’ (here tr. ‘udder’ perhaps misleadingly) as a pl. tantum, see comm. ad X.27.16.

carati bībhratī is another instance of quasi-auxiliary \sqrt{car} + pres. part. (also to a redupl. pres.); cf. 4b. Here, *carati* seems to have more lexical value than in vs. 4.

III.30.15: The sense of the hapax *yāmakōśā-* is unclear. Ge takes it as traveling trunks: “Die Reisetruhen sind bereit”; sim. Old. But the image of Indra standing by overseeing the loading of his luggage verges on the absurd. Old suggests rather that it is *we* who have come with empty suitcases, hoping Indra will fill them. Re takes *yāma-* to $\sqrt{yā}$ ‘beseech’ rather than $\sqrt{yā}$ ‘drive, travel’, yielding “les vases de la prière.” Since there is no comm. in EVP XVII, we will never know what he meant by that; it is certainly not transparent. My tr. “journey-bucket” is meant as a slangy term for chariot (‘bucket’ can be so used in English for an old or badly maintained car); certainly the use of *kōśā-* ‘bucket, cask’ to refer to (a part of) a chariot is clear from VIII.20.8, 22.9. WG’s “Wagenkörbe” is similar.

I also think that the chariots in question belong to the enemies mentioned in cd; this might account for the slangy designation of their vehicles -- rather like referring to a rival’s car as a jalopy. In any case it would seem odd to command Indra to stand fast and then immediately get on a chariot and go traveling.

III.30.16: The standard tr. all take the *ghōṣa-* to be emanating from the foes, but the instr. *amitraiḥ* with *śṛṇve* should make it an agent of the hearing (“is heard by ...”) not a source of the sound. Ge’s (/WG’s) “von” and Re’s supplied “(faite) d’ennemis” show their need to overrule the syntax. I see no reason why it should not be Indra’s battle-cry, striking fear in all who hear it.

III.30.17: *salalūka-* is yet another peculiar word that brings our interpr. to a standstill. The current standard interpr. is “indulgence, patience” vel sim. (Ge [/WG] “Nachsicht”). I do not understand where such a meaning would come from. Mayrhofer (KEWA s.v.) suggests $\sqrt{sṛ}$ in the meaning ‘sich erstrecken’, but the semantic channel from one to the other seems blocked to me. Although a deriv. from $\sqrt{sṛ}$ seems likely, a more literal sense of that root, ‘run, flow’, provides better sense. (The older interpr. of the word was ‘zerflossen’ or ‘umherschweifend’ [Gr, etc.].) Both the *l*’s and the affective *-ūka-* suffix suggest a slangy or low-register word -- hence my “send scooting.” Gr suggests a preform **salsalūka-*, presumably because *-ūka-* is often added to intensively reduplicated stems (see AiG II.2.498)(cf. *jāgarūka-* III.54.7). This seems possible (though not, of course, necessary), and “send scooting” is also meant to reflect an intensive/iterative sense. Note that *salalūkam* phonologically resembles *sahāmūlam* in pāda a (in almost the same metrical position), which may help account for the presence of *salalūkam* in the vs. and could also have facilitated a dissimilation from **salsalūkam*.

III.30.18: It is difficult to know how to construe the first pāda of this vs. I take it as a nominal main clause expressing the purpose of the subordinate clause in b. Ge (/WG) as a parallel subordinate clause with pāda b, for which a verb (ausziehst ‘set out for’) must be supplied -- all dependent on pāda c. Re as part of a single subord. cl. introduced by *yād* in b, also all dependent on c. Each of these solutions has drawbacks. Mine requires nothing to be supplied (Re’s supplies less than Ge’s), and it also avoids two problems produced by Re’s interpr: a worryingly late position of *yād* and an untethered *ca* in the middle of pāda a. But mine comes with a certain awkwardness of expression and an ill-assorted conjoined pair (“for well-being and with horses”).

However the various interpr. of ab differ, they all agree in taking *āsātsi* as the verb in the subor. cl. introduced by *yād*, thus showing the older non-imperative (that is, subjunctive) value of the so-called “-*si* imperative.”

III.30.19: Gr analyses *dhīmahi* as passive, but this is rightly rejected by all standard tr.: the numerous other examples of this form are all transitive. What then should we supply as object? I take the line of least resistance, importing *bhāgam* from the preceding pāda. I take the b pāda to mean that we hope to take the portion Indra brings us now and put it together with the superfluity of his previous gifts (and those to come) (*deṣṇāsya ... prareké*). Ge (sim. WG) does not construe these two nouns together, but takes *deṣṇāsya* as a partitive genitive, supplying the obj. of *dhīmahi* (“Wir möchten von deiner Gabe etwas auf Vorrat zurücklegen”), while Re takes the verb as reflexive: “puissions nous nous placer ...”

The Pp. and all standard analyses take *ūrvā* as underlying nom. *ūrvāḥ*; I, however, take it as loc. *ūrvé*. Though Ge and Re tr. the word as ‘sea’, it really refers to the container, in this case the sea-basin, and so logically what stretches out is not the container itself but the liquid in the container. (WG tr. Behälter, but keep it as nom.)

III.30.20: The conjoined verbs in ab, *mandayā ... papráthaś ca*, are in different moods, imperative and subjunctive respectively. Or so it seems: in the sandhi context *mandayā góbhiḥ* the apparent impv. *mandayā* could represent subjunctive **mandayās*. However, I don’t think this is necessary; impv. and subj. are both future-oriented moods, and in fact in this passage the pairing functions as a sort of covert conditional: “(if) you invigorate it, it will spread.” Kü (321), fld by WG, construes *candrāvatā rādhasā* with the 2nd verb, but both the accent on *paprāthaḥ* and the position of the *ca* make it clear that *paprāthaḥ* must begin a new clause.

III.30.21: Schaeffer (136) sees no particular repetitive function in the well-attested intensive *dārdar-*; she considers it simply lexicalized. Therefore my “keep breaking open” may impose a semantic nuance that does not belong to this stem. However, at the very least it takes pl. objects here (*gotrā, gāḥ*), so it could be considered “objektsdistributiv” (for which term see Schaeffer 86–87).

On *divākṣāḥ* (per Pp.), which raises both semantic and formal problems, see comm. ad X.65.7. As disc. there, the 2nd member most likely belongs to the root $\sqrt{kṣā}$ ‘rule’, not $\sqrt{kṣi}$ ‘dwell’, and, further, is quite likely not a root noun, but an -*as*-stem built to the zero-grade of the root (see Scar 92–93). The Pp. reading for our nom. sg., *divākṣāḥ*, is compatible with both a root-noun and an -*as*-stem 2nd member. However, it makes metrical trouble: the Saṃhitā hiatus, *divākṣā asi*, is correct for an underlying final -*ās* in sandhi, but the line then has an extra syllable. A contracted reading **divākṣāsi* would fix the problem, but makes trouble for both root noun and -*as*-stem interpr. Scar floats the possibility of an -*n*-stem (for this occurrence; it won’t work for the other two, which have the form *divākṣasaḥ*). This multiplication of stems is not appealing. A simpler and not-unprecedented explan. is given by HvN in their metrical commentary: “recursive application of sandhi rules.”

III.31 Indra

As indicated in the publ. intro., the hymn presents multiple difficulties, esp. in its first three vss. I will not attempt to represent the many conflicting interpr. of these vss., but simply lay out some parts of my own and point to some of the many puzzles that remain. As also noted in the publ. intro., I think the cosmic incest theme imposed on these vss. by others is faint at best, and also think that the ritual occasion depicted is not the original generation of the ritual fire but the removal of the Āhavanīya fire from the Gārhapatya.

In the publ. intro. I say that Indra is not named in the narrative of the Vala myth until vs. 11, but this is false: the last word of the 1st verse of the Vala treatment, 4d, is *índrah*. He is also named in the last vs. of the Vala section, 11b -- thus producing a satisfying ring.

Vss. 3 to the end are tr. and discussed by H.-P. Schmidt in *Bṛhaspati und Indra* (pp. 166-75).

III.31.1: The female line of descent implied in the 1st pāda, *duhitúr nāptyām* “the (grand)daughter of the daughter,” is striking. As noted already, I believe that this kinship succession refers to the production of the offering fire (Āhavanīya) from the householder’s fire (Gārhapatya) and the removal to the east of the former. Obviously, however, this can’t refer directly to the fires, because *agní-* is masc.; it is rather, I think, a reference to the hearths, which word (*dhiśānā-* in some uses) is fem. The conveyor (*váhniḥ*) who has come (*gāt*) is the fire itself (often called *váhni-*), which has made the journey from the Gārhapatya hearth to the Āhavanīya hearth. The offering is being made there by the father (*pitā*), whom I take as the priest. I do not see allusion to the cosmic incest of Heaven and his daughter, in part because it is difficult to identify who the granddaughter would be. (See Old.) The ritual identifications of *váhni-* = Agni and *pitā* = priest are pretty standard; it is the identity of the females that causes dispute.

On the vs. as possible evidence for the institution of the *putrikā* ‘appointed daughter’, see H-P Schmidt’s (*Women’s Rites and Rights*: 33–37) somewhat skeptical discussion of Yāska’s interpr. of the vs. Schmidt also points out that Vasiṣṭha DS XVII.16 interprets the vs. in the same way, as referring to the *putrikā*.

III.31.2: I do not see sufficient evidence in this vs. for the legalistic interpr. having to do with inheritance rights advanced by Old and Ge (fld. by WG); see also Schmidt (37–38) on Yāska’s interpr. Again, my interpr. involving the two fireplaces is at least thinkable, though there are a number of loose ends (in everyone’s interpr). In the first pāda in my interpr. the fire that has been taken out of the Gārhapatya leaves nothing behind. The two other occurrence of *āraik* have womb as obj. + a dative (as if it were our pāda b): I.113.1 *evā rātry uśāse yónim āraik* “so night has left behind the womb for dawn” and I.124.8, which even has a sister: *svāsā svāsre jyāyasyai yónim āraik* “The (one) sister has left the natal place to her older sister.” In both the idea seems to be that one has vacated the space for the other -- not left as legacy, as the legalistic inheritance interpr. requires. Problematic for my interpr. is the fact that *rikthām* should be the equivalent of the womb itself (the fireplace), not the detritus that the fire might leave in it. Moreover, the two hearths that had been daughter and granddaughter now become sisters -- but a certain fluidity in modeling kinship relations would not be surprising.

In b the site of the new fire, the Āhavanīya, is the womb of this new fire and “the repository of the winner” (the winner being the fire itself).

The second half-verse is fairly clear (for this hymn) in its description of the churning of the fire: the mothers are the fingers, the two good workers are the two kindling sticks. See the fire-churning passage with kindling sticks in nearby III.29.1.

The *yádī* opening the second half-verse is better taken as *yád ī*, with the enclitic pronoun. See 6a below.

III.31.3: In the first pāda the instr. *juhva* can be read simultaneously as “with his tongue,” construed with *rējamānaḥ* and referring to the flame(s) of the fire, and as “by the offering-spoon,” construed with *jaiñe* and indicating that the ghee poured from the spoon “begets” the fire by making it flame up.

The second pāda is likewise ambiguous and initiates the transition to the Indra-Āṅgiras-Vala myth portion of the hymn. The “sons of the great ruddy one” (*mahās putrām aruśasya*) can be the flames of the fire, that is, of Agni himself -- and the infinitival *prayākṣe* ‘to display’ is esp. appropriate to this interpr. But they can also be, as they are identified by most commentators, the Āṅgirasas, the sons of Heaven, who will figure in the Vala myth about to be related, but who are also associated with Agni, who is sometimes called *āṅgīrastama-* (e.g., I.75.2; see Macd, *Vedic Myth*. 143). The “birth of these” (*jātām eṣām*) in c can likewise refer to both the flames and the Āṅgirasas. Indra’s appearance in d strengthens the Āṅgiras reading and provides a transition to the next portion of the hymn.

The lexeme *prā√yakṣ* has been variously interpreted. For ‘display’ see Gotō (1st class, 153 and n. 572), EWA s.v. Curiously WG tr. it as if to *√yaj* ‘sacrifice’, despite Gotō’s own disc. just cited -- though the other possibility is suggested in the n.

III.31.4: Pādas a and c contain feminine plural nom./acc. forms: *jaītrīḥ* and *jānatīḥ* ... *uśāsaḥ* respectively. Although the default assumption would be that they are coreferential and both refer to the Dawns, the familiar plot line of the Vala myth suggests rather that they identify two different subjects: the (unexpressed) Āṅgirasas in ab, the (expressed) Dawns in c. (So Ge, Re, Schmidt [B+I, 167]; Old agrees that the Āṅgirasas should be supplied as subj. in a, but takes *jaītrīḥ* as obj. [presumably alongside clear acc. *spṛdhānām*], while WG take the Dawns as subj. of a, but supply the Āṅgirasas as subj. of b.) The Āṅgirasas are Indra’s back-up band in the Vala myth, as noted above ad III.30.10, and would be expected to accompany him, as pāda a depicts, while the Dawns are still confined within the Vala cave and only in c recognize Indra’s song and come out of the cave. The problem for an Āṅgiras reading of pāda a is of course the fem. gender of *jaītrīḥ*. Here it is probably best to follow Sāy. in supply *viśaḥ* ‘clans’ (so Ge, etc.); cf. I.121.3 *viśām āṅgirasām*. However, note that the Āṅgirasas are referred to by the fem. pl. *vāñīḥ* ‘choir’ in the preceding hymn, III.30.10, and that noun could be supplied here.

The cows of d are surely the dawns, as often; Indra becomes their *pāti-*, a word meaning both ‘lord’ and ‘husband’. On the naming of Indra here, see the intro. remarks above.

III.31.5: The Āṅgirasas, now presumably in the masc. (though both *dhīrāḥ* [a] and *vīprāḥ* [b] are technically ambiguous), remain the implicit subjects of abc, with Indra, also

unnamed, taking this role in d. The cows, also not identified, are represented in pāda a by the fem. pl. part. *satīḥ*. In fact, though these identifications are fairly easy to make for those familiar with the story, they remain covert, and, further, both b and d have unidentified objects as well. In b Ge (/WG) tr. *āhinvan* without object; I have supplied the cows (so apparently also Lü [Varuṇa 510–11], Schmidt [B+I 167]), while Re’s parenthetical “(l’)” in “(l’)incitèrent” presumably refers to Indra.

In d there is an expressed object, but it is merely a 3rd ps. pronoun, which is, furthermore, ambiguous in sandhi: *tā* in *tā nāmasā* can represent either neut. pl. *tā* (or instr. sg. *tā*) or fem. pl. *tāḥ*. The Pp. opts for the former, a decision endorsed by Old. The issue is further complicated by the fact that the form could be construed with either (or both) of two verbal forms, part. *prajānān* or pf. *ā viveśa*. Old takes *tā* to refer vaguely to things that Indra knows and construes it with *prajānān*; sim. Re: “sachant ces choses.” Ge [/WG], contra Pp., restores *tāḥ*, which he takes to refer to pl. *pathyāḥ*, generated from *pathyām* in c. My tr. is closer to Schmidt and to Lü, in restoring *tāḥ* (like Ge), but assuming its referent to be the cows, into whose company Indra enters. With Lü and Schmidt, I also take *prajānān* as having an implicit object inspired by *pathyām* in c, but *prajānān* is generally used absolutely to mean “knowing (the way)” and so a form of *pathyā-* need not be supplied. The publ. tr. should have parentheses: “knowing (the way).”

III.31.6: Ge (/WG) interpret ab as a direct quotation from the gods, for reasons that are unclear to me. Although an immediate past reading might help account for the injunctive aorists *vidāt* (a) and *kaḥ* (b), in fact the second hemistich also contains two injunctives, *nayat* (c) and *gāt* (d), the latter of which is also an aorist. So there is no clear grammatical distinction between the two half-verses, and the subject (Saramā) also remains the same throughout (by most interpr.), with all four pādas focusing on the same narrative. Other interpreters (Re, Lü, Schmidt) ignore this odd decision of Ge’s.

In pāda a *yādī* should be read *yād ī*; see 2c above.

In b *pāthaḥ* ordinarily means ‘fold, pen’, but here refers to the herd confined in the fold: the shift from container to contained is a common one in semantic change.

ākṣarāṇām in c most likely has double reference, both to the cows that are being released from the Vala cave and the syllables of the Aṅgirasas’ song that effects that release.

Ge makes the point (n. 6d) that *rāva-* in this context otherwise only refers to the Aṅgirasas’s song; this leads him to switch the subject to Uṣas, as the first out of the cave, coming in response to the sound of the Aṅgirasas. This seems, on the one hand, over-finicky -- why introduce another female character in the middle of a vs. without signaling it? -- and, on the other, rather deaf to the possibility of multiple meanings that always lurks in RVic discourse. One of the points of the Vala myth in general seems to me the mirroring of sounds: the song that releases the cows and their joyous counter-mooing in response -- an obvious place for a poet to allow a single word to do double duty. This same double reference is found in the preceding pāda in *ākṣarāṇām*. Schmidt (B+I 167) also takes the *rāva-* to be that of Indra and the Aṅgirasas and in fact makes Uṣas the subject of the whole 2nd hemistich. I do not see the need for this.

III.31.7: Note that all pādas begin with 3rd sg. preterite verbs: a *ágachat*, b *ásūdayat*, c *sasāna*, d (modified initial pos.) *áthābhavat* (which most likely represents *átha abhavat*, though *áthā bhavat* is possible). All but the perfect in c are augmented imperfects; this contrasts markedly with vs. 6, which, as was just noted, contains four 3rd sg. injunctives, three of them aorists. Three of the four pādas of vs. 7 also end with nom. sg. masc. pres. participles: a *sakhīyán*, c *makhasyán*, d *árcan*.

Pāda b configures the release of the cows from the Vala cave as a birth, but a birth overlaid with metaphor (“brought to sweetness”).

In c the standard tr. (save for Re and Klein, DGRV II.67) take *makhasyá-* as ‘being generous’ vel sim. But in all three occurrences of this verb stem (here and IX.61.27, 101.5) the ‘do battle’ sense is primary. Since it co-occurs with *sasāna* ‘won’ in this pāda, the ‘battle’ sense seems esp. appropriate. So Re “comportant-en-combattant.” For further on *makhá-* see comm. ad I.18.9.

My tr. of d, *áthābhavad āṅgirasāḥ sadyó árcan*, differs in an important way from the standard. In my opinion it states that Indra became an Āṅgiras as soon as he sang; the others that the Āṅgiras [=Indra] right away became a singer (e.g., Ge “Da ward sogleich der Āṅgiras zum Lobsänger”). On the one hand, I’m not certain that $\sqrt{bhū}$ + pres. part. can yield this sort of predication, esp. with the pres. part. standing in, in effect, for an agent noun. So -- a syntactic argument, though I have not examined the evidence in detail. Another syntactic/lexical argument: *sadyáḥ* + participle is frequently used to indicate the circumstances under which the action of the main verb takes place. This is esp. common with *sadyó jātāḥ* “just born” / *sadyó jajñānāḥ* “having just been born” -- e.g., the next hymn, III.32.9 *sadyó yāj jātó āpibo ha sómam* (\cong 10) “Just born, you drank the soma” (and cf. III.29.3). But the prevailing interpr. here requires the *sadyáḥ* to go with the main verb, despite its position directly before the participle -- e.g., Klein “And then did the Āṅgiras straightway become a singer.” And finally a semantic objection: the proposed tr. seems to me thematically backwards. Indra joins the category of the Āṅgiras because he joins them in song, which is their principal function in this myth; he is not an Āṅgiras by nature who happens to start singing. (This point is made, more or less, by Schmidt [173], despite his contrary tr.)

III.31.7–8: Given the thematic weight the part. *árcan* carries (see comm. immed. above) and given that it occupies pāda-final position in 7d and 8c, it should have been tr. the same way in these two vss. I would emend the publ. tr. to ‘chanting’ in 7d, or else 8c to ‘singing’ and *arkaiḥ* in 9b, 11b to ‘songs’. The instr. *arkaiḥ* reappears in pāda-final position in 11b.

III.31.8: Ge (/WG) take this vs. as a quotation of the Āṅgiras’ praise-song of Indra. I do not see why. The vs. seems to follow easily from the preceding one, and in fact at the end of vs. 7 it’s Indra who’s singing (/chanting), not the Āṅgiras. We might expect such a quotation to be signposted in some way. I do not consider the 1st pl. enclitic *naḥ* in c to be a sufficient signal.

The presence of Śuṣṇa in b is a bit puzzling, since the smiting of Śuṣṇa is not part of the Vala myth. Perhaps, with Schmidt (173), he is mentioned because Indra is uncontestedly Śuṣṇa’s killer, and this extra-mythic (or extra-Vala myth) association makes it clear that the unnamed subject of this vs. must indeed be Indra.

The standard tr. take c as a separate clause from d and supply a verb of motion with *prá* (e.g., Ge “[ging] ... voran”). This is certainly possible, but cd can also be read as a single clause (so Schmidt, 168), since *prá* is frequent with \sqrt{muc} . This interpr. allows, but does not enforce, a coreferential interpr. of *naḥ* (c) and *sákhīn* (d), as in my tr. (flg. Schmidt).

What calumny? Ge (n. 8d) suggests the dishonor because of the loss of the herd.

III.31.9: Ge’s suggestion that this vs. concerns the Aṅgirasas’ Sattrā, a months-long ritual, seems completely convincing. Note the verb *sedur* ‘they sat’ in pāda a and the nominal *sádanam* ‘sitting’ in c. I am less convinced by his interpr. of c (fld. by Re, WG), that this Sattrā is frequently (*bhūri*) repeated now, though I admit that both the hic-et-nunc prn. *idám* and the particle *nú* might support his view. I prefer Lü’s interpr. (Varuṇa, 511, fld. by Schmidt 168), who takes *bhūri* as ‘long’ and the hemistich as a further description of the Aṅgirasas’ Sattrā in the Vala myth.

My interpr. of d (based on Lü and Schmidt) deviates further from Ge (Re, WG). All of the latter take *yéna ... ṛténa* as coreferential and the equivalent of ... **ṛtám, yéna* -- that is, **ṛtám* in the main cl. as antecedent to *yéna*. The main cl. **ṛtám* would be an appositive to *sádanam* “the Session, (that is,) the *ṛtá* by which they ...” However, I separate the two instr. in d and take the antecedent of *yéna* to be *sádanam* (“the Session by which ...”), leaving *ṛténa* to mean ‘by/through truth’ as so often. They also take *māsān* as the obj. of *ásisāsan* (“they sought to win the months”), but this acc. pl. can easily be an acc. of extent of time (again, as so often), and the true object of their desire to win can be supplied as the cows.

III.31.10: What “the milk of the age-old semen” means is unclear to me. Ge suggests that they’re milking their old cows, but the rhetoric seems rather overblown just to express that. Lü (620–21, fld. by Schmidt 168) identifies the semen as *ṛtá-* and the milk as the Kultlied of the Aṅgirasas. This may well be, but nothing imposes this explanation, and Schmidt in fact worries briefly (173) that logically the Aṅgirasas should already have their Kultlied since they should have used it to free these very cows.

On *niṣṭhā-* ‘outstanding’ see Old, Scar (648–49). The word must be derived from *nís* $\sqrt{sthā}$, not *ní* $\sqrt{sthā}$ and in fact goes literally into English as ‘stand out’, with the same idiomatic meaning. In addition to two occurrences of the simplex (this and IX.110.9), it is found in several compounds: *karma-niṣṭhā-* X.80.1 of a hero who stands out through his work, *puruniṣṭhā-* ‘standing out among many’ V.1.6 (of Agni), VIII.2.9 of soma. Ge (unaccountably) takes it as ‘Verteilung’ (fld. by Re, Lü 528–29, Schmidt 168), an interpr. about which Old comments rather acidly. Old’s own interpr. is essentially reproduced here and was also adopted by WG.

Note the partial resposion between *ghóṣa* in c and *góṣu* in d, in the same metrical position.

III.31.11: My interpr. of the first hemistich differs from the standard; I take it as consisting of two separate clauses, each identifying Indra in one of his most important mythic roles -- in the Vṛtra-slaying and in the freeing of the Vala cows -- along with his associates in those enterprises, the Maruts and the Aṅgirasas respectively. It is important to note that this naming of Indra, in conjunction with the first appearance of his name in

4b (see comm. there and in the intro. remarks), frames the treatment of the Vala myth, and, by mentioning Vṛtra, it also sets the stage for the opening out of this hymn to treat other exploits of Indra.

Others take *vṛtrahā* in pāda a simply as an auxiliary epithet of Indra in this account of the Vala myth, but I do not think that Vṛtrahan would be so prominent in a treatment of the Vala myth, and I also cannot otherwise account for the *séd u* in the middle of pāda a without assuming that a new clause begins there. (Lü [517] gets out of this difficulty by accepting Ludwig's emendation to a bahuvrīhi *svéduhavyaiḥ* 'having sweating oblations' [=Aṅgirasas], but though this is ingenious, esp. as sweat figures in the same myth in X.67.6–7 as Ge points out, it requires too much alteration for a sequence that can make sense on its own.) In the first brief clause, *vṛtrahā* is the predicate, and *jātébhiḥ* refers to the Maruts, who are well known for being 'born (together)' (e.g., V.55.3 *sākām jātāḥ*). Ge suggests, but rejects, an emendation here to *sajātébhiḥ* (for transmitted *sá jātébhiḥ*), an idea also of Alsdorf's (see Schmidt 169); I would modify that by proposing haplology from *sá *sajātébhiḥ*. The rest of ab concerns the Vala myth, which has been the subject of the past seven vss. The myth is readily identifiable by the VP *úd usríyā asṛjat* "sent the ruddy (cows) surging up" and by the *arkaḥ*, repeated from 9a. Since the chants in 9a clearly belonged to the Aṅgirasas, there need not be any even oblique reference to the Aṅgirasas here: the bare *arkaḥ* will be enough.

III.31.12: The first pāda contains two datives, *pitré* and the prn. *asmai*. Because of its lack of accent, *asmai* cannot be a demonstr. adj. with *pitré*. Ge gets out of the difficulty by interpr. *pitré* as a simile, which allows *asmai* to be independently construed, but this depends on his frequent assumption that *cid* can be a simile marker, a role I do not think it can have. Instead I give the VP *cakruḥ sádanam* a double reading: acdg. to the first the Aṅgirasas perform a Sattra for their father (see 9c), but in the 2nd they also prepare for him a literal seat. Because *cakruḥ sádanam* participates in two clauses, each can have an independent dative, though in my opinion the datives are coreferential.

It is unclear what the referent of the object in b is, described as *máhi tvíṣīmat* "great and turbulent." Ge, flg. Sāy, takes it as a further reference to the seat, Re the all-purpose "quelque chose," Schmidt the eye of the sun, WG sim. the sun-god. My own candidate is the *pāṭhaḥ* of 6b, also described as *máhi* there. In vs. 6 the word is used to indicate the herd, which is contained in the fold (see comm. there); here I think it is the container, the fold or pen, itself -- representing the cosmic space and also the ritual ground. When they survey it they see that this space needs organizing, which they proceed to do -- by propping apart Heaven and Earth (a deed usually ascribed to Indra) and preparing and propping up a seat for Indra. They thus make the whole cosmos into Indra's ritual ground, and in the next vs. (13ab) Earth herself serves as the emplacement allowing Indra to pierce Vṛtra.

The position of the *hí* is somewhat anomalous: since the whole b pāda forms a single clause, we would expect the *hí* in Wackernagel's position. However, there is a general tendency when a preverb precedes its verb late in the clause for *hí* to intervene between them, as here: ... *ví hí khyāḥ*. More specifically, 1) when there's a *hí* in a clause containing a verbal form of *√khyā*, it always immediately precedes the verb -- sometimes in normal Wack. pos. (e.g., I.81.9), sometimes not (as here and, e.g., VI.15.15). 2) With

one exception, all injunc. forms of $\sqrt{khyā}$ are preceded either by *hí* or by a preverb ending in *-i*, which prob. led to a sense that $\sqrt{khyā}$ should be so preceded. Note also in this passage the phonetic echoes *#máhi ... vi hí khyan#*, which also resonates with *pāda d ... ví minvan#*. It is perhaps worth noting in this connection how many *pādas* in this hymn begin with *máhi* or *mahī*: 3d, 4b, 6b, 12b, 13a, 14a, 14c, 15a (esp. clustered here); cf. also *mahás* 3b, *mahān* 3c, 18d. I assume that a *pāda* opening **máhi hí* would be avoided; in any case there are none in the RV.

In d most tr. take the sun as the referent of the object. I instead supply the seat. The root \sqrt{mi} often takes ‘seat’ as obj.: not our *sádanam* admittedly, but *sádmān*- II.15.3 (with *vī*), X.20.5, I.173.3, IX.97.1, *sádana*- X.18.13. This is a fairly large percentage of the attested forms of the verb, and since ‘seat’ is already present in this vs., it is easily supplied here.

III.31.13: I take *yádi* here as a shortened form of *yád *ī* with enclitic pronoun (as in 2c and 6a), though it unfortunately appears before a word beginning with a single consonant. An “if” makes no sense here, and it is also desirable to have an acc. pron. in this *pāda* to serve as obj. of *dhāt* and subj. of the infinitival *śísínáthe*. This putative **ī* may anticipate and double the heavy acc. phrase of b, assuming that the latter refers to Indra.

As noted just above, Earth herself serves as the foundation from which Indra can launch his attack. Our passage is very similar to I.102.7 ... *tvā dhiṣāṇā titviṣe mahy, ádhā vṛtrāṇi jighnase* ... “The great (Earth), the Holy Place has sparked you So you keep smashing obstacles ...,” with the same *mahī ... dhiṣāṇā* as here and even a form of $\sqrt{tvīṣ}$, like *tvīṣīmat* in 12b; cf. also VI.19.2 *índram evá dhiṣāṇā sātáye dhāt* “The Holy Place positioned just Indra for winning,” with $\sqrt{dhā}$ + inf. as here. The same $\sqrt{dhā}$ + inf. construction is found in 19d below: *svàs ca naḥ ... sātáye dhāḥ* “and set us up to win the sun.”

Although Gr assigns the hapax *śísínáthe* to a them. stem *śísínátha-*, as Old clearly states we expect a dative infinitive here, and so it more likely belongs to an athem. stem *śísínáth-*; cf. *abhiśínáth-*.

Re takes b as describing *Vṛtra*, Schmidt Indra; Ge’s tr. is not clear, though Schmidt (169 n.) claims it’s to *Vṛtra*. I follow Schmidt in assigning the phrase to Indra, though the poet may have intended its referent to be ambiguous, indicating that the opponents are almost evenly balanced.

I follow the current standard view (represented already by Ge and Re) that *ánutta-* is the ppl. to the lexeme *ánu* $\sqrt{dā}$ ‘concede’; Schmidt and WG follow the older deriv. from \sqrt{nud} ‘push’, hence ‘unpushable’ vel sim.

III.31.14: Because *vaśmi* is unaccented, the first *pāda* would be more accurately tr. “I long for your companionship ...” since *vaśmi* cannot begin a clause. I tr. as I did to capture the parallelism of *pādas* a *#máhi ... sakhyām* and c *#máhi stótram*, as well as 15a *máhi kṣétram*.

III.31.15: Ge takes *nṛbhiḥ* as the agent with the part. *ḍḍyānaḥ* (“von den Männern entflammt (?)”), but this participle never elsewhere takes an agent. Better an instr. of accompaniment, with most other tr. That Indra is described as shining may be connected to the fact that three of the four things he generates shine too: the sun, the dawn, and fire.

There is some disagreement about who the men are: the Aṅgirasas or the Maruts. Given the general prominence of the Vala myth earlier in the hymn, but the more recent concentration on the Vṛtra myth, I imagine the ambiguity is intentional and both sets of Indra's helpers are to be thought of.

III.31.16: My interpr. of this vs. differs significantly from the standard, beginning with the disposition of the pādas. Most take abc together, with d as a separate clause, while I divide the vs. into two hemistichs, which express parallel notions. In ab, in mythological time, Indra sends the waters surging; this is the standard happy denouement of the Vṛtra myth. In cd priests (even perhaps the Aṅgirasas) impel another collection of liquid, the streams of soma -- the ritual equivalent of Indra's cosmogonic release of the waters. Although the standard interpr. tacks pāda c onto ab, as describing the waters, it contains vocabulary that is strongly associated with soma: *mádhu*- 'honey, sweet', *√pū* 'purify', and *pavítṛa*- 'filter', and I cannot offhand think of another instance in which *waters* are said to be purified, though they are purifying.

In ab note the return of several lexical items: *vibhū*- (13b) and *sadhryāñc*- (6b). The *cid* 'also' also links this vs. with a previous part of the hymn, namely 11b where Indra sends surging another group of fem. entities (ruddy [cows]): *úd usríyā asṛjad índro arkaśh*.

I do not understand why Indra is called *dámūnāh* 'master of the house'. The word is generally an epithet of Agni (understandably), and there is nothing in this passage that seems to me to link Indra to the domestic sphere.

In c *mádhvaḥ* is taken by most as fem. acc. pl. (by Schmidt as masc. nom. pl.). Several exx. of this form are analyzed by Gr as either masc. nom. pl. or fem. nom./acc. pl. However, none of these supposed examples is convincing, and it is best to take it here as the gen. sg. it usually is. It then needs a head noun. Old adduces nearby III.36.7 *mádhvaḥ punanti dhārayā pavítṛaiḥ* "they purify it in a stream of honey with purifying filters," which is very similar to our pāda c. I therefore supply, with Old, a form of *dhārā*- 'stream' upon which gen. *mádhvaḥ* depends. The precise form I supply is acc. pl. *dhārāḥ*, modified by the (fem. acc.) part. *punānāḥ* and coreferential with *dhānutrīḥ* 'runners' at the end of the vs. The conceit in the phrase *hinvanti ... dhānutrīḥ* is that the priests are spurring on the streams of soma (like) horses. As for the subj. of *hinvanti*, I take it as (the current) priests (as in the sim. passage III.36.7 just quoted; also III.46.5, where Adhvaryus are the subj. of *hinvanti*). It could also be, with Re, the Aṅgirasas, who have been operating as priests in the Sattrā depicted earlier.

Ge (/WG) take *kavībhiḥ* as an adjective with *pavítṛaiḥ* (Ge: "mit geistigen Filtern"), but in my opinion there are no adjectival uses of *kavī*-. Instead it is used as a defining appositive (poets as filters), as I take it, sim. Re, or it is a separate agent with *punānāḥ* ("being purified by poets with filters"), with Schmidt (170). For the same phrase see III.1.5.

III.31.17: As Ge points out, pāda a is very similar to IV.48.3 *ānu kṛṣṇé vásudhitī, yemāte viśvápeśasā* "The two black treasure chambers [=Night and Dawn], with all their ornaments, have directed themselves after each other in turn." Bloomfield (RR ad III.31.17) cleverly comments, "The words *kṛṣṇé* and *vásudhitī* are both dvandva ekaṣa:

‘black (Night) and (Uṣas)’ is a way of saying náктоśāsā; conversely ‘treasure-giving (Morn) and black (Night)’ is uśāsānāktā.”

“The magnanimity of the sun” is a slightly surprising expression. Is it that the sun makes the succession of Night and Dawn possible by his transit across the sky, and this is considered generous on his part? Or is it an indirect reference to the distribution of the dakṣiṇā at dawn. A related, but opposite, sentiment is found in VII.81.4 *uchántī yā kṛṇóṣi maṁhánā mahi, prakhyai devi svār dṛśé* “You who in dawning make through your magnanimity the sun to be visible for seeing,” with the magnanimity credited to Dawn.

The only other occurrence of pl. *ṛjipyá-* (II.34.4) is at least indirectly used of the Maruts; the standard tr. all assume they are the referents of cd, which seems correct. Here they seem to be functioning as priests, attempting to bring Indra to a sacrifice.

III.31.18: Note the alliteration in b (... *viśvāyur vṛṣabhó vayodhāḥ*) and the rather elementary etymological figure in d (*mahān mahībhiḥ*); although *sakhyébhiḥ śivébhiḥ* is neither the one nor the other, it seems to function as a bridge between the two.

III.31.19: Pāda b, *nāvyaṁ kṛṇomi ... purājām* “I make new (the hymn) born of old,” is about as succinct a summary of the RVic poetic enterprise as we can find in the text: the poets’ focus on ever new expressions based on traditional techniques and themes. In this particular case, Ge suggests that *purājā-* refers to the Preislid of the Aṅgirasas, about which we heard in vss. 7–8.

On the $\sqrt{dhā}$ + inf. construction, see vs. 13 above.

III.31.19–20: Note the echo of 19d *#s^uvaś ca naḥ* in 20b *s^uvastí naḥ*.

III.31.20: The mists are probably in part metaphorical -- menacing threats and mental darkness -- but may also refer physically to morning mists, which are clearing as the dawn sacrifice begins. Note also that pāda-initial *mīhaḥ* is a mirror image of *māhí*, which opens so many pādas in this hymn (see comm. ad 12b).

III.31.21: I follow Schaeffer (Intens., 133–34) in taking the medial intens. *dēdiṣṭe* in the meaning ‘display (one’s own X)’ -- hence my different tr. of *ādediṣṭa* (a) ‘has put on display’ and *diśāmānaḥ* ‘allotting’.

I interpr. b as having a more complex construction than the standard interpr. The trouble is the *antár* phrase: when *antár* governs the acc., it is only used with dual (or plurals conceived as duals -- *jātān ubháyān* [IV.2.2], e.g.), but *kṛṣṇān* has no overt partner here. I suggest that it is an elliptical plural-for-dual: “black (nights) and (bright days)”; cf. VIII.41.10 *śvetān ... kṛṣṇān* used for days and nights. The elliptical *kṛṣṇé* used of Night and Dawn in 17a would support this, and in 20a the clearing of the mists at daybreak (if I’m right) might provide the other half of this elliptical duality. If this is correct, Indra comes between (*antāḥ ... gāt*) the nights and days with the entities appearing in the instr. (*aruṣaiḥ dhāmabhiḥ*). *aruṣá-* ‘ruddy’ can of course be used of Dawn and her various associates, esp. her “cows”; *dhāman-* is a frustratingly multivalent word, but here I think it means ‘manifestation’ vel sim, and the phrase refers to the dawns, who of course come temporally between night and full day.

The positioning of *ca* in d is somewhat disturbing, but I see no other way to explain it than Klein's (DGRV I.225, II.102 n. 28): it conjoins the first and second half-verses, but takes Wackernagel's position in the 2nd pāda of the 2nd half-verse "following an intervening participial phrase."

svāḥ 'his own' is in a very prominent position, as the last word in the last real vs. of the hymn (before the refrain, vs. 22). Why it should be emphasized that the doors that Indra opens are his own I do not know, beyond the fact that anything belonging to Indra is highly noteworthy. But I would point out that *svāḥ* may be a pun on *s^uvas* (*s^uvah* in pause) 'sun' initial in 19d (though unfortunately *svāḥ* is not distracted here as it so often is). This pāda is identical to X.120.8d, where it also participates in word play.

III.32 Indra

III.32.1: The impv. *pība* is accented, though it is located mid-clause. There is no obvious reason for this. Old suggests weakly (ZDMG 60: 736) that it is an emphatic accent, but this is of course a circular argument: any verb bearing an unexpected accent can be called emphatic. I find the accent esp. disturbing because the identical phrase, minus the initial voc. *īndra*, is found without accented impv. elsewhere: #*sómam somapate pība*# (V.40.1=VIII.21.3) versus our #*īndra sómam somapate pībemám*#. There are several possible contributing factors. First, three pādas at the beginning of this hymn begin with accented *pībā* (2b, 3d, 5b), and our form may have had its accent added redactionally. However, I think that *pība* has special status and can be accented in positions that strict syntactic rules would not allow. (This is rather like Old's "emphatic" argument, except that I limit the effect to a single verb form.) See esp. I.15.1, II.37.1–3 and comm. there. The unsanctioned accent may arise partly because *pība* 'drink!' is a particularly rousing verb in RVic discourse. It also often occurs in non-initial position when it nonetheless legitimately has accent -- after init. vocatives (e.g. *īndra pība* III.36.2, etc.) or at the beginning of a clause after another short clause (or clauses) (e.g., VIII.4.8 *tūyam éhi drāvā pība* "Come here swiftly! Run! Drink!"), and this may have led to the sense that it can be accented in non-initial position in general. I also note in Lub's conspectus that unaccented *pība* generally occupies either final position in its pāda or second position, while accented *pība*, besides being common and expected in initial position, tends to avoid both those positions except when 2nd position follows an initial voc. (as in III.36.2, etc.) or final position opens a new clause (as in VIII.4.8). Note that if this distribution holds, the "identical" phrases I cite at the beginning of this comment are not the same after all, because unaccented *pība* is pāda-final and our accented *pība* is followed by another element. However, there are a few counterexamples with pāda-final *pība* not beginning a new clause (e.g., VIII.4.3, 65.5). One can speculate on why 2nd and final position would favor the unaccented verb while full medial favors the accented form: namely, that 2nd position is of course Wackernagel's position, where enclitics typically migrate, and, assuming a basic SOV underlying order, absolute final position is the default position for unaccented main-clause verbs. Still, the full medial position where we find accented main-clause *pība* does not otherwise favor or impose accent on other verbs that appear there, so if this hypothesis holds, it is only for this special verb.

Ge rather charmingly suggests that *praprúthya* represents "brr machend" to stop the horses. Although "whoa" would be the equivalent English word/vocal gesture, given

the object ‘lips’ (*śípre*), I wonder if it’s the “horse training voice command” (gleaned on the internet) called “smooching” -- defined as “kissing sound with lips used to ask a horse to move on or up a gait.” I rather like the idea of Indra smooching to his fallow bays.

III.32.4: Ge (and in part Re) take *mádhumat* as referring to speech (“... wurden beredt in süßen (Worten)”), but though *mádhumant-* occurs several times with *vácas-* and the noun *vípra-* ‘inspired poet’ demonstrates that *√ vip* ‘become inspired’ can have a strong verbal component, still the focus of this hymn is soma -- and the default referent of *mádhumant-* ‘honeyed’ is soma. Here the underlying word must be neut. (which *sóma-* of course is not), but the neut. *sávana-* ‘pressing’ is found elsewhere with this adj. (cf. X.112.7 *mádhumattamāni ... sávanā*), and *sávana-* is found three times in the first five vss. of this hymn (1b, 3c, 5a).

Note the insistent repetition of the syllable *ma* in pāda d (*amarmāṇo mányamānasya máрма*), anticipated by *mádhumad* in a and *marútaḥ* in b, and continued by the first word in 5a *manuṣvād*. This phonetic figure may be signaling the Maruts’ name. See also vs. 7.

III.32.5: The rendering of *vavṛtsva* in the publ. tr. (“let yourself be turned hither”), a sort of passive reflexive, now seems over-elaborate to me; I would substitute “be turned.” The other examples of this mid. pf. impv. seem more straightforwardly simply “turn” or “turn yourself,” but if *yajñāḥ* has true instrumental force, a passive rendering is more natural. Possible, however, is Re’s “grâce à (nos) sacrifices.”

The referent of *saranyúbhiḥ* is not totally clear. Sāy. (fld. by Re) suggests the Maruts, while Ge adds horses or waves as possibilities. The other ex. of a plural to this stem (also instr.) in I.62.4 is in a clear Vala context, with the Navagvas and Daśagvas in the same vs., which would suggest the Aṅgirasas -- but, although the Vala myth and the Aṅgirasas were prominent in the preceding hymn III.31, they are not found in this hymn, which is dominated by the Maruts and which mentions only the Vṛtra myth (here and in the following vs.). I therefore think it likely that Sāy. was correct. Note that *saranyú-* ... *sísarṣi* is an etym. figure, continued by *sártavaí* in the next vs. (6b).

The rendering of the phrase *apó áṛṇā* as “the flooding waters” in the publ. tr. assumes an emendation to fem. pl. *áṛṇāḥ*, with Gr and numerous others (see Old), contra the Pp and not reflecting the expected sandhi of such a form, which should be *áṛṇāḥ*. As Old points out, the emendation is not nec.: *áṛṇā* could easily be a neut. pl. to the thematic stem *áṛṇa-*. In this case the tr. would better read “the waters, the floods.”

III.32.6: This vs. appears to have no main clause. I take it as loosely attached to the preceding vs., while Ge attaches it to the next one. Old (fld. by WG) disputes the Nebensatz analysis, pointing first to the odd doubly accented Pp. analysis of *prāśṛjaḥ* as *prā áśṛjaḥ*: if the verb is accented, we would expect univerbation with the preverb and loss of the preverb accent. He instead suggests that *yád* is to be construed with the participial phrase *vṛtrám jaghanvān*, as if it contained the finite verb *jagántha* -- a mixed construction. I am in general reluctant to allow a subordinating conjunction to have domain over a participle, and in this particular case this assumption would further require bits of the main clause and the subordinate clause to be interwoven in a fashion unprecedented (as far as I know) even in RVic syntax: the major part of the subordinate

clause would be plunked down between the object of the main verb, *apāḥ*, and that verb (*prāśrjat*), and the 2nd half verse would consist of NPs modifying the object of the subordinate clause but following the end of the main clause. I do admit that the position of *yād dha* in pāda a suggests a close relation with the participial phrase, but I do not consider that position sufficient to override the arguments against that analysis.

The vs. contains several nice oppositions: *śáyānam ... cáratā* “(him) lying (still) with (your) moving (weapon)” and the etymological *devīr ádevam* “the goddesses, godless ...” In addition note the etymological pun: *vṛtrám ... vavrivāṁsam*.

III.32.7: The *ma-* phonetic figure that dominated 4d returns in this vs.: cd ... *mamátur ...*, ... *mahimānam mamāte*. This figure is reinforced by the first words of pāda a, *yājāma ín námasā*, and the uninterrupted sequence of *-am* acc. singulars in ab: ... *vṛddhām índram, bṛhántam ṛṣvām ajáram yúvānam*. Although a side-effect of the grammar, it is my impression that a skilled RVic poet would break the monotony of such a string -- *unless* it served some other poetic purpose, here to provide the mirror-image *-am* to *ma-* and perhaps to evoke the Maruts.

The two forms of the perfect to $\sqrt{mā}$ ‘measure’ in the 2nd hemistich, act. *mamátuḥ* and med. *mamāte*, share the same subj. and obj., with the 1st clause positive and the second negated. Clearly the poet is playing with two different senses of $\sqrt{mā}$. Gr, Ge, and Old neatly convert the word play to “messen” (‘measure’) versus “ermessen” (‘gauge, grasp, realize’)(or so I understand them). My “measure” / “measure up to” is a similar attempt whose purport is close to Kü (378) and WG: “sich messen.”

III.32.8: On the clash of gender and deixis in *pr̥thivīm dyām utémām*, see comm. ad VIII.40.8.

III.32.9: The juxtaposition of *adroghá-* ‘undeceptive’ and *satyá-* ‘real, true’ is also found in III.14.6 *adroghéṇa vācasā satyām*.

The standard tr. take pādas a and b together, with cd separate. I think it makes more sense to take b with cd, as supplying the reason (Indra’s early soma drinking) that he couldn’t be obstructed.

The standard tr. also take *dyāvah* as ‘days’, whereas the publ. tr. agrees with Hoffmann (Injunk. 242) in tr. ‘heavens’. The problem, as I saw it then, was its co-occurrence with *áhā* likewise ‘days’, which led to awkward duplication. However, I have now rethought this; the series of temporal expressions in this hemistich (*áhā, māsāḥ śaradaḥ*) invites a temporal reading of *dyāvah* as well and makes “heavens” seem out of place. In X.7.4. and 12.4 the two stems also co-occur and I tr. “daytimes and days.” I would now substitute that tr. here as well.

varanta here and in 16b is formally ambiguous; it can be either an injunctive or a subjunctive to the root aor. (see Hoffmann 239–40); Hoffmann takes it as a subjunctive. It does not work terribly well as either one; in both passages I tr. it as a preterital modal (“could obstruct”), but this interpr. is not firmly based in the morphology. I sense that in this vs. and the next the poet is struggling to express a verbal category that isn’t found in the Skt. verbal system, namely anteriority: modal anteriority here, temporal anteriority in 10cd.

III.32.10: As just noted, this vs. contains an apparent attempt to express anteriority: the pluperfect *āvivesīṭh* seems to function like an English pluperfect (rather than the standard Vedic plupf., a past tense to a presential perfect), to express an action that happened before the action of the main verb, an interpr. more or less endorsed by Kü (500).

III.32.11: The standard tr. (save for Hoffmann, Injunk. 100, sim. to my interpr.) take ... *sphigyā kṣām āvasthāḥ* as “you covered/ clothed the earth with your hip,” but the medial root pres. to *√vas* means ‘wear’ and takes an acc. of the garment rather than an acc. of the entity being clothed (the construction found with *vāsāya-*). See the similar ex. at VIII.4.8 and the comm. there, as well as the similar sentiment found in I.173.6, where Indra wears Heaven and Earth as various accessories. The point of course is to emphasize Indra’s vast size by making Earth (and Heaven) seem puny in comparison. A similar point was made in vs. 7d, as well as in the immediately preceding pāda 11c.

III.32.12: *yajñā-* is the focus of this vs., with 5 occurrences of it or a transparent deriv.

I take *vārdhanah* as the predicate of pāda b as well as pāda a (“the meal is also your strengthener”); the standard tr. take b as an independent nominal clause with *priyāḥ* as its predicate (“the meal is dear to you”). There is no way to tell for certain; the absence of *te* in b gives some support to my interpr., but that support is undeniably weak. The difference between the two tr. is also not large and has no effects on the interpr. of the rest of the vs.

The second hemistich expresses the reciprocity of the sacrificial enterprise, neatly shown by the balanced verb forms to the same root *√av* ‘aid, help’: impv. *ava* (c), impf. *āvat* (d). But the reciprocity is curiously indirect: Indra is asked to aid the sacrifice (rather than the sacrificer[s]), and the sacrifice aided Indra’s mace (not Indra himself). In both clauses the direct object is an inanimate entity standing in for an animate one, and in the second clause the subject is inanimate as well. Only Indra is animate and capable of acting.

The nom. sg. pres. part. *sān* ‘being’ is not used concessively (“although being ...”) as it normally is. I think it may have the same force as it does in III.30.5, a “definitional” one: Indra is by definition the one deserving of / derivationally associated with the sacrifice, and therefore he is the one who should aid it.

III.32.13: The reciprocity expressed by complementary verbal forms to *√av* found in the 2nd half of the last vs. is here wrapped up in one word, the instr. *āvasā*, which I tr. twice: I use the aid provided by the sacrifice (cf. 12d) to bring Indra here with his aid (cf. 12c). In Ge’s tr. it is only Indra’s aid, but he allows for the other possibility in n. 13a. Re and WG also associate it only with Indra. Given the balanced expression of 12cd, I think it is *meant* to have a double reading.

III.32.14: The standard tr. (see also Kü 186) take the two verbs *vivēṣa* and *jajāna* as parallel in the *yād* clause, with *mā* obj. of the first and possibly of the 2nd. I prefer to take *vivēṣa* as the main clause verb, followed by the *yād* clause, whose (sole) verb is *jajāna*. *vivēṣa* then owes its accent to its initial position in the pāda. This interpr. allows *mā* to take a more natural place, and it also saves us from positing a personal object to *vivēṣa*, which otherwise is not so construed. (Note that Kü’s second tr. of this passage [p. 502] is

entirely different from his first: he distributes the clauses as I do, but takes *vivēṣa* as *first* sg.) And what does it all mean? In my view the *dhiṣāṇā* ‘holy place’ (on which see comm. ad I.160.1) is here the ritual ground, and she is credited with the “birth” of the poet qua poet. After this birth, the poet can produce the praise of Indra that he is credited with in pāda b, and this in turn leads to the good results in pāda c.

Pāda c contains two different subordinators, *yātra* ‘where, when’ and *yāthā* ‘so that’, with a single verb, subjunctive *pīpārat*. Ge’s explan., that we simply have a doubling of relatives, seems to me the best account; this is reflected, more or less, by Old’s “wo (und) wie ...,” though Old goes on to suggest a complex crossing of two different constructions, which seems over-elaborate. In the publ. tr. I have rendered *yātra* as a temporal adv. (“at that time”) with no subordinating force, since I think *yāthā* expresses purpose and controls the subjunctive.

Rather than taking *āmhasaḥ* as an ablative, with most others, I supply *pārām* ‘far shore’, a word related to *pārya-* in pāda b and to the verb *pīpārat* itself, and found in this context elsewhere; cf. II.33.3 *pārṣi ṇaḥ pārām āmhasaḥ*. Here as well *āmhasaḥ* is then a gen. dependent on **pārām*. Although it unfortunately involves a breach of the pāda boundary, I also take *nāvēva* with the preceding pāda, because this simile is almost entirely limited to passages containing verbal forms to \sqrt{pr} (I.46.7, 97.7, 99.1, V.4.9, 25.9, VIII.16.11, 18.17, IX.70.10). I also find it hard to imagine Indra traveling by boat, even metaphorically.

III.32.15: The agent noun *séktar-*, which forms an etymological figure with *sisice*, presumably refers to a habitual or practiced ‘pourer’. So Tichy (*-tar*-stems, 159, fld. by Kü 570). I have taken *kósam* as the obj. in the simile rather than the frame, contra the standard tr., though it could certainly go in the frame or in both without appreciably affecting the sense.

The pf. form lacks retroflexion on its root initial, as does one of the other two forms of this pf. in the RV (*sisicuḥ* II.24.4), as opposed to expected *sisīcatuḥ* in VIII.33.13. I have no explanation for the lack of retroflexion.

III.32.16: On *varanta* see comm. ad vs. 9.

Ge (fld. by WG) takes *sákhibhyaḥ* as a dat. of benefit, but I think it more likely that it’s an ablative with agentival force. See Re, who simply tr. it as an agent. The mythological episode is surely the Aṅgirasas’ energetic help to Indra in the breaking of Vala.

III.33 Viśvāmitra and the Rivers

In addition to the usual treatments, see Schnaus, *Dialoglieder*, 81–107.

III.33.2: *īndreṣite* echoes *vīṣite* in 1b, though they belong to two different roots: \sqrt{is} ‘impel’ and $\sqrt{sā}$ ‘tie’ respectively. The basis for calling the rivers *īndreṣite* is given in 6ab.

I might now render *prasavám* slightly differently here, with the participial phrase meaning “begging for (the signal) for the forward thrust” (in the mode of Ge and Re), with *prasavá-* here a technical racing term. The situation is muddled by the fact that the

stem *prasavá-* occurs 4x in this hymn (here, 4c [\cong 11c], and 6d) with three somewhat different senses.

In c *ūrmíbhīḥ* can be construed with both participles, *samārāṇé* ‘clashing together’ and *pínvamāne* ‘swelling’, between which it is positioned.

Although by my rule (“Vedic *anyá-* ‘another, the other’ ...”; Fs. Beekes 1997, 111-18), forms of *anyá-* found initial in the pāda should be indefinite (‘another’) not definite as here, the *anyó‘nyam* (“the one ... the other”) construction works differently. This might also be an example of prosodic flip: since enclitic *vām* cannot begin a pāda, a putative order **vām anyānyām* might have flipped *anyā* to initial position.

III.33.4: The reference of the rivers switches from dual to plural here and remains so (save for two singulars in 10cd). There is no obvious reason for this change, though it may reflect the fact that when the two rivers merge into each other they form a third.

The first hemistich may contain two predicated present participles, *pínvamānāḥ ... cārantīḥ* “we (are) swelling ... proceeding,” but it is more likely that the predicate is the instr. adv. *enā* “So we are ...”: the rivers are affirming the truth of what Viśvāmitra and the poet of the hymn have said about them.

III.33.5: It is not clear to me why Viśvāmitra’s speech is somian (*vácase somyāya*). I doubt that it is because it is accompanied by soma (Gr), since Viśvāmitra is probably not performing a soma sacrifice on a river bank. Somewhat more likely, perhaps, is Ge’s soma-like, but probably by a transitive phrasal transformation: ‘speech’ (*vácas-*) is occasionally called ‘honied’ (*mádhumat-*), e.g., I.78.5, VIII.8.11); honey (*mádhu-*) is frequently qualified as *somyá-*. Hence, *somyá-* can be transferred to speech by way of the middle term ‘honey’.

Ge renders voc. *ṛtāvarīḥ* as ‘ihr Immerfliessenden’ without comment. But this is simply the fem. stem to the possessive *ṛtāvan-* ‘possessing *ṛtá-*’, which he elsewhere tr. “gesetzentreuen” (e.g., I.160.1, III.54.4) et sim. Interestingly, this fem. is used of river(s) (Sarasvatī in the sg.) or watery females in several other passages (II.41.18, III.56.5, IV.18.6, VI.61.9); in one of these Ge also inserts the notion of wandering in his tr. (III.56.5 “die rechtwandelnden ...”), though otherwise he conforms to the ‘truthful’ sense. Rivers/waters are probably so-called in part because they are famously noisy. I do not understand the source of Schnaus’s tr “Naturgemäss.”

In 5c *avasyú-* ‘seeking help’ answers the question posed by the rivers in 4c *kimyú-* ‘seeking what?’ and in the same position in the vs.

III.33.6: In this vs. the rivers indirectly respond to Viśvāmitra’s command “Stop!” (*rámadvam*) in the previous vs. (5a), by asserting that they flow because of the efforts of and at the pleasure of the gods: Indra dug their channels and, by smashing Vṛtra, removed the barrier to their movement; Savitar led them and they flow at his impulsion. Without explicitly refusing Viśvāmitra’s request, they make it plain that they won’t comply by stopping.

The stem *prasavá-* ‘forward thrust, impulsion’ occurs here for the third time in this hymn (2a, 4c, 6d; see also 11c) and is here associated with its etymological divinity Savitar, the Impeller. Although I tr. all 3 occurrences with ‘forward thrust’, I now render

this example in keeping with its usual sense when associated with Savitar: “at his impulsion.” See also comm. ad 2a above.

III.33.7: This is the central vs. of the hymn; in it Viśvāmitra practices the kind of praise poetry that the rivers will ask him to reproduce in perpetuity in vs. 8, couched in high formal style. In fact it can be seen as a variant of the opening of the great Indra hymn I.32.1: *índrasya nú vīryāṇi prá vocam, yāni cakāra ...* Here we have the gerundive *pravācyam* for *prá vocam*, *vīryam* matching *vīryāṇi*, *índrasya* as in I.32, and the nominalization *kárma* for the pf. *cakāra*. The serpent, the mace, and the signature verb *√han* are then found in the rest of b and in c, as they are in I.32.1 (and note also anticipatory *ápāhan vṛtrám* in 6b). As Watkins points out (Dragon, 309), here the verb *√han* has been displaced from its standard formulaic role, with *áhim* as object, to an adjacent part of the myth that there is “a veritable constellation of inherited words and roots relating to poetry in this passage” (apropos vss. 7–8).

I render *yád* in b as ‘when’; it could also be a neut. loosely construed with *kárma* (“... deed that he hewed apart the serpent”).

Note the etymological and phonetic figure *āyan ... áyanam* in d.

III.33.8: I think it quite likely that *yád* expresses purpose here (substituting for standard *yáthā*), given the subjunctive *ghóṣān*, not to mention the clear desire on the part of the rivers to have their praise remembered in later times. I would therefore slightly emend the publ. tr. to “so that ...”

Though med. *juṣáte* overwhelmingly means ‘enjoy’, the addition of the preverb *práti* sometimes yields a transitive ‘favor in return, in response’ with personal obj. See disc. ad IX.92.1.

The ubiquitous modern greeting *námas te* is found twice in the RV, here and VIII.75.10 (cf. also II.28.8 *námaḥ purā te ...*). Here it anticipates the literal action of bowing, demanded in 9c and performed in 10c.

III.33.9: *ánasā ráthena* – probably, as most translators take it, a reference to both baggage/supply wagon and war chariot.

III.33.10: Although the two rivers refer to themselves collectively in the 1st pl. in ab, the second hemistich consists of two contrasting statements in the 1st sg., each presumably made by one of the rivers. This balanced contrast accounts for the accent on the 2nd verb *śaśvacái*.

The simile involving the *pīpyānā ... yóṣā*, the young woman with breasts “swelling” with milk, has been prepared for by the earlier two occurrences of *páyas* ‘milk’ referring to the water of the rivers (1d, 4a).

III.33.11: As in the immediately preceding hymn III.32.9–10, the poet here seems to be trying to express verbal nuances that are not coded systematically in the Vedic verbal system, in particular another variety of anteriority. Here the sequence of moods is unusual: pres. optative in the subord. cl. (*saṃtáreyuḥ*), pres. subjunctive in the main cl. (*árṣāt*). With the optative he seems to be aiming at a future perfect (“will/would have crossed”) whose prospective action precedes that of the main verb, namely the

subjunctive referring to future time. Although I have not examined the entire RV with this in mind, these experiments in anteriority seem confined to -- or at least especially pronounced in -- the work of this poet. Note also that the poet makes no attempt to generate an opt. to the pf. *tatāra* or to use the already existing pf. opt. *tuturyā-* (RV 5x). This provides further evidence, if more were needed, against Dahl's claim that the pf. opt. denotes "epistemic possibility and anterior aspect" (*Time, Tense and Aspect*, p. 402 and in general pp. 392-402). If this were a stable function of the pf. opt., surely Viśvāmitra would have availed himself of that formation.

The vs. reprises much of the vocabulary from earlier in the hymn: *iṣitā indrajūtaḥ* is an elaboration on *indreṣita-* in 2a; the oft-repeated *prasavā-* returns again in the expression *prasavāḥ sārgataḥ* repeated from 4c.

III.33.12: The prospective action expressed by the opt. *saṃtāreyuḥ* in 11a is announced as completed by the aor. *ātāriṣuḥ ... sām* 'they have crossed', and the poet urges the rivers to flow again with a sequence of imperatives, elaborating on the subj. *ārṣāt* in 11c.

III.33.13: Hoffmann (Injunk, 93 n. 184) thinks the first impv. is concessive: "Mag eure Welle an die śamyās schlagen, die Geschirre lasst frei" -- this may well be, but a little hard to tell given our lack of teamster texts.

III.34 Indra

III.34.1: Gotō (1st class, 173–74) posits a separate root \sqrt{di} 'destroy' to account for 5 occurrences of *dāyate* ordinarily taken to mean 'divide' with the other occurrences of *dāyate*. (The forms in question are found in III.34.1, IV.7.10, VI.6.5, 22.9, and X.80.2.) He is followed by Lub and (at least in this passage and IV.7.10) WG. I see no reason to split the present into two and posit a second root; *vī dayate* 'divide into pieces, fragment' is simply another of the vivid images of destruction that RVic poets gloried in.

III.34.2: The sense of *jūtī-* as 'spur' here (on which see comm. ad III.3.8) is reinforced by *brāhmajūta-* 'spurred on by the sacred formulation' in the preceding vs., c.

I have tr. the nominal phrase *asi ... pūrvayāvā*, which comes out rather stiffly in English ("you are the fore-traveler"), into a smoother verbal expression.

III.34.3: The first two pādas of this vs. are rhetorically parallel, consisting of an etymological figure of augmented verb plus some part of the object (*vṛtrām avṛnot a, māyínām amināt* b), ending with a bv. formed with *-nīti-* 'leading, control'.

This interpr. of *vyāṃsa-* follows Schmidt (KZ 78 [1963]); see EWA s.v. *āṃsa-*.

In the second half-verse the subject takes an odd turn: after mention of Indra's iconic deed (besides the explicit mention of Vṛtra in a, see the echoes of the great Indra hymn I.32 in b *māyínām amināt* [I.32.4 *māyínām āmināḥ prótā māyāḥ*] and c *āhan vyāṃsam* [I.32.5 *āhan ... vyāṃsam*]), there is an abrupt switch to Agni phraseology. The same phrase *usádthag váneṣu* "burning at will in the woods" (?) is found in the Agni hymn III.6.7; cf. also *usádthag vānāni* also of Agni in the Agni hymn VII.7.2. The final pāda concerns the appearance of visible entities from the night, which also better fits an Agni context. For this reason I see a syntactic break in the middle of pāda c and take *usádthag*

vāneṣu with d, contra the standard tr. On the curious and problematic word *uśádhak* see comm. ad III.6.7 as well as Scar (197–99) at length. Both discussions conclude that *uśádhak* in III.6.7 should be a neut. noun, ‘(the) burning-in-the-wood’, rather than a straight root-noun adj. modifying Agni – though the adj. interpr. would work better here and in VII.7.2 – and in both places is, I think, simply a way of referring to Agni. Therefore I would (reluctantly) alter the tr. here to “The burning-at-will in the woods [=Agni] brought to light ...”

On *dhénā*- ‘milk-stream’ see comm. ad I.2.3 and Schmidt (Gs. Nyberg). Schmidt there suggests that the referent in this pāda is the dawns emerging out of the dark of the night. This occurs of course at the same time as the kindling of the ritual fire and would account for the shift in diction to Agni phraseology. This image can then be secondarily applied to Indra bringing the dawn cows out of the nocturnal darkness of the Vala cave.

III.34.4: The phonetic echo of *uśádhag* (3c) in *uśígbbhiḥ* (4b) reinforces both the thematic connection between these two vss. -- Indra’s production of light -- and the superimposition of Agni traits on Indra. As Schmidt (B+I 59) points out, the Uśij-priests, ordinarily associated with Agni, sometimes substitute for the Aṅgirasas in the Vala myth, but we should also note that it is esp. in Maṇḍala III that Agni is himself identified as an Uśij (III.2.4; 3.7,8; 11.2, 27.10); note also the Uśij-priests attending on him in III.2.9, 15.3.

III.34.5: The metaphorical use of *viveśa* ‘entered’ + an action (‘thrusts’) reminds me of the somewhat slangy English “get into” for “become enthusiastic about / energetically do (some action).”

The stem *barhánā*- otherwise only appears as an adverbial instr. ‘mightily’, and I am tempted to take it so here (as WG seem to do), rather than as the acc. pl. assumed in the publ. tr. However, the sandhi context is against this interpr.; note Old’s tart “Gewiss nicht *barhánā* Adverb (Hiatus!).”

As Ge points out, the referent of fem. gen. pl. *āsām* must be *dhíyaḥ* ‘insights’. For insights having bright color or hue, see the passages adduced by him (n. 5d): I.143.7 *śukrávarṇām dhíyam* and III.39.2, where *dhī-* wears silver garments. The *varṇam* here plays off *áryam varṇam* in 9d.

III.34.6: Another etymological figure appears in c: *vṛjána vṛjinān* “... the bent ones [i.e., morally twisted or corrupt] with his band [i.e., his circle of helpers bent around him],” both derived from $\sqrt{vṛj}$ ‘twist’, though the semantic connection is somewhat less obvious than in the etymological figures in 3ab.

There is another, thematic connection between vss. 3 and 6. As there, Indra here achieves his victory first with his comrades (*śárdha*- 3a), then with his tricks (that is, by “out-tricking” [*amināt*] with his shape-shifting abilities, *várpa*- 3b). In such cases his overwhelming strength might be almost superfluous -- hence my parenthetical “(though).” Note that *abhíbhūti*- (*abhí√bhū*) is a different lexical realization of *abhiṣṭi-* in 4b (if to *abhí√as*, as is the common opinion; cf. EWA s.v.).

III.34.8: The intense concentration on the root \sqrt{san} ‘win’ noted in the publ. intro. and the concomitant *s*-alliteration begin here.

On the clash of gender and deixis in *pr̥thivīm dyām utémām*, see comm. ad VIII.40.8.

III.34.9: The slightly awkward tr. “of many benefits” for *purubhójasam*, modifying the cow in d, is meant to capture its etymological relationship with *bhógam* in c.

The contrastive pairing of *dásyu-* and *ārya-* is striking here.

III.34.10: I do not see any semantic/functional difference between the imperfect *asanot* in a and b and the insistent pf. *sasāna* of vss. 8–9, though we might assume that the poet made the choice apurpose. Both Ge and Re render the forms in the same way (as do I); WG tr. *sasāna* as ‘er hat erlangt’ and *asanot* as ‘gewann’. Although I find the idea of rendering the two different grammatical forms differently appealing, I’m not sure that losing the root connection is worth it.

III.35 Indra

III.35.1: The first pāda is somewhat oddly expressed, at least as it is rendered in the publ. tr.: Indra is urged to mount the horses yoked to the chariot, but not only is horseback riding very rare in the RV, but no one is likely to mount a horse being used to pull a vehicle. This must be an awkwardly expanded version of the usual “mount the chariot” (see 4c below). There is an alternative interpr., which can rescue the expression. Patrick Stiles (as relayed to me by MLW) suggests that *tīṣṭhā* is a one-word clause, and the rest of pāda a is a nominal clause with *hārī* as nom. subject. Hence “Mount! the two fallow bays (are) being yoked to the chariot.” This avoids the horse-back-riding scenario and requires no change in the text. I might like the *ā* to be in a different place, but that seems a relatively minor problem.

The *niyūt-* ‘team’ is generally associated with, indeed belongs to, Vāyu, who is regularly called *niyūtvant-* ‘possessing *niyúts*’. However, the word is sometimes used in a reciprocal value: just as Vāyu and Indra drive to us with their *niyúts*, so do our *niyúts*, the ‘teams’ of poetic thoughts, drive in return to the gods, in passages where *niyūt-* is parallel to words for ‘thought, hymn’, etc. Cf., e.g., I.134.2, 135.2, VI.35.3, 47.14, VII.23.4, 90.1, X.26.1. It is therefore not nec., with Bloomfield (RVReps ad loc.) to assume that “*niyúto* is for *niyúdbhiḥ*.”

III.35.2: The most natural reading of *yáthā* in c is as a subordinator in a purpose clause (‘so that’) with the subjunctive *ā vahātaḥ* in d, and this is how the standard tr. take it. But there is a major stumbling block: the verb is unaccented. Old seems willing to emend to an accented verb; Ge suggests that if the unaccented verb is bothersome, assume an ellipsis in c. I have, in somewhat ad hoc fashion, taken *yáthā* as a sort of simile marker with *dravāt*. I am not entirely satisfied with this solution, but it does more or less fit category 4) in Gr’s lemma *yáthā*, and I am quite reluctant to put an unaccented verb into a subordinate clause. A similar phrase in the next hymn, where *yáthā* marks a localized comparison, gives support to the interpr. here; see III.36.6 *prasavāṇ yáthā* “like a shot” (tr. similarly by all standard tr.).

III.35.3: Medial *nayasva* is one of the relatively few middle forms to this pres. stem. It is presumably used here because Indra is leading his own horses.

The crux in this vs. is the hapax cmpd. *tapuṣpā-*. Gr glosses it ‘warmes trinkend’, perhaps referring to the gharma drink; in this he is tentatively fld by Mayrhofer (EWA s.v. *tāpuṣ-*). But this *-us*-stem, *tāpuṣ-*, refers only to heat, generally menacing scorching heat, and in any case the horses shouldn’t be drinking the gharma drink (or probably any hot drink at all). The word is discussed by Scar (305–6), who offers several possible interpr. The interpr. is made more difficult by the uncertain grammatical identity of the form. It appears in sandhi as *tapuṣpōtém*, is taken by the Pp. as *tapuḥ pā*, and is generally analyzed as a dual, modifying the bullish (horses) -- so Ge, Re, Scar, WG. However, Ge suggests in n. 3a that the form could represent irregular sandhi for *tapuṣpā(h) utá* (that is, a double application of sandhi, first losing the final *-s* before vowel and then coalescing the vowels) and therefore be a nom. sg., modifying Indra. I have adopted this solution; it doesn’t make much sense for the horses themselves to be doing the protecting, but Indra’s protective role would fit with the impv. *ava* ‘help’ in the next pāda.

In the last pāda Indra is urged to eat the roasted grains (*addhi dhānāḥ*). The same grains are prepared for the horses to eat in vs. 7: it seems somewhat surprising that Indra and his horses receive the same fodder, as it were -- though calling the horses Indra’s “comrades in joint revelry” in the next vs. (4b) suggests that they consume the offered meal together. I also don’t understand why the grains should be “of the same appearance every day.” This phrase is essentially repeated in III.52.8, which also contains 5 occurrences of *dhānā-* (or deriv.). Perhaps the point is that we unfailingly make the same offering to Indra daily; he needn’t worry that we will substitute inferior food.

III.35.4: The double etymological figure in pāda a is almost awkwardly heavy: *bráhmaṇā te brahmayújā yunajmi*, an awkwardness necessarily reflected in the tr.

III.35.7: All the clauses in this vs. are nominal sentences with past participle as predicate (*stīrṇám*, *sutáḥ* a, *kṛtāḥ* b, *rātāḥ* d). It is therefore misleading to tr. the last as “are given” (versus “has been strewn,” etc.) as in the publ. tr. I would change to “have been given.”

III.35.8: *prajānán vidvān* repeats 4d. The particular relevance of this phrase in either vs. isn’t clear to me.

III.35.9: Kü (477–80) discusses the stem *vāvas-* at length, rejecting the usual connection with \sqrt{vas} ‘desire, want’ and assigning it instead to $\sqrt{vās}$ ‘bellow’. (WG follow this interpr. in our passage; Lub still assigns this form to \sqrt{vas} .) Kü’s morphological arguments -- lack of *u*-redupl. and of root ablaut -- are strong. However, although I would concede that the form was derivationally original only to $\sqrt{vās}$, I would argue that once a stem *vāvas-*, built to $\sqrt{vās}$ ‘bellow’, became established, it was available to “migrate” to \sqrt{vas} ‘desire’, especially because the shortening of the root syllable in this metrically driven formation makes the form look more like \sqrt{vas} than $\sqrt{vās}$. Although the meanings of the two roots might seem so far apart that it would be hard to confuse one for the other, in fact the usual context of $\sqrt{vās}$ forms narrows the semantic gap considerably: cattle bellow because they want something. Kü allows for the possibility of semantic overlap as well.

III.35.10: The occurrence of 2nd sg. act. pres. impv. *pība* and aor. impv. *pāhi*, both to $\sqrt{pā}$ ‘drink’, in a disjunctive *vā* construction should give us a good opportunity to discern the functional distinction between the imperatives to these two tense-aspect stems, esp. since, as far as I can see, both imperatives would fit either of the metrical slots occupied. I have in fact tr. as if there is a functional difference: ‘drink’ versus ‘take a drink’, but I am not at all convinced that this is correct. Cf. the disc. of the positional tendencies of *pība* ad III.32.1 and note that the same pāda opening *indra pība* is found in the next hymn, III.36.2d. However, the same sequence of pres. and aor. to $\sqrt{pā}$ is found in III.36.3, so it may well be meaningful. (The standard tr. render *pība* and *pāhi* identically here.)

I take *prāyatam* in c with *yajñām* in d, contra the standard tr.

III.36 Indra

III.36.1: I confess to being somewhat puzzled by the first half vs., beginning with the identity of the 2nd ps. subject. My assumption is that it is the priest setting out the offering for Indra, not Indra himself, who is the 3rd ps. subject in cd. Pāda b (“being united with help”) would then express the priest’s receiving of Indra’s help, though the expression seems a little odd. The only similar passage I can find is V.42.8 *tāvotībhiḥ śacamānāḥ* ... “being accompanied by your help,” of the ritual patrons. It might instead be possible to take b with cd, modifying Indra “being at one with his (own) help.” The dvandva *śāsvac-chaśvat* in b matching *suté-sute* in c might weakly support such an interpr. (contra the standard tr. as well as my publ. tr.). Unfortunately the pres. *yādate* is not well enough attested to allow us to determine its usual subjects; of its 5 occurrences, 3 involve rivers uniting with the sea (as in 7a in this hymn).

The other question in this half-verse is how exactly to construe *sātāye dhāḥ*. The standard tr. take *prābhṛtim* as the subj. of an active infinitive *sātāye* -- perhaps most clearly in Keydana (Infinitive, 317 n. 132) “Mach, dass diese Darbringung siege,” taking Indra as the subject of *dhāḥ* (contra my identification of the priest as subj.). But I doubt that the *prābhṛti*- itself is the agent of winning. My publ. tr. takes *sātāye* as a passive, with (perhaps) Indra the implied agent: the offering is to be won by him. This interpr. may be supported by 2c *prayamyāmānān prāti sū grbhāya* “Grasp at (the drinks) being offered,” with *prā* \sqrt{yam} expressing the same notion as *prā* $\sqrt{bhṛ}$ in 1a and Indra’s gaining control of them in both passages. It might also be possible that *sātāye* is not being used as a real infinitive, and the phrase should be tr. “set this offering here for (our) gain” -- that is, when Indra takes the offering set out by the priest, there will be general gain for all of us but neither the offering nor Indra is the agent of an infinitival use of this dative. (This seems to be close to the WG interpr.)

III.36.2: *vidānāḥ* is another -- very clear -- example of a tense-stem participle serving as predicate. *Pace* Gr (fld. by Re) it most likely belongs to ‘know’ rather than ‘find’.

III.36.3: Both the pres. and the aor. stems of $\sqrt{pā}$ ‘drink’ occur here, as in III.35.10. The situation is in fact even a bit more complex: as in III.35.10 both stems deploy imperatives here, *pība* opening pāda a, *pāhi* in d, but the latter is also in a complex diptych with the impf. *āpibah* (“just as you drank [*āpibah*] ..., so [take a] drink [*pāhi*] today ...”). As in

III.35.10 I have translated as if there is still an aspectual difference between the two stems, but I am not certain this is the case.

III.36.4: Indra in pāda a is identified with a large drinking vessel, in this vs. that emphasizes his size and capacity.

The b pāda begins and ends with etymologically related words: *ugrām* (adj.) and *ójah* (noun), though each is part of a different NP.

As Kü demonstrates (503–6), the pf. of \sqrt{vyac} is always presential.

III.36.5: The vs. begins with the two words that began the first two pādas of the last vs.: 4ab *mahāṁ ...*, *ugrām*; 5a *mahāṁ ugró*.

Ge (/WG, Scar [209]) take *samācakre* in b as transitive and supply ‘cows’ as object, from c. Although it is true that the middle pf. of $\sqrt{kṛ}$ is generally transitive, in this context, parallel to intrans. *vāṇrdhe* in pāda a, a nonce passive value can be imagined. In fact see (in this same maṇḍala) III.1.8 *vṛṣā yātra vāṇrdhé kāvyaena* “where the bull has grown strong through our poetic craft,” of which this pāda seems to be a variant, with the *vāṇrdhe* there anticipated in our previous pāda. Cf. Re “il s’est empli ... de pourvoir-poétique,” also intransitive. (Ge suggests this possibility in his n. 5b.)

Scar (209–10) makes heavier weather of *vājadā(h)* then seems necessary. He points out that the cows shouldn’t be giving prizes, which is logically true enough, but surely the point is that Indra is so generous that even the prizes he gives, the cows, give prizes of their own (the trickle-down gift economy). Their gifts are presumably, on the one hand, milk products and, on the other, new calves.

III.36.6–8: The next three vss. ring changes on the theme of large bodies of water and large containers of soma.

III.36.6: On *prasavām yāthā* see disc. of *dravād yāthā* ad III.35.2.

In b the problem is the simile *rathyēva* -- more precisely what the nominal in that sequence represents. The Pp. resolves it, not surprisingly, as *rathyā*. Gr takes this as an instr. to *rathī* ‘charioteer’; Ge also takes it as an instr. but to a stem *rathyā-* ‘Fahrstrasse’ (see Old, ZDMG 61 [1907] 831–32 = Kl.Sch.262–63). Old himself (so apparently also Re) favors a nom. pl. *rathyāḥ* with double application of sandhi. This is possible (see similar possible situation in III.35.3), but I wonder if it does not reflect the du. *rathyā* it appears to be. This hemistich reads like a brief reprise of Viśvāmitra and the rivers (III.33). For one thing, the past tenses (impf. *āyan* a, pf. *jagmuḥ* b) don’t make much sense if the point of the half-vs. is simply to serve as the standard of comparison for Indra’s width (pāda c), whereas the past tense does work in a brief re-narration of the situation in III.33. The word *prasavā-* here also echoes III.33, which contains 4 occurrences of that stem. And III.33.2 contains an undoubted example of the dual *rathyā* also marked as a simile in a similar context: *āchā samudrām rathyēva yāthaḥ* “you two drive like two charioteers to the sea,” referring to the two rivers, the Vipāś and the Śutudrī. The mixture of numbers, with pl. rivers in the frame and du. charioteers in the simile, is not surprising; even in III.33 the dual reference to these rivers soon gives way to plural. This mythic snatch having been told, the sea, so filled, is available to be compared, unfavorably, to Indra. Kü (77, 156, fld. by WG) also takes it as du, but as

referring to two chariot horses. If the form is accepted as a dual here, it will have to be detached from *rathyèva* in VII.95.1, which see comm. ad loc.

III.36.7: The standard tr. take pāda a as a simile, with the rivers *compared* to the priests of cd. I instead take the rivers as referring to the soma-purifying waters and consider b the predicate to a, with the pres. part. *bhárantaḥ* substituting for the main verb. At least in the transmitted text their simile would be unmarked, though most interpreters manipulate the text to produce a marker. Bl (RRs ad loc., referring to an earlier art. of his) suggests emending to *samudré ná* as in the otherwise identical pāda VI.19.5, a suggestion seemingly endorsed by Old and fld. by WG. However, the instr. *ūtíbhīḥ* with *yādamānaḥ* in 1b supports the instr. reading of *samudréṇa* here, and in 4 of its 5 occurrences *yādamāna-* is construed with an instr. This suggests that VI.19.5 has altered the formula, rather than vice versa. Ge follows a different path to a simile marker, haplology of *samudréṇa* **ná*. Since the text makes sense as is, I see no reason to change it.

The verse contains two parallel morphological word-plays: *bhárantaḥ* ... *bharítraiḥ* and *punanti* ... *pavítraiḥ*, each containing a neuter *-tra-* instrument noun. The latter, *pavíttra-* lit. ‘instrument for purifying’, is of course very well attested in the RV, referring to the soma-purifying filters, but *bharíttra-* is a hapax, obviously generated to match *pavíttra-*, including the *-i-*liaison vowel appropriate only to the seṭ root $\sqrt{pū}$, not to aniṭ $\sqrt{bhṛ}$. It is tr. ‘arm’ by all (going back to the Naigh.), but milking with the arms doesn’t make sense in either life or metaphor. I think it means rather ‘hand’ and participates in a different word-play within its pāda: an ‘instrument for carrying’ can easily be a hand, and so it is synonymous with *hástā-* ‘hand’ found in the immediately preceding word *hastín-* ‘hand-ed’. There is a further implied verbal twist, at least with my interpr. of ab: the rivers don’t have hands but carry anyway, while the priests do have hands but use their carrying appendages for something else. I’m afraid the publ. tr. needed to be quite heavy-handed to convey the deftness of this little play.

III.36.8: On *kukṣí-* as ‘cheek’, not ‘belly’, see Jamison 1987 (Ged. Cowgill).

As Ge also comments, the chronological sequence of pāda d seems reversed, assuming (as I generally do) that the perfect participle regularly expresses anteriority: Indra drank the soma before smashing Vṛtra. The primary VP here, *avṛṇīta sómam* is found in the great Indra hymn I.32.3, but with a different opening (*vṛṣāyāmānaḥ*).

III.36.9: Most tr. take Indra as the implied obj. of *mākiḥ* ... *pári ṣṭhāt*, thus displacing *etát* into an adverbial role (Ge/WG ‘dabei’). This is possible, but I take it as anticipating *dátram* in c.

On the form of *dátra-* see comm. ad IV.17.6.

III.36.9–10: Note that the vocabulary of the beginning of the hymn is being turned around reciprocally at the end: *bhara* (9a) and *prá yandhi* (9d, 10a) are imperatives addressed to Indra, urging him to bring/offer things to us, whereas in 1a *prábhṛtim* (at least in my interpr.) and 2c *prayamyāmānān* the same lexical expressions refer to things we offer to Indra. Other ring compositional echoes are the *dhāḥ* + datival infinitive (1a *sātáye dhāḥ* and 10c *jīvāse dhāḥ*) and the stem *śásvat-* (1b, 10d).

III.37 Indra

I have endeavored to preserve in tr. the consistent position of *indra-* in each vs., for which see the publ. intro. Other elements have had to be juggled; as is often the case, it is harder to honor the half-verse division in Gāyatrī than in trimeter.

III.37.1: On the retroflex in *pr̥tanāṣāhya-* see comm. ad IX.88.7. As for the semanto-syntactic structure of the form, see comm. ad III.24.1.

III.37.3–4: As Ge also suggests, Indra’s names (*nāmāni*) in vs. 3 form a complementary pair with his hundred *dhāman-* ‘forms, embodiments’ in 4.

III.37.5: Given *vājeṣu* beginning vs. 6, *vājasātaye* would have better been tr. “to win prizes.”

III.37.6: And here a plural “when the prizes (are set)” would be more accurate.

III.37.7: The vs. contains 5 locatives, 4 of them plural, and so the issue -- though not a particularly pressing one -- is to sort out what goes with what. I have taken them pāda by pāda. Different tr. distribute them slightly differently.

III.37.9: On the *indriyāṇi* dispersed among the five peoples, see Proferes (2007: 65).

III.37.10: Note the alliteration in pāda b: *dyumnām dadhiṣva duṣṭāram*.

The root √*tṛ* contributes two forms here: *duṣṭāram* (b) and *úd ... tirāmasi*. It is difficult to convey their root connection in Engl.

III.38 Indra

In addition to the usual tr., it is worth consulting Re’s alternative tr. in his *Hymnes spéculatifs* (29–31 + nn.), in addition to his later one in EVP XVII.

My interpr. both in detail and in overall outline differs significantly from others, but it is internally consistent and attempts to fit the many puzzling details into an overall schema. That this sometimes requires making interpretive leaps is a price I’m willing to pay. I lay out and support my choices in the comments on individual vss., though I do not chart every deviation from the various other tr. and defend them against those tr.

III.38.1: The 1st sg. pf. *dīdhayā* is taken by all as a straight indicative; the Pp. reads *dīdhaya* with short final vowel. My tr. “I ponder” reflects this analysis (Kü [257–60] having demonstrated that the indic. pf. of this root is always presential). However, I now wonder if this form could be a subjunctive with the unextended 1st sg. subj. ending *-ā*. Although lengthened forms of the indic. pf. ending *-a* do exist (e.g., *védā* 9x), they are relatively uncommon. And a subjunctive “I shall ponder ...” would open this speculative hymn nicely.

The standard tr. take *priyāṇi ... pārāṇi* as coreferential (e.g., Old “die fernsten, lieben (Dinge, Ereignisse)”). I prefer to take the two as contrastive, the nearby familiar things dear to the poet and far-away matters almost beyond his ken -- with the intensive (i.e., frequentative) part. *mármṛśat* conveying the restless activity of his mind. Realizing

that he needs the steadying hand of poetic tradition to help control his racing but fertile thoughts, in d he expresses his desire for poets belonging to that tradition to give a full account of what he is seeing -- though he does not deny that he himself has wisdom.

III.38.2: As I see the movement of the verse, in pāda a the poet sets himself to question the older generations of poets about their creative activity. Pāda b concerns this activity in the past and identifies *mānas-* ‘mind’ as the foundation (\sqrt{dhr}) for the creative act. (I might now alter the tr. to make this clearer, to “making their minds the foundation.”) In cd we turn to the present time and to the poet (*te*) (who addressed himself in a); the *prañī-* in c (on which see further below) are the products or models derived from the creative activity in b. In d it is made clear that these precedents, actively sought by the current poet’s mind, rest on the *dhárman-* ‘foundation’ not only of the mental activity of the former poets but also of his own mind.

The first technical issue in this vs. is whether *prcha* + ACC. here means “ask X” or “ask about X” (in German terms “fragen” vs. “fragen nach”); both uses of the accusative are possible with \sqrt{prch} . Related to this question is what *jānimā* means in this context: ‘births’, ‘generations’, ‘races’? With Ge and Klein (DGRV I.453–54), I take *jānimā kavīnām* to be the personages addressed, not (with Old, Re, Hoffmann [Inj. 225], Scar [276, 288], WG) the topic of the question. The poet is widening his range of interlocutors from the current poets (1d) to the long series of generations, back to the poets who themselves participated in the creation (2b).

With all modern tr./comm, I take *takṣata* as a med. 3rd pl. middle to the athematic present to $\sqrt{takṣ}$, rather than a 2nd pl. act. of the thematic stem, as Gr classifies it. I have added the self-beneficial “for themselves” to the tr. because, though the root $\sqrt{takṣ}$ is abundantly attested, this appears to be the only middle form in the RV. In keeping with my larger interpr. of the hymn as concerning two creations, the second of which was the product of poets conjuring up the differentiated cosmos by their verbal powers, I think the medial *takṣata* here signals the intimate engagement of the poets in the act of creation and the interpenetration of the things created and the creators themselves. Note also that our current poet lays some claim to this primal act by calling himself in 1a a *tāṣṭar-* ‘craftsman, fashioner’, the agent noun to the root $\sqrt{takṣ}$, which supplies the verb of creation in 2b.

The root-noun cmpd. *prañī-* is found only here in the RV, but the lexeme *prá√nī*, lit. ‘lead forth’, is very common as a verb form and in other cmpds. The word here has received a not particularly instructive variety of renderings, which I will not repeat. I think it means ‘precedent’ -- that is, the work of creation engaged in by the kavis of old provides the model for the current poet. This seems a reasonable semantic extension of ‘leading forth’. The precedents keep “growing stronger / increasing” both because the elements of creation keep proliferating and because the current poet becomes more familiar with them and adept at employing them.

In the last pāda these precedents that the poet has sought with his mind take up their position in his mind, ready to serve for his own creative endeavors. The older generations of poets were called “firm in mind, holding their minds firm” (or, see above, “making their minds the foundation”)(*manodhṛt-*) in b; it is fitting that their models, which he “sought with his mind” (*mānovāta-*), should now in turn take up their position on his own mind’s support (*dhármanī*). On the basis of the cmpd. *manodhṛt-* in b I supply

‘mind’ as the possessor of *dhárman-*. Most tr. (Ge, Re [twice], Hoffmann [Inj. 225], Klein DGRV I.453-54) interpr. the loc. *dhármani* as a rather vague adverbial (Ge, Hoff “in rechter Weise,” sim. Klein). I think it needs to be interpr. in full locative sense; Scar (276) and WG in separate ways do give it a locative interpr. but their tr. do not reflect its connection with *manodhṛt-* in b.

III.38.3: Before addressing the question of what pādas a and b have to do with each other thematically, we must first consider the small technical issue of the placement of *utá* at the beginning of pāda b. Since pāda a contains a participle (*dádhanāḥ*) and pāda b a main verb (*sám añjan*), it is unlikely that *utá* is conjoining the two pādas. Instead, with Klein (DGRV I.396–97), I think it is probably conjoining this hemistich with the preceding vs., with *utá* displaced to the beginning of pāda b after the participial phrase in a. This is very reminiscent of III.31.21, in this same Indra series, where the same explanation accounts for a rightward displacement of *ca* into the beginning of the second pāda of the clause.

As indicated in the publ. intro., I think this vs. describes the role of the poets in the second creation. It fleshes out the laconic *takṣata dyām* “They crafted heaven” in 2b. But what are they depositing in pāda a, and why? The first question can be restated as -- what should be supplied with *gúhyā*? The most common nouns appearing with that adjective are *nāman-* ‘name’ and *padá-* ‘traces, track’; either of these could work here because both can be used of the esoteric verbal production of the poets. “Secret names” would refer to the act of creation that involves dividing and naming the inchoate mass of material pre-creation; “secret traces” would refer to the esoteric poetry more generally. Here they seem to have pooled and deployed these secret elements, to use in their poetic ornamentation -- that is, in their detailed elaboration -- of the originally undifferentiated matter of the two worlds. Note that the participle is middle: it is their own names/traces that are in play.

In both Hymnes spéc. (1956) and EVP XVII (1969) Re tr. *sám añjan* as “ont consacré,” as an allusion to royal unction. The dat. *kṣatrāya* ‘for dominion’ makes this a tempting idea, though *sám √ añj* is not a standard technical term in the royal consecration. I certainly think this is a secondary meaning of this pāda, but in keeping with the rest of the hymn, I think the primary meaning must be creation through poetic elaboration. Since royal consecration does in fact make the person in question a new entity, the king, it can be conceptualized as a creation as well.

The 2nd half-verse is more clearly concerned with creation. The root *√ mā* ‘measure’ is of course regularly used in this connection, and as I said in the publ. intro., the separation of the two worlds in d is a standard cosmogonic image. Ge’s interpr. of c is rather aberrant and in part dependent on a passage in the PB, and his interpr. has not become the standard. Because of the accent on *mamiré*, I have supplied ‘when’ with the first half of pāda c, though the accent may simply result from the adjacency of the two verbs *mamiré* and *yemúḥ*.

The verb in d, *antáh ... dhuḥ*, is not a standard expression for ‘separate’ and in fact might be expected to mean ‘place between’. WG tr. in that way, supplying “Luftraum” (*antárikṣa-*): “Zwischen die beiden ... (Welten) setzten sie (den Luftraum) ...” This is a clever solution and it may be the original sense of the lexeme, which, however, I believe has evolved to mean, without an object, ‘place apart’, that is, separate by putting something in between.

I take *dhāyase* as belonging to $\sqrt{dhā}$ ‘suckle, nourish’, like the rest of the occurrences of this *-as*-stem. Re (EVP), Kü (395), and WG all follow this root assignment, but Ge and Re (Hymnes spéc.) take it to $\sqrt{dhā}$ ‘place’: “damit sie (die Herrschaft) ausüben” and “pour qu’ils se tiennent stables,” respectively. The separation of the two worlds is often presented as a boon for humans, so the ‘nourish’ interpr. seems more fitting, and the usual analysis of *dhāyas*- supports it.

III.38.4: As noted in the publ. intro., I believe that this vs. turns to the first creation, before the poets’ intervention that was presented in vss. 2–3. It is appropriate that the entities described here are unidentified, for this is the time before the poets brought their verbal skills to bear. The central figure in this vs. is introduced merely by an acc. participle (*ātīṣṭhantam* ‘mounting’). The form makes it clear that the referent is masculine and singular, but no other information is given; there is not even a pronoun. Likewise the subj. of the verb *pāri ... abhūṣan* ‘they tended’ is given only as *viśve* ‘all’. Again we know the gender (masc.) and the number (pl.), but not the identity: poets (from vs. 2)? gods (the frequent default referent of *viśve*)? Rather than suggesting referents for these two entities as the standard tr. do, I think we should accept that the lack of referential clues is deliberate.

Certainly it continues through the verse, though some details accumulate. In b the ‘mounting’ entity of pāda a is now presumably the subject. He wears beauties (*śrīyo vāsānaḥ*) and is self-luminous (*svārociḥ*); these descriptions begin to narrow the field, but not enough. (The only other occurrence of *svāroci-* modifies the Maruts, who are not likely to be in question here. And a number of different gods acquire *śrī-*.) In c he is identified as both a bull (or bullish one, *vṛṣan-*) and a lord (*āsura-*), neither particularly diagnostic, and the pāda claims to provide us with his “great name” (*mahāt ... nāma*). Indeed d seems at first to give us that name: *viśvārūpaḥ*. But the joke is on us, for not only is *viśvārūpa-* not a name but an epithet, but its literal meaning tells us that the lack of a single identifiable referent in this verse is the point. The word means “having all forms,” and so the entity we’ve been chasing through the vs. is in fact protean and cannot be pinned down to a single identity. He/it is creation before differentiation. (For a similar figure in a similarly mystical hymn in this maṇḍala, see III.56.3, where the androgynous figure is also called both a bull and *viśvārūpa*.)

The final pāda forms a tight ring with the first, in that the verb $\tilde{a}\sqrt{sthā}$ returns, and this time we get some indication of what he is mounting. But even this further specification falls short: it is simply *amṛtāni*, a neut. pl. adjective with multiple possible referents. This repetition makes the unfolding creation seem somewhat circular, but also incremental, in that new details accumulate, if slowly. But what seems to me an important clue has generally been ignored in the standard interpr. I find it impossible to believe that the repetition of $\tilde{a}\sqrt{sthā}$ was not deliberate, but all the standard tr. (save in part for Re, Hymnes spéc, though he fell in line in EVP) render the two occurrences quite differently: the first literally (‘mount’), but the second with the idiomatic meaning ‘assume’, with Ge and WG supplying ‘names’ with the adj. ‘immortal’ (Ge “... hat er unsterbliche (Namen) angenommen”). There are two obvious things wrong with this interpr: 1) the lexeme $\tilde{a}\sqrt{sthā}$ is extremely common and I know of no passage where it means ‘assume’; 2) translating it thus completely ignores the intra-vs. repetition, which at least to me is extraordinarily salient: the first word of the vs. is *ātīṣṭhantam*, the last

tasthau. I therefore assume that the pf. in d also means ‘mount’ and that the referent of the pl. ‘immortal’ is deliberately unspecified, but is something one could stand on -- in this case probably ‘worlds’ or some kind of solid ‘things’. Cf. VIII.52.7 (Vālakh.) *ā tasthāv amṛtaṃ divī* “[it] has mounted to the immortal (world?) in heaven” and (with *adhī* √ *sthā*) I.35.6 *amṛtādhi tasthuḥ* “they have taken their place on his immortal (foundations?).” The specification of a place to stand on enlarges the cosmic picture. Consider also 9c below with *tasthūṣo vīrūpā* “of him surmounting the various forms,” with √ *sthā* and -*rūpa*-.

III.38.5: The unidentified creature in vs. 4, finally identified as a bull or as bullish (*vṛṣan*-4c), returns in this vs., with a slightly different ‘bull’ designation (*vṛṣabhā*-). Here it is depicted as androgynous: though masc. in gender and called a bull, it gives birth (*āsūta*). Androgyny is a powerful signal of the lack of differentiation I have been discussing, since perhaps the fundamental, universal binary contrast is male : female.

The bull’s act of birth results in the desired differentiation that characterizes creation. This is expressed both by ‘many’ (*pūrvīḥ*) in b and, indirectly, by the address to the two sons of heaven (*dīvo napātā*) in cd. These two then seem to establish control over what has been created in the earliest time (*pradīvaḥ* ‘from olden days’) and therefore implicitly preside over time.

I would now be inclined to interpr. pāda b as an expression of possession, “His are these many proliferating riches.” Cf. VI.3.3, also IV.23.8. However, the context is not definitive.

I interpr. and construe *vidāthasya* in c differently from most, who take it with *dhībhīḥ*, with the interpr. further complicated by variant renderings of *vidātha*- (Ge “im Geiste der Weisheit”; Re [EVP] “grâce aux visions-poétiques de la cérémonie”; WG “mit den Einsichten der (Beute-)Verteilung”). None of these makes a lot of sense to me, and therefore, despite the adjacency of *vidāthasya* and *dhībhīḥ*, I construe the former instead with *kṣatráṃ* “dominion of/over the (cosmic) division.” On this sense of *vidātha*- see comm. ad VIII.39.1: though the word generally refers to the ceremonial distribution of wealth and then to the ceremony where this happens, it can also refer to other types of division, including the parts of the cosmos. It may be somewhat more daring to assume that *kṣatrá*- can take a genitive of what is ruled over -- I do not now have parallels -- but keep in mind that the root √ *kṣā* from which *kṣatrá*- is derived regularly takes such a genitive. If my interpr. is correct, the *vidātha*- refers to the cosmic divisions produced by the 1st creation.

As noted in the publ. intro., a number of referents have been suggested for the two sons of heaven, and as I also said there, I think this is missing the point. We remain in the realm of the 1st creation where entities may begin to proliferate but they are still not named. I suggested there that the two may be the two world halves (note that *kṣatrá*- was associated with them in vs. 3b and see 8c below), but it is also quite possible that the focus should be on the “two,” not on who exactly the two are: the first splitting of the primal unity.

III.38.6: The first half of vs. 6 simply expands on vs. 5. The same two kings have as their sphere of activity an increasing number (“three, many, all” *trīṇi ... purūṇi ... víśvāni*) of “seats,” that is (in my opinion), separated places, in the cosmic division (*vidāthe*) also

repeated from vs. 5. Note that the same verb *pāri* √ *bhūṣ* ‘tend to’ returns from 4a, where ‘all’ was the subject, not the object as here.

In the 2nd hemistich the poet, who has been absent since vs. 2, returns, with his mind (*mānasā*), and sees the whole of creation in detail (or so I surmise), down to the wind-haired Gandharvas -- all subject to the commandment of the two kings.

III.38.7: This vs. summarizes both creations. The first is dealt with glancingly in the first pāda. I take the neut. prn. *tād* ‘this’ as a reference to the not-yet-differentiated proto-creation, which belonged to and arose from the androgynous bovine of 5a, here explicitly identified first as masculine (*asya*: since this pronoun is unaccented, it does not modify what follows but functions as an autonomous pronoun), then as both bull (*ṛṣabhāśya*, as in 5a) and milk-cow (*dhenóḥ*). This is the first appearance of any explicit feminine principle in this hymn.

The rest of the vs. concerns the second creation, with the original unitary *tād* divided and fitted out with names and forms. Note the return of the creation verb √ *mā* ‘measure’, with *ā ... mamire* (b) and *ní ... mamire* (d) echoing *sām ... mamire* in 3c. The curious phrase *sákmyam góḥ* has caused some puzzlement among interpr. Although by formation the hapax *sákmya-* appears to be a neut. abstract derived from √ *sac* ‘accompany’, the standard tr. (Ge, Re, WG) take the phrase as the equivalent of an animate creature, remarking that the companion of the cow must be the bull. But this not only ignores the abstract nature of *sákmya-* but also assumes that *góḥ* here refers narrowly to a female bovine, though the stem is regularly used as a cover term for bovines of both sexes. I take the phrase as meaning “the fellowship of the cow” (or better, though more awkwardly, “the fellowship of the bovine”) as a poetic description of what was depicted in pāda a, the joint activity of the bull-and-cow and its product. This undifferentiated creation is then measured out into individual parts and equipped with names. The subject of *ā ... mamire* in b is not identified, but I assume it is the same *māyínah* as the subject of *ní ... mamire* in d, whom I take to be the age-old poets we met in vs. 2–3.

Just as pāda b refers to the individual names, so does d refer to forms: the classical pairing of name-and-form (*nāmarūpa*) is thus distributed across the vs., as Ge already pointed out (n. 7b). I take *asmin* here as referring to the creation (it), rather than to a putative ‘him’ (as most tr. do). In the course of their creative activity the poets assume various powers (pāda c) to enable their individualizing work.

III.38.8: As was indicated in the publ. intro., this vs. is in certain ways a rephrasing of vs. 7, but updated, as it were, to the present day. The vs. begins exactly as vs. 7 did: *tād ín nv āśya*, followed by a genitive specifying the identity of the *asya* (*ṛṣabhāśya* 7a, *savitúḥ* 8a), a signal that vs. 8 is a second version of the immediately preceding vs. Hence, by my interpr., *savitár-* is the equivalent of the original creator, the bull-cow of 5a and 7a. I therefore do not think that this refers to the god Savitar, but is rather to be taken in its literal sense as “the impeller.” Or rather, since b = VII.38.1b (a Savitar vs.), the poet is identifying Savitar in his most generic sense with the Ur-creator, the one who “set in motion / impelled” the creation.

The poet disclaims any part in that original creation (*nákir me*), and the firmly fixed golden emblem of b seems to me to represent the static, undifferentiated result of

the first creation. It reminds us of the *hiranyagarbha* of X.121, another image of undifferentiated creation.

But in cd (at least in my view -- the interpretations vary quite a lot) the poet identifies himself with the poets of old (of 7bcd). In c most tr. supply a verb, with the *ródasī* phrase as its object: Ge “(bringe ich)”; Re “(Savitar) a suc(cité)”; while Kü (457) takes cd as a single clause, with #*ā* (c) and #*āpi* (d) both preverbs with *vavre*. I think, by contrast, that this is a nominal sentence with *ródasī* as subject. The two world-halves are credited with a role in the second creation, the same role they may play in 5cd (see comm. there): they set everything in motion. *But* they do so through the stimulus of a *sustutī-*, a ‘good praise-hymn’, and I take this praise-hymn to be the product of the 1st ps. poet, who disavowed a role in the first creation in 8a, but takes credit for contributing to the second creation in 8c. If my interpr. with *ā* as an adverb ‘here’, seems too radical, it would be possible to supply a verb, as others have done – but I suggest *√prā*: a quick glance through Lub shows that the most common verb with *rodasī* and *ā* is *prā* (see in this maṇḍala III.2.7, 3.10, 6.2, 34.1, 54.15 as well as numerous exx. in other maṇḍalas). This would yield an alt. tr. “he has [/ I have] filled the two world-halves ...”

The puzzling pāda to me is d, and my publ. tr. is opaque even to me. I have now rethought it and will propose here a modified tr. and interpr. First, I suggest returning to Gr’s grammatical analysis of *vavre* as a 1st sg., not a 3rd sg. (as all subsequent tr. have taken it, incl. my publ. tr.). I take the pāda now as the current poet’s boast, asserting his place in the poetic lineage. The lexeme *āpi √vr* means ‘swaddle, cover over’, as the simile of the woman and her children (one reading of *jānimāni* here) makes clear. But such a meaning can both be protective and somewhat arrogant or threatening. To understand the sense of the frame here, we need to go back to 2a, where the tremulous poet asked the previous generations (*jānimā*) of poets about their creative acts. I think these same poetic generations are what’s referred to here, but here our newly confident poet “covers” them -- on the one hand, in a protective sense, like the young woman swaddling her children. He protects their legacy by continuing it. But ‘cover over’ can also mean ‘conceal’, and in this sense the poet boasts that he will (or has?) become more skilled than they and cover up their achievements with his own. I would therefore retranslate the pāda as “I have covered over / swaddled the (poetic) generations like a young woman her children.”

III.38.9: As discussed in the publ. intro., I take this vs. as showing both contributors to the second creation -- the two (world-halves) from 8c and the masters of artifice (*mayīnaḥ*) from 7d -- bearing witness to our poet’s new skill. In the first half of the verse the two (world-halves) begin by bringing to success the first creation of “the age-old great one” (*pratnāsya ... mahāḥ*). I supply the equivalent of *tād* in pāda a, picked up by *yād* at the end of the pāda and further specified by *daivī svastīḥ* beginning b. The standard tr. instead take a and b as separate clauses, with *daivī svastīḥ* somewhat loosely construed with b.

In c the sequence *gopājihvasya* is variously interpr. Ge (/WG), Re (Hymnes spéc.), and, at least partially, Old read it as two words, the first nom. *gopā*, the 2nd emended to *jīvāsya* (Ge, WG) or *jagatas* (Re; he gives no accent, but it should be *jāgatas*) -- attaching pāda c to b and taking d as a separate clause. I see no reason in this case to go against the Pp, which considers the form a cmpd, much less to emend the text so

severely. Instead I take the two apparent genitives in c (*gopājihvasya tasthūṣaḥ*) as referring to the current poet: he boasts that his tongue is a herdsman -- that is, it marshals words -- and that he surmounts the various forms (*vīrūpā*) -- that is, he has (verbal) control over the differentiated forms of the second creation. The poet has achieved his vocation. For the tongue, see vs. 3 of the following hymn (III.39.3b), where the poem, the hymnic vision, “mounts the tip of (the poet’s) tongue.” A form of the root $\sqrt{sthā}$ is also found in the same pāda.

III.39 Indra

Though nowhere near as obscure as the previous hymn, the first three vss. of this one also portray poetic craft and, especially, poetic inspiration.

Morphological parallelism and lexical repetitions dominate the rest of the hymn.

III.39.1: $\sqrt{vañc}$ means ‘move crookedly, meander’, but encompasses a number of different types of such motion, including circular or wave-like motion. Here I think it refers, rather charmingly, to a bending, curling movement made in order to come out of a small opening. (English ‘scrunch’ might be accurate, but is also inelegant.) The poet’s heart is thus configured as a smallish container from which his thought must gracefully exit -- a characteristically female gesture perhaps. I very much doubt that she is galloping, à la WG.

The publ. tr. should be altered to “when being recited” to reflect the present participle and to match the identical phrase in 2b.

III.39.2: Ge (/WG), Scar (142) take *divāḥ* as temporal (“noch vor Tag geboren”). This is possible and would fit with the *jāgrviḥ* ‘wakeful’ and, perhaps, with the silvery garments of c (if they refer to dawn). Nonetheless, with Re (see also Ge’s n. 2a, where he suggests that the spatial interpr. is better), I take it as spatial “from heaven.” The vs. contrasts the immediate presence of the *dhī* (*séyām asmé* “this one right here in us”) with her origin as a product of age-old divine and ancestral inspiration (*sanajā pītryā*), and *divás cid ... pūrvyā* seems to me to participate in this balanced contrast.

III.39.3: The first pāda of this vs. is a definitional truism: the cmpd. serving as subject, *yama-sūḥ* ‘twin-bearing’, is split into its component parts in the VP, *yamā ... asūta* ‘bore twins’. The question is who are the twins. Given the context, I find Old’s suggestion (fld. by Re) that this is a metaphor for speech production and that the twins are, perhaps, the verse (*īc-*) and *sāman* more plausible than Ge’s interpr. (flg. Sāy.) that the twins are the Aśvins and the birth-giver is Uṣas. I take the mother to be the *dhī*- who was the subject of the previous vs.; note that *dhīḥ* is the last word of vs. 2.

Since I take the same noun to be subject of b, *pātāt* emerges as a problem, since it is presumably a neut. nom./acc. act. participle but qualifies the action of the proposed fem. subj. Given the tendency for neut. NA forms to be used adverbially, I so interpr. it here (as Re also seems to: “en volant”), rather than (with Ge [/WG]) introducing neut. *mānaḥ* ‘mind’ here for it to modify.

This hemistich echoes some of the vocabulary and themes found in the previous hymn. *asūta* in pāda a matches *āsūta* in III.38.5a, and note that the apparent product of this birth is also a dual in III.38.5c. As noted ad III.38.9c, both the tongue and the

mounting in that pāda are found in our 3b. I do not think the same events and entities are referred to in these passages, but they do seem to have a similar view of the relation between poetic speech and creation.

The standard tr. interpr. c as meaning that the pair just born associate with some kind of generic beauty (Ge “Schönheit,” Re “les formes-de-la-beauté”), but *vápūṃṣi* are esp. associated with Agni in Maṇḍala III, where he assumes or bears these wondrous forms (cf., e.g., III.1.8, 18.5, 55.9, 57.3; though admittedly he is not the only entity that has such forms). I think the *vápūṃṣi* of Agni are at issue here, and the pair -- verse and sāman -- accompany them as the ritual speech being recited when the ritual fire is blazing.

Unfortunately the verse-and-sāman interpr. does not fit as well in pāda d, where we might wish the dual “smashers of darkness” to be endowed with light one way or another. The only other occurrence of this stem modifies Agni, and Agni is several times subj. of the phrase *tāmaḥ √han* (V.14.4, VIII.43.34). This phrase once has a dual subj. (VI.72.1 *viśvā tāmāṃsy ahatam*), but the subj. there is Indra and Soma, whom we surely do not want to introduce here. It is worth noting that the Aśvins, the subjects here acdg. to Ge et al., are not found as subj. of this expression. Since I think there is good support for the verse-and-sāman interpr. in the rest of the vs., I would argue that these forms of ritual speech are called smashers of darkness because of their role in the dawn sacrifice.

III.39.4: The next part of the hymn seems driven by the rhetoric of morphology, both parallelisms and contrasts. In this vs. note the heavy *-i/anā-vant-* forms *māhināvān* and *daṃsānāvān* stationed at the end of successive pādas (c, d), which are followed by *dākṣiṇāvān* at the end of 6d and the neut. *barhāṇavat* at the end of 8d.

Pādas a and c contain what appear to be matching sequences that conceal morphological differences:

#(*nákir*) *eṣām ninditā* ...

#(*índra*) *eṣām dṛṃhitā* ...

The two *-itā* forms are respectively an agent noun (*ninditā*) and a neut. pl. ppl. (*dṛṃhitā*), though the two *eṣām* have the same grammatical identity and referent and the first word in each pāda is the subject.

III.39.5: The interweaving of lexicon and morphology continues in this vs. Pāda a contains two forms of the same stem: *sákhā* ... *sákhībhiḥ*, and the instr. pl. is found four more times in the vs. (adjacent *návagvaiḥ*, b *sátvabhiḥ*, c *daśábhīr dásagvaiḥ* the last pair with their own etymological play). Pāda-final *dásagvaiḥ* also parallels *návagvaiḥ* ending pāda a, and *sátvabhiḥ* of b is more subtly connected with *satyám* beginning c.

On *abhijñú-* see Scar (344–45).

III.39.6: The 2nd hemistich has intensely alliterative (partially) etymological figures: *gúhā hitám gúhyam gūlhám apsú, háste dadhe dākṣiṇe dākṣiṇāvān*. The first half is more restrained but note the morphological pair *padvát* ... *śaphávat* and the repetition of *viveda* from 5d.

The phrase *náme goḥ* is puzzling, and the hapax represented by *náme* has not standard interpr. Gr (s.v. *náma-*, thus a loc. of an *-a*-stem) glosses ‘Weide, Weideplatz (?)’. Ge refuses to tr. *náme*. Old suggests ‘Sichneigen’, which is essentially literal (if to

√*nam* ‘bow, bend’ and not very helpful. Re ‘domaine’, which makes sense but is not clearly related to its supposed etymon; WG “beim Zuteilen der Kuh,” also without accounting for the semantic development. Most likely both Re and WG are assuming a derivation from the probably separate PIE root **nem*, as in Greek νέμω ‘distribute’, though with different semantic devs. Like Old I also take it literally, as the loc. sg. of a thematic noun to √*nam* ‘bend, bow’, but suggest that “the bend of the cow” is some sort of homely spatial metaphor drawn from knowledge of cow anatomy indicating a hidden or protected place. English ‘oxbow’ for a U-shaped configuration of a river is a similar application of pasturage terminology to physical space. Cf. also *ukṣṇó rándhram* (VIII.7.26) “the loins of the ox,” which I also think is a way of referring to the Vala cave. See comm. ad loc. This tentative interpr. of *náme* assumes it is not the equivalent of the equally puzzling OAv *nəmōi* twice in Y 46.1, a form that appears to be a dative, possibly in infinitival use (which would make it a root noun, not an *a*-stem).

Pāda c is found identically in II.11.5 and X.148.2. In the former its referent is Vṛtra; in the latter I also take it as Vṛtra, though others opt for Soma. The referent here is unclear, but with HPS (B+I 142–43) I think the most likely candidate is the *mádhu* of pāda a, and that *mádhu* is the sun/light: “the concentrated honey” of the dawns. Lending support to this interpr. as the sun, see X.72.7 *átrā samudrá ā gūḍhám, ā sūryam ajabhartana* “then you brought here the sun, which was hidden in the sea.”

III.39.7: The IXth class *vṛṇīta* in pāda a is ambiguous: it can be either injunctive or optative; the standard tr. take it as the former, expressing straight past time. I instead interpr. it as optative, primarily because of the parallelism with 8a, where the light chosen in 7a, “should suffuse the two world-halves” with opt. *ānu syāt* (note also *syāma* in 7b, 8b). However, the ambiguity of *vṛṇīta* allows it serve as pivot between the past-time narration of vss. 4–6 and the expressed wishes of 7–8.

The rendering of *purutāmasya* in the publ. tr. makes it seem to qualify the hymns, not the bard. The tr. could be slightly emended to “... of the bard, who is the latest of many.”

III.39.8: Pāda b seems to pose an almost deliberate syntactic challenge. The adverbial *āré* ‘at a distance’ is normally construed with an ablative, as in 7b *āré syāma duriṭāt*, but in 8b we have the same phrase but with the noun in the genitive: *āré syāma duriṭásya bhūreḥ*. Or so it is taken by everyone, including me. But I now wonder if the ambiguous form *bhūreḥ*, which could be genitive or ablative, is in fact the latter and is not modifying *duriṭásya* but rather governing it: “May we be at a distance from an abundance of difficulty.”

III.40 Indra

III.40.1–2: The difference, if any, between *pāhi* (1c) and *pība* (2c) is as usual not clear. See disc. ad III.35.10. If we are looking for ways to distinguish them, *ā vṛṣasva* “drench yourself in it,” immediately following *pība* in 2c, might support a more durative interpr. of the pres. impv., as perhaps would the adj. *tāṭṛpi-* if it has intensive semantics ‘ever satisfying’.

III.40.2: Since $\tilde{a}\sqrt{vr̥s}$ takes genitive objects almost exclusively (see X.116.4), *tātr̥pim* is best construed with *pība*.

III.40.3: The adj. *dhitāvan-* is not entirely clear. It is a possessive -*van*-stem to the ppl. *dhitā-* ($\sqrt{dhā}$); as Debrunner points out (AiG II.2.560), it unusually preserves the *dh-* that is found in this ppl. only as 2nd member of a cmpd or under certain sandhi conditions. The final has been lengthened as is normal in these stems: in the RV only *maghāvan-* has a short final vowel before the -*van*-suffix. Cf. also the numerous -*ā-vant*-formations in the previous hymn (III.39.4, 6, 8). But what does it mean? The form occurs only here and in III.27.2, modifying Agni. Gr (flg. BR) glosses it as ‘gabenreich’, Ge “der das Erwartete (?) bringt,” whose connection to $\sqrt{dhā}$ I don’t understand. Both Re’s “pourvu (d’offrandes) présentées” and WG’s “das Vorrat habend” may be closer to the mark; see also Old’s tr. [SBE] of III.27.2 “in whom (manifold wealth) has been laid down.” But what is most characteristically *hitā-* at the sacrifice is the ritual fire, $\tilde{a}\sqrt{dhā}$ being the technical term of establishing that fire, and I therefore suggest that the sacrifice with its fires established is at issue here. Some support for this interpr. may come from the last phrase *stavāna viśpate* “o you who are praised as clan-lord.” The epithet *viśpāti-* is ordinarily used of Agni, so Indra is here being praised as Agni, and it is Agni who both is and oversees the ritual fires.

III.40.5: This is the first vs. that doesn’t begin with voc. *īndra*; the voc. surfaces only in the middle of b, an unprominent position. But its place is somewhat taken by phonologically similar *īndavaḥ* at the end of the vs., and initial *īndra* reappears in 6c.

III.40.7: Contra Old and WG, I agree with Ge and Re that *vanīnaḥ* is the ‘wooden’ word and is not a derivative of \sqrt{van} ‘win’. The focus in this hymn is very narrowly on the ritual situation.

III.40.8: This is the only vs. in the hymn without a form of *īndra-* (7 of the 8 of those forms being vocatives, the lone exception *īndram* in 7b). Here voc. *vṛtrahan* is substituted.

III.40.8–9: On the “magic square” of these vss., see publ. intro. Vs. 9 actually seems to be covering the logical possibility that Indra might not be either far or near but somewhere in between, and in that case the exhortation in vs. 8 to come from nearby or far away might not work.

III.41 Indra

III.41.1: The 1st persons *naḥ* and *madryāk* are somewhat awkwardly doubled. With Ge I take *naḥ*, found in (modified) Wackernagel’s Position in pāda a, with *sómapītaye* in b, and *madryāk* ‘in my direction’ with the verb of motion in c.

III.41.2: I now find ‘seasonal, at its season’ a somewhat misleading tr. for *rtvīya-* in a ritual context and would substitute ‘at the proper time’ here; see comm. ad III.29.10, X.28.5.

III.41.6: It is curious that the impv. *mandasvā* is not accented in this clause, despite the *hí*, nor is it in the identical vs. VI.45.27 or in VI.23.8 also with *sá mandasvā hí* ... I have no explanation; Old notes the lack of accent and gives a ref. to his treatment in ZDMG 60, but in fact there he does nothing more there than note the passages.

III.41.7: The 1st pl. them. *jarāmahe* is perfectly ambiguous between ‘(be) awake’ and ‘sing’, and all other tr. assign it to ‘awake’ -- incl. WG, though Gotō (1st class, 154) assigns it with certainty to ‘sing’. I have also tr. as ‘sing’, though nothing is at stake between the two renderings.

III.41.8: Most take *hári-priya-* as ‘loving the *hári*’ (e.g., Re “qui aime les alezans”); I have reversed the direction of affection: “dear to the fallow bays,” primarily because better attested *puru-priyá-* means ‘dear to many’ not ‘loving many’, though the accent difference between them may signal a difference in meaning. (However, the special accentual behavior of compounded *puru-* muddies the waters.)

III.42 Indra

III.42.1: The relative clause in c is somewhat tricky. The standard tr. (though Ge hesitates in his n. 1c) take the subject to be soma and take *hárībhyām* with ab, starting the rel. cl. with *yáh* in 2nd position (type “come with your fallow bays to our soma, which is for you and seeking us”). I am reluctant to break the pāda in that way -- though given *ukthébhiḥ* at the beginning of 4c, which must go with the preceding pāda, with a new clause beginning *kuvíd*, this is not much of an argument. More importantly, since *tvām asmayúḥ* in the immediately preceding hymn (III.41.7) has Indra as the referent, I am reluctant to have identical *asmayúḥ* modify soma here. (Old cites some passages in IX where this adj. does modify soma, but those cases describe the preparation of soma and his/its journey towards us, the priests, whereas here the soma is stationary and Indra is journeying towards it and, as its preparers, us.) My interpr. leaves *te* as the problem -- where to construe it and whether it can be coreferential with *yáh*. The 2nd question can be answered affirmatively; nothing forbids *yáh* from 2nd ps. reference here. As for the first, I take it with *hárībhyām*, a solution I find somewhat unsatisfying, since possessive genitives are not usually necessary in these situations. But cf. *máma* in 3a below, also in a situation where the possessor doesn’t need to be overt.

III.42.3: Note the alliteration framing the first two pādas: #*índram itthā* ... *iṣitā itáh* #.

III.43 Indra

The publ. tr. attempts to convey the density and distribution of the many words for ‘here’, ‘nearby’, ‘close’.

III.43.1: The standard tr. take *úpa barhīḥ* with the next pāda (“call you to the ritual grass”); Sāy. agrees with my version (see Ge’s n. 1c). There is no principled way to decide, and very little depends on it.

It is not easily possible to register the pun of *havya*(*vāhaḥ*) ‘oblation’ (to *√hu* ‘pour’) and *havante* (to *√hvā* ‘call’).

III.43.4: The reference to Indra changes from 2nd ps. in ab to 3rd in cd. It would be possible to attach ab to the preceding vs., which also has Indra in 2nd ps., and take cd as a new sentence. But the fact that both ab and cd have subjunctives (*vāhātaḥ* and *śṛṇavat*) suggests that the two clauses go together.

Because of the accent on *vāhātaḥ*, the *ca* is likely subordinating, as in fact the standard tr. (and I) take it. However, the sequence *ā ca* (...) *√vah* shows unexpected accent on the verb form elsewhere (I.74.6, X.110.1), so it is possible that ab is a main clause with the verbal accent produced by this curious formulaic usage; see comm. ad I.74.6.

III.43.5: 2nd ps. reference to Indra returns here, in *kuvīd* clauses otherwise parallel to the one in 4cd with 3rd ps. ref.

Ge (fld. by WG and by me) takes the pf. part. *papivāṃsam* as expressing the cause of Indra’s action.

The transmitted Saṃhitā text *ma ṛṣim* must be read contracted, as *mārṣim* (so HvN) to achieve a Triṣṭubh line; the Pp. correctly analyzes this sandhi sequence as *mā ṛṣim*.

III.43.6: The final word of this vs., *mūrāḥ*, is generally taken as distinct from *mūrā-* ‘stupid, foolish’ and as an acc. pl. fem. with *ātāḥ* (e.g., Ge “die verschlossenen (?) Töre”). I follow Old’s final suggestion that it belongs to the normal stem *mūrā-* and refers to the horses; English “dumb beast” is a reasonable analogue.

III.44 Indra

On the extended pun in this hymn, see publ. intro.

III.44.2: The two pāda-final *-āya*-causatives, *arcayaḥ* (a) and *arocayaḥ* (b), are also near phonological matches.

III.44.3: This is the middle vs. of the hymn and (comparatively) more complex than the rest. As in 2ab, the first two pādas end with morphologically parallel formations, the accusatives *hāri-dhāyasam* (a) and *hāri-varpasam*, both with *-s*-stems as 2nd member and *hāri-* as 1st. The standard tr. obscures this parallelism by giving them quite different interpr., with *hāri-* in the first cmpd serving as apparent obj. to *dhāyas-* (Ge “der den Goldigen nährt,” sim. Re and WG; also Gr), while the second cmpd is rendered as a straight bahuvrīhi. By this interpr., in the first cmpd. *hāri-* refers to soma (so Gr, Re) or soma or the sun (Ge [WG]), while the *hāri-* in the 2nd is simply a term of color or material. Given the structure of this vs. and the parallel structure in vs. 2, I think the two cmpds should be interpr. in a similar manner and that the “golden nourishment” of heaven would be the sunlight. However, I do concede that in some other *X-dhāyas-* cmpds the 1st member may be the recipient of the nourishment (e.g., *arí-dhāyas-* ‘having nourishment for the stranger’, *kārú-dhāyas-* ‘having nourishment for the bard’ – though

cf. *viśvá-dhāyas-* ‘affording/deriving all nourishment’), and so I would consider a tr. ‘having nourishment for the golden’, though I think this is the less likely possibility.

In c I assume a clause break after *ādhārayat* and take the rest of cd as a nominal cl. with *bhójanam* as subj. For a similar constr. with *bhójanam* cf. VII.68.5 *citrām ha yád vām bhójanam nv ásti*.

The poet has cleverly managed to gather the root \sqrt{dhr} into the pervasive verbal play of the hymn, by stationing the dual form *hárītoḥ* in a sandhi position where its initial surfaces as *dh*, hence *ādhārayad dhárītor*. This *dh* repetition resonates with (*hári-*)*dhāyas-* in pāda a. Meanwhile in c the double *dh*-alliteration of the first two words is matched by double *bh*-alliteration in *bhūri bhójanam*.

III.44.4: Pāda-final *rócanam* (b) echoes pāda-final *arocayaḥ* (2b) symmetrically around the central vs., as well as rhyming with pāda-final *bhójanam* in 3c.

III.44.5: As noted in the publ. intro., the insistently golden vajra of vs. 4 (*hárītam ... āyudham ... vājram ... hárīm*) is transformed into a silvery one (*árjunam, vājram*), but keeps the *har* phonology in the participle *haryántam* ‘gladdening’, also modifying the vajra. A different color-type term, *śukrá-* ‘gleaming, bright’ is also used of the accoutrements of the weapon; the instr. pl. *śukraīḥ* is again a surprise: we would expect *hárībhiḥ*.

And in fact we get two forms of the latter in the last hemistich. In one of them the poet uses the sandhi trick he employed in 3c to produce an initial *dh*: (*ápāvṛṇod*) *dhárībhiḥ*, which allows the sequence *dhárībhiḥ ádribhiḥ* to read as a virtual anagram.

This last half-verse introduces Vala-myth phraseology (*ápāvṛṇot, úd gāḥ ... ājata*) in a hymn that otherwise lacks any mythic references. This Vala theme seems particularly out of place because the soma and the vajra play little or no role in the Vala myth but are strongly associated with the Vṛtra myth. I am uncertain of the identity of the *hárībhiḥ* who participate in the driving up of the cows in d. Ge and Re confidently supply ‘horses’, and that is of course the default interpr. of this form in an Indra context. But Indra’s horses are not actors in the Vala myth elsewhere, as far as I can remember. His helpers in the Vala myth are the Aṅgirasas, so perhaps they qualify as golden here. Or perhaps it refers to the golden lights of the dawns and is an instr. of accompaniment with *gāḥ* (“drove up the cows along with the golden [dawn lights]”).

III.45 Indra

III.45.1: Although I use the Engl. word ‘gladdening’ here as in the last hymn, the repetition is misleading. The Skt. word here tr. is *mandrá-*, whereas in the last hymn it was *haryatá-*.

The simile concerning the bird and the snare is reminiscent of the much more obscure image in I.125.2, in which an animal of some kind seems to be bound up and captured.

III.45.2: In the string of agentive phrases that entirely make up this vs. the poet manages a certain variety of syntactic patterns: standard tatpuruṣa with 1st member obj. (*vṛtrakhādá-*), tatpuruṣa with accusative 1st member (*valamrujá-* [note that without the

acc. marker it would be a metrically unfavorable four light syllables]), agent noun with genitive (pāda bc, 4x with 3 separate agent noun types: *purāṁ darmá-*, *apāṁ ajá-*, *sthātar-
ráthasya*, *hāryor abhisvará-*), agent noun with acc. (*dṛlḥā ... ārujā-*). The relentless repetition of nom. sg. agent phrases makes it quite certain that the Pp. loc. sg. reading *abhisvaré* should instead be taken as nom. sg. -*aḥ*, with Old. All standard tr. agree. The only argument against this that I can see is that *hāryor abhisvarāḥ* would be the second GEN + simple -*á*-stem agent phrase (after *apāṁ ajāḥ* in b), and if the poet was serious about producing the phraseological variety I have just catalogued he might have avoided a repetition by couching this phrase in the loc. (“at the calling of the two fallow bays”). The only other occurrence of *abhisvará-* is in the loc. (-*e* in sandhi, also pāda-final) and means ‘call’, not ‘caller’ (X.117.8). Still, I do not think this arg. is strong enough to counter-balance the pressure of the nom. sg. sequence.

III.45.3: As noted in the publ. intro., this is the middle vs. of the hymn, and it contains four similes, which are interlocked in interesting ways. In the first half-verse both similes target *krátum* ‘resolve, will’. In the first the term held in common (*gambhirān* ‘deep’) has been attracted in number to the upamāna (*udadhīn* ‘pools’), though the position of the *iva* probably shows that ‘deep’ lies outside the simile proper (*gambhirān udadhīm iva, krátum ...*). This simile is not dependent on the verb, while the second one (*krátum puṣyasi gā iva* “you foster it like cows”) requires the fosterage of the verb *puṣyasi* for the comparison to make sense. That is, Indra’s will is like cows only in that he cultivates it and helps it prosper, whereas it is “deep” regardless of any verb that might govern it.

The second hemistich contains two parallel similes, both bipartite, with a nom. pl. referring to entities that reach an acc. goal: cows / pasturage, brooks / lake. The first, the bovine one, seems generated from the cow simile of pāda b, esp. as the adj. *sugopá-* (c) contains the same *gó-* as *gāḥ* in b. The interesting thing about this half-verse is that the frame, the upameya, is not expressed at all. There is neither an overt nom. of the entity(/ies) in motion nor an acc. goal -- simply the simile marker *iva*. The comparison is wide open. Sāy. suggests that soma drinks are the subj. to be supplied, and he is followed by the standard tr. (and Old). Old suggests that the goal is either “you” (=Indra) or his *krātu-*; Re shares his uncertainty, while Ge (/WG) supply “dich.” Although it is true that *āśata* takes soma drinks as subject in other passages (see Ge’s n. 3cd), this hymn does not otherwise mention soma, and I am wary of supplying it out of nowhere. I prefer to take *krātu-* as subj., either in the pl. (‘resolves’ as in the publ. tr.) or, as Ge. suggests in n. 3cd, as a sg., with the verb attracted to the number of the subjects of the two similes. And I take *āśata* in a different sense in the frame than in the similes -- without expressed goal as “reach fulfillment, achieved (their goal),” although I recognize that the overwhelming number of occurrences of this verb do have expressed goal.

III.45.4: The simile in b is not clear, in great part because *prāti √jñā* appears to be employed in some technical sense that we have no handle on. The lexeme is not common in Vedic and seems to mean ‘greet, welcome’ (or perhaps just ‘recognize, acknowledge’) in the Vāstospati hymn, VII.54.1, and in other texts ‘acknowledge, respond’ vel sim. In post-Vedic Skt. it means ‘promise’ or the like. Since *āmśa-* ‘portion’ may also have a technical or legal sense, this phrase may belong to a stratum of language that we have no access to at this period. My feeling is that it has to do with the acceptance or rejection of

something offered, as *prati* √ *grah* signals acceptance of a properly given gift (see Sac. Wife 199–201). But I cannot get further than that.

III.45.5: The first hemistich contains three forms with *sva*- ‘self’: *svayúh* ... *svarāṭ* ... *sváyaśastaraḥ*, and the second hemistich opens *sá* *v*-, with a scrambling of the phonetic elements. Other patterning is seen in the comparative *sváyaśastaraḥ* ending the first hemistich and the superlative *suśrávastamaḥ* ending the 2nd, both built to -*as*-stems and compounded with the phonological variants *sva*- and *su*-.

smáddiṣṭi- occurs 4x in the RV. It is a cmpd. of *smád*- ‘altogether, together with’ and the -*ti*-abstract of √ *diś* ‘direct, assign, allot’, and as Ge says (n. 5b), it appears to be a technical term in *dānastutis*. In its other three occurrences (VI.63.9, VII.18.23, X.62.10) it modifies the gift, while here it qualifies the giver, Indra. As Old points out, medial √ *diś* is used of the allotting of gifts in V.36.6, and such a sense seems to fit here as well. For further see Old’s detailed disc.

The splv. *suśrávastamaḥ* is rendered by the standard tr. (Ge, Re, WG) as ‘best listener’. Since it is built to the noun *śrávas*- ‘fame’ rather than directly to the root √ *śru*, I find this meaning unlikely. In some other passages the word simply means ‘most famous, having the best good fame’ (e.g., VIII.13.2). Here because of the involvement of ‘us’ (*naḥ*), I take it as ‘receiving the best good fame’, i.e., with ‘fame’ being the praises we offer him. In only one passage does ‘best hearer’ seem a likely interpr., and there that meaning is induced by the presence of the verb *śṛṇuṣvā*: I.131.7 *śṛṇuṣvā suśrávastamaḥ* “listen (to us) as the one who listens best.”

III.46 Indra

III.46.1: This vs. is cunningly constructed, in that until the very last word of the third pāda it consists entirely of genitives with nothing to depend on; neut. pl. *vīryāṇi* at the end of c breaks this string and provides the necessary grammatical support -- joined by the matching adj. *mahāni* at the very end of the vs.

III.46.3: All four pādas begin with *prá*; the verb of a, *ririce*, should be supplied with the other three pādas.

Note the phonological plays in a: *prá* (*mā*)*trā*(*bhī*) and *ririce roca*(*mānaḥ*).

III.46.4: The string of untethered accusatives in the first 3 pādas reminds us of the string of genitives in vs. 1. Here the syntactic tension is resolved only by the verb *ā* *viśanti* that ends the verse and allows the accusatives to serve as its goal.

I do not entirely understand the function of *abhí* in pāda a. It matches nearby III.48.4c ... *janúṣābhibhūya*#, where *abhí* is part of gerund. It may also recall *abhibhūtim ugrām* (I.118.9, IV.38.1, sim. VI.19.6), which in turn is a variant of *abhibhūty-ójas*- (cf. nearby III.48.4a, the vs. just cited for the gerund). In any case the *abhí* seems pretty functionless in this passage; my “over(whelmingly)” is an attempt to give it some function.

III.47 Indra

III.47.3: The aor. impv. *pāhi* here implicitly contrasts with the pres. impv. *pība* in 1b, 2b, 4d. As usual, it is difficult to know how much semantic or functional difference to read into this contrast. See disc. ad III.35.10. In this particular case the root noun cmpd. *ṛtupāḥ* may have triggered the immediately following *pā(hi)*.

Re tr. *ṛtupāḥ* as ‘guardien des temps-rituels’, with $\sqrt{pā}$ ‘protect’ rather than $\sqrt{pā}$ ‘drink’. I think it unlikely in a dull little hymn like this that there would be a pun of that sort, and the sequence *ṛtúbhir ṛtupāḥ pāhi*, with the two elements of the cmpd. extracted from it and flanking it, seems to impose etymological identity.

The second hemistich refers to Indra’s allowing the Maruts a share in the soma because of their support in the Vṛtra battle. For a dramatization of this ritual situation, see I.165 and associated hymns.

III.47.5: The first word of this final vs., *marútvantam* echoes the first word of the hymn, *marútvān*.

III.48 Indra

III.48.1: Though Gr classifies *prābhartum* as an infinitive, and Old’s and WG’s tr. seem (indirectly) to reflect this analysis (“dass man ihm darbrachte ...”), the form seems to be simply a -*tu*-abstract (somewhat concretized)(so tr. Ge and Re). As is well known, the -*tum* form that serves as the only infinitive in Classical Sanskrit is hardly found in early Vedic. Macd. (VG §586b) registers only five in the RV (not including this one) and an equal number in the AV. *prābhartu-* here seems more or less equivalent to *prābhṛti-* or *prābharman-*, though the -*u*-stem datives *bhártave* (IX.97.50) and *ápabhartavaí* (X.14.2) are infinitival.

Notice the near rhyming openings to the two half-verses, a: #*sadyó h(a)*, c: #*sādhóḥ*.

III.48.2: It is appropriate that the “beestings” (*pīyūṣa-*), that is, the colostrum or first milk, should be given to the new-born Indra.

The preverb *pári* in pāda a is presumably to be construed with *āśīñcat* in b, a verb with which it is frequently found. I do not understand the position of this *pári*, in the middle of the pāda, right after the caesura but breaking up the NP *mātā ... yósā jānitṛī*.

III.48.3: The 3rd sg. impf. *aiṭṭa* of course belongs to $\sqrt{īḍ}$, it is missing from Gr (as MLW pointed out to me), but registered in Lub.

It is not clear who the “others” (*anyān*) are whom he keeps away, but the medial pf. in the next pāda (*cakre*) implicitly claims that he did the great things (*mahāni*; cf. *vīryāni ... mahāni* in III.36.1cd) by himself, that is, without the help of others.

III.48.3–4: I assume that *purudhā-pratīka-* in 3d refers to Indra’s shape-shifting powers; the cmpd seems to be “unpacked” in 4b “he made this body as he wished” (*yathāvasāṃ tanvām cakra eśāḥ*).

These two vss. are noteworthy for containing 3 gerunds, *upasthāya*, *abhibhūya*, and *āmúsyā*. The quest of the poet(s) of the Indra hymns in III to find a way to express anteriority (see disc. ad III.32.9–10, 33.11) is successful at least in this passage.

III.49 Indra

III.49.1: The first word *śáṃsā* is read *śáṃsa* by the Pp., i.e., as a 2nd sg. impv. This is quite possible, of course, and is the interpr. of Ge (/WG) and Old. With Re I take it as a 1st sg. subjunctive because this is more in keeping with the 1st ps. diction in annunciatory initial praise vss. like I.32.1 *índrasya nú vīryāṇi prá vocam*, but nothing depends on the analysis either way.

III.49.2: The 2nd hemistich is universally tr. (save for Scar, 656) as a single rel. clause, but *amināt* is unaccented and so d must be a separate clause.

In c the standard tr. (incl. also Scar) construe the instr. pl. *sūṣaīḥ* with instr. pl. *sátvabhiḥ* (e.g., Ge “mit seinen mutigen Streitern”). This of course would be the default assumption. However, in almost every occurrence of the stem *sūṣá-*, including all the other examples of the instr. pl., it refers to hymns or praises, whether with a limiting noun or not. I therefore separate it from the other instr. in the pāda and take it as having its usual referent. The poet claims that Indra’s strength is at least partially dependent on our strengthening praises.

III.49.4: The ppl. *pr̥ṣṭá-* ‘asked (about)’ is a little odd. Ge tr. ‘gesucht’, which would make it less odd, but I don’t think *√prach* means that. It may be referring to the fact that Indra’s existence and whereabouts are often questioned in the RV.

In b Ge and WG take the simile to be *rátho ná vāyúḥ*. This of course conforms well to the structure of the pāda and of similes in general, but it has the undesirable consequence of requiring *rátha-*, a word whose meaning is about as well known as any in the RV, to stand not for ‘chariot’ but for ‘chariot-warrior’ (vel sim.; cf. Ge’s Wagenheld). I therefore, somewhat reluctantly, follow Re. in taking the simile to be *ūrdhvó, rátho ná* “erect like a chariot.” Re then takes *vāyúḥ* as a (pseudo-)genitive: “(se tenant) droit comme le char (de) Vāyu,” which is unacceptable for this clear nominative. I instead take *vāyúḥ* as the beginning of another, unmarked simile. Cf. IX.88.3 *vāyúr ná yó niyútān*, with simile marker.

III.50 Indra

III.50.2: On *dheyuḥ* and related forms, see my “... *dheyām* revisited” (Ged. Schindler, 1999).

III.50.3: The first hemistich poses some difficulties: the subject is not expressed, and it is not clear what it should be; there is an abundance of acc. sg. masculines, not all of which are coreferential; the root affiliation of *dhāyase* is disputed; the value of *gr̥ṇānāḥ* is unclear.

To begin with the last, which has implication for some of the other questions: the standard tr. take *gr̥ṇānāḥ* as transitive, with Indra as object. But of the over 50 examples of this middle participle, only one other occurrence is transitive, I.181.9, where this value was induced by contextual pressure (see comm. ad loc.). I therefore take it as passive here as well.

If it is passive, then the missing subject must be something capable of being praised. Gr takes the subject to be the horses of vs. 2; since they were the overt subject of a form of $\sqrt{dhā}$ in 2c (*dheyuh*) and would be the subj. of another one here (*dadhire*), this makes implicit sense. And it is possible that they might be praised or sung. However, the question is whether the horses can be thought to establish or deposit soma, as 2a requires. Priests would make more sense for this action (so Re), but priests would not ordinarily be praised -- hence the anomalous transitive interpr. of *grṇānāḥ* by most tr. In the end I would opt for the horses, but not very happily -- the contextual arguments pull in opposite directions.

Now, as for the accusatives: *mimikṣúm ... supārām, índram*, I agree with the standard tr. that the first refers to soma, seeking to be mixed with milk, and of course that the last, *índram*, is separate from it. The question is where *supārām* belongs. The standard tr., in different ways, take it with soma. Since in all its singular occurrences the word refers to Indra, I take it with *índram* here as well.

The final question is the root affiliation and value of *dhāyase*. The standard tr. all take it to $\sqrt{dhā}$ 'place', construed with *jyaíṣṭhyāya* and with Indra as implicit subj. (e.g., Ge "dass er [=Indra] die Oberhoheit ausübe"). However, all clear cases of *dhāyas-*, which mostly appears in the dat., belong to $\sqrt{dhā}$ 'suckle, nourish' (incl. at nearby III.38.3 [though see the minority opinion discussed in comm. ad loc.]). I take it as such here, with *índram* as its object (thereby avoiding the necessity to construe this acc. with either *dadhire* or *grṇānāḥ*). The procuring of soma to nourish Indra is a logical progression -- though I'm still concerned that the horses might be the agents.

III.50.4–5: On the sequence of two repeated vss. see publ. intro.

III.51 Indra

III.51.1–2: These two vss. have the same structure: pādas acd are just accusatives qualifying the acc. *índram* in b, and the b pādas are essentially the same, with nom. pl. *gírah* + a verb that governs the accusatives. Though vs. 3 breaks the syntax, Indra still appears first by name in pāda b.

III.51.2: The standard tr. take *aṇavám* as an unmarked simile, serving as goal to the verb in b: "my songs go to Indra, as if to the sea [Ge "(wie) zu dem Meere," Re "(tel) un océan," WG more accurately but less persuasively "(wie) zu wallender Flut"]. The word is therefore only indirectly associated with Indra: they are both goals but need have nothing else in common. But given the parallelism in structure of vss. 1 and 2, I am reluctant to break the pattern of accusatives characterizing Indra by introducing this syntactic disjunction, and further the supposed simile only makes good sense if *aṇavá-* really is a sea or the like, not an undulating flood. I think instead that Indra is directly described as a flood, the flood itself being characterized as *śākín-* 'possessing powers'.

Note the phrase *tūrṇim aptúram*, which I would now render 'advancing, crossing the waters', in line with my reassessment of the meaning and root affiliation of *tūrṇi-* (see comm. ad III.11.5). The connection of the adj. and the root-noun cmpd. is also found in I.3.8.

The water-crossing mentioned here may simply be a reference to Indra's general leadership in crossing rivers and gaining new territory, but it may more specifically point to the famous crossing of King Sudās dramatized in III.33 and referred to again in III.53.9, even though the poet Viśvāmitra, not Indra, is the major actor there. The crossing is mentioned again in 9a.

III.51.3: Although *panasyate* might make more sense if tr. “expresses admiration,” the other occurrences of this denom. stem and the related adj. *panasyú-* all mean ‘attract/invite admiration’. Here the poet is hoping for a good reception from the recipient of his hymns, which he indeed receives in pādas b and c. I have tr. the loc. phrase *ākaré vāsoḥ* as if ablative, to make the sense clearer. It could have been rendered “... seeks admiration at (the hands of) him ...”

I would now change “faultless rhythms” to “flawless rhythms”; see comm. ad X.61.12.

III.51.4: Though this vs. begins a new *tr̥ca* in a different meter, it partially restores the syntactic structure of vss. 1–2: the first pāda presents Indra in the acc., the second one directs praises to him. Note also that *nṛṇām ... nṛitamam* picks up *nāram* of 2a. The structure is somewhat complicated by the fact that both (unnamed) Indra in pāda a and the (unnamed) subjects of the impv. *arcatā* in b are addressed in the 2nd ps. This leads both Ge and Re to separate the two pādas: Ge pronounces pāda a an anacoluthon or ellipsis, while Re supplies “(je te chante).” This fastidiousness seems unnecessary to me: the two referents of the 2nd persons are in different grammatical numbers and unlikely to be confused with each other for other reasons, and in a ritual situation both should be present (“at the seat of Vivasvant,” 3c) and could both be directly addressed. The two instrumentals in pāda a (*gīrbhīr ukthaiḥ*) also go better with the verb in b; cf., e.g., VI.22.1 *īndram tām gīrbhīr abhy àrca ābhīḥ*.

Pāda d consists of two clauses, the nominal *nāmo asya* and the short verbèd clause *pradīva éka īśe*, and so, contra Gr’s suggestion (s.v. *īś*, col. 236, #8), the verb doesn’t take an acc. here. For supposed exx. of *√īś* with the acc., see comm. ad VII.32.18.

III.51.5: The stem *niṣṣīdh-* and related forms are difficult (see, inter alia, Scar 596–97). As Scar points out, there is no obvious direct way to connect it with either *√sādh* ‘succeed’ or *√sidh* ‘repel’, and neither of these roots appears with *nīḥ* in the RV (though the latter does in post-RVic texts, but without relevant meaning; see Gotō, 1st Kl., 328). On the other hand, the semantic range of the word itself in context is relatively clear. It usually refers to something offered by inferiors to superiors. Ge’s *Tribut* (see his brief disc. in n. 5b) works pretty well. If we want to connect it to the root *√sādh* ‘succeed, realize, reach the goal’, it may be seen as the material representation of the fulfillment (this is the *√sādh* part) of an obligation, and the *nīḥ* ‘forth’ may reflect the proffering of these material goods.

I supply ‘streams’ with *jīráyaḥ* on the basis of the other occurrence of this pl. in II.17.3 *prá jīráyaḥ sisrate ...* as well as the well-attested *jīrá-dānu-* ‘possessing lively drops’. There is general agreement in the standard tr. that *jīrí-* refers to flowing water.

III.51.6: Note the chiasmic structure *túbhyam bráhmāṇi gírah ... túbhyam*.

As MLW points out to me, c contains one of the few examples of initial *bodhí*, which, as I've discussed ("Syntactic Constraints on Morphological Change," 1997, esp. 69–75) is ordinarily found pāda-internal, as opposed to *bháva*.

Ge persuasively identifies *ávaso nūtanasya* as a genitive of quality.

III.51.7: This vs. contains yet another implicit contrast between the aor. and pres. of $\sqrt{pā}$ 'drink': *pāhi ... yāthā ... āpibaḥ*. See comm. ad III.35.10, 36.3, 40.1–2, and 47.3. It is not clear whether a contrast is also meant between the acc. *sómam* with *pāhi* (also 8a) and the (potentially partitive) genitive *sutásya* with *āpibaḥ* and, if so, whether it is signaling some sort of aspectual distinction.

The verb *ā vivāsanti* lacks an object here, though it usually is construed with one. Ge (/WG) interpret it as 'invite' (presumably supplying 'you'), while Re supplies the gods as object. I think the object slot has been intentionally left blank: with Indra's guidance and in his shelter they hope to win whatever they fancy, hence my somewhat awk. tr. "seek their win." Oberlies (Rel.RV I.403) suggests that this is a poetic contest, but I don't see any evidence of this beyond the plural.

Given the usual rendering of *kaví*- elsewhere in the publ. tr., I would change the tr. here to 'sage poets' or just 'poets'.

III.51.8: The connection between the two hemistichs in this vs. is not clear. The first unambiguously presents the here-and-now of the sacrifice, with an impv. and the adv. *ihá* 'here', while the second harks back to Indra's primordial birth and the gods' attendance on it, expressed by an augmented imperf. (*ābhūṣan*). There is no way to reconcile the temporal disjunction directly, so I have adopted Ge's makeshift: supplying "(wie damals)," though there is no overt representation of my "as" (or his "wie damals"). There does not seem to be much semantic connection between the two halves either, unless we, the pressers and offerers, are being identified with the gods who served Indra at his birth.

III.51.9: The abrupt temporal shifts continue in this vs., exacerbated by shifts in person. The poet first addresses the Maruts in the 2nd ps. and asserts something about Indra in the present time (or so I [and the other standard tr.] take the nominal sentence without overt copula). In pāda b the Maruts are then referred to in the 3rd ps. -- though they are not named in this pāda, the other two occurrences of *dāti-vara*- refer to them, and *ānu* \sqrt{mad} is a signature verb of theirs -- and in the past, in the augmented impf. *āmandan*. (Though the Saṃhitā text transmits '*mandan*', the augment is metrically guaranteed.) This pāda seems an aside, reminding the audience of the Maruts' previous involvement with Indra. The vs. then shifts to the present time again, with the Maruts remaining in the 3rd ps., as potential drinking companions for Indra.

On *dāti-vāra*- see my forthcoming article on it and, supposedly, related compounds.

In 6c Indra was urged to become "a friend of present help"; what that present help was/should be is spelled out here, a friend "at the water-crossing." For water-crossing see comm. ad vs. 2 above. It is presumably *not* directly related to the Maruts' applause in pāda b, for they provide material and moral support at the Vṛtra-smashing, not in crossing waters.

As MLW points out, *své* in the phrase *své sadhásthe* does not refer to the subject, but rather to the immed. preceding gen. *dāsúṣaḥ*.

III.51.9–10. Note that *pibatu* takes an acc. in 9cd, but a gen. in 10c, as with *ápibaḥ* in 7b.

III.51.10: The first two pādas of this vs. are variously translated. The problems are 1) the referent of *idám* and 2) the absence of a verb. My interpr. is closest to Ge's. If the referent of *idám* is the soma, we need only find a synonym for soma that is neuter; *sávanam* fits the bill and is elsewhere modified by *sutá-*, as it can be here. As for the verb, I assume a form of \sqrt{as} : the idiom *ánu \sqrt{as}* means 'be at hand'.

III.51.12: The three body parts to which the soma should reach are in different cases: pāda a contains loc. (or possibly gen., though this seems unlikely) *kukṣyóḥ*, while b and c have acc. *síraḥ* and *bāhū* respectively. The verb -- *prá ásnotu* -- is presumably held constant, though represented only by the preverb in b and c. Since the loc. can express goal just as well as the acc., this is allowable syntactic variation. Thanks to MLW for drawing my attention to the case disagreement.

III.52 Indra

III.52.2: *pacatyà-* occurs only here; it does not seem to have any gerundival sense, nor does its base *pacatá-*, though *-ata-* adjectives often do (*darśatá-* 'sightly', not just 'seen'); see AiG II.2.168. I assume *pacatyà-* is a nonce creation to provide an extra syllable here in the versified recipe. And perhaps *pacatá-* was fashioned as a clearer alternative past participle to *pakvā-*, which can of course also mean 'ripe', though it's quite commonly applied to cooked food.

III.52.3: The accent of *ghásah* is unexpected, but it presumably results from its juxtaposition with immed. following *joṣáyāse*, which can owe its accent to its pāda-initial position. Although *ca* can be subordinating ('if') and induce verbal accent, that doesn't seem to be its function here; instead it coordinate with the *ca* in b to produce a "both ... and" construction. That the *ca* in b is not in 2nd position but follows the obj. *gírah* supports this interpr., since the first *ca* follows the obj. *purolāśam*.

III.52.5: I would now render *túrny-artha-* as 'having a goal to advance to'; see comm. ad III.11.5.

III.52.6: On the acc. complement and sense of the lexeme *úpa síkṣa-* see comm. ad I.112.19, I.173.10

III.52.8: The phrase *vīratama- nṛṇām* 'most virile of men' is a variant of the fairly common formula *nṛṇām nṛtama-* 'most manly of men', an occurrence of which is found in the preceding hymn, III.51.4. This vs. is repeated at IV.32.16.

III.53 Indra, etc.

III.53.1: The curious dual dvandva *indrā-parvatā* ‘o Indra and Mountain’, only in the vocative and therefore unaccented, occurs 3x: I.122.3, 132.6, and here. As discussed ad I.122.3 and 132.6, I believe that the ‘mountain’ is Indra’s *vájra*-.

III.53.2: The verb in pāda b, *yakṣi*, is simply an injunctive 1st sg. *s*-aor. to √*yaj*, but it is rendered as a future/modal in all the standard tr. (including this one). This value seems also found in the identical form in X.52.5, though not in X.4.1. (Gr’s ex. in VI.16.8 is better taken as a 2nd-sg. act. *-si* impv.) I don’t know why this particular form should have this value, save for the general functional flexibility of the injunctive. But perhaps the fact that the formally identical 2nd sg. act. *-si* impv. is so common and (as an old *s*-aor. subjunctive) is used in both imperatival and subjunctive-future value may have allowed that value to spill over onto its formal twin. KH (Inj. 253) suggests that 1st sg. injunctives express the immediate future.

III.53.3: The 1st dual subjunctive (*śāmsāva*) coupled with a sg. voc. (*adhvāryō*) is a rough and ready way to express a 1st ps. inclusive. This type of construction contrasts with the 1st ps. exclusive found in phrases like VII.88.3 *ā yād ruhāva vāruṇas ca nāvam* “When we two, Varuṇa and I, mounted the boat ...” with a nominative explicitly conjoined with *ca* to an implicit *ahám*.

The injunctive *bhūt* in d must also, like *yakṣi* in 2b, be modal/prospective or even imperatival, since the *āthā ca* indicates that it temporally and/or logically follows the impv. *sīda* in c.

III.53.4: The dismissal of Indra and the sending him off home comes rather early in this hymnlet; he just got here (vs. 1) and at that point we urged him to stay put (vs. 2). Vs. 3 seems to depict the sacrifice proper, and the remaining 3 vss. of this portion of the hymn (vss. 4–6) are an extended farewell. In this vs. the poet seems to be reassuring Indra that if he goes home, he still won’t miss out on anything here: we’ll send Agni to fetch him whenever we press soma.

III.53.5: *pārā yāhi* “drive away” comes awfully soon after 2a *mā pārā gāḥ* “don’t go away.”

The genitive phrase *vājīno rāsabhasya* is ambiguous: does it refer to two animals or one? Re opts for the former: “... du (cheval) gagnant-du-prix (et) de l’âne.” But the same phrase in I.34.9 makes it likely that the two words belong together as the designation of a single animal. So Ge (/WG).

III.53.6–7: See the publ. intro. for the thematic and lexical connections between these two vss., despite their belonging to different sections of the hymn. See there also for the connection of vs. 7 with III.31, via the identification of the current poet with the Aṅgirasas, ur-sacrificers and givers of dakṣiṇās (on which see Ge’s n. 7a).

III.53.8: As Schaefer points out (p. 162), the intens. *bobhavīti* construed with an āmreḍita *rūpām-rūpam* must signal repetitive function (“Gestalt um Gestalt”).

In c I read *divāḥ* twice: once as ‘day’ with *trīḥ* in the meaning “three times a day” (cf. nearby III.56.5, 6 *trīr ā divāḥ*, also X.95.5 *trīḥ ... āhnaḥ*), once as ‘heaven’ with

following *pári* “from heaven.” The latter reading, adopted by Sāy., is rejected by Old and Ge (n. 8c) because we should expect the close sandhi *divás pári*. This argument is subject to criticism on two grounds. First, I think the double reading of *diváh* would preclude close sandhi for one of the readings. Moreover, none of the other cited exx. of *divás pári* is broken over the caesura as here. As Mark Hale has discussed at length, close sandhi of NOUN + POSTPOSITION is blocked at the caesura. See “Preliminaries to the Study of the Relationship between Syntax and Sandhi in Rigvedic Sanskrit,” *Münchener Studien zur Sprachwissenschaft* 51, pp. 77-96, 1990; this view is cited here after the 1995 draft, *Wackernagel’s Law in the Language of the RV*, pp. 38-50.

The ritual situation in the 2nd hemistich is puzzling for several reasons. First, Indra’s appearance at the sacrifice “three times a day” is what we expect, since there are three soma pressings. Then why is he characterized as *ánrtupāḥ* ‘drinking out of season’? Ge (/WG) gets out of this bind by supplying a parenthetical “(oder)”: he either comes three times a day *or* drinks unseasonably. This works, but the “or” is of course a complete invention. More problematic is the fact that Indra is drinking unseasonably at all. In this same Indra cycle he has been apostrophized as *ṛtupāḥ* (voc., III.47.3). The apparent breaking of the ritual rules here is esp. striking because he is called *ṛtāvan-* ‘possessing the truth, truthful’ at the same time, made more striking because this is the only place in the RV where *ṛtāvan-* qualifies Indra. Lüders (*Varuṇa* II, 547–48) suggests that *ṛtāvan-* is used here only as word play with *ánrtupā-*, since Indra has essentially no connection with *ṛtá-* (“dass er zum Rta so gut wie keine Beziehung hat,” p. 548). But this seems unlikely, esp. given that the unnegated expression *ṛtupā ṛtāvā* in the same metrical position is used of Agni in this same maṇḍala (III.20.4). Some point is being made, that Indra can be *ṛtāvan-* despite his un-rule-governed behavior.

I think the clues to a solution are found in the first half of the verse, where Indra is depicted as constantly shape-shifting and enveloping himself in *māyāḥ*. Perhaps Indra is impersonating other gods through the various *rūpa*-s he assumes, and his unseasonable drinking involves his taking their places in the rota (*rtú-*) of soma-recipients (the *Ṛtugraha* treated in I.15 and II.36–37). What then are “his own mantras” (*svaír mántraiḥ*), which accompany the unseasonable drinking? Lüders (p. 548) suggests that when he drinks outside of the three pressings he has to recite his own mantras. Though this is clever, I do not think it is correct, nor do I follow my own published tr. “by (the power of) his own (magic) spells” -- though I do think the mantras may be semantically linked to *māyāḥ* here. But my current thinking is that the phrase should be tr. “with *their* own mantras,” referring to the mantras appropriate to the gods whose forms he has appropriated and whose turns he takes in the drinking. As to how he can be called *ṛtāvan-* when his behavior seems not to be precisely aboveboard, perhaps he has gained the epithet from the gods whose identities he’s stealing: Agni, Tvaṣṭar, and Mitra and Varuṇa, all called *ṛtāvan-* elsewhere in the RV, all occur in the *Ṛtugraha* sequence (I.15; II.36–37). Or perhaps the epithet alludes to Indra’s most enduring adoption of another identity, that of *Brhaspati*. Though *Brhaspati* is called *ṛtāvan-* only once in the RV as far as I am aware (VI.73.1), the role of *ṛtá-* in association with *Brhaspati* in the Vala myth is very significant; see, e.g., Lüders p. 549. Or perhaps we can simply say that Indra’s “truth” -- his inherent nature -- is his ability to assume other forms and act out of turn and impose his will without following rules.

III.53.9-10: The use of somewhat inappropriate epithets continues in these vss. The subject of 9ab, the “great seer” (*mahām̐ ṛṣiḥ*) is Viśvāmitra, mentioned by name in c. A mortal, he is described as ‘god-begotten’ (*devajā-*) and ‘god-spēd’ (*devājūta-*) but ‘possessing a man’s sight’ (*nṛcākṣas-*); the last is also used of the Kuśikas, Viśvāmitra’s family, in the next vs. Curiously it is the epithet with *nṛ-* ‘man’ that appears to be misapplied, not those with *devā-* ‘god’: the stem *nṛ-cākṣas-* is found approximately 40 times in the RV, and in all other occurrences (with the exception of III.22.2, where it qualifies a divine quality, the radiance of Agni, and the possible exception of the next hymn, III.54.6) it qualifies a god, who either has his (divine) gaze on men or attracts the gaze of men. Thus, the status of Viśvāmitra and his kin is implicitly raised by receiving a descriptor usually used of gods. That the Kuśikas drink soma with the gods in 10cd is a sign of this enhanced status. What the adj. means here is unclear to me: is it that they too attract the gaze (and thus admiration) of other men, or that they, despite possessing only a man’s sight, still manage feats sufficient to match the gods, esp. Viśvāmitra’s stopping the rivers in full flood?

III.53.10: The publ. tr. does not recognize or render the idiom *vī√pā*, found generally in the middle, for which see also comm. ad VII.22.3. As is indicated there, in later Vedic and already in late RV, the idiom is specialized for the separation of *surā* from another liquid in the Sautrāmaṇī ritual, but earlier can refer more generally to the extraction (“drinking out”) of a liquid from another source, e.g., by the pressing stones in IV.16.3 and VII.22.3. What the idiom is doing here is less clear to me. Ge (n. 10d / WG) thinks this is a reference to the (much later) notion that *haṃsas* can separate liquids and so it belongs with the Sautrāmaṇī passages -- the *haṃsa* being found in pāda a, though only in a simile unrelated to drinking. I think this unlikely. It may simply be that the pressing stones are involved: the Kuśikas may be “drinking out” the soma by means of the pressing stones found in pāda a (*ādribhiḥ*). However, it is also possible that the *vī* represents the cross-species aspect of the drinking party: the mortal Kuśikas are urged to drink along with the gods, but the gathering may be segregated. So perhaps a tr. “drink apart, along with the gods”; such a notion seems to underlie Re’s “Buvez séparément avec les dieux.” It would contrast with a true symposium expressed by *sām√pā* also in the middle (see IV.35.7, 9) and in fact might allude to that idiom, given the well-known polarization of *vī* and *sām*. Another possibility is Sāy’s *parasparavyatihāreṇa* ‘by mutual interchange, alternately’. I am weakly inclined towards the pressing stone interpretation, though also somewhat drawn to the cross-species one. And I would also point out the resonance of the preverb *vī* with *viśvāmitraḥ* (9c) and *vīprāḥ* (10c).

III.53.11: This vs. is supposed to depict the Aśvamedha of King Sudās, and the releasing of the horse in b and the smiting of obstacles in all directions in c, followed by a sacrifice in d, certainly support this interpr.

cetāyadhvam is variously rendered, but most generally as ‘pay attention’ vel sim. I instead take this middle full-grade -*āya*-formation as a reflexive transitive “make yourselves known” based on the ‘make perceive’ sense of *cetāya-*. Re’s alternative “faites vous remarquer” is closest to mine.
